On a deeper level, the debate about the ʿAbbāsids was a debate about the religious meaning of the whole history of the *umma* [*q.v.*]. This debate was framed in terms of a paradigm of covenant, betrayal and redemption—a paradigm which had its roots in the Ḳur'ān's oft-repeated prophet narratives, whose guiding motif is the challenge by a prophet to his people to accept the worship of the one true God and to follow his commandments. This challenge represents God's offer of a covenant (Ar. *ʿahd, mīthāḳ* [*q.vv.*]), sc. obedience to His commandments in return for prosperity in this world and the next. The covenant is most often scornfully rejected, quickly followed by an outpouring of divine wrath. Even when it is accepted, as with the Jews and Christians, these communities quickly fall from wholehearted obedience and corrupt their religion. As the 3rd/9th-century historians understood the matter, Muḥammad's people had been offered just such a covenant in the Ḳur'ān. They had accepted it (not always without a struggle) and had been rewarded as no people before them. But soon even the Muslims had fallen prey to man's innate heedlessness (*ghafla*) and ingratitude (*kufr*); they had betrayed their covenant and now were rent by schism and bloodshed. This fall from grace compelled thoughtful Muslims to ask whether the betrayal could be repaired and the *umma* be redeemed. If so, how and at whose hands could such a redemption be won? Historians also had to ask how the betrayal of the Muḥammadan covenant had occurred and who was responsible.

The official interpretation propounded by the 'Abbāsid régime—which had to justify its claim to rule as kin of the Prophet, while preserving the legitimacy of the first three caliphs—laid the blame for the *umma*'s sufferings on the corrupt and tyrannical Umayyads. But most historians, even those with close ties to the 'Abbāsid court, concurred that the original crisis had occurred in the reign of 'Uthmān b. 'Affān (24-35/644-56), though they disagreed bitterly about which persons and groups bore the guilt for the catastrophe.

The paradigm of covenant, betrayal and redemption was clearly formulated by late Umayyad times and was highly productive for nearly two centuries. But as 'Abbāsid authority was subverted in the late 3rd/9th century and collapsed in the 320s/930s, this paradigm lost much of its power. It could not bestow meaning and value on the sordid intrigues of petty dynasts and warlords. The historians of the 4th/10th century and later focused more and more on recent and contemporary events, and sought new ways of constructing and interpreting these.

Some of the late 3rd/9th-century syntheses are best characterised as digests. Key examples would be three nearly contemporary works: the *Ta'rīkh* of al-Ya'kūbī (d. 283/897), *al-Akhbār al-ṭiwāl* of Abū Ḥanīfa al-Dīnawarī (d. 281/894), and the *Kitāb al-ma'ārif* of Ibn Ḳutayba (d. 276/889). Late examples of this group would be the *Murūdj al-dhahab wa-ma'ādin al-djawhar* and *Kitāb al-Tanbīh wa 'l-ishrāf* of al-Mas'ūdī (d. 345/956). The authors of the digests refine the disparate materials bequeathed them by earlier collectors into a single narrative line, with the intention of offering a clear and unambiguous interpretation of Islamic history. Even so, their works preserve the historical writing of earlier generations because they present their accounts in the form of (highly selective) quotation and paraphrase of their sources.

Of these digests the most original and interesting are the works of al-Ya'kūbī and al-Mas'ūdī. Al-Ya'kūbī composed the first true universal history in the Arabic language. He draws on a wide array of materials (many clearly non-Islamic) to give a culturally and intellectually oriented tableau of the pre-Islamic nations. Then with the coming of Muḥammad he narrows his focus to the political history of Islam, organised by caliphal reign and told from a markedly pro-'Alid perspective. In its overall structure al-Ya'kūbī's digest provided the model for the universal histories of al-Ṭabarī and al-Mas'ūdī, though there is no evidence that either of these scholars used his work. Al-Mas'ūdī's two digests are late works, abridgements or adaptations of a series of far larger and more systematic histories (all now lost) which he claims to have composed earlier in his career. They combine, in a manner never successfully imitated by any other historian, serious information with the arts and graces of *adab*. Al-Mas'ūdī's Islamic history is similar in many ways to al-Ya'kūbī's, but his non-Islamic materials are far wider-ranging and clearly draw on a much richer array of sources. He is, for example, the only Muslim author to give us a serious précis of Byzantine history since the rise of Islam. It is noteworthy that Ibn Khaldūn (d. 808/1406), so severe in his judgments on many historians, identified al-Mas'ūdī as his true precursor.

Without doubt the crucial historical works of this era are the massive compilations of al-Balādhurī (d. 279/893) and Abū Djaʿfar al-Ṭabarī (d. 310/923). It is these which preserve for us the broadest cross-section of early Arab-Islamic historical writing, and hence they are our fundamental sources for the origins and early development of Islamic historiography. Al-Balādhurī left us two major histories, both dealing wholly with Islamic times: *Futūḥ al-buldān*, an account of the Arab-Islamic conquests (coming down into 'Abbāsid times), organised by region and oriented toward legal-administrative issues; and *Ansāb al-ashrāf*, a vast collection of political biographies of the caliphs and other notable figures of Islamic history, with the biographies grouped according to lineage. Al-Ṭabarī's *Ta'rīkh al-rusul wa 'l-mulūk* is an enormous chronicle stretching from the Creation down to the last years of al-Ṭabarī's life. It is arranged by nation or people before the rise of Islam, with an emphasis on the Israelites and Persians; with the *hidjra* it follows a strict annalistic framework. It represents only one facet of the *œuvre* (in effect the retirement project) of a scholar who regarded himself chiefly as a Ḳur'ān commentator, *faḳīh* and *muḥaddith*.

In principle, the compilations of al-Balādhurī (especially the *Ansāb al-ashrāf*) and al-Ṭabarī aimed to assemble all well-attested accounts pertaining to the major events and actors in Islamic history. Both scholars used the *muḥaddith*'s tool of the *isnād* to show the provenance of each account, thereby allowing the informed reader to assess its authenticity and religious soundness. Al-Ṭabarī indeed deploys the *isnād* technique very rigorously; this and other indications suggest that he hoped to raise history to the full dignity of a religious science. But that turned out to be impossible, due at least in part to the highly disparate and uncontrollable sources which historians had to use.

In contrast to the digests, these vast compilations make no effort to construct a unified narrative of events. On the contrary, they consist of a series of discrete reports (Ar. *khabar*, pl. *akhbār*) varying in length from a line to several pages. These *akhbār* are not linked by a narrative thread; they are simply juxtaposed end to end, each being marked off from the others by its own *isnād*. A compiler might select several reports pertaining to a given event, and these could variously repeat, overlap, or contradict one another. The criteria for including some *akhbār* and omitting others are almost never spelled out explicitly; one must simply infer such criteria through context, literary structure, etc. In general, it was proper for a historian to abridge or paraphrase the *akhbār* which he found in his sources; he might even blend several accounts together into a "collective tradition" so long as he did no violence to their contents. Al-Balādhurī paraphrases quite freely; al-Ṭabarī follows the wording of his sources closely, albeit with considerable abridgment. Al-Ṭabarī also chops up what were originally extended narratives into short segments, so as to juxtapose these with contrasting or parallel versions of the events being presented.

None of the historians surveyed above ever intervenes in the narrative to explain its overall significance or to pass judgment on the actors. The reason for this reticence is partly grounded in early Islamic concepts of knowledge (*'ilm*). In this perspective, historical knowledge was constituted by statements which could be traced back to reliable authorities—ideally, to eyewitnesses of known veracity, but in any case to reputable persons who had obtained their information from good sources. The historian's task was thus simply to determine which *akhbār* were acceptable and to arrange these in a usable order. On another level, the events recorded by early Muslim historians were intensely controversial. Hence if they discussed these in their own words, they would inevitably be regarded as mere propagandists for one or another faction. Scholarly authority required a talent for self-effacement.

Insofar as they deal with the middle and later decades of the 3rd/9th century, the digests and compilations reviewed above drew, with varying skill and perceptiveness, on a variety of contemporary sources as well as personal observation. For the reigns of the ʿAbbāsid caliphs from al-Mahdī (775-85) until al-Maʾmūn (813-33), they seem to have used an official court historiography as redacted under al-Maʾmūn, supplemented by personal memoirs and other non-official accounts. The provenance of their information on these two periods raises many difficult issues, but there is no real question about the authenticity of the sources they used. That is, these sources do date from the periods which they recount, and they were composed by the authors to whom they are ascribed.

As we move into their sources for earlier periods, however, we can have progressively less confidence on this point. For the century and a half stretching between Muḥammad's call and the consolidation of ʿAbbāsid power under al-Manṣūr (*r.* 136-68/754-75), the direct sources for the "classical" syntheses were a series of *akhbār* collections (now mostly lost) compiled between *ca.* 750 and 850 by a number of scholars, of whom the most widely cited are Ibn Isḥāḳ (d. 150/767), Abū Mikhnaf Lūṭ b. Yaḥyā (d. 157/774), Sayf b. ʿUmar (d. *ca.* 180/796), al-Haytham b. ʿAdī (207/822), Hishām b. Muḥammad al-Kalbī (d. 204/819), Muḥammad b. ʿUmar al-Wāḳidī (d. 207/822), Muḥammad b. Saʿd (d. 230/845), and ʿAlī b. Muḥammad al-Madāʾinī (d. 225/840). The works of the earlier collectors in this group were certainly heavily redacted in the early 3rd/9th century, and it is in this form that the classical syntheses had access to them. Even so, the essential authenticity of these collections seems uncontestable; they are, as they claim to be, substantially works compiled and edited by Abū Mikhnaf, Sayf b. ʿUmar *et al.*

The early 3rd/9th century also witnessed the emergence of two new genres which would have a very long lifespan in Islamic historiography: the earliest biographical compilations, in the form of *ṭabaḳāt* [*q.v.*] or "generations" of notable Muslims (chiefly transmitters of *ḥadīth* and other religious knowledge) from the time of the Prophet; and the annalistic chronicle, which strove to place each known event in the precise Hidjrī year in which it occurred. The first extant biographical compilations already display a considerable range of subjects and emphases: the *Kitāb al-Ṭabaḳāt al-kabīr* of Ibn Saʿd, the terse *Kitāb al-Ṭabaḳāt* of Khalīfa b. Khayyāṭ al-ʿUṣfurī (d. 241/855), and the *Kitāb Ṭabaḳāt al-shuʿarāʾ al-djāhiliyyīn wa 'l-islāmiyyīn* by Muḥammad b. Sallām al-Djumaḥī (231/846). The biographical dictionary immediately met a critical need in a religious and literary culture which was based on the transmission of knowledge from one person to another, and which needed to determine the biographical data, religious acceptability, and reliability of each transmitter. The new form quickly branched off in many directions, and by the end of the 3rd/9th century it was producing works as diverse as al-Bukhārī's *al-Taʾrīkh al-kabīr* and al-Balādhurī's *Ansāb al-ashrāf.*

Until the mid-3rd/9th century, the favoured organisational scheme for general histories was by caliphal reign; this regnal or dynastic schema continued to be very widely used as well. After Khalīfa b. Khayyāṭ (*al-Taʾrīkh*), al-Ṭabarī was the next extant historian to use the annalistic structure; much of the confusion in his volumes on the earliest decades of Islam comes from the fact that his source material was not originally dated by year, and could only be located in the "right" year by context. But after al-Ṭabarī, the annalistic mode became and remained the most widely used organisational framework, at least among Arabic-language historians, down into the 13th/19th century.

The *akhbār* collections of the early 3rd/9th century differ from one another in many ways: subject matter, sources, organisation and handling of material, religio-political stance, etc. Nevertheless, they do have some important features in common. First, they all reflect the covenant-betrayal-redemption paradigm, thus demonstrating that this paradigm was already fully articulated by this era. Second, they embody predominantly ʿIrāḳī (and for the earliest decades, Ḥidjāzī) perspectives; only fragments of a Syrian or Egyptian tradition have found their way into them. This seems natural enough for ʿAbbāsid times, but obviously it implies serious distortions in their treatment of the Umayyads. Third, they are assemblages of *akhbār* relating to a given set of events rather than integrated narratives of those events. Fourth, most of them are monographic rather than synthetic—i.e. they bring together reports concerning discrete events (such as the Battle of the Camel) or topics (the Ridda wars or the conquests in Syria). (Note, however, that the earliest synthetic history of early Islamic political history was probably Ibn Isḥāḳ's *Taʾrīkh al-Khulafāʾ*, probably a digest rather than a detailed compilation, now lost except for a few citations in al-Ṭabarī and possibly a papyrus fragment.) Finally, these works use *isnāds* (not necessarily in a rigorous way) to link their narratives to the original reporters of the events they include. In spite of the formal structure of these collections, which implies that they are merely transmitting well-attested reports by persons close to the events in question, there is ample evidence of a strong authorial (or at least editorial) hand in many of them. For example, Sayf b. ʿUmar explicitly blends reports from several different transmitters into a single version, while al-Wāḳidī gives a level of detail and narrative elaboration which we seldom find in older accounts of the same events.

Too much attention to questions of form, structure, transmission, accuracy, etc. can be very misleading, for many works from this period exhibit a very strong folkloric tendency—an emphasis on storytelling for its own sake, the heroic, the colourful, the supernatural and fantastic. Folkloric elements were assuredly present in the very origins of Islamic historical narrative, but the early ʿAbbāsid period produced a number of larger works which are thoroughly imbued with folklore. The most notable of these is the *Kitāb al-Futūḥ* of Ibn Aʿtham al-Kūfī (who probably flourished *ca.* 200/815, *pace* M.A. Shaban). But this period must also have seen the origins of the widely copied *Futūḥ al-Shām* sagas ascribed to al-Wāḳidī, though these emerged in their present form only during the Crusades. The narratives collected and redacted by Sayf b. ʿUmar display a distinctive combination of serious purpose and folkloric storytelling. In fact there is no clear line separating "serious history" from folklore in the materials that have come down to us; we must take both as original and integral aspects in the understanding and articulation of their past by early Muslims.

It is precisely this unmistakable editorial/authorial presence which gives us pause about the way in which the late 2nd/8th century collectors used their sources, for we have no way of checking the accuracy or good faith of these collectors. It is true that the problem differs as between two distinct periods: (a) the life of the Prophet and the first seven decades of Islam, down to the end of the great civil war of 680-92; (b)

the Umayyad domination between 692 and the 'Abbāsid Revolution (747-50). In regard to the latter period, no one contends that the late 2nd/8th-century *akhbār* collectors simply invented the stories they tell, if only because the events of late Umayyad times were too recent. On the other hand, the collectors do report these events in an intensely partisan manner—not only because some (not all by any means) had close ties to the 'Abbāsid court, which actively sought to poison the memory of its predecessors, but also because their informants were themselves the survivors of many bitter conflicts in Umayyad times. We simply cannot say how far or in what ways the *akhbār* collectors of early 'Abbāsid times may have reshaped or elaborated the stories which they gathered. The major events at least are certainly not invented out of whole cloth, but how accurately do they reflect the original accounts of those who were involved in them? We can only guess. It is not even clear how much contemporary history was actually written down under the Umayyads; the *Fihrist* of Ibn al-Nadīm [*q.v.*] gives us only a few titles dealing with the period 700-50, and these were probably composed in the early decades of 'Abbāsid rule. On the other hand, the Umayyad court was clearly intensely interested in the decades before the reign of 'Abd al-Malik, since the events of that period were clearly essential to its claims to legitimacy. Rather than a developed (or even emerging) Umayyad historical literature, then, we have been given a very disparate body of recollections and statements, some originating within the Umayyad court, many put into circulation by its opponents.

If we may assume that narratives about events under the Umayyads, however reshaped for partisan and ideological purposes, are ultimately grounded in reality and can be linked to contemporary reporters, we can be far less confident about the nature of Umayyad-era historiography on the 1st/7th century. Existing evidence indicates that formal historical study and writing began in the decades following the second civil war (680-92), and was no doubt associated with the need to recover an authentic and authoritative past from the chaos and violence of those years. Moreover, at least some of this historical work was owed to Umayyad prompting and patronage, in particular the biographical materials on the Prophet collected by Ibn Shihāb al-Zuhrī (d. 124/742) and Mūsā b. 'Uḳba (d. after 141/758) [*q.vv.*]. It is undeniable that the Umayyad caliphs from 'Abd al-Malik on took an intense interest in emerging theological issues, in law, and in investigating and defining the early past of the Islamic community. In the light of the unrelenting challenges to their legitimacy from every quarter, they had no choice. It is now quite clear that the Umayyad caliphs claimed final (though perhaps not infallible) authority in matters of the faith. They could hardly take a slighter interest in the historical process through which they had risen to supreme authority over the community.

There was of course a counter-history of early Islam, and this clearly survives much more fully than the Umayyad version, due to the 'Abbāsid victory and their systematic purge of elements favourable to the old order. In both the pro-Umayyad and anti-Umayyad versions of Islam's beginnings, there are already clear traces of the covenant-betrayal-redemption paradigm. Having said all this, however, we simply do not know what the historical works of Umayyad-era historians looked like; we have fragments which may be more or less authentic, but these give us no idea of the whole collections from which they were drawn. Nor can we trace even these fragments back to the earlier authorities on which they based their statements with any confidence. A coherent body of historical tradition quite suddenly emerges under the Umayyads, but we cannot identify the raw materials out of which it was formed.

The primitive historiography (if we may call these accounts anything so formal as historiography) composed during the eight decades between Muḥammad's call and 'Abd al-Malik's consolidation of power poses problems which are not only far more severe but entirely different in nature. Both the accuracy and authenticity of every report attributed to this period are open to credible challenge. The problem is not that our texts are biased or partisan; it is a truism that every narrative represents events from some perspective, and hence encodes a complex body of ideologies, values, conceptual structures and cultural practices. But it is normally quite easy to decode these aspects of our texts, as Ignaz Goldziher demonstrated a century ago. The problem is rather that we do not know to what degree any given narrative transmits usable (albeit incomplete) information about the events which it claims to report—or sometimes, whether these events ever happened at all. A related problem is that of authenticity, i.e., quite apart from the issue of factuality, whether a given narrative actually goes back to its purported original reporter or whether it was first framed and circulated in a much later period. The parallels between archaic historical *akhbār* and the origins of *ḥadīth* are obvious, even though the structures and purposes of the two genres differ in many fundamental ways.

In short, we can only offer conjectural reconstructions of archaic historiography. The following comments should be taken in that light. We cannot speak of formal historical research—the systematic collecting and redacting of reports about events and persons—during the first eighty years of Islam. But Muslims must have been deeply aware of the titanic events through which they were passing, and of the profound changes in political institutions and patterns of life which these events represented. 1st/7th-century Muslims had to try to make sense of all this, and inevitably they did so through the genres of verbal expression familiar to them. First of all, they could draw on the kind of oral narrative practised among the tribes of ancient Arabia: prose recitals about memorable events, embellished and interpreted by verse (satirical, boasting or elegiac as the case might be). The point of these recitals was of course not meticulous accuracy but the values of manliness and tribal honour which they encoded. Particularly effective poetry often liberated itself from the events which had originally inspired it, and would henceforth stand on its own or be re-attached to new events. In another milieu, as Islamic practice became established among the newly converted tribesmen (and a few non-Arab converts), the mosque sermon quickly emerged as a vehicle for the interpretation of crucial events as well as a means of exhorting people to act. The themes of formal sermons were supplemented and reinforced by pious tales about the prophets and other religious heroes delivered by the *ḳuṣṣāṣ* (sing. *ḳāṣṣ* [*q.v.*]), both officially appointed and "self-employed". The templates for historical narrative in the mid-1st/7th century were thus provided by the *ayyām al-'arab, ḳiṣṣa, wa'z* and *khuṭba*, and (deployed not to narrate events but to interprete them) various genres of *shi'r*.

Such oral expression flowed spontaneously from those who had experienced the life of the Prophet,

the great conquests and the bitter civil strife of those decades. It could not be monopolised by the caliphs or any other central authorities, though these latter certainly tried to make their voice heard in the cacophony and to exert what little control they could. Some narratives seem to have been carefully composed from the outset, such as the pious exempla that demonstrate the stern morality and ardent faith of early Muslim heroes, or dramatic tableaux of confrontations between Muslim and infidel leaders. Precisely because these were effective moral tales, of course, they readily became *topoi* which could be attached to many different events by altering the protagonists and *mises-en-scène*. But even as details of fact were modified, the stereotyped plots, the lofty stylised language and the underlying religio-moral lessons would remain the same.

However, even apparently sober reportage about the conquests and civil wars is full of problems. Much of this material must have been remembered and passed on by participants in these events, but there was never a unified, official record of it; on the contrary, the original accounts were generated by thousands of men caught up in confusing situations and scattered across vast areas. Hence their stories about what they had seen or heard began to disintegrate almost as soon as they were told. By ʿAbd al-Malik's consolidation of power after 72/692, only scraps of authentic memory remained about the early conquests or the first civil war a half-century earlier. No doubt a few well-informed collectors could name the crucial events of that period, but no one could date them accurately or even specify the order in which they had occurred. As to minor or local events, it was impossible to separate fact from fiction. Often reporters could not even agree on which tribes or commanders had participated in which battles.

(It must be said that these remarks are far less applicable to the life of Muḥammad than to the events following his death. The Prophet was a uniquely significant subject, of course, but just as important, his memory was preserved among a highly self-conscious and relatively stable group—sc. the *Ṣaḥāba* or Companions and their successors in Medina—and at least in principle these could generate and transmit a coherent, reliable story about his life and teaching. Whether they actually did so is, of course, very much in dispute.)

We have so far focused on oral materials—battle stories, poetry, sermons, pious tales—as the stuff of 1st/7th century historiography. Was there any historical *writing* in this period? There is no unambiguous evidence of it, but we cannot completely exclude the possibility of informal efforts to record local or tribal accounts of major events. We can imagine but cannot confirm efforts to collect the narrative tradition of Ḥimṣ or Medina or Kūfa or Baṣra, or of the tribes of Tamīm or Kinda. It is probable in any case that efforts to build a written record (insofar as they existed) focused on the life and words of the Prophet. On the other hand, we do find some written materials (letters, treaties, administrative decrees) incorporated within the historical tradition, and a few documents (e.g. the famous "Constitution of Medina", the Ṣiffīn arbitration agreement, the substance if not the exact words of many peace treaties) are likely to be authentic. Likewise, our texts on the plan of Kūfa or the *dīwān* of ʿUmar seem to reflect real administrative arrangements from Islam's earliest decades. But in the final analysis we can say only this much. There was by the second civil war (62-72/683-92) a real and widely shared historical consciousness, including the kernel of the covenant-betrayal-redemption paradigm. However, there was as yet no coherent history of Islam's first decades nor any orderly effort to construct such a history. It would be, as we have seen, the work of Marwānid and early ʿAbbāsid times to collect and sift through accounts of Islam's beginnings, and to turn these disconnected bits and pieces into a coherent and persuasive whole.

Bibliography: Almost every title on the first three centuries of Islam could be listed, since every student of this period must wrestle with the nature and provenance of the sources. The essential documentation is in Ibn al-Nadīm, *Fihrist*, (esp. ch. 3); Ḥadjdjī Khalīfa; Brockelmann, I, S I; Sezgin, *GAS*, i; Shākir Muṣṭafā, *al-Taʾrīkh al-ʿarabī wa ʾl-muʾarrikhūn*, i, Beirut 1978; P.J. Auchterlonie, *Arabic biographical dictionaries: a summary guide and bibliography*, Durham 1987, See also the translators' prefaces and notes in E. Yarshater (general ed.), *The History of al-Ṭabarī* (38 vols., Albany, N.Y. 1985 ff.). L. Ammann, *Kommentiertes Literaturverzeichnis zu Zeitvorstellungen u. geschichtlichem Denken in der islamischen Welt*, in *WI*, n.s., xxxvii/1 (1997), 28-87 (comprehensive and important). General treatments of Islamic historiography: F. Rosenthal, *History of Muslim historiography*, Leiden 1952, 2nd ed. 1968; B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962; *Camb. hist Ar. lit.*, i (esp. chs. 3, 16, 17); Cl. Cahen, *History and historians*, in *Camb. hist. Ar. lit.*, iii, 188-233; R.S. Humphreys, *Islamic history: a framework for inquiry*, rev. ed. Princeton 1991, chs. 3, 4; T. Khalidi, *Arabic historical thought in the classical period*, Cambridge 1994. Among efforts to place early Islamic historiography in comparative context, see J. Wansbrough, *The sectarian milieu: content and composition of Islamic salvation history*, Oxford 1978; Humphreys, *Qur'anic myth and narrative structure in early Islamic historiography*, in F.M. Clover and Humphreys (eds.), *Tradition and innovation in late antiquity*, Madison, Wisc. 1989, 271-90; L.I. Conrad, *Theophanes and the Arabic historical tradition*, in *Byzantinische Forschungen*, xv (1990), 1-44.

The first serious (still essential) analyses of the earliest phases of Arabic-Islamic historiography are Wellhausen, *Prolegomena zur ältesten Geschichte des Islams*, Berlin 1899; idem, *Das arabische Reich und sein Sturz*, Berlin 1902, tr. M.G. Weir, *The Arab kingdom and its fall*, Calcutta 1927; L. Caetani, *Annali*. A modern statement of this approach in ʿAbd al-ʿAzīz al-Dūrī, *Baḥth fī nashʾat ʿilm al-taʾrīkh ʿind al-ʿArab*, Beirut 1960, tr. L.I. Conrad, *The rise of historical writing among the Arabs*, Princeton 1983. The Wellhausen-Caetani thesis has been challenged from both sides. The integrity and authenticity of early historiography has been defended by N. Abbott, *Studies in Arabic literary papyri. I. Historical texts*, Chicago 1957, and Sezgin, *GAS*, i, 237-56. A more radical critique was sketched by R. Brunschvig, *Ibn ʿAbdalḥakam et la conquête de l'Afrique du Nord*, in *AIEO Alger*, i (1942-7), 108-55, and J. Schacht, *On Mūsā ibn ʿUqba's Kitāb al-maghāzī*, in *AO*, xxi (1950-3), 288-300. Though not dealing with historiography directly, J. Schacht, *Origins of Muhammadan jurisprudence*, Oxford 1950, has been seminal. E.L. Petersen, *ʿAlī and Muʿāwiya in early Arabic tradition*, Copenhagen 1964, has broad implications. The most sceptical analyses are those of P. Crone, *Slaves on horses: the evolution of the Islamic polity*, London and New York 1980; eadem, *Meccan trade and the rise of Islam*, Princeton 1987; Suliman Bashear (Sulaymān Bashīr), *Mukaddima fi ʾl-taʾrīkh al-ākhar: naḥwa ḳirāʾa djadīda li ʾl-riwāya al-islāmiyya*, Jerusalem 1984; L.I. Conrad,

The conquest of Arwad, in idem and A. Cameron (eds.), *The Byzantine and early Islamic Near East. I. Problems in the literary source material*, Princeton 1992, 317-401. An important counter-revisionist interpretation: F.M. Donner, *Narratives of Islamic origins: the beginnings of Islamic historical writing*, Princeton 1997.

On the forms and motifs deployed in early historiography: A. Noth, *Quellenkritische Studien zu Themen, Formen u. Tendenzen frühislamischer Geschichtsüberlieferung. I*, Bonn 1973, 2nd rev. ed. tr. M. Bonner, *The early Arabic historical tradition: a source-critical study*, Princeton 1994; S. Leder, *Authorship and transmission in unauthored literature*, in *Oriens*, xxxi (1988), 67-81; idem, *Features of the novel in early historiography*, in *Oriens*, xxxii (1990), 72-96; idem, *The literary use of the khabar: a basic form of historical writing*, in Conrad and Cameron (eds.), *op. cit.*, 277-315.

On the problem of oral vs. written transmission, see W. Caskel, *Aijām al-ʿArab, Studien zur altarabischen Epik*, in *Islamica*, iii, Suppl. (1930), 1-99; G. Widengren, *Oral tradition and written literature among the Hebrews in the light of Arabic evidence*, in *AO*, xxiii/3-4 (1959), 200-62 (an application of Caskel's study to O.T. narrative literature); G. Schoeler, *Die Frage der schriftlichen o. mündlichen Überlieferung der Wissenschaften im frühen Islam*, in *Isl.*, lxii/2 (1985), 201-30; idem, *Weiteres zur Frage der schriftlichen oder mündlichen Überlieferung der Wissenschaften im Islam*, in *Isl.*, lxvi/1 (1989), 38-67; idem, *Mündliche Thora und Hadīt: Überlieferung, Schreibverbot, Redaktion*, in *Isl.*, lxvi/2 (1989), 213-37; idem, *Schreiben und Veröffentlichen: zu Verwendung und Funktion der Schrift in den ersten islamischen Jahrhunderten*, in *Isl.*, lxix/1 (1992), 1-43.

History and *ḥadīth* are distinct but intertwined. In addition to Schacht, *Origins*, see Abbott, *Studies in Arabic literary papyri. II. Qurʾānic commentary and tradition*, Chicago 1967; Sezgin, *GAS*, i, 53-84; G.H.A. Juynboll, *Muslim tradition: studies in chronology, provenance, and authorship of early* ḥadīth, Cambridge 1983; H. Motzki, *Die Anfänge der islamischen Jurisprudenz: ihre Entwicklung in Mekka bis zur Mitte des 2./8. Jahrhunderts*, Stuttgart 1991. *Sīrat al-nabī* has special problems of its own [see MUḤAMMAD]; access to the immense literature can be found in U. Rubin, *The eye of the beholder: the life of Muhammad as viewed by the early Muslims*, Princeton 1995; G. Schoeler, *Charakter u. Authentie der muslimischen Überlieferung über das Leben Muhammads*, Berlin 1996.

Our knowledge of Umayyad historiography still rests on Wellhausen, *Das Arabische Reich*; see also U. Sezgin, *Abū Miḫnaf: ein Beitrag zur Historiographie der umaiyadischen Zeit*, Leiden 1971. On early ʿAbbāsid historiography, J. Lassner, *The shaping of Abbasid rule*, Princeton 1980; idem, *Islamic revolution and historical memory: an inquiry into the art of ʿAbbāsid apologetics*, New Haven 1986; Leder, *Das Korpus al-Haiṯam ibn ʿAdī (st. 207/822). Herkunft, Überlieferung, Gestalt früher Texte der Aḫbār Literatur*, Frankfurt am Main 1991. For studies on specific historians (still very scattered), see the relevant articles in this Encyclopaedia under their names. (R.S. HUMPHREYS)

(b) The central and eastern lands 950-1500. The death of al-Ṭabarī does not quite spell the end of the "ancient" tradition of Arabic historiography; in the following centuries we find a few scholars who still understand and employ it, most notably the Andalusian Ibn Ḥubaysh (504-84/1110-88), who restudied the traditions on the 1st/7th-century conquests, and the Cairene (albeit of Andalusian ancestry) Ibn Sayyid al-Nās (671-734/1273-1334 [*q.v.*]), who was able to add important archaic materials to the lives of the Prophet composed by Ibn Hishām and al-Wāḳidī. But on the whole, the middle periods witness a sea change in the ways in which the past was imagined and constructed, and even in those aspects of the past which were thought to be appropriate objects of original study.

First, by the mid-4th/10th century history was beginning to be written in two languages, Persian as well as Arabic. The difference between the two is not merely linguistic; almost from the beginning each language embodies a distinctive cultural tradition and body of historiographic practices. In particular, Persian-language writers tend to draw far more heavily than their Arabic-writing counterparts on neo-Sāsānid themes, not only for rhetorical ornament or exemplary tales but for the underlying paradigms and narrative patterns which govern their accounts. Persian-language historians also focus on building a long, unified narrative, and pay relatively little attention to precisely dated chronological sequences of events (see further, 2. below). In contrast, the majority of Arabic-language writers deploy (either explicitly or very close to the surface) an annalistic framework. They are typically concerned to place each event in the right year, ideally with a precise day and month; their goal is thus a chronologically-ordered repertory of discrete and often very disparate events. In order to maintain a degree of continuity and coherence as they move from one year to the next, they rely chiefly on a few simple rhetorical devices, e.g., "as we said under the events of the preceding year. . . ."

Having noted these contrasts in approach and structure, however, we must recognise that both Arabic and Persian-writing historians were affected by the cultural changes and grave political convulsions of the early 4th/10th century. After al-Ṭabarī, only a few historians are still interested in seeking out new materials on the first 250 years of Islamic history. The crucial question confronting 3rd/9th-century historians had been the legitimacy of the ʿAbbāsid Caliphate— and more broadly, the fundamental legitimacy of the religious and political evolution of the *umma* as a whole. After the political catastrophes of the caliphate of al-Muḳtadir (295-320/908-32), however, these issues no longer seemed urgent and compelling. Henceforth, early Islamic history was typically covered through paraphrases or abridgments of al-Ṭabarī, though a few writers would supplement his compilation with other sources. For example, ʿIzz al-Dīn Ibn al-Athīr (555-630/1160-1233 [*q.v.*]) drew on al-Azdī's *Taʾrīkh al-Mawṣil* and al-Balādhurī's *Ansāb al-ashrāf*, but both of these were roughly contemporaneous with al-Ṭabarī. Even though many of al-Ṭabarī's early sources were still extant in substantial part, Ibn al-Athīr made no effort to use them.

Rather, historians more and more turned their attention to political and moral admonition through the recounting of recent and contemporary events; history was to be philosophy teaching by example. This was, of course, the view of Classical Antiquity, but the possibility of any direct influence is problematical at best, though it should not be dismissed without examination. Clearly Arab-Muslim historians never read Thucydides, Polybius or Plutarch; on the other hand, by the mid-4th/10th century the Greek ethical-political tradition which underlay Classical historiography was well known among philosophical circles in Baghdād and elsewhere. In this regard it is pertinent to recall that the historian Miskawayh (d. 421/1030 [*q.v.*]) was also the author of a very Aristotelian treatise on ethics, the *Tahdhīb al-akhlāḳ*, amongst a

number of other Aristotelian treatises, such as his answers to Abū Ḥayyān al-Tawḥīdī's *al-Hawāmil wa 'l-shawāmil*.

Typically, a historian would now copy or paraphrase (sometimes with attribution, more often without) one or a few already existing chronicles for his account of events down to the most recent decades. Once he reached his own lifetime, he would complete his source or sources by composing a "continuation" (*dhayl* [see ṢILA]). This segment would be based on direct observation recorded in a personal journal, oral information gathered from friends, official reports, or even somebody else's contemporary chronicle; the exact mix of sources would, of course, vary according to the writer's profession and social standing. In this way, the *dhayl* became the real focus of the historian's efforts. Historians who composed large-scale works might draw on a number of older chronicles for the earlier sections of their work, but as a rule they would cite these in sequence rather than trying to blend them into a unified synthesis. Good examples of this procedure are the *Mir'āt al-zamān* of Sibṭ Ibn al-Djawzī (582-654/1182-1256 [*q.v.*]) and the *Ta'rīkh al-duwal wa 'l-mulūk* of Ibn al-Furāt (735-807/1334-1405 [*q.v.*]). When carefully done (and both Sibṭ and Ibn al-Furāt were conscientious scholars) works of this sort can be invaluable, since they preserve almost verbatim major texts that are otherwise lost.

A few historians did create real syntheses, however, i.e, integrated narratives which draw on a wide variety of sources, and which reflect a consistent perspective, interpretation, and literary style—in short, an authentic authorial voice. As examples, we can cite the universal chronicles of Ibn al-Athīr (*al-Kāmil fi 'l-ta'rīkh*) and Ibn Khaldūn (732-808/1332-1406, *K. al-'Ibar*), the dynastic history of Ibn Wāṣil (604-97/1208-98 [*q.v.*], *Mufarridj al-kurūb fī akhbār Banī Ayyūb*), or the remarkable compilations of Taḳī al-Dīn al-Maḳrīzī (765-845/1363-1442 [*q.v.*]) on the history of Islamic Egypt. These and some other examples are outstanding achievements of historianship on many levels, but the very skill of their authors in blending a variety of sources into a unified text often makes it very difficult to determine the provenance of their information. Moreover, their very stylistic unity may lead to serious anachronisms in administrative terminology, titles, etc. This is a particularly acute problem in al-Maḳrīzī's account of the Ayyūbids and early Mamlūks (where we can correct his anachronisms, since so many of his sources survive) and the Fāṭimids (where for the most part we cannot).

The new emphases and methods of middle-period historians led to the development of new genres. They retained the "universal chronicle" of the preceding period, but to this they added the political biography, the dynastic chronicle and local history. The former two are of course closely related in structure and approach, since both focus on the deeds of rulers, portrayed as outsized figures who dominate the political stage. On the other hand, such works are hardly cookie-cutter productions; they vary enormously in terms of size, scope, organisation, rhetoric (from a simple, almost colloquial style to an extremely florid one), and political stance (some are sycophantic, others highly critical). Naturally enough, works of this kind were often composed by bureaucrats, who both regarded dynasties as a self-evident object of inquiry and had privileged access to the sources of information needed to write about them effectively. Some of these court historians had high office in the régimes they served, like 'Imād al-Dīn al-Kātib al-Iṣfahānī (519-97/1125-1201) and Ibn 'Abd al-Ẓāhir (620-92/1223-92), privy secretaries to Ṣalāḥ al-Dīn and Baybars respectively. Others like Miskawayh were men of middling rank. In Mamlūk Egypt and Syria, a number of important dynastic histories were composed by men who had spent their careers as members of the military élite or were at least closely affiliated with it—key examples would be the retired *amīr* Baybars al-Manṣūrī (d. 725/1325) and Ibn Taghrībirdī (812-74/1409-70 [*q.v.*]), son of the *atābak al-'asākir* (supreme general of the army) under the sultan al-Nāṣir Faradj—but there are many others. Since these ex-soldiers were typically Turks rather than native speakers of Arabic, their literary efforts were often regarded with some disdain by the indigenous *'ulamā'* and literati; even so, their writings are richly detailed and informed by real political acumen. It must be admitted that some of the best dynastic chroniclers were *'ulamā'* by profession rather than bureaucrats, though they normally had close ties to the courts about which they wrote; here the names Ibn al-Athīr (the *Ta'rīkh al-bāhir*, on the Zangids of al-Mawṣil), Ibn Wāṣil and al-Maḳrīzī may be cited yet again.

Local history is not a genre but a focus of concern—the region (sometimes a single city and its immediate hinterland, sometimes a broad province) where a given author lived, and normally where his family had sunk roots for many generations past. The rise of local history obviously reflects a world where the fate of the *umma* as a whole, as that fate is embodied in and symbolised by the universal caliphate, is no longer the only way or most important way of envisioning things. For the writers of local history, the *umma* is most immediately embodied in the hundreds of communities that constitute it. The rise of local history had multiple causes; most fundamentally, however, it must have reflected the progress of conversion to Islam outside the few metropolitan centres where it had been established since the early caliphate, a process that was well advanced in most regions by the mid-4th/10th century.

Local history often takes the form of a political chronicle. The events recounted may stretch back into the remote pre-Islamic past, but the author's emphasis tends to be on more recent decades. Local chronicles of this sort are typically written in simple, rather conversational prose—not surprising, since they were produced outside the pomp and ceremony of the princely courts and did not aim to flatter the pretensions of dynasts. They were typically composed in cities and regions with a strong sense of identity and a tradition of local autonomy, in particular the cities of northern 'Irāḳ, the Djazīra and Syria. An important early example would be the *Ta'rīkh al-Mawṣil* of al-Azdī (d. 334/946), but the most impressive work in this form may well be the *Dhayl ta'rīkh Dimashk* of Ibn al-Ḳalānisī (465-555/1073-1160 [*q.v.*]), a richly detailed and wonderfully partisan account of Saldjūḳid Damascus, with its turbulent court, factions of local notables, and popular militias. The decades after the death of the *atābak* Ṭughtigin (522/1127 [*q.v.*]) have almost the immediacy of a journal. Some decades later the Aleppan notable Kamāl al-Dīn b. al-'Adīm [see IBN AL-'ADĪM] (588-660/1192-1262) composed a similar work on his native city, *Zubdat al-ḥalab fī ta'rīkh Ḥalab*, though it embodies a more respectful, almost semi-official stance toward the Ayyūbid princes who governed the city during his lifetime. A work conceived as a regional history, but on a scale which links this modest genre to the universal chronicle, is *al-Nudjūm al-zāhira fī mulūk Miṣr wa 'l-Ḳāhira* of Ibn

Taghrībirdī, a vast survey of Islamic Egypt which begins with the Arab conquest and comes down to the mid-9th/15th century.

Apart from the chronicle form, the perspectives of local history were also embodied in the biographical dictionary. Such compilations would normally focus on the noted men of religion (with a smattering of sultans and *amīrs*) who had resided in a given city; in several cases these works are prefaced with a substantial topographical description. This genre of local history did not necessarily reflect a tradition of political autonomy but was rooted in local loyalties, the desire of urban notables to demonstrate that their native cities were major centres of Islamic piety and learning. The model for this genre was the immense *Ta'rīkh Baghdād* of al-Khaṭīb al-Baghdādī (392-463/1002-71 [*q.v.*]), which contains some 7,800 biographical entries. His example was followed closely about a century later by Ibn ʿAsākir (499-571/1105-76 [*q.v.*]) in the *Ta'rīkh madīnat Dimashk*, a work which deals with a far smaller city but on an even larger scale, with more than 8,000 entries. Ibn ʿAsākir clearly knew al-Khaṭīb al-Baghdādī's work intimately, and drew on it extensively though not slavishly for his entries on scholars who had come to Damascus from ʿIrāḳ. Apart from Muslim men of religion and rulers, Ibn ʿAsākir's work includes a number of pre-Islamic prophets; taken as a whole, it is thus a kind of sacred history of Syria, a register of those persons through whom God's revelation had been manifested and upheld in that land since the Creation.

Both Ibn ʿAsākir and al-Khaṭīb were primarily *fuḳahā'* and *muḥaddithūn*, and their compilations are narrowly focused on men of religion, with a very sparse number of entries for rulers and generals. Moreover, their entries are highly formulaic; they deal chiefly with a subject's teachers and students, the *ḥadīth*s he transmitted, and the barest facts of his life, sc. his countries of residence and date of death. Only in passing do they give us information on his career, and they contain a minimum of anecdotes (though some of those which they include are very telling). In partial compensation, Ibn ʿAsākir's dictionary does contain a substantial volume (some 800 entries) devoted to women, and from these we can glean some notion of the mode and extent of women's participation in the formal religious life of their society. In brief, these vast collections tell us a great deal about the academic life and intellectual traditions of their respective cities but give indirect testimony at best on politics and social structures. In contrast, Ibn al-ʿAdīm (a bureaucrat as well as a scholar) drew not only on biographical sources but also on a very rich body of political chronicles and geographical-administrative texts in composing his *Bughyat al-ṭalab fī ta'rīkh Ḥalab* (only partly extant). His work is thus an invaluable mirror of the political and social history of North Syria during the first six centuries of Islam. Moreover, Ibn al-ʿAdīm's habit of citing his sources by author and title gives us some sense of the extraordinary riches of Aleppo's libraries before the Mongol invasions. Ibn al-ʿAdīm's model was followed, on an equally vast scale, by al-Maḳrīzī in his *K. al-Muḳaffā al-kabīr*, an unfinished biographical dictionary of prominent Egyptians since the rise of the Fāṭimids.

Local history produced an intriguing and very original hybrid in the urban topography, which used a systematic catalogue of a city's important sites and monuments as the framework for the presentation of a wide variety of historical and biographical materials. Typically, an urban topography would proceed site by site, describing the circumstances under which a particular edifice was erected, then appending biographical sketches of the key persons associated with that monument. In this way the physical fabric of the city is linked to the men and women who created and sustained it, and embodies their purposes, values, and acts. The origins of the urban topography can be traced to the *faḍā'il al-madīna* literature (which first appears in the 4th/10th century) and to the topographical surveys attached by al-Khaṭīb al-Baghdādī and Ibn ʿAsākir to their biographical dictionaries. Only in the Mamlūk period, however, do we see the shaping of a fully developed genre. The earliest example (though in many ways still a transitional work) is found in the sections on Damascus and Aleppo of the administrative-geographical survey of ʿIzz al-Dīn b. Shaddād (d. 684/1285 [see IBN SHADDĀD]), *al-Aʿlāḳ al-khaṭīra fī dhikr umarā' al-Shām wa 'l-Djazīra*. The new genre culminated in the 9th/15th century with a group of systematic and remarkably rich works on Cairo, Damascus, Aleppo and Jerusalem. Particularly impressive is ʿAbd al-Ḳādir al-Nuʿaymī (d. 927/1521), *Tanbīh al-ṭālib wa-irshād al-dāris fī mā fī Dimashk min al-djawāmiʿ wa 'l-madāris*, a meticulously assembled compendium of Damascene historical scholarship in the Ayyūbid and Mamlūk eras. More idiosyncratic is the famous *al-Mawāʿiẓ wa 'l-iʿtibār bi-dhikr al-khiṭaṭ wa 'l-āthār* (universally referred as *al-Khiṭaṭ*) of al-Maḳrīzī, which covers all of Egypt but inevitably concentrates on the city of Cairo, whose history and monuments fill at least two-thirds of the book. The *Khiṭaṭ* really transcends its genre; its immense fund of information on architecture and urban topography, administrative and military institutions, and economic life makes it as close to a "total history" of Egypt as mediaeval Islamic historiography knew how to produce.

The wealth of texts devoted to specific dynasties or regions should not obscure the continuing vitality of the "universal chronicle" throughout the Middle Periods. Indeed, many of the most characteristic and impressive works composed during these centuries fall in this category; the names of al-Masʿūdī (d. 345/956 [*q.v.*], in many ways a transitional figure), Miskawayh, Ibn al-Djawzī (d. 597/1201), Ibn al-Athīr, al-Dhahabī (673-748/1274-1348), Ibn Kathīr (d. 774/1373), and Ibn Khaldūn suffice to make the point. However, middle-period works of this kind depart from the model established by al-Ṭabarī in several ways. Many make no effort to go back before the rise of Islam, and those which do generally deal with pre-Islamic antiquity in a far more summary fashion than al-Ṭabarī had. (Al-Masʿūdī's *Murūdj al-dhahab wa-maʿādin al-djawhar* and *Kitāb al-Tanbīh wa 'l-ishrāf*, written only a generation after al-Ṭabarī, are marked exceptions to this generalisation.) None of the middle-period chroniclers deploys al-Ṭabarī's rigorous *ḥadīth* methodology, and few cite their sources even in a general way. On the contrary, even the most scrupulous are content to paraphrase al-Ṭabarī until they reach the late 3rd/9th century, sometimes supplemented by whatever additional materials lay conveniently at hand. This practice reflects not so much intellectual laziness as a consensus (among Sunnīs if not Shīʿīs) that the crucial issues concerning the *umma*'s early history had been settled and need not be re-examined in any systematic way.

If these chroniclers bring little original content to their accounts of early Islamic history, however, they do display some important formal innovations. Ibn Khaldūn, as always *sui generis*, abandons the usual annalistic framework in favour of an analytic survey

organised by dynastic "clusters": the Caliphate; North Africa and Andalus before the Almoravids; Syria, Mesopotamia and Persia before the Saldjūḳids; the Saldjūḳids and their successors, including the Mamlūks; finally, the Berber polities of the Maghrib. This organisation undeniably makes his chronicle repetitious and confusing to use, but it also shows his grasp of the underlying structures of mediaeval Islamic political life. On what might seem a more mechanical level, Ibn al-Djawzī [*q.v.*] (*al-Muntaẓam fī ta'rīkh al-mulūk wa 'l-umam*) tried to integrate the very disparate approaches represented by the annalistic chronicle and the biographical dictionary by appending alphabetically-arranged obituaries of notable figures (including scholars) to the events of each year. Ibn al-Djawzī's innovation clearly met a strongly felt need and was very widely used; al-Dhahabī's immense *Ta'rīkh al-Islām* and Ibn Kathīr's *al-Bidāya wa 'l-nihāya*, to name only two examples, are perhaps as valuable for their biographical materials as for their narratives of events, important and well-crafted as these are. Formally, Ibn al-Athīr's *al-Kāmil fī 'l-ta'rīkh* is perhaps the most conservative of all the major universal chronicles, but it is also a superbly balanced and highly detailed survey of the history of all the lands and peoples of Islam, from the Atlantic coast to Central Asia. Ibn al-Athīr combines vast range with lucid organisation, direct and concrete diction, political astuteness and more than a touch of wit and irony. His work is certainly one of the most impressive achievements of premodern historiography in any culture.

The universal chronicle in Islam stretched back to the 3rd/9th century; the universal biographical dictionary was an innovation of the 7th/13th century, and in particular of Ibn Khallikān (d. 673/1274 [*q.v.*]). His *Wafayāt al-a'yān fī anbā' abnā' al-zamān* follows the formal conventions of the vast Arabic biographical literature that already existed by his day, but he departs from his models in many ways. First, although his documentation is very rich, he eschews the rigorous method of the registers of *'ulamā'* and *muḥaddithūn* that had been and would remain so important in the religious sciences, i.e. the kind of biography that ensured the integrity of religious knowledge by placing every scholar within a chain of masters and disciples reaching from the present back to the first generations of Islam. On the contrary, he favours snatches of verse and clever anecdotes which situate his subjects within the universe of mediaeval Islamic religious, moral, and aesthetic values. Second, he does not restrict himself to a single class of subjects, e.g. *'ulamā'* or poets or Ṣūfīs; rather, he hoped to include men of high distinction (there are no separate entries for women in his compilation) in every field which conferred cultural prestige in the 7th/13th century Islamic world: politics and war, *fiḳh*, Ṣūfism, poetry and literature. Third, he is highly selective (855 major entries in the 'Abbās edition), but he tries to include people from all corners of the Muslim world; there is inevitably some bias in favour of men from Syria and 'Irāḳ, but it is not for lack of trying. In the end, he gives us a wonderfully varied tableau of mediaeval Islamic culture as this culture was understood by one of its most characteristic figures.

Ibn Khallikān had many admirers but no real followers, in that no one else attempted his mix of solid scholarship, literary appeal, breadth and selectivity, but there were several "continuations" of his work in the 8th/14th century. Among these was Ibn Shākir al-Kutubī's *Fawāt al-Wafayāt*, but perhaps the most remarkable is *al-Wāfī bi 'l-Wafayāt* of Khalīl b. Aybak al-Ṣafadī (696-764/1297-1363 [*q.v.*], the son of a Mamlūk *amīr* who made his career as a government clerk). This immense work aspires to give a biography of everyone worth remembering in the history of Islam, from the Prophet down to al-Ṣafadī's own day. Most biographical compilations have more modest goals. Ibn Taghrībirdī's *al-Manhal al-ṣāfī wa 'l-mustawfī ba'd al-Wāfī* contains some 2,500 lives of prominent Mamlūk *amīrs* and bureaucrats. With *al-Durar al-kāmina fī a'yān al-mi'a al-thāmina*, Ibn Ḥadjar al-'Asḳalānī (773-852/1372-1449 [*q.v.*]) created a new form, the "centenary dictionary" devoted to notables throughout the Mamlūk Sultanate who had died during a given Hidjrī century. This innovation was quickly picked up by Ibn Ḥadjar's student al-Sakhāwī (830-902/1427-97 [*q.v.*])—who flavoured it with his own pungent judgments about his contemporaries—and it continued to flourish in the Arab lands up to and during Ottoman times. These centenary works were on no small scale: al-Sakhāwī's *al-Ḍaw' al-lāmi' fī a'yān al-ḳarn al-tāsi'* contains almost 12,000 entries (including a volume devoted to women).

We have so far labelled the writers of historical works as historians, and it is thus important to recognise that, until well into Ottoman times at least, there was no historical profession in Islam. That is, history was not recognised as a formal science with a specific subject matter, method and technique which could be taught and transmitted; nor was there any institutionalised way for a would-be historian to acquire the knowledge and skills of his craft; nor did anyone actually expect to make a living by working as a historian. History was neither a subject in the schools nor an element in any regular curriculum. History was the work of self-taught amateurs, whose regular professions (as noted above) lay elsewhere.

It is hard to explain why history did not become a recognised science, either secular or religious, in view of the immense body of literature produced by Muslim historians and the solid religious and intellectual reputations which these enjoyed. But that is the case; many scholars regarded history as a vain and trivial pursuit, "no more than information about... occurrences of the remote past, elegantly presented and spiced with proverbs," as Ibn Khaldūn ruefully said (Ibn Khaldūn, tr. Rosenthal, i, 6). As noted above, al-Ṭabarī had tried to show that history could be studied with the same methodological tools and rigour as *ḥadīth*. But insofar as he tried to make history one of the religious sciences, he failed, or at least no one else took up the challenge after him.

Only in the late 8th/14th century did Ibn Khaldūn argue (this time from an Aristotelian perspective) that history could be treated as a valid science based on philosophical premises and methods. Historical knowledge, he asserted, was not the mere compiling of factual data about the past; rather, it should be a systematic account of the principles governing human society. These principles were not knowable *a priori* but had to be elicited from factual data by a complex process of induction and deduction. For this reason, an accurate body of fact was the precondition for historical knowledge, even though facts *per se* were not the object of historical inquiry. The problem of obtaining and evaluating factual knowledge was thus crucial to the whole enterprise, and to this problem Ibn Khaldūn devoted some very interesting though ultimately inconclusive arguments.

Ibn Khaldūn's effort to create a science of history foundered, not because of questions left unanswered by his theory, but because no one else really felt like

taking up such issues. On a practical level, however, he had a considerable impact; he was highly esteemed by 9th/15th-century Egyptian historians, who show a far greater awareness of social processes and the interactions of élite politics and society at large than had their predecessors. And in a later age, Ottoman historians turned to him for insight on the causes of the rise and decline of empires. By the time of the Ottoman conquest, then, Arabic historiography continued to be a dynamic field of study and form of literary expression. This is so not only because of the continuing volume of historical production, but even more because Arab-Islamic culture was continuing to generate new and innovative ways of perceiving and constructing its past.

Many of the most useful surveys and critical assessments are found in monographs dealing with other topics: see esp. G. Makdisi, *Ibn ʿAqīl et la résurgence de l'islam traditionnaliste*, Damascus 1963; N. Elisséeff, *Nur al-Din*, i, Damascus 1967; R.S. Humphreys, *From Saladin to the Mongols*, Albany 1977; C.F. Petry, *The civilian elite of Cairo in the Later Middle Ages*, Princeton 1981. Studies on the historiography of particular periods are still rare. On the Fāṭimids, see A. Hamdani, *Fatimid history and historians*, in *Camb. hist. Ar. lit.*, iii, 234-47. On the Ayyūbids, D. Morray, *An Ayyūbid notable and his world: Ibn al-ʿAdīm and Aleppo*, Leiden 1994. Mamlūk historians have received more attention: U. Haarmann, *Quellenstudien zur frühen Mamlukenzeit*, Freiburg-im-Breisgau 1970; D.P. Little, *Introduction to Mamluk historiography*, Wiesbaden 1970; Li Guo, *Mamluk historiographic studies: the state of the art*, in *Mamluk Studies Review*, i (1997). Understanding the cultural and political meanings of Middle-Period historical writing requires going beyond historiographic studies in the narrow sense. On the biographical dictionary, see Chamberlain, *Knowledge and social practice in medieval Damascus*, Cambridge 1994. On the political language of Miskawayh and his contemporaries, R.P. Mottahedeh, *Loyalty and leadership in an early Islamic society*, Princeton 1980. Th. Bianquis, *Damas et la Syrie sous la domination fatimide*, 2 vols., Damascus 1986-9, provides a "close reading" or "explication du texte" of Ibn al-Ḳalānisī, Ibn ʿAsākir and al-Maḳrīzī. Editions of the works of particular historians, along with studies devoted to them, are given under the appropriate entries.

(R.S. Humphreys)

(c) The period 1500 to 1800. [See Suppl.].

(d) The 19th and 20th centuries.

By the 1840s the now-traditional forms and perspectives of Arabic-Islamic historiography, rich and varied as they were, no longer seemed adequate in face of the radical challenges posed by Europe to every aspect of life in the Islamic world. By the beginning of the 20th century, a few historians were beginning to model their work (with mixed but not inconsiderable success) on European approaches and research methods. The early 1900s witnessed the founding of universities on the European model, and as an inevitable consequence, a growing professionalisation of history. That movement has continued down to the present, so that now (as in Europe and America) the writing of history has become largely an academic enterprise, with all the gains and losses that this implies.

A. The 19th century.

The challenge of Europe was, of course, felt most immediately in political and economic life, but that in itself might have compelled few changes in historical vision; Muslim intellectuals had faced any number of equally acute crises on this plane over the centuries, and the deeply rooted but still flexible conceptual tools and cultural resources of their societies had permitted them to address these quite effectively. The European cultural challenge cut deeper, however. Felt only by a tiny minority as late as the mid-19th century, it had become inescapable to almost everyone (at least in the major urban centres) by the beginning of the 20th. It not only threatened the political independence and economic autonomy of Muslim societies but assailed the very foundations of Muslim identity.

The rapid intellectual readjustments of the late 19th century, of course, affected historical writing as well, although the works produced in this genre do not reach the level of the political and cultural essays of Rifāʿa Rāfiʿ al-Ṭahṭāwī (1801-73 [*q.v.*]), Djamāl al-Dīn al-Afghānī (1839-97 [*q.v.*]), or Muḥammad ʿAbduh (1849-1905 [*q.v.*]). This is due in large part no doubt to the fact that history continued to be (as it always had been in Muslim countries) the work of amateurs, and was seldom attempted moreover by the leading intellectuals of the age. As one might expect, the shift toward new forms and approaches began in Cairo and Istanbul, the two largest cities in the region, the seats of the most ambitiously reformist régimes, and the places which were most directly and profoundly exposed to Western pressures.

As in so many spheres during the 19th century, Cairo was the first and most important centre of a changing historiography. Cairo had, in fact, produced the last great work in a traditional mould, the *ʿAdjā'ib al-āthār* of ʿAbd al-Raḥmān al-Djabartī (1753-1826 [*q.v.*]). Al-Djabartī witnessed the catastrophic self-destruction of the Mamlūk beylicate in the late 18th century, the shock of the French occupation in 1798-1801, and the tumultuous changes forced on the country by Muḥammad ʿAlī (*r.* 1805-48 [*q.v.*]). He was an acute observer, but he regarded none of this as progress, and he was content to work within the chronicle/biographical dictionary framework bequeathed to him by the great Egyptian historians of the Mamlūk Sultanate.

Though an illiterate soldier, Muḥammad ʿAlī had much to do with the rise of an altered historical consciousness. Quite apart from his radical military, administrative and economic innovations, he took the risk of sending student missions to study in France, thereby exposing at least a few of his subjects to the thought and culture of contemporary Europe. No less important was his founding of the Translation Bureau (under the directorship of al-Ṭahṭāwī), which in spite of its many vicissitudes rendered many works of medicine, engineering, geography and even history into Turkish and Arabic. To be sure, the few historical works chosen for translation (e.g. Montesquieu's *Considérations sur les causes de la grandeur des Romains et de leur décadence*, Voltaire's lives of Charles XII and Peter the Great) represented the Enlightenment, not the new scientific history of Ranke or the romantic nationalism of Michelet. Even so, they suggested fundamentally new ways of imagining and representing the past.

The first major history in Arabic to reflect new possibilities and tensions was *al-Khiṭaṭ al-tawfīḳiyya al-*

djadīda (20 vols., Cairo 1886-8) by ʿAlī Mubārak (1824-93), the engineer who oversaw the Khedive Ismāʿīl's ambitious revamping of Cairo. Modelled to some degree on the classic work by Taḳī al-Dīn al-Maḳrīzī, it is a remarkably rich miscellany of historical-biographical information, geographical description, and administrative data. Conceptually and structurally conservative (like al-Maḳrīzī's work, it is organised by toponym), its contents nevertheless reflect many aspects of the new order created by the Khedive and his talented director of public works. A hybrid work of this kind could not generate many successors, though the *Taḳwīm al-Nīl* (6 vols., Cairo 1916-36) of Amīn al-Sāmī (*ca.* 1860-1941) comes closest in spirit and content. Like al-Ṭahṭāwī and ʿAlī Mubārak, al-Sāmī spent his life in loyal service to the régime, chiefly as an educator. He was director of the government teachers' college (Dār al-ʿUlūm [*q.v.*]) under Tawfīḳ and ʿAbbās II, and was appointed to the Senate by King Fu'ād I.

In Egypt, the political and ideological crisis of the ʿUrābī period proved to be, in the long run, a turning point, but for a time one sees only limited results, due in large part to the stifling of political life under Lord Cromer until almost the turn of the century. An exception to this generalisation would be Salīm al-Naḳḳāsh's passionate, richly detailed, but still little studied history of the ʿUrābī Revolt, *Miṣr li 'l-Miṣriyyīn* (6 vols., Alexandria 1884), based heavily on government documents and trial proceedings. By the end of the century we can perceive a marked shift from neo-traditional to contemporary European models of historiography. Of the new historians, by far the most successful and widely read was the staggeringly prolific Syrian immigrant Djurdjī Zaydān (1861-1914 [*q.v.*]). He edited several journals and wrote in many genres; among his works the most significant in the present context is his *Ta'rīkh al-tamaddun al-islāmī* (5 vols., Cairo 1902-6). This is less an original work of scholarship than a popular synthesis derived in large part from European Orientalist scholarship. Even so, it is a very competent job, and earned the accolade of an English translation of one volume (*Umayyads and Abbasids*, London 1907) by the formidable D.S. Margoliouth. Zaydān's was thus the first Arabic work in "modern" style to address mediaeval Islamic history. It was widely read but not much emulated, perhaps because as a Christian committed to a Westernising approach, Zaydān could not address adequately the deeper issues raised by his subject for modern Muslims. Nor could he really share the aspirations and frustrations of Egyptian nationalist writers. He was, in fact, offered the position in Islamic history at the new Egyptian University in 1910, but outrage in politically-engaged circles compelled the offer to be withdrawn.

B. The Interwar period 1919-45.

World War I was the turning point in almost every aspect of Middle Eastern life; indeed, this titanic event really laid down the agenda for the entire 20th century within the region. It created vast new hopes and possibilities, and, of course, even more bitter disappointments and insoluble problems. But it is no surprise that it ushered in a new era of historical writing, one marked by several characteristics: growing, if far from complete, professionalisation (with several scholars getting doctorates in Europe, especially from Paris), with an institutional basis within the new universities of Cairo and Alexandria; a much closer approximation in form and methodology to the kinds of historical writing practiced in Europe; a definition of core subjects of inquiry. One apparently odd product of the period was a marked bilingualism among the new generation of historians, who often wrote in French or English for European audiences and in Arabic for their own countrymen, in which the cultural agendas and conflicts of their native countries came to the fore. This is a phenomenon which continues no less strongly in the present.

It would be incorrect to assume that all traces of traditional literary-historical culture disappeared during these two decades. On the contrary, some of the most significant and useful historical compositions adhered to long-established genres. Muḥammad Kurd ʿAlī (1876-1953 [*q.v.*]), the founder of the Arab Academy of Damascus and a prolific man of letters, composed a monumental history of Syria, *Khiṭaṭ al-Shām* (6 vols., Damascus 1925-9).

Although Kurd ʿAlī was well acquainted with the critical methods of Western Orientalism, this is the last great work of historical topography, a Syrian tradition that went back to Ibn ʿAsākir and flourished at least until the 18th century.

Works of more "modern" style tended to reflect in quite direct ways the central contemporary political-cultural debates of the countries in which they were written. This was, of course, true not only of works on recent history but of those dealing with the more remote past. Indeed, the segments of the past chosen for discussion provide an excellent index of these debates. In Egypt, attention was focused equally on the 19th century (especially Muḥammad ʿAlī, Ismāʿīl, and the ʿUrābī Revolt) and on the beginnings of Islamic history. On the former topic, the key works produced in this period were probably those of ʿAbd al-Raḥmān al-Rāfiʿī (1889-1966), Muḥammad Ṣabrī (1894-1978) and Shafīḳ Ghurbāl (1894-1961). Al-Rāfiʿī, an ardent partisan of the old National Party founded by Muṣṭafā Kāmil at the turn of the century and deeply immersed in Egypt's political struggles, was self-taught as a historian and wrote exclusively in Arabic. Ṣabrī and Ghurbāl, in contrast, were professional academics; both took doctorates from the Sorbonne, held chairs at Cairo University, and published much of their major work in French or English.

In regard to early Islamic history, Ṭāhā Ḥusayn's *Fī 'l-shiʿr al-djāhilī* (Cairo 1926), Muḥammad Ḥusayn Haykal's *Ḥayāt Muḥammad* (Cairo 1934), and Aḥmad Amīn's three books on early Islamic history (*Fadjr al-Islām*, *Ḍuḥā al-Islām* and *Ẓuhr al-Islām*, Cairo 1928-53) are certainly landmarks in their various ways. Ṭāhā Ḥusayn [*q.v.*] had taken a Sorbonne doctorate with a thesis on Ibn Khaldūn; his attack on the authenticity of pre-Islamic Arabic poetry was an effort (almost disastrous for him and Cairo University) to apply European text criticism to a culturally sanctified body of literature. The works of Haykal and Amīn, in contrast, were attempts to synthesise Islamic piety and "scientific" historical method. Haykal's use of modern critical methods is open to question on a variety of grounds, but his biography of the Prophet was a literary *tour de force*, a superbly integrated portrait infused with a distinctively 20th-century sensibility. Aḥmad Amīn's studies, though less accessible, have commanded broad respect since their first publication. Although he was a graduate of the School for *Ḳāḍī*s and was largely self-taught as a historian, his European colleagues at Cairo University formally recommended him for a professorial chair on the strength of his publications.

The leading historians of this period did not simply toe the official line. On the contrary, many of them were often in trouble with their governments. Nor is their work merely a coded statement of their own

ideological predilections, for the work of every writer mentioned above has proved of enduring value. Al-Rāfiʿī's books, for example, were regularly reprinted down through the 1960s. But it remains the case that all these works were shaped in the context of the political struggles of their day, including the struggle for cultural identity.

C. The Cold War and the apogee of Middle Eastern nationalisms 1945-1970.

World War II marked another watershed, as the domination of the region by Great Britain and France collapsed, to be replaced by a bi-polar world of American-Soviet rivalry. Down at least to the early 1970s, and in some arenas down to the present, intellectuals in the Arab lands and Persia tended to interpret their past within a single broad framework, as a struggle against foreign domination—England and France in the modern period, of course, but often fellow-Muslims (Mamlūk *amīrs*, Arab invaders, *et alii*) in the mediaeval past. In the revolutionary age beginning in the mid-1950s, it was inevitable that many would also begin to look seriously at Marxism [see MĀRK(I)SIYYA] as an intellectual tradition, and thus to link issues of internal class struggle with long-established concerns about imperialism.

The inevitable engagement of historians in the political struggles of the post-war years did not prevent the increasing professionalisation of historical writing. The process was rooted in the rapid growth of higher education in Middle Eastern countries: a flood of new students into the universities required more professors, and professors, of course, had to have advanced research degrees. Down to the early 1970s, credible Ph.D.s could only be obtained abroad, preferably in Paris or London (the old imperial capitals, ironically), but many students found themselves in newer and less prestigious institutions in the north of England or the American Middle West. In any case, the bilingual nature of historical research among Middle Eastern scholars continued and even increased; many of the major French and English monographs published during these years had begun life as their doctoral theses at the Sorbonne and the University of London.

Again, it would be extremely misleading to interpret scholarly production simply as a reflection of ideology and political conflict. If a test for the "pure scholarship" of a work is its usability by scholars of highly disparate political-ideological commitments, then much produced in this era must rank very high indeed. It is, for example, hard to imagine early Islamic history without the contributions of ʿAbd al-ʿAzīz al-Dūrī and Ṣāliḥ al-ʿAlī and colleagues of the Universities of Baghdād and Baṣra. For the more recent centuries of Ayyūbid, Mamlūk and Ottoman domination in Greater Syria (i.e. Syria, Lebanon and Palestine), we are much indebted to scholars like Kamāl Ṣalībī and Muḥammad ʿAdnān al-Bakhīt, with flourishing centres of historical studies at the American University of Beirut and the University of Damascus and major publications of texts and studies emanating from them. In spite of political controls placed on Egyptian scholars under the Nasser régime, the students of Muḥammad Anīs at Cairo University initiated a major body of scholarship on the social and economic history of 19th and 20th-century Egypt. And for an earlier but hardly less contested era, that of the Crusaders, Ayyūbids, and Mamlūks, Saʿīd ʿAbd al-Fattāḥ ʿĀshūr (b. 1922) and his many students produced (and continue to do so) a major corpus of texts and studies still too little consulted among Western scholars. Even so, the free play of historical research was undeniably constrained by political pressures which far exceeded the partisanship of the previous era.

D. Since 1970.

Several of the underlying trends established during the 1950s and 60s have continued apace, in particular the burgeoning of universities and research institutes throughout the Middle East. In spite of chronic underfunding and a strong emphasis on scientific-technical training, this trend has led to an expansion of academic history. Particularly important, especially for the Ottoman period in Turkey and the Arab lands, has been a great improvement in the organisation of archives and documentation centres of all kinds. Another trend, already discernible before 1970 but much stronger since, has been the growing number of historians from the Middle East who hold permanent academic appointments in Europe and the United States. Admittedly, most of these completed their graduate studies in Western universities, but even so they bring a perspective rooted in the cultures and historical experience of the Middle East. The causes for this phenomenon are complex, but it does represent a highly significant inversion of the time-honoured pattern of student missions from the Middle East to the West.

The political climate in which historians must try to work has been variable but never easy. Apart from the pressures exerted by security-conscious régimes, the Islamic movement everywhere has increasingly affected historical inquiry and writing, as it has intellectual life in general. For example, a trend seen in the Arab world during the early 1970s, a radical critique of the nature of early Islamic society and even of the soundness of the sources, has been silenced or at least driven underground. There has been no real progress in Arabic-language works on the life of Muḥammad since Haykal's famous biography was published more than sixty years ago.

In spite of such official and cultural pressures, however, many periods and topics seem to be politically and religiously neutral, in the sense that historians are relatively free to construct their accounts of them in accordance with their own purposes and outlooks, rather than in accordance with externally dictated agendas. The Middle Periods of Islamic history (*ca.* 950-1500) have long fallen in this category, with the partial exception of the Crusades and the figure of Ṣalāḥ al-Dīn, and we can now add the early ʿAbbāsids and Ottomans, who no longer make a useful target for Arab nationalist polemics. The social and economic history of the late 18th and 19th centuries in particular has attracted a great deal of first-rate work during the past two decades. As regards pre-modern times, the early ʿAbbāsids, the Saldjūḳids and the Mamlūks have continued to be the subject of valuable and sometimes ground-breaking studies. To name individual scholars for the last two decades is invidious, since there are now so many historians at work, and it is hardly possible as yet to identify those whose contributions will prove seminal or enduring. What can be said is that the Arab countries now possess a substantial corps of professional academic historians writing chiefly in Arabic. In this respect, the history of the region is increasingly in the hands of its own scholars—the natural state of things, we might suppose, but one which was hardly the case for most of the 19th and 20th centuries.

(e) North Africa. [See Suppl.].

(f) In Muslim Spain.

Historical writing done in al-Andalus may be classified under two headings: chronicles dealing with the history of al-Andalus specifically and general histories of Islam. With the exception of certain very remarkable works, only the first category will be discussed here. However, there is also much historical information of great importance in works which are not chronicles, such as biographical dictionaries, geographical descriptions and *adab* works.

ʿAbd al-Malik b. Ḥabīb (d. 238/853) was the author of a *K. al-Taʾrīkh*, one of the oldest universal histories written in Arabic and the first historical work to be written in Muslim Spain. It contains a chapter on the conquest of the Iberian peninsula plus predictions of the loss and destruction of al-Andalus. It is the oldest source on the names and the chronology of the governors of Spain before the arrival of ʿAbd al-Raḥmān I. As the source for his redaction of the history, Ibn Ḥabīb used Egyptian traditionists, who played a most important role in the formation of the earliest historiographical tradition in al-Andalus. Yet despite the recent re-evaluation of his work and his place in Muslim Spanish culture, one cannot really consider Ibn Ḥabīb as the founder of historiography there. This place belongs in all true justice to Aḥmad b. Muḥammad b. Mūsā al-Rāzī (274-344/888-955), the author of *al-Istīʿāb fī ansāb mashāhīr ahl al-Andalus* and of the *Akhbār mulūk al-Andalus*. Unfortunately, al-Rāzī's works have only been preserved in citations by later writers, or in old translations into Portuguese or Castilian. His chronicle covered the whole of the history of al-Andalus, and, so far as we know of this text, it was characterised by a desire to produce written history and an effort at chronological precision and at verifying both written and oral sources.

One of his contemporaries, ʿAbd Allāh b. ʿUbayd Allāh al-Ḥukayyim (d. 341/953), wrote a *K. fī ansāb al-dākhilīn ilā al-Andalus min al-gharb wa-ghayrihim*, which he dedicated to the caliph al-Nāṣir in 330/941-2 and which probably followed the lines of historical research delineated by al-Rāzī. Al-Ḥukayyim's text, however, fell into oblivion (only citations of it are known in Ibn ʿAbd al-Malik al-Marrākushī's biographical dictionary), whilst al-Rāzī's work continued to be used by many later historians. Al-Rāzī, indeed, became the model historian for Andalusī historical writing to follow. His son ʿĪsā b. Aḥmad al-Rāzī (d. 379/980) continued in his father's tradition and wrote a *Taʾrīkh al-Andalus*, some parts of which are preserved by Ibn Ḥayyān (who was not, it seems, able to consult a complete text of the work) and by al-Makkarī.

Two other important historical works were also produced in the course of the 4th/10th century. The first belongs to the genre of universal history: the résumé (*mukhtaṣar, ikhtiṣār*) which ʿArīb b. Saʿīd (d. 370/980 [*q.v.*]) wrote of al-Ṭabarī's *History*. ʿArīb considerably enlarged the parts of al-Ṭabarī's work dealing with the history of al-Andalus, but only his text for the period 291/902 to 320/932 survives. Nevertheless, it was an important source for such authors as Ibn Ḥayyān and Ibn ʿIdhārī. The second of these chronicles is the *Taʾrīkh Iftitāḥ al-Andalus* of Ibn al-Ḳūṭiyya (d. 367/977 [*q.v.*]), who traced the history of the province from the Islamic conquest to ʿAbd al-Raḥmān III's reign. It is possible that the version of the work which has come down to us is incomplete, since some citations of Ibn al-Ḳūṭiyya in later authors are not found in the text as we know it today. As for his historiographical orientation, some people have discerned Shuʿūbī tendencies in Ibn al-Ḳūṭiyya [see SHUʿŪBIYYA], but it seems sufficient to characterise his attitude as that of a Muslim scholar of non-Arab origin, a partisan of the Umayyads and a writer with a moralising aim. The *Taʾrīkh Iftitāḥ al-Andalus* pays especial attention to the *mawālī* and the *muwalladūn*, which has been connected with the author's origins in the family of Ibn al-Ḳūṭiyya, the descendant of one of the marriages of Sāra al-Ḳūṭiyya, who belonged to the Visigothic royal house.

The 5th/11th century can be called the golden age of history writing in al-Andalus through both its richness and also the variety of works composed during this period. At the outset, authors continued the "genealogical" approach begun by al-Ḥukayyim and Aḥmad b. Muḥammad al-Rāzī, of which the most successful example is the *Djamharat ansāb al-ʿArab* by Ibn Ḥazm (d. 456/1064 [*q.v.*]), an indispensable work for knowledge of the lineages of the Arabs established in Muslim Spain and those of the Berbers, as well as being a general work on genealogies. The *K. al-ʿIbar* of Ibn Abi 'l-Fayyāḍ (d. 459/1066) is known only from citations in other writers, from which it has been deduced that it was a history of al-Andalus from the conquest until, at least, the age of the Taifas. The *Tarṣīʿ al-akhbār* of al-ʿUdhrī (d. 478/1085 [*q.v.*]) mixes geographical description with historical information. Around three-quarters of the original text have been lost, but the surviving part includes abundant and most interesting historical information, above all for the 2nd-3rd/8th-9th centuries and also for the first part of the next one. Al-ʿUdhrī is a basic source for our knowledge of rebellions against the central power, to which he seems to have paid particular attention. Even so, one should not interpret this prominence of rebellions in al-ʿUdhrī's work as reflecting a special standpoint of the author, who confined himself to setting them down as events in the life and activity of a specific region in a particular historical period.

But the most important figure of the history of al-Andalus in the 5th/11th century is probably Ibn Ḥayyān (d. 469/1076 [*q.v.*]), who dominates the historical panorama of his time and of later times. Ibn Ḥayyān's work as a compiler of earlier historical sources was

enormous, and this explains the loss of many of these works, since it was easier to consult them via his compilation, called *al-Muktabis*. In this work, Ibn Ḥayyān's personal intervention is almost nil; in practice, he limited himself to gathering together everything which had been written before his time concerning the earlier centuries of Islam in Muslim Spain. The *Muktabis* has survived till today only partially. The second great historical work of Ibn Ḥayyān, *al-Matīn*, must have been very different from the first. He wrote it over a period of several years, and was still at work on it in 463/1070-1. The text is above all known through the long fragments of it reproduced by Ibn Bassām in his *Dhakhīra*, a fundamental source for the end of the Umayyad state and the birth of the Taifa principalities. In his *Matīn*, Ibn Ḥayyān used oral sources plus his own personal experience, and he offered his own explanation of historical events which he had witnessed. Two other lost works of his, *Akhbār al-dawla al-ʿāmiriyya* and *al-Batsha al-kubrā* (on the Banū Djahwar of Cordova) may possibly have been part of the *Matīn*.

This survey of 5th/11th-century Andalusī historical writing should not be completed without mention of a unique work within the genre, *al-Tibyān ʿan al-hāditha al-kāʾina bi-dawlat Banī Zīrī fī Gharnāṭa*, written *ca.* 488/1095 by the last of the Taifa kings of Granada, ʿAbd Allāh b. Buluggīn. It can be classified as a classic example of dynastic history, but is also the autobiography of a dethroned prince. It is, accordingly, of doubtful objectivity; ʿAbd Allāh endeavours above all to justify his role in the events which surrounded the fall of the Zīrid dynasty. But at the same time, the *Tibyān* is the sole Arabic source which can be set at the side of Ibn Ḥayyān's information on the troubled period preceding the entry of the Almoravids into the Peninsula. Although later historians, such as Ibn al-Khaṭīb, knew the *Tibyān*, it is only cited by al-Nubāhī in his *al-Markaba al-ʿulyā*, a history of the judges of al-Andalus; yet its minor significance in the historiographical tradition should not make us forget its value as a document of personal witness.

Ibn Ḥayyān's influence in historical writing can also be measured by the existence of later works which are merely résumés of his texts, sometimes directly, sometimes via intermediate sources. The so-called *Crónica anónima* of al-Nāṣir is, in fact, just a résumé of part of the *Muktabis*. The case of the *Akhbār madjmūʿa* is more complicated. The anonymous author describes the Islamic expansion through the Maghrib until the middle of the 2nd/8th century, whilst paying especial attention to al-Andalus. The work's nature and the date of its composition have been the object of lengthy discussions, without coming to any conclusive result. The text is a compilation of written sources which pays especial attention to anecdotes, whilst omitting, in general, chronological precision. According to the latest results of historiographical research, the *Akhbār madjmūʿa* is to be connected with late, North African, sources, with which the text shares a common origin, one unidentified but which would ostensibly derive from Ibn Ḥayyān's *Muktabis*. After the manner of the *Akhbār*, the work of an anonymous author which is called *Fatḥ al-Andalus* seems to be the *Ṣilat al-mughrib*, a lost work by Ibn Muzayn (d. after 471/1078-9).

At the end of the 5th/11th century, al-Andalus became a province of North African empires, first that of the Almoravids and then, shortly afterwards, of the Almohads. Historical writing reflected this political dependence, and the vigorous development of historiography during the century of the Taifas declined under the pre-eminence of Maghribī historians. In any case, the Almoravid period was too short to allow the growth of dynastic historiography comparable to what had taken shape in the Umayyad period and was to appear under the Almohads. Only a few fragments have been preserved of the Andalusī chronicler of the Almoravids, Ibn al-Ṣayrafī (d. 570/1174 [*q.v.*]). One special case, in this period, is that of Ilyasaʿ b. Ḥazm (d. 575/1179), author of *al-Mughrib fī akhbār maḥāsin ahl al-Maghrib*, a work which he wrote for the Ayyūbid Ṣalāḥ al-Dīn whilst he was staying in Egypt, but its text, which was a source for e.g. al-Dhahabī, drew the contempt of the Andalusī Ibn al-Abbār. The *Mughrib* was, in effect, a re-writing of the history of Muslim Spain with the intention of attracting the attention of the Muslims of the East to the Christian menace against al-Andalus.

During the Almohad period and until the appearance, in the 8th/14th century, of Ibn al-Khaṭīb, the history of al-Andalus was written in the context of the history of the Maghrib, a fact of which the authors on both sides of the Straits of Gibraltar were aware. Thus the most interesting work of Ibn al-Abbār (d. 658/1260 [*q.v.*]) from the historical point of view, *al-Ḥulla al-siyarāʾ*, was dedicated to the poets from noble families of both North Africa and al-Andalus. In it, Ibn al-Abbār gave citations from earlier historians, including Ibn Ḥayyān's *al-Matīn*, but it is unknown whether he employed this text directly or via fragments copied by Ibn Bassām. In any case, the history of Muslim Spain in the 6th-7th/12th-13th centuries has to be read in the chroniclers of the Maghrib, such as Ibn al-Kardabūs, Ibn al-Shabbāṭ, Ibn Ṣāḥib al-Ṣalāt, ʿAbd al-Wāḥid al-Marrākushī, Ibn al-Kaṭṭān, Ibn ʿIdhārī and Ibn Abī Zarʿ. One should add to these names that of the author of *al-Ḥulal al-mawshiyya*, a work written towards the end of the 8th/14th century and attributed to Ibn Simāk, who came from Málaga. Amongst these authors, Ibn ʿIdhārī deserves special mention. The final redaction of his *Bayān al-mughrib* is dated 712/1312; to write his history of the Maghrib and Muslim Spain, he used many Andalusī sources now lost, those of Ibn Ḥayyān being notable here.

Ibn al-Khaṭīb (d. 776/1374 [*q.v.*]) probably dominates the intellectual scene in his age, during which al-Andalus was reduced to the territory of the Naṣrid kingdom of Granada. Amongst his immense production, at least four works pertain to the domain of history, with nuances here which have to be made more precise. *Al-Iḥāṭa fī akhbār Gharnāṭa* is, first of all, a biographical dictionary, with the aim of serving as an encyclopaedia of Granada, for which the author drew on documents from the royal chancery to which he had access. The work is thus of prime importance for his own time.

The history of the Naṣrid dynasty (up to 765/1363-4) was the subject of Ibn al-Khaṭīb's second historical work, *al-Lamḥa al-badriyya*. In his *Nufāḍāt al-djirāb*, he gave his personal memoirs for the period 761-3/1359-62, and since the author was very actively involved in the political life of his time, it is thus an important source for the history both of Granada and the Maghrib. However, Ibn al-Khaṭīb's most ambitious historical work was his *Aʿmāl al-aʿlām li-man būyiʿa kabl al-iḥtilām*. Written to defend the legitimacy of the claim to power of the infant son of the Marīnid sultan ʿAbd al-ʿAzīz (d. 774/1372-3), its second part is devoted to a general history of al-Andalus, drawing upon earlier sources of which the author gives in a summary fashion. The interest of the historical material in the *Aʿmāl* becomes more marked in the work's last part, which

also includes a résumé of the history of Castile.

No historical chronicles were written during the last century of al-Andalus's existence (9th/15th century), but material on the history of this period continued nevertheless to be used by North African writers, such as the anonymous compiler of the *Dhikr bilād al-Andalus*, which was very probably written during this century. The history of Muslim Spain was also the subject of a chronicle written in North African exile, the anonymous *Nubdhat al-ʿaṣr fī akhbār mulūk Banī Naṣr*, dating from 945/1540, which traces the history of Granada from 882/1477 to the emigration following the conquest of 1492. Finally, the monumental work of al-Makkarī (d. 1014/1631 [*q.v.*]), *Nafḥ al-ṭīb min ghusn al-Andalus al-raṭīb*, although in the ostensible form of a biography of Ibn al-Khaṭīb, contains numerous fragments from historical texts, and in this respect can be considered as an anthology of the historical and literary production of al-Andalus.

(MANUELA MARÍN)

2. In Persian.

Persian history falls into two well-marked periods, the pre-Islamic and the Islamic, each with their calendrical systems. In the Īlkhānate a modified version of the Chinese-Uighur duodecimal animal cycle was introduced and continued in use, with modifications, alongside the Hidjrī lunar calendar and the Hidjrī solar calendar from 1911 to 1925.

Persian histories as distinct from histories in Arabic written by Persians do not pre-date the 4th/10th century. By that time Persia had become part of the Islamic world and the surviving fragments of ancient Persian history had passed from Pahlavi into Arabic literary and historical writing. Islamic tradition was universal and all-embracing in its character, and its all-pervading nature gave a certain unity and inner consistency to Persian historical writing down to modern times. Alongside the Islamic tradition, the memory of ancient Persia survived, largely in the form of myth and legend [see KAYĀNIDS]. It was passed down in oral and written form (see E. Yarshater, *Iranian historical tradition*, in idem (ed.), *Camb. hist. Iran*, iii (1), *The Seleucid, Parthian and Sasanian periods*, 477). In the 3rd/9th and 4th/10th centuries, Persian versions of the national history emerged in prose and verse, notably in the *Shāh-nāma* of Firdawsī [*q.v.*] and thereafter the tradition of ancient Persia had a kind of "ghost existence", but it never became the dominant feature in the historical tradition. Even in the Ḳādjār period, when there was an attempt in some quarters to revive the heritage of ancient Persia (cf. Furṣat, *Āthār al-ʿAdjam*), the shah was still referred to as *shāhanshāh-i islāmpanāh*, as he had been in Ṣafawid times.

As a result of the long wars with the nomads of Central Asia in pre-Islamic times, "Tūrān" was seen as the antithesis of "Īrān". This antagonism re-emerged in mediaeval Persia in the dichotomy between *turk* and *tādjīk* (cf. Yarshater, *op. cit.*, 396), and from the 7th/13th century in the form of a Turco-Mongol tradition. This was important in tribal and military circles, which provided the major dynasties in post-Mongol times, but it was almost totally ignored by the "men of the pen" and does not play an important part in the written tradition. This is so even in the Īlkhānate, when the writing of history flourished. In any case, after the conversion of the Mongols to Islam, it can be assumed that the Islamic tradition reasserted itself.

The role of the royal court was immensely important in the production of histories. It was largely rulers to whom historians looked for pecuniary reward. Consequently, it was customary for histories to be dedicated to contemporary princes; and some were commissioned by rulers. Apart from this, the general cultural climate tended to be set by the court. Many, if not assemblies of learned men, were centres in which learning was encouraged as, for example, the courts of the Sāmānids [*q.v.*], of Maḥmūd b. Sebüktigīn [*q.v.*], the Īlkhān Ghāzān [*q.v.*] and the Tīmūrids Shāhrukh Mīrzā b. Tīmūr [*q.vv.*] and Sulṭān Ḥusayn Mīrzā b. Manṣūr b. Bāyḳarā. In mediaeval times the *nadīm* [*q.v.*] or boon companion of the ruler had to be able to converse on historical subjects, and a secretary in government service was expected to have a thorough knowledge of the past (F. Rosenthal, *A history of Muslim historiography*, Leiden 1952, 46-7). Ḥamd Allāh al-Mustawfī al-Ḳazwīnī [*q.v.*] describes how he developed a taste for sciences in general and history in particular in the circle of Rashīd al-Dīn Faḍl Allāh al-Ṭabīb [*q.v.*] (*Tārīkh-i Guzīda*, ed. ʿAbd al-Ḥusayn Nawāʾī, Tehran AHS 1339/1960, 2-3).

Those who wrote history were Muslims, and they inherited the presumptions which prevailed in contemporary Islamic civilisation. Many of them were government officials. Abū ʿAlī Muḥammad b. Muḥammad Balʿamī [*q.v.*], the father of Persian historiography, belonged to a family from which many *wazīrs* had come and he himself was *wazīr* first to the Sāmānid ʿAbd al-Malik b. Nūḥ and secondly to his successor Manṣūr. Abu 'l-Faḍl Muḥammad b. Ḥusayn Bayhaḳī [see BAYHAḲĪ], the author of the *Tārīkh-i Masʿūdī*, was a secretary in the chancellery of the Ghaznavid Masʿūd b. Maḥmūd [*q.v.*]. The author of the *Djahān-gushā*, ʿAlāʾ al-Dīn ʿAṭāʾ Malik Djuwaynī [*q.v.*], and Rashīd al-Dīn Faḍl Allāh, who wrote the *Djāmiʿ al-tawārīkh*, both held high office under the Īlkhāns. Faṣīḥ al-Khʷāfī, author of the *Mudjmal-i faṣīḥī*, served Shāhrukh Mīrzā b. Tīmūr and Bāysonghor [*q.v.*]; Iskandar Munshī, (Iskandar Beg), author of the *ʿĀlam-ārā-yi ʿAbbāsī*, was employed for a time in the Ṣafawid chancery; and Muḥammad Taḳī Sipihr [*q.v.*], who wrote the *Nāsikh al-tawārīkh*, was a secretary in the *dīwān* of Muḥammad Shāh Ḳādjār. Mīrzā Mihdī Khān Astarābādī, who was employed in the secretariat of Nādir Shāh [*q.v.*], was appointed official historiographer in 1148/1736.

A number of historians were *ʿulamāʾ*. Ẓahīr al-Dīn Abu 'l-Ḥasan ʿAlī b. Zayd b. Funduḳ [see AL-BAYHAḲĪ] was for a short period in 526/1132 *ḳāḍī* of Bayhaḳ and subsequently taught in various mosques in Nīshāpūr. The Ghūrid historian Abū ʿAmr Minhādj al-Dīn Djūzdjānī [*q.v.*] was the son of a *ḳāḍī* and became *ḳāḍī al-ḳuḍāt* in the Dihlī Sultanate, whither he had fled in 623/1226 after the first Mongol invasion. ʿAbd Allāh b. ʿUmar Bayḍawī [*q.v.*], who wrote the general history *Niẓām al-tawārīkh*, and died towards the end of the 7th/13th century, was at one time *ḳāḍī al-ḳuḍāt* of Shīrāz. ʿAbd al-Razzāḳ Samarḳandī [*q.v.*], the author of the *Maṭlaʿ al-saʿdayn*, was the son of a *ḳāḍī*. The tradition of historical writing continued among the *ʿulamāʾ* down to modern times (cf. the *Tārīkh-i Iṣfahān* of Ḥādjdjī Mīrzā Ḥasan Khān Anṣārī Djābirī).

Ḥasan Beg Rūmlū (b. 938/1531-2), the author of the *Aḥsan al-tawārīkh*, by exception, belonged to the military classes, having entered the ranks of the *ḳūrčīs* as a child. His history was planned to be in twelve volumes. Only two, the eleventh and the twelfth, in the form of annals from the accession of Shāhrukh in 807/1404 to the reign of Shāh Ismāʿīl II (900-85/1495-1577) are extant. Whether the other volumes were ever written is not known.

That many, if not most, Persian histories were written by government officials and members of the ruling classes results in a rather one-sided view. Facts unpalatable to the author's patron or to the received tradition tended to be omitted, and his victories were exaggerated; dissident movements on the whole were played down. The common people received little attention and we see the mass of the population, if at all, through the eyes of the ruling classes. Against statements of prosperity, well-being and good government, must be set periods of tyranny, disorder, insecurity, drought, famine, hoarding and war.

The general disposition of Persian historians was to record not to explain. This was perhaps partly due to the assumption that divine sanction corroborated world order—that God's cause triumphs in Islam. They did not pretend to re-create the past, and for the most part they ignored the development of human character and personality. The encyclopaedist Muḥammad b. Maḥmūd Āmulī, writing in 735/1334-5, states that the value of history and biography lay not in the col-

lection of stories and traditions but in admonition and warning, so that wise men might not set their hearts on this world but might concern themselves with the acquisition of eternal happiness (*Nafā'is al-funūn*, ed. Abu 'l-Ḥasan Sha'rānī, Tehran 1377/1958, ii, 170). In fact, the general belief that history corroborated the Muslim view of the world tended towards the "anecdotalism" of history. Provided the anecdotes were "useful", authors were not unduly particular about their authenticity.

The purposes which impelled Persian historians to write history were various. Rosenthal's emphasis on the utilitarian approach of Muslim historians (*op. cit.*, 47) applies also to Persian historians. First and foremost they were Muslims and as such their concern was to contribute to stability and to further right religion. The problem of power did not arise for them: the function of the state as they conceived it was to create conditions in which the good life could be lived. Histories were therefore composed partly in order to illustrate this. Almost all start with a section in praise of God. The views of Mīrkh[w]ānd [*q.v.*], the author of the *Rawḍat al-ṣafā'* who died in 903/1498, are fairly typical of earlier and later writers. He held that useful lessons were to be learnt from history and that its function was to admonish and warn. The preservation of the good name of the just was another motive which induced authors to write. Djuwaynī states that he had been urged by a group of his friends to write his history as a memorial to the excellence of the ruler (*Djahān-gushā*, ed. Muḥammad Ḳazwīnī, London 1912, i, 2-3). Ibn Funduḳ was in part inspired to write his history by a belief in the pre-eminence of learning (*Tārīkh-i Bayhaḳ*, ed. Aḥmad Bahmanyār, Tehran AHS 1317/1938, 5-6), but he was also concerned with the "usefulness" of history as a yardstick with which to judge the events of the present (10). Somewhat exceptionally he also regarded the study of history as in itself interesting (8-9). In the case of those who wrote local histories an important factor was local pride (see further below).

The sources at the disposal of Persian historians were written and oral traditions, the works of earlier writers, and their own personal experiences. Those who were state officials had access to material in state chanceries; *mustawfīs*, such as Ḥamd Allāh al-Ḳazwīnī, probably had in their possession tax records. Although no state archives are extant prior to the modern period, various collections of state documents exist such as the *'Atabat al-kataba* of Muntadjab al-Dīn Badī' al-Kātib Djuwaynī belonging to the Saldjūḳ period, *al-Tawassul ilā 'l-tarassul* of Bahā' al-Dīn Baghdādī for the Saldjūḳ and Kh[w]ārazmshāhī periods, and the *Dastūr al-kātib* of Muḥammad b. Hindūshāh Nakhdjiwānī for the late Īlkhānid and Djalā'irid periods. Innumerable state documents also survived in historical and literary works (see B.G. Fragner, *Repertorium persischer Herrscherurkunden*, Freiburg im Br. 1980) or in private hands and were available to later writers. This archival material is sporadic—continuous series do not exist until modern times. A few personal letters have survived from earlier periods independently or in collections of documents. Some of the documents in literary collections are "model" documents, presumably based on current theory or practice.

Biographical literature as part of historical literature exists, but is of a rather special kind. The copious lives of Ṣūfī saints and holy men are in large part hagiography. Typically, biographical material is found in *ṭabaḳāt* literature and in *wafayāt* in chronicles at the end of each year or reign, with predominance given to the religious classes. The biographical material in the *Tārīkh-i 'ālam-ārā-yi 'abbāsī* of Iskandar Beg Munshī, written in the early 11th/16th century, is exceptional in that a balance is preserved between the military, religious and bureaucratic classes, which would seem to correspond, in some measure, to the actual distribution of power in the state. Biographical dictionaries devoted to the religious classes are common but rare in the case of other groups except poets. Exceptionally, the *Āthār al-wuzarā'* of 'Aḳīlī, who lived at the court of Ḥusayn Bāyḳarā, and the *Dastūr al-wuzarā'* of Kh[w]āndamīr [*q.v.*], are devoted to the lives of *wazīrs*. That such works are much rarer than those devoted to the religious classes suggests that the contribution of the individual Muslim to the transmission of Islam was regarded as more important than his contribution to the building-up of the state. However, in dynastic and local histories space is devoted to members of the ruling house, their officials and those who were thought to have contributed to local development (see further A.K.S. Lambton, *Persian biographical literature*, in B. Lewis and P.M. Holt (eds.), *Historians of the Middle East*, London 1962, 141-51). Full-length biographies such as are known in the West do not exist in Persian until modern times. In recent years an increasing number of personal reminiscences and memoirs, written to record events in which the authors had participated and sometimes to justify that participation, or simply for personal diversion, have been published (see further Fragner, *Persische Memoirenliteratur als Quelle zur neueren Geschichte Irans*, Wiesbaden 1979).

There are also some rather unusual works which are part of historical literature but do not fit exactly into the category of either history or biography. One such is the *Rustam al-tawārīkh* of Rustam al-Ḥukamā' (ed. Muḥammad Mushīrī, Tehran AHS 1348/1969), begun in 1193/1779-30 and finished in 1199/1784-5. It is a strange jumble of fact and fiction, parable and reality, but it contains a good deal of information on political, administrative and social conditions (see Lambton, *Some new trends in Islamic political thought in late 18th and early 19th century Persia*, in *SI*, xxxix, 101 ff.).

History written in Persian begins with Bal'amī, who was commissioned by Manṣūr b. Nūḥ I [*q.v.*] in 352/963 to prepare a Persian translation of the *Ta'rīkh al-Rusul wa 'l-mulūk*, written in Arabic by Muḥammad b. Djarīr al-Ṭabarī, which begins with the creation of the world. Bal'amī's work is not simply a translation of al-Ṭabarī's history. As various scholars have pointed out, it abbreviates al-Ṭabarī's text but also in parts supplements it and includes unique information not to be found in al-Ṭabarī's history or, in some cases, in any other source (D.M. Dunlop, *Arab civilization to A.D. 1500*, London 1971, 90-1, and cf. B. Spuler, *Die historische Literatur Persiens bis zum 13. Jahrhundert als Spiegel seiner geistigen Entwicklung*, in his *Gesammelte Aufsätze*, Leiden 1980, 341). Elton Daniel, in a recent article, examines in detail the mss. and editions of Bal'amī's translation (*Manuscripts and editions of Bal'amī's Tarjamah-i Tārīkh-i Ṭabarī*, in *JRAS* [1990], 282-321). He states that the chapter on the death of Ḥasan b. 'Alī b. Abī Ṭālib [*q.v.*] is not found in al-Ṭabarī and that various sections "are explicitly described as amplifications of Ṭabarī's text" (284); also, that there are "scattered throughout the text attributions of material either to personal observation, specific sources or 'sources other than Muḥammad b. Jarīr'" (284-5). Bal'amī "not only added material to Ṭabarī, he frequently disagreed with him, pointing out errors and inconsistencies in Ṭabarī's accounts and offering alter-

natives to them" (285). Like Zeki Velidi Togan (*Völkerschaften des Chazarenreiches im neunten Jahrhundert*, in *KCsA*, iii [1940], 54), Daniel considers that Bal'amī's history should be regarded as an independent work, albeit based on al-Ṭabarī, "important in its own right as the oldest extant historical work in the Persian language and the model for much of later Persian historical prose" (*ibid.*, 286). He suggests that the decision to translate al-Ṭabarī was part of a larger programme that also led to the translation of al-Ṭabarī's *Tafsīr* and the catechism known as the *Sawād-i a'ẓam* and "almost certainly constituted an effort to propagate a state-sanctioned, 'official' ideology of Islamic history and dogma, presumably in defence of the Sāmānid régime".

Bal'amī set the pattern, and once set, the general tendency was to follow it, though the *ḥadīth* mentality characteristic of al-Ṭabarī weakened with the passing of time. Typically, Persian history is embodied in the general or "universal" history. These general histories begin with creation and are compounded of legendary, semi-legendary and historical elements. They are not world histories. With the rise of Islam the interest of the writers became limited to the spread of Islam and to the boundaries of the political structure within which the writer lived, and so "universal" history became little more than a summary introduction to dynastic or provincial history (H.A.R. Gibb, *EI*[1], art. *Ta'rīkh*). Their authors copied and abridged the work of their predecessors with or without acknowledgement. They can be regarded as primary sources only when they come to relate contemporary or near-contemporary events. Some, though not all, are annalistic, but the narrative frequently breaks the bounds of a given year. Many contain eye-witness accounts of the happenings which they record. An interesting feature of general histories, which perhaps bears witness to a sense of the continuity of history among their writers, is the composition of numerous *Dhayls* or continuations of existing histories, such as the *Dhayl* of Ḥāfiẓ-i Abrū [*q.v.*] to the *Djāmi' al-tawārīkh* of Rashīd al-Dīn.

One of the earliest general histories in Persian is the *Zayn al-akhbār* of Gardīzī [*q.v.*]. A rather later example is the anonymous *Mudjmal al-tawārīkh wa 'l-ḳiṣaṣ* (ed. Malik al-Shu'arā' Bahār, Tehran AHS 1317/1938-9). The author, writing in 520/1126, mentions by name the sources he had consulted. The book starts with the creation and has sections on the kings of ancient Persia, India, the Turks and eastern rulers, the caliphate and Persian dynasties down to 520/1126.

The tradition of composing general histories continued down to the 19th century (cf. the *Nāsikh al-tawārīkh* of Sipihr mentioned above), but alongside them dynastic histories without a "universal" element began to be written. One of the earliest, if not the earliest, is the work of Bayhaḳī, which starts in 409/1018-19. Only that portion relating to the reign of Sultan Mas'ūd b. Maḥmūd is extant. It contains a detailed account of events during his reign and life at his court. Under the Great Saldjūḳs, although Arabic was still the main language for historical writing and Arabic sources were mainly used, a tradition of dynastic histories in Persian, probably using Persian sources, also grew up. The memoirs of Anūshirwān b. Khālid (d. 532/1137-8 or 533/1138-9 [*q.v.*]), which apparently went up to 528/1133, have been lost but survive in the Arabic version of 'Imād al-Dīn al-Kātib al-Iṣfahānī [*q.v.*], the *Nuṣrat al-fatra*, finished in 579/1183, and in the recension of al-Bundārī [*q.v.*]. According to Cl. Cahen, Anūshirwān's work was "neither exclusively personal memoirs nor yet a complete chronicle, but something in between, 'memoirs as a contribution to the history of their time'" (*The historiography of the Seljuqid period*, in Lewis and Holt (eds.), *Historians of the Middle East*, 67). Among the earliest dynastic histories of the Saldjūḳs were the *Saldjūḳ-nāma* of Ẓahīr al-Dīn Nīshāpūrī and the *Malik-nāma*. Neither is extant. The former was used by Rāwandī in the *Rāḥat al-ṣudūr*. It comes down to the accession of Ṭoghril III, the last of the Great Saldjūḳs, and is brought down to the fall of Ṭoghril by Rāwandī. The *Malik-nāma* is preserved in the *Akhbār al-dawla al-saldjūḳiyya* of Abu 'l-Ḥasan 'Alī b. Nāṣir Ḥusaynī. Important histories have survived, whole or in part of the Saldjūḳs of Kirmān and their succession state, the Ḳara Khitay Ḳutlugh-Khānids [*q.v.*]. As the conquests of the Saldjūḳs and later Turks and Mongols spread westwards to Anatolia and eastwards to India they took with them the Persian language, and in both regions a rich Persian historical literature developed.

With the spread of the Mongol conquests there was a revival of the general or "universal" history, possibly because of, or in reaction to, the concept of world empire among the Mongols. The *Ṭabaḳāt-i Nāṣirī* of Djūzdjānī, written mainly in 657/1250 and 658/1260, starts with the patriarchs and prophets and continues with the caliphs down to the Mongol invasion. Bayḍāwī's general history, the *Niẓām al-tawārīkh*, starts with Adam and continues down to the Mongols, ending in 674/1275. The first part of Rashīd al-Dīn's *Djāmi' al-tawārīkh* is a general history of the world from earliest times to 700/1300-1. The *Zubdat al-tawārīkh* of Abu 'l-Ḳāsim 'Abd Allāh b. 'Alī b. Muḥammad Ḳāshānī, compiled in the reign of Öldjeytü (703-16/1304-16) is a general history from Adam to the fall of Baghdād. Similarly, the *Rawḍat ulī 'l-albāb fī tawārīkh al-akābir wa 'l-anṣāb* of Banākatī is a general history from Adam to Abū Sa'īd's accession in 717/1317.

The tradition continued under the Tīmūrids. Ḥāfiẓ-i Abrū, among his many works, wrote a universal history entitled *Madjma' al-tawārīkh*, which starts with Adam and continues to 830/1426-7. The last part, with the title *Zubdat al-tārīkh-i Bāysonghorī*, is a history of Tīmūr and Shāhrukh. The *Mudjmal al-faṣīḥī* of Faṣīḥ al-Dīn Aḥmad b. Muḥammad Khwāfī, who was a contemporary of Ḥāfiẓ-i Abrū, is another universal history of the traditional type. It has a *muḳaddima* from Adam to the Prophet and then consists of annals from 1/622 to 845/1441-2.

The Mongol period is commonly regarded as the high point in Persian historical writing. It is remarkable for its bulk and also for the wide-ranging interests of some of the historians of the period (D.O. Morgan, *Persian historians and the Mongols*, in idem (ed.), *Medieval historical writing in the Christian and Islamic worlds*, London 1982, 110). Much of Persia was devastated by the first Mongol invasion and for the first time for six centuries Persia was ruled by non-Muslims. This must almost certainly have disturbed the Islamic view of the world. Djūzdjānī refers to Čingiz Khān [*q.v.*] as *mal'ūn*, accursed, and saw the invasion as an assault upon Islam. He maintains that numerous traditions made it clear that the end of the world would be heralded by the coming of the Turks, i.e. the Mongols. Djuwaynī, who spent most of his life in the service of the Mongol rulers of Persia, visited Möngke's court in Mongolia in 650/1252-3, travelled widely within the Mongol empire, and writes highly of the justice and security in those regions. Nevertheless, he differs little from Djūzdjānī in his description of the

disasters inflicted by the Mongol invasion of Khurāsān and ʿIrāḳ. He saw the Mongols as the instruments of God's judgement on his sinful people, as a punishment and warning. However, in the eyes of Djuwaynī the coming of the Mongols was not all catastrophe, for Hülegü destroyed the Assassins whom Djuwaynī regarded as a greater menace to Islam than the Mongols. It is significant that he does not record the sack of Baghdād by Hülegü [*q.v.*] and the death of the last caliph, which he could hardly have condoned (*ibid.*, 111 ff.). By the time Ghāzān Khān asked Rashīd al-Dīn to write the history of the Turkish and Mongol peoples, some eighty years had passed since the first Mongol invasion and the rule of the Īlkhāns was firmly established. As deputy and later joint *wazīr*, Rashīd al-Dīn had access to official records and his work, commissioned as it was by Ghāzān Khān, is thus an "official" history. That part of it known as the *Tārīkh-i ghāzānī*, which he presented to Öldjeytü, the brother and successor of Ghāzān, after the latter's death, is an extremely valuable account of the reign of Ghāzān and contains information not available elsewhere. It includes the text of many decrees (*yarligh*) issued during Ghāzān's reign, though unfortunately not all are dated. The work suffers somewhat from the fact that Rashīd al-Dīn appears to have been at pains—not unexpectedly—to emphasise the success of the administrative reforms which he attributed to his patron (and which he himself probably had a large part in drawing up) and so exaggerated the extortion and incompetence prevailing under earlier Īlkhāns (see further Morgan, *Rašīd al-Dīn and Ġāzān Khān*, in D. Aigle (ed.), *L'Iran face à la domination mongole*, Paris 1997). Öldjeytü asked Rashīd al-Dīn to add to his work a history of those peoples—the Chinese, Indians, Jews, Franks and others—with whom the Mongols had come into contact. It seems that Rashīd al-Dīn had already been studying the history of the Mongols (*Histoire des Mongoles de la Perse*, ed. and tr. Quatremère, Paris 1836, 80-1) and he set to work assiduously to gather material from Mongol chronicles, which he had interpreted to him, and from oral information from Mongols, including Ghāzān, who, he states, was a great authority on Mongol tradition, and whatever foreigners who could be intercepted as they passed through Persia. In this part of his work, Rashīd al-Dīn also preserves information concerning Mongol history not extant elsewhere (see further Morgan, *The problems of writing Mongol history*, in S. Akiner (ed.), *Mongolia today*, London 1991, 1-8). Rashīd al-Dīn views the Mongols in their world context: Islam was a part of this, but not the essential framework, though by the time he was writing Islam had, with the conversion of Ghāzān, again become dominant. Rashīd al-Dīn refers to him as *pādishāh-i islām*. Rashīd al-Dīn is exceptional. But he did not found a "school of history": there were no more world histories. This may conceivably have been partly because, with the conversion of the Mongols to Islam, the former perspective of history was restored.

The *Tadjziyat al-amṣār wa-tazdjiyat al-aʿṣār* of Waṣṣāf, commonly known as the *Tārīkh-i Waṣṣāf*, one of the most important histories of the Mongol period, is of a rather different order to Rashīd al-Dīn's history. Waṣṣāf was born in Shīrāz in 663/1264-5. He was one of Rashīd al-Dīn's circle and was at one time in government service in Fārs as a *mustawfī*. He began to write his history in 697/1297-8, and in 702/1302-3 presented part of it to Ghāzān Khān, who had set out on his Syrian campaign, and nine years later, in 712/1302-3, he presented the remainder to Öldjeytü in Sulṭāniyya. Waṣṣāf states in his introduction that it had come to his mind to continue Djuwaynī's *Tārīkh-i Djahān-gushā* from the sack of Baghdād in 656/1258 onwards. He brings his history down to 728/1327-8, in the middle of the reign of the last Īlkhān Abū Saʿīd. It starts with a brief account of the Great Khāns as a summary introduction to the history of the Īlkhāns. Its general plan is somewhat confused and contains many digressions, including sections on the history of Egypt and India. Much of what he writes is from personal experience and observation and from what he learned from his contacts with government officials, both civil and military, and contains many valuable insights. His description of contemporary affairs in Fārs is detailed and contains much information on taxation and economic affairs. Although his interests spread beyond the confines of Persia, he is not concerned with the Mongols in a world context. What is important for him is the history of those dynasties which succeeded the Saldjūḳs in Fārs and the neighbouring regions, and happenings in Fārs under the Īlkhāns. What he is, perhaps, telling his readers is that the local history of Fārs is what is important, not the history of the Mongols, and that these local dynasties had had an independent existence before the Mongol conquest. If this is the case, it may be that it is this emphasis, among other things, which gave importance to his history for later writers, many of whom quote him.

Under the Tīmūrids historiography flourished; its form was broadly that of traditional historiography. Several histories on the life and exploits of Tīmūr [*q.v.*] were written. The oldest is the *Ẓafar-nāma* of Niẓām al-Dīn Shāmī. He was in Baghdād when it fell to Tīmūr in 795/1392-3. In 804/1401-2 Tīmūr ordered him to write a history based on the official records of his reign. Under Tīmūr's successors, Samarḳand and Harāt became flourishing cultural centres. A favourite form of historical writing was the "universal" history, though not all authors adopted this model. The *Muntakhab al-tawārīkh* of Muʿīn al-Dīn Natanzī is a general history coming down to the death of Tīmūr. Muʿīn al-Dīn uses earlier sources but adds unique information on the history of Central Asia and Fārs. In the case of his information on Central Asia, some of it may have been obtained from Turco-Mongolian *amīrs* who had served ʿUmar Shaykh and his sons and were still in Shīrāz when Muʿīn al-Dīn was at the court of Iskandar b. ʿUmar Shaykh until 817/1414, prior to joining Shāhrukh's court at Harāt (see J. Aubin's introd. to that part of the text of the *Muntakhab al-tawārīkh* which he published in Tehran in AHS 1336/1957). The greatest of the Tīmūrid historians was undoubtedly Ḥāfiẓ-i Abrū, who in the breadth of his interests and scholarship can be compared to Rashīd al-Dīn (see further J.E. Woods, *The rise of Timurid historiography*, in *JNES*, xlvi [1987], 81-108).

After the Tīmūrids, the centre of interest moved back from eastern Persia to western Persia. Modifications occurred in the perceptions of historians but they were not such as to lead to wholly new turns in the tradition of historical writing. The conversion of the Ṣafawids to Shīʿism clearly affected their interpretation of early Islamic history and the Sunnī-Shīʿī hostility prevailing between the Ṣafawid empire and both the Ottoman empire and the Özbegs was a factor influencing their relation of contemporary events. In recent years an increasing number of Ṣafawid historical texts have been published. Some of them narrate not only events of a political kind but also incidents in daily life.

In the 19th and 20th centuries, the interpretations put upon the facts of history by Persian historians tended to be coloured by a new nationalism and a heightened sense of separation from the rest of the Islamic world. At the same time, their approach was more critical and their attitude towards Islam more sceptical (see further Firuz Kazemzadeh, *Iranian historiography*, in Lewis and Holt (eds.), *Historians of the Middle East*, 430-4, and Hafez Farman Farmayan, *Observations on sources for the study of nineteenth and twentieth-century Iranian history*, in *IJMES*, v [1974], 32-49, also in *Farhang-i Īrānzamīn*, xx, [AHS 1353], 1-34. See also KASRAWĪ TABRĪZĪ).

Other than general and dynastic histories, there is a remarkable continuity in the production of local histories in which geography and history are closely connected. In the early centuries these histories were written in Arabic. Some of them were later translated into Persian. From the 5th/11th and 6th/12th centuries down to modern times, there has been a stream of histories centred not on the great empires but on the province, town, village or tribe. It is not unlikely that local histories represent a particular element in the conscious or unconscious orientation of society. The rhythm of Persian history was marked by the rise and fall of great empires. Their establishment was accompanied by an increase in centralisation; their break-up took place along geophysical lines. Because of the nature of power in Persia centralisation was resented in the regions; and the cultivation of local history may be in part at least a reaction against the centralising tendency of the great empires. The main motive of those who wrote local histories appears to have been local pride and the belief that the contribution of the regions was worthy of record and, perhaps, that their histories—rather than the histories of larger political units—represented or reflected the vigour and strength of Muslim society and built up the history of the community as a whole.

Most local histories start with a doxology and follow with a geographical description of the region or district. Most relate the circumstances, legendary or otherwise, of the foundation of the main city or cities of the region. Nearly all narrate the deeds of local rulers and government officials who have lived and worked in the district and contain biographical notices of local notables. Some include autobiographical details. Not all are purely local histories. In some the distinction between local and dynastic history is blurred. The various histories of Kirmān, for example, are of the nature of dynastic histories rather than purely local histories. Similarly, the *Tārīkh-nāma-yi Harāt* of Sayfī Harawī and the *Rawḍat al-djannāt fī awṣāf madīnat Harāt* of Muʿīn al-Dīn Isfizārī, although they contain a great deal of local information, are also political histories of eastern Persia. The former runs from 618/1221 to 721/1321 while the latter, completed in 899/1493-4, which is partly dependent on Sayfī Harawī's work, is a somewhat disjointed general history of eastern Persia from the Islamic conquest up to the reign of Ḥusayn Bāyḳarā, to whom it is dedicated.

The royal court played a less important part in the production of local histories than in the case of general histories, though there are exceptions, notably the *Fārs-nāma* of Ibn Balkhī, which was composed at the behest of the Great Saldjūḳ sultan Muḥammad b. Malikshāh (498-511/1104-117 [*q.v.*]). It contains the earliest independent account in Persian of the ancient kings of Persia, followed by an account of the Arab conquest of Fārs, a description of the province and brief mention of its history under the Būyids and Saldjūḳs. It also includes agricultural, fiscal and tribal information not found in other sources and an account of the *ḳāḍīs* of Fārs. Although many of the local histories were dedicated to local rulers, no doubt in the hope of pecuniary reward, the main stimulus tended to be *pietas* and the encouragement of learned men in the locality.

Fārs, Ḳum (see Hosein Modarressi Tabataba'i, *Kitābshināsī-i āthār marbūṭ bi-Ḳum*, Ḳum AHS 1353/1974-5 for an annotated bibl. of works on Ḳum), Yazd (see Īradj Afshār, *Yādigārhā-yi Yazd*, Tehran AHS 1348/1970, i, 25-32 *bis* for a list of the histories of Yazd), Kirmān (see Bāstānī Pārīzī's introduction to his edition of ʿAlī Aḥmad Khān Wazīrī's *Tārīkh-i Kirmān* (*Sālāriyya*), Tehran AHS 1340/1961, pp. xliv ff., for an account of the histories of Kirmān), and the Caspian provinces are particularly rich in local and provincial histories; but many towns, districts and provinces also have their histories. The authors of these works, because of their personal experiences and links with local tradition, almost certainly felt more closely related to those about whom they wrote than did the writers of general histories, and they yield occasional glimpses of a social reality different from that of the ruling classes. They reveal details not only of the lives of famous men but also of the common people and details of the local administration, which show how the regions were differentiated both from each other and from the central administration of the great empires. They include details of economic affairs, taxation and land tenure and accounts of natural disasters, floods, earthquakes, famines, scarcities, plagues and diseases seldom found in the general histories. There is much they do not tell and much that we cannot know, but certain tentative conclusions relating to changes in society and in the way men saw themselves at different periods and in different places can be drawn from their accounts (see further Lambton, *Persian local histories*, in B.S. Amoretti and L. Rostagno (eds.), *Yād-nāma. In memoria di Alessandro Bausani*, Rome 1991, i, 227-38).

(ANN K.S. LAMBTON)

3. In Ottoman and modern Turkish.

The development of historical writing in the Ottoman empire and modern Turkey falls roughly into four principal eras:

i. Beginnings, to *ca.* 1500

ii. The dynastic/state phase, to *ca.* 1700

iii. The late imperial phase, dominated by the office of the *waḳʿa-nüwīs* ("official historian" [*q.v.*])

iv. Modern historical writing, from *ca.* 1909.

While constraints of space make it possible to mention only the more significant Ottoman and modern Turkish historians, it is regrettable that there are no major studies on the general development of post-1500 historiography to which further reference can be made. It is also the case that only a handful of Ottoman histories have been published in modern critical editions. Many major histories are still used in often unreliable 19th-century prints, and the vast majority of minor works exist in manuscript only. The standard references are F. Babinger's *Die Geschichtsschreiber der Osmanen und ihre Werke* (1927), expanded entries on major writers in *İslam Ansiklopedisi* (Ankara 1940-88), and recent work on all writers in *Türkiye Diyanet Vakfi İslam Ansiklopedisi* (Istanbul, 1989 onwards).

i. *Beginnings, to* ca. *1500*

The earliest surviving historical account of the Ottomans is the brief verse section, *dāsitān*, in praise of the dynasty by the poet Aḥmedī (d. *ca.* 1412 [*q.v.*]), dating from the 1390s and appended to his longer didactic poem, the *Iskender-nāme.* Its survival is fortuitous, for no other 14th-century histories are known except as echoes in later compilations, and no major historical texts survive from the first half of the 15th century, probably because of the prolonged political instability of the state following the civil war between the sons of Bāyezīd I (1389-1402 [*q.v.*]). However, from the later part of Murād II's reign (1421-44, 1446-51 [*q.v.*]) onwards, three main types of historical work appear, ranging from basic annals, through more descriptive and entertaining chronicles, to the learned and rhetorical histories commissioned by Bāyezīd II (1481-1512 [*q.v.*]).

The stimulating political and cultural context of the period which furthered the development of Ottoman literature generally [see ʿOTHMĀNLĪ. III. Literature] equally encouraged the writing of history. Chronicles of the early Ottoman era are known from the mid-15th century onwards: notably, in Ottoman Turkish, the works of ʿĀs̲h̲ıḳ-pas̲h̲a-zāde, Rūḥī, Nes̲h̲rī (whose Ottoman history, *D̲j̲ihānnümā*, was the last and only surviving part of a six-volume universal history) and Urud̲j̲ [*q.vv.*], and the *Tewārīk̲h̲-i āl-i ʿOt̲h̲mān* (the so-called Anonymous Chronicles); in Persian, the universal history by S̲h̲ükrullāh, with its final section on the Ottomans; and in Arabic, the short account devoted to the dynasty by the *nis̲h̲ānd̲j̲ī* [*q.v.*] Ḳaramānī Meḥmed Pas̲h̲a [*q.v.*].

The material for such compilations was derived from three main types of source: *taḳwīms*, *menāḳib-nāmes* and *g̲h̲azā-nāmes*, and personal recollection. The *taḳwīm*, or retrospective calendar of events (usually drawn up by court astrologers on the pattern "it is X years since ...") provided a basic, though chronologically unreliable source. The earliest surviving Ottoman *taḳwīm* dates from 1421 but was clearly based on earlier lists. *Menāḳib-nāmes*, the often semi-legendary tales of the worthy exploits of significant political or religious figures, were incorporated by chroniclers into the annalistic framework supplied by the calendars. A similar type of exemplary tale, the *g̲h̲azā-nāme*, dealing more specifically with military exploits in frontier regions, was also frequently utilised. *Menāḳib-nāme* and *g̲h̲azā-nāme* sources could be either written or oral. One of the earliest Ottoman examples, the "*menāḳib* of Yak̲h̲s̲h̲ī Faḳīh" compiled in the late 14th-early 15th century appears to have been used directly or indirectly by a number of 15th-century chroniclers, particularly ʿĀs̲h̲ıḳ-pas̲h̲a-zāde, but is not extant. *G̲h̲azā-nāmes*, by virtue of their probable immediate origin as morale-boosting campfire tales told amongst the Ottoman soldiery, were more likely to have been oral sources, at least initially. However, with the increasing emphasis upon sustained military success and the sultan's leadership role under Meḥemmed II (1444-46, 1451-81) and later under Selīm I (1512-20) and Süleymān (1520-66) [*q.vv.*], the writing of *g̲h̲azā-nāmes* became an established literary-historical genre. An early distinctive text is the anonymous *G̲h̲azawāt-i Sulṭān Murād ibn Meḥemmed K̲h̲ān* (ed. H. İnalcık and M. Oğuz, Ankara 1978), an eye-witness account of Murād II's Varna campaign of 1443-4.

The reign of Meḥemmed II quickly became the subject of literary-historical texts by several writers associated with the Ottoman court. The cultural prestige of Persian language and literature stimulated works in the *s̲h̲eh-nāme* style by poets such as Muʿālī, Kās̲h̲ifī and S̲h̲ehdī. Written in Persian verse in imitation of Firdawsī's [*q.v.*] *S̲h̲āh-nāma*, such works have often been belittled as mere panegyric of the sultan but may nevertheless contain much historical information. The strong Persian influence upon Ottoman court historiography—both the language and the much-admired histories of D̲j̲uwaynī and Waṣṣāf [*q.vv.*]—continued well into the 16th century until absorbed into the Ottoman *ins̲h̲ā'* [*q.v.*] style of rhetorical prose. The latter had also originated as a literary style in the late 15th century: Tursun Beg [*q.v.*], author of a history of Meḥemmed II, is usually considered its first major historiographical exponent.

Historical writing was given special encouragement by Bāyezīd II, in whose reign most of the above chronicles were compiled. He appreciated the value of historiography as a political support for himself and for the dynasty, and promoted the writing of works both in simpler Turkish for a "popular" audience, and in rhetorical prose for élite court consumption. Significantly, several works originally ended *ca.* 1484-5, showing Bāyezīd securely enthroned after the politically controversial later years of Meḥemmed II and the succession conflict between Bāyezīd and D̲j̲em [*q.v.*]. By *ca.* 1500 the various strands of 15th-century historiography appeared to coalesce in Nes̲h̲rī's *D̲j̲ihānnümā*, which became the principal source used by subsequent historians for the early period of Ottoman history. Bāyezīd also commissioned two major literary histories, one in elaborate Persian prose by the scholar and *müns̲h̲ī'* Idrīs-i Bidlīsī [*q.v.*], the *Has̲h̲t bihis̲h̲t*, much referred to by later historians, and one in Ottoman *ins̲h̲ā'* prose from the future *s̲h̲eyk̲h̲ ül-İslām* Kemāl-pas̲h̲a-zāde [*q.v.*], which remained little used until modern times.

ii. *The dynastic/state phase, to* ca. *1700*

After *ca.* 1500, Ottoman historical writing increased rapidly in volume over a greater range of forms, producing a richly diverse and accomplished literature which comprises one of the most distinctive Ottoman cultural achievements.

Of universal histories, the best-known is the *Künh ül-ak̲h̲bār* of Muṣṭafā ʿĀlī [see ʿĀLĪ, Muṣṭafā b. Aḥmed], which quickly became a principal source for later historians, above all the fourth and final *rükn* on the

Ottoman state (see J. Schmidt, *Pure water for thirsty Muslims: a study of Muṣṭafā 'Ālī of Gallipoli's Künhü' l-aḫbār*, Leiden 1991; C.H. Fleischer, *Bureaucrat and intellectual in the Ottoman empire: the historian Mustafa Ali, 1541-1600*, Princeton 1986). The *Ṣaḥā'if ül-akhbār* of Müne**djdj**im-bashī (d. 1702 [*q.v.*]) was written first in Arabic but translated almost immediately into Ottoman and widely used. Among other world histories are those in Arabic by Djenābī (d. 1590) and that based upon it by Kātib Čelebi (d. 1657 [*q.v.*]); in Ottoman, the *Zübdet ül-tewārīkh* by Lokmān (d. *ca.* 1601 [see LUKMĀN, Seyyid]), and works by Meḥmed b. Meḥmed (d. 1640), Ḳara-Čelebi-zāde 'Abdül'azīz (d. 1658) and Ḥüseyin Hezārfenn (d. 1691); and in Persian by Lārī (d. 1572) [*q.vv.*].

The positive momentum generated by the military and political successes of Selīm I and Süleymān stimulated pride in the dynasty's achievements whilst providing a wealth of new subject matter for historical compositions. Histories of the dynasty from 'Othmān up to the author's own time, such as that attributed to Luṭfī Pasha (d. 1564) and those by Ramaḍān-zāde (Küčük Nishāndjī, d. 1571) and later by Ṣolāḳ-zāde (d. 1657) [*q.vv.*] remained popular. Much admired for its style was the *Tādj ül-tewārīkh* of Khodja Sa'd ül-Dīn (d. 1600 [*q.v.*]), a reworking of Ottoman history to the end of Selīm I's reign.

Other dynastic histories are more selective. The *Ṭabaḳāt ul-memālik we deredjāt ul-mesālik* by Djelāl-zāde Muṣṭafā (d. 1567 [*q.v.*]), *nishāndjī* under Süleymān, is the most detailed and authoritative contemporary account of the period 1520 to 1557, and is highly regarded as a model of Ottoman *inshā'* prose (P. Kappert (ed.), *Geschichte Sultan Suleyman Kanunis von 1520 bis 1557*..., Wiesbaden 1981). A group of works on Selīm I, known generally as "*Selīm-nāmes*" and mostly composed early in Süleymān's reign at the latter's behest, were designed to exonerate Selīm I from charges of arbitrariness and severity unworthy of the sultanate (cf. A. Uğur, *The reign of Selīm I in the light of the Selīmnāme literature*, Berlin 1985; M.C. Şehabeddin Tekindağ, *Selim-nameler*, in *Tarih Enstitüsü Dergisi*, i [1970], 197-230). Innumerable histories, long and short, exist on events in the reign of Süleymān, particularly in the *ghazā-nāme* style on his military conquests. Of these, an unusual work is *Beyān-i menāzil-i sefer-i 'Irāḳeyn* by Maṭrakčī Naṣūḥ (d. *ca.* 1564 [*q.v.*]), detailing the stages of the 'Irāḳ campaign of 1534-6 and illustrated with precise drawings and plans of towns and fortresses. In contrast, 'Ārif (or 'Ārifī, d. 1562) wrote his *Süleymān-nāme*, a "monumental work" in Persian verse on the *sheh-nāme* model, as a court history commissioned by Süleymān. Of another type is Eyyūbī's *Menāḳib-i Sulṭān Süleymān* (ed. M. Akkuş, Ankara 1991), a short work in Turkish verse describing the sultan's worthy qualities. A late *Süleymān-nāme* presented to Murād IV (1623-40 [*q.v.*]) is by the *sheykh ül-Islām* Ḳara-Čelebi-zāde. (For an extended discussion, see A. Özcan, *Historiography in the reign of Süleyman the Magnificent*, in [Ministry of Culture and Tourism, Ankara], *The Ottoman empire in the reign of Süleyman the Magnificent*, ii, Ankara 1988, 167-222.)

The active patronage of sultans and leading state officials, particularly under Süleymān, Selīm II (1566-74) and Murād III (1574-95) [*q.vv.*], meant that 16th-century writing was largely court-oriented and often composed in an elaborate literary style. In the 1550s, Süleymān established an official post of *shehnāmedji* [*q.v.*], "writer of *sheh-nāmes*", as a type of court historiographer, to ensure the portrayal of a proper image of the ageing sultan towards the end of his reign. Its principal incumbents, 'Ārif, Lokmān and Ta'līḳī-zāde (d. 1599), together produced a series of almost continuous court chronicles covering *ca.* 1520 to 1595, though these remained in the sultan's possession and did not enter the mainstream of Ottoman historiography. They deserve serious study, especially Lokmān's *Shehinshāh-nāme*, a three-volume illustrated history in Persian verse of his principal patron Murād III.

In the pre-modern era, when many "historians" also wrote poetry and other types of literary work, literary style often dominated historiographical form; histories entirely in verse were common, as were the conventions of *inshā'* prose. Many court histories were also richly illustrated with miniature paintings and have contributed a great deal pictorially to knowledge of the late 16th-century empire (see N. Atasoy and F. Çağman, *Turkish miniature painting*, Istanbul 1974). While universal and dynastic histories were still produced, most works dealt with recent or contemporary events, often witnessed personally by the author. While many lesser works by minor government officials may have been principally intended to demonstrate their authors' literary skills and thus to serve as career currency in the search for patronage and promotion, their content and the values expressed are equally deserving of study.

From the 1590s, a significant change of focus is discernible in the major histories. The political turmoil of the late 16th-early 17th centuries, together with less active patronage by the sultans, resulted in the development of a more broadly-based "state" (as opposed to "dynastic") approach, concentrating less upon the sultan and more upon the military-administrative and judicial officials of state. Moreover, several writers—notably Muṣṭafā 'Ālī, but also the *shehnāmedji* Ta'līḳī-zāde and others—expressed open political criticism, akin to that found in the closely-related genre of advice literature/political treatises (*naṣīḥat-nāme/risāle*) which features prominently in early 17th-century Ottoman writing [see ḲOČU BEG].

Few reign histories as such appear among the major historical works of the 17th century, again reflecting the changing role of the sultanate and its greater insecurity. Paradoxically, one of the few to survive is the *Nuṣret-nāme* of Silāḥdār (d. 1723 [*q.v.*]) on the controversial reign of Muṣṭafā II (1695-1703 [*q.v.*]) and its aftermath. Mention must also be made of Ṭūghī's short work on the deposition of 'Othmān II (1618-22 [*q.v.*]) (F. İz, *Hüseyin Tûğî: Vak'a-ı Sultan Osman Han*, in *Türk Dili Araştırmaları Yıllığı Belleten* [1967], 119-64). Attempts by Murād IV to revive the *shehnāme* genre to celebrate his eastern conquests bore little fruit.

The major 17th-century histories are not those of court-oriented literary historiographers or major state officials, but generally those by middle-ranking members of the scribal professions. The history by Selānikī (d. 1599 [*q.v.*]) is an almost daily diary of events centred upon the imperial council, *dīwān-i hümāyūn* [*q.v.*], full of references to lower ranking individuals. Muṣṭafā 'Ālī's *Künh ül-akhbār* includes for each reign sections of biographical data on viziers, *'ulemā'*, *sheykhs*, poets and others, a practice followed by, amongst others, Kātib Čelebi in his *Fedhleke*. The early 17th-century histories by Ḥasan Bey-zāde and Pečewī [*q.vv.*] concentrate on Ottoman history from 1520, and are both particularly valuable for their authors' observations on the 1590s onwards. Pečewī is also credited with being the first major Ottoman historian to make critical use of non-Ottoman sources (in this case, Hungarian; see B. Lewis, *The use by Ottoman historians of non-Ottoman sources*, in Lewis and Holt, *Historians*, 185-6). Wedjīhī (d. 1661 [*q.v.*]) chronicled the period *ca.* 1638 to 1661,

a period also covered in the lost history of Shāriḥ al-Manār-zāde (d. 1657 [*q.v.*]). Taken together, the *Fedhleke* of Kātib Čelebi (covering 1591 to 1656) and the history by Silāḥdār conceived as a continuation of it (covering *ca.* 1655 to 1695) chronicle virtually the entire 17th century. The *Wekāyiʿ-nāme* by the *nishāndjî* ʿAbdī Pasha (d. 1695) complements these for the period 1648 to 1682.

Short works of various types proliferated throughout the period *ca.* 1500 to 1700, the *ghazā-nāme* genre in particular remaining popular across a range of literary levels and styles, focussing in the absence of the sultan upon the Grand Vizier or other commander-in-chief (cf. A.S. Levend, *Gazavatnameler ve Mihaloğlu Ali Bey' in Gazavatnamesi*, Ankara 1956). *Sūr-nāme* works, describing imperial weddings and circumcision feasts, feature from the later 16th century onwards, reflecting the dynasty's more sedentary lifestyle: e.g. the anonymous *Sūrnāme-yi hümāyūn* describing the 1582 circumcision festival for the future Meḥemmed III.

Works devoted entirely to non-Ottoman history are rare, except insofar as they are translations, usually from Arabic or Persian on earlier periods of Islamic history. Geographical works, such as the *Kitāb-i baḥriyye* (*ca.* 1521) of Pīrī Reʾīs [*q.v.*], and the 17th-century geographical and naval compilations by Kātib Čelebi used some non-Islamic sources and extended their focus beyond the Islamic world. The *Seyāḥat-nāme* of Ewliyā Čelebi [*q.v.*] (1670s-80s), an extended travelogue with commentary, accumulates a wealth of miscellaneous material from both Ottoman and non-Ottoman sources. An historico-geographical work by Seyfī (d. after 1590 [*q.v.*]) details 16th-century Central Asian and Indian rulers. The *Taʾrīkh-i Hind-i Gharbī* (an account of the conquest of the New World) and a history of France, both translations from western sources, date from the 1580s. Ḥüseyin Hezārfenn used Greek and Latin sources for his universal history. Otherwise, serious historical interest in the non-Islamic world develops only later in the 18th century.

Ottoman bio-bibliographical compendia and works of reference first appear in this second phase of historiographical development. Both Sehī's [*q.v.*] *tedhkere* [see TADHKIRA. 3] of poets of 1538 and Ṭashköprülüzāde's [*q.v.*] *Shekāʾik-i nuʿmāniyye* of 1558 on the lives of the Ottoman *ʿulemā* were products of Süleymān's reign; each initiated a long Ottoman tradition of compiling biographical dictionaries on their respective subjects (J.R. Stewart-Robinson, *The Ottoman biographies of poets*, in *JNES*, xxiv [1965], 57-74; R.C. Repp, *The mufti of Istanbul*, London 1986, *passim*). A biographical work on a less commonly treated subject group is Muṣṭafā ʿĀlī's *Menākib-i hünerverān* on painters and calligraphers. The major Ottoman bibliographical reference work is Kātib Čelebi's *Keshf al-ẓunūn*, a listing in Arabic of *ca.* 14,500 works in Arabic, Persian and Turkish. Also considered an historical reference work is the *Münsheʾāt ul-selāṭīn*, Ferīdūn Beg [*q.v.*]'s collection of correspondence and decrees of the Ottoman sultans up to the time of Selīm II.

Historical works of a more local nature appear in the later 17th century. The *Enīs al-müsāmirīn* of Ḥibrī (d. 1676 [*q.v.*]) is a history of Edirne detailing the major buildings and prominent citizens of its Ottoman era, 1359-1633. Naẓmī-zāde (d. *ca.* 1723)'s *Gülshen-i khülefā* is a history of Baghdād to 1718, of particular value for the Ottoman period.

iii. *The late imperial phase*

By the end of the 17th century, the need to come to terms with Ottoman defeats in Europe after the failed siege of Vienna in 1683, together with the desire for an authoritative interpretation of Ottoman history after the *hidjrī* millennium (1000 = A.D. 1591-2), contributed to the establishment of the post of *wakʿa-nüwīs* "official historian", which dominates the third principal stage of historiographical development, and continued formally until 1922. From the mid-19th century a new historiographical trend also emerged, stimulated by the new influences upon Ottoman intellectual life generally during the *Tanẓīmāt* era.

(a) Official histories. Naʿīmā (d. 1716 [*q.v.*]) is generally considered the first *wakʿa-nüwīs*, although the series of consecutive appointments to a formal post as official historian began only with his successor Rāshid (d. 1735 [*q.v.*]). Based on government documents and subject to the sultan's approval, *wakʿa-nüwīs* histories were intended for a relatively wide readership, those of Naʿīmā (in 1734), Rāshid and Küčük-Čelebi-zāde ʿĀṣim (d. 1760 [*q.v.*]) (both in 1741) being among the few early publications of the Müteferriḳa press [see MAṬBAʿA. 2]. Sāmī (d. 1733), Shākir (d. 1744), Ṣubḥī (d. 1769) and ʿIzzī (d. 1755 [*q.v.*]) then contributed to a continuous official history up to 1752 (Sāmī-Shākir-Ṣubḥī, *Taʾrīkh*, Istanbul 1198/1783; *Taʾrīkh-i ʿIzzī*, Istanbul 1199/1784).

Although Naʿīmā conceived his history as a "guide to what to do" for Ottoman statesmen, using his sources with care and prefacing his work with a discussion on the nature of historiography (cf. L.V. Thomas, ed. N. Itzkowitz, *A study of Naima*, New York 1972), the narratives produced by some of his later 18th-century successors were little more than pedestrian compilations of the documentary evidence upon which they were based. By the reign of Selīm III (1789-1807 [*q.v.*]), the office had lost prestige and was no longer considered to be producing worthwhile accounts. Short-term appointments, complaints about the inaccessibility of important documents, and the confusion caused by some historians' re-writing of their predecessors' work are indicative of this. Enwerī (d. 1794 [*q.v.*]) and Aḥmed Wāṣif (d. 1806) had five and four terms respectively as official historian, and are together responsible for a history of most of the period 1752-1805. Standard histories were then produced by the early 19th-century official historians, ʿĀṣim (d. 1819 [*q.v.*]) for the period 1803-1808, Shānī-zāde (d. 1826) for 1808-21, and Esʿad Efendi [*q.v.*] for 1822-25, although the latter remained in office as *wakʿa-nüwīs* until his death in 1848. At the request of Maḥmūd II (1808-39 [*q.v.*]), Esʿad Efendi also wrote *Üss-i ẓafer*, an official account of the destruction of the Janissary corps in 1826.

By far the most important 19th-century Ottoman history is that by Aḥmed Djewdet Pasha (d. 1895 [*q.v.*]), *wakʿa-nüwīs* 1855-66, covering 1774 to 1825, published in twelve volumes between 1855 and 1884, and almost immediately republished in a second edition. Drawing upon a variety of sources, including previous official histories but also other documents and some western sources, Djewdet Pasha adopted a critical approach unusual for his time, albeit within a generally traditional chronological framework (cf. İstanbul Üniversitesi Edebiyat Fakültesi, *Ahmed Cevdet Paşa semineri 27-28 Mayis 1985*, Istanbul 1986). By contrast, his successor Luṭfī Efendi (d. 1907, in post 1866-1907 [*q.v.*]) chronicler of the period 1826 to 1879, was much criticised for his lack of analysis and for his reliance upon material from the official gazette, *Taḳwīm-i wekāyiʿ*, of which he was also for a time editor. The last Ottoman official historian, ʿAbd al-Raḥmān Sheref (d. 1925, in post 1909-22) published no major chronicle, but played an important role both in the popularising of histor-

ical knowledge through his writing of well-informed school textbooks and also in the modernising of academic historical research in Turkey as first president of the Ottoman Historical Society, *Ta'rīkh-i 'Othmānī Endjümeni*, founded in 1909. (On official historians, see B. Kütükoğlu, *İA* art. *Vekāyinüwīs*, on which the above is based.)

(b) Non-official historians of the 18th and pre-*Tanẓīmāt* 19th centuries tended less towards the writing of narrative history, especially recent or contemporary. Notable exceptions are the universal histories by Shemdānī-zāde (d. 1779) to 1777 and Ferā'idi-zāde (d. 1835) to 1774, the *ghazā-nāme* by [Novi'li] 'Ömer [*q.v.*] on Ḥekīm-oghlu 'Alī Pasha's 1736-9 Bosnian campaigns, Ahmed Resmi's (d. 1783 [*q.v.*]) account of the 1768-74 Russo-Ottoman war (see V. Aksan, *An Ottoman statesman in war and peace: Ahmed Resmi Efendi, 1700-1783*, Leiden 1995), and the histories of the Crimean khānate by Seyyid Meḥmed Riḍā (d. 1756) and Ḥalīm Girāy (d. 1823). Wehbī (d. 1736)'s *Sūrnāme* on the circumcision feast of 1729 is as well known for its illustrations as for its text.

Otherwise, the important historical works of this era are biographical compendia. Aside from the continuing series of *tedhkeres* of poets, and biographical dictionaries of the *'ulemā'* by 'Ushāḳī-zāde (d. 1723 [*q.v.*]), Sheykhī (d. 1736) and Müstaḳīm-zāde (d. 1787 [*q.v.*]), new professional groups are documented: Grand Viziers in the *Ḥadīḳat ül-wüzerā* of 'Othmān-zāde Aḥmed Tā'ib (d. 1724 [*q.v.*]), and the *dheyl* to it by Aḥmed Djāwīd (d. 1803); *re'īs ül-küttābs* in the *Sefīnet ül-rü'esā* of Aḥmed Resmī; Mewlewī *sheykhs* in the *Sefīne-yi Mewlewiyye* by Muṣṭafā Thāḳib (d. 1735); musicians in the *Tedhkere-i khānendegān* of Meḥmed Es'ad (d. 1753 [*q.v.*]); and, eventually, historians in the *Āyīne-yi ẓürefā* of Djemāl ul-Dīn Meḥmed Ḳarṣlī-zāde (d. 1845) (republished in 1896 as *'Othmānlī ta'rīkh ve müwerrikhleri*, with a continuation by Djewdet Pasha). Another significant work of data compilation (with two 19th-century continuations) is the *Ḥadīḳat ül-djewāmi'* of Ḥüseyin b. Ismā'īl [Aywansarāyī] (d. 1786), effectively an architectural history of the mosques and other religious buildings of Istanbul and its environs. Also worthy of note is the first translation into Ottoman of the *Mukaddima* of Ibn Khaldūn, the first two-thirds by Pīrī-zāde Meḥmed Ṣāḥıb (d. 1749 [*q.v.*]), completed and published in 1858-60 by Djewdet Pasha.

At the turn of the 20th century, two major biographical compilations appeared: Meḥmed Thüreyyā [*q.v.*]'s *Sidjill-i 'Othmānī* (publ. 1890-9), a composite listing across a range of professional groups, and Bursalī Meḥmed Ṭāhir [*q.v.*]'s *'Othmānlī mü'ellifleri* (publ. 1916-24), on Ottoman authors generally, including poets, historians and theologians. The culmination of the Ottoman tradition of biographical compendia came in the Republican era, in the work of İbnülemin Mahmud Kemal İnal (1870-1957), whose *Son asır Türk şairleri* (publ. 1930-41) and *Osmanlı devletinde son sadrazamlar* (publ. 1940-53) were conceived as *dheyls* to earlier works on poets and Grand Viziers respectively.

(c) "*Tanẓīmāt* historiography". From the mid-19th century, increased opportunity for Ottomans to study foreign languages and to travel in western Europe, plus the development within the empire of a new educational system and different tastes in reading, combined to produce a flurry of historical works catering for demands for wider knowledge. Readily published by an expanding press, these varied from school textbooks, through historical romance to detailed scholarly tomes, and could be of equally varied quality (cf. M.H. Yınanç, *Tanzimattan meşrutiyete kadar bizde tarihçilik*, in *Tanzimat*, i, Istanbul 1940, 573-95).

Of the many translations and adaptations of European works, the best known are Aḥmed Hilmī (d. 1878 [*q.v.*])'s six-volume universal history of 1866, based on Chambers' *Universal history*, and the fourteen volumes of histories of European states abridged from French originals by Aḥmed Midḥat (1841-1912 [*q.v.*]). Late Ottoman writers were also influenced by western historiographical methodology. An attempt to break away from the dominant chronicle format was the Ottoman history by Khayrullāh (d. 1866), one of several drawing heavily upon von Hammer's *Geschichte des osmanischen Reiches* (Pest 1827-35, later translated into Ottoman by Meḥmed 'Aṭā [*q.v.*], publ. in 10 vols., from 1912). Especially noteworthy is Muṣṭafā Nūrī Pasha (1824-90)'s *Netā'idj ül-wuḳū'āt*, which divides Ottoman history into five chronological eras, concluding each part with discussion of military, financial and other state institutions. Attention was turned to categories of historical evidence other than literary and archival, including the study of coins and seals and the preparation of catalogues of such collections (E. Kuran, *Ottoman historiography of the Tanzimat period*, in Lewis and Holt, *Historians*, 422-5).

European Turcology, with its emphasis upon the particular historical and linguistic heritage of the Turks before and beyond the Ottoman empire, gave a new turn to Ottoman historical studies. In 1899 appeared Nedjīb 'Āṣim (1861-35)'s *Türk ta'rīkhi*, a history of the Turks of Central Asia, also translated from a French original, which acquired an important place in the emerging Turkish nationalist historiography (B. Lewis, *History and national revival in Turkey*, in *Middle Eastern Affairs*, iv/6-7 [1953], 221 ff.).

iv. *Modern historical writing*

The foundation of the Ottoman Historical Society in 1909, in the wake of the restoration of the Ottoman constitution in 1908 and the removal of Ḥamīdian censorship, gave a tremendous boost to the development of modern Turkish historiography. It fostered a heightened professionalism amongst historians, and published the first major Ottoman/Turkish historical journal, *Ta'rīkh-i 'Othmānī Endjümeni Medjmū'asī*, which appeared in 18 volumes from 1910 to 1931 (repr. Istanbul 1988). Contributors to the journal, who included Nedjīb 'Āṣim, Meḥmed 'Ārif, Aḥmed Tewḥīd and Aḥmed Refīḳ [Altinay, 1881-1937; see AḤMAD RAFĪḲ], based much of their work on Ottoman archival documents, but with less emphasis upon a narrative of political events and more upon institutional and cultural history.

Interest in pre-Ottoman Turkish history grew during the First World War and the 1920s, and was subsequently promoted by Atatürk [*q.v.*] as a means of strengthening a new Turkish national identity; this was parallelled by his encouragement of the study of the pre-Ottoman history of Anatolia, the geographic base of the new Republic. Largely for political reasons, therefore, the original Ottoman (from 1923, Turkish) Historical Society was wound up in the late 1920s, to be succeeded in 1932 by a new Turkish Historical Society, *Türk Tarih Kurumu*, under Atatürk's patronage. Anatolian archaeology (reported from 1937 in the new journal *Belleten*) and Saldjūḳ Anatolia were two principal areas of study to benefit. A prolific researcher in both was Halil Edhem Eldem (1861-1938), director of the Istanbul Museum of Antiquities, who published widely on pre-Ottoman coins, seals and architectural inscriptions.

The outstanding Turkish historian of the early Republican era was Mehmed Fuad Köprülü (1890-

1966 [*q.v.*]), whose several hundred academic publications between 1912 and 1950 ranged over literary, institutional, social and political history. In one of his most influential works, *Les origines de l'empire Ottoman* (Paris 1935, Turkish tr. Ankara 1954, English tr. New York 1992), he located the principal elements of Ottoman success in the social and political conditions of the 13th- and 14th-century Anatolian Turkish emirates, thus mounting a strong challenge to the hitherto prevailing Western notion that the strengths of the Ottoman state derived mainly from their control of the Balkans. Widely respected outside Turkey, Köprülü's views on the nature of mediaeval Anatolian society both stimulated and gave credibility to the new Republican generation of Turkish historians.

Other historians inspired by the topics of the "Atatürk era" include Mükrimin Ḥalil Yınanç (1898-1961), Osman Turan (1914-77) and İbrahim Kafesoğlu (1914-84) on the Saldjūḳs of Rūm and other Anatolian Turks; and Zeki Velidi Togan (1890-1970), a Bashkir emigré after the fall of the Russian empire, who wrote on both the history of the Turks of Central Asia (2 vols., 1946-47) and historical method (*Tarihde usul*, 1950). A study of Ottoman intellectual history, *Osmanlı Türklerinde ilim*, was published by Abdülhak Adnan-Adıvar (1882-1955) in 1940. The latter was also first editor-in-chief of the *İslam Ansiklopedisi*, a Turkish edition of the *Encyclopaedia of Islam* published under the auspices of the Ministry of Education.

With the declining emphasis upon Turkish national and Anatolian history after Atatürk's death, Turkish historians' interests broadened. İsmail Hakkı Uzunçarşılı (1888-1977)'s multi-volume *Osmanlı tarihi* and his accompanying studies of Ottoman administrative institutions, dating from the mid-1940s onwards, symbolise the rehabilitation of the study of Ottoman history. Wider scope and differing approaches to historical writing were further encouraged by the freer political climate of the 1960s, the increasing interest shown by Western scholars, and the greater use made of the Ottoman archives. Attention focussed first on the successful early Ottoman state up to *ca.* 1600, and on the 19th-century *Tanẓīmāt* reforms as background to the development of the Republic. By the 1990s study of the relatively "dark ages" of the 17th and 18th centuries had also come into vogue. In what follows there is room to mention only a handful of the most distinguished of the many important Turkish historians of the later 20th-century. The vast majority of modern Turkish historical writing is on Ottoman/Turkish/Islamic subjects; work outside these areas is rare.

Ömer Lutfi Barkan (1902-79) pioneered the modern study of Ottoman socio-economic history, a field which has dominated recent historiography in Turkey and has produced a lively debate on the nature of Ottoman "feudalism". Barkan's studies on early Ottoman land law, *ḳānūn* collections, the *tīmār* system, colonization, financial "budgets", *waḳf* endowments, etc., culminated in a major two-volume study on the building of the Süleymaniye mosque, *Süleymaniye cami ve imareti inşaatı* (Ankara 1972, 1979).

Halil İnalcık (b. 1916) has published prolifically on virtually all fields and periods of Ottoman history, but especially on political and socio-economic aspects of the pre-modern empire. Much of his work has been published in English and has been particularly influential. *The Ottoman empire: the classical age, 1300-1600* (London 1973) is a standard introduction to the subject; much of his later work is encapsulated in Part I of *An economic and social history of the Ottoman empire, 1300-1914* (ed. H. İnalcık and D. Quataert, Cambridge 1994, 11-409).

Notable historians of the early empire include M.C. Şehabeddin Tekindağ (1918-83), M. Tayyib Gökbilgin (1907-81), and Cengiz Orhonlu (1927-75); prominent scholars studying the 19th century include M. Cavid Baysun (1899-1968) and Münir Aktepe. Ottoman historiography was the province of Bekir Kütükoğlu, and architectural history that of Semavi Eyice. Late Ottoman and early Republican intellectual history has been studied by the sociologist and historian Şerif Mardin, and post-1800 political and social history by Kemal Karpat.

Bibliography: Given in the text.

(CHRISTINE WOODHEAD)

4. In Muslim India.

It is often said, though inaccurately, that history came to India with the Muslims. The existence of Indian dynastic annals is attested in the epigraphic *praśastis* from the 4th century A.D. onwards; and Bāṇa's *Harshačarita* of the 1st/7th century and Kalhana's *Rājatarangini* (6th/12th) represent important landmarks of the pre-Islamic historical tradition. But so far as we can judge, this tradition existing mainly in Sanskrit did not exercise any traceable influence on the Muslims' pursuit of history-writing in India, such as, let us say, the *Shāh-nāma* tradition exercised on Perso-Muslim historiography.

The Islamic phase of history-writing in India began with a remarkable work, an Arabic work of unknown title and authorship, its Persian translation made, *ca.* 613/1216-17, by ʿAlī b. Ḥamīd Kūfī, now known as the *Čač-nāma* [*q.v.* in Suppl.]. The work consists essentially of two parts, an account of the Brahman dynasty of Sind preceding the Arab conquest, and a narrative of the Arab conquest 92-5/710-14. The former part is seemingly a translation of a local dynastic chronicle, and the latter and larger portion, a collection of narratives of the nature of those contained in al-Ṭabarī's great history, with the Arab and tribal biases of individual narrators being fairly well manifest. Except for one interpolation, at the end, the original Arabic text seems to have been completed during the 3rd/9th century, though some material may indeed be much earlier.

Indo-Persian historiography proper begins with Ḥasan Niẓāmī's very ornate work, the *Tādj al-maʾāthir*, completed in 614/1217, dealing with the first two sultans of Dihlī. But the first major work is Minhādj b. Sirādj Djuzdjānī's [*q.v.*] *Ṭabaḳāt-i Nāṣirī*, completed in 657/1259, a history of Islamic dynasties, but very rich on the Ghūrid dynasty, the early sultans of India and their nobles and on the contemporary Mongol empire, for which too it constitutes a valuable contemporary record.

A series of historical works by the poet Amīr Khusraw (d. 725/1325 [*q.v.*]), sc. the *Ḳirān al-saʿdayn* (688/1289), *Miftāḥ al-futūḥ* (690/1291), *Khazāʾin al-futūḥ* (711/1311-12), *Duwal Rānī Khaḍir Khān* (715/1316), *Nuh-sipihr* (718/1318) and *Tughluḳ-nāma* (720/1320), give rather uneven glimpses into the history of the period, especially of the Khaldjī dynasty (689-720/1290/1320). Despite their contemporariness to the events they describe, the poet's proneness to complex verse, stylistic digressions, words with double meanings and complicated rhetoric, deprive his works of much substance, and flattery overshadows genuine insight and truth.

A totally different kind of work, and one perhaps, entitled to be treated as a true history under any definition, is Ḍiyā al-Dīn Baranī's [*q.v.*] *Tārīkh-i Fīrūz-*

Shāhī, completed in 758/1357, treating of the history of the Dihlī Sultanate [*q.v.*] from Balban's accession in 664/1265 to Fīrūz Tughluḳ's early years. Baranī has a definite theory of history, in which the sultan's natural urge to aggrandise is seen as a threat to the stability of the nobility, since political stability must in his view, be based on respect for station according to birth. Baranī is masterly in his sketches of character, brilliant in his insights on complicated economic situations and administrative measures. His fluent and trenchant style, unaffected by any attempt at ornateness, makes him one of the great Indian masters of Persian prose.

Compared to Baranī, the other two histories of the Dihlī sultans, ʿIṣāmī's [*q.v.*] versified *Futūḥ al-salāṭīn* (750/1349-50) and Yaḥyā Sirhindī's *Tārīkh-i Mubārak Shāhī* (838/1434) are prosaic works, though furnishing us with much information derived independently of Baranī. Shams-i Sirādj ʿAfīf has left us a history of Fīrūz Shāh (r. 752-90/1351-8), written after Tīmūr's invasion (801/1398), which manages to be factual (though somewhat weak in dates) despite much rhetoric.

The 9th/15th and early 10th/16th centuries saw the production of a few histories of provincial dynasties, such as the anonymous *Tārīkh-i Muẓaffar Shāhī* (889/1484) and the *Ḍamīma-yi ma'āthir-i Maḥmūd Shāhī* (916/1511), relating to Gudjarāt, and Shihāb Ḥakīm's *Ma'āthir-i Maḥmūd Shāhī* (completed before 906/1500), relating to Mālwā. Rather surprisingly, no history of the two Afghān dynasties, the Lodīs (854-932/1450-1526) and the Sūrs (945-62/1540-56) was written during the period of their rule. For the Lodīs, there is the later *Wāḳiʿāt-i Mushtāḳī*, by Rizḳ Allāh "Mushtāḳī" (d. 989/1581), a work of an anecdotal character but the main source for later accounts of the Lodīs; and for the Sūrs, ʿAbbās Sarwānī's *Tuḥfa-yi Akbarshāhī* (written after 987/1579) remains the main source.

The establishment of the Mughal dynasty, with Bābur's victory at Pānīpat (932/1526 [*q.v.*]), inaugurated a new era in history writing. Bābur (d. 937/1530) continued the writing of his Turkī memoirs in India, so that he has given us a fascinating account of India and a frank description of the events of a large part of his four years' reign in India. These memoirs were translated into Persian with commendable accuracy by ʿAbd al-Raḥīm Khān-i Khānān (998/1589-90).

With Yazdī's *Ẓafar-nāma* setting the model for Tīmūrid history writing, the greatest historical work, which took it for its model, but undoubtedly went much beyond it, is Abu 'l-Faḍl's *Akbar-nāma*, first text completed in 1004/1596. This official history of Bābur, Humāyūn and Akbar not only used a large amount of archival material, but also a number of specially-commissioned memoirs, among which only a few survive, such as those of Gulbadan Begam and Bāyazīd Bayāt, as well as historical narratives especially sponsored to provide material, of which ʿAbbās Sarwānī's above-mentioned work is one. Abu 'l-Faḍl has a much larger vision of history than one of mere annals, and he therefore appended to his narrative history what came to be considered as a separate work, the *Ā'īn-i Akbarī*, containing massive fiscal, financial and social data, a detailed provincial gazetteer and a cultural history of India. It is remarkable in being without any religious bias and in treating Indian culture as a composite one to which both Hindu and Muslim traditions have contributed.

Akbar's reign saw the production of the first general history of India, Niẓām al-Dīn Aḥmad's *Ṭabaḳāt-i Akbarī* (1002/1593-4). Especially notable was his endeavour to reconstruct the history of provincial dynasties as part of the general political history of India. He was followed by Ḳāsim Hindū-Shāh "Firishta", who, in his *Gulshan-i Ibrāhīmī* (1015/1606-7), gave a still more detailed history of the country, and showed considerable critical sense in using his sources. ʿAbd al-Ḳādir Badā'ūnī [*q.v.*] completed his *Muntakhab al-tawārīkh* in 1004/1595-6, another history of India, which draws much of its information from Niẓām al-Dīn's work. But he concentrates on Akbar's reign, of whose events he gives a trenchantly critical interpretation from an orthodox Muslim point of view. His biographical sketches of scholars and other celebrities in his concluding portion form a special feature of his work.

Djahāngīr (r. 1014-37/1605-27) followed Bābur in writing his own memoirs. These are in Persian and appear to have begun to be written like a diary soon after his accession and continue up to 1034/1624. Djahāngīr writes in simple and literary prose with a surprising degree of frankness; and his deep interest in art and in natural history, as well as the life of ordinary people, particularly enliven his memoirs for the modern reader.

With his successor Shāh Djahān (1037-68/1628-58) begins another series of official histories. First, Muḥammad Amīn Ḳazwīnī was commissioned to write the *Pādshāh-nāma*, based on official records. His account covered the first ten years of Shāh Djahān's reign. A shift from the solar to lunar calendar for dating events, and perhaps other reasons, led Shāh Djahān to commission ʿAbd al-Ḥamīd Lāhawrī to write the history of these ten years afresh. Lāhawrī ultimately produced a very detailed account of the twenty years (lunar) of Shāh Djahān's reign, also under the title *Pādshāh-nāma*. The account of the third decade was prepared, as a continuation, by his pupil Muḥammad Wārith. Awrangzīb (1068-1118/1659-1707) had the history of the first ten years of his reign, written by Muḥammad Kāẓim, entitled the *ʿĀlamgīr-nāma*. All these official histories have some features in common. They are accurate as to dates and details, for which official records are their main source; they pay much attention to geography; and their authors are anxious to convey to the reader the imperial view, whether in commendation or criticism of individuals or in assessment of causes and consequences of various events. Their model for the narration of events was Abu 'l-Faḍl, though they obviously do not share his views on religion (now no longer the official ones), nor his very large vision of history that had embraced, as we have seen, the full range of economic and cultural life.

Since Awrangzīb did not allow any further official history to be written after 1079/1668, the era of private histories now began. The most notable was Abu 'l-Faḍl Maʿmūrī's untitled history, which was almost entirely incorporated in Khāfī Khān's well-known *Muntakhab al-lubāb* (1144/1731), a general history of India. Maʿmūrī's critical approach was shared by Bhīm Sen, a Hindu commander, whose *Nuskha-yi dilkushā* (1120/1709) is a combination of history and memoirs, written with much candour and insight (e.g. his discussion of the agrarian roots of the Marāṭhā uprising). Sāḳī Mustaʿidd Khān's *Ma'āthir-i ʿĀlamgīrī* (1122/1710-11) is designed to provide an ostensibly official history of Awrangzīb's reign, and therefore follows the style of such histories, but is much briefer. Awrangzīb's reign is also marked by the appearance of Hindu historians writing in Persian: besides Bhīm Sen, we have Isardās Nāgar and Sudjān Rāy Bhandārī [*q.v.*].

Historical works in Persian became still more numer-

ous in the 12th/18th century. Khāfī Khān's history has already been mentioned. An anonymous work, the *Tārīkh-i Shīvādjī*, written before 1191/1777, consciously presents the Marāthā point of view on Shīvādjī, which is based on a Marāthī narration or *bakhar*.

Perhaps the most interesting historical work of this late phase is Ghulām Ḥusayn Khān Ṭabāṭabā'ī's *Siyar al-muta'akhkhirīn* (completed in 1195/1781), covering the period from 1118/1707 onwards in great detail. Its close account of the English East India Company's conquests and government, and its strong criticism of the practices of that system of government assured it of a large readership, especially through Ḥādjdjī Muṣṭafā's celebrated translation (1789). It belongs partly to the genre of works produced under English patronage, such as Ghulām 'Alī Khān's *'Imād al-sa'ādat* (completed in 1223/1808), relating to Awadh [*q.v.*], and Lačhmī Narāyan "Shafīķ's" *Bisāṭ al-ghanā'im* (1214/1799), a history of the Marāthās down to 1174/1761.

Modern historiography began to exercise its influence in the 13th/19th century. Sayyid Aḥmad Khān [*q.v.*] wrote the *Āthār al-ṣanādīd* in Urdu in 1847 on the buildings of Dihlī; and his young friend Dhakā' Allāh produced the first history of India in Urdu, containing the results of modern research and first published in 1316/1898.

A discipline which followed a tradition distinct from history was that of biography. The biographical notices of 25 slave commanders of Sultan Iltutmish (*mamlūk-i Shamsī*) that Djuzdjānī gave in the *Ṭabaķāt-i Nāṣirī* finds no sequel in historical works of the succeeding generations. But with the Mughals, a new tradition of bureaucratic biography began. On 'Abd al-Raḥīm Khān-i Khānān was written a long biographical work, the *Ma'āthir-i Raḥīmī* by 'Abd al-Bāķī Nihāwandī in 1025/1616; and Ni'mat Allāh included in his *Tārīkh-i Khān Djahānī* (1021/1613), a full biography of his patron Khān-i Djahān Lodī, another commander of Djahāngīr's. The pioneering step towards compiling a comprehensive biographical dictionary of the Mughal nobility was taken by Shaykh Farīd Bhakkarī in his *Dhakhīrat al-khawānīn* (1060/1650), the result of extensive reading and collection of oral information. Much of his work was incorporated, along with other extensive data independently collected from other histories, epistolary collections and records, in the *Ma'āthir al-umarā'* of Shāh Nawāz Khān, Āzād Bilgrāmī and 'Abd al-Ḥayy (finally completed in 1194/1780), which contains over 730 biographies. A much smaller work of a similar kind, but earlier in date, had been Kewal Rām's *Tadhkirat al-umarā'* (1140/1727-8).

The biographical literature on religious divines begins with Mīr Khwurd's *Siyar al-awliyā'* (completed before 790/1387), a fairly detailed and reliable narrative of the lives of the Indian Čishtī saints from Mu'īn al-Dīn Čishtī (d. 638/1236) onwards. A subsequent work on fourteen Čishtī saints, the *Siyar al-'ārifīn* of Shaykh Djamālī (d. 942/1536), is less reliable but obtained considerable popularity. With 'Abd al-Ḥaķķ's *Akhbār al-akhyār* (999/1591) began the tradition of compilation of biographical dictionaries of Indian saints without distinction of mystical affiliation. Ghawthī Shaṭṭārī's *Gulzār-i abrār* (1022/1613) is a similar but much more comprehensive work, beginning with saints of the 7th/13th century, in which the compiler showed great care and industry.

Ṣadīd al-Dīn 'Awfī's [*q.v.*] *Lubāb al-albāb*, with biographical notices of some 300 poets, technically belongs to India since it was written (618/1221-2) under Nāṣir al-Dīn Ķubāča, the ruler of Sind. But the first major work of this genre was 'Alā' al-Dawla Kāmī's *Nafā'is al-ma'āthir* (begun in 973/1565-6), written under Akbar, giving notices of some 350 poets, all of his own century (the 10th/16th). Subsequent biographical dictionaries of poets include Shīr Khān Lodī's *Mir'āt al-khayāl* (1102/1690-1), Brindābandās's *Safīna-yi khwushgū* (1147/1734-5), Āzād Bilgrāmī's *Sarw-i āzād* (1166/1752-3) and Luṭf 'Alī Beg's *Ātishkada* (begun in 1174/1760-1). They are poetry selections as well, since each biographical notice is invariably followed by the author's selection of verses from that poet. It was partly by reliance on such biographical dictionaries of poets, besides information personally collected, that the *Āb-i ḥayāt* by Muḥammad Ḥusayn Āzād came to be written (1296/1880), combining the biographical dictionary form with a truly historical treatment of the Urdu language and literature.

Among more general biographical dictionaries covering scholars, mystics, theologians and poets, possibly the most noteworthy is that of Muḥammad Ṣādiķ, the *Ṭabaķāt-i Shāhdjahānī* (1046/1637), containing the lives of some 871 celebrities. A different kind of work is Mīrzā Muḥammad's *Tārīkh-i Muḥammadī* (completed in 1190/1776) giving obituary notices of prominent men in a chronological sequence according to the years of their deaths.

Modern Indo-Muslim historiography. With the introduction of the results of modern Indological and Orientalist researches into Indian historiography, it now becomes very difficult to demarcate the Indo-Muslim stream from the general stream of South Asian historiography. Two trends may, however, be identified: the Indian nationalist one, which has emphasised the Muslim contribution to a composite Indian culture, and the separatist one, which has insisted on the study of the Muslim community as an independent political, social and cultural entity. The nationalist point of view found early expression in Mohammad Habib's *Maḥmūd of Ghaznīn* (1342/1924), a critical tract on that conqueror, and in Tara Chand's *Influence of Islam on Indian culture* (1340/1922). The most comprehensive statement of the nationalist viewpoint perhaps occurs in M. Mujeeb's *Indian Muslims* (1386/1967). The opposite school came to be represented particularly in the writings of Ishtiaq Husain Qureshi, especially in his *The Muslim community of the Indo-Pakistan sub-continent* (*610-1947*) (1381/1962). The debate continues at various levels of historical writing in India, Pakistan and Bangladesh, with the Aligarh School of historians in particular making a lively and significant contribution.

Bibliography: A major work of translated extracts from Indo-Islamic historical works remains H.M. Elliot and J. Dowson, *History of India as told by its own Historians*, 8 vols., London 1867-77. The sources in Persian are surveyed in Storey, i, parts 2-3. Other relevant works include P. Hardy, *Historians of medieval India*, London 1960; Mohibbul Hasan (ed.), *Historians of medieval India*, Meerut 1983; Harbans Mukhia, *Historians and historiography during the reign of Akbar*, New Delhi 1976. See also M. Athar Ali, *The use of sources in Mughal historiography*, in *JRAS*, 3rd series, vol. v/3 (1995) 361-73.

(M. Athar Ali)

5. In West and Central Africa.

Our knowledge of the art of chronicling in sub-Saharan Africa is as yet rudimentary. What is currently known may be classified under three headings: (1) conventional chronicles by named authors; (2) biographical dictionaries; and (3) anonymous local chronicles and king-lists. It should be emphasised, however, that there are numerous unpublished works, and there

may yet be more manuscript material in the hands of local scholars.

(1) *Conventional chronicles.* The earliest chronicles in the region date from the late 10th/16th century. In Bornu, the Chief Imam (*al-imām al-kabīr*) Aḥmad b. Furṭuwā (or Furṭū) wrote a chronicle of the first twelve years (1564-76) of the reign of his patron, the *sulṭān* Idrīs Alōma (ed. and tr. D. Lange, *A Sudanic chronicle: the Borno expeditions of Idrīs Alauma (1564-1576)*, Stuttgart 1987), but says his work was inspired by an earlier chronicle, apparently written in the opening years of the century. He also wrote an account of his patron's expeditions against Kānem (Arabic text, Kano 1932, tr. H.R. Palmer, in *Sudanese memoirs*, Lagos 1928, i, 15-74). Because they are contemporary, and often eye-witness, accounts, they are especially valuable, despite their obvious biases; the same circumstance no doubt explains their lack of chronology apart from occasional phrases like "in the following year".

In the middle of the following century, two large chronicles were written in the Middle Niger region: the *Ta'rīkh al-Sūdān* of ʿAbd al-Raḥmān al-Saʿdī [*q.v.*], and the *Ta'rīkh al Fattāsh* of Maḥmūd Kaʿtī [*q.v.*], edited and added to by his maternal grandson Ibn al-Mukhtār. Both of these works principally chronicle the history of the Songhay empire [*q.v.*] from the mid-9th/15th century until the Saʿdian conquest of 1000/1591, though the *Ta'rīkh al-Sūdān* continues its account to 1065/1655-6. The history of the *pashalik* of Timbuktu deriving from the Saʿdian conquest, from 1000/1591 to *ca.* 1150/1737-8 is recounted in the anonymous *Dīwān al-mulūk fī salāṭīn al-Sūdān* (ms. B.N., Paris, fonds arabe, 5259, fols. 88-152), which was subsequently (1164/1751) re-arranged by an unknown hand as a biographical dictionary of the pashas under the title *Tadhkirat al-nisyān fī akhbār mulūk al-Sūdān* (ed. and tr. O. Houdas, Paris 1899-1901). The cycle of chronicles is completed by the work of Mūlāy Ḳāsim b. Mūlāy Sulaymān covering the years 1160/1747 to 1215/1800-1 (text and tr. in M. Abitbol, *Tombouctou au milieu du XVIII^e siècle*, Paris 1982).

The area of southern Mauritania and the Senegal river valley also has a tradition of chronicle writing as yet only very partially explored. Most of these historical works seem to have been written in the 19th and 20th centuries. Chronicles of Walāta (Oualata) and Niʿma (Néma) have been published in translation (tr. Paul Marty, Paris 1927), and a number of smaller works were published in Ismaël Hamet (tr.), *Chroniques de la Mauritanie sénégalaise*, Paris 1911; one of these deals with the *djihād* of the 11th/17th-century Nāṣir al-Dīn al-Yadālī, and another with genealogies, a popular genre in Mauritania, where claim to Arab, and especially Sharīfian, ancestry, is of paramount social importance. A very extensive chronicle and encyclopaedia of the populations of the Senegal river valley was written by the Tukulor *shaykh* Mūsā Kamara (d. 1945), *Zuhūr al-basātīn fī ta'rīkh al-sawādīn.* French translations of some parts have already been published, and the bulk of the rest is to appear in four volumes under the direction of Jean Schmitz.

The 19th and 20th centuries witnessed a proliferation of historical writing associated with the *djihād* of Shaykh ʿUthmān b. Muḥammad Fodiye (d. 1232/1817 [see ʿUTHMĀN B. FŪDĪ]) and the Islamic state which arose out of it (sometimes, misleadingly, called the "Sokoto Caliphate"). The earliest of these is the *Infāḳ al-maysūr fī ta'rīkh bilād al-Takrūr* of Shaykh ʿUthmān's son and military commander Muḥammad Bello [*q.v.*]; this is an account of the *djihād* campaigns, with valuable material on the history of Islam in the central *bilād al-Sūdān* written in 1227/1812 (ed. C.E.J. Whitting, London 1951). Shaykh ʿUthmān's brother ʿAbd Allāh, who had written much poetry celebrating the victories of the *djihād* and elegising the dead, collected his poems together and wove an historical account around them, completing in 1228/1813 his *Tazyīn al-waraḳāt* (ed. and tr. M. Hiskett, Ibadan 1963), a work in the tradition of Ibn Hishām's *Sīra.* Another early account is that of ʿAbd al-Ḳādir b. al-Muṣṭafā (d. 1280/1864, see *ALA* II, 221-30), the so-called *Rawḍāt al-afkār*, which also contains a unique account of Gobir history in the 18th century (tr. H.R. Palmer, in *J. African Soc.*, xv [1915-16], 261-73). The annals of the dynasty founded by Shaykh ʿUthmān were largely written by the viziers of the succeeding sultans (see D.M. Last, *The Sokoto Caliphate*, London 1967; idem, *Arabic source material and historiography in Sokoto*, in *Research Bull.* [Centre of Arabic Documentation, University of Ibadan], i/2 [1965], 3-19, i/3 [1965], 1-7). These are detailed in *ALA* II, 184-212, the most comprehensive being the *Ḍabṭ al-multaḳaṭāt min al-akhbār al-mutafarriḳa fī 'l-mu'allafāt* of the late vizier Djunayd b. Muḥammad al-Bukhārī (Arabic text publ. Sokoto n.d.; Hausa tr., *Tarihin Fulani*, Zaria 1957). Less well known are the *Taḳāyīd mimmā waṣala ilaynā min aḥwāl umarā' al-muslimīn salāṭīn Ḥawsa* of al-Ḥādjdj Saʿīd, an outsider to the institution, covering the period down to 1854 (part 2 only ed. and tr. O. Houdas, *Histoire du Sokoto*, at end of his tr. of *Tadhkirat al-nisyān*); and the unpublished *Kanz al-awlād wa 'l-dharārī* of Muḥammad Sambo b. Aḥmad al-Kulawī, written in 1234/1818-19, a long and rambling work of general Islamic history, pious biography and Fulani genealogy and history, not well regarded by Sokoto scholars and hence neglected (see *ALA* II, 230-1). Of local accounts of the *djihād* and its aftermath, two deserve mention, both unpublished: the *Taḳyīd al-akhbār* of Muḥammad Zangi on Kano (written in 1284/1868, see *ALA* II, 342), and the *Ta'līf akhbār al-ḳurūn* of Aḥmad b. Abī Bakr called Ọmọ Ikokoro, on Ilorin (written 1330/1912, see *ALA* II, 447).

(2) *Biographical dictionaries.* There are few works of this genre, but the following deserve mention: the celebrated collection of biographies of Mālikī scholars of North and West Africa and Andalusia, *Nayl al-ibtihādj bi-taṭrīz al-dībādj* by Aḥmad Bābā al-Tinbuktī (d. 1036/1627 [*q.v.*]), publ. on the margins of Ibn Farḥūn, *al-Dībādj al-mudhahhab*, to which it forms a supplement (Cairo 1351/1932-3, see also A. Cherbonneau, *Essai sur la littérature arabe au Soudan d'après le Tekmilet ed-Dibadje d'Ahmed Baba le Tombouctien*, in *Annales de la soc. arch. de Constantine*, ii [1854-5], 1-42); Aḥmad Bābā also wrote (1012/1603) an abridgement, *Kifāyat al-muḥtādj li-maʿrifat man laysa fī 'l-dībādj*, which remains unpublished. In 1214/1799-1800 a scholar of Walāta, Muḥammad ʿAbd Allāh b. Abī Bakr al-Ṣiddīḳ al-Barritaylī (or al-Bartilī) wrote *Fatḥ al-Shakūr fī maʿrifat aʿyān ʿulamā' al-Takrūr* (ed. Muḥammad Ibrāhīm al-Kattānī and Muḥammad Ḥadjdjī, Beirut 1401/1981), which provides biographies of scholars and saints of southern Mauritania and Middle Niger region. It was complemented by the *Minaḥ al-rabb al-ghafūr fī mā ahmalahu ṣāḥib Fatḥ al-Shakūr* of Abū Bakr b. Aḥmad al-Walātī (d. 1917), the single known manuscript copy of which is preserved in the Centre de Documentation et de Recherche Ahmad Baba (CEDRAB) at Timbuktu, ms. no. 669. In fact, the work goes beyond the simple compass of a biographical dictionary and merges this genre with the genre of annals (*ḥawliyyāt*), and in so doing provides much valuable information on the history of southern Mauritania

and northern Mali in the 19th century. Preserved in the same collection are the *Izālat al-rayb* of Aḥmad Bu 'l-Aʿrāf, and *al-Saʿādat al-abadiyya* of Aḥmad Bābēr al-Arawānī, the first broadly covering Mauritania and the Middle Niger, the second memorialising Timbuktu scholars.

(3) *Anonymous local chronicles and king-lists.* There is a considerable local literature of such material in central Sudanic Africa (especially within present-day Niger and Nigeria, see *ALA* II, ch. 14). Most of these materials are in Arabic, but there are items in Hausa, Nupe and Kanuri (the *girgams*, published in translation by H.R. Palmer in *Sudanese memoirs*, Lagos 1928). The best known are the chronicles of Agadès, which together cover the period 809-1307/1406-1890 (see J. Urvoy, *Chroniques d'Agadès*, in *J. Société des Africanistes*, iv [1934], 145-77), and the chronicles of Kano. There are several extant king-lists of Kano recorded in the 19th century, at least one of which contains narrative material (see J.O. Hunwick, *Not yet the Kano Chronicle: king-lists with and without narrative elaboration from nineteenth-century Kano*, in *Sudanic Africa*, iv [1993], 95-130). These list rulers of Kano, beginning with Bagauda (putatively 11th century), with regnal lengths, but no absolute chronology, down to the date when the particular list was recorded to writing.

In the late 19th century, an anonymous writer, perhaps a court official, wrote was has come to be known as "The Kano Chronicle". The basis of it is king-list material; hence it has only regnal lengths and no absolute chronology. It covers the history of Kano, from its legendary origins (putatively in the 5th/11th century), down to the reign of Sultan Muḥammad Bello (*r.* 1883-92). On to the king-list has been grafted material on the administration of Kano sultanate, the history of Islam and Kano's external relations. This material appears to be largely oral in origin, and is written in an idiosyncratic style reflecting its compiler's Hausa background (see Hunwick, *A historical whodunit: the so-called "Kano Chronicle" and its place in the historiography of Kano*, in *History in Africa*, xxi [1994], 127-46; P. Lovejoy *et alii*, *C.L. Temple's "Notes on the history of Kano" [1909]: a lost chronicle on political office*, in *Sudanic Africa*, iv [1993], 7-76). No Arabic text has ever been published, but it was translated into English by Palmer (*Sudanese memoirs*, iii, 92-132) and into Hausa under the direction of Rupert East (*Labarun Hausa da Makwabtansu*, Zaria 1933, ii, 3-58, with additional material covering the period down to 1926). Material of a similar nature was used by Ādam Na-Maʿadji in his *al-Iʿlān bi-ta'rīkh Kanū* (1352/1933-4). A Hausa chronicle of Kano from *ca.* 1819 down to the 1950s was written by Abubakar Dokaji, *Kano ta Dabo Cigari*, Zaria 1959.

A similar king-list tradition existed in Katsina (see *ALA* II, 584-5), though no elaborated form comparable to the "Kano Chronicle" emerged. The same is true in Bornu (see *ALA* II, 568-73) where a king-list was maintained going back to the 5th/11th century (see D. Lange, *Le Dīwān des sultans du (Kānem)-Bornu*, Wiesbaden 1977), and many brief anonymous, and generally undated, historical accounts have been written, some under the stimulus, or at the request, of colonial officials. Neighbouring Mandara also has its chronicles (see *ALA* II, 588-9; chronicles published in Eldridge Mohammedou, *Le royaume du Wandala ou Mandara au XIXᵉ siècle*, new ed., Tokyo 1982).

Farther west in what is now the Republic of Ghana, there is a tradition of local chronicle writing in Arabic that goes back to the mid-12th/18th century. Several of these items were published in Ivor Wilks *et alii*, *Chronicles from Gonja*, Cambridge 1986. Other brief chronicles of polities in northern Ghana were published in Wilks, *Wa and the Wala*, Cambridge 1989. Hausa chronicles concerning the late 19th-century Zabarma invasions of northern Ghana under Babatu have been published by S. Pilaszewicz, *The Zabarma conquest of Northern Ghana and Upper Volta*, Warsaw 1992 (but see Wilks in *Sudanic Africa*, iv [1993], 213-22).

In the area of western Sudanic Africa, there are also local anonymous chronicles for areas such as Futa Djallon and Futa Toro (see *Catalogue des manuscrits de l'IFAN*, Dakar 1966: fonds Brevié, fonds Gaden, fonds Veillard): and for 19th-century Mali, these latter materials being largely preserved in the Bibliothèque Nationale, Paris (see Noureddine Ghali *et alii*, *Inventaire de la bibliothèque ʿUmarienne de Ségou*, Paris 1985; David Robinson, *The Holy War of Umar Tal*, Oxford 1985), and at CEDRAB, Timbuktu (see *Sudanic Africa*, iii [1992], 173-81; *Fihris makhṭūṭāt markaz Aḥmad Bābā li 'l-tawthīk*, i, ed. Sidi Amar ould Ely, London 1995).

In the Middle Niger region and southern Mauritania, there is a tradition of recording obituaries and significant events (*ḥawādith, wakāʾiʿ*), which is first evident in the later chapters of al-Saʿdī's *Ta'rīkh al-Sūdān*, but which also has an independent existence.

6. In East Africa.

South of the plains below Ethiopia [see SOMALI], Islam had not penetrated the hinterland before the 19th century. Even our knowledge of the history of the coast is at best fragmentary. Agatharchides of Cnidus, Strabo, Pliny, Cl. Ptolemy, Cosmas Indicopleustes make tantalisingly brief references, which become only more extensive in *The Periplus of the Erythraean Sea* of *ca.* A.D. 50.

The first Arab author to make a historical statement was al-Djāḥiẓ, with some brief statements on the people of Pemba and Zanzibar. He was possibly a native of the former. Mediaeval Arab references are summarised in the art. SOFĀLA, and in detail by J.S. Trimingham, and sources for China by P. Wheatley. The most important accounts are of al-Idrīsī, al-Masʿūdī and Ibn Baṭṭūṭa, with the anecdotal references of Buzurg b. Shahriyār al-Rāmhurmuzī.

The earliest local document is preserved only in Portuguese by João dos Barros, the *Crónica dos Reyes de Quiloa*. This history is an account of the foundation of the sultanate of Kilwa [*q.v.*] and its sultans from the 10th century until *ca.* 1505, when the succession was contested. It was originally in Arabic. The *Kitāb al-Sulwa fī akhbār Kulwa*, B.L. ms. Or. 2666, a 19th-century copy of a history of the dynasty up to *ca.* 1550, was presented to Sir John Kirk by Sultan Barghash in 1877. It relates the history of the dynasty with, like the Portuguese document, some *lacunae.* Later, its fortunes in the 18th century are related in the 1770s by a French slave-trader, Morice, preserved in Rhodes House, Oxford, and in the Archives de France.

In the Lamu archipelago, a traditional Swahili *Habari za Pate* ("History of Pate") claims that the sultanate was founded in A.H. 600. It has the unusual feature of citing the full male descent of each sultan until 1224/1809. Additions were made by two further hands up to the end of the century when the sultanate foundered. Two traditional histories in Arabic, *al-Kawākib al-durriyya* (unpublished) and the *Kitāb al-Zunūdj* (ed. E. Cerulli) are compilations from precedent Arabic accounts of a confusing nature and of slender historical value other than as examples of what passed

for history. They are currently being edited by J.McL. Ritchie, who has also edited *The history of the Mazrui dynasty of Mombasa* by the former Chief *Ḳāḍī* of the Kenya Coast, Sh. al-Amīn b. ʿAlī al-Mazrūʿī, written from family papers *ca.* 1945. Brief fragments, in Swahili, refer to Lamu and to Kua, and the Mafia Is., while oral traditions of the Tanzanian coast were collected at the end of the 19th century by C.G. Büttner and by C. Velten. In the 1930s, many oral traditions in Swahili were collected in Tanganyika in "District Books" on government orders, and relate to the whole interior. Sir John Gray's *History of Zanzibar* also contains traditional Swahili material relating to Zanzibar and Pemba. Farther south, no local documents have been reported from Mozambique, but a number of traditions from the Comoro Islands, in Arabic and in Swahili, have been published or listed by C. Allibert, Mayotte. All this literature is preoccupied with dynasties and the fortunes of rulers, with only occasional glimpses of commerce, trade or economic traditions.

For the Swahili-speaking peoples, "literature" consists rather of poetry, epic, historical as well as lyric, the latter often with an underlying political purpose. Much has been published by W.H. Whiteley, J. Knappert, H.E. Lambert and others. In the 1960s J.W.T. Allen photographed a very substantial number of Swahili and Arabic mss. in private hands, returning them to their owners. The results of his research are preserved in Dar es Salaam University Library, with copies in the School of Oriental and African Studies, London, which fill nineteen large volumes. They contain matter of every description, and have received little attention from scholars. The Zanzibar Archives are known to contain some 300 mss. in Arabic from the library of the former sultans. They have never been studied, let alone even listed.

The historian of the area in pre-colonial times is greatly assisted by advances in archaeology, which can explain even some of the problems of the documents. John Walker, in articles in the *Numismatic Chronicle*, 1936, 1938, established the coinage of the Sultans of Kilwa; coinages from Zanzibar and from Mogadishu have been established by the present writer in the same journal, and for Pemba by H.W. Mitchell Brown. Excavations at Mtambwe Mkuu, Pemba Is., Shanga Is. off Lamu, and on Tumbatu Is. off Zanzibar, by M.C. Horton, have eventuated in a clearer historical chronology. Ceramics show firm Sāsānid-Islamic connections, and the coins have connections with 8th-century Amīrs of Sind and with 10th- and 11th-century Fāṭimid Cairo. What is possibly a wreck find of Fāṭimid dinars of the same period has been found recently (1995) off Madagascar. The historical chronologies based on archaeology of both J.S. Kirkman in Kenya and of H.N. Chittick in both Kenya and Tanzania have now had to be revised, with the result that the penetration of Islam into the area is now certain by the 8th century, not three or four centuries later. Commercial connections with Sīrāf and Persia are well demonstrated by Sāsānid-Islamic pottery at no less than twenty sites in the Lamu area alone. These advances also sustain verisimilitude to the late evidence for the histories of Kilwa and Pate.

For Mozambique, we know little from archaeology and nothing from numismatics. The principal sources are the Portuguese accounts of the 16th and following centuries, much of which is owed to the massive work of the late A. da Silva Rego. Arab Sofala was ultimately demolished to furnish masonry for Beira cathedral. Its hinterland was the source of the gold, which, with ivory and to a lesser degree slaves, were the staples of the prosperity of Kilwa and of Ḳanbalū on Pemba Island. There in its heyday the remains of a mosque capable of accommodating 600 worshippers show the wealth of an entrepôt serving as a stop from Sofala for trade being carried as far away as Peking (Beijing).

In the mid-19th century, Islam followed trade routes from Zanzibar into the interior, reaching Uganda and the court of Kampala, and westwards into the Congo, later Zaïre. In southern Tanzania, when the Benedictine missionaries were interned as German enemy aliens in World War I, many catechumens Islamised. They form a substantial proportion of the population to this day. This success of Islam over Christianity was not accomplished by spontaneous conversions, but rather by the work of members of Islamic *ṭarīḳas* or fraternities, of which B.G. Martin has given a detailed account. To the writer's personal knowledge, these were still active in the 1950s. There is no reason to suppose that their work ceased with the coming of independence, for the membership of fraternities gave the sense of belonging to a wider world. There is a widely distributed pamphlet literature of a popular nature which has not received scholarly attention.

7. In Indonesia and Malaysia.

Among a multitude of local languages, the great literary traditions of Indonesia and Malaysia are in Javanese and Malay. Javanese is the older and more richly elaborated, while Malay became the foremost vehicle for Islamic writings and the basis of the modern national languages of Indonesia and Malaysia [see INDONESIA. iii. Languages].

Javanese historiography of the pre-Muslim period (8th to 15th centuries) reflects the Indic culture of the courts in viewing history as the cyclic succession of four ages of declining morality, and appraising kings accordingly. The subject of dynastic succession is foremost, for example in the *Pararaton* ("Book of Kings", 15th century), a narrative of the rulers of East Java dated with chronograms in the Indic Śaka era. The rise of Islamic commercial centres like Demak on the north coast of Java in the 16th century spurred an interest in history writing. Great changes in the social order, the introduction of Islam and the demise of the old Indic agrarian kingdom of Madjapahit required historical explanation. With Islam came a new historical treasury: the stories of the prophets (*Sĕrat Anbiya*), the Amīr Ḥamza cycle (Ménak, an analogue of the older heroic-romantic legends of the Pañjī cycle and elaborated into a whole genre of literature and theatre), the popular traditions of Yusuf (Yusup), and the life of the Prophet celebrated in Mawlid (Maulud) recitations. The Iskandar legends, so widely used for political legitimation, become in Java the stories of Baron Sakĕṇdĕr's conflicts with the Dutch.

The challenge of this alternative historical framework is confronted in the 17th century formulations of a new kind of universal history, known as *Sĕrat Kaṇḍa* ("Narratives"), which conflated Islamic traditions with indigenous and Indic mythical elements, all as the foundation for Javanese dynastic histories. Miracle stories of early rulers, prominent in the *Pararaton* etc., were now woven around the nine saints (*wali sanga*) credited with the establishment of Islam in Java, some of whom were rulers of North Java principalities. Their lives and descent became a staple of the new histories. Thus, while accommodating new foreign elements, these writings remained almost wholly focused on Java. The culmination of this genre is the *Babad tanah jawi* ("The settlement of Java"), a cluster of texts celebrating the Mataram dynasty which under Sultan Agung united most of Java in the early 17th century. In them, Nabi Adam is made the first ruler of Java, but within four generations his descent becomes a line of wholly Javanese culture heroes who mingle with Hindu gods. The achievement of Mataram (and its historiography) was to re-unite this senior, left-hand line with the junior, right-hand line of descent running through the Javanese *walis*. The profound localisation of Islam inherent in this historiography is mirrored by the Javanese calendar, which after 1633 adopted the Muslim months and lunar year but continued to number the years according to the Indian-derived Śaka era and, generally, to express dates in chronograms.

Of other regional historiographies, Balinese and Sundanese are pre-Islamic and later offshoots of the Javanese tradition respectively. A significant independent tradition flourished among the Bugis and Makasar peoples of South Sulawesi, based on chronicle-keeping, meticulously dated, using both the Christian and Muslim eras, but leaning to the former. All these literatures used pre-Muslim scripts.

Malay-language historiography is, by contrast, recognisably Islamic in form and content. No historical writing in Malay, nor indeed Malay literature of any kind, pre-dates the adoption of Islam in the 14th century. Malay then became the major vehicle through which Islamic civilisation penetrated the archipelago, and the literary and intellectual language of Islamic communities. Consequently, we find an array of local histories of very varied nature and focus covering the whole maritime world of the archipelago from Aceh to Ternate, including the north Java coast. Before the 19th century, all were written in the Arabic script, and employed the Muslim calendar (if they gave dates at all). The most influential of these local histories was that of the powerful Melaka sultanate, entitled *Sulālat al-salāṭīn* ("The race of kings"), popularly *Sejarah melayu* ("Malay genealogies"), written about 1612. It places Malay genealogy and anecdotal history in a Muslim framework by integrating it with the Perso-Indic Iskandar legend. Like the *Babad tanah jawi*, the *Sejarah melayu* spawned many local variants updated to record the history of related branches of the royal house. Other regional histories particularly worthy of mention are the *Hikayat Iskandar Muda* ("Romance of Iskandar Muda") of Aceh, supposed to be modelled on Firdawsī's *Shāh-nāma*; and the *Hikayat Merong Mahawangsa* (Romance of Merong Mahawangsa), from Kedah, which conflates the Iskandar legend with the Rāmāyana. Though they are by no means analytical or moralistic works, these local histories typically include accounts of the local adoption of Islam, which—to a significantly greater degree than the Javanese histories—acknowledge it as fundamental in the development of state and society.

Beside these traditional dynastic histories there has been more self-reflective historiography. The earliest example is Nūr al-Dīn al-Rānīrī's *Bustān al-salāṭīn* ("Garden of kings"), in seven books, written in Aceh in 1638-43, which presents chapters on Melaka and Aceh in the context of a truly universal moral history of Islamic civilisation. The impact of al-Rānīrī's synthesis was lost, however, as portions of his integrated books were transmitted as separate manuscripts. Major advances in historiographical method were made by Raja ʿAlī Ḥādjī in his histories of Riau. His synthetic history, *Salāsilah melayu dan bugis* ("The Malay and Bugis lineages," 1865), expounds a new method of source criticism in which the principles for judging the strength of *aḥādīth* are adapted to judging competing historical accounts.

A modernist successor to al-Rānīrī's universal history is *Sejarah umat islam* ("History of the Muslim community") by Hamka (Haji Abdul Malik Karim Amrullah), the son of a renowned Muslim scholar. Published in 1961 and frequently reprinted in both Indonesia and Malaysia, this four-volume history of Islam begins with the life of the Prophet and concludes with the resistance of Indonesia's Islamic kingdoms to European incursions in the 17th century. It is markedly deferential to Western authorities, reproducing European testimonials to the greatness of the Prophet, relying heavily on colonial scholarship on Indonesian Islam, and applying its a priori methods for sifting fact (*fakta*) from myth and legend in a scientific (*ilmiyah*) manner. Hamka's history countered the Java-centred nationalist histories which glorified Indonesia's pre-Muslim antiquity, such as the writings of his fellow Minangkabau, Muhammad Yamin.

In 1974 the quasi-secular Indonesian government published its pervasively influential official national history, *Sejarah nasional Indonesia*. This seven-volume work

cautiously acknowledges the adoption of Islam by most peoples of Indonesia as a step forward in the nation's social and cultural development, but down-plays the role of Islam as a unifying political force. It sees the adoption of Islam as but a prelude to the defining narrative of Indonesia's national identity: that is, heroic opposition to colonial rule.

Bibliography: Soedjatmoko (ed.), *An introduction to Indonesian historiography*, Ithaca and London 1965; Th. Pigeaud, *Literature of Java*, 3 vols., The Hague 1967; Ann Kumar and J. McGlynn (ed.), *Illuminations: the writing traditions of Indonesia*, New York 1966.

(I. Proudfoot)

III. In the Sense of "Chronogram"

This is a device much used in Persian and Turkish poetry to indicate the date of some event by means of the sum of the numerical values of the letters that make up a word or phrase. A simple example is the verse inscribed on the tomb of Ḥāfiẓ:

ču dar khāk-i Muṣallē sākht manzil
bidjō tārīkh-ash az khāk-i Muṣallē

"Since he made his home in the earth of (the place called) Muṣallā, seek then its date from (the words) 'earth of Muṣallā'", where the value of the letters in *khāk-i Muṣallē* indicates the date of the poet's death, 791/1389. This is an explicit chronogram, where the reader is told very clearly which words need to have their letters counted, but things are not always so easy, many chronograms having more the character of elaborate riddles.

Sometimes the date of composition of a poetic work is indicated by a chronogram, generally in the last verse, though such verses have not infrequently been added, or tampered with, by copyists. But more commonly, as in the example cited above, the chronogram is in a separate short poem composed expressly to date some important event, though in this case, too, the chronogram can only be considered as sound historical evidence if it can be demonstrated that the author was a contemporary, and arithmetically competent, witness.

For comparable phenomena in Arabic, see ḥisāb al-djummal.

Bibliography: Browne, *LHP*, ii, 76-7; Gibb, *HOP* (see the index, s.v. "Chronograms").

(F.C. de Blois)

TARIM, a river in the Sinkiang Uighur Autonomous Region of China (Eastern Turkestan). It is formed at the confluence of the Kāshghar and Yarkand rivers, and flows through the northern part of the Tarim basin until it reaches, on the east, the Lob Nor lake. The river's historical importance lies chiefly in the name associated with this unique area.

The Tarim basin, an elevated ellipsoid depression (1280 km/800 miles from east to west, 640 km/400 miles from north to south) bordered by massive mountain complexes (Kunlun, Altyntagh and Nanshan on the south, Pamir on the west, Tianshan on the north), consists of three or more distinct segments: the Takla Makan desert as its core, the string of mostly piedmont oases surrounding this desert, and the Lob Nor lake, the eastern limit of the basin; the smaller but deep Turfan depression on the north-east is included by some in the Tarim basin. The important cities of Kāshghar in the west and Turfan in the east [*q.vv.*] can be viewed as its longitudinal brackets.

Agricultural civilisation, nourished by irrigation derived from streams or underground conduits (*kārīz* [see ḳanāt] descending from the mountains, has flourished in the oases of the Tarim basin since antiquity, and the population used to speak chiefly Indo-European languages: the *satem* group in the southwest and west (Iranian Khotanese), and the *kentum* group in the north and northeast (Tocharian of Turfan). Today, most autochthonous inhabitants speak Turkic languages, mainly Uyghur. This has resulted from a penetration of pre-Islamic Uyghur and Islamic Ḳarakhānid dominance that started in the 9th century, and linguistic transformation may have been completed by the time of the Mongol conquests (13th century). The attendant influx of nomadic Turkic groups, however, remained below a degree sufficient to change the predominantly sedentary agricultural lifestyle of the inhabitants. Conversion to Islam of the mostly Buddhist population accompanied Turkicisation in the case of Khotan [*q.v.*] and other oases of the west, but occurred only later in Turfan (14th-15th centuries), where the pagan or Manichaean Uyghurs had first converted to Buddhism. In the latter case, a body of both lay and religious (Buddhist and Manichaean) literature had come into being, and is now a precious source for the study of pre-Islamic Turkic.

Another facet of the Tarim basin's historical importance is its unique geographical position between China, India, the Middle East, and the European and Mediterranean West. The lofty mountains surrounding it could be crossed through numerous passes, thus enabling merchant caravans and pilgrims to use the basin as a corridor leading to their destinations. Commodities of high value and small weight or bulk were the choice articles of this trade, above all, silk, whence the term Silk Road for this network of trade routes.

The oases functioned as so many way-stations in this traffic, but several absorbed portions of the cultural and religious values carried by it to the point where they became centres of exquisite spiritual and artistic creativity. This occurred, however, chiefly in their pre-Islamic past. Unlike its neighbour, Western Turkestan, the Tarim basin of Eastern Turkestan failed to produce much cultural florescence since its Islamisation, and the Silk Road traffic abated with the rise of competitive sea routes and restructuring of world trade in the 16th century. Moreover, the Turkic and Muslim identity of its population is now integrated in the political, social and economic structure of the People's Republic of China, with a massive influx of Chinese-speaking residents as one of the results (40% for the entire province; most Chinese, however, live in the northern, Dzhungarian part of Sinkiang, and the percentage must be considerably lower for the Tarim basin). For Chinese influences in the region, and its modern positon within China, see sinkiang.

TARĪM, a well-known town in Wādī Ḥaḍramawt [*q.v.*], situated about 40 km/25 miles from Shibām, east, slightly north, and about 25 km/15 miles from Say'ūn [*q.v.*] in the same direction (see

H. von Wissmann, map, *Southern Arabia, RGS*, London 1958). The town marks where Wādī Ḥaḍramawt ends and where Wādī al-Masīla begins. In Arab tradition, the name comes from Tarīm b. al-Sukūn b. al-Ashras b. Kinda or from the name of the one who first settled there, Tarīm b. Ḥaḍramawt b. Saba' al-Asghar. The name is attested in the pre-Islamic inscriptions: *trm* in Iryani 32 and *trym* in Jamme 547. The town is renowned for its learning and scholarship and is the home of the Āl Bā 'Alawī. Its *djāmiʿ* dates from the 4th/10th century.

Al-Hamdānī, *Ṣifa* 87, refers to Tarīm as "a great town" and other early sources mention time after time its fame for learning and list the scholars who came from it. In particular, two upright scholars, Abū Kadr/Akdar and Abū Bukayr, are mentioned, both killed as martyrs in Tarīm in 575 or 577/1179 or 1181 by the Ayyūbid deputy, 'Uthmān al-Zindjārī, who had seized Ḥaḍramawt from Aden. Another version of the story is that, when the latter heard of the arrival in the Yemen from Egypt in 579/1183 of the second Ayyūbid sultan in the Yemen, al-Malik al-'Azīz Ṭughtigīn b. Ayyūb, and that he had seized Zabīd [*q.v.*] and its environs, al-Zindjārī fled in fear to Ḥaḍramawt and killed all learned men there.

On occasions in later history, the other major Ḥaḍramī town of Say'ūn [*q.v.*] took over as a centre of Islamic learning temporarily from Tarīm, but it is the latter town which has the much greater reputation in this field to this day. The town remains also the centre of many large private family manuscript libraries.

al-ṬARḲ bi 'l-ḤAṢĀ [see khaṭṭ].

ṬARKHĀN, also *tarkhān*, a high-ranking Inner Asian title of considerable antiquity. It probably entered Arabic from Soghdian *trgh'n* or Middle Pers. *trkh'n* < Turk. *tarḳan* (pl. in Mongolian *tarḳat*), which appears to have been part of the imperial titulature that the Türks inherited from the Jou-jan empire. Its etymology is unclear. Attempts have been made to link it with the Hsiung-nu *Shan-yü* (Archaic Chin. **dân-hwâh*), the title of their supreme ruler (Pulleyblank, 91). It is also noted among the Hephthalites, another pre-Türk polity deriving from the same groupings as the Jou-jan. It is recorded as a title and personal name in virtually all the languages and sources of the neighbours of the Inner Asian nomads, from the Eastern Mediterranean to China. In the pre-Islamic Turkic states, it denoted a high dignity, probably somewhat below the *shads* and *tégins* [*q.v.*] of the royal clan. In Maḥmūd al-Kāshgharī's day (*Dīwān lughāt al-turk*, tr. Dankoff, i, 329) it was considered "a pagan word meaning *amīr*" in the Arghu dialect. By the Čingisid era, as Djuwaynī reports (ed. Ḳazwīnī, i, 27, tr. Boyle, i, 37-8), it had come to denote "those who are exempt from compulsory contributions, and to whom the booty taken on every campaign is surrendered; whenever they so wish they may enter the royal presence without leave or permission." In Modern Mongolian, *darkhan* means "artisan, craftsman," as well as one exempt from taxes. It also signifies an "area set aside for religious reasons and therefore inviolable". The Darkhad (pl.) tribe in Mongolia was "charged with the cult of Činggis Khan" in the Ordos (Lessing, 236; Jaghchid and Hyer, 287-8).

TARKĪB-BAND [see tardjīʿ-band].

ṬARRAKŪNA, the mediaeval Arabic form of the name of the town of Tarragona on the coast of Catalonia in northeastern Spain.

The town's importance in Roman times was the starting-point for the descriptions of the Arab geographers, who call it an ancient, well-fortified town, with tide-water mills (Ibn Ghālib, Ibn Saʿīd, al-Maḳḳarī, the *Dhikr*) or wind-driven ones (al-Ḥimyarī). It comprised many districts and strongholds, and had a strategic situation on the *Via Augusta*. It produced many walnuts, hazelnuts, chestnuts, pistachios and grapes.

Some sources attribute the Muslim conquest of Tarragona to Mūsā b. Nuṣayr [*q.v.*], and the *Crónica del Moro Rasis* notes its destruction, which must, however, have been only partial, since some Roman buildings remained, praised by the geographers (Ibn Ghālib and al-Bakrī, in al-Maḳḳarī; al-Ḥimyarī), and also, significantly, its walls "of marble" (al-Idrīsī, al-Ḥimyarī). It was an important seat of the Visigoths, with coins minted there in the name of Akhila around the year 711. Al-Idrīsī calls it "the town of the Jews" (*madīnat al-yahūd*).

In the second half of the 8th century, Tarragona would certainly have been included in the territory, with its capital at Narbonne in the first place and then further south, which extended as far as Tortosa (Ṭurṭūsha [*q.v.*]), and which was entrusted by 'Abd al-Raḥmān I to the governor 'Abd al-Raḥmān b. 'Uḳba, according to Ibn al-Ḳūṭiyya. Then control of Tarragona must have oscillated between al-Andalus and Barcelona; it may have been occupied by the Christians immediately after the fall of Barcelona (801), since the Muslim chroniclers (Ibn ʿIdhārī, al-Maḳḳarī) note attacks by the Franks on Tortosa towards 192-3/807-9. Despite Muslim expeditions against Barcelona throughout the 10th century, it probably remained under Christian control into the first years of 'Abd al-Raḥmān III al-Nāṣir's reign, since Ibn Khaldūn and al-Maḳḳarī record "certain envoys of Mughīra b. Shunyer, ruler of Barcelona and Tarragona" arriving in Cordova. But it must have been ultimately reconquered by Muslim counter-attacks during the caliphal period, since there is evidence for attacks by the fleet of al-Andalus along the Llobregat river valley, at least in 323/935. Its return to Muslim control seems to be commemorated in an inscription recording the restoration of the congregational mosque of Tarragona in 349/960-1. Being in Muslim territory once again, Tarragona became exposed to Christian raids, which became more acute in the reign of

Ramón Berenguer I (1035-76) until the reconquest by the Catalans in the time of Ramón Berenguer III and its definitive re-population by the Christians after the fall of Tortosa to Ramón Berenguer IV in 1148.

The neighbouring town of Tortosa took over the leading role, political, cultural and economic, which Tarragona had had in Roman and Visigothic times. Although al-Idrīsī and the *Dhikr* call it a city or large town (*madīna*), this must be a reflection more of its glorious pre-Islamic past, since under Islam it played no great role and lacked any significant cultural activity; Yāḳūt calls it a small town (*balda*) only.

(MARIA J. VIGUERA)

ṬARRĀR (A), a pickpocket. The word is derived from the action of swiftly cutting an object. The *ṭarrār* is also called *khālis*, *mukhtalis* or *nashshāl*, each of which indicates acquisition of other people's property in a public place. *Mukhtalis*, however, places greater emphasis on secrecy, while the newer term, *nashshāl*, indicates swiftness in picking the object (Ibrāhīm Anīs *et alii*, *al-Muʿdjam al-wasīṭ*, Cairo 1972, i, 249, ii, 554, 923). Although, according to Ibn al-Athīr, there is a *ḥadīth* narrated by al-Shaʿbī stating that a *ṭarrār* is liable to amputation, Muslim scholars disagree over this as his punishment. This seems due to the disagreement (*khilāf*) in accepting this *ḥadīth*, as well as a loophole in understanding the concept of safekeeping (*ḥirz*). Al-Sarakhsī explains that, if the pickpocket lifts the object while it is kept inside a pocket in the sleeve of a garment, he becomes liable to amputation. However, if the money is kept outside the sleeve, without adequate *ḥirz*, then the thief is not liable for this punishment. Abū Yūsuf in fact gave preference (*istiḥsān*) to amputation in all cases.

(M.Y. IZZI DIEN)

ṬARSH (A.), the term for an engraved block used for printing. First identified by J. Karabacek (*Papyrus Erzherzog Rainer. Führer durch die Ausstellung*, Vienna 1894, 247-50), more than a hundred mediaeval Arabic blockprints on paper and parchment have been identified in museums and private collections, and a few have been recovered from the ruins of Fusṭāṭ in Egypt. Most are long, narrow strips, sometimes printed from several blocks, and were intended as amulets.

The term *ṭarsh* appears in two poems devoted to the practices and jargon of the Banū Sāsān [*q.v.*], the informal mediaeval guild of beggars and confidence men. Abū Dulaf al-Khazradjī, writing in Persia in the 4th/10th century, glosses the term as follows: "The engraver of *ṭarsh* is he who engraves (*yaḥfiru*) moulds (*ḳawālib*) for amulets (*taʿāwīdh*). People who are illiterate and cannot write buy them from him. The seller keeps back (*ḥafiẓa*) the design (*naḳsh*) which is on it [the *ṭarsh*], so that he exhausts his supply of amulets on the common people (*nās*) and makes them believe that he wrote them. The mould is called the *ṭarsh*." (R.W. Bulliet, *Medieval Arabic ṭarsh: a forgotten chapter in the history of printing*, in *JOAS*, cvii/3 (1987), 430, Arabic text in C.E. Bosworth, *The mediaeval Islamic underworld: the Banū Sāsān in Arabic society and literature*, Leiden 1976, ii, 201.)

An 8th/14th century Syrian poem by Ṣafī al-Dīn al-Ḥillī [*q.v.*] intimates that some of the blocks may have been made of tin, and physical characteristics of a few surviving specimens seem to confirm the possibility that, in addition to woodblocks, tin plates were made by pouring molten metal on an inscribed clay mould (Bulliet, 433-5). This peculiarity suggests a technological origin independent of Chinese influence, as does the apparent restriction of *ṭarsh* to the company of beggars compared with the universal acceptance of the Chinese technology of papermaking. Though *ṭarsh* technology seems not to have survived the 8th/14th century, and was forgotten by later Muslim society in the Middle East, the appearance in that century of blockprinting in Europe may be attributable to Arab example, possibly in the form of playing cards (Italian *tarocco*).

(R.W. BULLIET)

TARṢĪʿ (A.), a figure of speech in Arabic (later also Persian, Turkish, etc.) rhetoric.

General notion

Non-technically *tarṣīʿ* means "the act of setting, fixing, or putting together (jewels, precious stones, etc.); the act of making (a thing) according to a measure; the act of forming (it) by the inserting of one part within another" (cf. Lane, s.v. *r-ṣ-ʿ*). *Tarṣīʿ al-ʿiḳd*, according to the rhetoricians, means "that the same pearls are on one side of the necklace as are on the other" (Ibn al-Athīr, *al-Mathal*, i, 361).

Description, definition, and examples

Tarṣīʿ is a stylistic feature of word combination based on the principle of equivalence of sound. It is attested in Arabic literature from the earliest stages and can be found in Ḳurʾān, *Ḥadīth*, poetry, and

prose. A figure of style explicitly called *tarṣīʿ* was described for the first time, as far as we know, by Ḳudāma b. Dja'far [*q.v.*] (*Naḳd*, 14 ff.). He considers it a phenomenon pertaining to *wazn* (metre, rhythm). Al-Ḳazwīnī [*q.v.*] and his school regularly include the figure in the chapter on *ʿilm al-badīʿ* and classify it as a subcategory of *sadjʿ* "rhymed prose" [*q.v.*].

The definition of *tarṣīʿ* among Arab scholars is by no means homogeneous. Al-Ḳazwīnī defines it in his *Talkhīṣ al-Miftāḥ* (*apud* Mehren, *Rhetorik*, 90 [text], 168 [tr.]) as follows: "If what is found in one of the two phrases (or cola [*ḳarīna*]) (which form this figure of speech) is, in its metre (or word pattern [*wazn*]) and rhyme (*taḳfiya*), exactly like that which corresponds to it in the other phrase, then this is *tarṣīʿ*." This definition holds the golden mean between very comprehensive definitions, like that of Ḳudāma b. Djaʿfar, *Naḳd*, 14, who only requires agreement in metre or rhyme and who allows assonance instead of pure rhyme, and very restrictive ones, like that of Ḍiyāʾ al-Dīn Ibn al-Athīr, *al-Mathal*, i, 361, who requires the strictest correspondence in word pattern as well as pure rhyme and, in addition, prohibits the repetition of identical words.

The ideal form of the figure is represented, e.g., by an oft-quoted utterance of Abū ʿAlī al-Baṣīr [*q.v.*]: *ḥattā ʿāda* taʿrīḍuka taṣrīḥ^an^ *wa*-tamrīḍuka taṣḥīḥ^an^ "until your allusion turns into explicitness and the care for you into recuperation" (see e.g. al-Khafādjī, *Sirr*, 182). Here the corresponding parts of the two phrases agree completely in their word patterns and, in addition, display a strict rhyme. The number of phrases need not be two; in a frequently quoted verse of al-Khansāʾ there are three: *ḥammālu alwiyat^in^—shahhādu andjiyat^in^—ḳaṭṭāʿu awdiyat^in^*. At the same time, this example shows the frequent case, explicitly permitted by Ḳudāma, that not all corresponding parts rhyme; in the present case, only the second parts rhyme, whereas the first parts display only the assonance of identical word patterns. Ḳudāma even adduces cases in which the first parts are only metrically equivalent to each other, while the second parts show nothing but assonance: *alaṣṣu ʾl-ḍurūsi—djanīyu ʾl-ḍulūʿi* (Imruʾ al-Ḳays; see *Naḳd*, 14). Abū Hilāl al-ʿAskarī, *Ṣināʿatayn*, 390, and Ibn Rashīḳ, *ʿUmda*, ii, 26, 29, follow him in this. According to Ḳudāma and some of his followers, *tarṣīʿ* may also consist of one part per phrase; two examples of this variant occur one after the other in a hemistich by Imruʾ al-Ḳays quoted as proof by Ḳudāma: *mikhashsh^in^—midjashsh^in^, mukbil^in^—mudbir^in^ maʿan*. The examples for one-term *tarṣīʿ* adduced by al-Bāḳillānī, *Iʿdjāz*, 95-6 (tr. von Grunebaum, 35-6), are of a different kind: He includes the hemistich-final rhyme in initial verses of poems (*taṣrīʿ*) and the rhyme of the Ḳurʾānic *fāṣila*, provided, of course, that the metre (or word pattern) of the rhyme words is identical. Thus for him Sūra LXVIII, 2-3, contains a *tarṣīʿ*: *mā anta bi-niʿmati rabbika bi*-madjnūn—*wa-inna laka la-adjr^an^ ghayra* mamnūn; the correspondence is restricted to the last word each in the two *āyas*, i.e. the *fāṣila*. Usāma b. Munḳidh, *Badīʿ*, 116, follows al-Bāḳillānī in this view. In addition, al-Bāḳillānī adduces cases in which the two phrases forming the *tarṣīʿ* occur in two consecutive lines of poetry in such a way that the corresponding parts occupy the same metrical position.

Distinction from similar figures

If one allows assonance alongside strict rhyme as the criterion for *tarṣīʿ*, as Ḳudāma does, the borderline to a figure called, by later rhetoricians but not yet Ḳudāma, *muwāzana* (metrical or word-formational equivalency between the final words of both phrases) or *mumāthala* (total or nearly total equivalency of the two phrases) becomes fuzzy; cf. e.g. Sūra LXXXVIII, 15-16: *wa-namāriḳu maṣfūfa—wa-zarābiyyu mabthūtha* (cf. for these two figures, al-Ḳazwīnī, *Talkhīṣ*, 91 = Mehren, *Rhetorik*, 169-70).

Abū Hilāl adduces the one-term type of *tarṣīʿ* which, in one place, he has expressly defined as *tarṣīʿ* to serve, in another place, as an example for *muṭābaḳa* (*ṭibāḳ* [*q.v.*]), in this case Imruʾ al-Ḳays's *mikarr^in^—mifarr^in^, mukbil^in^—mudbir^in^ maʿan* (*Ṣināʿatayn*, 321). This overlap results from the fact that the antithetical terms of the *ṭibāḳ* are often identical in their word pattern. Some rhetoricians do not strictly distinguish between *tarṣīʿ* and *tasmīṭ* [see MUSAMMAṬ] (cf. van Gelder, *Two Arabic treatises*, 32).

Evaluation of the figure by indigenous critics

Ḳudāma asserts that this figure of style does not always impress as beautiful, and that on the contrary it must fit the context where it is applied. Frequent occurrence or even inclusion in each and every line of a poem is normally a sign of *taʿammul* "artificiality", and *takalluf* "constraint". However, Ḳudāma does allow exceptions to this rule. Abū Hilāl, al-Khafādjī and Ibn Rashīḳ basically follow Ḳudāma's views. A more detailed critique of individual lines is offered by Abū Hilāl, *Ṣināʿatayn*, 393-4.

Ibn al-Athīr considers *tarṣīʿ* to be artificial *per se* and consequently contests its occurrence in the Ḳurʾān and in ancient poetry. This is only possible due to his very restrictive definition of the figure. On the other hand, the late author Ibn Maʿṣūm, *Anwār*, vi, 163-4, quotes with admiration six lines from a poem by Rashīd al-Dīn Waṭwāṭ which contains a *tarṣīʿ* in each of its forty lines. Some critics put *tarṣīʿ* first in their treatment of *badīʿ* figures.

Observations of modern scholars

The first European scholars dealing with *tarṣīʿ* (N. Rhodokanakis, *al-Ḫansāʾ*, 38; I. Goldziher, *Bemerkungen*, 313) noticed that *tarṣīʿ* (or *tasmīṭ*, see above) is particularly frequent in the *rithāʾ* "dirge" [see MARTHIYA] and that it occurs predominantly in the *basīṭ* metre. Goldziher considered the former feature to be an echo of the *sadjʿ* of the earlier laments (*niyāḥa*) from which, according to him, the *marthiya* had developed. The frequency of *basīṭ* is explained by Rhodokanakis by the fact that "mit seinen scharfen Einschnitten" (i.e. its clear segmentation) no metre is as suitable for *tarṣīʿ* as this one (*op. cit.*, 44). A. Ambros, in his *Beobachtungen zu Aufbau und Funktionen der gereimten arabischen Buchtitel*, in *WZKM*, lxxx [1990], 13-57, has noted the great popularity, in book titles, of *tarṣīʿ* with the rhyme scheme *abab*, as e.g. *Madjmaʿ al-zawāʾid wa-manbaʿ al-fawāʾid* or *Ḳaṭr al-sayl fī amr al-khayl* [*op. cit.*, 52 ff.]).

Tarṣīʿ *in Persian rhetoric*

The Persian rhetoricians, in their rather homogeneous definitions, require exact agreement in metre and rhyme between the corresponding parts of the phrases involved (al-Rādūyānī, *Tardjumān*, 7 ff.; Rashīd al-Dīn Waṭwāṭ, *Ḥadāʾiḳ*, 3 ff.; Shams-i Ḳays, *Muʿdjam*, 335 ff.; see also Rückert-Pertsch, 88 ff.). In Persian examples the figure often has three or more parts per phrase. The oldest-quoted poet seems to be Rūdakī [*q.v.*]. Al-Rādūyānī and Waṭwāṭ list *tarṣīʿ* as the first figure of style at the beginning of their works.

ṬARSŪS, the Arabic form of the name of the city of Tarsus in Cilicia, situated on the classical River Cydnus, the Nahr Baradān of early Islamic times and the contemporary Turkish Tarsus Çay, in the rich agricultural plain of the modern Çukurova.

The ancient city appears first firmly in history under the Assyrian kings, then as being in the Persians' sphere of influence, then as disputed by the Seleucids and Ptolemies, being for a while styled Antioch-on-the-Cydnus in honour of Antiochus IV Epiphanes (175-164 B.C.). After 67 B.C. it became the capital of the new Roman province of Cilicia and an important intellectual centre. In early Christian times it had the distinction of having been the birthplace of Saul or St. Paul (Acts, xxii, 3), and bishops and metropolitans of Tarsus are frequently mentioned in the Acts of the various Councils of the early Church. Administratively, under the Byzantines it became the capital of Cilicia Prima, with Anazarbus (the later Islamic ʿAyn Zarba [*q.v.*]) forming the capital of the corresponding eastern half, Cilicia Secunda (see Pauly-Wissowa, *Real-Enzyclopädie*, new ed., IV.A/2. cols. 2413-24; Sir William Ramsay, *The cities of S. Paul, their influence on his life and thought*, London 1907, 85-244; C.E. Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers in early and middle ʿAbbāsid times*, in *Oriens*, xxxiii [1992], 268-9).

Tarsus must have been threatened as the Arabs advanced towards the Taurus during the caliphates of ʿUmar and ʿUthmān and reached the zone of frontier fortresses later known as the *thughūr* [*q.v.*] or *masāliḥ* "garrisons". It is unclear when it was first captured by the Arabs, but in any case, control of the city seems to have oscillated between the Greeks and the Arabs and it long remained in the front line of attack from both sides. In 25/646 Muʿāwiya, the governor of Syria, raided as far as Amorion, and found the zone between Antioch and Tarsus empty, hence placed garrisons of troops from Syria and al-Djazīra there. In 93/712 al-ʿAbbās b. al-Walīd b. ʿAbd al-Malik raided into the zone and captured Tarsus.

During the early decades of ʿAbbāsid rule, when the Muslims held Tarsus they made it into a strongly-fortified concentration-point for *ghāzīs*, volunteer fighters for the faith, with the city marking the western end of an arc of fortresses stretching eastwards to Malaṭya [*q.v.*], the zone of the *ʿawāṣim* [*q.v.*]. Much money from the taxation of Syria and al-Djazīra and from the central funds of the caliphate was poured into the construction and manning of these fortresses, in addition to the pay allowances provided by tribal chiefs leading their own contingents (see M. Bonner, *Jaʿāʾil and Holy War in early Islam*, in *Isl.*, lxviii [1991], 45-64). In 162/778-9 the commander al-Ḥasan b. Ḳaḥtaba al-Ṭāʾī, after rebuilding and refortifying the *ʿāṣima* of al-Ḥadath [*q.v.*], was charged with undertaking similar work at the then ruinous site of Tarsus. This restoration was, however, only done later, in Hārūn al-Rashīd's caliphate, by Faradj b. Sulaym, and Tarsus now became a rallying-point for volunteers from as far away as Khurāsān and Transoxania as well as for the troops of the regular army (see Bosworth, *op. cit.*, 269-73).

Nevertheless, it must have been regained by the Greeks towards the end of the 8th century A.D. or the beginning of the 9th one, and during the period of internecine warfare in the caliphate between al-Amīn and al-Maʾmūn it seems to have remained in Byzantine hands. But the Emperors were themselves preoccupied by internal revolts and the threat from the Bulghars in the Balkans, and near the end of his life, al-Maʾmūn turned his attention to the Byzantine frontiers. In 215/830 he penetrated via Tarsus into Cappadocia, and in 218/833 used it as a base for his last expedition, being buried there after he died on active service. In subsequent decades, it was generally under Muslim control, and there are mentions of a *faḳīh* and a *ḳāḍī* of Tarsus during these years. The governor of Egypt Aḥmad b. Ṭūlūn attempted in 265/878-9 to take over Tarsus as a base for *ghazw* against the Christians, but was repulsed by the garrison there under the eunuch Yāzmān, loyal to the caliph al-Muʿtamid. The Ṭūlūnids did nevertheless briefly have control of Tarsus when al-Muʿtaḍid made over the governorship of Syria to Aḥmad's son Khumārawayh [*q.v.*], and the latter used it as the base for a Ṭūlūnid expedition into Anatolia. But after Khumārawayh's death in 282/896 it reverted to direct ʿAbbāsid control of the marches until this passed in the mid-4th/10th century to the Ḥamdānids. During all this time, we have a series of coins minted by the governors of Tarsus, caliphal, Ṭūlūnid, Ikhshīdid and Ḥamdānid, from 172/788 to the mid-4th/10th century (see G.C. Miles, *Islamic coins from the Tarsus excavations of 1935-1937*, in *The Aegean and the Near East. Studies presented to Hetty Goldman*, New York 1957, 297-312; S.M. Stern, *The coins of Thamal and of other governors of Tarsus*, in *JAOS*, lxxx [1960], 217-25). These governors were active in both land and in sea operations from the port of Tarsus. Thus the eunuch commander Thamal al-Dulafī in 309/921-2 led a naval expedition to Egypt to fend off invasion by the Fāṭimids, and in 312/924 he endeavoured to concert maritime operations against the Byzantines with the Bulghars.

But the military strength of the resurgent Byzantines was now growing. Sayf al-Dawla's expedition of 339/950 into Anatolia, in which 4,000 men of Tarsus participated, was ultimately a disaster, and the Strategus Basil Hexamilites won a crushing victory over a Muslim fleet that had set sail from Tarsus to harry the Byzantine coasts. The culmination of this revanche for Tarsus was the recapture of the city, with al-Maṣṣīṣa and Adana, in 354/965 by the Emperor Nicephorus Phocas and the Domesticus John Tzimisces. After futile appeals for help from Egypt and Baghdād,

the city was surrendered by Sayf al-Dawla's representative on a promise of *amān*, so that any Muslim could leave with whatever he could carry, including weapons, but had to leave behind property. Many of the inhabitants became Christian; a small number of Muslims remained, but many others departed for Antioch and, according to al-Muḳaddasī, 160, eventually settled at Bāniyās [*q.v.*] in northern Palestine. The Friday mosque of Tarsus was either torn down or turned into the imperial stables. See Canard, *H'amdanides*, 822-3; Bosworth, *op. cit.*, 278-80.

We possess valuable accounts of the last years of Muslim rule in Tarsus from such 4th/10th century sources as the geographical writers al-Iṣṭakhrī, Ibn Ḥawḳal and Abu 'l-Ḥusayn al-Ḥasan al-Muhallabī [*q.v.*], and an author who was himself of Tarsus origin, Abū ʿAmr ʿUthman al-Ṭarsūsī (preserved in the much later *Bughyat al-ṭalab* of Ibn al-ʿAdīm) (all but the first of these sources were written after the city had actually passed out of Muslim control). There is in them much information on the fortifications, topography and social structure of Tarsus, showing the atmosphere of bellicose piety which characterised the city, with its throngs of *ghāzīs* from as far afield as Khurāsān and Sīstān and the numerous *dārs* and *ribāṭs* for their residence. See Bosworth, *op. cit.*, 281-4; idem, *Abū ʿAmr ʿUthmān al-Ṭarsūsī*'s Siyar al-thughūr *and the last years of Arab rule in Tarsus (fourth/tenth century)*, in *Graeco-Arabica*, v (Athens 1993), 183-95.

Tarsus was under Christian rule for the next three centuries. The Crusaders seized it in 1097 on their march through Byzantine territory in 1097. In the 12th century it came within the Rupenid kingdom of Little Armenia based on Sīs. In 673/1275 the lowland regions of Adana and Tarsus were raided by the Mamlūk sultan Baybars, and in the next century, in the third reign of al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn, it finally passed into Mamlūk hands. Soon afterwards it came within the buffer-state, between the Mamlūks and the Ḳaramānids and their supplanters the Ottomans, of the Ramaḍān-oghullarí [*q.v.*]. In the 9th/15th century Khalīl al-Ẓāhirī mentions it as a fine town, with walls and a fortress. In the next century it was gradually absorbed fully into the Ottoman empire, at first within the *eyālet* or province of Aleppo, then in 1571 as a *sandjak* within the *eyālet* of Cyprus, and then in 1608 as part of the *sandjak*, later an *eyālet*, then a *sandjak* again, of Adana, in 1867 becoming a *ḳaḍā'* of the *sandjak* (see A. Birken, *Die Provinzen des osmanischen Reiches*, Wiesbaden 1976, 110, 137, 139, 238).

By the end of the 19th century Tarsus itself was little more than a ruinous village in the malarial swamplands of the Tarsus Ẓay (see V. Cuinet, *La Turquie d'Asie*, Paris 1890-5, ii, 44-50), but in Republican Turkey, the swamps have been drained, and Tarsus is now a flourishing commercial centre in the *il* or province of İçel.

ṬARSŪSĪ [see abū ṭāhir ṭarsūsī].

al-**ṬARSŪSĪ**, Marḍī (or Murḍā) b. ʿAlī b. Marḍī, enigmatic writer in Arabic on military topics. His dates are unknown, but he flourished in the later 6th/12th century and seems to have lived in Alexandria.

He composed for the Ayyūbid sultan Ṣalāḥ al-Dīn [*q.v.*] a treatise, *Tabṣirat arbāb al-albāb fī kayfiyyat al-nadjāt fi 'l-ḥurūb min al-aswā' wa-nashr aʿlām al-iʿlām fi 'l-ʿudad*, extant in the Bodleian unicum Hunt 264 (extracts ed. and tr. Cl. Cahen, *Un traité d'armurerie composé pour Saladin*, in *BEO*, xii [1947-8], 1-47, 150-63). It deals with weapons such as the sword, bow, lance, mace, etc., and equipment like the shield and cuirass [see on these ḳaws; silāḥ in Suppl.], and devices used in the field such as caltrops (*muthallatha*, with three spikes, and *musaddasa*, with six). But it is especially valuable for its information on siege weapons like missile-hurling engines and battering-rams [see ʿarrāda; mandjanīḳ] and on techniques of siegecraft, including the use of Greek Fire [see ḥiṣār; naft. 1 and 2], especially as the manuscript contains drawings of the contrivances in question. The whole work richly merits a critical edition and commentary.

Bibliography: Given in the article.

(C.E. Bosworth)

TARTĪB (a.), a word derived from the root *r-t-b*, the primary sense of which is "to become fixed, stand upright", whence the derived meanings of "to arrange, stop, put in order or in rank". It is the term employed by the Moroccan *Makhzan* to denote the reforms (*tartībāt*) which it was obliged to undertake during the second half of the 19th century under European pressure, with connotations similar to those of the word *tanẓīmāt* [*q.v.*] in the Ottoman empire. The term is still applied, however, to the fiscal reforms initiated ineffectively by Mawlāy al-Ḥasan (1873-94) and revived by his son and successor Mawlāy ʿAbd al-ʿAzīz (1894-1907) in the least favourable of circumstances and only brought to a conclusion by the Protectorate.

The first *tartīb* emerged from decisions taken at the conference convened in Madrid in the spring of 1880, which had the object of restricting the anarchic development of consular protection in Morocco, it being largely a device to avoid taxation, depriving the *Makhzan* of its most active subjects and consequently of the best taxable goods [see imtiyāzāt]. The conference adopted several resolutions relating to patronage and decided that European entrepreneurs as well as the protected persons of the consuls should pay the same taxes as Moroccans as a whole, these being *zakāt*, *ʿushūr* and also harbour duties. A "special regulation" or *tartīb* was to determine the procedures to be followed (arts. 12 and 13 of the Convention). In exchange, the Europeans were granted the right to possess property in Morocco (art. 11). In March 1881, a first *tartīb* was promulgated, distinguished by three novel features: it extended *zakāt* and *ʿushūr*, albeit these were purely Ḳur'ānic obligations, to the Europeans; it gave to the consular services the right to oversee Moroccan fiscal administration; and the tax could be paid in cash on the basis of prices in the market closest to the site of the particular enterprise. This experiment fell short of its objectives. The consuls were willing to apply it only in exchange for recognition of property rights. Mawlāy al-Ḥasan was not at all inclined to make this step and furthermore, he hardly appreciated consular mediation in the assessment and levying of revenues. But the sultan did not lose sight of his objective, which was to deliver a body-blow to consular protection. In 1884, a second *tartīb* was promulgated with the intention of putting an end to the abuses to which the *ḳā'ids* charged with the management of taxes were partial and which were, according to the Europeans, the principal reason for recourse to protection. Population census (*iḥṣā'*), assessment (*kharṣ*) and collection (*djibāya*) were entrusted to *umanā'* appointed directly by the *Makhzan*. They were obliged to compile an inventory of taxable property and to convey it to it in such a way as to establish in cen-

tralised fashion the quotas beyond which deductions needed to be made, in kind for *zakāt* and *'ushūr* and in cash for the revenues of the crown (levies for the three religious festivals). Over and above these deductions, they obtained a percentage to be shared on an equal basis with the *ḳā'ids*, now confined solely to their public order functions. Otherwise, all franchises were suspended. But this attempt at reform likewise misfired. Applied cautiously in certain provinces such as the Dukkala, it was opposed by too many local usages and entrenched interests and was doomed to be quickly forgotten.

In 1901, Mawlāy 'Abd al-'Azīz, poorly advised and lacking experience, revived the *tartīb* in a more systematic manner. Gripped by an "itch for reform", in the words of a contemporary commentator, and not knowing whether the fiscal shortfall derived from the discontent of his subjects or rather from the abuses practised by the *ḳā'ids* (*ẓahīr* of 26 August 1901), the sultan revived and reinforced the measures taken by his father. The *ḳā'ids* were removed from fiscal administration, entrusted once more to the *umanā'*, assisted by *'udūl* or notaries and required to compile a census of the greatest possible precision, a copy of which was submitted to the *Makhzan*; a receipt was also delivered to each taxpayer, detailing his goods and his liability. A new feature was that payment could no longer be paid except in money, with the option of paying in two instalments per year. Still more draconian, while the former obligations related only to the totality of annual revenue, the new *tartīb* transformed them into contractual taxes levied on capital, calculated for arable cultivation according to the number and quality of ploughs possessed, and for animals and trees according to their number. Furthermore, the *umanā'* and their assistants were to be paid by the central *Makhzan*, and like *ḳā'ids* they were obliged to swear to abstain from any form of corruption. As a final and outstanding demonstration of political incompetence, it was decided that levying of the former taxes should be suspended even before the new system had been set in operation. The latter could only be applied if endorsed by the Europeans, since the objective of the *Makhzan* was always that of imposing restrictions on consular protection. It was not until November 1903 that a measure of agreement was reached, but in the meantime Mawlāy 'Abd al-'Azīz found himself in an unstable position. Accused by his subjects of being in the pay of foreigners and compelled, furthermore, to restrict government borrowing, the sultan abandoned the *tartīb* to revert to the old methods. However, the Algeciras Conference retained the basic notion, article 59 stipulating that European nationals should submit themselves to the "tertib" (as it was henceforward to be written in European sources), as soon as it was applied to Moroccan subjects.

This dilemma which was at the root of the reform, to compel Europeans and their protected persons to pay taxes as a means of extinguishing consular protection, or to put an end to all forms of fiscal evasion by introducing more order and justice into the system, could be resolved only by the Protectorate. The *tartīb* was established under the cover of occupation troops which had behind them their long experience of Algeria and Tunisia, and which had had the opportunity to become acquainted with the Moroccan taxpayer in Shāwiya and in the province of Udjda, occupied since 1907. *Zakāt* and *'ushūr* were levied there until 1912 with certain modifications. The *ḳā'ids* were assisted in their fiscal functions by commissions working *coram publico*. Assessments were made according to ploughs or areas of land under cultivation, payments made in cash. The term *tartīb* was avoided.

It did not reappear until after the establishment of the Protectorate. In November 1912, Sultan Mawlāy Yūsuf addressed a special message to the *ḳā'ids* of the Atlantic littoral, imposing upon them the procedure to be followed for its application. In July 1913 a diplomatic regulation was promulgated on the basis of that of 1903, cancelling the liability of European subjects to the *tartīb*. Nationals of countries which did not renounce their exterritorial privileges (including Great Britain until 1937 and the United States until 1952), would continue to pay it through consular channels. In 1914, another special instruction enlarged its sphere of application. Finally, the two great institutional *ẓahīrs* of 10 and 11 March 1915 were promulgated in the form in which they were to function throughout the duration of the Protectorate, if no regard is taken of texts of application, annual fixing of tariffs and partial reorganisation subsequently undertaken, such as the *ẓahīrs* applying to the *tartīb* on fruits and vines (May 1939), those of 1952 extending it to certain hitherto neglected products (cotton, rice, bananas, market gardening, etc.) or even the *ẓahīrs* of November 1924 and March 1933 on methods of roofing and construction.

In general, the *tartīb* evolved according to the trail blazed by previous experience, while conforming to the developing profile of the Protectorate. The *ḳā'ids*, standard-bearers of pacification, retained their fiscal prerogatives, deducting a percentage for their remuneration, although they were subject, in an increasingly rigorous fashion, to the control of officials of the colonial administration. Procedures of census and assessment were conducted in the most public manner possible: in the spring, valuation of annual crops and produce of trees; in the autumn, that of seasonal produce and animals. Numerous categories of production were distinguished, five in 1915, nine in 1956. Valuations were conducted with ever-increasing precision, such that they amounted to a form of land-survey, applied to the colonists at first, by which the mass of the peasantry remained unaffected, relying on valuation by ploughs or by *mudd* which subsequently needed conversion into produce, in quintals to the hectare. Annual crops paid 5% calculated on the basis of current prices. Trees were at first taxed in lump sums according to units and species, but in 1939 they were taxed according to overall production valued in terms of the market. A distinction was then drawn between vines in regular cultivation and vines in irregular cultivation, the profitability in the two cases not being comparable. As for animals, they were subject, after weaning, to a *zakāt* which took account neither of their commercial value nor of Ḳur'ānic scales. The management of all these levies was progressively entrusted to a distinct administration comprising controllers and inspectors acting independently of one another but not of the political control to which they remained subordinate in all respects.

The fact is that the *tartīb* was not only a tax which on average supplied to the Protectorate more than half of its direct fiscal receipts. It was also, and especially, a means of penetration and of pacification, utilised in such a way that it never served as a springboard for Moroccan resistance. Thus it became confused with colonisation in both its positive and negative aspects. It could be said that it was an instrument for the integration of the Moroccan countryside, a factor of unification and a decisive lesson in solidarity and discipline (Jouannet). But, on the contrary, it

could also be said that it filled the coffers of the colonial régime, financing its new towns and infrastructures, and built on the backs of a peasantry which was defenceless, crushed by conquest and delivered into the power of the *ḳāʾid*s, with hands and feet tied in a manner unprecedented in the history of Morocco. The nationalist movement, from the time of its earliest inception, did not miss the opportunity to criticise it in the 1934 programme of reforms. In 1951 the Istiḳlāl Party was able to show that the Moroccan peasant paid to the *tartīb* 24% more than was paid by the colonist, who also benefited from numerous subsidies and refunds, not to mention credit facilities and the means of having grievances heard. In 1934 a French lawyer had shown that the *tartīb* weighed most heavily on the least privileged strata of the peasantry.

For all these reasons, in the aftermath of independence this levy could only be seen as a relic of colonisation. But initially, the legislation which controlled it in the French zone was extended to the former Spanish zone (*ẓahīr* of 8 March 1958) and to the former international zone of Tangier (*ẓahīr* of 15 January 1959). The Spanish had begun by applying the *tartīb* on the basis of the diplomatic regulation of 1913, and it was only institutionalised by a caliphal *ẓahīr* dated 12 January 1927, followed by a vizierial decree which extended the levy to the entire zone. Thereafter, and until 1956, various texts were published, fixing the tariffs as well as the commissions paid to *ḳāʾid*s and others appointed to collect the tax, and even setting out the measures to be taken against evaders. The administration of the tax remained constantly in the hands of "interventores", the equivalent of the civilian controllers and officials of Indigenous Affairs in the former French zone. As for the international zone of Tangier, the *tartīb* was not levied there following the promulgation of its statute in December 1923.

But independent Morocco was always intent on reforming the basis of revenue. The *ẓahīr* of 2 November 1960 substituted for the simple rate of tax levied at 5% a rate varying between 2 and 10% for primary crops, thus charging a heavier rate on higher outputs and exempting outputs of less than four quintals per hectare. At a stroke, more than 50% of the cultivated land was freed from tax. Once the *tartīb* ceased to apply to the peasant masses, it was no longer a system yielding high returns. Thus on 6 June 1961 King Ḥasan II proclaimed its abolition, describing it as "an unjust and sterile tax, established on illogical foundations, a weapon of exploitation in the hands of despots and an obstacle on the road to economic development, social justice and the development of the country". The truth is that in the meantime, independent Morocco had inherited from the colonial past a whole range of new taxes which excused it not only from continuing to charge the impecunious peasant, but also from levying what was originally only a simple Muslim charity; there was now no question of charging it upon non-Muslims.

Contribution à l'histoire contemporaine du Maroc*, Rabat 1996.

(Brahim Boutaleb)

ṬARṬŪS or Tortosa, earlier Anṭarṭūs, frequently Anṭarsūs (by analogy with Ṭarsūs), a town on the Syrian coast, the ancient Antarados opposite the island of Arados (Ar. Djazīrat Arwād, also written Arwādh; now Ruwād; concerning the Arab conquest of the island, see L.I. Conrad, *The conquest of Arwād: a source-critical study in the historiography of the early medieval Near East*, in Averil Cameron and Conrad (eds.), *The Byzantine and early Islamic Near East. I. Problems in the literary source material*, Princeton 1992, 317-401). Under the Roman empire, Antarados was called Constantia, but the old name remained alongside of this and in the end drove the latter out again.

The Muslims took the fortress of Ṭarṭūs under ʿUbāda b. al-Ṣāmit in 17/638. The town was destroyed and remained for a long time uninhabited. Muʿāwiya rebuilt it, fortified it and settled there and in Maraḳiyya and Bulunyās soldiers to whom he allotted lands. It was only after the conquest of Cyprus that Muʿāwiya was able to take the island of Arwād also from the Greeks (al-Dimashḳī, tr. Mehren, 186; Theophanes, *Chronicle*, ed. de Boor, 344). The Ḳurʾān of the Caliph ʿUthmān is said to have been kept in Ṭarṭūs. Ibn Khurradādhbih includes the district (*kūra*) of Ṭarṭūs in the territory of Ḥimṣ; according to al-Yaʿḳūbī, *Buldān*, 325, tr. Wiet, 172, the people of the town belonged to the tribe of Kinda.

When in 357-8/968 the Byzantines under Nicephorus Phocas conquered Northern Syria, the strong defences of the town protected it from capture by the enemy, according to the evidence of the contemporary Ibn Ḥawḳal (ed. Kramers, 176-7, tr. Kramers and Wiet, 173-4). On the other hand, about a generation later, Yaḥyā b. Saʿīd of Anṭākiya reports that the Emperor took Ṭarṭūs, Maraḳiyya and Ḥiṣn Djabala (Yaḥyā, ed. Kračkovskiy and Vasiliev, in *Patrol. orient.*, xviii, 816). In 386/995-6 the emperor Basil II took the town (Yaḥyā and Djamāl al-Dīn b. Ẓāfir, in Rosen, *Zapiski Imp. Akad. Nauk*, xliv, 32, 35-6, 241; Schlumberger, *L'Épopée byzantine*, ii; 95-6, who wrongly distinguishes Ṭarṭūs from Tortosa). At the beginning of the year 1099, the Crusaders took Ṭarṭūs but soon afterwards lost it. It was not till 495/1102 that they finally attained possession of it under Raimund of Toulouse. After Raimund's death, Count William of Cerdagne was given Ṭarṭūs and Djabala as a fief. By the treaty of Devol (Sept. 1108), Arwād and Ṭarṭūs among other places were promised to the Byzantine emperor Alexius Comnenus (Anna Comnena, *Alexiad*, ed. Bonn, ii, 241.) The town later passed into the possession of the Count of Tripoli. From a poem dedi-

cated to Usāma b. Munḳidh by the Egyptian vizier al-Malik al-Ṣāliḥ Abu 'l-Ghārāt Ṭalā'i' b. Ruzzīk [*q.v.*], it is evident that the town must have already been in the hands of the Templars before 1158 (Derenbourg, *Ousâma*, 293).

In Djumādā I 584/July 1188 the Ayyūbid Ṣalāḥ al-Dīn advanced on the town and found it deserted by its defenders, as they had retired into two strong towers on the city walls. He occupied the town in less than an hour; one of the towers was stormed by his vassal, the lord of Irbil, and Ṣalāḥ al-Dīn had it destroyed and the ruins thrown into the sea. The other, which was built of large hewn stones and surrounded by a well-watered garden, was so bravely defended by the commander of the Templars that Ṣalāḥ al-Dīn raised the siege and contented himself with destroying the walls and famous Church of the Virgin. The earthquake in May 1202, which devastated the whole Syrian coast, is said also to have affected Ṭarṭūs but to have spared the Church of the Virgin, which had been rebuilt in 1188. This edifice, celebrated for the miracles and cures wrought in it, and which contained a valuable image of the Virgin, was considered her oldest sanctuary in Syria (al-Dimashḳī, ed. Mehren, 208); al-Idrīsī apparently already knew it (he wrote in 1154 or later, although he seems wrongly to transfer it to the island of Arwād). In the year 611/1214-15, Count Raimund of Tripoli, son of Bohemund IV of Antioch, was murdered by Ismā'īlīs; in revenge, the prince led an expedition against the Assassin fortress of Khawābī (Kamāl al-Dīn, tr. Blochet, in *ROL*, v, 48; Ibn Furāt, in Röhricht, *Gesch. d. Kgr. Jerus.*, 271 n. 1, 715 n. 4). The Church of the Virgin lay within the area of the sanctuary of the apostle Andrew, as appears from a letter from Pope Clement IV to Bishop William of Tortosa of 26 April 1265.

In the treaty of 626/1229 between the Emperor Frederick II and al-Malik al-Kāmil [*q.v.*], Ṭarābulus, Ḥiṣn al-Akrād, Ṣāfīthā, Marḳab, Ṭarṭūs and Anṭākiya were not included; the Emperor had to pledge himself to remain neutral in case of a war between these lands and the Muslims (Röhricht, *Beiträge z. Gesch. d. Kreuzzüge*, i, 41, 77-8; idem *Gesch. d. Kgr. Jerusalem*, 785).

When the Mamlūk Sultan Baybars in 666/1267-8 was advancing on Antioch via Ṭarābulus, envoys from the Templars of Ṣāfīthā and Anṭarṭūs appeared before him with presents and 300 Muslims, lately prisoners, and thus succeeded in having their territory spared (al-Maḳrīzī, in Quatremère, *Hist. des sultans mamlouks*, i/2, 52; Röhricht, *Gesch. d. Kgr. Jerus.*, 953. An attack by the Mamlūk ruler on Ṭarṭūs and other towns in 669/1270-1 met with no success of note (al-Maḳrīzī, *op. cit.*, i/2, 84; al-Mufaḍḍal b. Abi 'l-Fāḍā'il, *Histoire des sultans mamelouks*, ed. Blochet, in *Patrol. orient.*, xii, 528). Later, however, the Templars found themselves forced to conclude a treaty with him by which their territory and that of Marḳab and Bāniyās was divided between them and the sultan (al-Maḳrīzī, *op. cit.*, i/2, 151; al-Mufaḍḍal, *op. cit.*, xii, 536, xiv, 445; Röhricht, 953). The Master of the Templars, William of Beaujeu (de Bellojoco), in 681/1282 concluded a truce with al-Malik al-Manṣūr for Ṭarṭūs and the district around for ten years and ten months (from 15 April 1282), and the possessions of the two parties were accurately delimited. To Ṭarṭūs belonged 37 districts of the region round 'Arayma (now Ḳal'at 'Arayme) and Mī'ār (now Burdj Mī'ār). After the conquest of 'Akkā', Ṭarṭūs was taken from the Franks by Sultan Khalīl, being one of the last towns to fall, on 5 Sha'bān 690/3 August 1291.

The Templars succeeded temporarily in establishing themselves again in Ṭarṭūs in 1300-2 from the island of Arwād. The island was not taken until 702/1302-3 in the reign of al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn; the Christians there were put to death or enslaved and the defences razed to the ground (al-Maḳrīzī, *Hist. des sultans mamlouks*, ii/2, 195; Abu 'l-Fidā', ed. Reiske, v, 180; al-Idrīsī, in Le Strange, *Palestine under the Moslems*, 400; Weil, *Geschichte der Chalifen*, iv, 256).

Henceforth Ṭarṭūs was a little district under the *nā'ib* of Ṭarābulus (al-Ḳalḳashandī, *Ṣubḥ al-a'shā'*, in Gaudefroy-Demombynes, *La Syrie*, 116, 228; Ibn Faḍl Allāh al-'Umarī, *Ta'rīf*, 182, in R. Hartmann, in *ZDMG*, lxx [1916], 36, n. 14). The town declined more and more, the castle of the Crusading period serve the few inhabitants of Ṭarṭūs as a dwelling place up to the early 20th century.

The modern revival of Ṭarṭūs came with the later years of the French Mandate and with Syria's attainment of independence after the Second World War [see AL-SHA'M. 2 (b), (c)], a process stimulated by the loss of Alexandretta [see ISKANDARŪN] to Turkey in 1939 and the consequent need for Syria to develop other ports as outlets for her trade. The modern town of Ṭarṭūs (lat. 34° 55' N., long. 35° 52' E.) is now a centre for fisheries, the focus of a rich agricultural hinterland and (until recent interruption) the terminus of an oil pipe line from 'Irāḳ. All these activities have made it Syria's second most important port after Latakia [see AL-LĀDHIḲIYYA]. Since the early 1970s Ṭarṭūs has been the chef-lieu of a governorate (*muḥāfaẓa*) of the same name. In 1981 the town had a population of 52,589 and the governorate one of 443,290. The town is mainly Muslim but with a significant minority of Greek Orthodox Christians. The Church of the Virgin, in its later form, still survives, as do the Templar fortifications.

(E. HONIGMANN-[C.E. BOSWORTH])

TĀRŪDĀNT, conventionally Taroudant, a town in the Sūs region of southern Morocco situated in lat. 30° 31' N., long. 8° 55' W. at an altitude of 250 m/820 feet. It lies 4 km/2½ miles from

the right bank of the Wādī Sūs and some 83 km/51 miles from Āgādīr [*q.v.*] and the Atlantic coast. The old town is enclosed by a lengthy, high, early 18th-century crenellated wall with five gates.

Tārūdānt was an important town in mediaeval Islamic times. It formed part of the Almoravid empire from 421/1030 onwards, but a century later was conquered by the Almohads. It was at Tārūdānt that the Sa'dian sultan Aḥmad al-A'radj (d. 950/1543) established his power, but the Sūs region as a whole was frequently in rebellion against the authority of Marrakech. Tārūdānt was a centre for the pretender to the Sharīfian throne Aḥmad al-Hība [*q.v.* in Suppl.] from 1912-13 onwards, but French troops finally established their authority there in May 1917. By the mid-20th century, Tārūdānt was being surpassed by the expanding port of Āgādīr as the main centre of the Sūs, but has remained important as an agricultural marketing focus. In 1950 it had a population of almost 12,900, including 900 Jews who lived in a *mellāḥ* [see MALLĀḤ] but who have now almost all emigrated; by the early 1980s the population had reached 24,000. For further details on the town's history, see AL-SŪS AL-AKṢĀ.

Bibliography: See that to AL-SŪS AL-AKṢĀ, to which should be added: Naval Intelligence Division. Admiralty Handbooks, *Morocco*, London 1941, i, 214-16, ii, 64-5, 283-4 and indices; Guides Bleus, *Maroc*, Paris 1954, 210-11; *Taroudant, cité du Sousse*, joint publication, Faculté des Lettres et Sciences Humaines d'Agadir 1993. (ED.)

ṬĀRUM, ṬĀROM, the name of two places in Persia.

1. The best-known is the mediaeval Islamic district of that name lying along the middle course of the Ḳïzïl Üzen or Safīd Rūd river [*q.vv.*] in the ancient region of Daylam [*q.v.*] in northwestern Persia. Adjoining it on the east was the district of Khalkhāl [*q.v.*]. There are, at the present time, two small towns or villages bearing the name Ṭārum, one of them on the right bank of the Ḳïzïl Üzen between Wanisarā and Kalladj.

According to Ḥamd Allāh Mustawfī (*Nuzhat al-ḳulūb*, 65, 217-18, tr. 69-70, 209-10), the district of "the two Ṭārums" (*Ṭārumayn*) was divided into an upper and a lower Ṭārum, with chief towns at Ḳal'a-yi Tādj and Shamīrān respectively; the population at that time (8th/14th century) were Shāfi'ī Sunnīs. Ṭārum lay off the main communication routes, and the limited amount of traffic between Ardabīl and Zandjān had to cross the Ḳïzïl Üzen either at the only bridge or, more directly, by means of inflated rafts (*keleks* [*q.v.*]). Though the district was very mountainous, Mustawfī mentions its excellent crops and fruit, and according to Yāḳūt (*Buldān*, ed. Beirut, ii, 6, s.v. *Ṭāram*), high quality silken garments were produced there. Some four centuries previously, the Arab traveller Abū Dulaf al-Khazradjī [*q.v.*] had mentioned famous mines for iron sulphate, alum and borax (*Abū-Dulaf Mis'ar ibn Muhalhil's travels in Iran* (*circa A.D. 950*), ed. and tr. V. Minorsky, Cairo 1955, text § 11, tr. 74).

One of the most famous places in Ṭārum was the fortress of Shamīrān, which was visited by Abū Dulaf, Nāṣir-i Khusraw and Yāḳūt. The site of Shamīrān has not been discovered, but the itinerary of Nāṣir-i Khusraw enables it to be fixed with sufficient accuracy. The traveller coming from Ḳazwīn arrived at Kharzawīl (below Mandjil); from there after a descent of 3 *farsakhs*, he arrived at Brzalkhyr (?), a dependency of Ṭārum. He then came to a village of Khandān on the Shāh Rūd near its mouth. At Khandān a toll for crossing (*bādj*) was levied by the Amīr (of Ṭārum). From here to Shamīrān, Nāṣir-i Khusraw reckons it 3 *farsakhs*. In reality, the distance from Kharzawīl to the Shāh Rūd in a direct line is not over 8 km/5 miles. In the more open country to the west of the Shāh Rūd, 3 *farsakhs* would be the equivalent of a longer distance in miles. According to Yāḳūt, Samīrān (Shamīrān) was "on a large river"; all these details enable us to locate Shamīrān near Darband. Indeed, Rawlinson mentions the ruins there of a "large and very strong fort" (5 km/3 miles below Giliwān) and the Russian map shows the "ruins of a fortress" on the cliff on the left bank (*ca.* 12 km/7 miles above the mouth of the Shāh Rūd). The strategic importance of Shamīrān was that it guarded at its narrowest point the entrance to Ṭārum by the valley of the Ḳïzïl Üzen, while the fort of Ḳalāt commanded the entrance from the Zandjān side.

History. We do not know who were the early inhabitants of the district of Ṭārum. Rawlinson located in this part of the Ḳïzïl Üzen the ancient people of the Cadusii and relied for this on the authority of al-Djayhānī (*Ashkāl al-'ālam* ?) who still (5th/11th century ?) calls all this district Ḳādūstān (?). The wild and remote country of Ṭārum-Khalkhāl only played a part in history in the period of the Musāfirid dynasty [*q.v.*] which, with Shamīrān as its capital, ruled Ādharbāydjān, Arrān, Gīlān and the country as far as Rayy. As early as 316/928 we find Sallār b. Aswār lord of Shamīrān; cf. Ibn al-Athīr, viii, 142. Abū Dulaf Mis'ar b. Muhalhil (*loc. cit.*) speaks of 2,850 large and small buildings in Samīrān (Shamīrān). From the interesting letter of the Būyid vizier al-Ṣāḥib Ibn 'Abbād al-Ṭālaḳānī, quoted by Yāḳūt (s.v. *Samīrān*), it seems that Ṭārum was at first under Ḳazwīn, from which it was detached by Muḥammad b. Musāfir, who coveted the district for its fortress. The Ṣāḥib pays a high tribute to the importance of Shamīrān by calling it "sister of the fortress of Alamūt" (al-Muḳaddasī, 360) and mentions the ornamentation of the fortress of Samīrūm (*sic*) in the form of lions in gold, the sun and the moon. In 379/989 the Būyids acquired Shamīrān by a matrimonial alliance, but after the death of Fakhr al-Dawla, the Musāfirid Ibrāhīm seized Zandjān, Abhar, Sardjihān (a district to the north of Abhar near Ṣā'in-ḳal'a = the old Ḳuhūd) and "Shahrizūr" (reading uncertain, but the place must be identified with "Sharzūrlard, Sharūzlar" which the *Nuzhat al-ḳulūb*, 65, tr. 70, mentions among the dependencies of Lower Ṭārum). Shamīrān is not explicitly mentioned among these domains, but in 438/1046 Nāṣir-i Khusraw found at Shamī-rān (Samīrān) a Musāfirid prince and a garrison of 1,000 men. The traveller says that the fortress on a cliff commanded the town (*kaṣaba*); it was surrounded by a triple wall; a subterranean passage (*kārīz*) going down to the river enabled water to be procured. According to Yāḳūt, the fortress was destroyed by the Ismā'īlīs in circumstances which are still unknown. Ḳalāt in the time of Yāḳūt was occupied by the lord of Alamūt.

Under the Mongols, especially when the capital was transferred to Sulṭāniyya [*q.v.*], Ṭārum gained in importance and the *Nuzhat al-ḳulūb* (740/1340) gives evidence of the exact knowledge then possessed of this district. Under Öldjeytü, Ṭārum was ruled by a certain *Shiḥna* Girāy (?) who is mentioned as sending the expedition into Gīlān in 700/1307 (Dorn, *Auszüge*, 139). Under the Tīmūrids, the *khāns* of Khalkhāl and of Ṭārum (Shaykh Zāhid Ṭārumī; Dorn, *Auszüge*, 229, 231, 234, 382) played a role of some importance. Shamīrān also must have been rebuilt, for the historians

of Gīlān tell how after the death of Yaʿḳūb b. Uzun Ḥasan Aḳ Ḳoyunlu (896/1490), the *Kār-kiyā* Mīrzā ʿAlī seized the fortress by a stratagem. Later, a certain Mīr Zayn al-ʿĀbidīn Ṭārumī rebelled against Mīrzā ʿAlī but without success. In the reign of Rustam Beg Aḳ Ḳoyunlu (898-902/1493-7), his general Dede Beg with 10,000 men recaptured the "fortress of Ṭārum" but later during the struggle between the Aḳ Ḳoyunlus Alwand and Muḥammadī (904-6/1500-1), the general of *Kār-kiyā* Mīrzā ʿAlī "freed Ṭārum from Turkish rule" (cf. *Mirʾāt al-buldān*, i, 236).

Under the Ṣafawid S̲h̲āh Ismāʿīl I, Ṭārum was on the most convenient route between the lands of the *Kār-kiyā*, where the young monarch was in hiding and Ardabīl, the ancestral home of his family. The route followed in 905/1479-1500 by Ismāʿīl in his famous march was by Ṭārum-Barandaḳ-Nasāz-Kūʾī-Ḥifẓ-ābād-Abaruḳ-Ardabīl (cf. E.D. Ross, *The early years of S̲h̲āh Ismāʿīl*, in *JRAS* [1895], 332). Ṭārum is several times mentioned in the *Tārīk̲h̲-i ʿĀlam-ārā* as the place where the Ṣafawids spent the winter of 921/1515-16 and hunted (1002/1593-4, 1003/1594-5) and from where they sent expeditions against Gīlān.

The Turkish elements gradually absorbed the Iranian (Daylamī and Gīlānī) elements. Under Nādir S̲h̲āh, the Amarlu Kurds were settled in Mand̲j̲īl and in the Pus̲h̲t-i Kūh of Ṭārum. According to Rawlinson, they were of the Lūlū tribe (Lōlō ?, traces of which are still found in Upper Syria (Le Coq), near Tehran (Brugsch), etc.), but in his time they had already become Turkicised. Rabino, however (*RMM*, xxxii, 261), distinguishes between the Ris̲h̲wand Kurds (of Sulaymāniyya) settled near Mand̲j̲īl by S̲h̲āh ʿAbbās I and the ʿAmarlu Turks (?) who came in the time of Nādir. In any case, according to Fortescue (1924), Ṭārum had a Turkish population; after Giliwān the peasants did not understand Persian. In the toponymy also, a Turkish layer gradually obscures the old Iranian names (cf. Pardalīs from **prd* "bridge", Nimahil, Niyāb, Gulčīn, etc.). A study of the old Iranian toponymy in Ād̲h̲arbāyd̲j̲ān has still to be made, but it is evident that the local dialects belonged to the group called "Northwestern".

According to the *Mirʾāt al-buldān*, i, 335, the Ḳād̲j̲ārs made Ṭārum a separate domain and gave it as a fief (*iḳṭāʿ wa-tiyūl*) to Muḥammad K̲h̲ān Dawalu, to his son Allāh-yār K̲h̲ān Āṣaf al-Dawla, etc. After the accession of Riḍā S̲h̲āh Pahlawī (1925), a punitive expedition was sent to K̲h̲alk̲h̲āl and several local K̲h̲āns (Ras̲h̲īd al-Mamālik, etc.) were hanged.

Bibliography (in addition to references in the article): For older bibl. and travellers' accounts, see *EI*[1] art. Fortescue, *The Western Elburz and Persian Azerbaijan*, in *JRGS* (1924), 301-18; Barthold, *An historical geography of Iran*, Princeton 1983, 232.

2. A town of Fārs (Yāḳūt: Ṭirm; *Fārs-nāma*, ed. Le Strange: Tār(u)m) situated at the extreme east of the province of the Kirmān side. The town seems to correspond to Tāravā in the land of the Yautiyā mentioned in pre-Islamic inscriptions. Ṭārum is now a village and rural district of the province of Kirmān, in the *s̲h̲ahrastān* of Bandar ʿAbbās.

(V. Minorsky-[C.E. Bosworth])

TARWIYA (a.), is the name for the day 8 Dhu 'l-Ḥid̲j̲d̲j̲a (*yawm al-tarwiya*). The Islamic Ḥad̲j̲d̲j̲ begins on this day; on it the pilgrims go from Mecca to Minā and as a rule after a short stay there go on again to be able to pass the night at ʿArafa. The chief focus on the "Day of *Tarwiya*" in the *Ḥadīth* (and later law books) is what the pilgrim should properly do and say on that day, especially with respect to performance of ritual prayers and assumption of *iḥrām*: see e.g. al-Buk̲h̲ārī, 4 (*Wuḍūʾ*), 30; 25 (*Ḥad̲j̲d̲j̲*). 26, 33, 36, 145, etc.; Muslim, *Ṣaḥīḥ*, 15 (*Ḥad̲j̲d̲j̲*). 25, 136, 138, etc.; Ibn Abī Zayd al-Ḳayrawānī, *al-Risāla*, Ar. text with Fr. tr. L. Bercher, [6]Algiers 1975, 144-5; cf. Ibn Rus̲h̲d, *The distinguished jurist's primer* [*Bidāyat al-mud̲j̲tahid*], tr. I.A.H. Nyazee, Reading, U.K. 1994, 409). In Muslim works, the term *yawm al-tarwiya* is usually explained from the fact that the pilgrims on this day give their animals a plentiful supply of water in preparation for the ride through the waterless area or from their taking with them a supply of water for themselves. However, since *tarwiya* properly means "pouring" rather than "watering" animals or "taking water with one", it has been suggested that the expression goes back to some kind of sympathetic rain-charm with which the rite of the pilgrimage was introduced in the oldest period. With this one might compare the pouring and sprinkling of the sacred water of Zamzam as observed by Ibn D̲j̲ubayr in S̲h̲aʿbān 579/November-December 1183 among the Meccans, and by al-Batanūnī among the Bedouin during the pilgrimage in 1909. See also ḤAD̲J̲D̲J̲.

(R. Paret-[W.A. Graham])

AL-ṬĀSA (a.), the term used in mediaeval Islamic scientific texts for the magnetic compass. The earliest references to the magnetic compass in the Islamic written sources have been surveyed by E. Wiedemann in MAG̲H̲NĀṬĪS. 2. to which see also the addenda in volume IX. To these sources may now be added:

1. A treatise on the magnetic compass (called *ṭāsa*) used for finding the *ḳibla*, compiled by the Rasūlid Yemeni Sultan al-As̲h̲raf *ca.* 690/1290 (first studied by P. Schmidl in 1994); see Pl. V. There is no mention of any deviation of the compass needle from the meridian, but we cannot be sure what that deviation might have been in the Yemen at that time. The

instrument, which is a bowl with a scale around the rim divided in degrees, is called *ṭāsa* and is to be filled with water, on which the needle floats.

2. A short description of a circular compass-box (called *ḥukk al-ḳibla*) with a needle attached at the centre (see Pl. VI) in a treatise on astronomical time-keeping by Ibn Simʿūn, who worked in Cairo *ca.* 700/1300 (this section was studied by Schmidl in 1994 and the whole treatise is currently being investigated by M. Castells). There is no mention of any magnetic deviation.

3. A treatise on a compendium or multi-purpose instrument by the mid-8th/14th-century Damascus astronomer Ibn al-Shāṭir, in which a magnetic compass is fitted in order to align the instrument in the cardinal directions (published by D.A. King and L. Janin in 1977). There is no mention of any deviation of the compass needle from the meridian, but we cannot be sure what that deviation might have been in Damascus at that time.

4. A treatise on a universal equatorial sundial by the mid-9th/15th-century Egyptian astronomer ʿIzz al-Dīn al-Wafāʾī (published by S. Tekeli in 1960). In this the author presents a value for the declination of the magnetic compass from the meridian.

5. Various later treatises in which a compass is mentioned, such as the treatise on *dāʾirat al-muʿaddil* of Seydī Reʾīs (studied by R. Lorch *et alii* in 1976). In this, al-Wafāʾī's value of the deviation is adopted, but the treatise was compiled much later in Istanbul, and the value of the declination was surely different.

6. A ceramic water-bowl compass made in Syria *ca.* 922-6/1516-20 by a craftsman named Thābit has survived. It was made for the Ottoman Sultan Selīm I and bears inscriptions purporting to give the *ḳibla* values of some 40 localities, mainly in Persia (see Pl. VII, Fig. 1). However, the information is so corrupt that it is seldom other than worthless. The instrument was clearly copied from another; indeed, it is at the end of a long process of transmission, the data being further corrupted each time a new instrument was made. It appears probable that the "original" compass that inspired the series was made in Persia in the 7th/13th century. Several of the few *ḳibla* values that are intelligible contain the same errors found in an extensive Tīmūrid geographical table that is preserved in ms. London B.L. Or. 7489, fols. 53a-58b (on this, see the addenda and corrigenda to AL-SAMT).

7. Magnetic compasses are found on two world-maps centred on Mecca that have survived from late-Ṣafawid Persia. See AL-SAMT on the first, rediscovered in 1989, especially Pl. LXVIII; the other came to light only in 1995; see now the important addenda and corrigenda to that article in volume IX and Pl. VIII.

8. Magnetic compasses are also found on various late-Ṣafawid astrolabes (see Pl. VII, Fig. 2) as well as on a late Syrian quadrant (illustrated in RUBʿ, Pl. XXXIV) and on countless late Persian *ḳibla* indicators.

Our knowledge of the transmission within the Islamic world of the various scientific notions regarding the magnetic compass is still very fragmentary, and we can be confident that more textual sources and instruments remain to be discovered in libraries and museums and private collections around the world.

Bibliography: In addition to MAGHNĀṬĪS. 2, see the addenda to that article. On various manuscripts and instruments featuring a magnetic compass, see D.A. King, *Mathematical astronomy in medieval Yemen. A bio-bibliographical survey*, Malibu, Calif. 1983, 29, and pl. VII, and now P. Schmidl, *Two early Arabic sources on the magnetic compass*, forthcoming; L. Janin and King, *The* Ṣandūq al-yawāqīt *of Ibn al-Shāṭir. An astronomical compendium*, in *Jnal. of the Hist. of Arabic Science*, i (1977), 187-256, repr. in King, *Islamic astronomical instruments*, London 1987, 1995, XII; S. Tekeli, *The equatorial armilla of ʿIzz al-Dīn b. Muḥammad al-Wafāʾī and the torquetum*, in *Ankara Üniversitesi Dil ve Tarih-Coğrafya Fakültesi Dergisi*, xviii (1960); W. Brice, C. Imber and R.P. Lorch, *The Dāʾire-yi Muʿaddel of Seydī ʿAlī Reʾīs*, in *Seminar on early Islamic science* (University of Manchester), i (1976). On the ceramic *ḳibla* bowl, see Sophie Cluzan *et alii* (eds.), *Syrie. Mémoire et civilisation*, Paris 1993, 440-441, no. 336 (preliminary description prepared before the inscriptions had been interpreted). On the Mecca-centred world-maps, see in addition to AL-SAMT the addenda and corrigenda to that article.

(D.A. KING)

TAṢAWWUF (A.), the phenomenon of mysticism within Islam. It is the *maṣdar* of Form V of the radical *ṣ-w-f*, indicating in the first place one who wears woollen clothes (*ṣūf*), the rough garb of ascetics and mystics. Other etymological derivations which have been put forward in Western and, especially, Islamic sources, are untenable. Hence a mystic is called *ṣūfī* or *mutaṣawwif*, colls. *ṣūfiyya* or *mutaṣawwifa*.

1. Early development in the Arabic and Persian lands.
2. Ibn al-ʿArabī and after in the Arabic and Persian lands and beyond.
3. In North Africa [see ṬARĪḲA. II. 2].
4. In 19th and 20th-century Egypt.
5. In Persia from 1800 onwards.
6. Amongst the Turks.

   (b) The Balkans [see ṬARĪḲA. II. 6].
   (c) The Ottoman Turkish lands and Republican Turkey in the 19th and 20th centuries.
7. In Muslim India.
   (a) The pre-1800 period [see ṬARĪḲA. II. 7].
   (b) In the 19th and 20th centuries.
8. In Chinese Islam.
9. In Africa south of the Maghrib during the 19th and 20th centuries.

1. Early development in the Arabic and Persian lands.

Already among the Companions of the Prophet Muḥammad there were persons who wanted more than just to strive after the outward observance of the religious law and of the usages founded by the Prophet. At the same time, while fulfilling their religious duties, they paid attention to what was happening to their souls, and tried to harmonise these internal experiences with the external observances by means of renunciation of the world and asceticism. Here, they knew that many characteristics of the Prophet's message favoured this, whilst the 1st-2nd/7th-8th centuries brought about a certain secularisation of life and luxury, contrary to the ideals of the original Islamic community, and from which the truly God-fearing person could save himself only by withdrawing from the world.

The representatives of the ascetic movement, which strove after giving depth to life and renouncing the world, were often called *nāsik*, pl. *nussāk*, corresponding to the Latin *viri religiosi*. As an outward sign, they wore rough woollen cloth in order to react against

the people wearing more luxurious dress, and possibly also in imitation of the dress of Christian monks and ascetics.

A fringe group of the movement was called *Ṣūfiyya* in the 2nd/8th century. As opposed to the *religiosi*, antinomian, antisocial and anti-governmental tendencies became noticeable among them. This is in any case reported by sources which were ill-disposed towards the *Ṣūfiyya* and therefore cannot lay claim to unconditional trust. The *Ṣūfiyya* tried to achieve a sensitive relation with God. They developed views about the love of God, and for this they could quote Ḳur'ān V, 54: "He loves them, and they love Him". They also had a means to intensify this relation and to give it an artistic expression by playing music and wordly poetry, in particular love poetry, and by listening to this (*samāʿ* [*q.v.*]). For the *Ṣūfiyya*, the beloved who was celebrated in these poems was God, and the love relation described in them was their relation to God. The "hearing" often put them in a state of ecstasy (*wadjd*) brought about in particular by the dance which was connected with the hearing. Another exercise was the *dhikr Allāh*, on which see below. Notwithstanding the fact that the *religiosi* in general rejected these practices, the word *Ṣūfī*, which in the 2nd/8th century still had been an expression for a somewhat disreputable fringe group, had been adopted for the entire mystical movement in the course of the 3rd/9th century for reasons which are not clear. On the whole, however, the name never succeeded in imposing itself universally. In the East, in Khurāsān and in Transoxania, mystics were for a long time called *ḥakīm*, pl. *ḥukamā'*, and besides this the term, "knower of God" (*ʿārif*, pl. *ʿārifūn*) was often used.

The Ṣūfī was poor (A. *faḳīr*, P. *darwīsh*). He had renounced the world as a *zāhid* (pl. *zuhhād*) and devoted himself to the ardent service of God. However, he was not only contending with the world and its seductions, but also with himself, his own base self (*nafs*), experienced as the seat of all evil lusts, which impeded real renunciation of the world and exclusive surrender to God. It was therefore his task to look into himself and exercise self-training, with the aim of doing away with the self and all the impulses of the will emanating from it. For as long as the self was enduring, true Islam, true surrender to God's will was not possible. The final obliteration of personal activity was experienced as an absorption, a cessation of being, in God (*fanā'* [*q.v.*]). A road (*ṭarīḳ* or *ṭarīḳa* [*q.v.*], pl. *ṭuruḳ*, the later word for "dervish order"), along which the mystic travelled (*sulūk*), led to this. In the internal experience it led across a number of way stations (*manāzil*), locations (*maḳām*, pl. *maḳāmāt*) and situations (*ḥāl*, pl. *aḥwāl*), for which in later times classification systems were established in the handbooks (see below). Already in early times, many interpreted this road as a journey towards God through the macrocosmos.

The Ṣūfīs strove to procure a coherent foundation of their theory and practice. Their guiding principles were the Ḳur'ān and Sunna, the "orthodox" custom of the Islamic world which consolidated itself in the 3rd/9th century. The science thus formed was called *ʿilm al-bāṭin*, knowledge of the inner self or internal knowledge. They opposed it to the traditional sciences, namely, tradition (*ḥadīth*) and jurisprudence (*fiḳh*), which they designated as knowledge of the perceptible or the perceptible knowledge (*ʿilm al-ẓāhir*). The Ṣūfīs considered the status of their knowledge of the inner self as being superior to the perceptible sciences, yet they thought the latter to be indispensable for leading a God-fearing life. Rendering mysticism "orthodox" and coherent entailed the elimination of many of the attitudes of earlier times, especially those of the circles of the *Ṣūfiyya*. This is perhaps one of the reasons why the designations *Ṣūfī*, *Ṣūfiyya*, became socially acceptable in the 3rd/9th century.

The endeavour to get at a mental elucidation, at an intellectualisation, at a "rendering orthodox", is also found in Ṣūfī literature which originated in the 3rd/9th century. At the outset, there are collections of sayings by local leaders, which were then moulded into thematically-arranged collections. To these rather unassuming writings were added, in this same century, treatises by the great mystical scholars of that time, who pushed forward the development of the *ʿilm al-bāṭin*. Unfortunately, many of these writings have been lost. As authors one might mention al-Ḥārith b. Asad al-Muḥāsibī (d. 243/857 [*q.v.*]), who worked in Baṣra and in Baghdād. His name *al-Muḥāsibī*, i.e. he who takes himself to task, who settles accounts with himself, alludes to the contents of his writings. In the latter, a science of scrupulous introspection of great subtlety is being developed, one which was unequalled by all who came later.

At this same time, a centre of intellectual mysticism developed in the capital Baghdād after the leadership of the movement had first been at Baṣra, in the circle and among the pupils of al-Ḥasan al-Baṣrī. The leader of the school of Baghdād was al-Djunayd b. Muḥammad (d. 298/910 [*q.v.*]), to whose authority almost all later Ṣūfism refers. Other authors and scholars of the ʿIrāḳ and Baghdād schools were Abū Saʿīd al-Kharrāz (d. 279/892 or 286/899 [*q.v.*]), Abu 'l-Ḥusayn al-Nūrī (d. 295/907) and Aḥmad b. ʿAṭā' (d. 310/922). To Baṣra belongs Sahl b. ʿAbd Allāh al-Tustarī (d. 283/896 [*q.v.*]). From al-Djunayd's circle also came Abū Bakr al-Wāsiṭī (d. 320/932), but he was mainly active in the east, in Khurāsān. A solitary and a special case was the famous al-Ḥusayn b. Manṣūr al-Ḥallādj [*q.v.*] who by his exaggerated and challenging sayings provoked the state authorities and was finally executed in Baghdād in 310/922.

In the East, Naysābūr [see NĪSHĀPŪR] and the region around Balkh and Tirmidh, on the upper Oxus, were centres of Ṣūfism. As the main author one should mentioned al-Ḥakīm al-Tirmidhī (d. *ca.* 300/910), whose work is the most comprehensive of what has survived of classical Ṣūfism ("classical" here indicates the period between the 3rd/9th and the 4th-5th/10th-11th centuries). The famous Abū Yazīd al-Bisṭāmī (d. probably in 261/874-5 [*q.v.*]) was also active in the East.

The 4th-5th/10th-11th centuries were a period of consolidation, in which there appeared the great collections and text-books which gave Ṣūfism its final orthodox tone. One may mention Abū Naṣr al-Sarrādj (d. 378/988 [*q.v.*]) and his *Kitāb al-Lumaʿ*, Abū Ṭālib al-Makkī (d. 386/996 [*q.v.*]) and his *Ḳūt al-ḳulūb*; al-Kalābādhī (d. 380/990 [*q.v.*]) and his *al-Taʿarruf li-madhhab ahl al-taṣawwuf*; Abū ʿAbd al-Raḥmān al-Sulamī (d. 412/1022 [*q.v.*]), who in numerous comprehensive writings collected information about Ṣūfism and Ṣūfīs; al-Ḳushayrī (d. 465/1074), the author of the well-known *Risāla*; and the anonymous author of the text-book *Adab al-mulūk*, probably composed towards the end of the 4th/10th century.

Classical Ṣūfism found a certain culmination in the activities of Muḥammad al-Ghazālī (d. 555/1111 [*q.v.*]). Originally a theologian, he was converted to mysticism after a crisis in his life. In his main work, the *Iḥyā' ʿulūm al-dīn*, he accomplished a synthesis of theological science and mystical *ʿilm al-bāṭin*, and continued the

endeavours of his Ṣūfī predecessors of the 4th/10th century. In lengthy passages, the *Iḥyā'* is simply a revision of the *Ḳūt al-ḳulūb* of Abū Ṭālib al-Makkī, and, to a lesser extent also, of the *Risāla* of al-Ḳus͟hayrī.

Increasingly, the Persian language was also used in Ṣūfī literature, which until far into the 4th/10th century was only written in Arabic. Anṣārī of Herat (d. 481/1089) wrote mainly in Persian. With his *Kas͟hf al-maḥd͟jūb*, ʿAlī b. ʿUt͟hmān al-D͟jullābī al-Hud͟jwīrī (d. towards 1080 [*q.v.*]) composed the first Ṣūfī handbook in Persian. Sūfism was to be of particular importance for Persian poetry, in connection with which one should mention the poets ʿAṭṭār (d. *ca.* 615/1220), D͟jalāl al-Dīn Rūmī (d. 672/1273) and D͟jāmī (d. 898/1492) [*q.vv.*], and later, the other languages of the Islamic world, Turkish, Urdu etc., were to follow.

If on the one hand Ṣūfism was confined in the straightjacket of Islamic theology, it experienced on the other hand enrichment and enlargement by admitting non-Islamic ways of thinking and worldviews, above all those of Classical Antiquity, mainly Neoplatonism, mixed with Aristotelian elements, which had become known to the Islamic world through translations since the beginning of the 3rd/9th century. There are also influences from Iranian religions and ways of thinking. Vague influences from non-Islamic doctrines can already be detected in the writings of the scholars of the 3rd/9th century. Above all, al-Ḥakīm al-Tirmid͟hī should be mentioned, since he developed an early theosophical system. However, it was only very much later that a broad influence set in, the main exponents of this tendency being Yaḥyā b. Ḥabas͟h al-Suhrawardī (d. 587/1191 [*q.v.*]) from Persia and Ibn al-ʿArabī from Spain, who spent the second half of his life in Syria and Asia Minor, and died in Damascus in 638/1240 [*q.v.*]. Al-Suhrawardī joined mystical experiences with older Iranian traditions. Ibn al-ʿArabī drew up a Neoplatonic-Gnostic system, which is dominated by the idea of the unity of all beings (*waḥdat al-wud͟jūd* [see WAḤDAT AL-S͟HUHŪD AND WAḤDAT AL-WUD͟JŪD]). Early classical Ṣūfism had directed its attention to the fact that God operates everything, that God is the only real agent, to whose will and action man should submit with no will or self of his own. Post-classical Ṣūfism, whose beginning is to be dated in the 5th-6th/11th-12th centuries, made God not only into the only agent but even into the One who exists all alone. Later, there arose, in the person of Ibn Taymiyya (d. in Damascus 728/1328 [*q.v.*]) and others, opposition against aspects of Ṣūfism which Ibn Taymiyya considered as abuses. Among other things, his criticism was aimed at the monism of being of Ibn al-ʿArabī.

In addition to non-Islamic ways of thinking, later Ṣūfism had also to integrate further elements. Through exercises and practices—above all through *d͟hikr* [*q.v.*]—the mystic could place himself in situations in which he had visionary experiences (*mukās͟hafāt* "unveilings") which he interpreted as information coming from higher worlds, even from God Himself. A system of classification and interpretation of the visions was developed. Here mention should be made of Nad͟jm al-Dīn al-Kubrā from K͟hīwa in K͟hwārazm (d. 620/1220 [*q.v.*]), in whose school attention was given in particular to the visionary element. Already in the 5th/11th century, al-Ḳus͟hayrī began to incorporate this element into the doctrinal system of Ṣūfism, and it is found in its entirety in the last classical handbook of Ṣūfism, the *ʿAwārif al-maʿārif* of Abū Ḥafs ʿUmar al-Suhrawardī (d. 635/1234 [*q.v.*] in Bag͟hdād). It went through a Persian translation and adaptation in the 8th/14th century, and has remained a standard work of Persian mystics until the present day.

Mystic life was increasingly cultivated in the orders (*ṭuruḳ*), and these have been its characteristic home until the present day. If nowadays Islamic mysticism is mentioned, in general, gatherings like those of the orders are meant. These last originated in the 6th-7th/12th-13th centuries, during which Ṣūfī groups were formed with fixed rules and hierarchically-arranged leadership, but gatherings must have existed already earlier. Al-Hud͟jwīrī enumerates ten traditions of schools. But it is not yet a question of orders proper, if indeed one understands by order a Ṣūfī gathering, with a hierarchical organisation, fixed rules and rituals.

In the early days, well into the 4th/10th century, the pupil-teacher relation was a very loose one. The pupil (*murīd*) often visited several teachers (*s͟hayk͟h*, pl. *s͟huyūk͟h*) in order to seek instruction about the path. Later, the typical teacher giving instruction was called *s͟hayk͟h al-taʿlīm*. From the end of the 3rd/9th century onwards, in fact, at first in eastern Persia, a change became visible in this relationship. Next to mere instruction came personal education by the teacher, who took the pupil much more under his wing so that the relationship became closer. The customs which developed from these teacher-pupil relations were the foundation of the later rules of orders. After the instruction of the novice was finished, he obtained from his teacher an authorisation (*id͟jāza* [*q.v.*]) and, as an external sign, a rough cloak (*k͟hirḳa*). To his outfit also often belonged a prayer rug (*sad͟jd͟jāda*), a rosary (*misbaḥa*) and a beggar's bowl (*kas͟hkūl*).

The most important orders are the Ḳādiriyya, the Kubrawiyya, the Naḳs͟hbandiyya, the K͟halwatiyya and the S͟hād͟hiliyya [*q.vv.*]. As a rule, the orders have fixed, written rules, which usually deal with the following points:

1. They give the order's affiliation (*silsila*), which is traced back from the present leader to the Prophet Muḥammad. It may comprise 30-40 degrees. These affiliations are frequently not very historical; in the various orders, they often coincide from the Prophet onwards till the foundation of the specific order in the 7th-9th/13th-15th centuries, but after that date, differentiation appears.

2. The conditions and rituals for admission into the order. Some orders take men and women, some only men. The novice owes the *s͟hayk͟h* unconditional obedience (*perinde ac cadaver*), one which refers also to the affairs of everyday life.

3. Instructions about the use of the formulas for the *d͟hikr*. They deal with the regulation of breathing, with rhythms in which these formulas must be recited, and with the different speed in which this has to be performed.

4. Instructions regarding seclusion (*k͟halwa*). The Ṣūfī often withdraws for a length of time, which may span weeks, in special, screened-off small rooms, in order to devote himself to *d͟hikr* exercises. As a rule, very precise instructions are given for these; they deal with the site and the arrangement of space, the length of the seclusion, the sequence of the formulae and litanies, the prescriptions for posture, and practical points like maintenance and questions of cleanliness.

5. Often advice is also given concerning the relation of the members of the order among themselves.

The most important practice of the Ṣūfīs and of the Ṣūfī communities is the remembrance of God (*d͟hikr*), and with some orders also listening to music and dance. These were rejected by the theologians, as well as by Ibn Taymiyya and his school; others,

like al-G͟hazālī, accepted just *samā'*. In early times, even during the Prophet's lifetime, *d͟hikr* could consist of the picturing of God in the mind and of thinking of Him, to which aim meetings were held. The early *Ṣūfiyya* recited certain formulas in common. Later, and up to the present time, it means to have God's name (*Allāh*) always present and to pronounce it while paying attention to certain breathing techniques. This recital of God's name could lead to ecstatic situations, which were accompanied by visions. At times, the schools or orders developed specific methods for remembering God. At the admission into the order these methods were "implanted" into the novice by the teacher (*talḳīn al-d͟hikr*).

Many prominent teachers and personalities of Ṣūfism attained an odour of sanctity soon after their death, some even during their lifetime. Supernatural knowledge and the power to work wonders were ascribed to them, and their tomb often became a place of pilgrimage (*ziyāra* [*q.v.*]). Soon a garland of stories and legends around their person and their doings came into being, thus forming the basis of hagiographies. The first were written in Arabic, but unfortunately these have survived only in Persian translations.

The example of wonder-working saints was the Prophet Muḥammad himself, to whom supernatural features were ascribed by the Ṣūfīs. Already for the oldest Ṣūfīs, the Prophet's life (*sīra*) and sayings and doings (*sunna*) were the example. The Ṣūfī should not only follow him with body and soul (the *imitatio Muhammadi*) but also exert himself to keep Muḥammad himself always present in thoughts and feelings. This representation could be intensified to such an extent that Ṣūfīs thought they had Muḥammad in person before their eyes, who communicated with them by words and advice, for they were and are convinced that Muḥammad after his death lives on in a transformed existence. In later times the term "Muḥammad's path" (*ṭarīḳa muḥammadiyya*) was used in this context.

The mystical path is in principle open to every Muslim. According to the Ṣūfīs, therefore, anybody can arrive at higher forms of religious knowledge, even if this must be achieved under the guidance of a *s͟hayk͟h*. These achievements are promised to the novice as fruits of the path. The S͟hī'a, on the other hand, for which religious authority and knowledge must always be connected with blood percentage with the Prophet Muḥammad through the Imāms, were and are still hostile to this "democratic" idea of knowledge upheld by the Ṣūfīs.

Radtke, Beirut 1991, Ger. tr. Gramlich, *Die Lebensweise der Könige*, Stuttgart 1993. Sulamī's *Ḥaḳā'iḳ al-tafsīr*, a fundamental commentary on the Ḳur'ān with reference to early Ṣūfism, has not yet been published; cf. G. Böwering, *The Minor Qur'ān Commentary of Abū 'Abd ar-Raḥmān... as-Sulamī (d. 412/1021)*, Beirut 1995; other works by this author collected together by N. Pūrd͟jawādī, *Mad͟jmū'a-yi āt͟hār-i Abū 'Abd al-Raḥmān-i Sulamī*, 2 vols. Tehran 1369-72/1990-4.

4. Editions and monographs on individual persons. Basic for the older, classical Ṣūfism is Gramlich's *Alte Vorbilder des Sufitums*, Wiesbaden

1995-6, vol. i. on 13 *shaykhs* of the West, vol. ii on 10 *shaykhs* of the East. On al-Ḥasan al-Baṣrī and his circle, see van Ess, *Theologie*, ii, 41-121. See further idem, *Die Gedankenwelt des Ḥārit al-Muḥāsibī*, Bonn 1959; Gramlich, *Abū Sulaymān ad-Dārānī*, in *Oriens*, xxxiii (1992), 22-85; van Ess, *Der Kreis des Dū n-Nūn*, in *WO*, xii (1981), 99-105; Böwering, *The mystical vision of existence in classical Islam. The Qur'ānic hermeneutics of the Sufi Sahl at-Tustarī (d. 283/986)*, Berlin 1980; Massignon, *La passion de Ḥusayn ibn Manṣûr Hallâj*, new ed. Paris 1975; idem, *Akhbâr al-Ḥallâj*, 3Paris 1957; idem, *Le dîwân d'al-Ḥallâj*, new ed. Paris 1955; Ali Hassan Abdel-Kader, *The life, personality and writings of al-Junayd*, London 1976 (almost useless); H. Ritter, *Die Aussprüche des Bāyezīd Bisṭāmī*, in F. Meier (ed.), *Westöstliche Abhandlungen* (Festschrift R. Tschudi), Wiesbaden 1954, 231-43; Meier, *Die Fawā'iḥ al-ǧamāl wa-fawātiḥ al-ǧalāl des Naǧm ad-dīn al-Kubrā*, Wiesbaden 1957; B. Radtke, *Al-Ḥakīm at-Tirmidī. Ein islamischer Theosoph des 3./9. Jahrhunderts*, Freiburg 1980; idem, *Drei Schriften des Theosophen von Tirmid*, i, *Die arabischen Texte*, ii, *Übersetzung und Kommentar*, Beirut-Stuttgart 1992-6; Gramlich, *Abu 'l-ʿAbbās b. ʿAṭā'. Sufi und Koranausleger*, Stuttgart 1995. (L. Massignon-[B. Radtke])

2. Ibn al-ʿArabī and after in the Arabic and Persian lands and beyond.

i. *The present state of research.* Judgements here have to be made with caution, since this period is far less known and far less studied than the first one. There is little doubt, however, about its importance, and Marshall Hodgson was probably right when he wrote "Once the Ṣûfîs came to espouse a distinctive metaphysic, that metaphysic became the most influential form of speculation among Muslims generally... Ṣûfism, especially the new intellectualizing expressions of it, served more than any other movement to draw together all strands of intellectual life" (*The venture of Islam*, Chicago 1974, ii, 230). The teachings of Ibn al-ʿArabī (560-638/1165-1240 [*q.v.*]) were without doubt pervasively influential, but the exact nature of this needs exploration, as do the works of his followers and commentators; also, several of his contemporaries were authors of major importance who established lines of teaching and influence that extended for centuries to come.

There is the further problem of defining Ṣūfism/*taṣawwuf* in this period. Authors known as Ṣūfīs may or may not have applied the term to themselves. All through the period one finds a broad spectrum of attitudes, beliefs and practices that have been labelled as Ṣūfism by both Muslims and outside observers. One is also overwhelmed by the sheer mass and diversity of material, in various forms of art, a vast range of devotional material, popular stories, hagiographies, handbooks on *adab*, collections of sayings or *malfūẓāt* [*q.v.* in Suppl.], etc. The Ṣūfī orders [see ṬARĪḲA] display its social and political aspect, but Ṣūfism continued to be transmitted by other channels also; Ṣūfī texts became part of the curriculum for any well-educated scholar.

ii. *The Ṣūfism of Ibn al-ʿArabī.* If Ibn al-ʿArabī came to be known as *al-shaykh al-akbar*, "the Greatest Master", this is because he offered enormously erudite and challenging explanations of all the basic issues of Islamic theory and practice. However, given the complexity, profundity, prolixity, and diversity of Ibn al-ʿArabī's writings, it is difficult if not impossible to make categorical statements about his views on any important theoretical issue. Certainly the attempts that have often made to categorise his thinking—such as calling it "static" as opposed to "dynamic" (Massignon and Gardet)—have little basis in his writings. Although we are told everywhere in the later literature, both Islamic and Western, that Ibn al-ʿArabī established the perspective of *waḥdat al-wudjūd*, he never employs this expression, which has a complex history among both his followers and his critics, meaning different things to different authors (see Chittick, *Rūmī and waḥdat al-wujūd*, in *Poetry and mysticism in Islam*, Cambridge 1994, 70-111). It is misleading to say without qualification that Ibn al-ʿArabī believes in any specific doctrine. On any given issue, his position depends on the standpoint he chooses to adopt in the context, and he acknowledges the conditional validity of every standpoint. This relativity of standpoints does not negate the fact that some standpoints are more true than others, or that immediate happiness after death can only be achieved by following the prophets, which, in Islamic terms, means observing the *sharīʿa*.

Once we treat generalisations with caution, we can say that certain notions play central roles in Ibn al-ʿArabī's thinking, such as *wudjūd* (existence, being, finding), the divine names, God's self-disclosure (*tadjallī* [*q.v.*]), and imagination (*khayāl*). Probably the most basic of these notions, however, is the perfect human being (*al-insān al-kāmil*), who is looked upon as integrating of all reality, since he is the origin and goal of the universe, the model and criterion for human development, and the guide on the path to God. Several of Ibn al-ʿArabī's works, such as his famous *Fuṣūṣ al-ḥikam*, his monumental *al-Futūḥāt al-makkiyya*, and his short *al-ʿAbādila*, are structured in terms of various modalities of human perfection. These modalities in turn are viewed as manifestations of the multiform reality of the Ḳur'ān (see Chodkiewicz, *Ocean*, ch. 2), and every standpoint of his starts from the Ḳur'ān and the basic hermeneutical principle that God intends every sense that can be understood from his Word without distorting the plausible meanings of the Arabic language.

Instead of attempting to summarise Ibn al-ʿArabī's worldview, it may be useful to suggest how his perspective might help us understand the place of Ṣūfism in Islamic history. It is well to keep in mind, however, that Ibn al-ʿArabī would probably not call himself a "Ṣūfī" in any limiting sense, since he rarely employs the term, and, in a tripartite division of the Men of God (*ridjāl Allāh*), he places the Ṣūfīs in an intermediate category, above the ascetics (*zuhhād*) to be sure, but below the Blameworthy (*malāmiyya*), who are also called the Realisers (*muḥaḳḳiḳūn*). In this highest category, he numbers the Prophet and the greatest friends of God (*awliyā'*), including himself. Their basic activity is *taḥḳīḳ*, which Ibn al-ʿArabī understands in terms of the Prophet's command, "Give everything that has a *ḥaḳḳ* its *ḥaḳḳ*". Everything in existence has a *ḥaḳḳ*—a truth, a reality, a right, an appropriate claim—or else God would not have created it. The function of the Realiser is to discern a thing's *ḥaḳḳ* and act accordingly, and Ibn al-ʿArabī sets out principles in terms of which every *ḥaḳḳ* can be discerned and acted upon.

Ibn al-ʿArabī's teachings are intimately tied to the Ḳur'ān in diverse ways, both obvious and hidden. His writings attempt to show how the Ḳur'ān manifests the reality of God in its every chapter, verse, word and letter. On a doctrinal level, his governing idea is *tawḥīd* or the assertion of God's unity, to be understood from two basic points of view, which can be labelled by the two primary names of the Holy Book—*ḳur'ān* and *furḳān*. According to one traditional under-

standing, *ḳur'ān* means "bringing together" (*d̲j̲am'*); hence it represents a perspective that is complementary to *furḳān*, which means "separation" and "differentiation". The Ḳur'ān differentiates all the phenomena of the universe in keeping with God's knowledge and wisdom, but it also brings all things together under the umbrella of God's unitary creativity. Reality's differentiation is prefigured in God's external knowledge of creation, and its unity derives from the divine oneness. God is one through his Essence (*d̲h̲āt*) and "many" through his differentiated knowledge. His oneness pertains to *wud̲j̲ūd*, and his manyness to the things, which, *qua* things, have no *wud̲j̲ūd*. The unifying principles of the many things are known as the "divine names". This is what Ibn al-'Arabī means when he says, as he often does, that God is the One/the Many (*al-wāḥid al-kat̲h̲īr*)—He is one through His Essence and many through His names. For its part, the Holy Book, as God's eternal speech, designates both the oneness and the manyness of reality. Its two names, *ḳur'ān* and *furḳān*, signify the two basic principles in terms of which God creates the universe and reveals himself in the "signs" (*āyāt*) that are found in the three fundamental domains of manifestation: the universe, the soul, and the Book.

Sa'īd al-Dīn Farg̲h̲ānī (d. *ca.* 695/1296 [*q.v.*]), who is probably the first follower of Ibn al-'Arabī to use the term *waḥdat al-wud̲j̲ūd* in a technical sense, employs it to designate the side of *ḳur'ān*, and he contrasts it with *kat̲h̲rat al-'ilm*, "the manyness of [God's] knowledge", which designates the side of *furḳān*. For him as for many other members of Ibn al-'Arabī's school, the goal of knowledge and practice is to establish a happy balance between *furḳān* and *ḳur'ān*, both in the soul and in human interactions. In later Islamic history, especially in the debates over Ibn al-'Arabī that raged in the Indian subcontinent, the perspective of *waḥdat al-wud̲j̲ūd* was said to assert that "All is He" (*hama ūst*), whereas the opposing view, labelled *waḥdat al-s̲h̲uhūd* by S̲h̲ayk̲h̲ Aḥmad Sirhindī (d. 1034/1604 [*q.v.*]), was said to maintain that "All is from Him" (*hama az ūst*) or "All is through Him" (*hama bidūst*).

If we examine the *Futūḥāt al-makkiyya*, we see that Ibn al-'Arabī's basic approach is to deal with any Ḳur'ānic verse, *ḥadīt̲h̲*, or intellectual issue in terms of these two perspectives. He often refers to the two as *tanzīh* and *tas̲h̲bīh*, the assertion of God's incomparability and the declaration of His similarity, or, loosely, transcendence and immanence. He sees the first standpoint expressed plainly in the divine names of majesty (*d̲j̲alāl*) and wrath (*g̲h̲aḍab*), while the second appears more clearly in the names of beauty (*d̲j̲amāl*) and mercy (*raḥma*). He associates the first with the rational faculty and its activities (*'aḳl, naẓar, fikr*), and the second with imagination (*k̲h̲ayāl*) and direct vision (*kas̲h̲f, s̲h̲uhūd, d̲h̲awḳ, futūḥ*—unveiling, witnessing, tasting, opening). In his view, these are the two basic standpoints of Islamic thought, represented roughly by the philosophers, theologians, and jurists on the one hand and the Ṣūfīs on the other. In contrast, the standpoint of *taḥḳīḳ* acknowledges the limited truth and rightfulness of every standpoint. Ibn al-'Arabī affirms the necessity of both modes of knowing and criticises any attempts to limit knowledge to one mode or the other. Hence he asserts both the oneness of God's *wud̲j̲ūd* and the manyness of His knowledge, the unity of His Essence and the multiplicity of His names, *ḳur'ān* and *furḳān*, *tas̲h̲bīh* and *tanzīh*, *k̲h̲ayāl* and *'aḳl*, "He" and "not He". On the human side, these two perspectives are the "two eyes" (*'aynān*) with which people see their way to God. Ignoring the vision of either eye yields a distorted view of things, valid within its own limits, but inadequate as a guide to God and as a judge of other viewpoints.

What then is the role of the *s̲h̲arī'a*? Ibn al-'Arabī employs the term *s̲h̲arī'a* (and *s̲h̲ar'*) generally to signify the whole range of teachings that have come through the prophets, more specifically to designate the teachings that have come in the Ḳur'ān and the Sunna, and most specifically to mean the *aḥkām* or revealed legal rulings as contrasted with the *ak̲h̲bār* or revealed reports. The function of the *s̲h̲arī'a* in all these meanings is to bring about the return to God in a mode that guarantees felicity (*sa'āda*), that is, salvation. Hence, the *s̲h̲arī'a*, including all the specific *aḥkām*, is the indispensable guide.

Ibn al-'Arabī drew from all the Islamic sciences in his works, especially *tafsīr*, *ḥadīt̲h̲*, grammar, *fiḳh*, and *kalām*. Methodologically, what differentiates him from masters of all these sciences is his reliance on *kas̲h̲f* and *k̲h̲ayāl* as the corrective to *'aḳl*. *Kas̲h̲f* or unveiling is a type of vision that sees the presence of *al-wud̲j̲ūd al-ḥaḳḳ*, the Real Being, manifest in God's signs. The importance of unveiling, which discerns invisible realities in their images, comes out clearly in Ibn al-'Arabī's theory of imagination, and no discussion of his teachings can afford to ignore the centrality of this term to his vocabulary. *K̲h̲ayāl*, he tells us, is the centrepiece of the necklace of knowledge, the integrating factor. It is the human cognitive faculty that sees connections and sameness, and as such it is contrasted with *'aḳl*, which sees difference and otherness. By nature *k̲h̲ayāl* inclines toward *tas̲h̲bīh*, and by nature *'aḳl* tends toward *tanzīh*. If knowledge is left in the hands of *'aḳl*, there can be no understanding of God's presence in the world, and if it is left in the hands of *k̲h̲ayāl*, there can be no understanding of God's distance, transcendence, and unity. *'Aḳl* easily grasps God's inaccessibility and majesty, but it cannot understand, save theoretically, His nearness and beauty, and the direct perception of God's presence can only be achieved through imagination.

K̲h̲ayāl, then, is the human cognitive faculty that perceives the object in its mirror image, or the signified in its signifier. More broadly, the term designates the notion of an "image", which is neither the thing that it images nor completely different from it, and in this sense it may be treated as a synonym for *barzak̲h̲* [*q.v.*] or "isthmus", which refers to any intermediate reality. Thus the term *k̲h̲ayāl* can designate the universe itself (*al-'ālam*), which is an intermediary between God and absolute nothingness (*al-'adam al-muṭlaḳ*), since it is neither the one nor the other, though it is the image of both. On a lower level, *k̲h̲ayāl* refers to the world of imagination or *mundus imaginalis*, which is the intermediary between the angelic world of pure spirits and the sensory world of pure bodies, hence the locus of visionary events and the resurrection. Microcosmically, *k̲h̲ayāl* can designate the human self or soul (*nafs*), which bridges spirit and body, light and darkness, knowledge and ignorance, awareness and unconsciousness. Because the soul is imaginal, it is never purely spiritual or purely bodily, so it can never be pure light or pure darkness. Like the universe itself, it undergoes constant development, change, and transmutation through the new creation (*al-k̲h̲alḳ al-d̲j̲adīd*), the never-ending process whereby the universe emerges from the infinite light of God and returns to it. Since nothing has true and permanent *wud̲j̲ūd* but God, and since God's mercy prevails over His wrath, felicity will ultimately reach all the people of the Fire. The principle of the pre-

dominance of mercy over wrath, asserted explicitly in the *ḥadīth* literature and implicitly in the Ḳur'ān, determines the final end of everything. *Ḳur'ān* will eventually triumph over *furḳān*, since light is more real than darkness, and the oneness of *al-wudjūd al-ḥaḳḳ* is more basic to reality than the manyness of the things, though the traces of manyness will never disappear on any level. From the standpoint of human welfare and ultimate felicity, *furḳān*, *tanzīh*, and *'aḳl* remain vital and inescapable.

With this extremely brief overview of Ibn al-'Arabī's overall perspective, we can suggest that, if he is accepted as the *shaykh al-akbar* of the "Ṣūfīs", then "Ṣūfism" involves seeing with both eyes, discerning the *ḥaḳḳ* of each thing on the basis of the Ḳur'ān and the *ḥadīth*, and giving each thing its *ḥaḳḳ* through practice according to the *sharī'a*, the Sunna, and the example of the People of God (*ahl Allāh*). The importance of the *sharī'a* in Ibn al-'Arabī's own writings cannot be overstated. The idea that Ibn al-'Arabī's *waḥdat al-wudjūd* devalues or overthrows the *sharī'a*, though popular among his critics (and some fans), is untenable; as he often insists, the *sharī'a* is inseparable from the *ḥaḳīḳa*.

Ibn al-'Arabī's Ṣūfism clearly remains inaccessible to almost everyone, a point that he acknowledges when he calls himself the "seal of the Muḥammadan friends of God", but it remains the ideal against which numerous Ṣūfī teachers have judged themselves and others. For him and them, Ṣūfism in its highest sense is *taḥḳīḳ* in both theory and practice. On the level of theory, both *ḳur'ān* and *furḳān* must be given their proper due. Theory relates primarily to the *akhbār*, the reports from the prophets, not to the *aḥkām*, the prophetic rulings.

Since the discussion of the *aḥkām* pertains to the second half of the *shahāda*, it is weighted in favour of *furḳān*, not *ḳur'ān*. The specific standpoint of the legal rulings is the Muḥammadan perfection, which is asserted in relation to human salvation and damnation, and here Ibn al-'Arabī leaves less room for manœuvre. He asserts *ḳur'ān* only by acknowledging the correctness of every *madhhab* and every *mudjtahid*, but this does not allow for a diminution of the *sharī'a*'s authority.

The *sharī'a* was established by God with certain specific aims, and these cannot be achieved unless it is observed. The fact that God has established other *sharī'as* for other segments of humanity pertains to the domain of *akhbār*, not *aḥkām*, so it has no relevance to the specific acts that Muslims are required to perform as followers of Muḥammad.

This then may suggest something of what "Ṣūfism" involves for Ibn al-'Arabī. In a more limited understanding of the word *taṣawwuf*—and it is this understanding that corresponds more closely to the views of sympathetic outside observers—it denotes a type of Islamic religiosity that usually stresses the first term in the following complementary pairs: *ḳur'ān* and *furḳān*, *tashbīh* and *tanzīh*, *kashf* and *'aḳl*, mercy and wrath, *ḥaḳīḳa* and *sharī'a*, intoxication (*sukr*) and sobriety (*ṣaḥw*), intimacy (*uns*) and awe (*hayba*), meaning (*ma'nā*) and form (*ṣūra*), spirit and letter. In contrast, *sharī'a*-minded Islam stresses the second term in all these pairs. In the lived reality of Islam over history, these pairs can be taken as designating the extreme limits of various spectra according to which Muslims understand their religion and put it into practice. As for groups such as *bī-shar'* Ṣūfīs or the Ḥurūfiyya [*q.v.*], one needs to keep in mind that the accounts often derive from critics and that modern scholars (and, for very different reasons, politicised Muslims of all sorts) are constitutionally predisposed to propagate negative reports. If it is found that the reports are indeed correct, then such groups would represent a total rupture of the balance between *furḳān* and *ḳur'ān*, if not an outright rejection of the normative Islam that is established in the Ḳur'ān and the Sunna. In the same way, modern "fundamentalism" can be seen as a rupture of balance in the direction of *furḳān* (cf. M. Woodward, *Islam in Java: normative piety and mysticism in the Sultanate of Yogyakarta*, Tucson 1989).

iii. *Ibn al-'Arabī's contemporaries.* Ibn al-'Arabī appears as a watershed in the history of Ṣūfism partly because he solidifies a certain shift in focus that had gradually been occurring in Ṣūfī writings. Before his time, most authors of theoretical works had devoted their efforts to issues of practice, morality, ethics, and "spiritual psychology" (the stations and states—*maḳāmāt* and *aḥwāl*), but from his time onward, Ṣūfī works commonly deal with topics that had been discussed in detail only in *kalām* and *falsafa*, such as *tawḥīd*, *nubuwwa*, and *ma'ād*, even though writing on the earlier topics continues unabated. The Ṣūfī works differ from those of other disciplines by their stress on *ḳur'ān* over *furḳān*, which means, among other things, that *kashf* predominates over *'aḳl* as a means to understand the Ḳur'ān and the Sunna.

Within the writings of authors known as Ṣūfīs, this same spectrum of thought and practice can be discerned, and the 7th/13th century is a highpoint of Islamic history in terms of the diversity and richness of the Ṣūfī spectrum. Compared to most other Ṣūfī authors, Ibn al-'Arabī appears as the most prolific and profound of the masters of *furḳān*, which helps explain why Western scholars have often spoken of his "systematisation" of Ṣūfism. In a certain sense, his writings are systematic, especially when contrasted with masters of the other extreme, such as Ḥāfiẓ or Yūnus Emre, but not when compared to the works of theologians, philosophers, and jurists.

Authors who stand on the *furḳānī* side of the Ṣūfī spectrum write relatively systematic works in which they differentiate and discern on the basis of a sober evaluation of all things' distance from God, but those who stress the *ḳur'ānī* side are drawn toward benevolent inattention to distinctions and an intoxicated celebration of the oneness of all being. *Furḳān* is the domain of knowledge and intelligence, *ḳur'ān* the realm of love and union. The knowers strive to achieve the differentiated vision of each thing in the context of the divine reality, but lovers try to overcome all difference so that nothing remains except the eternal Beloved.

If the natural vehicle of *furḳānī* discourse is technical prose, the most effective vehicle for *ḳur'ānī* language is poetry and its performance. Poetry is able to bring God's presence into the direct awareness of the listener without the intermediary of rational analysis, which by nature removes God from the stage. The two greatest masters of explicitly Ṣūfī poetry are contemporaries of Ibn al-'Arabī—Ibn al-Fāriḍ (d. 632/1235 [*q.v.*]) in Arabic and Djalāl al-Dīn Rūmī (d. 672/1273 [*q.v.*]) in Persian, as is another great Ṣūfī poet of Persian, Farīd al-Dīn 'Aṭṭār (d. 618/1221 [*q.v.*]). Poetry's function is made most explicit in Rūmī's works. "God is beautiful", as the Prophet said, "and He loves beauty", so everything beautiful is lovable and, in the last analysis, all beautiful things take their beauty from God. Why, Rūmī asks, do you take water from the drainpipe? You should recognise that all beauty is God's beauty, all love is love for God,

and every intermediary disintegrates and disappears. Poetry's evocation of beauty is evocation of God. Reminding people of beauty stirs up love in their hearts, and all love redounds on God. Nonetheless, *furḳān* cannot be abandoned, for without it, love will remain forever misguided.

Although Rūmī stands on the side of *ḳur'ān* when contrasted with Ibn al-ʿArabī, his dialectic of love presents us with the same complementarity between *ḳur'ān* and *furḳān*. Ibn al-ʿArabī differentiates in the technical language of the *ʿulamā'* between the eye that perceives *tanzīh* and the eye that sees *tas̲h̲bīh*, but Rūmī describes in the language of the common people the experience of separation (*firāḳ*) and union (*wiṣāl*). Union is to live in God's presence, beauty and gentleness (*luṭf*), and separation is to suffer His absence, majesty and severity (*ḳahr*). But mercy prevails over wrath, so every cruelty (*d̲j̲afā'*) of the Beloved is in fact an act of faithfulness (*wafā'*). In showing their sincerity, God's lovers welcome the pain (*dard*) of the dregs (*durd*) along with the joy of the wine. In this poetic discourse, rooted in images, symbols, and signs of the transcendent, bold expressions of paradox—"All is He!," "I am the Beloved!"—are standard fare.

No one doubts that Ibn al-Fāriḍ and Rūmī were great Ṣūfī poets, but questions have been raised concerning the Ṣūfī content of the works of many important poets during this whole period. For some observers, Ḥāfiẓ (d. *ca.* 792/1390 [*q.v.*]) appears as the greatest of all Persian Ṣūfī poets, but for others he is simply a genius who employed the available imagery. Amīr K̲h̲usraw (d. 725/1325 [*q.v.*]) was the foremost Indo-Persian poet and a disciple of the great Ṣūfī master Niẓām al-Dīn Awliyā' (d. 725/1325 [*q.v.*]), yet, we are told, there is little trace of Ṣūfism in his poetry. The poems of Ibn al-ʿAfīf al-Tilimsānī (d. 688/1289 [*q.v.*]), it is said, should probably not be given a Ṣūfī interpretation, even though his father was a famous disciple of Ibn al-ʿArabī and was violently attacked by Ibn Taymiyya. The Awadhī poetry of Malik Muḥammad D̲j̲āyasī (d. *ca.* 949/1542 [*q.v.*]) deals almost exclusively with "secular" topics, yet he is recognised as a great Čis̲h̲tī saint. Discussions of this sort miss an important point: What conveys the basic message of *ḳur'ān* is not so much the explicit content as the psychological impact on the listener. The single most important feature of Ṣūfī poetry is its beauty, a beauty that entrances and intoxicates. In Ṣūfī theoretical works, authors write about intoxication, but readers stay sober. Ṣūfī poetry (and, in fact, any good poetry well sung) conveys intoxication, as most who have attended sessions of the musical recitation of poetry known as *ḳawwālī* in the subcontinent will attest. As for someone like Ḥāfiẓ, he is a Ṣūfī poet not only because of his repeated references to Ṣūfī teachings but also because, within the tradition, it is inconceivable that any but a great friend of God could transmute language with such alchemy. For the modern scholar, whose radical *furḳān* leaves no room for "mysticism", Ḥāfiẓ's title *lisān al-g̲h̲ayb* ("the tongue of the unseen") is simply a poetical way of saying that he was remarkable; for the Ṣūfī tradition, it means that the invisible, divine master of the universe used Ḥāfiẓ as His tongue, just as He used Rūmī as his reed. The metaphor is the reality.

Although, in the domain of *furḳānī* Ṣūfism, Ibn al-ʿArabī may indeed deserve the appellation *al-s̲h̲ayk̲h̲ al-akbar* that his followers gave to him, there are many other important figures whose lifetimes overlapped with his and who deserve much more attention than modern scholarship has given to them. In Ibn al-ʿArabī's own view, the greatest of his contemporaries was S̲h̲uʿayb Abū Madyan (d. 594/1197 [*q.v.*]), who left behind disciples like Ibn Mas̲h̲īs̲h̲ (d. 625/1228 [*q.v.*]), the master of Abu 'l-Ḥasan al-S̲h̲ād̲h̲ilī (d. 656/1258), the eponym of the S̲h̲ād̲h̲iliyya [*q.v.*] (see V. Cornell, *The way of Abū Madyan. Doctrinal and poetical works of Abū Madyan Shuʿayb ibn al-Ḥusayn al-Anṣārī*, Cambridge 1996). Among other important contemporaries in the *furḳānī* domain were the philosophers Suhrawardī al-Maḳtūl (d. 587/1191 [*q.v.*]) and Afḍal al-Din Kās̲h̲ānī (7th/13th century), both of whom have a Ṣūfī orientation in some of their writings. Ibn Sabʿīn (d. 669/1270 [*q.v.*]), born like Ibn al-ʿArabī in Murcia, displays a highly sophisticated and articulate philosophical mind, so much so that some scholars have considered him a Peripatetic, but the practical implications and Ṣūfī orientation of his teachings becomes obvious in his *rasā'il* and his *Budd al-ʿārif*. He seems to be the first author to have used the term *waḥdat al-wud̲j̲ūd* in anything like a technical sense, and his understanding of this expression (along with the polemical attack on it by Ibn Taymiyya) probably resulted in the idea that *waḥdat al-wud̲j̲ūd* is equivalent to the Persian expression *hama ūst*. Also of interest are Ibn Sabʿīn's students and fellow-Andalusians, Badr al-Dīn al-Ḥasan b. Hūd (d. 699/1300) and the poet Abu 'l-Ḥasan al-S̲h̲us̲h̲tarī (d. 668/1269). Awḥad al-Dīn Balyānī (d. 686/1288) of S̲h̲īrāz seems to be following in Ibn Sabʿīn's footsteps in his famous *Risālat al-aḥadiyya*, which was long attributed wrongly in Western sources to Ibn al-ʿArabī (see M. Chodkiewicz, *Awḥad al-Dīn Balyānī. Epître sur l'unicité absolue*, Paris 1982).

Ibn al-ʿArabī himself had several disciples who wrote significant works and exercised a determining influence in the way the tradition was to interpret him; these include al-Badr al-Ḥabas̲h̲ī (d. *ca.* 618/1221), Ibn Sawdakīn (d. 646/1248), ʿAfīf al-Dīn al-Tilimsānī (d. 690/1291), and especially Ṣadr al-Dīn Ḳūnawī (d. 673/1274 [*q.v.*]). Both al-Tilimsānī and Ḳūnawī were independently minded in their readings of Ibn al-ʿArabī's works. The former sometimes employs his commentary on the *Fuṣūṣ al-ḥikam* to criticise his master's positions, and both were far more inclined toward *falsafa* than Ibn al-ʿArabī. Ḳūnawī's direct students included three major transmitters of his teachings—the Persian poet Fak̲h̲r al-Dīn ʿIrāḳī (688/1289 [*q.v.*]), author of the short prose classic *Lamaʿāt*; Saʿīd al-Dīn Farg̲h̲ānī, author of the first commentary on Ibn al-Fāriḍ's *Tā'iyya*; and Mu'ayyid al-Dīn al-D̲j̲andī (d. *ca.* 700/1300), author of the most influential of the more than one hundred commentaries on the *Fuṣūṣ*. Perhaps pertaining also to Ḳūnawī's circle is one Naṣīr or Nāṣir al-Dīn K̲h̲ū'ī, who is probably the author of a widely-read Persian work that helped popularise some of Ibn al-ʿArabī's teachings, *Tabṣirat al-mubtadī* (see Chittick, *Faith and practice of Islam. Three thirteenth century Sufi texts*, Albany 1992). Also connected with Ibn al-ʿArabī's circle was Awḥad al-Dīn Kirmānī (d. 635/1238 [*q.v.*]), a well-known author of Persian quatrains. Ibn al-ʿArabī entrusted Ḳūnawī's training to him for a period of time, but there is no apparent trace of Ibn al-ʿArabī's teachings in his poetry. The idea that Rūmī was a student of or influenced by Ibn al-ʿArabī, propounded by Nicholson and others, has no textual basis. Other authors of great importance in this period include Rūzbihān Baḳlī (d. 606/1209) and Rūmī's father Bahā' Walad (d. 628/1231), both of whom exposed the reality of love in extraordinarily beautiful Persian prose. Nad̲j̲m al-Dīn Kubrā (d. 618/1221 [*q.v.*]), the eponym of the Kubra-

wiyya, has been noted for his psychology of colours. His theoretical and practical interests were developed in various directions by his disciples. Thus Saʿd al-Dīn Ḥammūʾī (d. 649/1252 [*q.v.*]) writing in both Arabic and Persian, and the latter's disciple ʿAzīz al-Dīn Nasafī (d. before 700/1300) writing in Persian, manifest the general tendency of the period to deal much more explicitly with metaphysical and philosophical issues, though Ḥammūʾīs works are obscure, and he delights in expounding the symbolism of letters and numbers, while Nasafī wrote relatively popular expositions of the different metaphysical and cosmological teachings of various schools of Ṣūfism and philosophy (though it is usually difficult to determine which historical figures he has in mind; see H. Landolt, *La paradoxe de la "face de dieu". ʿAzīz-e Nasafī (VII^e/XIII^e siècle) et le "monisme ésotérique" de l'Islam*, in *SI*, xxv [1996], 163-92). Kubrā's disciple Nadjm al-Dīn Dāya Rāzī (d. 654/1256 [*q.v.*]) wrote the Persian classic *Mirṣād al-ʿibād*, which has been a mainstay of the teaching of both theory and practice in the Persian-speaking orders. Another important author of the period, Shihāb al-Dīn ʿUmar Suhrawardī (d. 632/1234 [*q.v.*]), nephew of the eponym of the Suhrawardiyya [*q.v.*], wrote the Arabic classic *ʿAwārif al-maʿārif*, a work that has been widely influential in the organisation and practical teachings of the orders.

iv. *From the late 7th/13th to the 12th/18th century*. This period of four centuries is marked by an enormous proliferation of works on Ṣūfism, but the problem of surveying these works is made doubtly difficult by the increasing geographical spread of Islam and the use of local languages. The best regional survey of Ṣūfism is provided by Rizvi's two-volume *History of Sufism in India* (Delhi 1978-83), but a short tour through Indian manuscript libraries was able to turn up several important authors of Ṣūfī theoretical works whom Rizvi does not mention, such as the inventive author of Persian treatises on Ibn al-ʿArabī's perspective Khūb Muḥammad Čishtī (late 10th/16th century), the prolific Ḳādirī *shaykh* ʿAbd al-Ḥaḳḳ Muḥammad Makhdūm Bīdjāpūrī Ṣāwī (*fl.* 1108-23/1696-1711), the sophisticated Ḳādirī metaphysician Sayyid ʿAbd al-Ḳādir Fakhrī Naḳawī (late 12th/18th century), the essayist Irādat Khān Wāḍiḥ (12th/18th century), and the stylist Muḥtaram Allāh (12th/18th century) (see Chittick, *Notes on Ibn al-ʿArabī's influence in India*, in *MW*, lxxxii [1992], 218-41). In the small number of cases in which Ṣūfī authors of this period have been studied, they have often been chosen for reasons that can best be called political or ideological. One example is Shaykh Aḥmad Sirhindī [*q.v.*], who has been the object of several monographs, even though it is easy to argue that his works—in contrast to his claims—hardly stand out among those of his contemporaries. The reason for his fame seems to be that among Muslims of the subcontinent, he has taken on mythic proportions as the precursor of a certain type of modern political consciousness, since he defended an Islamic particularism that overcame the heritage of Akbar and led politically to the triumph of Awrangzīb over Dārā Shukūh [see HIND v.(b)] (for general remarks on the distortions introduced by ideology in the Indian context, see C. Ernst, *Eternal garden. Mysticism, history, and politics at a South Asian Sufi center*, Albany 1992).

Scholars have frequently observed that Ṣūfism was instrumental in the spread of Islam in diverse cultural contexts. On a doctrinal level, one of the primary reasons for its spread is the flexibility that is provided by the perspective of *ḳurʾān*. Once it is recognised that "All is He", alien beliefs and practices can easily be read as expressions of Islamic truths. The intellectual figures in India who actively studied the theory and practice of Hinduism had Ṣūfī predilections. Dārā Shukūh [*q.v.*], with works such as *Madjmaʿ al-baḥrayn* and his translation of the Upanishads, is a prime example. Another is the Shaṭṭārī *shaykh* Muḥammad Ghawth of Gwalior (d. 970/1563 [*q.v.*]), who was an important supporter of Bābur and wrote several works that show both originality and mastery of the perspective of Ibn al-ʿArabī's school; one of these, the Persian *Djawāhir-i khamsa*, was widely read not only in the original but also in an Arabic translation. He also translated into Persian, with many modifications and additions, an earlier Arabic translation of the Yogic text *Amritkund* (see Ernst, *Sufism and Yoga according to Muhammad Ghawth*, in *Sufi*, xxix [1996], 9-13; according to an oral report from Bruce Lawrence, the Arabic is still read today in a Ṣūfī order in Syria). The two most important Muslim authors writing in Chinese, Wang Daiyu (d. 1657 or 1658) and Liu Chih (d. *ca.* 1736 [*q.v.*]), adopt a *ḳurʾānī* perspective in theoretical issues. Wang makes little reference to Arabic or Persian terminology, but skilfully explains Islamic metaphysical, cosmological and psychological doctrines with the help of terminology drawn from Confucianism, Taoism, and Buddhism. He is sympathetic toward the Chinese traditions, especially Confucianism, but *furḳān* occasionally comes to the fore, and then he offers judicious criticisms to illustrate Islam's superiority, and he consistently describes the details of right activity in terms of the *sharīʿa*.

In order to provide some idea of the vast range of material waiting to be studied, one may cite the names of a few representative authors, divided into three main categories (ignoring, despite their social and historical importance, many major Ṣūfī masters not known primarily as authors): (a) poets; (b) authors rooted in the metaphysical perspectives established by Ibn al-ʿArabī and others; and (c) authors primarily concerned with spiritual, psychological, ethical and practical teachings.

(a) Throughout this period, poetry is the most important literary vehicle for the wide dissemination of Ṣūfī teachings, especially the *ḳurʾānī* view of things. Poetry incites love and, in the *mathnawī* form, excels at story-telling. Persian Ṣūfī poets of the first rank include Saʿdī (d. 691/1292 [*q.v.*]), whose love poetry is preferred by some even to Ḥāfiẓ and whose prose classic *Gulistān* reflects a Ṣūfī concern for practical morality. Bīdil (d. 1133/1721 [*q.v.*]) is considered by many Persian speakers (at least among the Afghāns) to be the greatest of all poets. In his case, there can be no doubt as to his Ṣūfī perspective, since he was a master of Ibn al-ʿArabī's school of thought, as comes out clearly, for example, in his *mathnawī* called *ʿIrfān*. Among the many other Persian Ṣūfī poets who deserve special mention are Maḥmūd Shabistarī (d. 718-20/ [*q.v.*]), Awḥadī Marāghaʾī (d. 738/1338), and Kamāl Khudjandī (d. 803/1400-1 [*q.v.*]). In Turkish; besides Yūnus Emre one can mention Mīr ʿAlī Shīr Nawāʾī (d. 906/1501 [*q.v.*]), writing in Čaghatay Turkish, and Nesīmī (d. 820/1417-18 [*q.v.*]), Lāmiʿī (d. 938/1531-1 [*q.v.*]), and Nāẓim (d. 1139/1726 [*q.v.*]) writing in Ottoman. Also deserving mention is Ḳāḍī Burhān al-Dīn [*q.v.*], sultan of Sivas for eighteen years until his death in 800/1398. Although he has been called a poet of "profane love", this judgment should be tempered by the fact that he was a master of Ibn al-ʿArabī's school, as proven by his highly original *Iksīr al-saʿādāt fī asrār al-ʿibādāt* (see Chittick, *Sultan Burhān*

al-Dīn's Sufi correspondence, in WZKM, lxxiii [1981], 33-45). Outstanding poets of other languages who deserve special mention include Maẓhar (d. 1195/1781 [q.v.]), Dard (d. 1199/1785 [q.v.]), and Mīr Muḥammad Taḳī (d. 1223/1810 [q.v.]) in Urdu; Shāh ʿAbd al-Laṭīf (d. 1165/1752) in Sindhi, Bāyazīd Anṣārī (d. 980/1572-3 [q.v.]) in Pashto, Bullhe Shāh (d. after 1181/1767-8) in Panjabi; and Ḥamza Fanṣūrī (d. ca. 1008/1600) in Malay.

(b) Authors with a metaphysical orientation. The importance of a continuing tradition of debate over the exact significance of Ibn al-ʿArabī's teachings becomes obvious in the large number of commentaries on the *Fuṣūṣ al-ḥikam*. Several of these were written by prolific authors whose works are begging for serious study. These include ʿAbd al-Razzāḳ Kāshānī (d. 730/1330 [q.v.]), Dāwūd al-Ḳayṣarī (d. 751/1350), Sayyid ʿAlī Hamadānī (whose commentary is in Persian; d. 786/1385 [q.v.]), the Shīʿī thinker Sayyid Ḥaydar Āmulī (d. 787/1385), ʿAbd al-Karīm Djīlī (d. 832/1428 [q.v.]), ʿAlī b. Aḥmad b. ʿAlī Mahāʾimī (d. 835/1432), Ṣāʾin al-Dīn ʿAlī Turka Iṣfahānī (d. 835/1432), Ḳuṭb al-Dīn al-Iznīḳī (d. 885/1480), ʿAbd al-Raḥmān Djāmī (d. 898/1492 [q.v.]), Bālī Khalīfa (d. 960/1553), Ismāʿīl Anḳarawī (whose commentary is in Turkish, d. 1041/1631-2 [q.v.]), ʿAbd Allāh Busnawī (two commentaries, one in Arabic and one in Turkish, d. 1054/1644), Muḥibb Allāh Ilāhābādī (two commentaries, one in Arabic and one in Persian, d. 1058/1648), and ʿAbd al-Ghanī al-Nābulusī (d. 1143/1730 [q.v.]; for a list of *Fuṣūṣ* commentaries, see O. Yahia's Arabic introduction to *Sayyed Haydar Amoli. Le texte des textes*, Tehran and Paris 1975). Of all these, Kāshānī has been the most studied, but far from thoroughly (notable is T. Izutsu's partial analysis of his *Fuṣūṣ* commentary in *Sufism and Taoism*, Berkeley 1984, and P. Lory's *Les commentaries ésotériques du Coran d'après ʿAbd al-Razzāq al-Qāshānī*, Paris 1981). Djīlī, who has often been singled out as Ibn al-ʿArabī's chief follower—perhaps because his *al-Insān al-kāmil* has remained popular among Arab Ṣūfīs until recent times—is a good example of an original thinker who appears superficially to be a mainstream member of Ibn al-ʿArabī's school. Sophisticated support for Ibn al-ʿArabī's positions is found in the numerous works of Ṣafī al-Dīn Ḳushashī (d. 1071/1660-1 [q.v.]) and his disciple Ibrāhīm al-Kūrānī (d. 1101/1690 [q.v.]). The Algerian *shaykh* Aḥmad b. Adjība (d. 1224/1809 [q.v.]) demonstrates that theorising in the line of Ibn al-ʿArabī continued in the Arabic-speaking countries into the 19th century.

The Persian treatises, numbering over 100, of the poet Shāh Niʿmat Allāh Walī (d. 834/1430-1), eponym of the Niʿmat-Allāhiyya [q.v.], are firmly grounded in the writings of Ibn al-ʿArabī and his commentators, especially Kāshānī and Ḳayṣarī. More widely influential among Persian readers, however, has been *Sharḥ-i gulshan-i rāz* by Muḥammad Lāhīdjī (d. 912/1506 [q.v.]), which is a far more fluent and readable interpretation of the same sources. The Naḳshbandiyya [q.v.] are sometimes said to have been hostile to Ibn al-ʿArabī, perhaps because of Sirhindī's critique of *waḥdat al-wudjūd*, but in fact many Naḳshbandīs, early and late, supported his teachings, such as Khʷādja Muḥammad Pārsā (d. 842/1419), Khʷādja ʿUbayd Allāh Aḥrār (d. 896/1490), and Djāmī, who was not only a learned commentator on Ibn al-ʿArabī, but also an extremely influential populariser of his teachings through his seven *mathnawīs* (known as *Haft awrang*), his *dīwān*, and his short Persian treatises such as *Lawāʾiḥ*. Mullā ʿAbd Allāh Ilāhī (d. 896/1491), a disciple of Aḥrār, was the first major propagator of the Naḳshbandiyya in Turkey and popularised Ibn al-ʿArabī's ideas with works in Arabic, Persian, and Turkish; he is sometimes confused with another disciple of Aḥrār, Mullā Aḥmad Ilāhī of Bukhārā, who settled in Bursa and translated Ṣadr al-Dīn Ḳūnawī's *Miftāḥ al-ghayb* into Persian at the command of Mehemmed II Fātiḥ in the year 880/1475-6 (M. Kara, *Molla Ilāhī: un précurseur de la Nakşibendiye in Anatolie*, in *Naqshbandis*, 316-18 [see also ṢADR AL-DĪN ḲŪNAWĪ]). Khʷādja Kalān and Khʷādja Khurd, the two sons of Bāḳī Billāh (d. 1012/1603 [q.v.]), who introduced the Naḳshbandī *ṭarīḳa* into India, both wrote works supporting *waḥdat al-wudjūd* and criticising, if indirectly, the position of their father's disciple Sirhindī. The poet Mīr Dard, who founded a branch of the Naḳshbandīs, appears as a follower of Ibn al-ʿArabī in many metaphysical issues in his long Persian work, *ʿIlm al-kitāb*. Shāh Walī Allāh (d. 1176/1762 [see DIHLAWĪ]) was also not opposed to Ibn al-ʿArabī. Like Sirhindī, he has taken on mythic proportions among modern-day Indian Muslims, who respect him not only for his scholarship but also his political ideas. His sophisticated handling of metaphysical, theological, and psychological issues is demonstrated in several works, especially his Arabic *Ḥudjdjat Allāh al-bāligha*; in one well-known treatise he attempts to demonstrate that there is no fundamental contradiction between the views of Ibn al-ʿArabī and Sirhindī. The great Egyptian *shaykh* ʿAbd al-Wahhāb al-Shaʿrānī (d. 973/1565 [q.v.]) was a famous and prolific defender of Ibn al-ʿArabī.

Many members of the Čishtiyya [q.v.] were known for their support of Ibn al-ʿArabī's teachings, including ʿAbd al-Ḳuddūs Gangohī (d. 944/1537) and Kalīm Allāh Djahānābādī Čishtī (d. 1142/1729 [q.v.]), though Masʿūd Bakk (d. ca. 789/1387) should not be considered Ibn al-ʿArabī's follower, since his writings demonstrate little awareness of Ibn al-ʿArabī's school and instead are reminiscent of the perspective of ʿAyn al-Ḳuḍāt Hamadānī (d. 525/1131). The works of the latter, who offered a sophisticated theological standpoint as well as a subtle theory of love, were widely read in this period. Numerous other Ṣūfīs in India devoted themselves to Ibn al-ʿArabī's teachings, foremost among them the above-mentioned Muḥibb Allāh Ilāhābādī, who was probably the best-informed of all the Indian authors concerning the contents of the *Futūḥāt*. Maḥmūd Khʷush-dahān Čishtī (d. 1026/1617), author of *Maʿrifat al-sulūk*, employs the terminology of Ibn al-ʿArabī's school in an original revisioning of relationships that seems to represent the teachings of his master Shāh Burhān al-Dīn b. Mīrāndjī Shams al-ʿUshshāḳ (d. 1005/1597) of Bidjapur. An interesting if unknown author is Ḳamar al-Dīn b. Munīb Allāh b. ʿInāyat Allāh al-Ḥusaynī al-Awrangābādī, who apparently flourished in the 12th/18th century. His Arabic *Maẓhar al-nūr*, on which his son Nūr al-Hudā wrote a long commentary, is a history of Islamic ideas on light, classifying major schools of thought in terms of their understanding of light and concluding with support for *waḥdat al-wudjūd* as the best of these perspectives. A significant line of Ibn al-ʿArabī's intellectual influence extends through figures who are not known as Ṣūfīs, such as Djalāl al-Dīn Dawānī (908/1502-3 [q.v.]; see, for example, his unpublished *Sharḥ-i rubāʿiyyāt*), the philosopher Mullā Ṣadrā (d. 1050/1640 [q.v.]), and the broad-ranging Shīʿī scholar Muḥsin Fayḍ Kāshānī (d. 1090/1679 [q.v.]). Other lines of theoretical writing are clearly present during this period, though once again, it is difficult to disentangle them from Ibn al-ʿArabī's ideas. Kubrawī authors such

as ʿAlāʾ al-Dawla Simnānī (d. 736/1337 [*q.v.*]) showed hostility to certain of Ibn al-ʿArabī's teachings, and he, along with the important and prolific Čis̲h̲tī master Gīsū Darāz (d. 825/1422 [*q.v.*]), are often claimed as precursors of Sirhindī. Theoretical writers of special importance in Indonesia include Ḥamza Fanṣūrī, Nūr al-Dīn Rānīrī (d. 1068/1658), and ʿAbd al-Raʾūf Singkilī (d. after 1104/1693) [see INDONESIA. vi].

(c) Despite the numerous authors who wrote books concerned specifically with the fine points of metaphysics, theology, cosmology, and psychology, by far the most common genre of Ṣūfī writing during this period is category (c), especially when we remember that most if not all the authors of works in category (b) also wrote books pertaining to it. Among authors of special importance here one can mention Ibn ʿAṭāʾ Allāh al-Iskandarī (d. 709/1309 [*q.v.*]), a major theorist of the S̲h̲ād̲h̲iliyya who wrote the famous collection of aphorisms known as *al-Ḥikam*; ʿIzz al-Dīn Kās̲h̲ānī (d. 735/1334-35), who composed among other works the Persian *Miṣbāḥ al-hidāya* (which is not, contrary to some reports, a translation of Suhrawardī's *ʿAwārif al-maʿārif*, though it was certainly inspired by it); Ibn Ḳayyim al-D̲j̲awziyya (d. 751/1350 [*q.v.*]), the most important student of Ibn Taymiyya; and the Firdawsī *s̲h̲ayk̲h̲* Mak̲h̲dūm al-Mulk Manīrī (d. 782/1381 [*q.v.*]) and the S̲h̲ād̲h̲ilī *s̲h̲ayk̲h̲* Ibn ʿAbbād al-Rundī (d. 792/1390 [*q.v.*], both of whom are famous for their letters to disciples.

Bibliography: Only a small proportion of the primary works have been published, but the printed primary and secondary literature in Islamic languages is enormous. In order to keep the bibliography within bounds, after the general works, only a few recent Western-language studies that have not been cited in the relevant *EI*[2] entries are mentioned.

4. In 19th and 20th-century Egypt.

In Egypt, the 19th century witnessed the emergence and institutionalisation of central authority over the Ṣūfī orders and the institutions linked with the orders: *zawāyā* [see ZĀWIYA], *takāyā* [see TAKIYA], and the shrines of saints. This position of central authority was granted to the *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-bakriyya* [see BAKRIYYA] in a *firmān* proclaimed by Muḥammad ʿAlī [*q.v.*], the then Ottoman governor of Egypt, in 1812. State agencies became active in support of al-Bakrī's administration of the Ṣūfī orders from the 1840s, and the *s̲h̲ayk̲h̲ al-Azhar* was excluded from interference in the affairs of the orders in 1847. These developments allowed for a more specific actualisation of the somewhat diffuse authority granted in the *firmān*, and contributed to an increased administrative importance of the office of *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-bakriyya*. In the second half of the 19th century, the principle of right of *ḳadam* (i.e. priority) became central to the administration of the Ṣūfī orders. This principle implied the exclusive right of a Ṣūfī order to proselytise and to appear in public in an area, if it could be proved that it had been the first to do so, i.e. that it had *ḳidam* (seniority). The rise of the principle of right of *ḳadam* was a development in conjunction with the abolition of the *iltizām* [*q.v.*] system, and possibly the result of this abolition, by Muḥammad ʿAlī between 1812 and 1815. Since the administration of the Ṣūfī orders under the *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-Bakriyya* was instrumental in consolidating the positions of the majority of the heads of the orders and safeguarded their established interests, its legitimacy went largely unchallenged. It functioned effectively until early 1881, when the then *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-Bakriyya* was pressured by the Khedive Tawfīḳ to initiate reforms pertaining to ritual practice, and to encroach upon the internal autonomy of the heads of the orders. Moreover, in consequence of the increased efficiency of the state's administration, following its reorganisation in the wake of the British occupation in 1882, the administration of the Ṣūfī orders lost much of its significance for the state and its agencies. These ceased to act fully in support of the orders, even when adequate maintenance of rights of *ḳadam* was at stake. Inadequate maintenance of these rights allowed for the rise and spread of a number of new Ṣūfī orders and for the secession of others, some of which obtained official status as independent Ṣūfī orders in their own right. In consequence, most of the heads of the established Ṣūfī orders and many of the heads of the *takāyā* tended towards self-containment and distanced themselves as much as possible from the *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-bakriyya*. The decline of the authority of this official was reversed with the promulgation of the Regulations for the Ṣūfī Orders (*Lāʾiḥat al-ṭuruḳ al-ṣūfiyya*) by khedivial decree in 1895. These Regulations, which were revised in 1903, provided a new legal base for the office of supreme head of the Ṣūfī orders, i.e. for the office of *s̲h̲ayk̲h̲ mas̲h̲āyik̲h̲ al-ṭuruḳ al-ṣūfiyya* (this term seems to become current only after 1880, and is not used in official communications and documents until 1892), whereas the members of a council, known as *al-mad̲j̲lis al-ṣūfī*, and chaired by the *s̲h̲ayk̲h̲ mas̲h̲āyik̲h̲*, represented the heads of the orders in the central decision-making process. The regulations strengthened the position of the *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-bakriyya* in his capacity of supreme head of the orders (the heads of the *takāyā* and the *zawāyā* were placed under the authority of the *Dīwān al-Awḳāf*). In conjunction with the Internal Regulations for the Ṣūfī Orders (*al-Lāʾiḥa al-dāk̲h̲iliyya li'l-ṭuruḳ al-ṣūfiyya*) which came into force in 1905, it provided the office of *s̲h̲ayk̲h̲ mas̲h̲āyik̲h̲ al-ṭuruḳ al-ṣūfiyya* with an unprecedented high degree of specificity and autonomy of the authority allotted to it, while it gave a self-sufficiency and distinctiveness to the administration of the Ṣūfī orders in its totality, unmatched at any previous stage. The two sets of regulations, of 1903 and 1905, were the constitution for the Ṣūfī orders until 1976.

A number of paragraphs in the regulations prohibited and regulated certain aspects of ritual and belief. These, however, were not enforced and were probably included in response to the principal challenge the Ṣūfī orders were facing at the time: the increasing call for *iṣlāḥ* [*q.v.*] of the reformists and the current rumours casting doubt on the righteousness of belief of some heads of the orders. Reformist criticism of *taṣawwuf* became more intense and frequent in the first half of the 20th century, and notably from the 1920s onwards, when three organisations, *al-D̲j̲amʿiyya al-S̲h̲arʿiyya* (headed by Maḥmūd K̲h̲aṭṭāb al-Subkī), the *D̲j̲amāʿat Anṣār al-Sunna al-Muḥammadiyya* (headed by Muḥammad Ḥāmid al-Fiḳī), and the *Ik̲h̲wān al-Muslimūn* [*q.v.*]; (headed by Ḥasan al-Bannā), turned against the orders. In the 1930s, the *s̲h̲ayk̲h̲ al-Azhar*, Muḥammad Muṣṭafā al-Marāg̲h̲ī, in line with his notions of *iṣlāḥ*, consistently worked for a re-organisation of Islamic institutions in Egypt and their incorporation into one single organisational structure supervised by al-Azhar. This structure was to include the Ṣūfī orders, which were to be supervised by the *hayʾat kibār al-ʿulamāʾ*, while the heads of the orders would have to be Azhar-trained scholars. These plans met with much opposition and never materialised.

Reform-minded Azhar circles triumphed in 1947, when King Fārūḳ deposed the then *s̲h̲ayk̲h̲ mas̲h̲āyik̲h̲ al-ṭuruḳ al-ṣūfiyya*, Aḥmad Murād al-Bakrī. He was to be the last *s̲h̲ayk̲h̲ al-sad̲j̲d̲j̲āda al-bakriyya* to hold the office of supreme authority over the Ṣūfī orders in Egypt. Aḥmad al-Ṣāwī, an Azharī scholar without Ṣūfī background, was appointed in his stead. He took a

variety of failed initiatives aiming at reform of the Ṣūfī orders. Yet, these initiatives eventually resulted in an *iṣlāḥ* movement among the heads of the orders under his authority. The reforms they advocated pertained mainly to ritual practice, and implied strict prohibitions of certain forms of self-mortification, public displays of mystical ecstasy, and the trading of *idjāzas* [see KHALĪFA]. This movement continued to have an impact after al-Ṣāwī's abdication in 1957, and eventually left its traces in the Law on the Ṣūfī Orders of 1976, and the Regulations of 1978 (see below).

Involvement of Ṣūfī orders in Egyptian party politics was limited throughout the first half of the 20th century. Available data point toward an increasing politicisation of the realm of the Ṣūfī orders in the years immediately preceding the revolution of 1952. This limited involvement in politics would seem to reflect the decline of the Ṣūfī orders in the first half of the 20th century in conjunction with the emergence of secularising trends, as well as with the rise of voluntary associations of a different nature operating out of a non-mystical or anti-mystical conception of Islam. After 1952, considerations of domestic and foreign policy seem to have induced the new régime to take an interest in the Ṣūfī orders and to stimulate their revival. Mystical Islam and the administrative organisation of the Ṣūfī orders could be used by the régime to combat opposition inspired by the *Ikhwān al-Muslimūn*, as well as to strengthen and widen its own base of support by stimulating and favouring the adherents of conceptions of Islam that were rooted in and partly identical with some of the central conceptions in popular Islam. In conjunction with objectives in the realm of foreign policy, and notably the consolidation of ties with Syria, the Sudan, and Morocco, a number of Ṣūfī orders were coached, supported and stimulated. In addition, *shaykh*s of Ṣūfī orders from Nigeria, Mali, Senegal and Ghana, together with a number of heads of Ṣūfī orders in Egypt, were involved in the preparations for a World Ṣūfī Conference to be convened in Cairo. The plan, which was launched in 1961 on the occasion of the visit of the Senegalese Tidjānī *shaykh* Ibrahima Niass to Cairo, never came to fruition. The official visit of this *shaykh*, who was received by Egypt's president Djamāl ʿAbd al-Nāṣir, reflects the importance attached by the régime to the Ṣūfī orders and their leaders in the realm of foreign policy.

Apart from the increased visibility of Egyptian Ṣūfī orders abroad, the revival of the orders in Nāṣir's Egypt manifested itself in several ways: their number increased, as did their membership; they were given a prominent role at official religious celebrations; and more *mawālid* [see MAWLID] were celebrated and on a larger scale then had been the case in the decade before 1952. As a rule, the Arab Socialist Union, from its creation in 1962 onwards, was involved in the organisation of these celebrations, which were used for making propaganda for the régime in a variety of ways. This increased involvement of the A.S.U. with the Ṣūfī orders, brought about an increase in the number of orders who distanced themselves from the Ṣūfī Council and refused to recognise its authority. Thus in the early 1970s, Ṣūfī orders which functioned outside the formal administrative framework of the Ṣūfī Council, and who were known as *ṭuruḳ ḥurra* (free Ṣūfī orders), were more numerous than those who *de facto* recognised its jurisdiction, and who were known as *ṭuruḳ rasmiyya* (official Ṣūfī orders).

The revival of *taṣawwuf* in Nāṣir's Egypt from the end of the 1950s continued and broadened in the Egypt of Anwar al-Sādāt, where the régime seemed to arm itself against the anti-mystical religiously-inspired opposition by means of further cultivating the Ṣūfī orders. The Law on the Ṣūfī Orders (*Ḳānūn al-Ṭuruḳ al-Ṣūfiyya*) adopted by the Egyptian Parliament in 1976, and the supplementary set of regulations known as *al-lāʾiḥa al-tanfīdhiyya*, issued by Presidential decree in 1978, and which replaced the regulations of 1903 and 1905, were to better serve this purpose. The detailed and precise formulations in the Law and the Regulations constituted a new legal framework for *taṣawwuf* in Egypt. They aimed at bringing all the Ṣūfī orders in Egypt under the control of the state, and provided institutional prerequisites allowing for an effective exercise of authority. In conjunction, policies of cultivating and favouring the orders were conducted in a quest for optimal legitimacy, and with the obvious aim to make them instrumental to strengthening the position of the régime in its struggle against the religiously-inspired opposition. These policies were essentially continued after the murder of Anwar al-Sādāt in 1981, and account for the pre-eminent position of the approximately seventy Ṣūfī orders which were recognised by the state in Egypt in 1997.

(F. DE JONG)

5. In Persia from 1800 onwards.

The history of Ṣūfism (*taṣawwuf*) in Persia in the 19th and 20th centuries has mainly been dominated by two Ṣūfī *ṭarīḳa*s, the Niʿmatullāhiyya and the D̲h̲ahabiyya. In contrast to other orders in Persia, whose impact has been more on popular than on "high" culture, these two orders have made the most important contributions to the mystical intellectual tradition in Persia in respect to *ḥikmat*, *ʿirfān* and *taṣawwuf*.

i. *Other Persian Ṣūfī sects and orders: Ḳādiriyya, Naḳs̲h̲bandiyya and Ahl-i Ḥaḳḳ.*

Aside from these two orders, few other *ṭarīḳa*s have featured in the religious topography of Persian Islam with any permanence or prominence during this period. Although the Naḳs̲h̲bandiyya "arose among Persian-speakers and virtually all its classical texts are in the Persian language", its impact on Persian culture "has been relatively slight" [see NAḲS̲H̲BANDIYYA, 1. In Persia]. Naḳs̲h̲bandīs in Iran today are mainly confined to the region of Kurdistān where their members are overwhelmingly drawn from rural folk society. Similarly, the followers of the Persian-based Ahl-i Ḥaḳḳ or ʿAlī-Ilahī quasi-Ṣūfī sect were, up until the 1950s when they started to acquire urban-based followers, "largely tribespeople and peasants, or poor urban migrants, with no link to centres of power" (Ziba Mir-Hosseini, *Redefining the truth: Ahl-i Haqq and the Islamic Republic of Iran*, in *BRISMES Bulletin*, xxi/2 [1994], 213). The fact that adepts of this sect "neither observe Muslim rites, such as daily prayers and fasting during the month of Ramaḍān, nor share its sacred space, such as sanctity of the mosque and pilgrimage to Mecca" (*ibid.*, 213), and that their theology combines S̲h̲īʿī extremism (*g̲h̲ulāt*) with a belief in metempsychosis also puts them beyond the pale of orthodox Islamic Ṣūfism. There have been recent efforts to reorient Ahl-i Ḥaḳḳ theology in accordance with S̲h̲īʿī orthodoxy, but such modernist and universalistic interpretations are rejected by the majority of the old-school Ahl-i Ḥaḳḳ members within Persia. Besides formidable theological differences, the Ahl-i Ḥaḳḳ's alienation from the mainstream of modern Persian spirituality is literary and linguistic as well; until recently their sacred language was Gūrānī rather than Persian or Arabic, in which tongues the intellectual life of Persian Ṣūfism in this period found their predominant expression. Likewise, while the founder of the Ḳādiriyya [*q.v.*], ʿAbd al-Ḳādir D̲j̲īlānī (d. 528/1134) hailed from the province of Gīlān, the impact of his order on Persian *taṣawwuf* in the 19th and 20th centuries has been rather insignificant.

ii. *The Niʿmatullāhī revival: Maʿṣūm ʿAlī S̲h̲āh to Ṣafī ʿAlī S̲h̲āh (1770-1898).*

The period from approximately 1750-1980 in the history of Persian Ṣūfism represents an attempt to recreate, albeit in newfangled S̲h̲īʿī garb, the political and cultural glory which Ṣūfism enjoyed in pre-Ṣafawid times. External movements in Persian political history and incidents in the intellectual universe of the Niʿmatullāhiyya provide three distinct periods into which the historical development of Ṣūfism in Persia may be roughly divided during the 19th-20th centuries: (1) 1770 to 1898, (2) 1898 to 1978, and (3) 1978 to the present day.

It was with the death of the 34th Niʿmatullāhī Ḳuṭb, Riḍā ʿAlī S̲h̲āh Dakkanī, *ca.* 1800, and with the advent to Persia of Sayyid Maʿṣūm ʿAlī S̲h̲āh in 1184/1770—which generated what has been dubbed "the Niʿmatullāhī renaissance" (N. Pourjavady and P.L. Wilson, *Kings of love: the history and poetry of the Niʿmatullāhī Sufi Order of Iran*, Tehran 1978, 93)—that the real history of Ṣūfism in modern Iran begins. By the middle of the 19th century, the fame and fortunes of Ṣūfism had declined to their lowest ebb in the entire history of post-Islamic Persia. Writing in the early 1840s, Zayn al-ʿĀbidīn S̲h̲īrwānī reported that "in the whole land of Iran there is neither abode nor site where a dervish can lay his head. . . . In the rest of the inhabited quarter of the world among all its different races and peoples, hospitals for the sick and *k̲h̲ānaḳāh*s for the dervishes are built—except in Iran, where there is neither *k̲h̲ānaḳāh* nor hospital" (*Ḥadāʾiḳ al-siyāḥa*, Tehran 1348/1929, 258).

The S̲h̲īʿī clerical establishment felt threatened by the enthusiasm with which the Niʿmatullāhī revival in Persia was received. Writing in the early 1800s, Sir John Malcolm reported that "the progress of Soofeeism has of late been very rapid in Persia", with adherents of Sayyid Maʿṣūm ʿAlī S̲h̲āh and Nūr ʿAlī S̲h̲āh numbered in tens of thousands, though he admitted that such calculations were only guesswork (*Hist. of Persia*, London 1829, ii, 292 ff.). The former was assassinated in 1211/1795 by the fanatical S̲h̲īʿī cleric Āḳā Muḥammad Bihbahānī, who thus acquired his notorious sobriquet of *Ṣūfī-kus̲h̲* "Ṣūfī killer"; but this killing and those of other Niʿmatullāhīs only served to fan the flames of Ṣūfī revival in Persia.

In the late 18th century, Sayyid Maʿṣūm and Nūr ʿAlī S̲h̲āh had travelled extensively through Persia, setting up *k̲h̲ānaḳāh*s in various towns and reviving an interest in Ṣūfism, which had been ruthlessly suppressed in the late Ṣafawid period. Amongst his disciples was Mus̲h̲tāḳ ʿAlī S̲h̲āh, an illiterate *mad̲j̲d̲h̲ūb* who nevertheless became a legend in the annals of Persian Ṣūfism and whose charisma has been compared to that of S̲h̲ams-i Tabrīzī or Ḳāsim-i Anwār, inspiring several literary works. Muẓaffar ʿAlī S̲h̲āh (see below) adopted "Mus̲h̲tāḳī" as his pen-name and composed a *dīwān* in his honour, the *Dīwān-i Mus̲h̲tāḳiyya* after Mus̲h̲tāḳī's martyrdom at the hands of fanatical mullahs in Kirmān in 1206/1792 (see W.R. Royce, *Mīr Maʿṣūm ʿAlī S̲h̲āh and the Niʿmat Allāhī revival 1776-7 to 1796-7. A study of Sufism and its opponents in late eighteenth century Iran*, Ph.D. diss., Princeton Univ. 1979, unpubl.). The Niʿmatullāhīs had benefited in the 1770s from the liberal intellectual and stimulating atmosphere during Karīm K̲h̲ān Zand's reign, but after the latter's death in 1779, they were exposed to the taunts and assaults of the exoteric *ʿulamāʾ*, their leaders fleeing from Iṣfahān and in the end finding refuge in Ottoman ʿIrāḳ, where Nūr ʿAlī S̲h̲āh was well received by the governor Aḥmed Pas̲h̲a and was able to write in Bag̲h̲dād the first two chapters of his immense Ṣūfī epic poem *D̲j̲annat al-wiṣāl* (ed. D̲j̲. Nūrbak̲h̲s̲h̲, Tehran 1348 *s̲h̲.*/1969).

In Kirmān, near to which S̲h̲āh Niʿmatullāh's tomb lay, the revival scored its greatest successes amongst the local ruling élite, including the adherence of the physician and *ʿālim* Mīrzā Muḥammad Taḳī, better known by his Ṣūfī sobriquet of Muẓaffar ʿAlī S̲h̲āh (later, in 1800, poisoned at Bihbahānī's prompting). It also attracted the sympathy of the governor for the Zands, Abu 'l-Ḥasan Bīglarbaygī, the 42nd Imām of

the Nizārī Ismāʿīlīs, the two groups having sympathetic relations (see H. Algar, *The revolt of Āgā Khān Mahallatī and the transference of the Ismāʿīlī Imamate to India*, in *SI*, xxi [1969], 55-81; N. Pourjavady and P.L. Wilson, *Ismāʿīlīs and Niʿmatullāhīs*, in *SI*, xli [1975], 113-35). Bihbahānī's anti-Ṣūfī measures led to further deaths authorised by the Ḳādjār régime and to an anti-Ṣūfī polemic literature, with treatises such as Bihbahānī's *Risāla-yi Khayratiyya* and Muḥammad Rafīʿ Tabrīzī's *Ḳaṭʿ al-maḳāl fī radd ahl al-ḍalāl*. Niʿmatullāhī devotees were, for their part, active in composition, and Muẓaffar ʿAlī Shāh attempted in his prose works to integrate Peripatetic, Illuminationist and Akbarian (Ibn al-ʿArabī's) philosophical doctrines into a complicated theomonism expressed in Shīʿī theosophical terms but interiorised along traditional Ṣūfī lines. Although the literary and poetic works of the Niʿmatullāhī Ṣūfīs at this time rarely come up to the achievements of the great classical Persian poets (cf. Browne, *LHP*, iv, 220-1), these were part of the great intellectual and physical efforts, achieved not without bloodshed, to renew the covenant with the classical Ṣūfī past.

In the early 19th century, Ḥusayn ʿAlī Shāh became head of the order in both Persia and India, and then in 1817 Madjdhūb ʿAlī Shāh, but after his death in 1823, the order split into three branches, the main branch under the dominant figure of the Niʿmatullāhiyya in the 19th century, Zayn al-ʿĀbidīn Shīrwānī, called "Mast ʿAlī Shāh", while two derivative branches, Kawthariyya and Shamsiyya have not attracted much notice aside from *Shams al-ʿurafāʾ* (d. 1935; on which see M. Humāyūnī, *Tārīkh-i silsilahā-yi ṭarīḳa-yi Niʿmatullāhī dar Īrān*, London 1992, 105-58; 159-67; R. Gramlich, *Die Schiitischen Derwischorden Persiens. Erster Teil. Die Affiliationen*, Wiesbaden, 1965, 43-50). He had a prodigious literary output, comprising three large travel accounts of his travels and adventures throughout the Islamic world, from North Africa to Bengal, which show us a warm personality with universal concerns and a fascination with religious diversity, and a broad-minded, cosmopolitan humour. Most of his life was spent in forced exile, wandering under threat of execution and in the shade of *fatwās* demanding his death. But with the accession of Muḥammad Shāh Ḳādjār in 1834, the circumstances of the Ṣūfīs improved greatly under the influence of the Grand Vizier Mīrzā Āḳāsī, a Niʿmatullāhī leader and associate of Mast ʿAlī, so that many Niʿmatullāhī *shaykhs* now secured royal stipends, although he and Mast ʿAlī subsequently became rivals for the leadership of the order. But there was no striking shift of influence at this time from the *ʿulamāʾ* to the Ṣūfīs (Abbas Amanat, *Resurrection and renewal. The making of the Babi movement in Qajar Iran*, Ithaca and London 1989, 79). After Mast ʿAlī's death in 1837, he was succeeded by Raḥmat ʿAlī Shāh, who now became royal deputy-governor of Fārs, so that the same Shīʿī mullahs of Fārs, wrote Raḥmat's son later, "who had previously insisted that Raḥmat's hookah first be washed and purified before others smoke it, now vied with each other for the blessing of drinking the dregs of his tea cup" (Maʿṣūm ʿAlī Shāh Shīrāzī, *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ed. M.Dj. Maḥdjūb, Tehran 1345 *sh.*/1966, iii, 392). Raḥmat's achievements included the diffusion of the order by sending representatives as far as India and Turkey, and the composition of the first volume of the *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, completed after his death by his son Maʿṣūm ʿAlī Shāh (Humāyūnī, *Tārīkh*, 191), the most important and impartial history of Ṣūfism ever written in Persian in modern times. A year before his death in 1861, Raḥmat left the affairs of the order to his uncle Ḥādjdjī Āḳā Muḥammad, called Munawwar ʿAlī Shāh, but soon afterwards, two other branches split off, the Gunābādīs and the Ṣafī ʿAlī Shāhīs.

(a) The Gunābādīs. The schism here arose from the refusal of the *shaykh* appointed by Raḥmat to Iṣfahān, Saʿādat ʿAlī Shāh, to follow Munawwar, to the point of founding his own order. Very soon, the headship of this sub-order became exclusively hereditary and confined to the family of Sulṭān ʿAlī Shāh Gunābādī (d. 1909). W.M. Miller, during his sojourn amongst this sub-order in the 1930s, reported that they had some 10,000 adherents throughout Iran, including several members of the *Madjlis* and the prime minister Ḳawām al-Sulṭana (*Shiʿah mysticism, the Sufis of Gunābād*, in *MW*, xiii, 346-7). The Gunābādiyya continue today under the leadership of followers of the recently-deceased *ḳuṭb* Riḍā ʿAlī Shāh Tābanda. In the 1980s, Tābanda warmly endorsed the Islamic Republic's war with ʿIrāḳ, declaring the Gunabādīs's willingness to become martyrs. In 1997 a near relative, Dr. Nūr ʿAlī Tābanda, became head, after his predecessor had, according to a leading Iranian newspaper in London, suffered harassment from the Islamic Republic police on the grounds that, *inter alia*, the dervishes were engaging in "immoral activities" (*lahw wa lahb*). But notwithstanding Dr. Tābanda's previous participation in Mihdī Bāzargān's Freedom Movement and his present quietist rhetoric, the Gunābādī Ṣūfīs remain active supporters of the fundamentalist ideology of the Islamic Republic.

(b) The Ṣafī ʿAlī Shāhīs. Ḥādjdjī Mīrzā Ḥasan Iṣfahānī, called Ṣafī ʿAlī Shāh (d. 1898) was undoubtedly the foremost Niʿmatullāhī poet—and perhaps the foremost Persian Ṣūfī poet—of the 19th century. His ample *Dīwān* has been frequently reprinted, and he wrote several prose works and a two-volume versified Ḳurʾānic *tafsīr* in the same metre as that of Rūmī's *Mathnawī*. He broke his allegiance to Munawwar in 1877, and after his death his disciple, the Ḳādjār prince ʿAlī Ẓahīr al-Dawla, brother-in-law of Muẓaffar Shāh Ḳādjār [*q.v.*], turned the sub-order into an *Andjuman-i ukhuwwat* "Fraternal Society" with the aim of combining Ṣūfism and politics, in the atmosphere of the time of numerous secret societies and lodges founded on Masonic principles (see A.K.S. Lambton, *Secret societies and the Persian revolution of 1905-6*, in her *Qajar Persia. Eleven studies*, London 1987, 300-19; H. Algar, *An introduction to the history of freemasonry in Iran*, in *MES*, vi [1970], 291; and FARĀMŪSH-KHĀNA, in Suppl.). The *Andjuman* also reflected its founder's support for the constitutional movement, and many of the members of this quasi-*ṭarīḳa* were, like himself, high-ranking statesmen. It also had many social and charitable activities, and by 1964, some 34,000 members had been admitted to the society. But with the triumph of the fundamentalist Islamic Revolution in 1979, the *Andjuman* was forcibly renamed, its building became used primarily as a mosque and the remaining members of the sub-order seem to have caved in to government pressure to participate in formalities unrelated to Ṣūfism.

iii. *The main branch of the Niʿmatullāhī order from 1861 to the present day.*

As noted above, Munawwar succeeded Raḥmat in 1860, and his quarter-century's headship of the order was marked by the Gunābādī and Ṣafī ʿAlī Shāhī schisms (see above, ii. a, b). Although the Dhahabiyya masters had made hereditary succession an essential feature of their administration of their order during the early 19th century, signs of such spiritual patrimonialism did not appear amongst the Niʿmatullāhīs

till the end of that century. Munawwar's son ʿAlī Āḳā Dhu 'l-Riyāsatayn, called Wafā ʿAlī Shāh, succeeded him, effectively meaning that, for four generations—from Raḥmat ʿAlī Shāh to Mu'nis ʿAlī Shāh, excluding Ṣādiḳ ʿAlī Shāh's four-year tenure 1918-22—filial affiliation and consanguinity determined spiritual sovereignty, so that the main branch was transformed into what Pourjavady and Wilson have called a virtual "Family of Poles" centred on Shīrāz. Finally, in the 1910s, the Gunābādī sub-order transformed hereditary succession into what is probably today the only unwritten socio-political dogma of modern Persian Ṣūfism (this principle being in contrast to the position in Egypt, where inheritance of such leadership positions was often implicit, rather than prescriptive as in Persia).

Mu'nis ʿAlī Shāh (d. 1953) was called Dhu 'l-Riyāsatayn from his mastery of the exoteric sciences of Islam as well as the esoteric ones. In 1936 he moved from Shīrāz to Tehran and established there his Čahār Sūḳ *khānaḳāh*, which became one of the most important Ṣūfī centres in Tehran of its time. After his death, the control and the office of *ḳuṭb* exercised by one family for almost a century came to an end with the coming of a talented and educated medical student, Djawād Nūrbakhsh, who had already attained the rank of *Shaykh al-shuyūkh* "Supreme Shaykh" in Mu'nis's last years and had been designated by the latter his "sole spiritual son" (*farzand-i rūḥānī yigāna*), indicating his appointment as future *ḳuṭb* and head of the order. During the 1950s, Dr. Nūrbakhsh (he had graduated M.D. at Tehran University in 1952) managed to secure the allegiance of most of the order's *shaykhs* (Pākalʿa'ī of Isfahān was an exception). As well as being active writing in his professional field of psychiatry, Dr. Nūrbakhsh has been active in publishing Ṣūfī works from his "Khānaḳāh Niʿmatullāhī Publications" and writing his own works on Ṣūfism. By 1978, he had founded 60 *khānaḳāhs* in Iran, and in the 1970s, responding to the wishes of American disciples, several Niʿmatullāhī centres were founded in North America. In 1983 he moved to Britain, where he now resides, and now (1997) there are 21 *khānaḳāhs* in extra-Islamic lands, ranging from the U.S.A. and Canada to West Africa and Australia, each with anything from 25 to 75 full-time members. Within Iran of the Islamic Republic, the order has maintained itself and its 60 *khānanḳāhs* with considerable difficulty. Since 1995, the acceptance of new initiates has been forbidden to local directors on pain of imprisonment or worse. In 1994 the Ministry of Islamic Guidance banned, without explanation, all new publications and the reprinting of old Niʿmatullāhī works. Thus although the order has apparently successfully established itself in the West, in the face of a concerted campaign of interference and intimidation in Iran, the survival of this major Ṣūfī order into the 21st century there seems uncertain.

iv. *The Dhahabiyya.*

The revival of this order in more recent times within Persia began earlier than with the Niʿmatullāhīs in the person of Ḳuṭb al-Dīn Nayrīzī (d. 1173/1759), the 32nd master of the order (on the origins of the order, see D. DeWeese, *The eclipse of the Kubraviyah in Central Asia*, in *Iranian Studies*, xxi/1-2 [1988], 62-9). Nayrīzī was a fine scholar in the traditional sciences, an admirer of Ibn al-ʿArabī, author of numerous Arabic and Persian *rasā'il*, and at the end of his life, we are told, when resident in Nadjaf he gave lectures to all members of the main four Sunnī *madhhabs* as well as the Djaʿfarī Shīʿa (Iḥsān Allāh ʿAlī Iṣṭakhrī, *Uṣūl-i taṣawwuf*, Tehran 1338/1959, 443); and his travels throughout Persia and ʿIrāḳ were ultimately to lead to a revival of the Dhahabī *ṭarīḳa*. From Nayrīzī's time onwards, familial relationship was linked to spiritual headship, with new masters having married daughters of their predecessor, so that the order became a family dynasty based on patrilineal succession. The Dhahabī *ḳuṭbs* enjoyed the support of the Zands in Shīrāz but were also quick to give support to Āghā Muḥammad Ḳādjār at Tehran in the early 1780s. However, they suffered, like other Ṣūfīs, under Bihbahānī's persecutions and the dominance of the *ʿulamā'* during Fatḥ ʿAlī Shāh's reign (1797-1815).

From 1815 to 1869 the master of the order was Abu 'l-Ḳāsim Shīrāzī, who had the pen-name of Rāz for his poetry, the 35th Dhahabī *ḳuṭb*, "most prolific of all Dhahabī masters" (Asad Allāh Khāwarī, *Dhahabiyya. Taṣawwuf-i ʿilmī, āthar-i adabī*, Tehran 1362/1983, 380, 575-680), the first master since pre-Ṣafawid times to build a formal *khānaḳāh* for Dhahabī *fuḳarā'*, who had formerly gathered in private houses in Shīrāz. As a poet, Rāz attained considerable renown, composing some "half a million couplets, thirty thousand of which belonged to his state of *djadha* and the rest written from the quietude of spiritual attainment" (Khāwarī, *Dhahabiyya*, 380; also see 575-680 for a lengthy discussion of his literary works and theologico-poetic contribution to Persian Ṣūfism). He was also known for his tutelage of famous *shaykhs*, among whom may be mentioned the *mudjtahid* Mīrzā ʿAbd al-Karīm Rāyiḍ al-Dīn Zinghānī (known as ʿUdjūba and ʿĀrif ʿAlī Shāh, d. 1882). He also assumed custodianship in 1851 of the Shāh Čirāgh complex, the third most important shrine and pilgrimage centre in Persia, thus increasing his personal prestige. He lauded his son Djalāl al-Dīn, who subsequently became the 36th *ḳuṭb*, as a saint and immaculate from the womb. By such speculations, Rāz reinforced the nepotism now firmly enshrined in this *silsila*, ensuring that the pattern of paternal inheritance went unquestioned and that all property (especially the wealthy Shāh Čirāgh complex) and power over disciples would remain the birthright of his descendants; indeed, such favouritism was diametrically opposed to earlier Dhahabī masters' views on spiritual succession. Rāz's fourth son Madjd al-Ashrāf was master of the order 1869-1913. Under his leadership, Dhahabī teachings spread throughout Khurāsān, Iṣfahān and Fārs (Iṣṭakhrī, *Uṣūl*, 528, and he was the first Dhahabī to realise the value of the new Western techniques of printing, so that by his death at the age of 85, he had published over 40 of the works of the classical Ṣūfīs. During the upheavals of the Constitutional Revolution, he adopted a conservative and quietist stance, unlike his fellow Shīrāzī townsmen the Niʿmatullāhī *ḳuṭbs* Wafā ʿAlī and Mu'nis ʿAlī Shāh; his earlier writings had indicated his strongly pro-Ḳādjār royalist stance, successfully achieving Muẓaffar al-Dīn Shāh's support for his continuing custodianship of the Shāh Čirāgh.

On his death in 1913, the order was thrown into confusion, with many members uncertain about the succession, causing the first major schism within the Dhahabiyya, with a serious and effective challenge to the patrilineal right of inheritance for the *ḳuṭbiyyat*, the office of *ḳuṭb*; in the end, the majority of the Dhahabiyya abandoned the family line of Madjd al-Ashrāf and followed Waḥīd al-Awliyā' and, later, his successor Ḥubb-i Ḥaydar. A considerable polemical literature grew up amongst the Dhahabīs over this question, almost all of it biassed in some direction or other, but it is clear that a spiritual office had become entangled with the temporal concerns of a self-perpetuating

family loyalty, and this last could not long survive in the revolutionary, anti-monarchical climate of early 20th-century Iran. Nevertheless, the Sharīfī family kept their position as custodians of the Shāh Čirāgh until 1978, when they fled the country and the mausoleum was seized by the Islamic revolutionaries.

Despite the fact that the Sharīfī family considered Waḥīd al-Awliyā' as a usurper and mere pretender to the *kuṭbiyyat*, the majority of Dhahabīs today consider him to have been the 37th Master and rightful spiritual successor of Madjd al-Ashrāf. Waḥīd al-Awliyā' was a Tabrīzī by birth, famed for his expertise in *'irfān* and a prolific author, who also revived and reprinted a good number of Ṣūfī classics. In addition to his vigorous publishing activities, his learned *shaykhs* such as Ḥādjdjī Mīrzā Muḥsin (*alias* "'Imād al-Fuḳarā' Ardabīlī") and Dr. Iḥsān Allāh 'Alī Iṣṭakhrī made considerable literary contributions to Dhahabī spirituality, the former composing some 18 books, including Persian translations of Arabic Ṣūfī works, while the latter's attractive, if hagiographical, exposition of the "principles of Ṣūfism" from a Dhahabī perspective, called *Uṣūl-i taṣawwuf* (Tehran 1379 A.H./1959) represents (together with Khāwarī's work *Dhahabiyya*) the best general account of this order from its earliest days to the early 1960s. On his death in 1955, he was succeeded by one of his elect disciples, Ḥubb-i Ḥaydar, unconnected with his family in any way, but responsible for constructing his master's large mausoleum in Shīrāz. There have been many active scholars and publishers of Dhahabī and other classics among Ḥubb-i Ḥaydar's followers, and it is clear that the order, like the Ni'matullāhiyya, is quite intellectually active. Hence Hamid Algar's assertion that "most contemporary adherents of the Dahabīya appear to be merchants and civil servants with little knowledge of the theoretical bases of Sufism" is inaccurate. Nor is there any indication today that the order is but "a degenerate parody of the Sufi tradition, rather than an actual continuation of it" (*EIr*, art. *Dahabīya*, at vol. vi, 580).

When Ḥubb-i Ḥaydar died in 1962, he was succeeded by Dr. Abu 'l-Ḥamīd Gandjawiyān, a professor of dermatology at Tabrīz University as the 39th *kuṭb*. With an extensive Western educational background and a formidable specialist output, he currently resides in Southampton, England, as a British subject. This background and experience, and the presence of numerous disciples in North America and England, will probably ensure that, like the Ni'matullāhīs, the future spiritual tradition of the Dhahabīs will be as much the product of the secular university as of the religious *madrasa*.

v. *Dhahabī-Ni'matullāhī relations.*

Although the Dhahabīs have always been less widespread than the Ni'matullāhīs, being mainly confined to Fārs, their contribution to the development of 19th and 20th-century Persian spirituality has been no less significant. The fact that Ni'matullāhī sources (e.g. Shirwānī, *Ḥadā'iḳ al-siyāḥa*, 251) deride the Dhahabiyya only reflects the narrow-minded, sectarian, intra-*ṭarīḳa* rivalry still permeating relations between the two groups. Yet philosophically speaking, their approach to theosophical questions was much the same, centred on the Shī'a in their mystical theology and with a common intellectual universe still largely defined by the *waḥdat al-wudjūd* doctrines of Ibn al-'Arabī as interpreted by his Persian followers like Ṣadr al-Dīn Ḳūnawī.

vi. *Numbers and geographical distribution of Persian Ṣūfīs in the 19th-20th centuries.*

Like Malcolm in the early 19th century, Richard Gramlich in the later 20th century has acknowledged the impossibility of any accurate calculation here. Perhaps because of the more informal nature of Persian Ṣūfism—with many persons affiliated to several orders at once, whilst others may be affiliated to one order but rarely visit its *khānaḳāh*—there are no precise figures for those in *khānaḳāhs* in pre-1979 Persia, unlike in Ottoman Turkey, where precise figures were recorded in government records (see S. Anderson, *Dervish orders of Constantinople*, in *MW*, xii [1922], 53-61). Gramlich's review of the three main orders—Khāksar, Dhahabiyya and Ni'matullāhiyya—led him to conclude that the latter was, by the 1960s, by far the largest Persian Ṣūfī order, anything from 20 to 100 times larger than the other two put together (*Die schiitischen Derwischorden Persiens. I. Die Affiliationen*, Wiesbaden 1965, 89-90). The Gunābādī branch of the latter order is now considered to be the larger branch in Iran. For statistics of the present distribution of the Ni'matullāhiyya and their centres, see above, section iii, at the end. Up to the 20th century, the Dhahabiyya were concentrated on Shīrāz, with small branches in other Persian cities under *shaykhs* of the *kuṭb*. In the early 1950s, the Tehran *khānaḳāh* was endowed as a religious charity, and after Waḥīd al-Awliyā''s death, his house and mausoleum in Shīrāz were converted into a *khānaḳāh*, subsequently expanded into a large complex. There are at present (1997) seven official Dhahabī *khānaḳāhs* in Iran, with gatherings of members in private houses in other towns. None of the *khānāḳāhs* has so far been confiscated by the Islamic Republic régime, nor has there been any persecution of members, and the publication of Ṣūfī works by the order has proceeded unimpeded. Outside Iran, the only official *khānaḳāh* is in Southampton, England, where the order's head resides, although there are gatherings in private houses in three cities of the USA.

vii. *Key features of Persian Ṣūfism in the 19th and 20th centuries.*

From the above survey, it is evident that in its social transformations and adaptation to the exigencies of modern religious and political changes during the 19th-20th centuries, Ṣūfism has developed certain features which render it substantially different from the mystical Islam of the high classical period in Saldjūḳ, Mongol or Tīmūrid Persia. Since the metaphysical and spiritual reality (*ḥaḳīḳat*) of Ṣūfism does not permit quantitative analysis on the basis of social, historical or political transformations, whether or not these features embody a "decline" is not in question. However, in the light of these—basically six—features outlined below, it is evident that modern Persian Ṣūfism has failed to maintain, indeed, in many senses, has fallen far away from, the high ethical standards previously attained during the renaissance of Ṣūfism in the 12-13th centuries (on which see L. Lewisohn (ed.), *The legacy of mediæval Persian Sufism*, London 1993).

(a) *Institutionalisation.* During the 19th-20th centuries, each initiatic chain of succession (*silsila*) and "Path" (*ṭarīḳa*) tended vigorously to maintain its own separateness and difference, distinguishing—often to the point of sectarian discrimination—its teachings from others. As in classical Islam, the *khānaḳāh* institution with its various duties—ranging from services (*khidmat*) to musical liturgy (*samā'*)—became once again the central social focus of the various orders. Ṣūfī *khānaḳāhs*, up to recently, could be found in every major city and town in Iran. In the beginning of the 20th century, just when the signs of modernisation were becom-

ing visible everywhere in Tehran, "one could find *khānaḳāhs* outside all ten gateways leading into Tehran, within each of which dwelled a *pīr* serving as a spiritual guide, sought after by numerous pilgrims whether in pursuit of the soft drink of divine Unity or the wine of spiritual guidance" (Dja'far Shahrī, *Tārīkh-i idjtimā'ī-yi Tihrān dar ḳarn-i sīzdahum*, Tehran 1369 *sh*./1990, vi, 419). In post-1978 Tehran, institutional Ṣūfism is still flourishing despite—if not because of—the pressures upon and persecution of its leaders by the Islamic régime.

(b) *Intra*-ṭarīḳa *rivalry*. Just as the orders are now firmly distinguished from each other in separate institutional forms, the differences between, rather than unity among, the contemporary Persian *silsilas* are emphasised in the literature. Consequently, the chaste attitude of universal charitable tolerance (*ṣafā'*) maintained by the classical Persian mystics was, in this period, replaced by rivalry for positions of leadership and power over disciples, bitter jealousy between, and irreconcilable schisms among the leaders of the modern Persian *ṭarīḳas* (e.g. the rancour roused in Ni'matullāhī ranks by the Ṣāfī 'Alī Shāh schism, and the vitriolic polemics written by Dhahabī Ṣūfīs opposed to Waḥid al-Awliyā').

(c) *Ṣūfī religious exclusivism*. Gramlich's observation (*Die Schiitischen Derwischorden*, ii, 146) that the Persian Shī'ī Ṣūfī orders generally tend to identify the *ḳuṭb* as belonging exclusively to their particular *ṭarīḳa* conveys a fundamental tendency of contemporary Persian Ṣūfism rarely found elsewhere in the Islamic world. Whereas, according to most contemporary Sunnī Ṣūfism, the spirit of the *ḳuṭb* can only be seen at Mecca, at the Ka'ba, which is his *maḳām* [see ḲUṬB], in orders such as the Ni'matullāhiyya and Dhahabiyya, the head of the *ṭarīḳa* is considered the supreme *ḳuṭb*, the sole and unique Pole of the Muslim saintly hierarchy, so that his cosmological role is physically and politically temporalised. One socio-political consequence of this doctrine has been that every Persian *murshid* is considered not only an absolute monarch over his disciples—quite in accordance with ordinary *pīr-murīdī* tenets and teachings found in other areas of the Islamic Ṣūfī world—but also the only genuine ruler in the invisible and visible worlds of being. W.M. Miller's observation (*art. cit.*, 344) that the *ḳuṭb* is the "central doctrine" of the Gūnābādī Ṣūfīs may generally be said to apply to *ḳuṭb* doctrines rife in the Dhahabiyya as well as the various branches of the Ni'matullāhiyya.

Probably influenced by the Ismā'īlī doctrine of the infallibility of their Imām, Ni'matullāhī Ṣūfīs of the early Ḳādjār period such as Nūr 'Alī Shāh and Muẓaffar 'Alī Shāh reoriented the Shī'ī *wilāya* doctrine to imply that they were in direct communication with the hidden Imām (Amanat, *Resurrection*, 73-5), while among the Dhahabiyya an identical doctrine appeared as well (e.g. the Dhahabī *ḳuṭb* Sayyid Muḥammad Ḥusayn-i Sharīfī is explicitly called in one source "the special representative of the Imām of the Age", *Nāyib-i khāṣṣ-i imām-i 'aṣr*). Such esoteric speculations gradually effected the "peculiar" assimilation "of the *Quṭbī* and *Imāmī* conceptions" in Shī'ī Ṣūfī orders, as Trimingham has termed it: "With Twelver Ṣūfīs, the *Quṭb* is the representative of the Imām on earth; hence the hatred of the *mujtahids* for the Ṣūfīs. The first principle of the Gūnābādī branch of the Ni'matullāhiyya is *walāya* or 'allegiance' to the *Quṭb*, who is the actual present head of the order, even though through him all things subsist" (*The Sufi orders in Islam*, Oxford 1973, 164).

Though speculations on the doctrine of the *ḳuṭb* and the Imām, there has been gradual vulgarisation in the classical doctrine of *ḳuṭbiyya*, causing not only the cosmological but the political "polarisation" of *taṣawwuf*. Hence *ma'rifa* is understood to be the exclusive intellectual property of a particular Ṣūfī order, implicitly excluding all other spiritual orders, masters, religions, and mystical paths from the divine plan of salvation and self-realisation (for further discussion of the Shī'ī Ṣūfī *ḳuṭb* doctrine, see al-Shaybī, *al-Ṣila bayn al-taṣawwuf wa 'l-tashayyu'*, Cairo 1969, 463; idem, *Sufism and Shi'ism*, London 1991, 75 ff.; Matti Moosa, *Extremist Shi'ites. The Ghulat sects*, Syracuse 1988, 111; D.M. Donaldson, *The Shi'ite religion*, London 1933, 14; on Ni'matullāhī attempts to resolve the exclusivism occasionally caused by this doctrine, see Gramlich, *Die Schiitischen Derwischorden*, i, 49). Whether such a polarised (a literally *ḳuṭb*-centric) approach to mysticism has been ultimately conducive to Ṣūfism's final goal of theocentric consciousness is questionable. What is *prima facie* evident, however, is that the exclusivism of the Persian Shī'ī Ṣūfī *ḳuṭb* doctrine provides little constructive groundwork for ecumenism, creative religious pluralism or inter-faith dialogue—in a modern world where religious diversity is an inescapable fact of life.

(d) *Ṣūfī patrimonialism or dervichisme*. Jean Aubin coined the term *dervichisme* to describe an essential component of a type of hereditary Ṣūfism passed down by lineages of "sacred families" during the Mongol period, so that "spiritual authority and material management was transmited, hand to hand, hereditarily, with their morally privileged status and their ancestry assuring the social position of the inheritors" (*La propriété foncière en Azerbaydjan sous les Mongols*, in *Le Monde iranien et l'Islam*, iv [1976-77], 128). During the Mongol period, hereditary succession in both civic and religious matters was the norm in Persian society, as Marshall Hodgson has observed: "Even the head of a Ṣūfī order, who designated his successor from among his disciples, was encouraged to designate a son if one had become a disciple. But such family loyalty was pragmatic rather than prescriptive" (*The venture of Islam*, Chicago 1977, ii, 112). Eventually, however, as a consequence of such Ṣūfī dynasticism, what was from the start "an originally charismatic leadership was institutionalized" (*ibid.*, ii, 217).

By the early Ṣafawid period, the hereditary principle in Ṣūfī orders such as the Nūrbakhshiyya and Ni'matullāhiyya in Persia had become virtually prescriptive. The Ni'matullāhiyya, for instance, originally began as a *ṭarīḳa* designed to offer spiritual guidance, but by waging war against the Ottomans, currying patronage and forging links of marriage with the ruling Ṣafawid family, this *silsila* became a *dūdmān* (family dynasty) dedicated to the acquisition of royal power, and based exclusively on hereditary succession ('Abd al-Ḥusayn Zarrīnkūb, *Dunbāla-yi djustudjū dar taṣawwuf-i Īrān*, Tehran 1362 *sh*./1983, 232-6). Indeed, such *dervichisme* became enshrined in most Persian *ṭarīḳa* doctrine, for all the Ṣūfī orders which wished to survive or succeed in Ṣafawid Persia were forced to make the position of *shaykh* hereditary, if only in emulation of "the Safavids themselves who had insisted that *pidar-farzandī*, that is, the dynastic principle, was the sole criterion to be used to determine the succession, and not *naṣṣ*" (R.M. Savory, *Iran under the Safavids*, Cambridge 1980, 25).

Following the Ni'matullāhī revival in the Ḳādjār period, similar dynastic pretensions reappeared among leaders of certain branches of the Ni'matullāhiyya in the middle, and the Dhahabiyya at the end, of the 19th century. As worldly dynastic interests took prece-

dence over otherworldly spiritual attainment, all quest for genuine and individually realised spirituality was set aside, as most of the Ṣūfī orders, seeming to lose sight of the basic spiritual principles of their practice, treated the position of *ḳuṭb* as hereditary—the Gunābādī branch of the Niʿmatullāhīs, the Dhahabiyya in the 19th century, and the Ahl-i Ḥaḳḳ, in particular, have generally made hereditary succession and *dervichisme* their fundamental social pillar.

(e) *Ṣūfism and Persian poetry.* Sir John Malcolm's observation that "the very essence of Soofeism is poetry" (*History*, ii, 279) highlights an enduring characteristic of *taṣawwuf* in Persia: that spiritual guidance and mystical understanding remain linked to lyrical expression and poetic inspiration. However, by the 19th century, the Persian poetico-mystical tradition had considerably declined due to various factors. A sort of separation between literature and *taṣawwuf* occurred in Persia in the late Ṣafawid period, both of which, anyway, were experiencing a waning (on the literary slump, see Bahār, *Sabk-shināsī*, iii, 311-18). By the Zand and Ḳādjār periods, one finds that most of the *ghazals* and *mathnawīs* composed by the Persian *ṭarīḳat shaykhs* were to a large extent a means by which those who possessed some literary talent could confirm their spiritual authority by creating poetic utterances capable of integration into their followers' *samāʿ* liturgy. The central political motif in most Ṣūfī poetry produced during this period is what DeWeese has termed "*ṭarīqa*-solidarity"—in the present Persian context constituting a sense of the distinctness of the Niʿmatullāhī (or Dhahabī) *silsilas* as constituting a bona-fide, self-conscious Ṣūfī order amongst other Islamic brotherhoods. Walter Feldman's remark that 18th-century Turkish Ṣūfī poets tended to speak of themselves "primarily as enlightened mürşids" in contrast to the earlier classical Turkish Ṣūfī poets such as Yūnus Emre who had usually humbly "cast themselves as seekers on the Path" (*Mysticism, didacticism and authority in the liturgical poetry of the Halvetî Dervishes of Istanbul*, in *Edebiyât*, NS iv/2 [1993], 263), and Asad Allāh Khawārī's observation that the composition of poetry by Dhahabī *shaykhs* had less an aesthetic than a utilitarian function, being "considered as one of the necessary conditions of *ḳuṭbiyyat*" (*Dhahabiyya*, 685), also applies to the 19th-century Persian Ṣūfī poets. In their verse one finds less and less the wine of "ecstasy divine": a scent of rosewater perhaps, but the fragrance of the rose has fled.

To the present day, Persian Ṣūfīs still continue to compose and publish *mathnawīs* and *ghazals* filled with all the ancient and timeless symbolism and imagery of rose and nightingale, beloved and lover, prince and pauper. However, even if contemporary Iran is the inheritor of the world's most venerable tradition of mystical poetry, there has been no Ṣūfī bard during the entire modern period, with the notable exceptions of Nūr ʿAlī Shāh in the early 19th century, Furūghī Basṭāmī (d. 1274/1857; a follower of the Čishtiyya *silsila*) at the end of the 19th, and Ṣafī ʿAlī Shāh in the early 20th century, whom any contemporary Iranian literary historian has acknowledged to have combined spiritual gifts and poetico-literary genius with any of the same competence or literary success shown by his mediaeval forebears. Hence literary historians usually regard the Ṣūfī contribution to modern Persian literature as largely insignificant (see M.T. Bahār, *Sabk-shināsī*, iii; Browne, *LHP*, iv; and Y. Aryanpūr, *Az Ṣabā tā Nīmā. Tārīkh-i 150 sāl adab-i fārsī*, Tehran 1357/1978).

(f) *Loss of self-confidence caused by the marginalisation of mysticism in the intellectual milieu.* In the mid-19th century, the anxiety of the Persian Ṣūfīs in face of encroaching Europeanisation is reflected in the nostalgic comment of the Niʿmatullāhī leader Mast ʿAlī Shāh (penned in the early 1830s): "In truth, these Europeans (*ḳawm-i firang*) in affairs of government, politics and cultivation of their lands are extremely skillful and do not neglect even the least minutia in the art of war, nor of the means of overcoming enemies and cultivating friends" (*Ḥadāʾiḳ al-siyāḥa*, 348-9; also cf. similar comments by Shīrāzī, *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, iii, 521-2; J.I. Cole, *Invisible occidentalism. Eighteenth-century Indo-Persian constructions of the West*, in *Iranian Studies*, xxv/3-4 [1992], 3-16. For a discussion of similar circumstances in Turkey, see Nuray Mert, *Children of a "defeated civilization". The sad face of Westernization in Turkey*, in *Turkey: the pendulum swings back*, London: Islamic World Report, i/3 [1996], 69-70).

During the 20th century, with Shīʿism in the *madrasas*, and secular rationalism the idol of the intellectual élite in the universities, Ṣūfism was denigrated by both groups and in this process fell by the wayside, ceasing to be part of the mainstream of Persian religious and intellectual life. The main Persian 19th-century political reformers, such as Djamāl al-Dīn al-Afghānī (1839-97), Ākhundzāda (1812-78), Mīrzā Malkum Khān (1833-1908) and Mīrzā Āḳā Khān Kirmānī (1854-96; who had rebelled against his Ṣūfī origins—his father being affiliated with the Ahl-i Ḥaḳḳ), castigated Ṣūfī mysticism for its alleged passivity and advocacy of *taḳlīd*. Their attack was continued by the radical Iranian secular intellectuals of the early 20th century such as Aḥmad Kasrawī (1891-1946 [*q.v.*]), who condemned Ṣūfism "as one of the deep-rooted and greatly misguided beliefs to have appeared in Islam" (see his *On Islam and Shiʿism*, tr. M.R. Ghanoonparvar, Costa Mesa, Calif. 1990, 79).

Kasrawī's opinions of Ṣūfism were later repeated by Iranian secular intellectuals in the 1960s-1970s, most of whom toed the Marxist Tūdih party's atheist-materialist line on the social irrelevance of religion. As a consequence, the more moderate voices of both European Persianists who considered Persian Ṣūfism to be a chief cause of cultural advancement in Islam such as R.A. Nicholson and F. Meier (*Soufisme et déclin culturel*, in R. Brunschvig and G.E. von Grunebaum, *Classicisme et déclin culturel dans l'histoire de l'Islam*, Paris 1957, 217-41), as well as Iranian savants such as Mudjtabā Mīnuwī, who considered the Ṣūfī movement to be the apex of human ethical thinking and the sole champion of religious tolerance in Islam (see his *Āzādagī wa tasāmuḥ*, in *Iranshenasi*, vi/1 [1992], 174-85) have been all but drowned out by the louder cries of the secular and religious fundamentalists.

Refutations of Ṣūfism based on its perceived incongruence with Shīʿī doctrines continued as in Zand and Ḳādjār times to be written during the 20th century by extremist Iranian clerics (such as Sayyid Abu 'l-Faḍl b. al-Riḍā, known as ʿAllāma Burḳaʿī) (cf. his *Ḥaḳīkat-i ʿirfān*, [2]Tehran n.d., which reproduces texts, 161-2, of four *fatwās* in condemnation of early 19th-century Niʿmatullāhī masters purportedly issued by 19th-century clerics—Baḥr al-ʿUlūm, ʿAlī Ṭabāṭabāʾī, Muḥammad Mahdī Shahristānī and Abu 'l-Ḳāsim Ḳumī). At present, most of the Iranian Shīʿī clergy "regard it [Ṣūfism] as nothing more than an illegitimate competitor in the marketplace of religious values" (Y. Richard, *Shi'ite Islam*, tr. A. Nevill, London 1995, 54).

To the present day, although the dervish ideal (*darwīshī*) remains, on the one hand, an indelible trait

of Iranian national character (see M.C. Bateson *et alii*, *Ṣafā-yi bāṭin. A study of a set of Iranian ideal character types*, in Brown and Itzkowitz (eds.), *Psychological dimensions of Near Eastern studies*, Princeton 1977, 257-73), on the other hand, institutional or *khānaḳāh*-based Ṣūfism continues to be frequently attacked by both Iranian intellectuals in exile and modernist and traditional religious thinkers within Iran proper. In Iranian newspapers published in the West, the cultural and political significance of Ṣūfism remains a hotly-debated topic whose relevance to modern philosophies of life is frequently contested or vindicated (see e.g. Dāryūsh Humāyūnī, *Imrūz zamān az madrasa bih khānaḳāh raftan nīst*, in *Nīmrūz*, year 8, no. 390, Djum'a 11, Ābān 1375 *sh*., 15e, and Riḍā Ḥakkdjū's pro-Ṣūfī riposte to Humāyūnī, *Ham madrasa wa ham khānaḳāh*, in *Nīmrūz*, year 8, no. 393, Djum'a 2 Ādhar, 1375 *sh*., 33) by supporters for and against. Though beleaguered at the time of writing by the atmosphere of the religious intolerance prevailing in the Islamic Republic of Iran, and in the West, where traditional *taṣawwuf* is challenged by the anti-mystical "secular fundamentalism", Persian Ṣūfism will doubtless survive this crisis.

i. *The Ottoman period.*

The history of Ṣūfism in the Ottoman empire of the 19th and early 20th centuries reflects, in the first place, the consequences of the liberal reforms of the *Tanẓīmāt* [*q.v.*] and the discovery of European philosophical thought. Also, up to 1925, and even under the Republic, although in a different way, Ṣūfism remained closely linked with the Ṣūfī brotherhoods (*ṭuruḳ*), except for a few exceptions, themselves not without interest.

Two Ṣūfī orders imposed their mark, the Bektāshiyya and the Naḳshbandiyya [*q.vv.*]. The Bektāshiyya were forbidden in 1825 together with the Janissaries but reconstituted themselves some years later, becoming a mystical and philosophical current, notably in the great cities of the empire (Istanbul, Izmir and Salonica). The Bektāshīs of the countryside, less and less accepted by their co-religionists of the towns, who were offended by their ignorance, were progressively absorbed by the 'Alewīs. As a general rule, the Bektāshiyya espoused the movement for liberal reform, against Sultan 'Abd ül-Ḥamīd (1876-1909) and in favour of restoration of the constitution abolished in 1878. This is explicable by, amongst other things, their suppleness in religious matters, even their lack of respect for the *Sharī'a*, which they placed after the *ṭarīḳa* (the brotherhood and its exoteric rules), the *ḥaḳīḳa* (truth) and *ma'rifa* (gnosis), in accordance with their doctrine of the so-called "four doors" (*dört ḳapī*); this was regarded as a sign of the supremacy of the *bāṭin* (hidden doctrine, Ṣūfism) over the *ẓāhir* (the exoteric sciences, those of the *medreses*). Bektāshī Ṣūfism was nevertheless very poor on the level of the mystical techniques of contemplation.

The Bektāshiyya were strongly attacked by the Sunnī *'ulamā'* for what these last considered their heretical beliefs. In particular, in 1874 the *'ālim* Isḥāḳ Efendi attacked their closeness to the Ḥurūfiyya [*q.v.*] in his *Kāshif ül-esrār wa-dāfi' ül-eshrār* (German tr. G. Jacob, *Beiträge zur Kenntnis des Derwisch-Ordens des Bektaschis*, Berlin 1908). The response to this took the form of an apologia for the Bektāshiyya which is one of the best expositions of Bektāshī doctrine, of a quality rarely seen previously (Aḥmed Rif'at, *Mir'āt ül-maḳāṣid fī dāfi' ül-mefāsid*, Istanbul 1876). The doctrine was then subsequently fixed through several other works, in particular, by Aḥmed Rifḳī (in his *Bektāshī sirri*, Istanbul 1910), who accentuated the order's heterodox and political dimension and brought its doctrine into the heretical Balkans current of the Ḥamzawīs (see below) and the liberal movements opposed to 'Abd ül-Ḥamīd II. Bektāshī thought was further set forth in several poetic collections signed by its most brilliant representatives of the 19th and 20th centuries: Turābī (d. 1868), Meḥmed Ḥilmī Dede (1842-1907), Edīb Kharābī (1852-1915) and Riḍā Tewfīḳ (1868-1949 [see BÖLÜKBASHĪ, RIḌĀ TEWFĪḲ, in Suppl.]).

In opposition to this form of Ṣūfism, there was that of the Naḳshbandiyya, an order which enjoyed a pro-

found renewal at the beginning of the 19th century amongst the Kurds of the empire's eastern provinces. This renewal of the Nakṣhbandiyya, called Khālidiyya from the name of Mawlānā Khālid Baghdādī (1776-1827), who had studied with the Nakṣhbandīs of India at Dihlī, strongly echoed the teachings of the Indian Nakṣhbandiyya Mudjaddidiyya but made certain innovations. The Khālidiyya made compulsory retreat (*khalwa erbaʿīniyya*) for new initiates and made the doctrine of the *rābiṭa* (the spiritual link of the *sheykh* with his disciple) the order's great rule (B. Abu-Manneh, *Khalwa and Rābiṭa in the Khālidī suborder*, in M. Gaborieau *et alii* (eds.), *Naqshbandîs. Cheminement et situation actuelle d'un ordre mystique musulmane*, Istanbul 1991). It invariably opposed the use of music and dancing. Very soon, with some exceptions, the Nakṣhbandiyya of the whole Ottoman Empire adopted the Khālidiyya form. Believing that the mystical way was primarily to be achieved through a profound knowledge of the Ḳur'ān and Sunna, and by scrupulous respect for the prescriptions of the *Sharīʿa*, the Nakṣhbandiyya set themselves firmly against the liberal-type reforms of the *Tanẓīmāt* era, reforms which *inter alia* gave rights similar to those of the Muslims to the infidels of the Empire. Their form of Ṣūfism, with its ensemble of very potent contemplative techniques, was practised strictly within the framework of the *Sharīʿa* (Th. Zarcone, *Expérience de la mort et préparation à la mort dans l'Islam mystique. Le cas des nakşibendî de Turquie*, in G. Veinstein (ed.), *Les Ottomans et la mort. Permanences et mutations*, Leiden 1996). Unlike the Bektāshiyya, the Nakṣhbandiyya supported the Ḥamīdian régime; Gümüshkhānawī Aḥmed Ḍiyā (1813-93), the order's main *sheykh*, had numerous disciples amongst the Palace staff. He linked the study of *ḥadīth* with his mystical teaching, a tradition which has maintained itself amongst his disciples to the present day. After the constitutional revolution of 1908-9, the Nakṣhbandiyya were to be generally found on the conservative wing of the Young Turk movement. Being both a Young Turk and a Nakṣhbandī, the *Sheykh ül-Islām* Mūsā Kāẓim (1850-1920) attacked heterodox Ṣūfism (i.e. the Bektāshiyya) and went so far as to preach the absorption of the *tekke* by the *medrese*, convinced that Ṣūfism had to be taught with the other Islamic sciences and not elsewhere.

In the 19th century, other Ṣūfīs, linked with mystical currents originating in the Arab world, like the Shādhilī Muḥammad Ẓāfir al-Madanī (1829-1903) or the Rifāʿī one Abu 'l-Hudā al-Ṣayyādī (1850-1909 [*q.v.* in Suppl.]), held, like the Nakṣhbandiyya, that Ṣūfism should range itself alongside Islamic orthodoxy. In other respects, the 19th and 20th centuries were notable for another interpretation of Ṣūfism which adopted a philosophical dimension close to Arabic Neoplatonism according to the commentary of several controversial mystics, such as Ibn al-ʿArabī, and even of those who had been condemned to death, such as Badr al-Dīn b. Ḳāḍī Samāwnā (1358-9 to 1416 [*q.v.*]), with a complete lack of interest in the structure of the *ṭarīḳa*; one could cite the Malāmī movement of Muḥammad Nūr al-ʿArabī (d. 1888) which rose out of the Ḥamzawī milieux of the Balkans and was very quickly introduced into Istanbul. The devotees of other orders were also marked by this rejection of the external aspects of Ṣūfism (the *tekke*, ceremonies, special garments, headgear, etc.) in the name of a return to a purified mysticism, but also under the influence of ideas of progress. One might mention here the name of Ḳushadalî Ibrāhīm Khalwatī (1774-1845) who rejected the *tekke* and proclaimed himself against celibacy and renouncement of the world (*terk-i dünyā*), two aspects of the mystical life which have often divided Ṣūfīs (Zarcone, *Pour ou contre le monde. Une approche des sociabilités mystiques musulmanes dans l'Empire ottoman*, in F. Georgeon and P. Dumont (eds.), *Vivre dans l'Empire ottoman. Sociabilités et relations intercommunautaires (XVIII^e-XX^e siècle)*, Paris 1997). At the end of the 19th century there arose from Nakṣhbandī circles Bedīʿ ül-Zamān Saʿīd Nūrsī (1876-1960 [*q.v.*]), founder of the Nurcu movement [see NURCULUK], and he likewise opposed the system of *ṭuruḳ* in the name of a return to the faith and to pure Ṣūfism.

The tradition of commentaries on the writings of Ibn al-ʿArabī and the *Mathnawī* of Djalāl al-Dīn Rūmī continued, with innovations appropriate to the age. Modernist Ṣūfīs and Ottoman intellectuals like Meḥmed ʿAlī ʿAynī, Riḍā Tewfīḳ, Ismāʿīl Fennī, Ferīd Ḳam and Aḥmed Ḥilmī Shehbenderzāde, showed a great interest in these two thinkers whose doctrines favoured a rapprochment of Islam with the ideas of the Age of the Enlightenment and even with such European philosophers then in vogue as Herbert Spencer in Britain and Henri Bergson in France. The old dispute over the orthodoxy or not of Ibn al-ʿArabī, specifically on the doctrine of the unity of existence attributed to him, *waḥdat al-wudjūd* [see WAḤDAT AL-SHUHŪD], continued and gave rise to lively debates between the Ṣūfīs and the *ʿulamāʾ*, going beyond the strict framework of religion and involving the Turkish philosophers affected by the Western schools of thought. The main commentator at this time on Ibn al-ʿArabī was Aḥmed ʿAwnī Ḳonuḳ (1868-1938) (his commentary on the *Fuṣūṣ al-ḥikam*, ed. M. Tahralı and S. Eraydın, 3 vols. Istanbul 1987). Regarding the *Mathnawī*, it continued to be studied within the framework of the special institutions for this (*dār ül-methnewī*) or by members of the Mawlawiyya; the most famous *dār ül-methnewī* was that founded at Istanbul by the *sheykh* Murād al-Bukhārī (d. 1848). It is characteristic of certain commentaries written on the *Mathnawī* in the 19th and early 20th centuries that they consider Rūmī's Ṣūfism in relationship to modern thought and Western science; such authors were ʿĀbidīn Pasha (d. 1907) (his commentary in 6 vols. Istanbul 1887-8), Ṭāhir ül-Mewlewī (1877-1928) (*Methnewī*, 14 vols. Istanbul 1963) and Kenʿān Rifāʿī (*Sherḥli Methnewī-yi sherīf*, Istanbul 1973). Furthermore, the interest in the press in general drove Ṣūfīs of all tendencies to found journals and to set forth their thoughts in a new literary manner (the journals *Muḥibbān*, *Ḥikmet*, *Djerīde-yi Ṣūfī*, *Taṣawwuf*, *Maḥfil*, etc.); in these can be found commentaries on the *Mathnawī*, biographies, historical texts, philosophical essays, mystical commentaries on the Ḳur'ān, etc.

One of the main conflicts between Ṣūfism and Islamic theology at the opening of the 20th century set the *sheykh* Ṣafwet (*Taṣawwufun ẓaferleri*, Istanbul 1924) against the theologian Izmirli Ismāʿīl Ḥaḳḳī (1868-1946) (*Ḥaḳḳîn ẓaferleri*, Istanbul 1922) concerning the question of *ḥadīth*, the crux being whether the *ḥadīth*s cited by the Ṣūfīs to justify their doctrines were reliable. Ismāʿīl Ḥaḳḳī, himself a member of the Shādhiliyya and under al-Ghazālī's influence, some time later distinguished, in a new elaboration of Islamic theology (*Yeñi ʿilm-i kelām*, Istanbul 1923-4, 151-2), between two forms of Ṣūfism, one linked with the Ḳur'ānic tradition and the other departing from it.

ii. *The Republican period.*

The creation of the Republic (1923) and the abolition in 1925 of the orders, involving the closing of the *tekke*s, led Ṣūfism, if it was to survive, into either bypassing the structures of the *ṭuruḳ* or going under-

ground, a situation which, in both cases, had consequences for the development of the practice of mystical doctrines. It was only in the 1950s, with a relaxation of state anti-religious measures, that some Ṣūfis were able to publish their writings. In general, Naḳshbandīs remained faithful to their orthodox line. This was set forth by Mehmed Zâhid Kotku (1897-1980) and his son-in-law Mehmed Esat Coşan, who today directs the "Iskenderpaşa community" in Istanbul (it inherits the *tekke* of Gümüshkhānawī Aḥmed Ḍiyā); by Abdülhekim Hüseynî (1902-72) and his son Mehmed Reşid Erol (1929-96), founder of the "community of Menzil Köyu" at Adıyaman in Anatolia; and by several other *sheykhs* stemming from the eastern parts of Anatolia (H. Algar, *The Naqshbandi order in Republican Turkey*, in *The pendulum swings back*, London 1996). It is important to note that many of these maintained unofficial *medreses* in which Ṣūfism had a major part. ʿAbd ül-Ḥakīm Arwāsī/Abdülhakim Arvasi (1864-1943), another Naḳshbandī, vigorously brought into prominence the teachings of Aḥmad Sirhindī [*q.v.*], the founder in India of the Naḳshbandiyya Mudjaddidiyya, and proponent of al-Ghazālī and his Ṣūfism, at the same time combatting the Shīʿa and the radical Wahhābiyya [*q.v.*]. His pupils and successors, the main ones being the writer Necip Fazil Kısakürek (1905-83), with his *O ve ben*, 6th ed. Istanbul 1990, and Hüseyn Hilmi Işık (b. 1911), founder of the Işıkcı movement, remained faithful to his thought but broke with several minor Naḳshbandī practices and the system of *tekkes*.

Already in existence at the end of the Ottoman period, the Nūrdju movement of Saʿīd Nūrsī, a former Naḳshbandī, can be classed as a crypto-Ṣūfī movement, despite its rejection of the *ṭarīḳa* and the *sheykh*'s authority, since it continues to venerate and to follow the teachings of such grand masters of Ṣūfism as ʿAbd al-Ḳādir al-Djīlānī and Aḥmad Sirhindī and since it describes itself as a return to pure Ṣūfism. This aspect had been reinforced by the Nurcu Fethullah Gülen, who fiercely defends a revolutionary view of instruction, proposing a harmonisation of the old *medrese* system with that of the secular schools (Lâtif Erdoğan, *Fethullah Gülen Hocaefendi "Kücük dünyam"*, Istanbul 1995; Eyüp Can, *Ufuk tur, Fethullah Gülen Hocaefendi ile*, Istanbul 1996 or 1997). On the other hand, in the last decade, certain Nurcus, called Aczmendî, have considered that it is time to re-establish the *tekke* system (*Risale-i Nur'da usûl ve program. Aczmendlik*, Istanbul n.d. [1996 or 1997]).

Ṣūfīs linked with other currents have contributed to the development of an Islamic mysticism during the time of the Republic, like the Khalwatī Muzaffer Ozak (1916-85), who attached central importance to music and dance movements. Like the Ḳādiriyya and Rifāʿiyya, he kept up the link between mystical doctrine and dancing, a link which became lost amongst the Mawlawiyya. Other Ṣūfīs, already only very loosely attached to the *ṭarīḳa* system, adapted immediately to the situation under the Republic, such as the Melāmīs, who kept up, at Istanbul, the tradition of Muḥammad Nūr al-ʿArabī: Ḥādjdjī Maḳṣūd Khulūṣī (d. 1929), Hasan Lutfī Susut and Mahmud Sadettin Bilginer (1909-83), Khulūṣī's son. Alevî doctrines were favoured by the Kemalist régime, and the Alevîs took over Bektāshī *tekkes* and for many years caused a grave confusion by identifying the Ṣūfī doctrine and practices of the Bektāshiyya with their own system, this despite the protests of a small group of Bektāshīs led by Bedri Noyan (1912-97), one of whose chief members was Turgut Koca (1921-97), who incarnated this tradition. Amongst the Alevîs, Bektāshī doctrine enjoyed a popularisation and acquired a folkloric nature which has profoundly deprived it of its real nature. Having almost totally disappeared within Turkey itself, the tradition of commentaries on the *Mathnawī* and on Ibn al-ʿArabī had a brilliant representative in Sarajevo in the person of Fayḍ Allāh/Fejzulah Hadžibajrić (d. 1990), who gave life to the last *dār ül-methnewī* of the Ottoman world.

7. In Muslim India.

(a) The pre-1800 period. See ṬARĪḲA. II. 7.

(b) In the 19th and 20th centuries.

i. *The study of Ṣūfism in colonial and post-colonial South Asia.*

The term and category "Ṣūfism" was first coined for European languages by British Orientalists based in India, particularly Sir William Jones (*The sixth discourse, on the Persians*, and *On the mystical poetry of the Persians and Hindus*, in *Works*, London 1807). While European travellers had previously remarked upon "dervishes" and "fakirs" only as exotic curiosities, Orientalists applied the term "Ṣūfī" largely to the literary phase of Ṣūfism, particularly as expressed in Persian poetry. These European scholars were persuaded that the elegant poems of Ḥāfiẓ and Djalāl al-Dīn Rūmī [*q.vv.*] could have nothing to do with the Islamic ("Mahometan") religion, and therefore they unanimously believed it to be derived from Indian sources; this position was reinforced by the anti-Ṣūfī attitudes of Shīʿī *mudjtahids* in Persia (Sir J. Malcolm, *History of Persia*, London 1815, ii, 382-3; Lt. J.W. Graham, *A treatise on Sufiism, or Mahomedan mysticism*,

in *Transactions of the Literary Society of Bombay*, i [1819], 89-119). British colonial officials, who were the main source of European studies of Ṣūfism in the 19th century, thus maintained a double attitude toward Ṣūfism: its literary classics (part of the Persian curriculum required by the British East India Company until the 1830s) were admired, but its contemporary social manifestations were considered corrupt and degenerate in relation to what was perceived as orthodox Islam (R.F. Burton, *Sindh*, London 1851, 198-231). This "golden age" ambivalence toward Ṣūfism was soon mirrored by the attitudes of Muslim reformists and fundamentalists (see below), creating a situation in which Ṣūfism quickly became a contested term, the meaning of which remains hotly disputed today. In Urdu, *taṣawwuf* still generally means a prescriptive ethical and spiritual ideal as it did in early Islamic texts, though sometimes it functions as a generic equivalent of mysticism. The English word "Ṣūfism" describes a variety of practices and doctrines with a debatable relationship to Islam (C. Ernst, *The Shambhala guide to Sufism*, Boston 1997).

Colonial officials encountered contemporary Ṣūfism primarily in the context of government regulation of the many shrines and saints' tombs found in India; under their administration, active Ṣūfī circles were no longer attached to major shrines, though *kh̲ānḳāhs* continued to function, particularly in the Pand̲j̲āb and Sind. British officials settled disputes over the administration of shrines as *waḳf* properties under Anglo-Mohammedan law (cf. G. Kozlowski, *Muslim endowments and society in British India*, Cambridge 1985). This was an issue particularly for large shrines, such as the tomb of Kh̲ʷād̲j̲a Muʿīn al-Dīn Čis̲h̲tī at Ad̲j̲mēr, or that of Bābā Farīd al-Dīn Gand̲j̲-i S̲h̲akkar at Pākpaṭṭan [*q.vv.*] (D. Gilmartin, *Shrines, succession and sources of moral authority in the Punjab*, in *Pakistan. The social sciences' perspective*, ed. A.S. Aḥmed, Karachi 1990, 146-64). Some Ṣūfīs, e.g. the Čis̲h̲tī leader Ḥād̲j̲d̲j̲ī Imdād Allāh (d. 1899), fought against the British during the 1857-8 uprising, and groups such as the Ḥurr (followers of the Pīr Pagārō in Sind) continued resistance up to 1947 (H.T. Lambrick, *The terrorist*, London 1970). But colonial policy reinforced the position of many hereditary *sad̲j̲d̲j̲āda-nis̲h̲īns* as rural landlords and notables, particularly in the Pand̲j̲āb. The process of legal regulation and dispute resolution of Ṣūfī shrines has continued in post-colonial India and Pakistan (S.K. Rashid, *Wakf administration in India*, New Delhi 1978).

There is considerable proto-anthropological material on Ṣūfī saints and shrines compiled by colonial officials in the Indian district gazetteers and surveys of the "castes and tribes" variety, often drawn from local oral tradition; most of these accounts regard Indian Ṣūfī practice as a Hinduised deviation from a supposedly pristine Islam (T.W. Arnold, art. *Saints and martyrs, Muhammadan, in India*, in *ERE*, xi, 68-73). Some Hindu scholars went so far as to interpret Ṣūfism in terms of Vedanta (L. Ramakrishna, *Panjabi Sufi poets*, London 1938). Politically-oriented studies of Ṣūfī saints and orders have focussed upon their relationship with the colonial government (Sarah Ansari, *Sufi saints and state power. The Pirs of Sind, 1843-1947*, Cambridge 1992) and the Pakistan movement (D. Gilmartin, *Empire and Islam. Punjab and the making of Pakistan*, Berkeley 1988). There is an increasing body of anthropological literature on Ṣūfī practice in Pakistan and India, both on the part of government officials (Census of India, *Beliefs and practices associated with Muslim pirs in two cities of India [Delhi and Lucknow]*, New Delhi 1966) and Euro-American researchers (K.P. Ewing, *Sufism and desire in Pakistan*, Durham 1997).

Post-colonial governments in Pakistan, under the impulse of modern nationalism, have promoted publications that focus on Ṣūfī literature (especially poetry in local languages) as the manifestation of national identity. The Folk Heritage Institute in Islamabad (*Lōk Wirt̲h̲a*) publishes a "Sufi Poets Series" consisting of editions and Urdu translations of prominent Ṣūfīs who wrote poetry in the regional languages of Pakistan (Pas̲h̲tō, Pand̲j̲ābī, Balōčī, Brāhuī, Hindkō, Sindhī). The Department of Charitable Trusts (*Maḥkama-i Awḳāf*), which controls the revenue of major shrines, publishes officially sanctioned biographies of Ṣūfī saints in Urdu that accord with the Islamic "Pakistan ideology," and high-ranking provincial and national officials regularly preside at the *ʿurs* anniversaries of Ṣūfī saints (Ewing, *The politics of Sufism: redefining the saints of Pakistan*, in *Journal of Asian Studies*, lii [1983], 251-68). Hagiographies organised along provincial or all-Pakistan lines also receive official sponsorship. The Government of India, in contrast, sponsors literature and films that identify Ṣūfīs as "secular nationalists" having more in common with Hindu bhaktī than with Islam (M. Jotwani, *Sufis of Sindh*, New Delhi 1986).

Although British historians largely ignored Ṣūfī writings, the post-colonial era has seen the growth of new scholarship in South Asia, initially at Aligarh Muslim University, focused on the history and literature of Ṣūfism of the "medieval" period. The studies of the Čis̲h̲tī order by K.A. Nizami have demonstrated how it is possible to follow the continuities in a *silsila* through the oral discourses (*malfūẓāt*) and letters (*maktūbāt*) that continued to be written in Persian up to the 20th century (Nizami, *Tārīk̲h̲-i mas̲h̲āyik̲h̲-i Čis̲h̲t*, Delhi 1953; see also C. Ernst and B. Lawrence, *Burnt hearts. The Chishti Sufi order*, London 1998). Biographical and historical studies of particular Ṣūfī saints and orders have been written in the history departments of South Asian universities, while Persian and occasionally Arabic text editions of Ṣūfī writings have been produced in language and literature departments. Particularly prized Persian writings by famous *s̲h̲ayk̲h̲s* of the Čis̲h̲tī and Naḳs̲h̲bandī orders have been printed for devotional use in Pakistan as recently as the 1960s. "Classical" Ṣūfī works in Arabic and Persian, from the 13th up to the 19th centuries, are widely available for popular use through modern Urdu translations in India and Pakistan, and occasionally in other languages as well. The vast majority of South Asian Ṣūfī texts in Persian still remains in manuscript, however (for a comprehensive list, see Aḥmad Munzawī, *Fihrist-i mus̲h̲tarak-i nusk̲h̲ahā-yi k̲h̲aṭṭī-yi Fārsī-i Pākistān*, Islamabad 1984-, esp. vols. iii [*ʿIrfān*] and xi [*Ẓindagī-nāma-yi pīrān*]). Only rarely have contemporary Ṣūfī writings in Indian languages been translated (C. Shackle (tr.), *The teachings of Khwaja Farid*, Multan 1978; idem (tr.), *Fifty poems of Khwaja Farid*, Multan 1983).

ii. *Ṣūfism and modern ideologies.*

Ṣūfī *pīrs* of the 20th century, despite their entrenched positions as landholders in the colonial system, were crucial to the support of the Pakistan nationalist movement because of their large followings, and Ṣūfī leaders have generally found nationalism to be a congenial doctrine. But the ideological proponents of modernism and Islamic fundamentalism have both seen Ṣūfism as a major opponent. Modernists like Iḳbāl [*q.v.*], in a critique similar to that of Orientalists, denounced institutional Ṣūfism for fatalism, passivity, and a false notion of the absorption of humanity in unity with God. Although Iḳbāl's writings invoke Ṣūfī figures such as Ḥallād̲j̲ and Rūmī [*q.vv.*], his concepts of terms

such as *khudī* and *ʿishk* [*q.v.*] owe as much to Bergson and Nietzsche. Secularised intellectuals and Muslim modernists alike saw Ṣūfī practice as mediaeval superstition and as a drug that stupefies the masses. Ṣūfī apologists have responded to this criticism by appropriating the rhetoric of science and announcing that Ṣūfism attains the goal of truth that science can only dream of (Wāḥid Bakhsh Siyāl, *Mushāhada-i ḥakk: islāmī rūḥānī sā'ins* [*science*], Karachi 1974).

Fundamentalists (echoing Orientalists and colonial officials) criticised Ṣūfism as Hindu-influenced idolatry of human beings, amounting to abandonment of "pure" Islam. Reformers like Ḥādjdjī Sharīʿat Allāh (d. 1840), founder of the Farā'iḍī movement in Bengal, and Sayyid Aḥmad Brēlwī (d. 1831 [*q.v.*]) in the Pandjāb, were militantly opposed to certain forms of Ṣūfism, Shīʿism, and local adaptations of Islam; for this reason, the British regarded them as "Wahhābīs," although some reformers were trained in Ṣūfī orders. Abu 'l-ʿAlā' Mawdūdī (d. 1979), founder of the fundamentalist Djamāʿat-i Islāmī, rejected Ṣūfī practice despite his upbringing in a Čishtī family, though his authoritarian leadership style has been interpreted as an extension of the master-disciple relationship (S.V. Nasr, *Mawdudi and the making of Islamic revivalism*, Oxford 1996). Defenders of Ṣūfism argue that Ṣūfism is the spiritual essence of Islam, and at the same time they refute earlier Orientalist theories of the non-Islamic origins of Ṣūfism (W.B. Sial Rabbani, *Islamic Sufism. The science of flight in God, with God, by God, and union and communion with God, also showing the tremendous Sufi influence on Christian and Hindu mystics and mysticism*, Lahore 1984). Nakshbandī groups concerned about Islamisation have apparently de-emphasised meditation practices (the *laṭā'if*) but have redefined discipleship as a basic Islamic religious duty (A. Buehler, *Masters of the heart. Naqshbandi Sufism in colonial India*, Columbia, S.C. 1997).

The debate over Ṣūfī doctrine and practice in South Asia has crystallised around two North Indian *madrasas* founded in the colonial period, the *ḥadīth*-oriented Deoband school [*q.v.*] and the devotional Barēlwī school. Although the founders of Deoband were largely drawn from the Ṣābirī branch of the Čishtiyya, they rejected practices such as *samāʿ* [*q.v.*], and *ziyārat* as well as excessive veneration of the Prophet or Ṣūfī masters (Barbara Metcalf, *Islamic revival in British India. Deoband, 1860-1900*, Princeton 1982). The Barēlwīs, followers of Sayyid Aḥmad Riḍā Khān (d. 1921) of Ray Bareilly, emphasise the necessity of intercession by the Prophet and, secondarily, the Ṣūfī *shaykh*; as in other Muslim regions, the issue of saintly mediation has thus become highly controversial (U. Sanyal, *Devotional Islam and politics in British India. Ahmad Riza Khan Barelwi and his movement, 1870-1920*, Oxford 1996). Pietistic missionary groups such as the Tablīghī Djamāʿat [*q.v.*] founded by Muḥammad Ilyās (d. 1944) have appropriated the ethical emphasis of Ṣūfism while rejecting ritual, metaphysics, and sainthood (M.A. Haq, *The faith movement of Mawlana Muhammad Ilyas*, London 1972). Polemics and apologetics from these different perspectives dominate modern discussions of Ṣūfism in Urdu and in English.

iii. *Ṣūfism in print.*

Probably the greatest social transformation in modern Ṣūfism derives from the introduction of print to South Asia early in the 19th century, principally in the form of calligraphed lithography (movable Arabic type was preferred by the British). As in other regions, Ṣūfī orders were among the first to make use of the new technology to distribute teachings of contemporary teachers and to preserve the classical texts of the past. The revolution entailed by printing Ṣūfī texts lay in the possibility of mass distribution of inexpensive books to the middle-class public, in place of the restricted access to manuscripts and oral teachings among a privileged few. Printing of Ṣūfī texts in India was carried out principally in the northern cities of Dihlī, Kānpūr, and Lak'hnaw, often at presses (such as Nawāl Kishōr in Lak'hnaw) run by Hindu *munshīs*. The number of Persian texts printed in India in the 19th century was considerably higher than the total printed in Persia or Central Asia. Leaders of Ṣūfī orders such as the Čishtiyya, Nakshbandiyya, Ḳādiriyya and Suhrawardiyya orders [*q.vv.*] commissioned publication of both early and contemporary Ṣūfī texts, initially in Persian but increasingly in Urdu translation (C. Ernst, *The study of Sufism in Pakistan*, unpubl. paper for American Institute for Pakistan Studies Workshop, 1996). Their publications included periodicals, and *shaykhs* like the Nakshbandī leader Djamāʿat ʿAlī Shāh (d. 1951) sometimes required their disciples to subscribe (Buehler). Some Ṣūfīs (the Čishtī leaders Dhawḳī Shāh, d. 1951, and Ḥasan Niẓāmī, d. 1955) were trained in modern universities and made use of the press and European literary genres such as the novel to communicate their insights in Urdu and English to wider audiences.

Beyond the Gangetic basin, the Pandjāb, and the Urdu-speaking centres of the Deccan (U. Khālidī and M. ʿAḳīl, *Dakan kā ʿahd-i islāmī, 1300 tā 1950, ēk bunyādī kitābiyyāt*, Watertown, Mass. 1993, 58-65), very little scholarly work has been done on Ṣūfī activities in the modern period, such as the transmission of Ṣūfī orders from Kerala [see MAPPILA] to Ceylon in the 19th century. While Urdu has been an important medium for disseminating the full range of Ṣūfī literature, Indian languages that employ non-Arabic scripts (Bengali, Tamil, Malayalam) have also been used for Ṣūfī publications. In the Tamil country, tombs like that of Shāh al-Ḥamīd (d. 1558) at Nagore are still centres of pilgrimage for Muslims, Hindus, and Christians, and hagiographies in Tamil remain popular (V. Narayanan, *The Zamzam in Nagore: worshipping Shahul Hamid in a Tamil landscape*, unpubl. paper). The Mā'idjbhandārī Ṣūfī order, founded in Chittagong by Sayyid Aḥmad Allāh (1826-1906) with links to the Ḳādiriyya, has engaged in extensive proselytisation and publication of biographies and songs in Bengali, with support from the ruling circles of contemporary Bangladesh (M.A. Latif, letter of 1992). The tantric bards known as the Bāuls gained cultural respectability after the 1920s when Rabindranath Tagore popularised the Bengali songs of Lālan Fakir (d. 1890); despite their religious ambiguity, the presence of Ṣūfī symbolism in their writings is unmistakeable (C. Solomon, *Bāul songs*, in D. Lopez, (ed.), *The religions of India in practice*, Princeton 1996, 187-208).

iv. *The internationalisation of South Asian Ṣūfism.*

Devotion to Indian Ṣūfī saints spread to the Malay peninsula, South Africa and the Caribbean in the 19th century as the British exported indentured laborers to those regions from India. In the 20th century, Europeans were exposed to visiting Indian Ṣūfī teachers such as ʿInāyat Khān (d. 1927), who was trained as a Čishtī but presented Ṣūfism as a universal religion detached from normative Islam. His teachings have been perpetuated by Americans (Rabiʿa Martin, Samuel Lewis) as well as family members (Pir Vilayat Khan) in Europe and America. Bawa Muhaiyaddeen (d. 1986), a Tamil Ṣūfī from Sri Lanka, acquired a significant following (both Muslim and non-Muslim)

after moving to the U.S.A. in 1971, and his tomb outside Philadelphia has now become a place of pilgrimage. South Asian Muslim immigrants and students in England, Canada, and the U.S.A. have established branches of the Čishtiyya and the Nakshbandiyya in their new homes along traditional lines. European and American converts to Islam have also joined South Asian Ṣūfī orders; the principal *khalīfa* of Dhawḳī Shāh in Pakistan was Shahīd Allāh Farīdī (d. 1978), an Englishman formerly named Lennard, whose Urdu writings have been published in Karachi. The principal ideological change for Ṣūfism in the modern period is the option of Ṣūfism without Islam, something barely conceivable before the 20th century. This new possibility is partly the result of the efforts of Western scholars and fundamentalists, both of whom regard Ṣūfism as separate from "pure" Islam, but it is partly the natural effect of ecumenism and the modern search for spirituality. Ṣūfī groups in Europe and America also give a much more prominent and public role to women than was previously customary in South Asia. Cultural products of Ṣūfism have attained great popularity in the West, from not only the Middle East (the Whirling Dervishes and Rūmī's poetry) but also South Asia (*ḳawwālī* music by the Sabri Brothers and Nusrat Fateh Ali Khan). At the end of the 20th century, South Asian Ṣūfism has found large new audiences through electronic communications on an international scale.

Bibliography: Given in the article.

8. In Chinese Islam.

It is likely that the Muslims from the Middle East or Central Asia, drawn to China in the 13th-14th centuries by the Mongol emperors of the Yüan dynasty, brought with them Ṣūfī practices. But this is only a supposition since, in our present state of knowledge, we know nothing about the religious life of the Muslims of China before their complete sinicisation. We have to wait till the middle of the 17th century and the upheavals which mark the end of the native Ming dynasty and its replacement by the Manchu dynasty of the Ch'ing (or Qing) in order to find a specifically Islamic Chinese literature, which from then onwards is rich, mature and self-assured.

i. *Literary Ṣūfism.*

As a general rule, the great Muslim thinkers of the 17th-19th centuries adopted a uniform approach. They give an exposition for their coreligionists and compatriots, in Chinese, of the complete foundations of the faith, beginning with a sacred history which places the mystical and ancient past of China within the continuity of the enfolding of Biblical history. They continue with a dogmatic system of morality set out in Confucian terms and with the believer's obligations set forth in a clear language which is quasi-vernacular. Finally, they set forth a mysticism which is undeniably Ṣūfī.

If speculative theology shows itself as being consistent from the time of the first works composed, sc. the time of those of Wang Tai-yü (Wang Daiyu, *ca.* 1580-1658?), published between 1642 and 1657, this theology nevertheless evolves from one author to another over the course of the two succeeding centuries whilst remaining, so far as it seems, not rooted in any particular time and with no sectarian links. In order to acquire prestige, this theology often claims to stem from the translation of some Arabic or Persian work. Sometimes such originals are imaginary; but even when these actually exist and are as famed as the *Mirṣād al-ʿibād* of Nadjm al-Dīn Rāzī Dāya [*q.v.*] or the *Lawāʾiḥ* of Djāmī [*q.v.*], works which were highly valued in Chinese Islam, the alleged translation implies a total re-writing and remodelling in order to translate the philosophical notions and concepts of Ṣūfism into an acceptable Chinese mode of thought. From this, an original literature has resulted, one unknown to Islamic specialists for want of being studied by Sinologists.

The great Chinese *ʿulamāʾ* were actually forced to use as best they could the lexicographic and conceptual material at their disposal—Neo-Confucian, Taoist and Buddhist. The believer's journey towards "absorption" with the divine (*ho-hui, ho-ch'i*), which is a "return to origins" (*kuei-pen, fan-pen, hai-yüan*) is made, they explain, by "transformation" (*hun-hua*) through attaining the "Perfect Way" (*chih-tao*) or "Vehicle of the Truth" (*chen-ch'eng*, i.e. *ḥaḳīḳa*)—*tao* being the basic concept of Taoism and *ch'eng* that of Buddhism. The postulant seeking illumination has first of all followed, at a lower level, the "Usual Way" (*ch'ang-tao*) or the "Vehicle of the Rites" (*li-ch'eng*) or "Vehicle for Religion" (*chiao-ch'eng*, i.e. the *Sharīʿa*) in order to understand the letter of the "Five meritorious acts" (*wu-kung*, i.e. *al-arkān al-khamsa*); then he follows the "Middle way" (*chung-tao*) or "Vehicle of the Way" (*tao-ch'eng* or *ṭarīḳa*) which allows him to discover the spirit of the five meritorious acts, all this under the direction of a "Head of the Way" (*tao-chang* or *shaykh*), a "Ship of compassion on the sea of illusions", according to the Buddhist formula normally applied to Kuan-yin, the Chinese avatar of Avalokiteçvara. The journey of the believer is comparable to the search for "personal perfection" (*hsiu-shen*) recommended by Confucius and Mencius and set in the centre of the Neo-Confucian ethics of the 16th-17th centuries. For "he who knows himself knows his God" (*jen-chi jen-chu*). As a 19th-century author, Ma K'ai-k'o (Ma Kaike), from Yunnan, sets forth, by following the way of gradual attainment of perfection, the believer "acts as in Confucianism, but progresses to a supplementary degree" (*Ta-hua tsung-kuei* "The general return [to God] of the great transformations", 1865, ed. Peking 1922-3, ii, 46). This supplementary degree is attained thanks to the ascetic practice of the thirty "levels" (*p'in*, the "stations", *maḳāmāt*), described in detail by the *Chen-kung fa-wei* "The secret unveiled of truly meritorious acts" (whose author and date are problematical: the end of the 17th or the end of the 18th century ?).

In the thread of written discourse, the Arabic terms—or more exactly, Arabo-Persian ones, since the influence of the great religious centres of Central Asia was strongly felt in Chinese Islam—are not only translated but also transliterated phonetically, so far as the Chinese characters allow. Thus *dhikr* is written phonetically as *ch'i-k'e-erh*, and the *shahāda* is written and recited as *lio-i-lio-he-ying-lan* (= *lā [ilāh] illā 'llāh*) and, at the end of the formula, *Mu-han-me-te-la-liu-lun* (= *Muḥammad rasūl [Allāh]*). Since Chinese Muslims pronounce Arabic in a manner much deformed by Chinese phonetics, it is not surprising that, as pilgrims to Mecca, they have been looked down upon by Arabic-speakers and have had the reputation of following a bastardised form of religion. However, their literature proves that this is not the case: the use of a terminology and a juggling with images borrowed from Chinese culture has not resulted in a degenerate syncretism. The message, the Ṣūfī one in particular, has remained distinctively Muslim. According to a Chinese historian of world religions (Li Xinhua, 1983, 76), Nakshbandiyya adherents are said to be recognisable by their preference for Neo-

Confucian thought, whilst the partisans of the Ḳādiriyya are said to incline towards a choice of Taoist and Buddhist terms; but this is, for the moment, merely a working hypothesis.

The fate of the works of literary Islam, so strongly marked by Ṣūfism, is curious. Those which emanate from the most prestigious thinkers—foremost amongst which is the Nanking scholar Liu Chih (Liu Zhi, *ca.* 1662-70 to *ca.* 1730-6), whom one of his 19th-century admirers, Ma Lien-yüan, considered as the Chinese Ibn al-ʿArabī—have been constantly republished up to the present time, and in the most varied circumstances: in the midst of civil war in the 19th century, on the occasion of the modernist movement of the 1920s and in the period of relaxation and re-Islamisation of the post-Maoist years, and in Taiwan. They symbolise a feeling of identification amongst the community, even—and above all—for adherents of the Ikhwān movement, close to the government in the Republican period as also in the Communist period. In former times published by the mosques and spread by them alone (at the present time, in continental China, in rivalry with the institutes of Islamic studies), they were accessible to all the faithful of the mosque who were sufficiently literate. Also, the fact that in 1993 the most typical work and the one most appreciated by believers, "The Arabian philosophy", *T'ien-fang hsing-li* of Liu Chih (*ca.* 1704), has been "translated" into the spoken language, shows a continuance of interest in speculative Islamic literature.

ii. *The Ṣūfism of the brotherhoods.*

In China, the popular Ṣūfism of the brotherhoods has its historical bases in the northwestern part of the country, where the intercontinental trade route which we call the "Silk Road" comes out. The late Joseph Fletcher (1934-84) showed in a magisterial way how this Ṣūfism was connected with the movements of worldwide Ṣūfism and attached itself to various *silsilas* of the Middle East and Central Asia. From the 15th century onwards, Naḳshbandī activists from the Altishahr or "Six cities" of the Tarim basin (in the southern part of modern Sinkiang), themselves shaped by the Naḳshbandīs of Transoxania, came to preach in the western part of China; and, in the same way, in the second half of the 17th century, the grandson of Makhdūm-i Aʿẓam (the ancestor of the Khodjas of the Altishahr [see KHODJAS in Suppl.]), Muḥammad Yūsuf, and also, above all, the latter's son, Hidāyat Allāh, called Khōdja Āfāḳ (d. 1694), the founder of the Āfāḳiyya spiritual lineage. At the end of the 17th century, three Chinese spiritual lineages, the best known of which was to become that of Ma Lai-ch'ih (1673-1753) at the head of the "Flowery Mosque", *Hua-ssu*, claimed descent from Khodja Āfāḳ and, through him, from the Naḳshbandiyya. The founder of the oldest known Chinese *ṭarīḳa*, a Ḳādirī one, Ch'i Ching-i (1656-1719), was equally influenced by him.

In the second half of the 18th century, the propagator of the Naḳshbandī revival, who had been trained in Yemen and advocated a strict enforcement of the *Sharīʿa* and the abandonment of the cult of sacred tombs, Ma Ming-hsin (1719-81 [*q.v.*]), founded an indigenous *ṭarīḳa* called the Djahriyya (*Che-he-lin-yeh*) with *dhikr* uttered out loud. This was called by outside observers the "New Religion", *Hsin-chiao*, in contrast to the earlier movements derived from the Āfāḳiyya, called Khufiyya (*Hu-fei-yeh*) with *dhikr* formed within the mind only, or, seen from the outside, the "Old Religion" (*Lao-chiao*). (It should be noted that, in the 19th-20th centuries, the New/Old Religion dichotomy embraced a set of realities which varied according to circumstances.) It was from the rivalry between these two Naḳshbandī trends of thought that there resulted, on several occasions, the bloody troubles which culminated in the putting to death of Ma Ming-hsin in 1781 and the execution in 1871 of his fifth successor, Ma Hua-lung (1810-71 [*q.v.*]), together with the depopulation of whole Muslim regions of Shensi, Ningsia and Yunnan [*q.vv.*] by the Chinese imperial armies which exterminated or deported masses of population. From the last quarter of the 19th century onwards, the centres of authority of the Ṣūfī brotherhoods were brought together within a restricted area, in comparison with the immense size of China, one not more than 350 km/220 miles from north to south between the 35th and 38th parallels and 500 km/310 miles from east to west between Kansu, Ningsia and west of the Ch'inghai. Nevertheless, from this time onwards, they swarmed forth across the whole of China, in the wake of commercial enterprises which were linked with missionary work.

The *ṭuruḳ* introduced into China—the Ḳādiriyya, Naḳshbandiyya in their various forms, and Kubrawiyya—after the second or third generation of spiritual masters, split into small groups called *men-huan*: a *men-huan* is at one and the same time the hereditary line of a *shaykh*, the group of faithful under the domination and authority of that line, the considerable ensemble of goods and lands owned by it, worked and protected for it by the faithful, and finally, the holy places which bear its charisma. The *men-huan* re-appeared after the Cultural Revolution. A Djahrī master of the eighth generation, Ma T'eng-ai, was from 1980 till his death in 1991 the deputy-governor of Ningsia and manager of a commercial house trading with the Near East. But in the 1990s, the survival of the *men-huan* is threatened as much by the fundamentalism of the Ikhwān, which is becoming more and more powerful, as by the course of rivalries within the *men-huan* themselves.

9. In Africa south of the Maghrib during the 19th and 20th centuries.

For the sake of convenience, Ṣūfism will be examined here under the following headings: (i) doctrinal developments, (ii) missionary Ṣūfism, (iii) Ṣūfī involvement in the political sphere, and (iv) opposition to Ṣūfism.

i. *Doctrinal developments.*

Two major trends are discernible, not mutually exclusive. Chodkiewicz has pointed out the pervasive influence of Ibn al-ʿArabī's teachings in the 19th century, amounting to an "Akbarian" revival, and this is as true in Africa as elsewhere. Whether by direct reading of *al-Futūḥāt al-makkiyya* or filtered through secondary sources of Akbarian ideas, such as the writings of ʿAbd al-Wahhāb al-Shaʿrānī (d. 963/1565) and ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731) [*q.vv.*], the ideas of Ibn al-ʿArabī have been diffused in many parts of Africa. This influence is particularly evident in the teachings of Aḥmad al-Tidjānī and his major West African disciple *al-Ḥādjdj* ʿUmar b. Saʿīd (d. 1864). But it is also evident in the writings of such diverse figures as ʿAbd al-Ḳādir al-Djazāʾirī, Māʾ al-ʿAynayn al-Ḳalḳamī, Muḥammad Aḥmad the Mahdī of the Sudan, Aḥmad al-ʿAlawī al-Darḳāwī, and ʿAbd al-Salām al-Fītūrī, founder of the Libyan ʿArūsiyya.

Familiarity with Ibn al-ʿArabī's thought is also to be found in Aḥmad b. Idrīs, though he is more typically representative of the second trend, that is, the *ṭarīḳa Muḥammadiyya*, which stresses imitation of the Prophet in word and deed and seeing him in a waking state. His anti-madhhabist teachings, which advocate individual resort to Ḳurʾān and Sunna in matters of personal conduct, are reflected in the writings of one of the most important 19th-century Ṣūfī personalities in Africa, Muḥammad b. ʿAlī al-Sanūsī [*q.v.*]. Al-Sanūsī quotes the definition of the *ṭarīḳa Muḥammadiyya* of Abu 'l-Baḳāʾ Ḥasan al-ʿUdjaymī (d. 1113/1702): "This Way is the inward immersion of the adept in the contemplation of Muḥammad's person, whereby he imitates the Prophet in word and deed, occupies his tongue with pronouncing blessings upon him at all times, whether in retirement or when appearing in public, so that honouring the Prophet dominates his heart to such an extent and penetrates his interior so deeply that when he merely hears the Prophet's name, he begins to shake, his heart is overwhelmed beholding him, and the physical appearance of the Prophet manifests itself before the eye of his inner vision" (*al-Manhal al-rawī*, in *al-Madjmūʿa al-mukhtāra*, Beirut 1968, 49-50, tr. B. Radtke in his *Ijtihād and Neo-Sufism*, 915). An important influence on Aḥmad b. Idrīs and his school was the teaching of ʿAbd al-ʿAzīz al-Dabbāgh (said to be inspired directly by al-Khaḍir) as reported in the *K. al-Ibrīz* of Aḥmad b. al-Mubārak al-Lamaṭī; it was also extensively quoted in the Tidjānī manual *Rimāḥ ḥizb al-raḥīm* of *al-Ḥādjdj* ʿUmar.

A third trend, quite unrelated to the two previous ones, may also be noted: that is, the increased incorporation into certain "popular" Ṣūfī orders, such as the ʿĪsāwiyya and Ḥamādsha of Morocco, of rituals of blood sacrifice, spirit exorcism and trance, at least partly under the influence of freed slaves of West African origin. Another manifestation of the amalgamation of Ṣūfism and African spirit cults is to be observed in phenomena such as the "*dīwān*s of Sīdī Bilāl" of Algeria, the rituals of the Gnāwa of Morocco, the Stambali of Tunisia and the Ṭumbura of the Sudan (also found among African slaves in Mecca, according to C. Snouck Hurgronje, *Mecca in the latter part of the 19th century*, Leiden 1931, 11-12).

ii. *Missionary Ṣūfism.*

In the course of the 19th and the first half of the 20th century, Ṣūfī teachings were disseminated over wide areas of the continent through the activities of certain brotherhoods, and in many cases they were the conduit for conversion to Islam. The Tidjāniyya gained a considerable number of adherents in Morocco and Algeria, and *zāwiya*s were established in Egypt and the Sudan. But it is in Mauritania and West Africa that its spread has been most noteworthy. In southern Mauritania it was taken up by the Idaw ʿAlī under the influence of Muḥammad al-Ḥāfiẓ (d. 1247/1830), and from there it spread into Senegal and Guinea. *Al-Ḥādjdj* ʿUmar b. Saʿīd (d. 1865 [*q.v.*]), was made a *khalīfa* of the order by Muḥammad al-Ghālī and subsequently initiated a *djihād* in Guinea and Mali which led to conversion to Islam and a short-lived Tidjānī "empire". His nephew, Muḥammad al-Hāshimī b. Aḥmad b. Saʿīd, known as Alfa Hāshim (d. 1349/1931), fled French colonialism and established a base in the Ḥidjāz, which catered to African Tidjānīs, but also, because of its location in the lands of pilgrimage, led to the propagation of the Tidjāniyya among Muslims from other areas of the world (e.g. Indonesia, ʿIrāḳ and the Balkans). In the 20th century, the chief African propagandist for the order has been the Senegalese *shaykh* Ibrāhīm Niasse (d. 1975), who has made the Tidjāniyya an order of mass participation, not only in Senegal but also in northern Nigeria and Ghana. His teachings, which emphasise spiritual tutelage (*tarbiya*), have also found favour in Mauritania, Chad and the western Sudan.

Brotherhoods based on the teachings of Aḥmad b. Idrīs have also spread far and wide. The Sanūsiyya [*q.v.*] established a network of *zāwiya*s in eastern Libya and throughout Chad to as far as Kano in northern Nigeria. The Khatmiyya, founded by Muḥammad ʿUthmān al-Mīrghanī (d. 1268/1852), a Meccan who went to the Sudan to propagate the teachings of Aḥmad b. Idrīs, gained many adherents in the Sudan and Eritrea [see MĪRGHANIYYA]. Another Idrīsian brotherhood, the Rashīdiyya-Ṣāliḥiyya, was also successful in the Sudan, and in Somalia, where it was propagated by the anti-colonial leader Muḥammad ʿAbd Allāh Ḥassān [*q.v.*].

Older brotherhoods also enjoyed increased influence in the 19th century and were agents for conversion to Islam. The Ḳādiriyya enjoyed considerable success in West Africa through its Mukhtāriyya branch deriving from the Kunta scholars [see KUNTA] of the late 18th and 19th centuries. Disciples of the Kunta *shaykh*s carried their teachings to the savannah and forests, and were proselytisers for the faith. Shaykh ʿUthmān b. Muḥammad Fodiye [*q.v.*], the Fulani *mudjāhid* (d. 1232/1817), traces one of his *ṭarīḳa* lines through the Kunta *silsila*. Through Shaykh ʿUthmān, the Ḳādiriyya became the quasi-official *ṭarīḳa* of the state he founded in northern Nigeria, and through his *djihād* many were converted to Islam. Aḥmad

Lobbo (also known as Seku Aḥmadu, d. 1260/1844), the Fulani *mudjāhid* of Masina (Mali), also had a Ṣūfī affiliation to the Ḳādiriyya-Mukhtāriyya. In Senegal, Aḥmad Bamba (d. 1927) founded an entirely new order derived from the Ḳādiriyya, the Murīdiyya [*q.v.*], which, by preaching a doctrine of *laborare est orare*, has played an important role in developing agriculture, and with its economic success has come powerful national political influence. There has also been a Ḳādiriyya revival in Nigeria in recent years led by Muḥammad al-Nāṣir b. Muḥammad al-Mukhtār al-Kabarī of Kano (locally known as Nasiru Kabara, d. 1996). Sometimes Ṣūfī brotherhoods have been agents of "reconversion"—the diffusion among rural or nomadic Muslims of normative urban Islam; such was the case with the Ḳādiriyya-ʿUthmāniyya in Nigeria, the Sanūsiyya in Libya and Chad, and the Madjdhūbiyya-Shādhiliyya in the eastern Sudan. Many Ṣūfīs of sub-Saharan Africa were also scholars of *fiḳh*, notably the Kano Tidjānīs of the Ṣalgha tradition.

iii. *Ṣūfī involvement in the political sphere.*

In addition to what has been noted above, Ṣūfī movements worked, on the one hand, to resist colonial penetration, and on the other, at least in some cases, to establish a working relationship with colonial régimes. Some of the more striking examples of Ṣūfī involvement in armed struggle in opposition to colonialism are as follows: resistance to French penetration of Algeria led by the Ḳādirī *shaykh* ʿAbd al-Ḳādir al-Djazāʾirī; resistance to Italian penetration of Chad by the French and later Libya by the Italians, spearheaded by the Sanūsiyya brotherhood; resistance to French penetration of Mauritania led by the Ḳādirī *shaykh* Māʾ al-ʿAynayn [*q.v.*] (who founded a new branch the ʿAyniyya); and resistance to British colonialism in Somalia from 1900 to 1920 led by Muḥammad ʿAbd Allāh Ḥassān. During the colonial period, relationships between brotherhoods and colonial régimes were in some cases good, even close, while in others they were cold or downright hostile. In North Africa, the Tidjānī leaders were on amicable terms with the French, as was in Senegal Seydou Nourou Tall, who became a virtual mouthpiece of the French colonial order in West Africa. On the other hand, the Ḥamālliyya Tidjānīs were fiercely opposed to the French, while the Tidjāniyya leadership of Kano was under constant British surveillance. The French exiled both Ḥamallāh and the Murīdiyya leader Aḥmad Bamba. In the Sudan, the Khatmiyya under Sayyid ʿAlī al-Mīrghanī developed its own political party, the National Unionist Party (*ḥizb al-ittiḥād al-waṭanī*) in opposition to the Umma Party of Sayyid ʿAbd al-Raḥmān al-Mahdī, who organised his Anṣār along *ṭarīḳa* lines. In Tanzania, the Ḳādiriyya brotherhood has played a significant role in national politics since independence.

iv. *Opposition to Ṣūfism.*

The most vigorous opposition to Ṣūfism in Africa has been that directed against the Tidjāniyya brotherhood. Attacks were directed against Aḥmad al-Tidjānī's claims that he had received direct authorisation for his teachings from the Prophet Muḥammad, that he was the *ḳuṭb al-aḳṭāb*, that reciting certain Tidjānī litanies (notably the *ṣalāt al-fātiḥ*) brought more merit than reciting the Ḳurʾān, and that those who see him or serve him would enter paradise without judgment. There has been a virtually constant stream of polemic in Mauritania since soon after the brotherhood reached there. An attack by the poet Idyaydj al-Kumlaylī (d. 1854) was responded to by Muḥammad b. Muḥammad al-Ṣaghīr b. N'būdja in his *al-Djaysh al-kafīl bi-akhdh al-thaʾr mimman salla ʿalā ʾl-shaykh al-Tidjānī sayf al-inkār*. This was then attacked by Muḥammad al-Khaḍir b. Māyābā (d. 1925), a Ḳādirī adept, in his *Mushtahā ʾl-khārif al-djānī fī zalaḳāt al-Tidjānī al-djānī*, which was attacked by several scholars, most importantly by Muḥammad Niasse (d. 1959) in his *al-Djuyūsh al-ṭullaʿ bi ʾl-murhafāt al-ḳuṭṭaʿ ilā Ibn Māyābā akhī ʾl-tanaṭṭuʿ*. In Nigeria in the 1970s and 1980s, both Tidjānīs and Ḳādirīs came under attack in sweeping denunciations of Ṣūfism led by a neo-Wahhābī scholar Abū Bakr Gummi (d. 1994), whose *al-ʿAḳīda al-ṣaḥīḥa bi-muwāfaḳat al-sharīʿa* (publ. Beirut 1392/1972) drew numerous responses. More specifically directed against the Tidjāniyya were the writings of an ex-Tidjānī adept, Muḥammad al-Ṭāhir Mai Gari, whose attacks elicited rebuttals from two Mauritanian scholars as well as from Nigerian Tidjānīs (see *Arabic literature of Africa* (*ALA*), ii, ch. 13, for an account of the Nigerian polemical literature).

Bibliography: *ALA*, i (for the Sudan down to 1900), ii (for Nigeria and Chad), within each of which volumes there is an abundant bibliography of both primary and secondary sources for the regions concerned); E. TASBĪḤ [see SUBḤA].

TASHAHHUD (A.), verbal noun of form V of *sh-h-d*, the recitation of the *shahāda* [*q.v.*], especially in the *ṣalāt* [*q.v.*]. It must, however, be kept in mind that in this case *shahāda* comprises not only the *kalimatānⁱ*, but (1) the following formula: "To God belong the blessed salutations and the good prayers"; (2) the formula "Hail upon thee, O Prophet, and God's mercy and His blessing; hail upon us and upon God's pious servants"; and (3) the *shahāda* proper, consisting of the *kalimatānⁱ*.

The above form of the *tashahhud* is in keeping with a tradition on the authority of Ibn ʿAbbās, beginning thus: The Messenger of God used to teach us the *tashahhud*, just as he used to teach us a sūra from the Ḳurʾān (e.g. Muslim, *Ṣalāt*, trad. 60). In the corresponding tradition on the authority of Ibn Masʿūd (*loc. cit.*, trad. 56; Aḥmad b. Ḥanbal, *Musnad*, i, 422) in the formula under (1), the word "blessed" is lacking; in Abū Mūsā al-Ashʿarī's tradition it runs "To

God belong the good salutations, the prayers".

According to al-Nawawī, in his commentary on Muslim, *loc. cit.*, the learned scholars admit the three forms of the *tas̲h̲ahhud*. The *madhhabs* do not agree, however, on the question which is the best one.

The *tas̲h̲ahhud* occurs twice in the *ṣalāt*: at the end of each pair of *rakʿas* and at the end of the whole *ṣalāt*. In the latter case, it may be followed by personal prayers and is concluded by the twofold *taslīma*.

Padwick, *Muslim devotions, a study of prayer manuals in common use*, London 1961, 64, 126-51. (A.J. Wensinck-[A. Rippin])

TAS̲H̲BĪH (A.), literally "the act of comparing, comparison".

1. In rhetoric.

"Simile" or "(explicit) comparison" is one of the most important literary techniques in all literatures. It is especially frequent in pre- and early Islamic Arabic poetry, where metaphor [see istiʿāra] is less common than in ʿAbbāsid poetry, but it remained a central figure of speech, forming the main "point" of innumerable lines and epigrams. When describing objects, persons or events, classical poets are not content with "factual" description but feel compelled to produce similes, often in rapid succession and taken from disparate semantic fields. Although, already in the earliest period, there are many standard comparisons and conventions (hero: lion; generous man: sea; teeth: camomile or hailstones; etc.), the originality and creativity of a poet is often judged on the basis of his striking new similes or subtle variations on existing ones. The importance of *tas̲h̲bīh* is reflected in literary criticism and theory: it is called one of the four "pillars" (*arkān*) of poetry (al-Marzubānī, *al-Muwas̲h̲s̲h̲ah*, Cairo 1965, 273) and is listed together, somewhat incongruously, with basic modes such as panegyric and love poetry by T̲h̲aʿlab [*q.v.*] in his *Ḳawāʿid al-s̲h̲iʿr* (Cairo 1966, 37) and Ḳudāma b. D̲j̲aʿfar [*q.v.*] in his *Naḳd al-s̲h̲iʿr* (Leiden 1956, 23). The several anthologies of similes, thematically arranged according to the *primum comparationis*, of which that by Ibn Abī ʿAwn [*q.v.*] is the earliest, give a useful insight into the "poetic universe" of Arabic literature.

Ibn al-Muʿtazz [*q.v.*], himself famous for the similes in his poetry, incorporated *ḥusn al-tas̲h̲bīh* among the figures of *maḥāsin* [*q.v.*] in his seminal *K. al-Badīʿ* (London 1935, 68-74). The figure is subsequently discussed in every work on literary criticism and theory [see balāg̲h̲a; bayān; al-maʿānī wa 'l-bayān), among which those by ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī [*q.v.* in Suppl.] are particularly important, above all his *Asrār al-balāg̲h̲a* which analyses in considerable depth and detail the various kinds and functions of *tas̲h̲bīh* and its relationships with other figures such as metaphor, *tamt̲h̲īl* and *tak̲h̲yīl* [*q.vv.*]. Usually, the critics do not limit themselves to poetry and also deal with simile in prose, naturally giving much attention to Ḳur'ānic similes [see iʿd̲j̲āz]. In the school of al-Sakkākī and al-K̲h̲aṭīb al-Ḳazwīnī [*q.vv.*], *tas̲h̲bīh* forms part of *ʿilm al-bayān* and is discussed from various angles: the *primum* and *secundum comparationis* (*al-mus̲h̲abbah* and *al-mus̲h̲abbah bihi*, respectively; they may be *ḥissī*, perceivable by sense perception, or *ʿaḳlī*, conceivable only by the intellect) and their relationship (the *wad̲j̲h al-s̲h̲abah*, classified in a number of ways), the syntactic form (the employ of the *adāt al-s̲h̲abah*: particles like *ka-*, *ka'anna*, *ka-mā*, *mit̲h̲l*, or genitive constructions) and the purpose or function (*g̲h̲araḍ*). In a normal simile such as "the caliph's face is like the sun" the *mus̲h̲abbah bihi* (here, the sun) usually possesses more clearly or to a higher degree the quality implied by the comparison (here, some form of "brightness"). Exceptionally, this may be reversed with some effect ("The sun is bright like the caliph's face").

Poets and critics alike were fond of concision, of similes expressed in one line, or even an accumulation in one line; thus Ibn Ḥazm takes pride in his own "unsurpassable" line ("I, she, the cup, the wine, and darkness were/like earth, and rain, and pearls, and gold, and jet", *Ṭawḳ al-ḥamāma*, ed. Iḥsān ʿAbbās, Beirut 1980, 110). Although this often results in rapid shifts to wholly unconnected spheres of imagery, a certain harmony is appreciated, as in a much-admired line by Bas̲h̲s̲h̲ār b. Burd [*q.v.*] that likens swords flickering in the dust stirred up in battle to shooting stars in a dark night. Similes spanning more than one line are found but receive less attention and appreciation from critics. Especially in early Arabic poetry, one finds extended similes in some ways reminiscent of "epic" or "Homeric" similes, which form episodes in which the *primum comparationis* temporarily disappears from sight. Thus in the early *ḳaṣīda*, long sections may be found describing an oryx or onager, to which the poet's camel is compared.

Partly as a reaction against traditional practice and theory, *tas̲h̲bīh* has lost much of its status in modern Arabic poetic criticism.

TAS̲H̲BĪH wa-**TANZĪH**, two terms of Islamic theology which stand for different discourses about God, *tas̲h̲bīh* roughly meaning "anthropomorphism" and *tanzīh* "transcendentalism" (Greek ἀφαίρεσις). They are, however, not used on the same level; *tanzīh* has a positive connotation whereas *tas̲h̲bīh*, together with

its derivatives *mushabbih* and *mushabbiha* (denoting a person or a group practising *tashbīh*), is used in polemical language, as a derogatory term. The negative equivalent to *tanzīh* is *taʿṭīl*, divesting God of his attributes; as the positive pendant to *tashbīh*, *ithbāt* is sometimes used, the affirmation of the divine attributes by analogy. The origin of all these terms has still to be clarified. They are not found in the Ḳurʾān; when *tanzīh* appears in a *ḥadīth* (cf. Wensinck, *Concordance*, vi, 423) it is part of an explanatory remark which seems to have been added later on and reflects already independent theological usage.

The problem itself reached Islam in a late and derivative form. Islam does not know anthropomorphism on the immediate level of religious consciousness, as mythology, for instance, and rejects, under the notion of *ḥulūl* (*q.v.* = ἐνοίκησις), the form of anthropomorphism typical for Christianity, namely, incarnation. *Tashbīh* means "making similar" and can be understood either as "producing something similar to creation", i.e. images (which are forbidden in *Ḥadīth* under the expression of *shabbaha bi-khalḳ Allāh*) or as "assimilating God to His creature" (creature always meaning man, never animals as in Ancient Egyptian theriomorphism). In the latter sense, which is the only one used in Islamic theology proper, it aims at the problem of how to interpret the anthropomorphic discourse in the Scripture, i.e. at the exegetical level. Here, the closest parallels outside Islam are found in Judaism. If, however, it is contrasted with *tanzīh*, the term also opens up the systematical question of how the personalist aspect of the divine presupposed by all theistic religions has to be dealt with. What influenced Islamic thinking most in this regard was Neoplatonic philosophy, especially in the form it had assumed in Christian theology.

The Ḳurʾān is by intention strongly transcendentalist; it does not, however, avoid anthropological language as a symbolic reference to God's actions and qualities. This was not in the beginning felt as a tension or contradiction. When Islam, however, expanded into the lands of the civilisations of the Ancient World, both transcendentalist and anthropomorphist tendencies were sharpened by the religious ideas prevailing in the new environment. *Ḥadīth*, therefore, contains many anthropomorphist sayings, some of which are obviously exegetical whereas others go far beyond this. Early *tafsīr* works were sometimes so strongly anthropomorphist that they had to be purged in later recensions (cf. e.g. Muḳātil b. Sulaymān). Theologians, either Sunnī and starting from *Ḥadīth* (e.g. Dāwūd al-Djawāribī) or Shīʿī and taking up the spirit of Kūfan circles (Hishām al-Djawālīḳī or Hishām b. al-Ḥakam), gave this development a systematic turn by speculating about how God may be ascribed a shape or a form (*ṣūra*), whether He has or is a body (*djism*), how His speech (*kalām*, i.e. revelation) proceeds from Him, etc. The transcendentalist pattern, on the other hand, did not pass through *Ḥadīth*, but was expressed in theological terms right away, with Djaʿd b. Dirham and Djahm b. Ṣafwān [*q.vv.*], later on with the Muʿtazila. The Muʿtazilīs took transcendentalism to be a necessary prerequisite of *tawḥīd*. But the anthropomorphists did not see any contradiction between their standpoint and *tawḥīd* either; they wrote books under this title and made it clear in their theology that they did not want to "assimilate" God to man or understand Him as a composite entity.

As far as the aspects of Islamic anthropomorphism are concerned, we can differentiate between (a) anthropomorphism proper, concerning God's outward appearance, His shape (μορφή); (b) God's actions like speaking, sitting, etc.; (c) His feelings like wrath, satisfaction, etc., so-called anthropopathisms; and (d) "passive" anthropomorphisms inasmuch as God may be the object of human perception: when He is seen, heard, etc.

(a) *Anthropomorphism proper.* The Ḳurʾān mentions God's face (*wadjh*), His eyes (though never in the dual, only in the plural and in the singular), His hands, in a certain way His side (*djanb*; sūra XXXIX, 56), and possibly His leg (LXVIII, 42). But all the passages involved had a primarily metaphorical meaning; in the two last cases, the connection with God had even intentionally to be established first. Some of them were further elaborated in *Ḥadīth*. Sūra XXXVIII, 75 which implied God's having created Adam "with His own hands" was filled out by saying that He kneaded Adam's clay for forty days; XXXIX, 67, "the earth altogether shall be His handful on the Day of Resurrection", was made more concrete by asking which part of it will be on each finger; when, in VII, 143, God was supposed to have made Mount Sinai "crumble to dust", people thought that He achieved that by merely putting out the tip of His little finger. In this way, even a new limb was added; since, according to L, 30, Hell is going to ask "Are there any more (sinners) to come?", one could imagine God putting his foot (*ḳadam*) into the fire in order to quench its heat. The most important addition, however, was the statement of Gen. i. 27, according to which God created Adam in His image (*ʿalā ṣūratihī*); this was not found in the Ḳurʾān and became now, via *Ḥadīth*, the basis of theological speculation. The word *ṣūra* (for Hebrew *dᵉmūt*, which simply meant "likeness") referred to sūra VII (*ṣawwarnākum* "We shaped you"), and LXIV, 3 (*aḥsana ṣuwarakum* "He shaped you well"); the question then was how man's beautiful shape reflected God's own appearance.

The question had two sides. One could speculate about the similarity in man; then one could say, e.g., that Adam, as long as he was in Paradise, had been a lot taller than later human beings since God is immensely big. But normally, one concentrated on the similarity in God: He looks like the blessed in Paradise, young and with curly hair, perhaps 32 years old (like Jesus!), perhaps only about 15, like a youth who has not yet grown his beard. His size is seven spans, as said Muḳātil b. Sulaymān and afterward Hishām b. al-Ḥakam, ideal spans which were not necessarily identical with human ones. In order to link these popular conceptions with the Ḳurʾān, the theologians discovered the enigmatic attribute *ṣamad* in CXII, 2. They understood it as "solid, massive" and saw in it the description of a bodily constitution which guarantees unity (the topic of the entire sūra). God is not hollow or porous, as said Muḳātil b. Sulaymān; only man is hollow, and he is porous because he consists of clay. Man has a cavity (*djawf*), namely, his chest and his belly; God does not. God therefore does not need food; He has neither digestion nor sexuality. He "does not beget nor has He been begotten" (CXII, 3). But He speaks and He thinks, for He is wise. This is why Dāwūd al-Djawāribī pretended, in contrast to Muḳātil, that God can only be massive in His lower part. He has to be hollow from His waist upward, since His speech, i.e. revelation, comes forth from His mouth and His wisdom, namely, the Ḳurʾān, from His heart, i.e. from His chest. Shīʿī theology tried to attenuate this approach by conceiving God as a luminous being which has a different and much more subtle matter than man. Hishām al-Djawālīḳī, though still thinking of God as having a "form", imag-

ined Him to consist of white light which only changed into black when His profuse hair had to be described. Hishām b. al-Hakam then gave up the *ṣūra* concept altogether and merely ascribed to God an ideal geometrical shape which he called a "body" (*djism*) in the philosophical sense of the word (like σῶμα in Stoicism). While Hishām al-Djawālīkī still assumed that God had senses, Hishām b. al-Hakam conceived God as a regularly-shaped mass of light which emits rays as means of perception. This could no longer be called anthropomorphism, but since he used the word *djism* which, under a perspective different from his, evoked God's being composite, he was labelled a corporealist (*mudjassim*).

(b) *God's actions*. Among those divine actions which were mentioned in the Ḳur'ān many could immediately be linked to God's body: seeing, hearing, speaking, creating (like shaping Adam out of clay, anything except *creatio ex nihilo*). Most important was God's sitting on the throne, the symbol of His majesty and power. Only one action was explicitly denied: sleeping; "slumber seizes Him not, neither sleep" (II, 255, in the throne verse; cf. Ps. cxxi. 4). Sleeping would have been the negation of His acting, a period of rest during His creation which the Ḳur'ān, in contrast to the Bible, deemed unworthy of God. In *Ḥadīth* we then get reflections about *how* God is sitting on His throne (leaning back, one leg put upon the other) or whether He allows somebody to sit at His side in order to honour him or to even let him partake in His power (e.g. the Prophet when he practices intercession, *shafā'a* [*q.v.*]). In Jerusalem, people believed that God had left His footprint on the Rock of Mount Zion because His throne had been standing there in the earthly paradise before He got up and ascended to Heaven. This idea was combined in the Umayyad period with Muḥammad's night journey (*isrā'*), which led him to Jerusalem and made him encounter God in the garden which was located in the precincts of the "Solomonic" (i.e. Herodian) Temple. God was sitting there on His throne in the shape of a beardless youth with a crown on His head and golden sandals on His feet. He could even be imagined to touch the Prophet then with His hand, as a gesture of intimacy, when He conveyed a secret or a message to him. But He could also be thought to appear at Mecca, during the Pilgrimage, "at the eve of 'Arafa", when He used to come down from Heaven riding on a camel in order to accept the supplications or the repentance of the believers. This was not a symbol of His power then but of His compassion and mercy.

(c) *Anthropopathisms*. Among God's feelings and passions, His mercy was most prominent in the Ḳur'ān. But it was never felt to be anthropomorphic; it was simply part of His essence. Similarly, His wrath (*sakhaṭ, ghaḍab*) and His satisfaction (*riḍā*) were considered by many early theologians as His main and only attributes, expressing the polarity of His nature. The anti-Islamic treatise attributed to Ibn al-Muḳaffa' criticised the common tendency to ascribe grief and mourning to God; in *Ḥadīth*, it could be said that God wept about the annihilation of mankind by the Flood. The only attributes which became problematic in the long run were those which seemed to injure God's sovereignty or perfection: His cunning (*makr*, cf. III, 54, and IV, 142), His mockery (II, 15, and IX, 79), His forgetfulness (IX, 67) or His patience (*ṣabr*, which could also mean "enduring"). A special case was divine love; it was rejected by theologians and jurists (who thought compassion to be more appropriate), accepted, however, and frequently glorified by the mystics.

(d) *"Passive" anthropomorphisms*. According to certain *ḥadīths*, God may touch man. But He can never be touched Himself. He can be heard, though, and He can also possibly be seen. His being heard was never questioned; only the mode was a matter of dispute. Moses was mentioned in the Ḳur'ān as the one who had been spoken to by God directly (IV, 164); in contrast to him, Muḥammad heard the revelation only through an intermediary, i.e. Gabriel. When the Ḥanbalīs later on called the pronunciation (*lafẓ*) of the Ḳur'ān uncreated, they assumed that, during the act of recitation, everybody hears the Speech of God as such. The vision was more problematic. The two visions of Muḥammad alluded to in the Ḳur'ān (LIII, 5-12, and 13-18) did not mention God explicitly; they could as well be interpreted as referring to Gabriel. When the Prophet met God during his *mi'rādj* [*q.v.*], many people doubted that he had seen Him in person; they thought that he had only heard Him speak from behind a veil. The Ḳur'ānic basis for the beatific vision in Paradise was weak; the doctrine was rejected by the Mu'tazila but finally accepted by the majority, at least in Sunnism [see RU'YAT ALLĀH].

Unrestricted anthropomorphism did not withstand the onslaught of the Mu'tazilīs; their theology in this respect shaped the Islamic identity until today. Before their time, transcendentalism had a precarious stand; Dja'd b. Dirham and Djahm b. Ṣafwān were both executed, though probably for political rather than dogmatical reasons. At that time, in the late Umayyad period, part of Islamic theological thinking may still have been tinged by a Neoplatonic spirit. Dja'd b. Dirham pretended that God could never have taken Abraham as His "friend" (*khalīl*; cf. IV, 125) or have spoken to Moses; possibly he also denied Muḥammad's having seen God during the *mi'rādj*. Djahm b. Ṣafwān rejected God's being heard or seen, too; for him, God was simply the absolute Power. God is not only beyond any form, but also beyond being as such; he is not anything (*shay'*). This was more than the Mu'tazilīs later on admitted. They were not against calling God *shay'*, insofar as He exists, and they did not deny God's speech altogether but accepted it as long as it was created in an earthly substratum (the burning bush, e.g.). The Ḳur'ānic argument which they used against anthropomorphism was that of XLII, 11, *laysa ka-mithlihī shay'*, which was understood now as meaning absolute and not only relative otherness. God could then be described as *shay' lā ka'l-ashyā'*. This turned out to be a suitable expression which spread far beyond the Mu'tazila. Amongst the Mu'tazila themselves, other definitions of otherness had been tested: God as *khilāf al-'ālam* "the (absolute) divergence from the world" (Abu 'l-Hudhayl), or simply as *ghayr* "the Other" ('Abbād b. Sulaymān). In the earliest phase, theologians like Ḍirār b. 'Amr had expressed the same idea by saying that only God's existence (*anniyya*) is accessible to the human mind, not his essence (*māhiyya*); this position, however, was given up when Abu 'l-Hudhayl and others after him started elaborating a doctrine of attributes.

Talking about attributes meant mitigating the concept of *tanzīh*. The radical position held by Djahm b. Ṣafwān was never repeated again except by the Ismā'īlīs in Eastern Persia. They developed a consistent *theologia negativa* on the basis of Neoplatonic philosophy where God was beyond being and therefore ineffable, neither *shay'* nor not *shay'*. According to Ḥamīd al-Dīn al-Kirmānī, He was not even the creator; creation (*ibdā'*) was effected by the first Intelligence, whereas God was severed from the world

and remained unknown. According to the view of the Islamic majority, such ideas were sectarian. Even Muʿtazilī *tanzīh* was soon denounced as *taʿṭīl*. Ultimately, it survived only in Imāmī and Zaydī S͟hīʿī thought. In Sunnī Islam, the As͟hʿarī reaction led to a readjustment of the fronts. The anthropomorphisms were incorporated into God's essence (*d͟hāt*), as *ṣifāt k͟habariyya*, i.e. attributes based on the evidence of Ḳurʾān and *Ḥadīt͟h* which should be understood *bi-lā kayf*. This latter formula was to have a long history. It could mean "without further comment"; this is how it was used by the Ḥanbalīs and other *aṣḥāb al-ḥadīt͟h* who were close to them. The relevant traditions were then collected and interpreted in books like Ibn K͟huzayma's *K. al-Tawḥīd wa-it͟hbāt ṣifāt al-Rabb*, Aḥmad b. al-Ḥusayn al-Bayhaḳī's *K. al-Asmāʾ wa 'l-ṣifāt* or Ibn al-D̲j̲awzī's *Dafʿ s͟hubhat al-tas͟hbīh*. Theologians, however, used *bi-lā kayf* rather in the sense of "without qualifying God in a way only to be applied to His creation"; they presented it as a middle course between a literal acceptance of the anthropological statements in the Scripture (= *takyīf*, *tas͟hbīh*) on one side and their metaphorical interpretation in the Muʿtazilī sense (*taʾwīl* = *taʿṭīl*) on the other. Even Ibn Taymiyya adopted this attitude. Among those who kept aloof from it were al-G͟hazālī and Ibn Rus͟hd (in his *Kas͟hf ʿan manāhid̲j̲ al-adilla*); they rather differentiated between *tas͟hbīh* (*bi-lā kayf*) and *tanzīh* (= figurative interpretation, *taʾwīl*) according to a social criterion, by contrasting the discourse of lay people (*ʿawāmm*) with that of the experts (*k͟hawāṣṣ*). The question of whether man cannot talk about God unless in anthropological language anyway, his discourse inevitably being metaphorical (*mad̲j̲āz*), was rarely asked since the Ḳurʾān was thought to be the speech of God Himself (*kalām Allāh*) and therefore veritative (*ḥaḳīḳī*) by definition.

TAS͟HELḤĪT (Tas͟hlḥiyt), a dialect of Berber.

1. Linguistic region.

Tas͟helḥīt or Tas͟hlḥiyt is the most important Berber dialect of Morocco, both by the number of its speakers and by the extent of its area. The space within which it is used as a first language comprises an area within a line in the north connecting Essaouira (Mogador) and Tanant in the High Atlas, a line following the eastern slopes of the High Atlas towards the region of Ouarzazate, a southern line following the course of the Wadi Dra and western one represented by the Atlantic coast from the mouth of the Wadi Noun to Essaouira.

From the point of view of physical geography, this is a region of comparative contrasts: mountain zones of the High and Anti-Atlas, the Haha plateau in the north-west and the Aït Baâmrane one in the south-west, the plains of the Sūs and of Tiznit [*q.vv.*], valleys in the upper levels and pre-desert zones in the south-east and south-west of the region. It is populated by sedentaries practising a traditional agriculture on the plateaux and mountains (cereals and the rearing of sheep and goats), whereas modern agriculture predominates on the plains (citrus fruits, banana groves and market gardening).

Because of very many difficulties, the most important being the precariousness of the economy and demographic pressure, the region has been characterised by both an internal and an important external migration. Migration of labour towards France and Belgium was considerable during the period 1960-70; the rural exodus is still a large-scale one, towards the urban centres, with the people of the Sūs, notably those originally from the Anti-Atlas, being mainly concerned with trade in foodstuffs. Finally, it is also a region for tourism, with the beach resort of Agadir, the historic town of Taroudant and the picturesque countrysides of Tafraout and Ouarzazate.

2. Language.

The structure of Tas͟helḥīt.

The population of this region is for the most part Berber-speaking, but with Arabic-speaking communities implanted on the plains (Oulad Teima, Oulad Berrehil, Oulas Boutayeb, Oulad Jerrar, etc.). The idiom used by the Berber-speaking population is S͟hluḥ, in Berber *tas͟hlḥīt* (*tas͟hlḥiyt*), and the native speaker of this is called *as͟hlḥi* (or *as͟hlḥiy*), pl. *is͟hlḥiyen*. The dialect is relatively homogenous, despite some divergencies in the spoken varieties.

In phonology, Tas͟helḥīt is considered to be an "occlusive" dialect. The consonant system includes the labials *b, m, f*; the apicals *t, d, n, l, r, s, z, s͟h, j*; the dorsals *k, g, y, w, k͟h, g͟h, ḳ*; the pharyngeals *ḥ*, ʿ; the laryngeal *h*; and the emphatics *ṭ, ḍ, ṣ, ẓ, j̣, ṛ, ḷ*. All consonants can be geminated (lengthened), except *g͟h*, *h* and *d*, which are realised as *ḳ* and *t* in the geminated state. It should, however, be noted that in the speech of the communities of the High Atlas, spirants are substituted for the occlusives *b* > *ḇ*, *k* > *ḵ*, *g* > *g̱*; further, in the communities of the Anti-Atlas, sibilants are substituted for the dentals (*t* > *s*, *d* > *z*). Vowels are reduced to *i, a, u*; in contrast to other Berber dialects, Tas͟helḥīt admits syllables with a consonantal core, e.g. *ml* "to show", *krz* "to work", *bzg* "to puff out, dampen", *bdd* "to get up, stand". Accent is not distinctive in Berber; in Tas͟helḥīt the tonic accent is on the heavy syllable counting from the end of the word; in the absence of such a syllable, the final syllable is accented.

In its main features, the verbal morphology of Tas͟helḥīt does not differ from other Berber dialects. Words are built up from roots, usually comprising consonants, generally three (e.g. *mgr* "to harvest"), but sometimes two (e.g. *fl* "to let, leave") or even five (e.g. *frskl* "to crack"). The root consonants are always present in the word, and give a basic semantic aspect to all words derived from that root; the root, joined to a vocalic melody, completes a scheme whose form and substance vary according to the prosodic structure of the word. The most simple verbal form is the aorist (e.g. *krf* "to shackle"); the complex forms stem from a process of derivation whose nature seems to be regulated by the structure of the radical. The intensive aorist expresses habitual or continuous action, and is derived by (1) the prefixing of *tt* (e.g. *amẓ* > *ttamẓ* "to take, hold"); (2) gemination of the first radical

(e.g. *krf* > *kkrf* "to shackle"); (3) gemination of the first radical and infixing of *a* (e.g. *fl* > *ffal* "to leave, let"); or (4) gemination of the second radical and the infixing of *a* (e.g. *kl* > *klla* "to spend the day"). The causative-factitive form is derived by prefixing a voiceless sibilant, simple or geminated according to the structure of the root (e.g. *bdd* > *sbdd* "to make stand up", *lkm* > *sslkm* "to make arrive, reach"); this sibilant becomes assimilated to another sibilant within the radical (e.g. *kshm* > *shshkshm* "to cause to enter", *nz* > *zznz* "to cause to sell"). The passive form is derived by prefixing (1) *tt* (e.g. *ut* > *ttut* "to be beaten"; (2) *ttu* (e.g. *krf* > *ttukraf* "to be shackled"; or (3) *tti* (e.g. *ags* > *ttiagas* "to be wounded"). The reciprocal-reflexive form is derived by prefixing (1) *m* (e.g. *shawr* > *mshawar* "to consult together"); (2) *mm* (e.g. *zr* > *mmzr* "to see each other"); or (3) *nn* (e.g. *fk* > *nnfk* "to exchange"). There also exist super-derived forms combining two derived forms starting from the same radical (e.g. *rwi* "to mix up, put into disorder" > *smmrwi* "to turn completely upside-down").

The noun varies in gender (e.g. *afrux* "boy" > *tafruxt* "girl") and in number (e.g. *argaz* "man" > *irgazn* "men", *tamghart* > *timgharin* "women"). It is likewise subject to variation in its state. The placing of the free-state noun into the construct state is accompanied by changes which modify the structure of the noun's initial syllable; these changes follow from determined syntactical contexts, as is the case with Berber in general (e.g. *argaz idda* > *idda urgaz* "the man left", *tamghart tkshm* > *tkshm tmghart* "the woman has entered"). The verbal noun is most of the time derived from an attested root; the noun of agent is formed by the prefixing of *a* and infixing of *a* or *am* (e.g. *krz* "to plough" > *amkraz* "ploughman"). The noun of action is obtained by several processes, of which the most widespread are (1) prefixing and infixing of *a* in the case of a masculine noun (e.g. *zug* "to go into exile" > *azwag* "exile"; (2) infixing *ta* and suffixing *i* in the case of a feminine noun (e.g. *las* "to shear, clip" > *talusi* "shearing, clipping"). Finally, the noun of instrument is formed by prefixing *as* (e.g. *krz* "to plough" > *askrz* "plough-share").

Regarding syntax, the surface structure is of the VSO type (verbal syntagm + nominal syntagm), e.g. *ikrz umkraz igr* "the ploughman has ploughed the field". There are two types of predicate, the verbal one (e.g. *idda* "he left") and the non-verbal one (e.g. *dari inbgiwn* "I have with me some guests"). One of the characteristics of the phrase in Tashelḥīt is the predicative construction with the verbal copula *g* "to be, to put", e.g. *g argaz* "be a man!" In general, the syntax of the phrase is paratactic, with propositions being juxtaposed, e.g. *ibdd iffgh* "he stood up; he went out", or else hypotactic, with co-ordinated propositions, e.g. *ikshm ntta d tmghart ns d mas d tarwa ns* "he came in, he *and* his wife *and* his mother and his children". However, complex propositional constructions are frequent, both nominal and verbal. The first type could be (1) a relative subject, e.g. *argaz lli yussm* "the man who is old"; (2) an appositive relative, e.g. *illa mad ur ittafn amya* "there are some who have nothing; (3) a direct relative, e.g. *afrux lli izrin* "the boy who has just passed". As for a proposition with a verbal predicate, it can take the form of a direct expansion with a subordinating word, e.g. *mnan ad mmuddun* "they thought of travelling", and *ur iddi aylligh ishsha* "he did not go out until he had eaten". The nominal group displays several types of construction, notably (1) the genitive construction, e.g. *adar n usrdun* "the mule's hoof"; (2) the topicalised construction, e.g. *ifis ishsha aghyul* "the hyaena has eaten the ass"; (3) the dislocated, twisted construction, e.g. *aghyul ishsha-t ifis* "the ass, the hyaena has eaten it"; (4) the focussed construction, e.g. *aghyul ad ishsha ifis* "it is the ass which the hyaena has eaten".

The socio-linguistic position of Tashelḥīt.

The dialect is used as a vernacular idiom within rural communities, and its spheres of usage extend to the family circle and to relations outside that circle in which Berber-speaking speakers are involved. Tashelḥīt is the Berber dialect which has the greatest diffusion outside the Berber-speaking regions; in towns, it is found in a situation of linguistic contact, notably with colloquial and standard Arabic, but also at times with French and Spanish. This contact leads Tashelḥīt-speakers to borrow words from these languages, but the number of borrowings in Tashelḥīt is less than in the other Berber dialects of Morocco. Berber-speakers residing in towns are *ipso facto* subject to a transitional bilingualism or multilingualism in which Tashelḥīt is in a position of becoming weakened, despite a feeling of conscious identity, especially in the circles of urban élites.

3. Literature.

Tashelḥīt (Tashlḥiyt) is the only Berber language which has a long and continuous written tradition. This tradition goes back at least nine centuries, and can be divided into three periods.

(i) *Mediaeval period.* We know from the works of several historians that Berber texts were written during the Middle Ages. Most famous among these was the *Murshid* composed in Arabic and Berber by the *Mahdī* Ibn Tūmart [*q.v.*]. As far as is known, neither this text nor any other longer, coherent text from this period has been preserved. However, the sparse materials that have survived are sufficient to show that Berber texts were indeed being written during the Middle

Ages, and that this was done in a consistent, specially designed orthography using the Maghribī Arabic script.

The most important source for our knowledge of mediaeval Berber and its orthography is the *Kitāb al-Asmā'* "Book of nouns", an Arabic-Berber dictionary containing 2,500 bilingual entries which was composed in the year 540/1145 by Abū ʿAbd Allāh Muḥammad b. Djaʿfar al-Ḳaysī, also known as Ibn al-Ramāma or Ibn Tūnārt (478-567/1085-1172). Several copies of this dictionary are preserved in the library of Leiden University. The same library possesses a fragment of a mediaeval manuscript containing a text on ethics entirely written in Berber. Another important source are the Berber phrases that are found in the anonymous *Kitāb al-Ansāb* and in the memoirs of al-Baydhaḳ, a companion of Ibn Tūmart (ed. Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928). These two texts contain a wealth of Berber names of persons, tribes and places. Berber place-names are also found in the work of Abū ʿUbayd al-Bakrī (ed. de Slane, *Description de l'Afrique septentrionale*, Paris 1857) and other works on geography and history. All these Berber materials are written down in a highly consistent orthography. The earliest examples of the use of this orthography are found in the numerous Berber names of plants and other *materia medica* found in pharmacological manuals such as the works of Abu 'l-Ḳāsim al-Zahrāwī (Albucasis, d. 404/1013 [see AL-ZAHRĀWĪ]) and Ibn Biklārish (d. after 500/1106 [*q.v.* in Suppl.]).

The Berber language recorded in these sources is closely related to Tashelḥīt, and is probably an archaic form of it.

(ii) *Pre-modern and modern period.* More than two hundred texts in Tashelḥīt dating from the 16th century to the present have been preserved in manuscripts. In scope and volume, this literary tradition is comparable to other African vernacular literatures in the Arabic script, e.g. Fulani, Hausa and Swahili.

The large majority of the texts deal with religious subjects, especially theology (*ttawḥid*), ritual obligations (*lʿibadat*), and accounts of Judgment Day and the Hereafter (*laḥwal n-likhrt*). A special genre is formed by the texts called *nnṣaḥt* "advice" (Ar. *naṣāḥa* or *naṣīḥa*), whose purpose it is to provide the illiterate population with information on orthodox Islamic practice, as opposed to unorthodox or un-Islamic practices (*lbidaʿ*). In addition to these, there are panegyric poems on the Prophet and well-known, popularised stories such as the *Lḳiṣt n-Yusf* "Story of Joseph" and the *Lghazawat n-Bn Zhaʿfar* "Raids of Ibn Djaʿfar". Tashelḥīt texts usually have titles in Arabic.

All these texts are composed in verse, using Berber metres. Prose texts are less common. Examples include bilingual vocabularies, anthologies of *ḥadīth* and manuals on medicine. Tashelḥīt is not ordinarily used in letters or documents.

The earliest preserved, long Tashelḥīt text was written by Ibrāhīm b. ʿAbd Allāh al-Ṣanhādjī, commonly known as Aẓnag (d. 1005/1597). Around 1590 he composed a work entitled *ʿAḳā'id al-dīn* or *Lʿḳayd n-ddin* "Chapters on religion". This is a text-book for the Islamic sciences which constitute the curriculum in a traditional college (*lmdrst*). Another early author is ʿAbd Allāh b. Saʿīd al-Ḥāḥī (d. 1012/1602-4), who composed a text on the Hereafter (mentioned in the *Nuzhat al-ḥādī*, ed. Houdas, 210, tr. 343).

From the middle of the 17th century we have an Arabic-Tashelḥīt vocabulary containing 900 bilingual entries by ʿAbd Allāh b. Shuʿayb al-Hilālī.

The most famous author is Muḥammad b. ʿAlī al-Hawzālī, known as Awzal (d. 1162/1749). He composed an admonition (*lmawʿiḍa*) entitled *Baḥr al-dumūʿ* "Ocean of tears" which includes an account of the Hereafter, and a manual of Mālikī law entitled *al-Ḥawḍ* "The reservoir" which is still widely used by Tashelḥīt-speaking *fuḳahā'*. An extensive commentary on *al-Ḥawḍ* entitled *al-Mandjaʿ* "The pasture" was written in Tashelḥīt prose by al-Ḥasan b. Mubārak al-Tamuddiztī (d. 1316/1899). This is the longest extant text in Tashelḥīt.

Other *fiḳh* manuals were composed by Dāwūd b. ʿAbd Allāh al-Tamsawtī (d. after 1166/1753), Muḥammad b. Yaḥyā al-Tīzakhtī (d. *ca.* 1275/1858-9) and by ʿAlī b. Aḥmad al-Darḳāwī (d. 1328/1910).

The most prolific authors of "books of counsel", "pieces of advice", are Aḥmad b. ʿAbd al-Raḥmān al-Timlī, known as Imml (d. 1327/1909) and Muḥammad b. Muḥammad al-Hanā'ī (d. 1295/1878). A lengthy *Kitāb al-Bidaʿ* "Book on heresies" was written by al-Ḥasan b. Aḥmad al-Irazānī (d. 1308/1890-1).

The most famous panegyric of the Prophet is *al-Ḳaṣīda al-būshikriyya* by Muḥammad b. ʿAbd Allāh al-Būshikrī (d. 1282/1865-6). An adaptation of al-Būṣīrī's famous *Ḳaṣīdat al-Burda* by ʿAbd Allāh b. Yaḥyā al-Ḥāmidī (18th century) is often recited on festive occasions.

The Tashelḥīt literary tradition remains alive today. Old texts are still being (photo-)copied, and new texts are being composed.

(iii) *The present day.* Since the 1970s, a small modern literature has sprung up. This literature is composed by European-oriented literati, who on the whole have little or no knowledge of the older tradition. Publications include bundles of poetry by Muḥammad Mustāwī, among them *Iskraf* "Shackles" (Casablanca 1976), *Tadsa d-imṭṭawn* "Laughter and tears" (*ibid.* 1979) and *Asays* "Dance floor" (Rabat 1988), by Ibrāhīm Akhiyāṭ (*Tabratt* "Letter", Rabat 1989) and by Muṣṭafā Bīzrān (*Ifrawn* "Leaves", Casablanca 1987) as well as a play entitled *Ussan smmiḍnin* "Cold days" by Mu'min ʿAlī al-Ṣāfī (Casablanca 1983). Ibrāhīm Akhiyāṭ is also the editor of the periodical *Amud* "Seeds" ("Revue de création en Tamazighte", first issue Rabat 1990). A noteworthy feature of this new literature is the use of neologisms; most publications contain an explanatory list of the neologisms used in the text.

Writers from this group are involved in publications devoted to Tashelḥīt orality. Muḥammad Mustāwī is the editor of a series devoted to oral literature entitled *Tifawin* "Lights" (first issue Rabat 1985), and he has edited a collection of proverbs (*Nnan willi zrinin* "The forebears said", Casablanca 1980).

All these modern publications use the Arabic script to record Tashelḥīt. From the 1980s onward, the Latin script is used as well, especially in Tashelḥīt texts published in the Moroccan newspaper *Al Bayane*. A translation of Shakespeare's *Romeo and Juliet* in Latin script was published by Ahmed Adghirni (Rabat 1995).

Script.

a) The mediaeval materials are written in fully-vocalised Maghribī Arabic script in which the *fatḥa* represents the vowel *e* (schwa) and the *ḥurūf al-madd* represent the vowels *a*, *i* and *u*. The Berber consonant *g* is represented either by *djīm* or by *kāf* and the consonant *zh* by *djīm* or by *shīn*. The letter *ṣād* represents the consonant *ẓ*. Words are generally separated.

b) The traditional Tashelḥīt orthography uses an adapted form of the Maghribī Arabic script. The alphabet (*id-lif*) is recited in the usual Maghribī order, except that *ẓā'* and *ḍād* have exchanged places. The consonant *zh* is written with *djīm* and two additional letters have been formed, *ṣād* and *kāf* with three dia-

critical points, to represent the consonants ẓ and g respectively. These two letters are not part of the recited alphabet. The script is always fully vocalised, with the vowel signs *fatḥa*, *kasra* and *ḍamma* representing the vowels *a*, *i* and *u* (the schwa of the mediaeval language has been lost in pre-modern and modern Tas̲h̲elḥīt). The *ḥurūf al-madd* are used in verse texts to represent the vowels that have metrical stress. Words are written in clusters. The core of a cluster is usually a noun or a verb, with various pronominal affixes, preverbials, prepositions and the like connected to it, e.g. *ur illi mad d ingadda* "there is nothing like it" is written as *urilli maddingadda*.

c) The modern literature uses a newly-designed, unvocalised Arabic orthography in which the *ḥurūf al-madd* represent the vowels and in which the words are separated. The Persian *z̲h̲e* is used to represent ẓ and *gāf* is used to represent *g*.

d) The Latin orthography for Tas̲h̲elḥīt, propagated by the Moroccan magazine *Tifawt* since the 1980s, has been designed with typographical simplicity in mind. Thus, *c* is used for *s̲h̲*, *j* for *z̲h̲*, *à* for *ʿayn* and *x* for *k̲h̲*. The subscript point used in scholarly transcriptions has been replaced with a circumflex placed on an adjacent vowel, e.g. Muhâmmad for *Muḥammad*, azûr for *aẓur*.

Bibliography: The only comprehensive study is N. van den Boogert, *The Berber literary tradition of the Sous*, Publication of the De Goeje Fund, 27, Leiden 1997. An edition and translation of the *Baḥr al-dumūʿ* by Muḥammad Awzal is included in this study. An edition in the original orthography is B.H. Stricker, *L'océan des pleurs. Poème berbère de Muḥammad al-Awzalī*, Publication of the De Goeje Fund, 19, Leiden 1960. J.-D. Luciani, *El H'aoudh. Texte berbère (dialecte du Sous) par Meh'ammed ben Ali ben Brahim, publié avec une traduction française et des notes*, Algiers 1897, is an edition in transcription with translation of Awzal's *al-Ḥawḍ*. Another edition of the same text in modernised Arabic orthography is ʿAbd Allāh al-Raḥmānī, *al-Ḥawḍ fī 'l-fiḳh al-mālikī bi 'l-lisān al-āmāzīghī li 'l-s̲h̲ayk̲h̲ Mḥemmed u ʿAlī Awzāl*, Casablanca 1397/1977. An edition of the Berber materials in al-Hilālī's vocabulary as well as several other vocabularies is van den Boogert, *Révélation des énigmes. Lexiques arabo-berbères des XVII^e et XVIII^e siècles*, Travaux et documents de l'IREMAM, Aix-en-Provence 1998. Bio-bibliographical data on many of the authors of manuscript-texts are found in the works of Muḥammad al-Muk̲h̲tār al-Sūsī, in particular *Rid̲j̲ālāt al-ʿilm al-ʿarabī*, Tangier 1989, and *Sūs al-ʿālima*, 2nd impr. Casablanca 1984.

(N. VAN DEN BOOGERT)

TAṢḤĪF (A.), mistake in writing, synonymous, in spite of sporadic artificial attempts to make a distinction, with *taḥrīf* (without, however, the specialised use of the latter, [*q.v.*]). While its meaning is unambiguous, the derivation of the word is less so. Its connection with *ṣ-ḥ-f* in the (originally South Semitic) meaning of "to write" [see MUṢḤAF] can be considered certain; the negative connotation may reflect a negative attitude toward all writing as against orality, rather than a privative use of the second form of the verb. It is not excluded that *taḥrīf* may have influenced the formation. Note also *ṣaḥafī/ṣuḥufī* (Lane, 1655a) "one who commits mistakes in writing," presumably from "one being concerned with written sheets (?)."

Muslim scholars were fully alert to mistakes as the ever-present bane of writing and discussed them in minute detail. It was always stressed that the character of the Arabic script provided unusual opportunities for mistakes to be made, a subject also systematised in *mu'talif wa-muk̲h̲talif/muk̲h̲talif wa-mu'talif* works. The extraordinary importance of proper names in Muslim culture and the central position of poetry, with its manifold problems of comprehension and interpretation, added to the widespread concern with *taṣḥīf*. Above all, the need for accuracy in the transmission process of *ḥadīt̲h̲* and the religious/legal sciences created a vital interest in potential mistakes, even among those who were convinced of the superiority of writing over memory (see e.g. al-K̲h̲aṭīb al-Bag̲h̲dādī, *Kifāya*, 245 ff., or Ibn al-Ṣalāḥ, *Muḳaddima*, ch. 35). Understandably, in a climate where no distinction was usually made between sound and written symbol, a distinction between miswriting and misreading could not be maintained. Thus reading mistakes with regard to vocalisation, something not normally indicated in writing at all, found much attention, and *taṣḥīf* increasingly included all kinds of linguistic errors.

In the manuscript age, it made no sense to trace mistakes to particular, identifiable manuscripts. Occasional references are found, in particular in the commentary literature. To a large degree, literary *taṣḥīf* works are filled with anecdotes whose authenticity cannot be proved and is usually somewhat irrelevant. These anecdotes were often used in the bitter fights among philologists, with the purpose of ridiculing the individual to whom a mistake was ascribed. Very commonly they were invented just to add to the stock of humorous and entertaining material. This is most obvious in the many "intentional" miswritings that challenge the addressee to discover, through changing the diacritics, a message different from what the written words originally seem to suggest. Rarely, a serious historical background may be discerned, as in the famous *taṣḥīf* of the command *aḥṣi* "count, register!" to *ik̲h̲ṣi* "castrate!" (see E.K. Rowson, in *JAOS*, cxi [1991], 691).

Although Muslim scholars no doubt discussed writing mistakes since the earliest times, it was the 4th/10th century that saw the composition of monographs with *ṣaḥḥafa/taṣḥīf* in their titles, apart from the apparently lost and brief *Taṣḥīf al-ʿulamā'* in the list of works of the 3rd/9th-century Ibn Ḳutayba, see *Fihrist*, 77. The treatise on the mistakes of Kūfī philologists by al-Ṣūlī, *Mā ṣaḥḥafa fīhi al-Kūfiyyūn*, is partly recoverable from al-Ṣafadī, *Taṣḥīḥ*, while little is known of al-Dāraḳuṭnī's *Taṣḥīf al-muḥaddit̲h̲īn* (bibliographical references in the introduction of the edition of his *al-Mu'talif wa 'l-muk̲h̲talif*, 44 n. 5). Three full-length monographs are preserved and have been edited. They illustrate different approaches to the subject. Ḥamza al-Iṣfahānī [*q.v.*] brilliantly probes the suspected reasons for the occurrence of writing mistakes; he goes also far afield, considering such interesting topics as the various Persian scripts and other writing systems and including the cherished *jeu d'esprit* of riddles [see LUG̲H̲Z; MUʿAMMĀ]. In his large work, the roughly contemporary Abū Aḥmad al-ʿAskarī ([*q.v.*], see also Sezgin, *GAS*, viii, 181-2) put greater stress on the purely literary aspects, and he occasionally admits that his material may go beyond any proper definition of what constitutes writing mistakes. Much later, al-Ṣafadī [*q.v.*] devoted much attention to the theoretical possibilities of mistaking words and to their supposedly correct forms and usages in contrast to "common" practice; he presents his material in alphabetical order and indicates the sources he used, thus creating a useful specialised dictionary.

The subject of *taṣḥīf* was hardly consolidated into a distinct scholarly discipline. However, Ṭas̲h̲köprüzāde

[*q.v.*] cannot be blamed for reserving a place for it among his numerous *ʿulūm*. He presumably got a good laugh out of the story of the destruction of al-Baṣra by the Zandj, misspelt *rīḥ* "wind", and attributed anachronistically to the caliph ʿAlī.

(F. ROSENTHAL)

TASHKENT, usually written *Tāshkend* or *Tashkend* in Arabic and Persian manuscripts, a large town in Central Asia, in the oasis of the Čirčik, watered by one of the right bank tributaries of the Sïr Daryā [*q.v.*] or Jaxartes now, since the break-up of the USSR, in the Uzbekistan Republic (lat. 41° 16' N., long. 69° 13' E.).

1. History till 1865.

Nothing is known of the origin of the settlement on the Čirčik. According to the Greek and Roman sources, there were only nomads on the other side of the Jaxartes. In the earliest Chinese sources (from the 2nd century B.C.), mention is made of a land of Yu-ni, later identified with the territory of Tashkent; this land is later called Čö-či or Čö-shi or simply Shi. The corresponding Chinese character is used with the meaning of "stone", and this is connected by E. Chavannes (*Documents sur les Tou-kiue occidentaux*, St. Petersburg 1903, 140) with the later Turkish-Sogdian hybrid name (*tash* "stone" and *kend* "town with a moat and rampart" = "stone town"). The Chinese transcription must certainly correspond to the native name Čāč, known in the Islamic period; the Arabs here, somewhat unusually (since *č* is usually rendered by *ṣ*) rendered the sound *č* by *sh*. The Arabic form al-Shāsh gradually drove the original name out of use in the written as well as the spoken language. Whether and how the modern Turkish name, first found in the 5th/11th century, is connected with Čāč or Shāsh, is still doubtful. The etymology (Tāžkent = town of the Tāžik, i.e. the Arabs) proposed by E. Polivanov (*ʿIḳd al-djumān*, Festschrift for W. Barthold, Tashkent 1927, 395) will hardly find favour.

Details of the land of Čāč and its capital, the circumference of which was about 10 *li* (less than 5 km/3 miles), are first found in Chinese sources of the 3rd century A.D. In the time of Hiuen-Tsang (*Mémoires sur les contrées occidentaux*, tr. St. Julien; i, Paris 1857, 16), there was no ruler in Čāč to whom the whole country was subject, as in other countries. The separate towns were under the suzerainty of the Turks. In the history of the wars of conquest of the Arabs in the 2nd/8th century, there is frequent reference to a "king (*malik*) of Shāsh"; his capital is given by al-Balādhurī, *Futūḥ*, ed. de Goeje, 421, and al-Ṭabarī, ii, 1517, 1521, as the town of Ṭārband, not otherwise mentioned in the Arabic geographical literature; that we have here, as the editor D.H. Müller assumed, a contracted form of Ṭurārband (al-Muḳaddasī, 61 l. 20), is more than doubtful. The ruling family was presumably of Turkish origin. The suzerainty of the Turkish Kaghans was at times replaced by that of the Chinese. In 133/751 the Chinese governor of Ḳuča, the Korean general Kao Sien-chih, executed the prince of al-Shāsh, and his son appealed for assistance to the Arabs. Ziyād b. Ṣāliḥ, sent by Abū Muslim [*q.v.*], inflicted a severe defeat on the Chinese in Dhu 'l-Ḥidjdja 133/July 751 (cf. Ibn al-Athīr, v. 344) on the Talas river [see ṬARĀZ for details], and Kao Sien-chih was killed in the battle. This battle established the political supremacy of Islam in Central Asia, and no further attempts were made by the Chinese to dispute it.

Under the ʿAbbāsid caliphs, the territory of al-Shāsh was regarded as the frontier of Islam against the Turks; the settled lands were protected from the raids of the nomads by a wall, remains of which still exist (see below). Nevertheless the land was conquered by the Turks, probably for a short period only, in 191/806-7. A "prince (*ṣāḥib*) of al-Shāsh with his Turks" is mentioned as an ally of the rebel Rāfiʿ b. Layth [*q.v.*] (al-Ṭabarī, iii, 712). Under al-Maʾmūn, al-Shāsh again belonged to caliphal empire; when in 204/819, members of the Sāmānid family became governors of various districts in Mā warāʾ al-Nahr, one of them, Yaḥyā b. Asad (d. 241/855), was granted al-Shāsh [see SĀMĀNIDS]. In 225/840 the eldest of the brothers, Nūḥ b. Asad, the senior governor of the lands entrusted to the Sāmānids, by conquering Isfīdjāb (the modern Sayrām) succeeded in advancing the frontier further north. About the same time, a canal in al-Shāsh, which had become silted up in the early days of Islam, was restored. The caliph al-Muʿtaṣim (218-27/833-42) contributed 2,000,000 dirhams towards the work on these canals (al-Ṭabarī, iii, 1326).

In the geographical sources of the 4th/10th century, Čāč/al-Shāsh appears not as the name of a town but as that of a district, essentially the valley of the Parak river (the later Čirčik) which rose, according to the *Ḥudūd al-ʿālam*, "from behind the mountain of the Khallukh/Ḳarluḳ" and flowed into the Sïr Daryā (tr. Minorsky, 72). From the proximity of the region to the great river, the Sïr Daryā is often called in the geographical literature "the river of Shāsh". The region was closely linked with that of Īlāḳ, the district to the south, in the valley of another right-bank affluent of the Sïr Daryā, the Āhangarān river (modern Anguen), also flowing down from the mountains of Farghāna (see *ibid.*, tr. 72, 117, comm. 356).

The same sources describe the district of Čāč/al-Shāsh as extensive and prosperous, full of enthusiastic fighters for the Muslim faith, the local speciality being bows and arrows of *khadang* (probably birch) wood (*ibid.*, tr. 118; cf. al-Muḳaddasī, 325). The main urban centre was Binkath, which had at this time many walls and gates, with these walls protecting a *madīna*/*shahrastān* with a citadel (*ḳalʿa*, *arg*), and inner and outer suburbs (*rabaḍ*, *bīrūn*) with gardens and orchards. Water was plentifully supplied by canals, and the whole area protected by a wall, built by the ʿAbbāsid commander ʿAbd Allāh b. Ḥumayd (b. Ḳaḥṭaba, governor of Khurāsān in 159/776) to protect the town from the pagan Turks (see Le Strange, *The lands of the Eastern Caliphate*, 480-3; Barthold,

Turkestan down to the Mongol invasion, 172-3). Al-Bīrūnī, in his *al-Ḳānūn al-Masʿūdī*, says that Binkat͟h was called in Turkish and Greek "stone tower" (*burd͟j al-ḥid͟jāra*), apparently alluding to the popular Turkish etymology and to the Ptolemaic *lithinos pyrgos* (for another "stone tower", *burd͟j-i sangīn*, in Central Asia, but further east on the borders of China, see *Ḥudūd al-ʿālam*, tr. 85, comm. 357). From an examination of the distances between settlements in the district given by the geographers, Barthold thought that the subsequent Tas͟hkent is quite possibly on the site of the ancient Binkat͟h. Coins were minted at Binkat͟h from early ʿAbbāsid times onwards, but normally have the regional designation "al-S͟hās͟h", only rarely with the addition of "Binkat͟h" (see E. von Zambaur, *Die Münzprägungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 80, 156-7). The tomb of a celebrated *faḳīh*, Abū Bakr Muḥammad al-Ḳaffāl al-S͟hās͟hī (d. 365/975-6), called by al-Ḥakīm al-Naysābūrī Ibn al-Bayyiʿ the greatest S͟hāfiʿī scholar of his age in Transoxania, is mentioned by Kās͟hg͟harī as a well-known feature of Tas͟hkent (where his tomb was still visible in the early 20th century, according to Barthold).

Whether the name Tas͟hkent was in use before the Turkish conquest (before the final collapse of the Sāmānid dynasty, the whole Sīr Daryā territory had been ceded to the Turks in 386/996) is doubtful. So far as we know, the name "Tās͟hkend" is first found in al-Bīrūnī (*Taḥḳīḳ mā li 'l-Hind*, ed. Sachau, 149, tr. idem, i, 298); from the etymology of the name, al-Bīrūnī wrongly identifies it with the λίθινος πύργος of Ptolemy (see above, and J. Marquart, *Ērānšahr*, Berlin 1901, 155). Maḥmūd Kās͟hg͟harī, tr. Atalay, i, 443, iii, 150, mentions "Terken" (otherwise unknown) as a "name of S͟hās͟h" in addition to Tās͟hkend. The name Tas͟hkent first appears on coins in the Mongol period. In the second half of the 5th/11th and in the 6th/12th century, coins were struck in Banākat͟h, Fanākat͟h or Banākit, which lies quite close to it on the right bank of the Sīr Daryā; it is possible that this town at this time was of greater importance than Tas͟hkent. In D͟juwaynī's account of the Mongol campaign against Fanākat͟h and K͟hud͟jand (tr. Boyle, i, 91 ff.), Tas͟hkent is not mentioned; only the taking of Banākat͟h is recorded. Under Mongol rule, Tas͟hkent, for reasons unknown to us, had a better fate than Banākat͟h. Tas͟hkent continued to exist as a town and was occasionally visited by the K͟hāns; on the other hand, Banākat͟h, although it had not offered resistance to the Mongols, was in ruins at this date, and it was not till 794/1392 that Tīmūr rebuilt it under the new name of S͟hāhruk͟hiyya.

After the decline of the Čag͟hatayids [*q.v.*], Tas͟hkent belonged to the empire of Tīmūr and the Tīmūrids; in 890/1485 the town with the lands belonging to it was ceded to the Turco-Mongol K͟hān Yūnus, who died there in 892/1487 (*Taʾrīk͟h-i Ras͟hīdī*, tr. Ross, 114-15). His tomb is in the mosque of S͟hayk͟h K͟hāwand-i Ṭuhūr (popularly S͟hayk͟hantawr), a local saint; on his period (8th/14th century), see A. Semenov, in *Protokolī Turk. Kučzka Ljub. Arkh.*, xx [1915], 29. K͟hān Yūnus was succeeded by his son Maḥmūd K͟hān; after 908/1503, Tas͟hkent belonged to the kingdom of the Özbegs, who had, however, to give it up only a short time after the death of the founder of this kingdom, S͟hībānī K͟hān [*q.v.* and SHĪBĀNIDS]. During the centuries following, Tas͟hkent was sometimes under the rule of Özbegs, sometimes under the Ḳazaḳs, and in 1135/1723 it was conquered by the Kalmucks [*q.v.*], but not at once occupied by them; the town continued to be governed by a prince of Ḳazaḳ descent who was now a vassal of the rulers of the Kalmucks. Sometimes its rule passed into the hands of the K͟hod͟jas, the descendants of the local saint (see e.g. F. Teufel, *Quellenstudien zur neueren Geschichte der Chânate*, in *ZDMG*, xxxviii [1884], 311).

During these centuries, the possession of Tas͟hkent was frequently the cause of heavy fighting. Some of the accounts of these battles are of importance for the understanding of the topographical conditions of the period. The records of the battles of Tas͟hkent in the time of the S͟hībānid ʿAbd Allāh K͟hān b. Iskandar [*q.v.*] clearly show that the town of Tas͟hkent had not yet assumed its present form. It is not till the 12th/18th century that the division of the town into four quarters (Kukča, S͟hayk͟hantawr, Sibzar and Bes͟h Ag͟hač), with a common bazaar, is mentioned. Occasionally, each quarter had a chief (*ḥākim*) of its own; each quarter formed an entity by itself and was very often at war with the others.

About 1780, Yūnus K͟hod͟ja, the chief of the S͟hayk͟hantawr quarter, succeeded in combining the whole town under his rule. Yūnus K͟hod͟ja fought successfully against the Ḳazaḳs, but suffered a severe reverse at the hands of the Özbegs of K͟hoḳand under ʿĀlim K͟hān; after his death, in the time of his son and successor Sulṭān K͟hod͟ja, in 1809, Tas͟hkent had to submit to the rule of the K͟hāns of K͟hoḳand, who used it as a springboard for expansion into the Ḳazaḳ steppes. For its history in this period, see KHOḲAND.

Bibliography: Given in the article, but see also Barthold, *Four studies on the history of Central Asia*, tr. V. and T. Minorsky, Leiden 1956-62, i, 130, 143, 156, 160, 163, iii, 94-5, 135; *EIr*, art. *Central Asia*, v (B. Spuler), vi (R.D. McChesney), vii (Y. Bregel).

(W. BARTHOLD-[C.E. BOSWORTH])

2. From 1865 to the present.

Situated at the heart of a huge cotton-growing oasis, a regional and international communications centre, the city of Tas͟hkent experienced a considerable demographic and economic development at the end of the 19th century and became the most important urban centre in Central Asia. The major turning-point in the town's history was its submission to Russian rule, achieved in June 1865 by General Tcherniaev, one of the major protagonists of Tsarist expansion towards India. Following the conquest, the colonial town was constructed to the east of the original city, made up of traditional quarters (*maḥalla* and *daha*) and outside the walls of the latter—an illustration of the concern of the Tsarist authorities to avoid direct confrontation with local populations. Two years later, the Governorship-General of Turkestan was constituted, with Tas͟hkent as the seat of power and General von Kaufmann (1867-81) as the first Governor. Henceforward, there was a surge in political, economic and cultural activity (appearance in 1902 of the first clandestine Marxist circles, uniting Muslim reformists and nationalists fleeing the repression to which they had been subjected in Buk͟hārā, publication of the first newspaper in the Uzbek language, *Turkistan Vilayatining Gazeti*, first Russo-indigenous secular establishment) (Azadaev, 1967). Its population increased from 56,000 inhabitants in 1868 to 156,000 in 1897. The Transcaspian railway reached Tas͟hkent in 1898, and in 1901 work began on the Trans-Aral line which would connect it to Orenburg. Numerous enterprises, banks and scientific institutions were established by the civilian and military Russian colonists who, in spite of strong reservations on the part of the colonial authorities, preoccupied with threats of a *d͟jihād*, also obtained permission to build Orthodox churches (Dobromyslov,

1912). However, it was not until 1912, at a time of general internal unrest, that the first, and ephemeral, so-called "anti-Muslim" mission was opened in Tashkent; its results in terms of proselytism were to be insignificant. Besides the popular demonstrations of 1892 against sanitary measures taken by the Russians during a cholera epidemic, reckoned as contrary to Islam (*Istoriya Uzbekskoy SSR*, i, 131), the mutiny of Tsarist officers in 1905 and the 1916 anti-labour conscription revolt, also affecting the capital of Russian Turkestan, were the principal events preceding the outbreak of the Revolution of 1917 (Tursunov, 1962).

The revolutionary activities witnessed in Tashkent corresponded to those unfolding in Moscow and Petrograd, with some specifically local features. The town lost its status as capital to the benefit of Samarkand; June 1917 saw the overthrow of the Turkestan Committee of the Provisional Government created on 7 April and, in parallel, the appearance of a counter-revolutionary front formed by the Military Organisation of Tashkent and the "Association of interpreters of the Sharīʿa", the latter created in the old city by the leaders of the nationalist bourgeoisie. On 20 October (10 November) 1917, the Bolsheviks established the REVKOM or Soviet of Tashkent, with the unexpected support of Russian colonists perturbed by Muslim pretensions to sovereignty. From 19 to 22 February 1918, the army of this Soviet bombarded the "Autonomous state of Khokand", an ephemeral Muslim counter-power founded in the Farghāna valley. This event marked the beginning of civil war in Turkestan (1918-22), which saw the whole of this zone cut off from the central regions by General Dutov's White Army and the population decimated by famine. It was also the arena for years of warfare between the Red Army on the one hand and Basmači [*q.v.*] rebels and foreign interventionists on the other (Pulatov, Rashidov, 1972). Besides the armed insurrection of 9 January 1919 led by Ossipov, a former officer of the Tsarist army, 6 April 1919 saw the constitution of the Musbyuro, specifically designed for ideological propaganda in Muslim circles on behalf of the Russian Communist Party, directed by T. Ryskulov, J. Aliev, J. Ibragimov, A. Muhitdinov and N. Khodyaev, reformist leaders who had opted for the Bolsheviks (*Tashkent*, 1983, 212). This organisation having proposed the formation of a Turkish Republic and of a Turkish Communist Party, and faced by the extortions perpetrated by the Tashkent Soviet on the Muslim population, Lenin decided to re-establish his control, sending in the Turkkomissiya led by Frunze (*Istoriya kommunističeskikh organizatsiy*, 1967). In 1924, Tashkent entered the Soviet Socialist Republic of Uzbekistan, of which it once again in 1930 became the capital at the expense of Samarkand, regaining its central position in politics and culture. There are currently 105 scholastic establishments, for 20,000 pupils (in 1917, the town possessed 19 schools for 8,000 pupils) (Pougatchenkova, 1983, 24).

As the face of Tashkent has undergone profound changes during the decades of Soviet domination, the history of its urban development cannot be dissociated from the political events of which it was the theatre. From the beginnings of nascent Bolshevik power, the principle of division between traditional town and new town was rejected. The task of Soviet urban architects was defined as twofold: on the one hand, reconstruction of the ancient quarters, damaged by the civil war and the destruction that had accompanied the imposition of the Soviet régime; on the other, the realisation of officially-sanctioned ideological objectives in the form of social buildings: construction of a network of cultural centres, libraries, theatres, educational, recreational, medical and social infrastructures. Several phases may be identified in this evolution (*Uz. SSR*, 402-8).

(i) *1917-41.* As elsewhere in the USSR, this period belongs under the heading of electrification (first central system in 1923) and industrialisation. The end of the 1920s marks a phase of intensive construction of public and residential buildings in eclectic styles, neo-classical or constructivist (House of the Supreme Soviet, and that of Economic Affairs). The 1930s witnessed an acceleration in industrial construction, also residential quarters (*socgorod*), parks and gardens. The overall scheme for the urbanisation of Tashkent, adopted in 1938, was inspired by that adopted for Moscow in 1935. It left the centre unchanged, built around the enormous Lenin Square (currently Independence Square) (Kadyrova, 1976), to allow extended construction as far to the east as to the west of the old city, which remained of only marginal interest to the planners. However, numerous religious buildings which were a feature of the *mahalla*s (Bulatova, Mankovskaya 1938) were destroyed or converted for other purposes such as factories, warehouses and printing presses.

(ii) *1941-54.* The entry of the USSR into the Second World War caused substantial upheavals in the capital of Uzbekistan, to which numerous factories, offices, universities and whole populations were evacuated from the western front (50 business enterprises, 300,000 persons in all, including 100,000 children and several thousand Ashkenazi Jews). The population doubled, rising to a million inhabitants. On 20 October 1943, the Spiritual Board of the Muslims of Central Asia and Kazakhstan was established in Tashkent (after the independence of Uzbekistan it took the name of Spiritual Board of the Muslims of Mawarannahr). Architecture became monumental and pompous.

(iii) *1955-65.* This was a decade of intense urbanisation, corresponding to the introduction of new technologies in construction (foundations in reinforced concrete). Entire quarters of the old city gave way to modern multi-storey constructions, surrounding communal green spaces. Efforts were made to accommodate residents of the same *mahalla* together in the new apartment blocks, so as to preserve familial solidarity and traditional social habits. The area of the city increased considerably.

(iv) *1966-91.* In the aftermath of the earthquake of 26 April 1966, which claimed nearly 400,000 victims (a third of the total population) and destroyed 95,000 homes, with lethal after-shocks continuing for a whole year, the reconstruction of the town took place according to a new plan which favoured the creation of peripheral residential quarters (*mikroraion*) and the principle of asymmetrical development (*Uz. SSR*, 405). Architectural trends were a blend of modern techniques of construction and "Uzbek national styles" (arcades, galleries, open verandahs, mosaics and panelling). In addition to the opening of the Imām al-Bukhārī Higher Islamic Institute in 1971 (the second in the USSR after that of Bukhārā), 7 November 1977 saw the inauguration of the first underground railway line.

The Brezhnev period (1964-83) was marked by intense diplomatic activity directed towards the Muslim countries with which the USSR was seeking reconciliation. In its role as showcase of socialism in Asia, Tashkent was the site of numerous peace conferences, at least until 1979, the date of the Iranian revolution

and of the Soviet intervention in Afg̲h̲ānistān.

In the course of a *perestroika* instigated by various nationalist or religious demonstrations (new nationalist parties, Birlik, Erk, Party of the Islamic Renaissance and Tatars of the Crimea, between 1987 and 1991), Mikhail Gorbachev attempted one last anti-Muslim campaign which did not, however, succeed in stemming the ever more visible manifestations of religious renewal (in 1989, the Spiritual Board of Tas̲h̲kent retrieved the "Ḳur'ān of 'Ut̲h̲mān" which had been kept in the Ermitage Museum for its own library, and numerous mosques were renovated or restored to their congregations) combined with a campaign against the "cotton mafia" which aggravated rancour towards Moscow and induced the ruling élite to assume an independence which had not been envisaged at the outset. On 1 September 1991 Tas̲h̲kent became the capital of the independent Republic of Uzbekistan which took its seat at the United Nations on 2 March 1992.

A new era began, marked by the changing of hundreds of street names, in spite of a perceptible continuity in the management of the administrative, economic and social problems, imposed by the post-Soviet transition, on the part of the rehabilitated élites of the former régime. Tas̲h̲kent today comprises 2.1 million inhabitants (or 10% of the total population of the Republic). It is twinned with Tripoli, Tunis, Marrakesh, Patiala (India), Seattle, Skopje and Karachi, and is intent on forging new diplomatic, economic and strategic alignments.

ṬAS̲H̲KÖPRÜZĀDE, the name of a family of Ottoman Turkish scholars who stemmed from the village of Ṭas̲h̲ Köprü ("stone bridge") near Ḳasṭamūnī [*q.v.*] in northern Anatolia. Famous members of the family include:

1. Muṣliḥ al-Dīn Muṣṭafā, preceptor of Sultan Selīm I [*q.v.*].

He was born at Ṭas̲h̲ Köprü in 857/1453, and died on 12 S̲h̲awwāl 935/19 July 1529 in Istanbul. He studied in Bursa and Istanbul under celebrated scholars, and then progressed through a series of *medreses* at Bursa, Ankara, Skopje, and Edirne. Bāyezīd II [*q.v.*] appointed him preceptor (*k̲h̲od̲j̲a*) of his son Selīm, who was then governor of Trebizond, but when the prince showed more interest in administrative matters than in learning, he was transferred to teaching positions at Amasya, Bursa, and Istanbul. As sultan, Selīm I appointed his former teacher as judge of the newly-conquered city of Aleppo, but he returned to the teaching profession and eventually settled at the Ṣaḥn-i t̲h̲amān [*q.v.*]. He wrote poetry under the *mak̲h̲laṣ* of Ḥilmī. His son was 'Iṣām al-Dīn Aḥmed (see 2. below).

Bibliography: For a full biography, see M. Münir Aktepe, art. *Taşköpri-zâde.* 2., in *İA*.

2. 'Iṣām al-Dīn Aḥmed b. Muṣṭafā b. K̲h̲alīl, Abu 'l-K̲h̲ayr, the fourth in the line, theologian and biographer, d. 968/1561.

Life. He was born at Bursa on 14 Rabī' I 901/2 December 1495, the son of Muṣliḥ al-Dīn Muṣṭafā [*q.v.*]. He was taught by his father, then studied at Ankara, Bursa, and Istanbul under celebrated scholars and became a member of the learned profession, teaching first in 931/1525 at a *medrese* at Dimetoḳa [*q.v.*] and being promoted to Istanbul in 933/1527. From there he was transferred to Skopje/Üsküb in 1530, then taught in *medreses* in Istanbul; in 945/1539 he was appointed to the Üç Şerefeli Medrese at Edirne [*q.v.*]. He was then promoted to the Ṣaḥn-i t̲h̲amān [*q.v.*] where he taught till 951/1544. He went on to teach at the *medrese* of Bāyezīd II at Edirne. In 952/1545 he left *medrese* teaching to hold the office of *ḳāḍī* of Bursa, but in 954/1547 he was dismissed and reinstated as Ṣaḥn professor. In 958/1551 he took up the office of *ḳāḍī* of Istanbul, but had to resign in 961/1554 because of failing eyesight. He devoted the following years to dictating his works. He died in Istanbul on 30 Rad̲j̲ab 968/13 April 1561. One of his sons was the historian Kemāl el-Dīn Meḥmed (d. 1030/1621, see 3. below); a younger son, Ebū Ḥāmid, a judge, died in 1005/1597.

Works. 'Iṣām al-Dīn Aḥmed wrote more than nineteen theological and encyclopaedic works in Arabic. He is celebrated for his biographical *al-S̲h̲aḳā'iḳ al-nu'māniyya fī 'ulamā' al-dawlat al-'Ut̲h̲māniyya*, which he dictated down to 965/1558. It is divided into ten classes, *ṭabaḳāt*, corresponding to the reigns of ten Ottoman sultans and culminating in the reign of Süleymān. From the fourth class onwards, one chapter is devoted to religious scholars and one to dervish *s̲h̲eyk̲h̲s*, and from the seventh class onwards a third chapter on physicians is added. For the notices of earlier mystics, 'Iṣām al-Dīn Aḥmed, a K̲h̲alwetiyye [*q.v.*] member, relied on Lāmi'ī's [*q.v.*] enlarged Turkish recension of D̲j̲āmī's [*q.v.*] *Nafaḥāt al-uns*. Translations into Turkish were begun by 'Ās̲h̲iḳ Čelebi [*q.v.*]; the most important ones are those by Med̲j̲dī and 'Aṭā'ī [*q.vv.*]. For the illustrated translation by Meḥmed Belg̲h̲rādī presented to 'Ot̲h̲mān II, see Esin Atıl (ed.), *Turkish art*, New York 1980. Among the continuations in Arabic, that by 'Alī b. Bālī, nicknamed Mīnīḳ (d. 997/1569), entitled *al-'Iḳd al-manẓūm fī d̲h̲ikr afāḍil al-Rūm* has been translated into German by O. Rescher, Stuttgart 1934. Other works include the *Nawādir al-ak̲h̲bār fī manāḳib al-ak̲h̲yār*, a collection of biographies completed at Üsküb in 938/1532. The encyclopaedia *Miftāḥ al-sa'āda wa-miṣbāḥ al-siyāda* has been translated into German by Rescher, Istanbul 1934.

3. Kemāl al-Dīn Meḥmed, historian (959-1030/1552-1621).

Son of the better-known scholar Aḥmed b. Muṣṭafā (see 2. above), Kemāl al-Dīn Meḥmed was born in Istanbul in 959/1552 where his father held the post of *ḳāḍī*. From 984/1576 he served as a *müderris* in several *medreses* in the capital before transferring to a judicial career in 999/1591 as *ḳāḍī* of Selānīk (Salonika). Thereafter he held major *ḳāḍīlīḳs* in Üsküdar, Aleppo, Damascus, Bursa, Cairo and Ghalaṭa before himself becoming *ḳāḍī* of Istanbul in 1011/1603. Between 1012/1604 and 1018/1609 he was three times appointed *ḳāḍī ʿasker* [*q.v.*] of Anatolia; between 1021/1612 and 1030/1621 he held three times the post of *ḳāḍī ʿasker* of Rumeli. In the latter year he set out with ʿOthmān II (1618-22 [*q.v.*]) on the campaign against Poland, but turned back due to ill-health and died at Isḥāḳče (Isakči, in Rumania) on 4 Shewwāl 1030/22 August 1621. He was buried next to his father at the ʿĀshıḳ Pasha mosque in Istanbul (Newʿī-zāde ʿAṭāʾī, *Ḥadāʾiḳ al-ḥaḳāʾiḳ*, Istanbul 1268/1852, 641-2; Kātib Čelebi, *Fedhleke*, Istanbul 1267/1851, ii, 6; *GOW*, 148-9; *Sidjill-i ʿOthmānī*, iv, 80; M.M. Aktepe, art. *Taşköprüzade Kemaleddin*, in *IA*, xii, 44-6).

Under the title *Taʾrīkh-i ṣāf* (also known as *Tuḥfat al-aṣḥāb*) he compiled a brief history of the Ottoman empire down to the reign of Aḥmed I (1603-17 [*q.v.*]), to which was added a history of the ʿAbbāsids and brief accounts of other Muslim dynasties (publ. 3 parts in 1 vol., Istanbul 1287/1870). The work was written during the latter part of the reign of Aḥmed I, to whom it was dedicated. According to ʿAṭāʾī, Ṭashköprüzāde was commissioned by ʿOthmān II to compose a *shehnāme* (probably on the Polish campaign), but his death obviously precluded this (ʿAṭāʾī, 642). His translations into Ottoman Turkish include his father's encyclopaedic work in Arabic, *Mawḍūʿāt al-ʿulūm* (publ. 2 vols., Istanbul 1313/1895-6), and a treatise in Persian by Ḥusayn Wāʿiẓ Kāshifī [*q.v.*] (unpubl.). In addition to various minor works and translations, he also wrote Arabic and Ottoman poetry under the *makhlaṣ* of Kemālī (ʿAṭāʾī, 642; *ʿOM*, i, 347-8).

Bibliography: Given in the article.

(F. Babinger-[Christine Woodhead])

TASHLIDJALI YAḤYA, modern Tkish. Taşlıcalı Yahya (d. 990/1582), an important Ottoman poet of the period of Süleymān II [*q.v.*] and a member of the North Albanian Dukagjin family (Gibb, *HOP*, iii, 116 ff.), sometimes identified as Dukaginzāde Yaḥyā Beg.

Conscripted under the *dewshirme* [*q.v.*], he was educated and given military training, rising to high rank in the Janissaries and taking part in most of the 16th-century campaigns. Concurrently he pursued the career of poet under important patrons, including the Grand Vizier Rüstem Pasha [*q.v.*]. Especially pleased by a satire Yaḥyā wrote against the rival poet Khayālī [*q.v.*], Rüstem appointed him administrator of several pious foundations. However, as a result of Yaḥyā's well-known elegy for Süleymān's son Muṣṭafā [*q.v.*], a poem well received by Muṣṭafā's admirers among the Janissaries, Rüstem (implicated in the prince's execution) sought but failed to have the poet put to death. He did, nevertheless, obtain Yaḥyā's dismissal from office, and the latter spent his last years on a fief in Bosnia, and is reputed to have become deeply involved in Islamic mysticism (Mehmed Çavuşoğlu, *İA* art. *Yahyâ Beg, Dukagin-zâde*).

In addition to a *dīwān* (Çavuşoğlu, *Yahya Bey Divanı*, Istanbul 1977), Yaḥyā's works include two *shehr-engīz* for Edirne and Istanbul, and a *Khamsa* [*q.v.*], sc. five *mathnawīs* that gained him a solid reputation, both for their construction and (as with his poetry in general) for the clarity and purity of his language.

Bibliography: There is a full bibl. in Çavuşoğlu's *İA* article, and recent doctoral studies by B. Çağlayan, İ. Doğanyiğit and D. Sabahat at Gazi, Erciyes and Marmara Universities respectively. See also Abdülkadir Karahan, *Les poètes classiques à l'époque de Soliman le Magnifique*, Ankara 1991, 76-7; İ. Güven Kaya, *Dükaginzâde Taşlıcalı Yahyâ Beğ'in şiirlerinde cinsellik*, in *Jnal. of Turkish Studies*, xiv (1990), 273-81.

(Kathleen R.F. Burrill)

TASHOZ (Tkish. form of the Greek Thasos), an island in the northernmost part of the Aegean Sea near the coast of Greece, not far from the port city of Kavala [see kawāla]. Its round shape and large size (area 393 km^2; population 13,000) give Thasos a distinctive identity, enhanced by a fairly mountainous wooded interior (Ipsari, the highest peak, 1,123 m/3,683 feet). The administrative centre is a port city of the same name, also called Limenas, facing the mainland.

Thasos, like Lesbos [see midilli] and Lemnos [see limni], was a fief granted to the Genoese family of Gattilusi by the last three Byzantine emperors, a grant renewed for a brief period after the fall of Constantinople to Meḥemmed II [*q.v.*] in 1453. Despite intermittent Venetian threats, at the conclusion of a war between Turkey and Venice (1463-79) Thasos passed under definitive Ottoman control. It was usually governed by a *voyvoda* sent by the *sandjak beyi* of Kavala. Turkish overlordship lasted until, in the First Balkan War, the Greek navy landed there on 18 October 1912; Greek possession was ratified by the treaty of Bucharest in August 1913.

Between 1813 and 1902 a unique interlude occurred in the history of Thasos, for in 1813 the Ottoman sultan Maḥmūd II [*q.v.*] granted it as a personal fief to Muḥammad ʿAlī Pasha [*q.v.*] of Egypt. The latter, a native of Kavala, was said to have spent part of his childhood on the island, and had therefore a sentimental attachment to it which manifested itself in a grant to it of considerable internal autonomy. This situation continued under Muḥammad ʿAlī's successors; but after 1874 the relationship soured, until in 1902 the inhabitants demanded and obtained a re-establishment of Ottoman rule.

During the centuries of life in the *Dār al-Islām*, the people of Thasos remained chiefly Greek-speaking and Orthodox, except for the small Turkish settlements at Theologos and Kasaviti up to 1821. Prosperity on this naturally rich island fluctuated because of external factors, the principal one being piracy afflicting the Aegean especially during the 17th, 18th and

the first half of the 19th century. It forced the Thasians to leave the fertile coastal area for the wooded mountainous interior and to erect watch towers for early warning.

A noteworthy episode was the occupation of Thasos by the Russians in 1770-4, when after the victory of Česhme [*q.v.*], their fleet dominated this part of the Mediterranean. The Russians then carried out some of their ships' repair and construction on Thasos, which had extensive stands of fine timber exploited for shipbuilding.

Bibliography: For the classical period, see Pauly-Wissowa, 2nd ser., v (1934), cols. 1310-27 s.v. Thasos; for the Turkish period, A.E. Bakalopoulos, *Thasos: son histoire, son administration de 1453 à 1912*, Paris 1953 (École Française d'Athènes, *Études thasiennes*, 2), and the bibl. there, or its Greek original *Historia tes Thasou, 1453-1912*, Thessalonike 1984; see also the *Bibls.* of LIMNI and MIDILLI.

(S. SOUCEK)

TASHRĪʿ (A.), a technical term of Islamic law-making.

1. *Definition and historical context.*

Tashrīʿ, in the modern context, signifies statutory legislation incorporating elements from the *sharīʿa*. In theory, legislative authority is alien to Islam. In the Middle Ages, temporal legislation by caliphs and rulers based on *siyāsa sharʿiyya* [*q.v.*] was a common practice. This took place, however, within the framework of a theocracy, the underlying concept of which was the sovereignty of the *sharīʿa* assumed to reflect the revealed will of Allāh on earth through His authorised interpreters. Today, in contrast, the parliament is the declared source of sovereignty, and it sets bounds to the *sharīʿa*.

2. *The impetus for* tashrīʿ.

This was the desire to adapt the *sharīʿa* to the changing requirements of a modern society. The method to this end has been inspired by the West: the adoption of the institution of the legislature and the concept of codification. The Young Ottomans, the first Islamic constitutional movement, introduced these innovations in the second half of the 19th century, and the trend with respect to codification (*taḳnīn*), was followed in Egypt by the liberally-oriented modernist movement founded by Muḥammad ʿAbduh. He advocated the codification by the *ʿulamāʾ* (rather than the legislature) of *sharʿī* law pertaining to *muʿāmalāt* (with special reference to matters of personal status and *waḳf* [*q.v.*]) to be imposed on the *sharīʿa* courts by the state. Yet it was Western-trained lawyers who took the leading role in advancing *tashrīʿ* by promoting ideas such as statutory legislation, codification along European patterns and modernisation of the court system. Conservative sectors, mainly the religious establishment, opposed this trend. The government took a middle position.

In Egypt during the 1930s, attempts by the emerging Islamic political groups, especially the Muslim Brothers, to revive the *sharīʿa* through statutory legislation failed. In the 1970s these attempts were renewed (see below). The attempts were rejected mainly by secularised Muslim intellectuals, while the government again took a middle position.

Traditionalist *ʿulamāʾ* consider *tashrīʿ* a means of secularising the *sharīʿa*. Conformist *ʿulamāʾ* support the technique (and have even prepared legislative proposals, as in Egypt during the 1970s) for various reasons: they fear jeopardising their economic, social and political position; their integration into the political establishment enables them to better understand the interests of the state and to cooperate from inner conviction; they identify the good of the state with their own good; they fear that the alternative to moderate reformist policy via *tashrīʿ* may be a radical one outside their control; and finally, the reforms have not been carried out in the name of a declared anti-religious ideology.

In Saudi Arabia, the cooperation between the *ʿulamāʾ* and the *umarāʾ* has a theoretical basis in the political doctrine of Ibn Taymiyya [*q.v.*], according to which the *sharīʿa* depends on the ruler for its application while the state needs the *sharīʿa* for its legitimation.

3. *Codification of the* sharīʿa.

Legal reform in the 19th-century Ottoman Empire started with adoption of European codes (such as commercial and criminal) in their entirety, but soon shifted to codification, along Western patterns, of various domains of the *sharīʿa*. The most important codification of the 19th century was the *Medjelle*, the Ottoman civil code [*q.v.*]. Towards the end of the 19th century, the Egyptian jurist Muḥammad Ḳadrī Pasha compiled three codes pertaining to obligations and contracts, personal status, and *waḳf*. Similarly to the *Medjelle*, these too were based on selection (*takhayyur*) from the Ḥanafī school. In contrast to the *Medjelle*, however, they were not endorsed officially as state laws, though due to the author's prestige they were sometimes resorted to by courts both in and outside of Egypt.

Since the beginning of the 20th century, codification has been extended to matters of personal status and succession (which are the core of the *sharīʿa*), and to *waḳf*. Following the Ottoman Family Rights Law of 1917, most Middle Eastern and North African countries have promulgated reformist statutes in these domains. The impetus for the reforms was the desire to adapt *sharīʿa* norms to the features of the nuclear family and to strengthen the position of women [see NIKĀḤ; ṬALĀḲ; MĪRĀTH].

The Egyptian jurist ʿAbd al-Razzāḳ al-Sanhūrī compiled the Egyptian civil code of 1948, which was based on the French-inspired Egyptian codes of 1875 and 1883, national court decisions, and (to a lesser extent) the *sharīʿa*. In the event of a lacuna, the court shall decide in accordance with (1) customary law, (2) adequate principles of the *sharīʿa*, and (3) the principles of equity. The Egyptian civil code was adopted with some variations by Syria (1949) and Libya (1954). Al-Sanhūrī was also the architect of the civil code of ʿIrāḳ (1953), which is strongly inspired by the *Medjelle*, and that of Kuwait (1961). The Sudanese Transactions Act of 1984 is based mainly on the Jordanian civil code of 1976, which in turn is also based on the *Medjelle*. The Iranian civil code of 1939 is a combination of *sharʿī* and French legal principles. This applies also to the Tunisian Code of Obligations and Contracts of 1906.

The juristic basis for accommodating the *sharīʿa* via codification has been provided by a wide range of methods, some of which were provided by the modernists, such as *takhayyur* and *talfīḳ* [*q.v.*], *siyāsa sharʿiyya*, *maṣlaḥa* [*q.v.*] and neo-*idjtihād* [see MAḤKAMA. 4. xiii].

No legislature in the strict sense of the term has so far been introduced in Saudi Arabia. The King's power to issue administrative orders (*marsūm* rather than *ḳānūn*) is in the best tradition of *siyāsa sharʿiyya*. In the wake of Ibn Suʿūd's unsuccessful attempt to codify the *sharīʿa*, six books by well-known Ḥanbalī jurists were designated as authoritative sources to be relied on (in a certain order) in the *sharīʿa* courts.

4. *Reinstating the* sharīʿa *via* tashrīʿ.

Since the early 1970s, there has been an increasing tendency towards the Islamisation of various domains of the law, especially the penal law, in countries such as Libya, Iran, the Sudan and Pakistan. This too has proceeded by means of codification and statutory legislation, as well as by national court decisions making the validity of statutory provisions conditional on the extent of their conformity to the *sharīʿa*.

In Egypt, attempts in the 1970s towards reviving the *sharīʿa* have not yielded any substantial results, the only exception being the prohibition (1976) on the consumption of alcohol in public places, which has had a minimal effect. In the early 1980s a parliamentary committee drafted six *sharīʿa*-inspired codes pertaining to civil and penal codes, and codes of procedure, evidence, maritime commerce, and commerce. These were aborted, however, before they were given life.

5. *The courts' attitudes towards* tashrīʿ.

In Egypt, *ḳāḍīs* resisting personal status reforms interpreted them narrowly. Many other *ḳāḍīs* applied the reforms either technically—in the spirit of the *ʿulamāʾ*'s traditional obedience to the ruler's decrees—or out of ingenious support for the aims of the reforms. Some *ḳāḍīs* have even interpreted the reforms quite broadly. Generally speaking, it seems that many *ḳāḍīs* have been attentive to social change and encouraged by the statutory legislation to adopt a more innovative legal approach. As a whole, they did not obstruct the application of the reforms.

The Egyptian national courts, whose jurisdiction has been extended to matters of personal status since the abolition of the *sharīʿa* courts (1955), apply statutory reformist provisions without inhibitions. When there are lacunae, however, they do not hesitate to adopt legal norms of the Ḥanafī or any other school of law. They apply Ḥanafī, alongside civil, rules of evidence and procedure.

A few Egyptian judges of the civil courts, invoking Article 2 of the 1980 Constitution (according to which the *sharīʿa* is the main source of legislation), refused to apply statutory provisions contradictory to the *sharīʿa*, usually referring the case to the Supreme Constitutional Court to obtain a ruling with regard to the constitutionality of the provisions concerned. In a 1985 decision, the Supreme Constitutional Court rejected the appeals of such judges by ruling that Article 2 was not applicable to legal enactments in force prior to the adoption of the 1980 Constitution.

6. *Evaluation of* tashrīʿ.

From the strictly orthodox *sharʿī* point of view, mere codification inevitably implies the transformation of the *sharīʿa* from jurists' to statutory law. Statutory provisions have an autonomous existence based on state-imposed sanctions, and the *sharʿī* elements are to be interpreted strictly within the framework of the national-territorial statutes. In other words, on the level of the basic norm (which represents the primary legal norm in any given country) codification results in a complete departure from the religious-legal literature (unless, in the event of a lacuna, the court is directed by the legislator to resort to the *sharīʿa*). On the level of interpretation, however, the court is not debarred from consulting religious-legal literature (or any other source) provided the court does not contradict statutory provisions, as Egyptian *ḳāḍīs* were prone to do prior to the abolition of the *sharīʿa* courts.

Moreover, codification brings about total disruption of the *sharʿī* legal methodology (*uṣūl al-fiḳh* [*q.v.*]) (without a new doctrine taking its place), the corpus of the *sharʿī* positive law as consolidated in the schools of law (*madhāhib*) and the legal professional class of the *fuḳahāʾ* and *muftīs*, the authorised exponents of the *sharīʿa*. In Libya and the Sudan, the selective incorporation of *sharʿī* norms into statutory legislation, within the policy of the Islamisation of the legal system, has in many cases caused deviations from the *sharīʿa*, to the point of distorting it. In Iran under Khumaynī, jurists' law was not restored, the Madjlis did not cease to exist, and not all the statutes contradictory to the *sharīʿa* were abolished.

(A. Layish and R. Shaham)

TASHRĪFĀT [see marāsim. 1; nīshān].

TASHRĪḤ (a.), a technical term for anatomy. Early dictionaries give only two meanings: the cutting of flesh from the bones and slicing it very thin prior to cooking (referring to preparation of animal meat for food), and the expounding upon a question and thus exposing an obscurity (e.g. *LA*, √ *sh-r-ḥ*); in the second sense it is similar to *sharḥ* [*q.v.*]. The

medical definition occurs in later lexicons (e.g. Ḥādjdjī Khalīfa, i, cols. 408-9; Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, Calcutta 1853-62, 735) where it is used for both anatomy as a description of the human body and for the empirical science of dissection.

Knowledge of anatomy in mediaeval Islam was firmly based on the anatomical writings of the Greek physician Galen [see DJĀLĪNŪS], who flourished in the 2nd century A.D., and who to a large extent argued from analogy with animal structures. Galen's writings were available in the Islamic world through the translations of Ḥunayn b. Isḥāḳ al-ʿIbādī [*q.v.*] and his collaborators. Galen presented the material in a highly teleological manner, with constant emphasis on structure and function demonstrating the design of the Creator, and this approach found a receptive audience amongst Islamic philosopher-physicians.

All the major Arabic and Persian medical encyclopaedias had sections on anatomy describing the bones, muscles, nerves, arteries, veins, and the compound organs which included the eye [see ʿAYN], the liver [see KABID], the heart and the brain. The relevant sections from the *K. al-Manṣūrī* (*maḳāla* 1, *bābs* 1-26) by Muḥammad b. Zakariyyāʾ al-Rāzī [*q.v.*], from the *Kāmil al-ṣināʿa* (*djuzʾ* I, *maḳāla* 2, *bābs* 1-16, on homogenous parts including the bones, nerves, blood-vessels, cartilages, membranes, ligaments, hair, nails; and *maḳāla* 3, *bābs* 1-37 on heterogenous parts consisting of the muscles and compound organs) by ʿAlī b. al-ʿAbbās al-Madjūsī [*q.v.*], and from the *Ḳānūn fi ʾl-ṭibb* (*kitāb* I, *fann* 1, *taʿlīm* 5, *djumlas* 1-5 on bones, muscles, nerves, arteries and veins; and scattered passages in *kitāb* III, *fanns* 1-22 on compound organs) by Ibn Sīnā [*q.v.*] have been published and translated into French by de Koning. Such works summarised the Galenic anatomical concepts and were occasionally illustrated with schematic diagrams of the eye, the cranial sutures, or the bones of the upper jaw. Debates arose regarding the total number of bones and muscles in the human body.

Ocular anatomy was discussed in treatises concerned with ophthalmology or optics, such as those by Khalīfa b. Abi ʾl-Maḥāsin [*q.v.*] or al-Ḥasan b. al-Haytham, which often included illustrations of the eye. Anatomy was also a topic in non-medical writings such as the *ʿAdjāʾib al-makhlūḳāt wa-gharāʾib al-mawdjūdāt* by al-Ḳazwīnī [*q.v.*], where there is a discussion of the human body as one of the wonders of the world. In the early 8th/14th century, Rashīd al-Dīn Ṭabīb [*q.v.*] had translated into Persian for his world history an illustrated Chinese anatomical treatise (*Tanksūḳ-nāma-yi īlkhānī*, coll. works, Tehran 1971, ii), which appears to have had no subsequent influence upon Islamic anatomical thought.

No anatomical illustrations of the entire body are known to have been produced in the Islamic world before those that usually accompany the *Tashrīḥ-i Manṣūrī* by Manṣūr b. Muḥammad b. Aḥmad b. Yūsuf b. Ilyās, whose Persian-language treatise, often called "Manṣūr's Anatomy" was dedicated to a grandson of Tīmūr and ruler of Fars from 796-812/1394-1409. The treatise consists of an introduction followed by five chapters on the "systems" of the body: bones, nerves, muscles, veins and arteries, each illustrated by a full-page diagram with numerous Persian-Arabic labels. A concluding section on compound organs and the formation of the foetus is usually illustrated with a diagram showing a pregnant woman.

A similarity has been noted between the first five illustrations accompanying the *Tashrīḥ-i Manṣūrī* and a set of anatomical illustrations that appeared in earlier Latin medical treatises. This similarity is particularly evident in the diagram of the skeleton, which in both the Latin and Islamic versions is viewed from behind, with the head hyperextended so that the face looks upward. All the figures are in a distinctive squatting posture. The earliest Latin set dates from the 12th century A.D. while the earliest dated Islamic set was completed on 4 Muḥarram 894/8 December 1488 (Bethesda, Md., NLM ms. P 18).

The origin of this anatomical series remains a puzzle. It clearly predates the Tīmūrid treatise by Ibn Ilyās, with which about two-thirds of the nearly 70 perserved sets of Islamic diagrams are associated. The remainder are more recent renderings, usually unlabelled, that circulated independently or were inserted into copies of other treatises. The sixth figure in the Islamic series, the pregnant woman, has no parallel in the earlier Latin series and was probably a contribution by Ibn Ilyās himself. It was constructed from the arterial figure, without the labels, over which there was superimposed an oval gravid uterus having the foetus in a breech or transverse position.

Systematic human anatomical dissection was no more a pursuit of mediaeval Islamic society than it was of medieval Christendom. It seems clear from the available evidence, however, that there were no explicit legal or religious strictures banning it. Indeed, many Muslim scholars lauded the study of anatomy, primarily as a way of demonstrating the design and wisdom of God. Typical of such sentiments is a saying attributed to Ibn Rushd [*q.v.*]: "Whoever has been occupied with the science of anatomy has increased his belief in God" (Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ed. A. Müller, Cairo-Königsberg 1882-4, ii, 77). What is meant by the "science of anatomy" (*ʿilm al-tashrīḥ*) in such statements is not the dissection of an animal in order to determine its structure, but rather the elaboration of the ideas of Galen regarding structure and function. There are, however, some references in scholarly and medical writings to dissection, though to what extent these reflect actual practice it is impossible to say.

What is certain is that mediaeval Islamic writers made two noteworthy contributions to the knowledge of anatomy. One was the result of chance observation: following the discovery of some skeletons during a famine in Egypt in 597/1200, the scholar and physician ʿAbd al-Laṭīf al-Baghdādī [*q.v.*] improved the description of the bones of the lower jaw and the sacrum.

The second was the description of the movement of the blood through the pulmonary transit by the Syrian physician Ibn al-Nafīs [*q.v.*], who composed a commentary on the *Ḳānūn fi ʾl-ṭibb* of Ibn Sīnā in which Ibn al-Nafīs criticised Ibn Sīnā for spreading his discussion of anatomy over several different sections, for which reason Ibn al-Nafīs subsequently prepared a separate commentary on just the anatomical portions (*Sharḥ tashrīḥ al-Ḳānūn*, ed. S. Ḳaṭāya and B. Ghalyūndjī, Cairo 1988). A subject of debate among historians is whether Ibn al-Nafīs's commentary on the anatomy was available through translation to European physicians. In his commentary, preserved in a copy completed in 640/1242 some 46 years before his death (Los Angeles, UCLA Biomedical Library, ms. Ar. 80), Ibn al-Nafīs described the movement of blood through the pulmonary transit, explicitly stating that the blood in the right ventricle of the heart must reach the left ventricle by way of the lungs and not through a passage connecting the ventricles, as Galen had maintained. This formulation of the

pulmonary circulation, sometimes called the "lesser" circulation, was made three centuries before those of Michael Servetus (d. 1553) and Realdo Colombo (d. 1559), the first Europeans to describe the pulmonary circulation. It is known that Ibn al-Nafīs's commentary on the last part of the *Ḳānūn*, concerned with compound remedies, was translated into Latin by the Renaissance physician Andrea Alpago (d. 1522), who had also prepared a new translation of Ibn Sīnā's *Ḳānūn*. The translation of Ibn al-Nafīs's commentary on compound remedies was not published until 1547, when it was printed at Venice, but the possibility remains that other parts of Ibn al-Nafīs's commentary might have been transmitted through unpublished translations. Within the Islamic world, Ibn al-Nafīs's commentary on Ibn Sīnā's anatomy remained relatively unknown. However, two 8th/14th century writers knew of his theory of pulmonary circulation, the 10th/16th-century physician 'Imād al-Dīn Maḥmūd Shīrāzī wrote two anatomical treatises dependent upon it, and passages from it are not infrequently encountered as marginalia in Arabic manuscripts.

While Galenic anatomy remained otherwise unchallenged in the Islamic world until the 17th century, in Europe new ideas on the subject emerged in the 16th century. Andreas Vesalius's Latin treatise *De humani corporis fabrica*, printed in Basel in 1543, signified a break with the classical Greek reliance on the application by analogy of animal anatomy to the human body, for in it he undertook systematic human dissection in an attempt to re-evaluate traditional Galenic anatomy. By the 17th century it is evident that Vesalius's treatise was known in the Ottoman and Ṣafawid empires. Illustrations from the *Fabrica* influenced the drawings of individual parts of the body included in the anatomical treatise by Shams al-Dīn 'Itāḳī. In his Turkish treatise, *Tashrīḥ-i abdān wa tardjumān-i ḳabāla-yi faylasūfān*, dedicated to Murād IV [*q.v.*] in 1033/1623, 'Itāḳī intermingled renderings of the Vesalian woodcuts illustrating the brain, skull, vertebral column, eye muscles, uro-genital systems and bones of the legs, feet and hands with schematic diagrams in the tradition of Ibn Ilyās.

Evidence of Persian interest in Vesalian anatomy is found in anonymous Persian manuscripts of the late 17th to mid-19th century which contain ink sketches of the skeletal and muscular figures, and some individual organs, based on diagrams in the *Fabrica*, as well as a large Ḳādjār oil painting apparently intended for didactic purposes. In western India, the continued blending of mediaeval/Galenic anatomy with early modern concepts is evident in a 19th-century copy of the Persian manual by Ibn Ilyās, accompanied by 24 unusual illustrations mixing the two anatomical traditions (Edinburgh University library, ms. Or. 416).

(Emilie Savage-Smith)

TASHRĪḲ (a.), a special name for the last three days of the Muslim Ḥadjdj (11-13 Dhu 'l-Ḥidjdja: *Ayyām al-Tashrīḳ*), during which the pilgrims, having finished their regular rites with the sacrifice on the 10th, stay in Minā and have to throw seven stones daily on each of the three piles of stones [see djamra; ḥadjdj] there. Legally, these stoning rites comprise one of the obligatory pilgrimage duties (*wādjibāt*) according to the four Sunnī schools (*al-Fiḳh 'alā al-madhāhib al-arba'a*, Cairo 1967, 649-51; cf. Ibn Rushd, *The distinguished jurist's Primer* [*Bidāyat al-mudjtahid*], tr.

I.A.H. Nyazee, Reading, U.K. 1994, 414-18). According to the Ḥadīth, fasting is not allowed on these days, for they are "days of eating and drinking", *ayyām akl wa-sharāb* (Muslim, *Ṣaḥīḥ*, 13 [*Siyām*], 144, 145; Mālik b. Anas, *Muwaṭṭa'*, 20 [*Ḥadjdj*], 44, 134-7; al-Nasā'ī, 47 [*Īmān*], 7; Ibn Ḥanbal, *Musnad*, ii, 229, iii, 401, 460, iv, 335, v, 75-6, etc.). With reference to Ḳur'ān II, 184, these days are also said to be days that are to be devoted in addition to *dhikr Allāh* (Mālik b. Anas, *op. cit.*, 20, 44, 135). They are identified traditionally as *al-ayyām al-maʿdūdāt*, "the numbered (i.e. few) days" (Lane, 1971c; cf. al-Bukhārī, *Ṣaḥīḥ*, 13 [*ʿĪdayn*], 11).

In the early period of Islam, the name *tashrīḳ* was also given to the solemn *ṣalāt* on the morning of 10 Dhu 'l-Ḥidjdja. The term is probably a survival from the pre-Islamic period and therefore could no longer be explained by the Muslims with certainty. For example, the obvious explanation which derives the term from "cutting into strips and drying" the sacrificial meat left over on 10 Dhu 'l-Ḥidjdja, is doubtful. An isolated tradition derives *tashrīḳ* from the recitation of the words *ashriḳ thabīr kaymā nughīr* [see TAHLĪL; TALBIYA; TAKBĪR]. One would therefore have to assume that this formula was originally used not only, as we are told, on 10 Dhu 'l-Ḥidjdja before sunrise but also at the lapidation on the following days, and that as an essential element it later became the name for the whole ceremony. In Islam, this lapidation is accompanied by *takbīr* (pronouncing *Allāhu akbar*) among other exclamations. This is perhaps why Abū Ḥanīfa explains *tashrīḳ* as *takbīr* (*TʿA*, vi, 393). See also ḤADJDJ.

Husain, *A guide to Hajj*, Lahore 1972, 85-7.

(R. PARET-[W.A. GRAHAM])

TĀSHUFĪN B. **ʿALĪ** b. Yūsuf b. Tāshufīn, third Almoravid sovereign, ruled over the Maghrib and al-Andalus 537-9/1143-5.

During his father's reign, Tāshufīn served as governor of al-Andalus (522-32/1128-38) where he led several raids and counter-raids, mostly successful, against Christian strongholds and marauders in the regions of Toledo, Badajoz, Seville and Cordova. In 524/1130 he captured the fortress of Azeca, northwest of Toledo. Four years later, he beat off raiding parties in the vicinity of Badajoz, stormed Idania castle and Escalona, and at Albacar, north of Cordova, he narrowly escaped a surprise attack by a Castilian detachment of horsemen.

Growing jealous of Tāshufīn's popularity, Sīr, his half-brother and heir-apparent, prevailed upon his father to recall Tāshufīn to Marrakesh (early 532/1138). Following Sīr's death a few months later, Tāshufīn was enthusiastically acclaimed by Almoravid elders as heir-apparent and, upon his father's death, Tāshufīn succeeded him as *amīr al-muslimīn* on 8 Radjab 537/27 January 1143.

In Morocco, meanwhile, the power of the Almohad rebels, led by ʿAbd al-Mu'min b. ʿAlī [*q.v.*], was growing apace. At an encounter outside Tlemcen, the Almoravids, led by Tāshufīn, were routed and had to retreat to Oran. In the course of his retreat towards the coast where he had arranged for vessels from the fleet stationed in Almeria to arrive in order to transport him to al-Andalus, should the need arise, Tāshufīn fell from his horse off a cliff and died (27 Ramaḍān 539/23 March 1145).

Taking advantage of Tāshufīn's preoccupation with fighting the Almohads in the Maghrib, Alfonso VII of León seized a number of key Muslim strongholds, including Oreja, Coria and Mora, while Andalusian rebels rose against the Almoravids in the Algarve and at Cordova (539/1144-5).

In Morocco, ʿAbd al-Mu'min proceeded to capture Fez and the Almoravid capital Marrakesh, the latter's fall, after a two-year siege, on 17 Shawwāl 541/22 March 1147, marking the end of the Almoravid dynasty in the Maghrib and al-Andalus.

(AMIN TIBI)

TASILI, conventionally TASSILI (Tamasheḳ Berber "plateau"), used by the Tuareg as a generic term for the sandy and rocky ensemble of plateaux of the central Saharan massif: Ahnet and Imidir in the north-west, Tassili N'Ajjer in the north-east, Tassili Tin Missao in the south-west and Tassili N'Ahaggar in the south.

They form an enceinte of heights, ringing at some distance the Ahaggar [*q.v.*] massif with its central position, with their rocky, impressive escarpments rising up to face it like posts for attack round a besieged town. They correspond to a primary geological layer (Ordovician and Devonian sandstones) set down on an ancient shelf of the African shield, which has been buckled under the impact of a great curving movement, pushing up in its centre the Ahaggar massif and leaving between this last and the scarps of the Tassilis a vast, ring-shaped depression. The symmetry of this phenomenon is, however, far from perfect, since the enceinte is at present composed only of the remaining reliefs, although that on the north is quasi-continuous. It is the north-east which is the most regular and which has the highest altitudes (1,700 m/5,100 feet, and even 2,100 m/6,300 feet in the volcanic massif of the Adrar), and which is accordingly a little more humid and a little more favourable to life; this is the region of Tassili N'Ajjer.

The Tassili N'Ajjer lies mainly within modern

Algeria, but stretches into Libya (lat. 26° 30' N to 24° N., long. 5° 30' E. to 10° 30' E.). It comprises two successive series of plateaux, ending in the south in several imposing escarpments, and growing lower towards the north and north-east by vast edges. The whole is gashed by water-made and wind-made erosion: whence the astonishing and grandiose topography, the existence of ramparts, canyons, towers, pinnacles and jagged and ruin-like sites. The altitude of the whole region and the sandy nature of the terrain are conducive to intermittent torrents in the wadis, permit watercourses at high levels and explain the presence of certain local species: the pools preserve various species of fish; a small crocodile was killed in 1924 in the wadi Ihérir; and several hundreds of the Tassili cypress (*cupressus dupresianus*), thousands of years old, survive in certain hollows (Tamrit).

The region owes its name to the Kel Ajjer, a confederation of Tuareg nomads, cousins and enemies of the Kel Ahaggar at the end of the 19th century. At that time they were organised in a very hierarchical society, made up of noble tribes (Oraren, five sections) and vassal tribes paying tribute (Imrad, twelve sections). At the beginning of the 20th century, the region, explored by Henri Duveyrier who has left some remarkable descriptions, was the subject of dispute between the Turkish power in Tripoli and the French army in Algeria. Today, the border leaves G̲h̲āt in Libya and D̲j̲anet in Algeria.

Prehistory has left the Tassili a fabulous legacy. Over a long period stretching from 8,000 to 2,000 B.C., when conditions were somewhat wetter, the peoples of these massifs painted or incised on the rocky faces the episodes which made up their life, and above all, the wild animals which they hunted. They have accordingly created one of the finest open-air museums in the world. The sites of Wadi D̲j̲erat, of Séfar, of Tamrit and of Jabbaren offer works which are quite beautiful, and now famous throughout the world; the name of Henri Lhote is linked with the recording of these discoveries. More than 10,000 of these paintings and carved drawings have been counted, making the Tassili one of the finest permanent records of the Sahara. The Libyan parts also contain sites with rock illustrations (the D̲j̲ebels Messak and Akakus).

Today, the massif has a small population of some 20,000 Tuaregs, nomads who either live off their herds or are grouped in small localities where they act as guides for tourists. G̲h̲āt, D̲j̲anet and Ihérir have small palm groves. D̲j̲anet in the south and Illizi in the north are two lively centres in Algerian territory. G̲h̲āt, the traditional capital of the Tassili and an important stage along the caravan routes, is now in Libyan territory and suffers a little from its frontier position. Because of the rugged terrain, the massif is difficult to cross: Illizi and G̲h̲āt are accessible by road, and D̲j̲anet by aeroplane.

In 1982 Tassili was classified by UNESCO as a "world heritage" region. Since 1972 it has been organised by Algeria into a National Park, reorganised in 1987 over an area of 72,000 km^2. The Tassili National Park Department, like that of the Hoggar, is dependent on the Ministry of Culture. It has the task of studying the cultural and ecological heritage which makes up the whole, and at the same time of controlling the influx of tourists which, for a decade now, has alighted at D̲j̲anet in order to ascend the plateau and find out about the rock paintings.

TASʿĪR (A.), verbal noun from the form II verb *saʿʿara* which means, according to Lane, "to assign a known and fixed price"; hence *siʿr* is "that upon which the value (*t̲h̲aman*) is established". The particle "that" gives *siʿr* a wider breadth than the concept of monetary value. In fact, a similar usage of "that" was included in the UAE Civil Code defining "price", which is presumably *t̲h̲aman* and not *siʿr*, as follows: "that which the parties have agreed in consideration of the sale, whether it is greater or less than the [true] value" (art. 503).

In Islamic law, the distinction between *siʿr* and *t̲h̲aman* appears subtle, owing to the proximity of the two concepts, and can easily be confused. However, it is clearer when one considers the verbal noun forms of the two words. *Tat̲h̲mīn* refers to estimating the value, *ḳīma*, of the subject-matter, whereas *tasʿīr* is concerned with the commodity's fixed price. The Prophet is reported to have declined to fix the price of goods on the grounds that "the one fixing the price, *musaʿʿir*, is God". The *LA* accordingly states that "no-one should fix prices". However, both ʿUmar and ʿAlī are reported to have advocated price fixing during their reigns, although the former's view was said to be merely a meritorious advice that he gave when he saw a tradesman selling his raisins at a price so low that it could have damaged the prices in the market (Ibn Ḳudāma). This apparently contrasting view led to conflicting opinions regarding the validity of *tasʿīr* even within the same school of law. Al-Mud̲j̲aylidī (a Mālikī scholar, d. 1094/1683), in his unique treatise on *tasʿīr*, bases its principle on the grounds of public interest (*maṣlaḥa*), postulating that it can only be practised on commodities of weight or measure. This principle had been accepted by other scholars like al-S̲h̲āfiʿī and Mālik. It is relevant to state here that, though *tasʿīr* is inherently a practical market device, the *muḥtasib* [see ḤISBA] is not allowed to fix it himself. The fixing of prices requires a political decision, whereby "the Imām would gather and consult the leading figures (*wud̲j̲ūh*) of the market who deal in the commodity in question". Once the price is fixed by the Imām, all sale contracts according to it are valid and the Imām or the *muḥtasib* can punish the person who does not obey the ruling by discretionary punishment (*taʿzīr* [*q.v.*]).

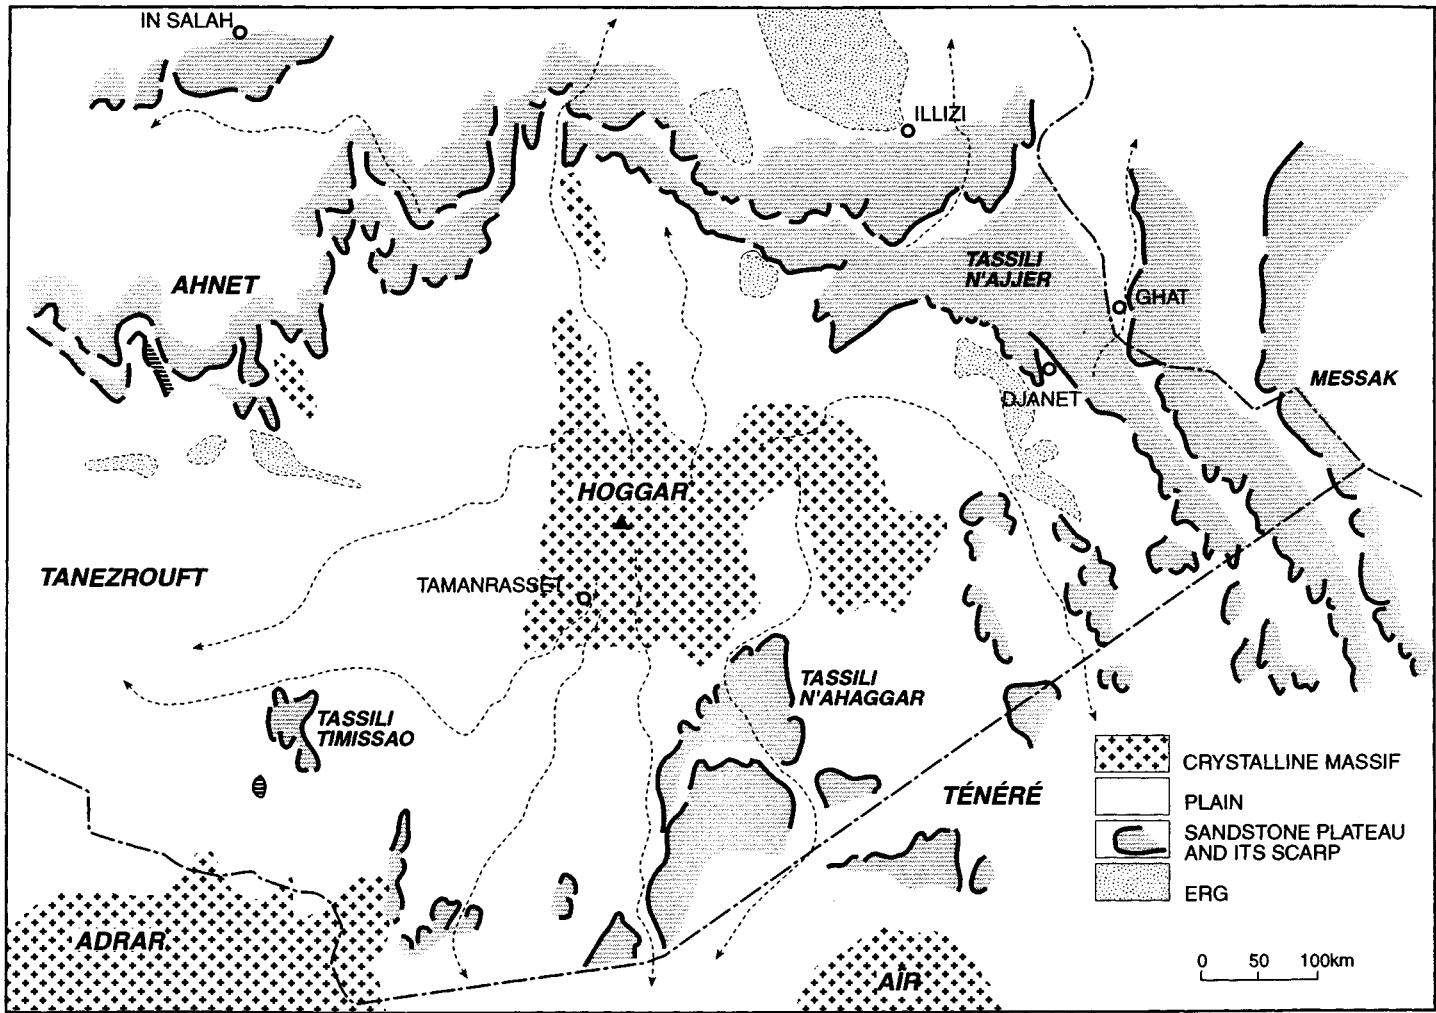
ṬASḲ [see K̲H̲ARĀD̲J̲].

TAṢLIYA (A.), the invocation of God's blessing upon the Prophet Muḥammad.

The word has many applications, but commonly refers to the section of the *tas̲h̲ahhud* [*q.v.*] in the ritual *ṣalāt* [*q.v.*], following the *taḥiyya* ("greeting") and


s͟hahāda [*q.v.*], in which the worshipper recites the *ṣalāt ʿalā ʾl-nabī* (*taṣliya* being derived from this sense of "performing the *ṣalāt*", perhaps). One typical formulation of the *taṣliya* is known as *al-ṣalawāt al-ibrāhīmiyya*, see ṢALĀT. III. B. A *taṣliya* is also a part of the response to the *ad͟hān* [*q.v.*], also known as the *duʿāʾ al-wasīla* the "prayer of mediation": "O God, send your blessing (*ṣalli*) on our Lord Muḥammad and on the family of our Lord Muḥammad and greet them with peace! O God, the Lord of this completed call and of the prayer about to commence, give to our Lord Muḥammad mediation, merit and a high rank, and that praiseworthy station which You have promised him" (see prayer manuals commonly in use, e.g. Sh. Muhammad Ashraf, *Salat or Islamic prayer book*, Lahore 1971 etc., 18-19). The term *durūd* is used to refer to the *taṣliya*, especially in India and Pakistan; *ḳunūt* ([*q.v.*]; see also S. Bashear, Qunūt *in* tafsīr *and* ḥadīth *literatures*, in *JSAI*, xix [1995], 36-65) also overlaps with the term in some contexts (e.g. the *witr* prayer), in which supplications are inserted into the *ṣalāt*, frequently being invocations of Muḥammad.

More broadly, *taṣliya* can be understood as (but, as a term, is not usually understood to be derived from) the repetition of the phrase *ṣallā ʾllāhu ʿalayhi wa-sallama*, "May the prayers and peace of God be upon him" (and variations thereon), a phrase which, in later theory, is limited in application as a eulogy to Muḥammad alone (and thus consistent with *taṣliya* being understood as *ṣalāt ʿalā ʾl-nabī*) but, in fact, has been used widely in a variety of contexts throughout history.

The origin of the practices and phraseologies of the *taṣliya* is traced to the Ḳurʾān and *ḥadīt͟h*. The Ḳurʾānic statement in XXXIII, 56, "God and His angels bless (*yuṣallūna*) the Prophet. O believers, bless him (*ṣallū*) and pray for peace for him (*sallimū taslīm^an^*)", is cited in this regard, although the implications of God "blessing" Muḥammad in the way in which individual Muslims "bless" him did raise a number of concerns, leading to glosses of *ṣallā* here as "forgive" or "praise" when spoken of as the action of God. Similarly, statements of invocation are not conceived of as "intercession" by the believer on behalf of Muḥammad, who is certainly not thought of as being in need of intercession on his behalf. Rather, they are understood as pleas that Muḥammad's intercession be accepted by God on behalf of his followers.

(A. RIPPIN)

ṬASM, name of one of the legendary extinct tribes of the Arabs, *al-ʿarab al-bāʾida*. These tribes are genealogically directly linked up to Biblical genealogies and thus precede the split into Northern and Southern Arabs, symbolised by the eponyms ʿAdnān and Ḳaḥṭān. According to one of our earliest sources, Ibn al-Kalbī [*q.v.*], Ṭasm's relationship to the other tribes (in small capitals) is as follows:

Nūḥ
Sām
Iram — Lūd͟h (or Lāwud͟h) — Arfak͟hs͟had
ʿŪṣ — D͟jāt͟hir — ʿIMLĪḲ — IMMĪM — ṬASM — S͟hālik͟h
ʿĀD — ʿABĪL — T͟HAMŪD — D͟JADĪS — ʿĀbir
YAḲṬĀN
(see W. Caskel, *Ǧamharat an-nasab*, Leiden 1966, i, 40, which see also for the vocalisation of "Immīm"; and cf. Ibn Ḥabīb, *Muḥabbar*, ed. I. Lichtenstädter, Ḥaydarābād 1361/1942, 384; Ibn Ḥazm, *D͟jamhara*, ed. ʿA.M. Hārūn, Cairo 1382/1962, 486, and, with variations, al-Ṭabarī, ed. M.A.F. Ibrāhīm, i, 203-9 (mainly based on Ibn Isḥāḳ), tr. W. Brinner, *The History of al-Ṭabarī*, ii, *Prophets and patriarchs*, Albany 1987, 12-20; the translator renders ʿAbīl, Immīm, and D͟jadīs as ʿUbayl, Umaym, and D͟judays, for which there seems to be no authority).

These tribes were the first to speak Arabic after the confusion of tongues at Babel and are, therefore, called *al-ʿarab al-ʿāriba*, in contradistinction to *al-ʿarab al-mutaʿarriba* (sometimes *al-mustaʿriba*), referring to the descendants of Ismāʿīl who learned Arabic by settling among the "true" Arabs (there is, however, much fluctuation among the sources with regard to the application of these terms).

When the tribes moved into the Arabian Peninsula, Ṭasm settled in the Yamāma, where they were later joined by D͟jadīs. The most famous story is set in this situation. Its main elements are the following: Ṭasm under their king ʿImlīḳ erect a tyrannical rule over D͟jadīs. An estranged couple from D͟jadīs with their young son come before the king asking that he act as an arbiter in their custody battle (a migratory anecdote); the king, however, treats them atrociously. The woman gives vent to her frustration in a poem. The king, greatly angered, institutes the *ius primae noctis*, though pertaining only to the virgins of D͟jadīs. One of the victims manages to shake D͟jadīs out of their fearful lethargy. Her brother, in a leadership position within the tribe, invites Ṭasm (i.e. the king and his court) to a large banquet, where they are all treacherously massacred, this against the advice of his sister who wanted a more manly procedure. A single Ṭasmī escapes and succeeds in persuading the King of Ḥimyar, Ḥassān, to mount a campaign of revenge against D͟jadīs. He informs the king that he has a sister (the famous *kāhina* Zarḳāʾ al-Yamāma [*q.v.*]) married among the D͟jadīs who has an extremely far-reaching sight and might warn D͟jadīs of the approach of the army. They use the "march of Birnam wood" ruse (as in *Macbeth*); consequently, the abstruse report of Zarḳāʾ al-Yamāma meets with little credence among the D͟jadīs. They are taken by surprise and

wiped out, and only the regicide escapes. He goes to the Two Mountains of Ṭayyi', before even Ṭayyi' [*q.v.*] has settled there. The story of the migration of Ṭayyi' from the South is intercalated here. When they arrive in their new territory, they find this single giant-like and fear-inspiring man in possession of the area. They have one of their youngsters kill him (a David and Goliath motif).

The story seems thus to have attracted a number of well-known motifs. A close study of the variants in the various sources might prove fruitful.

Bibliography: The earliest attestation of the story is presumably in 'Ubayd ('Abīd) b. Sharya, *Akhbār al-Yaman*, ed. F. Krenkow, as an appendix to his ed. of Ibn Hishām, *K. al-Tīdjān*, Ḥaydarābād 1347/1928-9, 311-492, here 483-7 (incomplete at the end due to defective mss.); see also *Aghānī*[3], xi, 164-9; Ibn Badrūn, *Sharḥ Ḳaṣīdat Ibn 'Abdūn*, Cairo 1340/1921-2, 62-8; Ibn al-Athīr, ed. Beirut, i, 351-4 (he dates 'Imlīḳ to the time of the *mulūk al-ṭawā'if* after Alexander); Nuwayrī, *Nihāyat al-arab*, xv, 339-44; A.P. (W.P. Heinrichs)

TASMIYA [see BASMALA].

TAṢNĪF (A.), lit. "sorting out, distinguishing, classifying s.th.", whence "putting in order, composing a book, etc.", and then as a common noun "orderly presentation or classification". See INSHĀ'; KITĀB, and the *Bibl.* to this last article, to which should be added G. Bosch, J. Carswell and G. Petherbridge, *Islamic bindings and bookmaking. Catalogue of an exhibition*, The Oriental Institute, Chicago 1981; J. Pedersen, *The Arabic book*, Eng. tr. G. French, Princeton 1984.

The associated noun form *muṣannaf* has a technical usage in Islamic religious literature for the arrangement of items of religious learning, e.g. *ḥadīths*, in a structured arrangement of chapters or other subdivisions; for this sense, see MUṢANNAF. (Ed.)

TASNĪM (A.). 1. The name of a fountain in Paradise, occurring in the Ḳur'ān, LXXXIII, 27, where it is said that its water will be drunk by the *muḳarrabūn* "those who are admitted to the divine presence" and that it will be mixed with the drink of the mass of the inhabitants of Paradise. The commentaries are uncertain whether *tasnīm* is a proper name—which, according to the *Lisān al-'Arab*, is inconsistent with its being a diptote—or a derivative from the root *s-n-m*, a root conveying the meaning of "being high" (cf. *sanām* "camel's hump"). In the latter case, the meaning of the verse would be: "and it (sc. the drink of the inhabitants of Paradise) will be mixed with water which is conducted to them from a high place". Al-Ṭabarī mentions a third explanation, sc. "hidden things gladdening the inhabitants of Paradise".

There seems to be no obvious etymology from other languages (see Jeffery, *The foreign vocabulary of the Qur'ān*, 91-2); Nöldeke (*Sketches from Eastern history*, 38) thought that it was an invention by Muḥammad himself.

Bibliography: Bukhārī, *Tafsīr* on sūra lxxxiii; Ṭabarī, *Tafsīr*, xxx, 59; Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghayb*, vi, 502, and the other commentaries on the Ḳur'ān; *Lisān al-'Arab*, xvi, 199.

2. The verbal noun of form II of *s-n-m* "raising graves above the level of the earth". It is said that Muḥammad's grave was *musannam* (al-Bukhārī, *Djanā'iz*, *bāb* 96). On the other hand, it is said that Muḥammad ordered that graves should be levelled (Muslim, *Djanā'iz*, trads. 92, 93; Aḥmad b. Ḥanbal, *Musnad*, vi, 18 bis, 21). Al-Shāfi'ī's opinion was that graves should be raised only so much that they could be recognised as such, lest people should sit or walk on them (al-Tirmidhī, *Djanā'iz*, *bāb* 56). The Mālikīs, however, preferred *tasnīm* (al-Nawawī's commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii, 344). See also ḲABR.

(A.J. Wensinck*)

TAṢRĪF, in Classical Arabic grammar, the term for one of the two main divisions of linguistic theory, the other one being *naḥw* [*q.v.*] in the sense of "syntax". *'Ilm al-taṣrīf* is the science that studies the alterations of words, excluding the declensional endings (*i'rāb*). According to the analysis of Bohas and Guillaume (1984, 15-21 and cf. Owens 1988, 98-104), *taṣrīf* is divided into two parts, which are roughly equivalent to the modern domains of morphology and morphonology. The first part studies the meaningful alterations of words, e.g. the changes in verbal measures, the plural patterns of nouns, or the diminutives. The second part analyses the morphonological changes in words (*'ilal*), e.g. the changes weak verbs undergo. Most definitions of *taṣrīf* emphasise its non-declensional character, for instance, that by al-Astarābādhī (*Sharḥ al-Shāfiya*, i, 1.15-16), *'ilm bi-uṣūl tu'rafu bihā aḥwāl abniyat al-kalim allatī laysat bi-i'rāb* "knowledge about rules by which one recognises the state of the patterns of words that are not declension". Others define *taṣrīf* in opposition to *naḥw*, for instance when Ibn Djinnī (*Munṣif*, i, 4.13-14) states that it is the *ma'rifat anfus al-kalim al-thābita* as against *naḥw*, which is the *ma'rifat aḥwāl [al-kalim] al-mutanaḳḳila*, where *aḥwāl* indicate the three cases of the word that alternate as the result of the action of an *'āmil*.

The origin of the term *taṣrīf* is unknown. The lexical meaning of both *ṣarafa* and *ṣarrafa* is "to send away, to avert, to inflect", as in the expression *tuṣarrif al-kalima 'alā wudjūh shattā* (Ibn Djinnī, *Munṣif*, i, 3.18). Form V of the verb means "to move freely", or in a legal sense, "to have the free disposition of finances". Applied to grammar this term is used for the free syntactic behaviour of some words (Versteegh 1990, 284). A similar meaning is manifest in other terms from the same root, e.g. *munṣarif (mutaṣarrif)* "fully declinable". In Classical grammar, this term is applied to the triptote nouns, but it also has a wider application meaning all words that occur in several forms (e.g. adverbials such as *ladun*) or words which may occur in several constructions. As a synonym for *taṣrīf*, the term *ṣarf* [*q.v.*] is used in later grammar; in modern Arabic publications this has become the usual term for "morphology". Originally, this term was used for a "divergence" between constituents in a sentence, which brings about a change in the endings, e.g. in the expression *lā ta'kul al-samaka wa-tashraba 'l-labana* (cf. Carter 1973).

In the translations of Greek philosophical and logical writings, *taṣrīf* is used as a general term for morphological changes of nouns and verbs, including declensional endings. Ibn Sīnā, for instance, uses it to translate the Aristotelian *ptōsis* (*Shi'r*, 191.24). Ibn Suwār (d. 408/1017) states that *taṣrīf* is *lafẓ yuzādu 'alā 'l-ism bi-ḥaraka 'alā istiḳāmatihi... wa-aṣnāf al-taṣārīf khamsa* "an expression that is added to the nominative of the noun in the form of a vowel... and there are five different *taṣārīf*", clearly referring to the five cases of Greek grammar (Georr 1948, 372.4-7 and cf. Versteegh 1977, 64-67). On the other hand al-Fārābī (*Sharḥ*, 32.15; 36.8; 42.21) assigns inflection to both nouns and verbs, perhaps reflecting a connection with the Greek *klisis*, which etymologically means approximately the same thing as Arabic *taṣrīf*.

In Sībawayhi's *Kitāb*, the term occurs only three times; once (ii, 315.6-7) *taṣrīf* denotes the procedure of the

analysis of words by means of the formal notation with the radicals *f-ʿ-l* (cf. Talmon 1982, 22). He ascribes this to the *naḥwiyyūn*, the preceding grammarians. In the other two passages it probably means the structure or pattern of a word (i, 341.14; i, 460.12). In al-Khalīl's *Kitāb al-ʿAyn* the term is more frequent; usually it means "structure" (e.g. *ʿAyn*, i, 326; i, 361.7). Once (*ʿAyn*, ii, 210.5) al-Khalīl refers to the *aṣḥāb al-taṣrīf*, who have a certain theory about the structure of a word. According to the Arabic tradition, the "invention" of *taṣrīf* was the work of the grammarian Muʿādh al-Harrāʾ (d. 187/802), who was the first to use the notation with *f-ʿ-l* (cf. Abbott 1972, 6; al-Suyūṭī, *Iḳtirāḥ*, 84).

In the early period of Arabic grammar *taṣrīf*, therefore, was the term for a procedure of finding out the structure of a word, or the term for that structure itself. In later grammar this meaning of the term is still present, for instance when the grammarians define the function of *taṣrīf* as that of separating the radicals of a word from the additional consonants (Ibn Djinnī, *Munṣif*, i, 2.3-4 *bihi tuʿrafu uṣūl kalām al-ʿArab min al-zawāʾid al-dākhila ʿalayhā*). Because of its importance in the curriculum, it came to denote a separate domain of linguistics or a discipline *sui generis*. Where Sībawayhi had incorporated morphology in his *Kitāb*, dealing with it after the section on syntax and before the section of (mor)phonology, al-Māzinī (d. 248/862 [*q.v.*]) was the first to dedicate a monograph to this field; his *Kitāb al-Taṣrīf* has been preserved in the extensive commentary on it by Ibn Djinnī [*q.v.*] (cf. Sezgin, *GAS*, ix, 75). Other grammarians followed this example and wrote separate handbooks on morphology and syntax, for instance Ibn ʿUṣfūr, who wrote a *Kitāb al-Mumtiʿ fi ʾl-taṣrīf*, or al-Astarābādhī [*q.v.*], who wrote a commentary on Ibn al-Ḥādjib's [*q.v.*] *Shāfiya fi ʾl-taṣrīf*.

Bibliography: Astarābādhī, *Sharḥ Shāfiyat Ibn al-Ḥādjib*, ed. M. Nūr al-Ḥasan, M. al-Zafzāf, M.M. ʿAbd al-Ḥamīd, Beirut 1969; Fārābī, *Sharḥ Kitāb Arisṭūṭālīs fi ʾl-ʿibāra*, ed. W. Kutsch and S. The term* ittisāʿ *and related notions in Arabic grammar*, in Carter and Versteegh (eds.), *Studies in the history of Arabic grammar*, ii, 281-93, Amsterdam 1990. (C.H.M. Versteegh)

ṬASSŪDJ (A., pl. *ṭasāsīdj*), a territorial division, a loan word in Arabic from the MP *tasōk* ("one quarter"). According to Frye, *tasōk* had been used under the Sāsānids for a subdivision of the city of Nīshāpūr [*q.v.*], but in the Arabic sources *ṭassūdj* is normally used for the rural subdivision of a *kūra*, mainly in the Sawād [*q.v.*] of ʿIrāḳ. There are said to have been 60 such subdivisions in ʿIrāḳ sometimes corresponding to canal districts. A *ṭassūdj* was sometimes equivalent to a *rustāḳ* [*q.v.*] (pl. *rasātīḳ*) or a *nāḥiya*, although the presence of a further subdivision at the village level might be reflected in the use of any of these terms as the subdivision of one of the others. Yāḳūt's account, following Ḥamza al-Iṣfahānī, that each *kūra* was divided into *rasātīḳ*, each *rustāḳ* into *ṭasāsīdj*, and each *ṭassūdj* into a number of villages, appears to be overly schematic. According to Ibn Khurradādhbih, the *ṭasāsīdj* of the *kūra* of Ardashīr Bābakān in the Sawād were divided into *rasātīḳ*.

Bibliography: Ibn Khurradādhbih, 6-11; Yāḳūt, *Muʿdjam al-buldān*, i, 39-41, cf. Wadie Jwaideh, *The introductory chapters of Yaqut's Muʿjam al-buldan*, Leiden 1959, 58; F. TAṢWĪR (A.), verbal noun from the form II verb *ṣawwara* "to form, fashion", then "depict, represent, illustrate". It is the principal term used in Arabic for both the representational arts including painting, drawing, sketching, engraving and photography (on which see 2. below) and the process of their creation. It is often contrasted to *timthāl* (sculpture) and synonymous with *ṣūra* and the rarer *taṣwīra* or their respective plural forms *ṣuwar* and *taṣāwīr*. Other synonyms of *taṣwīr* widely used in Persian texts are *naḳsh* (A.) and *nigār* (P.). Although in the usage of a particular author, period or region, *taṣwīr* and its synonyms may acquire more restricted or differentiated meanings, these terms remain virtually interchangeable. However, in a manuscript an individual painting, technical diagram, scientific illustration or map is more often labelled as *ṣūra* or *naḳsh* than *taṣwīr*.

1. In painting and other representational arts.

Although the art forms with which *taṣwīr* is usually associated are largely two-dimensional, Ḳurʾānic usage of the related verb *ṣawwara* suggests it had a primary meaning of giving form or shape to a person or thing (XL, 64; LXIV, 3; VII, 11; III, 6). The well-known strictures against idolatry in Islam inhibited the development of sculpture, so that the term *muṣawwir* which in the Ḳurʾān is applied to God as the fashioner of forms (LIX, 24), is normally used as the equivalent of "painter, draughtsman" when applied to a person. In Persian, *muṣawwir* is used as a professional epithet, as in "Mīr Muṣawwir", but in other contexts the terms *nigāranda* and *naḳḳāsh* are more often used for "painter, designer or engraver". In Ottoman Turkish, *naḳḳāsh* is the customary title for a painter.

There is no Ḳurʾānic interdiction of painting or the other representational arts, but reservations about their legality seem to appear in the theological literature from the late Umayyad or early ʿAbbāsid times. Widely-circulated *ḥadīth*s mention the reluctance of angels to enter a house which contains either a dog or a painting and predict dire punishment for a *muṣawwir* on the Day of Judgement when he will be held accountable for his inability to bring to life creatures which he has depicted. There are, however, countervailing *ḥadīth*s which narrow the focus of these

interdictions, such as the one describing how the Prophet ordered the destruction of all images in the Kaʿba except for one of the Virgin and Child. Some of the religious objections appear to spring from an aversion to idolatry, but others suggest a fear that images possessed quasi-magical powers (see further, ṢŪRA. 1).

The degree to which the concerns of theologians affected the practice of representational art, or shaped its character, appears to have varied considerably from region to region and period to period. Such strictures seem to have had the greatest impact in the Maghrib, where depictions of living creatures are rarely encountered, whereas in Persia and adjacent regions the objections of theologians seem to have been largely ignored. Nevertheless, an aversion from mixing worship with images ensured that, in Islamic communities, painting developed within the private sphere, and particularly in the context of the court. Its use in that setting could be compared with the patronage of music and the drinking of wine which often flourished, in private, despite criticism from the religious establishment.

A dichotomy between private and public spheres in the use of figural representations had already developed in the Umayyad period. The decoration of mosques with images of trees, vines and fruit in Damascus and Medina was counterbalanced by use of figural sculpture, painting and mosaic in luxurious private residences such as Khirbat al-Mafdjar and Ḳaṣr al-Ḥayr al-Gharbī [*q.vv.*]. This distinction continued under the ʿAbbāsids when figural wall-paintings, mentioned in texts, were also discovered in private areas of the Dār al-Khalīfa excavated at Sāmarrāʾ. This figural art used in early Islamic palaces is largely indebted to a widely diffused Greco-Roman idiom with some elements taken from the repertoire of Sāsānid art.

Although the dubious religious status of figural imagery did not prevent its use in a private context, such criticism probably lowered the social prestige of the profession and discouraged its growth. Moreover, comments in Islamic sources suggest that painting was a skill cultivated by non-Muslims, for they often praise Rūmī (Greek or Christian) and Čīnī (Chinese) painters. Thus Yāḳūt, in his description of the Sāmarrāʾ palaces, attributes their wall paintings to Rūmī painters.

The active pursuit of Greek learning in early ʿAbbāsid ʿIrāḳ also led to the importation of Byzantine illustrated manuscripts. The imprint of their paintings can be found in Arabic manuscript illustrations on subjects ranging from pharmacology and the antidotes to snake bites to the diseases of horses. There is, however, a curious chronological gap between the 2nd-3rd/8th-9th centuries when Greek texts were translated, and the 6th-7th/12th-13th centuries dates of their Arabic illustrated versions.

The most important Arabic illustrated text of the latter period was, however, the *Maḳāmāt* of al-Ḥarīrī, and its illustrators drew upon the mood and setting of individual episodes to create images which portray many facets of life in ʿIrāḳ. The tendency to illustrate Arabic literary texts also spread to the Maghrib. The romance of Bayāḍ and Riyāḍ is known from a version illustrated in North Africa or Spain in the 6th/12th or 7th/13th centuries. The novelty of its paintings is suggested by the fact that each is labelled and described. The production of Arabic illustrated books declined in ʿIrāḳ after the Mongol invasions but continued in Damascus and Cairo into the 8th-9th/14th-15th centuries.

Persia was, however, the region where painting found its most congenial home, especially during the post-Mongol period when the patronage of painters became a standard feature of court life. During the first Islamic centuries, intellectual and cultural developments were largely focused on Khurāsān and Transoxania, the latter an area previously dominated by Soghdian principalities. Excavated buildings from Soghdian cities such as Afrāsiyāb and Pandjīkant show an extensive use of figural wall-paintings and sculpture in both temples and private dwellings. The most important legacy of Soghdian painting in the Islamic period was its use of images in conjunction with story-telling, a feature which may have been developed through contact with India, where itinerant story-tellers, who used portable images in their performances, were well established.

The linking of story-telling with pictures was carried into the Islamic period by the popularity of both moralising fables, such as the collection known as *Kalīla wa-Dimna* [*q.v.*], and heroic epics, notably the cycles included in Firdawsī's *Shāh-nāma*. Although evidence for the use of didactic or epic paintings in the early Islamic period is mainly literary rather than physical, such paintings are mentioned in both historical and poetic texts. The *Shāh-nāma* itself contains references to wall-paintings, including some with epic themes. One of the Sāmānid viziers is said to have owned an illustrated copy of *Kalīla wa-Dimna*.

The habit of decorating the walls of a palace with various kinds of paintings evidently continued during the period of Ghaznawid and Saldjūḳid domination. References in court poetry suggest that Ghaznawid pavilions were decorated with both figural and non-figural paintings, and excavated palaces in both Ghazna and Lashkar-i Bāzār [*q.vv.*] have yielded portions of wall paintings and figural relief sculpture. The most explicit reference to a connection between the recital of poetry and the use of wall-paintings comes in Ibn Isfandiyār's description of the palace of a ruler in the Caspian area. That ruler, who was particularly fond of the *Shāh-nāma*, arranged for its recital in a room, the walls of which were covered with paintings illustrating the stories themselves.

Illustration of themes from the *Shāh-nāma* appears to have been an important catalyst in popularising the use of both wall-paintings and book illustrations in Persia and adjacent regions. By the late 6th/12th and early 7th/13th centuries, the *Shāh-nāma*'s popularity had spread to Saldjūḳ Anatolia, where it inspired the illustrations of a story detailing the travails of two lovers, Warḳa and Gulshāh. Later, the Ottomans were to use the *Shāh-nāma* as a model for the composition and illustration of their own dynastic epics.

The Mongol invasions were an important watershed in the development of painting within the Islamic Near East, since they introduced several new factors. The one most often mentioned by scholars is the incorporation of landscape features derived from Chinese painting into the repertoire of the Persian painter. This physical change, however, was also accompanied by other shifts in the scope and character of painting even more important for future developments. The preference of the Mongols and their successors for a peripatetic life encouraged the growth of a separate court culture at the expense of traditional cities. Gradually, the courts became centres for both the production and consumption of many luxury goods, including illustrated manuscripts.

Under the Mongols, the range of themes with which painters concerned themselves also expanded to include religious history. The development of didactic imagery

intended to illustrate important themes of Islam's history may have been stimulated by requests from the Mongols themselves, who were familiar with both Buddhist and Christian religious imagery. This avenue of development led to the creation of illustrative cycles devoted to themes such as the *Miʿrādj-nāma*, or epics which describe the exploits of ʿAlī. By the 19th century, this increased interest in religious imagery produced a genre of popular paintings celebrating important Shīʿī themes that acquired an almost iconic quality in commemorating the events depicted.

The most significant innovation of the post-Mongol period, however, was the use of painting as an instrument of dynastic prestige. This trend was initiated by the production of Rashīd al-Dīn's [*q.v.*] *Djāmiʿ al-tawārīkh*, in which the achievements of the Mongols were integrated into a chronicle of world-wide scope. Although this text was written at the request of Ghazan Khān, the production of illustrated copies was entrusted to the author himself. This example of an illustrated dynastic chronicle was to provide a stimulus to the Tīmūrids, Mughals and Ottomans to have their own deeds illustrated. Although the stress varied from dynasty to dynasty, these illustrated histories helped further to expand the range of pictorial imagery and challenged painters to depict specific events in a recognisable setting. These books not only provide a kind of visual record of major accomplishments of a given ruler but also reveal that ruler's values and self-conception.

Among the successor dynasties of the Mongols, the Djalāyirids [*q.v.*] hold a special place in the development of painting, particularly because of the close connection that they established between painting and court life. Scenes depicting their palaces and courtiers were included not only in historical texts but also in poetic epics. This development created paintings which had a dual purpose: they both illustrate a text and refer obliquely to the manuscript's patron and the circumstances of his life. This innovation, which helped to create the pictorial equivalent of panegyric verse, also stimulated the inclusion of the ruler's portrait in the guise of a poetic hero.

The Tīmūrids were especially influential in their sponsorship of illustrated books. They made particular use of royal portraits placed in a book's opening pages, and one of the most impressive shows Sultan Ḥusayn with his drinking companions in a palace enclosure. A copy of Sharaf al-Dīn Yazdī's *Ẓafar-nāma*, which chronicles the life of Tīmūr, illustrated for Ḥusayn, later belonged to the Mughals and served as a model for their own dynastic histories. The Tīmūrid pictorial tradition was also influential in both Ṣafawid Persia and Ottoman Turkey.

The incorporation of painters into the entourage of rulers helped to increase the prestige of both painters and painting. This new prominence is signalled by a rise in the popularity of *murakkaʿ*s [*q.v.*] or albums containing choice specimens of painting and calligraphy, and also by the appearance of texts which chronicle the lives of painters. Although both genres existed in the Tīmūrid period, they were fully developed only under the Ṣafawids. The enthusiasm both for *murakkaʿ*s and for writing about the lives of painters soon spread to Mughal India and Ottoman Turkey. *Murakkaʿ*s prepared for members of the Mughal dynasty are among the most lavishly decorated of all Islamic books.

Although some paintings in *murakkaʿ*s were originally intended for inclusion in manuscripts, many others were made specifically for such compilations. Thus the increased popularity of albums is paralleled by a decline in the number of illustrated books. Many single-page paintings produced from the 10th/16th century onwards are figure studies; during the 11th/17th century the attention of painters turned increasingly to portraiture. In Persia, the portraits were usually idealised, but in Ottoman Turkey and Mughal India court painters emulated the European style of individualised portraiture. In Turkey, the primary focus was on portraits of individual Ottoman sultans which were collected in *murakkaʿ*s. At the Mughal court, however, painters also recorded the appearance of notable court personalities, and these studies were used to create both single-page paintings and composite group portraits.

The rate at which importation of European prints and even the presence of European painters at royal courts changed the approach of painters at Muslim courts varied from place to place, but by the 12th/18th century hybrid styles existed in Turkey, Persia and India. The introduction of photography during the mid-19th century provided a new standard of verisimilitude which undermined the idealised approach used by the Muslim painter, effectively ending a distinctive tradition.

2. In the sense of photography.

Here we have, as well as simple *taṣwīr*, also *taṣwīr shamsī* or *ḍawʾī*, *fūtūghrāfiyā*; Ott. Turk. *taṣwīr*; mod. Turk. *fotoğrafçılık*; Persian *ʿakkāsī*, *fōtōgherāfī*.

This was introduced into Muslim lands soon after its invention in 1839. It was immediately reported in the Ottoman press (*Taḳwīm-i weḳāʾiʿ*, 15 August 1841). The first known photograph was of Raʾs al-Ṭīn Palace in Alexandria (7 November 1839). The first book on photographic techniques was Sarkīs Der Torosyān's *Risāle-yi fōtōghrāfyā* (Istanbul 1866), in Turkish with Armenian script. Others followed. Brought by West European travellers, scholars and artists, the spread of photography was encouraged by rising incomes in the West and increasing curiosity about the East—scientific, cultural, religious, political, commercial, or simply romanticising. Steady technical improvement, chiefly the invention of the inexpensive hand-held Kodak camera in the 1890s, fostered dissemination. In many books and albums, photographs more-and-more frequently replaced paintings, drawings and sketches; if less attractive, they presented realistic precision and authentic detail.

In the Muslim sphere, photography was first motivated by the European search for the roots of Western civilisation and culture. French and British visitors

focused on Egypt and Palestine, then on Syria, Lebanon, Persia and Turkey, photographing temples, inscriptions and archeological remains; a few visitors recorded Islamic architecture (e.g. J.-Ph. de Prangey, *Monuments arabes d'Egypte, de Syrie, et de l'Asie Mineure*, 1846). Artists photographed mainly landscapes and city panoramas, concentrating on Jerusalem and Istanbul. Subsequently, ethnologists and anthropologists increasingly documented their findings with street scenes and festivities, and with people of all ages, crafts, tools and wares, both in towns and villages.

Scientific missions to the East promoted photography, first employing foreign, then local photographers, both amateurs and professionals. The number of local professionals grew slowly. Due to economic constraints, they had to live off the tourist trade, selling photo-postcards or photographic equipment. Because of Jewish and Islamic religious opposition to creating images, almost all professionals were Christians (Armenians, Greeks and others) or converted Jews; some were associated with local churches or missions. Except in Persia, where native photographers catered to wealthy customers, Muslim exponents were rare until the early 20th century: in 1910, Raḥmī-zāde Bahā' ül-Dīn opened a studio in Istanbul and in 1914 the first Ottoman Photographic Society was founded.

By then, initial Islamic opposition had diminished. In 1839-40, Muḥammad ʿAlī of Egypt had been impressed by photography, but considered it "the work of the devil". Later, however, the Ottoman and Persian rulers, as well as the Niẓām of Ḥaydarābād, had their own court photographers. Maḥmūd II was the first Ottoman Sultan to have his portrait displayed publicly, thus breaking the taboo on human representations. ʿAbd al-ʿAzīz was a patron of photography. ʿAbd al-Ḥamīd II commissioned photographic records of the social, educational and military modernisation of his empire. This did not prevent him from issuing an *irāde* (1900), forbidding the sale of photographs of the Kaʿba, other holy buildings, or unveiled women. As S̲h̲īʿīs are, in practice, less opposed than Sunnīs to physical images, Persia may have been the first Muslim state to encourage photography officially. Among the early practitioners were European teachers and military instructors, since 1844, followed later by local photographers. A department of photography was established at Tehran's *Dār al-funūn* in *ca.* 1860, and a court photographer nominated in 1280/1863. Nāṣir al-Dīn S̲h̲āh collected 20,000 photographs of all aspects of Persian life, including his court and family; this interest was pursued by Muẓaffar al-Dīn S̲h̲āh.

Patronage of Sultan and S̲h̲āh notwithstanding, religious opposition to photography continued in some Sunnī regions like Turkestan and India. In Egypt, too, Muḥammad Ras̲h̲īd Riḍā issued a *fatwā* against *ṣuwar al-yad wa 'l-ṣuwar al-s̲h̲amsiyya* (*al-Manār*, xi/4, 30 May 1908, 277-8), as did the S̲h̲eyk̲h̲ ül-Islām in Istanbul in 1920. During the 1920s, however, and later, photography became accepted amongst all but the most traditional groups. One argument condoned photography since it did not create new images, but merely recorded shadows. Another declared that two-dimensional photographs were permissible, since they cast no shadows; see the *fatwās* in *Mad̲j̲allat al-Azhar*, vi (1936), 171, vii (1937), 327, xi (1940), 163-4. In the post-Second World War era, photographs of people and objects (but less of mosques) have become commonplace, even in Saudi Arabia.

Bibliography: Photographs of Muslim countries may be found in numerous libraries and museums, like Istanbul University (ʿAbd al-Ḥamīd II's albums); the Albōmk̲h̲āna of the Gulistān Palace, Tehran; the Library of Congress, Washington, D.C.; The Semitic Museum, Harvard University; the Metropolitan Museum of Art, New York; and Musée de l'Homme, Paris. See also G. Grant, *Middle Eastern photographic collections in the United Kingdom*, Durham 1989. For a specialised bibliography, Seyit Ali Ak and A. Modiano, *Türkçe fotograf yayınları katalogu, 1971'den 1993'e*, Istanbul 1993. Local periodicals: *Turkish Photography Year Book* (Istanbul) and *Mad̲j̲allat al-taṣwīr al-ḍawʾī* (Kuwait). Many useful studies in *History of Photography* (London, quarterly).

3. Modern painting in the Arab world.

"Modern painting", (*fann*) *al-taṣwīr/al-rasm al-ḥadīth/al-muʿāṣir*, designates a Western-influenced form of art, the practice of which began at the end of the 19th century, eventually replacing Islamic art. Western art was introduced by Orientalist painters travelling to the East (exhibitions of Orientalist painting in Cairo since 1891; *Salon Tunisien*, since 1894). The founding of art schools contributed to the spread of Western art: Cairo, 1908; Algiers, 1920; Tunis, 1923; Beirut, 1937; Baghdad, 1941; Damascus, 1959. Museums of modern art were also opened, the oldest in Cairo in 1931 (Wizārat al-Thaḳāfa, *Mathaf al-fann al-miṣrī al-ḥadīth*, Cairo 1992). With its several galleries, Beirut was to become an important art centre in the 1960s and 70s.

Despite regional differences, some general trends can be pointed out. The first painters (*ruwwād*) were influenced by Western Orientalism, Impressionism and landscape painting. Through its art school, directed by European academic artists until 1937 (Guillaume Laplagne, Gabriel Biessy, Camillo Innocenti), and the yearly *Salon du Caire* (instituted in 1922), academic painting took root in Egypt. Maḥmūd Saʿīd (1897-1964), Muḥammad Nādjī (1888-1956), Rāghib ʿAyyād (1892-1980) and Yūsuf Kāmil (1891-1971) concentrated on life in the countryside and in the poor city areas (B. Abū Ghāzī, *Mahmud Saʿīd*, Cairo 1972; idem, *Yūsuf Kāmil*, Cairo 1978; *Muḥammad Nādjī, al-fannān al-ta'thīrī al-miṣrī/Mohammed Naghi, un impressionniste égyptien*, Cairo 1988). In Lebanon, painting first appeared at the end of the 19th century, when painters trained in the West such as Dāwūd Ḳurm (1852-1930), Khalīl al-Ṣalībī (1870-1928) and Ḥabīb Surūr (1860-1938) opened portrait studios in Beirut (S. al-Ṣalībī, *Khalīl al-Ṣalībī, muṣawwir min Lubnān/Khalil Saleeby, a painter from Lebanon/Un peintre du Liban*, Beirut 1986). The writer Djibrān Khalīl Djibrān (1883-1931) [*q.v.*] also produced pictorial works in a symbolist style (W. Kayrouz, *Gibran in his museum*, Jounieh 1995). Genre painting began in the 1920s and 1930s with Muṣṭafā Farrūkh (1901 or 1902-57), Ḳayṣar al-Djumayyil (1898-1954) and ʿUmar al-Unsī (1901-69), all of whom had studied in Europe (M. Farrūkh, *Ṭarīḳī ilā 'l-fann*, Beirut 1986; *César Gemayel, le pinceau ardent/The ardent brush*, Beirut (?) 1985; *Omar Onsi, le jardinier des apparences/The gardener of epiphanies*, Beirut (?) 1985). Their themes were chiefly Lebanese landscapes and folk scenes. In ʿIrāḳ, the first painters were students at the Istanbul Military School; in the 1930s Akram Shukrī (b. 1910), Fā'iḳ Ḥasan (1914-92), ʿAṭā Ṣabrī (b. 1913), Ḥāfiẓ al-Durūbī (1914-91) and Djawād Salīm (1919-61) were sent to Europe to study painting. Besides landscapes, the Syrian artists Tawfīḳ Ṭāriḳ (1875-1940) and Saʿīd Taḥsīn (1904-86) depicted historical motifs (Gh. al-Khālidī, *Saʿīd Taḥsīn, ʿindamā yuṣbiḥ al-fann... ta'rīkh^{an}*, Damascus 1994). In Tunisia, ʿAbd al-Wahhāb Djilānī (1890-1961) was the first Muslim to be admitted to the *Salon Tunisien* in 1912; Yaḥyā Turkī (1901-68) is considered the pioneer of modern painting, together with the artists of the *Ecole de Tunis* founded at the end of the 1940s. In Algeria, only Muḥammad Rāsim (1896-1975) [see DINET, ALPHONSE, in Suppl.], a painter of miniatures, was admitted to the Algiers Academy (*Mohammed Racim, miniaturiste algérien*, exhibition catalogue, Institut du Monde Arabe, Paris 1992). Elsewhere, painting was to develop later.

After World War II, modern Western styles were adopted, accompanied by the search for authenticity (*aṣāla*). Authenticity could be expressed through elements of the popular arts, calligraphic signs, or pre-Islamic styles, all together forming the "heritage" (*turāth*). In Egypt, ʿAbd al-Hādī al-Djazzār (1925-66) and Ḥāmid Nadā (1924-90), members of the *Djamāʿat al-fann al-ḥadīth* (founded 1946) crudely depicted the life of the Cairo poor, drawing colours and symbols from the popular tradition (A. and C. Roussillon (eds.), *ʿAbd al-Hādī al-Djazzār, fannān miṣrī/Abdel Hadi al-Gazzar, une peinture égyptienne/An Egyptian painter*, Cairo 1990). In ʿIrāḳ, the *Djamāʿat Baghdād li 'l-fann al-ḥadīth*, founded in 1951 by Djawād Salīm, issued two manifestos (1951; 1955) asserting that ʿIrāḳī art had to accept Western (stylistic) modernity while seeking inspiration from local traditions (for the original texts of the manifestos published in ʿIrāḳ, see Sh. Ḥ. Āl Saʿīd, *al-Bayānāt al-fanniyya fi 'l-ʿIrāḳ*, Baghdād 1973).

First examples of committed art (*al-fann al-multazim*) are to be found after the Suez crisis in Egypt; social concern was shown by many artists in the two following decades and often dominated figurative painting. As exemplified in the work of the two originators of this genre, Ismāʿīl Shammūṭ (b. 1930) and his wife Tamām al-Akhal (b. 1935), the struggle and the longing for the lost country is a central theme in Palestinian painting. In ʿIrāḳ, the idea of commitment was first expounded in the manifesto *Naḥwa al-ru'ya al-djadīda* (1969), as a reaction to the 1967 defeat. In the seventies and eighties, an officially sponsored "Arab realism" emerged; figurative and realistic, it did not conform to a specific style. In Algeria, a nationalist form of painting resorted to Orientalist patterns developed in the 1980s.

Abstraction (*tadjrīd*) as practised in the West asserted itself in the 1960s; the Lebanese Shafīḳ ʿAbbūd [Chafik Abboud] (b. 1926), and Yvette Ashḳar [Achkar] (b. 1928), but also, partly, the Moroccan Muḥammad Mulayḥī [Melehi] (b. 1936), are representative of this trend. Most Arab abstract artists, however, attempted to establish a connection to the local non-figurative traditions. Examples of this can be seen in the work of the Lebanese Ṣalībā al-Duwayhī [Saliba Douaihy] (1915(?)-94), the Moroccan Farīd Bilkāhiyya [Belkahia]

(b. 1934), and the Algerian Muḥammad Khadda (1930-91) (M. Bouabdellah (ed.), *Mohamed Khadda, une vie pour une œuvre*, Algiers 1994). The Lebanese artists Ḥusayn Māḍī (b. 1938) and Samīr al-Ṣā'igh (b. 1945) practice an abstract or semi-abstract art combining Islamic concepts of art with Western techniques.

The manifesto *al-Buʿd al-wāḥid* (Baghdād 1971) theorised the use of Arabic letters as a mere formal element allowing to arabise abstraction. The movement, called *ḥurūfiyya*, has followers throughout the Arab world. It takes its inspiration from Western artists such as Paul Klee more than from Islamic calligraphy [see KHAṬṬ]. Some of its main representatives are the Tunisian Nadjā Mahdāwī [Mahdaoui] (b. 1937), the Palestinian Kamāl Bullāṭa (b. 1942), the Algerians Rashīd Ḳurayshī (b. 1947) and Maḥdjūb b. Bīllā [Ben Bella] (b. 1946), the Egyptians Aḥmad Māhir Rā'if (b. 1926) and Muḥammad Ṭāhā Ḥusayn (b. 1929), the Sudanese Aḥmad Muḥammad Shibrayn (b. 1932), the Syrian Maḥmūd Ḥammād (1923-88), the ʿIrāḳīs Djamīl Ḥammūdī (b. 1924), Madīḥa ʿUmar, Shākir Ḥasan Āl Saʿīd (b. 1926) and Rāfiʿ al-Nāṣirī (b. 1940) (Sh. Dāghir, *al-Ḥurūfiyya al-ʿarabiyya, fann wa-huwiyya*, Beirut 1990; S. Naef, *L'art de l'écriture arabe, passé et présent*, Geneva 1992, 33-65).

Since the 1980s, figurative as well as abstract trends (*ḥurūfī* or not) continue to co-exist, but formal research has gradually replaced the political commitment of previous decades. The concern for local materials and styles is still an important issue.

AL-TASYĪR (A.; in the West: atazir, ataçir, athacir, directio, prorogatio, ἄφεσις, théorie aphétique) a procedure used in astrology of artificial continuation of a planet or of an astrological house or any other definite part of the heavens to another star or its aspects, or other houses with the object of ascertaining the equatorial degree situated between these two places, the figure of which is used, by converting it into a definite period of time, to prognosticate the date of a future happening, either good or evil.

The astrological magnitude ascertained by this process played a very prominent part among the ancients as well as among the Arabs and in the West, for on the one hand, it made possible a *judicium speciale* (i.e. definitely laid down the time of fulfilment of statements made in the *judicium generale* of a nativity about future good or ill fortune, and in particular enabled the length of life to be calculated or the choice of particularly auspicious days (*al-ikhtiyār*) for beginning a journey, for holding weddings, for founding a city, for beginning a reign, etc.), and on the other hand, it was distinguished by special complexity in the method of its calculation.

The astronomical calculation of the arc of special importance for our task (we call it briefly the *tasyīr* arc) is not particularly difficult, once the limits of the places in the heavens defining the arc, the "advancing" planet or place (*al-mutaḳaddim, al-haylādj*, significator) and the "succeeding" or second (*al-thānī*, promissor) are ascertained. In Fig. 1 (and 2) A is the significator, B the promissor, P the visible pole of the celestial sphere, NBS (NAS) the circle of the promissor (significator), C the intersection of the circle parallel to the circle of position drawn through A (B). The circles of declination drawn through A (B) and C cut out the *tasyīr* arc *ac* (*bc*). The *tasyīr* arc is thus the curve of the equator, which in general does not exceed 90°, which crosses over the circle of position during the period in which the significator (promissor) is transferred by the apparent daily revolution of the celestial sphere on its parallel circle to the circle of position of the promissor (significator), assumed to be fixed within this period (for further information on the concepts that occur, see ʿILM AL-HAY'A).

According to the respective positions of the significator and promissor, two kinds of *tasyīr* are distinguished:

a. Direct *tasyīr* (*directio directa*), when the significator precedes the promissor in the order of the signs of the zodiac. Here, the significator is the place to be "directed", the promissor regarded as fixed (Fig. 1).

b. Indirect *tasyīr* (*directio conversa*), when the significator precedes the promissor in the order of the daily motion of the celestial sphere. In this case, the promissor is moved to the circle of position of the significator which is assumed to be fixed.

A special form for application of the calculation of the *tasyīr* (a kind of inversion of the process) was developed in choosing days in this way that the position of only one star was given and also a definite time or what is the same thing on account of the conversion of periods of time into degrees of the equator, a definite number of *tasyīr* degrees. The problem is to find the degree which corresponds to the end point (the "goal") of the *tasyīr* arc. *Judicia* could then be deduced from the conjunction of planets occurring at this degree.

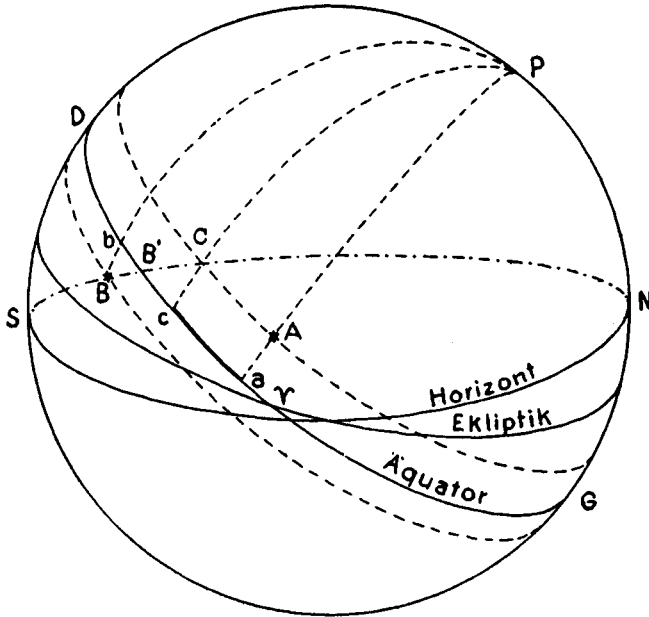
The mathematical calculation is a problem in spherical trigonometry and goes back to simple formulae with equinoctial time as the basis. In the equation *tasyīr* $a\ c = b\ a - b\ B' - B'\ c$ (Fig. 1), the right side is known, for $b\ a$ = right ascension B—right asc. A and


Fig. 1
Fig. 3
Fig. 2
Fig. 4

the magnitudes $b\ B'$ and $B'\ c$ are found from the formulae:

$$\text{I. } \cos B' = \sin (\measuredangle\ D\ S\ B') \cos S\ D.$$
$$\text{II. } \sin b\ B' = \text{tg } B\ b \text{ cotg } B'.$$
$$\text{III. } \sin B'\ c = \text{tg } c\ C \text{ cotg } B'.$$

The Arabs, however, used other approximative methods of calculation based on hours of mean time (*zamāniyya*) which are given in the following formulae:

I. (According to al-Battānī, al-Bīrūnī etc.):

number of *tasyīr* degrees:

$$= \left|\alpha \pm (\alpha - \beta)\,\frac{\text{dist. } B \text{ from upper [lower] culm. point}}{\text{half day [night] arc } B}\right|,$$

where

$$\alpha = \text{right asc. } A - \text{right asc. } B,$$
$$\beta = \text{obl. asc. } A - \text{obl. asc. } B.$$

The signs ± before the round bracket depend on whether α is greater or less than β, the expression in the square brackets are used when B is below the horizon.

Special cases:

a. B in the meridian: *tasyīr* = |right asc. A — right asc. B|.

b. B in the horizon: *tasyīr* = |obl. asc. A — obl. asc. B|.

II. (Second rule of al-Battānī):

Number of *tasyīr* degrees =
=|dist. B from upper [lower] culmin. point ×
half day [night] arc A ±
(right asc. A—right asc. of the upper [lower] culm. point),

where the—before the round bracket is for the case when A and B belong to the same hemisphere, the + when A and B belong to different hemispheres. The expressions in the square brackets are used for the western hemisphere or for the case when the lower meridian lies between A and B.

In both cases, the total result is positive in direct and negative in indirect *tasyīr*. For indirect *tasyīr*, B and A in the above formulae are to be interchanged. The number of degrees in the *tasyīr* arc thus obtained was converted into a period of time in this way: if it was a question of length of life, for example, 1° was equated to a solar year, 5' = 1 month, 1' = 6 days, in other cases 1° = 1 day.

The difficulty, continually emphasised by the Arabs, of calculating a *tasyīr* is on the one hand due to the regard paid to astrological demands, and on the other, particularly, to the amount of separate necessary astronomical calculations and measurements, which it would take too much time to detail here fully. The necessary knowledge of the different methods for accurately calculating the time of birth and the astronomical significance of the different times of being born, of the different houses of the heavens of the signs of the zodiac, of the seven planets and their aspects, of the most important fixed stars, first in themselves, then with respect to one another and with regard to their special positions (house, degree of elevation, triplicity, injury, fall) taking into consideration the very many rules for the strength, weakness or moderation, the beneficial or dangerous influence of the various planets and their aspects, of the houses and the arrow of fortune (*sahm al-saʿāda*), the calculation of larger, smaller or medium numbers of years for length of life according to the position of the influential planets, the choice of a lord of birth and of the horoscope after definite rules (ascendant, *al-ṭāliʿ* [*q.v.*]), of an interpreter of life (significator), of a foreteller of death or misfortune (promissor), of a giver of years (*al-kadkhudā*), the knowledge of the great, little or medium effect of definite direction, of auspicious or inauspicious directions and other things, demanded a perfect command of the astrological knowledge of the period. In addition, considerable skill in the carrying out of the necessary astronomical calculations was necessary, the reduction of the time to the meridian on which the Ephemerid tables were based; the longitude, latitude and declination of the most important fixed stars, the planets and their aspects and the application of their values to the time of birth, the astrological houses in the heavens and the signs of the zodiac and planets in them; the arrow of fortune, the circles of position of significator and promissor, etc. Simply for the calculation of the curve of the *tasyīr* after ascertaining its termini, there are necessary: right asc. of A and B, their distance from the meridian, their declination and half-day or half-night curve, the elevation of the pole over the circle of position (distance of the intersection of circle of position and equator from the meridian).

To simplify the long and tiresome process and to carry out an observation without calculation, the Arabs used mechanical (nomographic) aids, either single planes ("plane of the *tasyīr*" in al-Bīrūnī) which were placed in the astrolabe or a special instrument ("estrumente del leuantamiento" in Alfonso X of Castile) which was mainly used to obtain the *tasyīr* but also facilitated other calculations. The essential part of this instrument was a plane which contained on the front the projections of as many circles of position as possible or of hours for the latitude of the point of observation concerned (it is the same plane as the plane of the *tasyīr* in al-Bīrūnī; cf. Fig. 3), and on the back the projections of the circles of longitude and latitude according to the system of the ecliptic (Fig. 4). On the axis of the instrument, common to the two sides, was an undivided alhidade with two movable pointers placed as required on the front or back and kept in position by a fastener ("cavallo", *al-faras*). On the back could also be put the net ("spider") with the projections of different positions of fixed stars which is made exactly as in the astrolabe.

The mechanical calculation of the *tasyīr* curve was carried out as follows, when latitude and longitude of the places in the heavens A and B (cf. Figs. 1, 3 and 4) were known:

1. Place the moveable pointer of the alhidade on the place B on the back, and then read the degree of the equator b to which the alhidade now points.

2. Move the alhidade to the front, place it on the degree of the equator b, and then ascertain the circle of position (from B) on which the moveable pointer falls.

3. Place the moveable pointer at the place A on the back, and then read the degree of the equator a.

4. Move the alhidade to the front, place it on the degree of the equator a, and turn the alhidade until the pointer running through the parallel circle from A points to the circle of position of B (in C).

5. Read the degree of the equator C through which the alhidade now points: the curve $a\ c$ is the *tasyīr* curve desired.

Works in Arabic on the *tasyīr* or the plane of the

tasyīr were composed by Muḥammad b. ʿUmar b. Farrukhān (H. Suter, *Die Mathematiker u. Astronomen der Araber* etc., in *Abh. z. Gesch. d. math. Wissensch.*, xlv, Heft 10 [1900], no. 34); al-Battānī (Suter, no. 89); Abū Djaʿfar al-Khāzin (Suter, no. 124); and al-Bīrūnī (Suter, no. 218). But the complete astrological works of the former have not survived. The "Book of the Ataçir" in the astronomical works of Alfonso X is by Rabi Çag de Toledo (Isaak ibn Sid), the editor of the Alfonsine Tables, but seems to be merely a translation of an Arabic original.

In Ibn al-Ḳifṭī's *Taʾrīkh al-Ḥukamāʾ*, the following astronomers are honorably mentioned for their particular ability in calculating the *tasyīr*: al-Ḥasan b. Miṣbāḥ (163); al-Marwazī (170, Suter, no. 22); al-Khāḳānī (181, Suter, no. 206); Sind b. ʿAlī (206, Suter, no. 24); al-ʿAbbās b. Saʿīd al-Djawharī (219, Suter, no. 21); Ibn Yūnus (203, Suter, no. 178); Ibn al-Aʿlam (235, Suter, no. 137); Muḥ. b. Ibrāhīm al-Fazārī (270, Suter, no. 1); Muḥ. b. Khālid al-Marwarrūdī (281, Suter, no. 46); Yaḥyā b. Abī Manṣūr (357, Suter, no. 14); Yaḥyā b. Sahl al-Sadīd Abū Bishr al-Takrītī (365); Abu 'l-Faḍl b. Yāmīn (426).

Hogendijk, *The Mathematical structure of two Islamic astrological tables for "casting the rays"*, in *Centaurus*, xxxii (1989), 171-202. (O. SCHIRMER)

TAT (T.), a term used in earliest Turkish with the general meaning of "alien, non-Turk", but speedily coming to be applied par excellence to the Persians as opposed to the Turks, in any case with a somewhat contemptuous nuance of meaning, as likewise with the term *tādjīk* [*q.v.*]. It is clearly not in origin a proper noun, and Schaeder rightly dismissed the suppositions in Minorsky's outdated *EI*[1] art. *Tāt* of origins from such names as that of the Tangut or that given by the Voguls and Ostiaks of western Siberia to the river Irtish [*q.v.*]. Schaeder suggested, rather, that *tat* is a meaningless onomatopoeic word (*Schallwort*) analogous to Greek *barbaros*, used by the Turks opprobriously to designate non-Turkish speakers who stammered or who were generally incomprehensible; connected with it would be the root *tatmak* "to taste" and such derivatives as *tatïgh* "taste" and *tatlïgh* (Ottoman *tatlï*) "tasty, sweet", from the pleasurable clicking of the tongue in anticipation of something tasty.

1. Historical development of the term.

The first attestation of *tat* is in the Orkhon [*q.v.*] inscriptions (KT S 12 and BK N 15), where one finds the phrase *on oḳ oghlïña tatïña tägi bunï körü biliñ* "see this [writing] and know this, [all of you], up to the progeny of the On Oḳ and their subjects (*tat*)". Here, the "Ten Arrows" are the remnants of the first Western Turk empire who had dwelt from north of the Tien Shan westwards to the Sïr Daryā [*q.v.*] and the Caspian Sea (see D. Sinor, in *The Cambridge history of early Inner Asia*, i, Cambridge 1990, 309 ff.), and the Tat must have been the people of various urban settlements in the lands of the Western Turks, essentially Sogdians who were subject to the Ḳaghans; thus *tat* was already coming to refer to Iranians (see the passages from the inscriptions in Talât Tekin, *A grammar of Orkhon Turkish*, Bloomington 1968, 232, 246, tr. 263, 281).

Tat does not occur in the Uyghur material from the 9th century onwards recovered from Eastern Turkestan, nor in such "high", courtly, early Islamic Turkish literature as the *Ḳutadghu bilig* [*q.v.*] of Yūsuf Khāṣṣ Ḥādjib (later 5th/11th century), in whose prose introduction it is the *īrānlïḳlar* who are contrasted with the *tūrānlïḳlar*, or in the Khʷārazmian, Middle Turkish *Ḳiṣaṣ al-anbiyāʾ* of Rabghūzī (d. 710/1310 [*q.v.*]), which has *tāzī* and *fārsī* for "Arab" and "Persian". Nevertheless, use of the term *tat* had clearly continued on the popular level during the Ḳarakhānid period, as attest various mentions in the *Dīwān lughāt al-turk* of Maḥmūd al-Kāshgharī [*q.v.*], including the verbal derivative *tatlamaḳ* "to behave like a Persian" (ed. Kilisli Rifʿat Bey, iii, 217), corresponding to the "high" Ḳarakhānid form *täzhiklämäk* of iii, 251. Elsewhere, he states that all the Turks call the Persians *tat*, but qualifies this by saying that, in particular, the Turkish tribes of the Tukhsï and Yaghma (by the 5th/11th century living, respectively, north of the Ču river, and in the region of Kāshghar and south of the Narïn river in the Semirečye, see W. Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 75) used the term for the *kafara uyghur* "infidels of the Uyghur" (i, 378, ii, 224, Eng. tr. Dankoff and Kelly, i, 241, ii, 103). These last were probably the Iranian and "Tokharian" Manichaean subjects of the Uyghur Ḳaghan in the Eastern Turkestan oasis cities. *Tat* further occurs, with a clearly contemptuous sense, in some proverbs which al-Kāshgharī quotes and, significantly, in the jingling verbal coupling *tat tawghač* which, he says, can mean "Persians and Turks" but which he personally prefers to interpret as "Uyghur and Chinese (*ṣīnī*) (i, 378, Eng. tr. i, 341). Here we should interpret "Uyghur" as the non-Turkish subjects of the Uyghur Ḳaghans (see above) and "Chinese" as the people of the lands lying beyond the eastern half of the Ḳarakhānid confederation, the eastern khānate of Kāshghar, Yārkand and Khotan [*q.vv.* and ILEK-KHĀNS]. The phrase *Malik al-Ṣīn* is familiar in Ḳarakhānid titulature, including on their coins, as is *Tabghač/Tamghač Khān*, both the Arabic and the Turkish titles expressing the claim of suzerainty over lands stretching as far as northern China proper.

In the westwards expansion of the Turks into the Middle East from the 5th/11th century onwards, spearheaded by the Saldjūḳs [*q.v.*], *tat* continues to apply exclusively to the Persians, and there is no evidence from this time that *tat* was ever applied e.g. to the Arabs or Armenians or Greeks whom the Turkmen invaders encountered in Anatolia and the northern Djazīra and Syria. In a mixed Turkish-Persian verse, Djalāl al-Dīn Rūmī lists the Persian (*tat*), the Greeks (*rūm*) and the Turks (*turk*), and in his Turkish verses, Mawlānā's son Sulṭān Walad [*q.v.*] often contrasts *tatdja* "Persian" with *türkdje* "Turkish" (see E.J.W. Gibb,

HOP, i, 150). *Tat/tatdja* were thus clearly the standard renderings in 7th/13th century Saldjūḳ Anatolia for "the Persians/Persian language". They continue to be attested in the early 8th/14th century, e.g. in the Turkish *methnewī* called *Süheyl ü Newbehār* of the poet Mesʿūd b. Aḥmed, where *tat u mughal* = "the [non-Turkish] Persians and Mongols". Thereafter, however, *fārsī* for "Persian" seems to gain the upper hand in literary usage amongst both the Southwestern Turks and in Čaghatay Turkish; cf. for the latter, the works of Mīr ʿAlī Shīr Nawāʾī [*q.v.*], who always uses either *fārsī* for the people and the language, or else *sart ulusî* and *sart tili* for the Persian people and their language respectively (see the discussion in Schaeder, 5-8, and also SĀRT). Schaeder did, however, note a survival of the usage of *tat* in its ancient Orkhon Turkish social rather than ethnic sense in a citation from the anonymous Čaghatay-Ottoman dictionary, compiled in 967/1560, called after its first word *Abushka* or, more properly, *al-Lughāt al-nawāʾiyya wa 'l-istishhādāt al-djaghatāʾiyya*, where *tat* = the personal following of a chief or leader, assembled out of subject races (*ibid.*, 8). Also, from its ethnic usage in Southwestern Turkish, *tat* seems to have lingered on in provincial Anatolian dialects right up to modern times but with such meanings as "stranger" and "dumb, speaking unintelligibly" (Jäschke, quoted in *ibid.*, 33), whilst Minorsky in his *EI*[1] art. noticed that the Ḳashḳāʾī of Fārs used *tat* in the sense of "non-Turks", as also the Turks of Transcaspia (i.e. what is now part of the Kazakhstan and Turkmenistan Republics) and possibly the Turkish-speaking Ahl-i Ḥaḳḳ [*q.v.*] of Ādharbāydjān.

Other usages cited by Minorsky, *loc. cit.*, of *tat* = other peoples in addition to the Persians, are much more doubtful. Schaeder discussed passages which Minorsky adduced from the travel account of the Ottoman captive Hans Schiltberger (early 15th century), and he showed that the reading of some mss. of the *Reisebuch*, the language *Kuthia* "called by the heathens *That*", should really be *Churin* = the people of the northeastern Caucasus, in what is now southern Dāghistān [*q.v.*], the Kürin or Lezgin [see LEZGH], who would at that time have been near neighbours of the still-subsisting Iranian Tats of the Baku and Apsheron peninsula region [see below, 2. Language]. The correct reading *Churin* can thus have no connection with the remnants of the Goths (the putative *Kuthia*) in the Crimea, as asserted originally by W. Tomaschek. On the other hand, Schiltberger correctly located a group of Tats in the Crimea, the inhabitants of Karkery/Karkeri (= Ḳîrḳ yer, the name in later times for the "Jewish settlement" Čufutḳalʿe near Bāghče Saray) and Sutti/Suti (= the ancient Alan settlement on the southeastern coast of the Crimea, Grk. Sougdaia, Ital. Soldaia, Sodaia, etc., in Islamic rendering Sughdāḳ [*q.v.*], modern Sudak). Schiltberger's *Thatts* could not, however, have been Crimean Goths but were probably Greek-speaking Christians; *tat* was used over three centuries later by the Crimean Tatars for Greek Christians who migrated between 1775 and 1778 from the southeastern coast of the Crimea to Mariupol (modern Zhdanov) on the northern shore of the Sea of Azov and who spoke both a Neo-Greek dialect and Turkish (which they wrote in Greek characters). The considerable ethnic mixture of the Black Sea shores region, with various peoples there becoming Turkicised over the centuries, may be reflected in the titulature of a Crimean Tatar khān, Djānī Beg Giray, described in a *yarlîgh* of his from 1037/1628 as *tat bilä tawghačnîñ ulugh pādishāhî*, where the coupling *tat tawghač* is a survival from Ḳarakhānid times (see above): a piece of bombastic phraseology which nevertheless probably shows that a part of the mixed population of the Black Sea coastlands was still known as Tat (see Schaeder, 10-14).

The conjecture of Tomaschek, given hesitatingly by Minorsky, that the Magyar name for the Slovaks, *Tót*, came from *tat*, is rejected by Schaeder, 33, citing J. Melich, in *Magyar Nyelv*, xxv (1929), 326-8, that the older pronunciation, attested from 1240, was *tout*, originally also **taut*, and derived from the Thracian tribe of the Tauti, attested in the Roman province of Dacia Ripensis in the 4th century.

Finally, one should note a usage of *tāt* in Arabic and Ottoman Turkish sources for the military and social history of Syria after the conquest of that province by Selīm I in 922/1516. Here, *tāt* was used for foreign troops in Syria, those neither Arab nor Rūmī (i.e. Anatolian Turks), sc. Kurds, Albanians, Turkmens living within the Arab lands, etc.; hence within the Janissary garrison troops of a city like Damascus, the *tāt* are distinguished from the *yerlü*, i.e. locally-recruited troops (see Abdul Karim Rafeq, *The local forces in Syria in the seventeenth and eighteenth centuries*, in V.J. Parry and M.E. Yapp (eds.), *War, technology and society in the Middle East*, London 1975, 277-8; and YERLIYYA).

Bibliography: Given in the article; the outstanding study, much used here, is H.H. Schaeder, *Türkische Namen der Iranier*, in G. Jäschke (ed.), *Festschrift F. Giese* (= Sonderband der *WI*), Leipzig 1941, 1-16. (C.E. BOSWORTH)

2. Language.

Tātī is the name given to New Western Iranian dialects surviving in language islands in the eastern Caucasus region, mainly in the extreme northeast of the former Azerbaijan S.S.R. (now the independent Republic of Azerbaijan) and the Daghistan A.S.S.R. of the Russian federation. According to the 1970 census, there were 17,000 speakers of these. (These dialects are not to be confounded with the Ādharbāydjān Iranian dialects of northwestern Persia, supposed to be descendants of the indigenous Northwest Iranian languages spoken there before the spread of Ādharī Turkish [*q.v.*], which are also called Tātī by the local population.) Historically, Tātī belongs to the Southwestern branch of the New Iranian languages, showing a close relationship with the dominant language, New Persian.

The two main dialects of Tātī reflect religious differentiation. Northern Tātī (N) is spoken by the Jews of Dāghistān (Derbend) and northeastern Caucasus (Ḳuba, Vartashen). Southern Tātī (S) is spoken by the Muslims and, to a lesser extent, by Armeno-Christians in northeastern Ādharbāydjān (Diviči, Lakhidj, etc.).

Tātī dialects display some archaic features together with innovations (especially S) due to Turcophone (mainly Ādharī Turkish) interference. In phonology, note the preservation of initial Old Ir. **v* as opposed to New Persian *b*, or the rhotacism of Old Ir. **t* > New Persian *d*, Tātī *r* (**vata-* > New Persian *bād*, S Tati *vār*, N Tati *vor*). Morphology shows inflecting and agglutinating features. There is no gender. The noun can be followed by different suffixes indicating plural (N *khune-ho*, S *khuna-hā* "houses", N *kuk-un* "sons", S *mard-um* "people"), definite object (N- *r(e)*, S *-(r)a*), instrumental-comitative (N *-(r)evoz*, S *-(r)āz(ā)*, *(r)āvāz*). There are three possibilities of expressing possession: (1) the Persian-type *iḍāfa* without the connecting vowel except after final *-e* (N), *-a*, *-ā* (S), e.g. *khahar Khanon* "Kh.'s sister" (N); (2) the same construction with a possessive particle (N *en*, S *an*), e.g. *khahar en Kh.* (N); and (3) an inverse possessive construction with the

possessor first supplied with the suffix—*(r)a*, followed by the possessive determiner plus the pronoun correlating with its possessor: *pyar-a khuna i* "the father's house (his)" (only in S Tātī, an innovation).

In adjectival constructions, the adjective comes first supplied with the vowel *-e* (N), *-a* (S): *khub-e khune* (N), *khub-a khuna* (S) "good house". Pronouns (only stressed) can take the same morphemes as nouns: sing. 1. acc. N *me-re*, S *man-a*, instr.-comit. N *me-revoz*, S *man-āz*, poss. N *en-men*, S *al-man* or *al-man-kin* (borrowed from Ādharī). Reflexive pronouns: N *khishte(ni)*, S *khishtan*. Numerals have vigesimal formations (*sa-bist* "60") along with regular forms (*shast*).

Verbal forms are based on two stems: present (present-future, present or aorist, imperative, optative) and past (preterite, iterative past); on the past participle (perfect, past perfect and, only in N, past conditional); and on the infinitive (present, imperfect and, only in S, past conditional). The verbal endings are the same in the present and the past except sing. 3 (ø). There is in N an optative with special endings (S *-om*, *-osh*, *-o*, pl. *-oum*, *-oshit*, *-oshut*). Two verbal prefixes (durative *mi-* and perfective *ba-*) can be attached to certain forms displaying nuances of aspect and mood (e.g. the verb "to weave" in S, present-future *mi-bāf-um*, aorist *bāf-um*, iterative past *mi-bāft-um*, perfect *bāftā-m*, present *ba-bāftan-üm*, imperfect *ba-bāftan bürüm*). The verbal nouns are gerundive and absolute.

(Éva Jeremiás)

TATAR, the name of a Mongolic tribal grouping.

Their earliest attestation is in the 8th century Orkhon Türk inscriptions in which the *Otuz Tatar* ("Thirty T.") are noted (KT, e14, s1) together with other Proto-Mongolian peoples (the Ḳitan, Tatabî) as rebellious subjects of the Türk Empire. Elsewhere (BḲ, e35), the *Toḳuz Tatar* ("Nine T.") are reported as allies of the Oghuz who were defeated by Bilge Ḳaghan (Tekin, *Orhon yazıtları*, see also runic fragments from Tuva and Khakasia, Vasil'ev, *Korpus*, 33-4; Kljaštornyj, *Das Reich*, 75) and in the late 740s by the Uyghurs. Attempts to connect the Otuz Tatars to the people called Shih-wei in Chinese sources are problematic (Gumilev, *Drevnie tyurki*, 31; Viktorova, *Mongolî*, 156). The colophon (*ca.* 825-32) of the Manichaean *Mahrnāmag* mentions an official *Tatar Apa Tekin* (Müller, *Ein Doppelblatt*, 9; Kljaštornyj, *Das Reich*, 78). The earliest Chinese reference to the *Ta-ta* is recorded in a letter of 842 (Pelliot, *Comans*, 143). Tenth-century Chinese documents from Tunhuang place them around Suchou, indicating a polity in the Kansu-East Turkistan region. Ninth-10th century Khotanese Saka sources also report the involvement of the *ttättarä*/*ttattara* and *kūysa ttattara* [Kuz Tatars] in Uyghur and Northern Chinese affairs in the Kansu region (Bailey, *Culture*, 80, 85-7; idem, *Khotanese texts*, vi, 92-3). On occasion, they accompanied Uyghur embassies to China (e.g. in 958), offering assistance, in 996, against the Hsi Hsia/Tanguts (Pinks, *Die Uiguren*, 30, 107; Hamilton, *Les Ouïgours*, 89, 138; Malyavkin, *Uygurskie gosudarstva*, 75). A 10th-century Chinese embassy to the Uyghurs also notes the *Chiu-tzu Ta-tan* ("Nine T.") with whom the Kao-ch'ang Uyghurs had close ties (Pelliot, *Comans*, 147-48; İzgi, *Çin elçisi*, 48-50). This close connection is reflected in the early notices in Islamic sources. Thus the *Ḥudūd al-ʿālam*, tr. 94, reports that the "Tatār too are a race (*djins*) of the Toghuzghuz".

Some of the Tatar groupings appear to have come under the control of the Ḳitan/Liao (907-1125) who vied for control of Northern China with the Sung (960-1279). The Chinese sources of this era make frequent reference to the Tsu-pu (cf. Tibet. *Sog-po* "Mongol"), a tributary tribal confederation of the Ḳitan/Liao, whom Wittfogel and Fêng, *Hist. Chinese soc.*, 50, 101, 102) view as either identical with or closely related to the Tatars. Viktorova (*Mongolî*, 163-4), argues, however, that *Sog-po* derives from the designation for Soghdian (now expanded to other peoples) and suggests that the Sung authors used *Tatar* as a collective term for the Inner Asian steppe nomads. The Tangut ruler Yüan-hao claimed in 1039, that the *T'a-t'a*, among others in the Kansu region, had submitted to him (Kičanov, *Očerk*, 134). Chinese sources of the 13th century use the term *Hei-Ta(-ta)* "Black Tatars" to designate all the Mongols, and *Pei Ta-ta* "White Tatars" to signify the Önggüd, a Turkic people (Olbricht and Pinks, *Meng-ta Pei-lu*, 4, 6).

Gardīzī (ed. Ḥabībī, 258), in his account of Kimek [see KIMÄK] origins (this people being an important Turkic or Turkicised tribal confederation in Western Siberia which had extensive trade relations with Muslim merchants), derives their ruling house from the *mihtar* of the Tatārs. Moreover, a tribe named "Tatār" constituted one of the seven core tribes of this union. Maḥmūd al-Kāshgharī (Dankoff, i, 82-3, 312) considers the Tatārs "a tribe of the Turks", but notes them among the distant, Inner Asian nomadic peoples near China, the Ḳāy, Yabāḳū and Basmïl who each have "their own language but they also know Turkic well". According to the anonymous *Mudjmal al-tawārīkh*, 421, the "Pādishāh of the Tatār is called *symwn bywy ḥyār*".

With the overthrow of the Liao, the Tatars were forced to send hostages to the Djurčen/Chin who supplanted the Ḳitan. There then began a complex relationship with the Chin in which the Tatars until *ca.* 1190 alternately policed the Mongolian steppes for them or themselves revolted against Djurčen overlordship. At this time, they were located south of the Mongol tribe/union in Northeastern Mongolia. Rashīd al-Dīn, i, 159 ff. ed. Karīmī, i, 57 ff., in an extensive report on them, mentions two Tatar habitats, one on the Būyir Nor and the other on the Angara ("Anḳūra") river in South Siberia, the latter a memento, perhaps, of an earlier alliance with the Ḳirghîz (on this, see Kljaštornyj, *Das Reich*, 76). They were reportedly a bellicose, strife-ridden people famous for fighting with knives (*kārd-zanī*), who possessed a land rich in silver. Although "an *īl* and a subject people who paid tribute to the Pādishāhs of Khatāy", they frequently rebelled. Had they been more constant in their unity, he maintains, "the other tribes of the Khatāys and others would have had no success in resisting them". Nonetheless, they were more often than not victorious over their neighbours. As a consequence of their grandeur (*ʿizzat*) and magnificence (*hashmat*), other tribes "made themselves famous with their name and are all called Tatār". Herein, as Rashīd al-Dīn notes, i, 163, lies the origin of the widespread usage of this name as a general designation of the Mongol-speaking tribes and others of the Činggisid era. He further remarks that the name "Mughūl (Mongol) spread in much the same fashion", and names (i, 165) six Tatar tribes divided into three groupings: Tūtūḳlīyūt and Kūyīn, Alči and Tarāt,

Čaghān and Barkūy, with the Tūtūklīyūt (< Turk. *tutuk*, a title of Chinese origin + Turk suffix *-li* + Mong. pl. *-ut*), having the highest standing. The Tatārs had a long-standing blood feud with the Mongol tribe dating to the era of Kabul Khān (mid-12th century) who was the ruler "of the multitude of Mughūl". A Tatār shaman who failed to cure Sāyīn Tegin, a Kunghrāt and the brother-in-law of Kabul Khān, was murdered by his now deceased patient's brothers. The Mongols were obliged to make common cause with the Kunghrāt because of this marital tie and the two sides "repeatedly warred. On both sides, each time the opportunity presented itself, they killed one another and caused devastation". During the course of these struggles, the Tatārs captured Hambakāy (Mong. Ambaghay) Khān, a successor of Kabul Khān, and turned him over to Altān Khān (the "Golden Emperor" = Chin) who subjected him to a grisly death (Rashīd al-Dīn, i, 166-9, 485, repeats several variants of this tale, cf. also ed. Karīmī, i, 142, 188). The dying Ambaghay called on his people "till the nails of your five fingers disappear through wear ... strive to avenge me" (see *The Secret History*, tr. Cleaves, 11). The Tatārs also captured Ökin Tartāk, a son of Kabul Khān and the Kereyid leader, Sarik Khān/Marghūz (Rashīd al-Dīn, i, 195-6, 260), both of whom underwent the same fate in Chin captivity. This enmity, undoubtedly enflamed by the Chin's policy of divide and conquer in the steppe, continued up to the late 12th century, when the tribes of Mongolia were being organised by Temüdjin (named after a Tatar foe slain by his father), soon to be the Činggis Khān. It was the latter who "made sword-fodder (*ʿalaf-i shimshīr*) of the whole of the tribes of the Tatār and the Emperor of Khatāy" (Rashīd al-Dīn, i, 171). In May-June 1196, Činggis Khān and his allies attacked the Tatārs, who had now fallen afoul of the Chin, and came away with great booty for "at that time the Tatār tribes were the most blessed with bounty (*munʿamtarīn*) and wealthiest (*mutamawwiltar*) of all those who live in the steppe". In 1202, at a battle near the Khalkha river, the Mongols utterly routed the Tatārs. Činggis Khān, as a consequence of their long-standing hatred, "ordered that they be completely slaughtered and not one be left alive to the extent that the *yasak* allows, that women and little ones also be killed and the bellies of pregnant women be torn asunder completely. No one was permitted to give them sanctuary" (Rashīd al-Dīn, i, 172-3, 175). Many Tatārs, however, had intermarried with Mongols and in this way sizeable numbers survived and not a few of their descendants later became important personages in the Činggisid empire. Rashīd al-Dīn, i, 189, mentions among others Abishka (Abushka Noyan of Perso-Turkish sources), a descendant of a Tatār orphan taken in by one of Činggis Khān's Tatar wives, who ruled Rūm, and his nephew, Bektut, was the commander of the Karāūnas, the Turco-Mongol group found in the region of Transoxania and Afghānistān in the 7th-8th/13th-14th centuries.

(P.B. Golden)

TATAR PAZARCIK, a town of central Bulgaria, on the upper reaches of the Marica, 120 km/75 miles from Sofia and 36 km/22 miles from Plovdiv. It had 88,000 inhabitants in 1991; since 1934 it has been officially known as Pazardjik (Пазарджик).

Situated on the great Belgrade-Istanbul axis, only a short distance from Plovdiv (Filibe [*q.v.*]), Tatar Pazarcik could only emerge as an urban centre in the imperial Ottoman context. After the conquest of Bosnia (1463), a caravan route was established between Sarajevo and Istanbul, via Priština, Skopje, Kjustendil and Samokov. At the junction of the two routes Tatar Pazarcik was founded in 1485, around a Tatar colony from Bessarabia, of which little is known. Regional centre of a *kaḍā* from the 16th century onwards, the town suffered from the proximity of Plovdiv, a traditional regional metropolis. It was nevertheless a flourishing commercial centre: iron from Samokov, wood from the Rhodopes, and rice, cultivation of which had been introduced in the 16th century; all of these were sent down the Marica by raft as far as Edirne or the Aegean Sea. In the 19th century, commerce in roughly-spun cloth (*aba*) and in corduroy (*gaytan*) was predominant; the fair of Maraš was held each year from 30 June to 15 August. In 1873, railway connections were established with Istanbul and Dedeaghač.

Located on a major axis, Tatar Pazarcik was described by numerous travellers, who hesitated to call it a village (Scheper, 1533), a *palanka* (Schweiger, 1577) or a town (Kuripešič, 1530; Vrančić, 1567). In 1578, Gerlach counted no more than 30 houses belonging to Christians, who had no church or resident priest. All admired the fine caravanserai constructed in 1574 by Ibrāhīm Pasha and its elegant fountain. Ewliyā

Čelebi enumerated 16 *maḥallas* and 870 houses. Quiclet mentions a clock-tower in 1664 (the current clock-tower dates from 1741). In 1718, Driesch found houses larger and more attractive than those of Niš or of Sofia.

The Bulgar population only began to grow from the 18th century onward. The town seems to have been spared the anarchy of the years between 1790 and 1815, being controlled at this time by a powerful family of *aʿyāns*, who entertained visitors in sumptuous style (Galt, 1811; Lamartine, 1833). Zahariev provides a detailed description of the place as it was in the 1860s: it comprised 33 *maḥallas* and 3,420 houses, 1,200 shops, 19 mosques, 6 churches, 1 synagogue and 4 public baths. There were 8 Turkish schools with 500 pupils, 6 Bulgar schools with 530 pupils, and Jewish, Vlach and Armenian schools. The population is said to have amounted to 25,000 inhabitants, of whom Bulgars comprised 57% and Turks 28.5%.

In January 1878 the town was burned and pillaged in the course of Süleymān Pasha's retreat (a moving description in de Lonlay's account). The majority of the Turkish population emigrated at that time, while the prohibition of rice-growing between 1879 and 1884 was intended to ruin the Beys. In the context of Eastern Rumelia (1878-85), then of the Principality of Bulgaria, Tatar Pazarcik managed to survive: in 1900 it comprised 17,000 inhabitants, including 2,000 Turks and 1,000 Muslim Gipsies. In 1923 it still largely retained its Ottoman appearance, although only four mosques remained; an assistant *muftī* was in residence there. At the present day, the Muslim presence is assured by a significant Gipsy community (Horohan and Kalajdži groups) and, unobtrusively, by Pomaks [*q.v.*] originally from the neighbouring mountains.

(B. Lory)

TAṬARRUF (A., verbal noun of form V of *ṭ-r-f*), at present the usual Arabic word for extremism, radicalism. Metaphorically, the term is understood as the opposite of "moderate". The latter meaning is connected with the topos of the "the golden mean" between two extremes, which has been current since Antiquity and has served as a definition for the concept of moderation (A. *tawassuṭ*, *iʿtidāl*). After World War II the concept of extremism found its way into academic literature, and since the 1970s has been specifically used in Islamic and Orientalist literature for the phenomenon of militant religious-political groups. *Inter alia*, the term is applied to mark the difference between those groups and other ones for whom a number of more comprehensive neologisms such as "Islamists" (*islāmiyyūn*) and "fundamentalists" (*uṣūliyyūn*) appear to be appropriate. On the other hand, the concept of *taṭarruf* is also used as a synonym of the older concept of *ghuluww* [see GHULĀT] as well as that of *taʿaṣṣub*, *tanaṭṭuʿ*, *tazammut* or *tashaddud* "fanaticism, rigorism".

The concept of extremism, unless its contents are carefully defined, is problematic, for it can easily be politicised and used indiscriminately. In the Western world, the "democratic constitutional state" usually counts as the antithesis to "extremism", but in the Islamic world such a consensus is missing, as is clear from a quick glance at the literature. Here the existing state power, legitimised democratically only in rare cases, determines what political extremism is. It is even more difficult to determine *al-taṭarruf al-dīnī* and to define it against the *wasaṭiyya*—a concept often claimed by Muslim authors for their religion (usually with reference to Ḳurʾān II, 143, 185, and IV, 28), but in general without much elaboration. While many Muslims view the (militant) Islamists as extremists, the latter tend to apply that term to both their secular-minded co-religionists as well as to religious fringe groups (such as the Aḥmadiyya, the Bahāʾīs or the Ismāʿīliyya [*q.vv.*].

Basically, the word "extreme" may refer to: 1) Ideas and actions by groups of various types (among them circles of theorists, individual [isolated] activists, terrorist groups, merger movements, vanguard parties). They may be distiguished from one another according to the importance they attribute to doctrine, organisation and action, but are similar with regard to their aim to overthrow the established social order. 2) Countries and régimes which want to undermine the political authority and legitimacy of other states and régimes. 3) States which try to modify the existing power relations within the international system. In spite of the various aims and strategies, the term "extreme" always refers to movements or régimes which want to bring about a change in the *status quo*, occasionally with all possible means, and to counteract in the region the interests of the "Westerners", in particular those of the USA and of Israel.

The extremist doctrine is in general marked by the following structural patterns: claims to know the absolute truth, dogmatism, utopianism, friend-enemy stereotypes, conspiracy theories, fanaticism and activism. To its most important functions belong interpretation and explanation (but not the search for understanding) of what is going on in the world. In the case of religious extremism, there is also the certainty of salvation, which is connected, especially in the Shīʿa, with the idea of martyrdom and of messianic or millenarian expectations. Next to this, the doctrine also serves to indicate the way of action and to formulate the aim, to integrate members or to isolate alleged enemies. Further, it functions to both legitimate and justify action on the political level.

The particular nature of religious-political extremism lies in its claim to religious legitimacy and divine guidance; its followers consider themselves as possessors of the absolute truth, sanctioned by God. The specific dimensions of this extremism are:

1. Striving for the expansion of religious law; in this process, the *Sharīʿa* is indeed explained and accentuated in different ways, but is in general interpreted rigorously and selectively (idealisation of the early *Umma*, "founding myths").

2. Social isolation and the set-up of a counter-society serving as a model for the future. This implies among other things that during missionary activities precautionary measures are taken in order to prevent the dangers which may arise from contact with those who are not like-minded.

3. Rejection of cultural forms and values that are not perceived as indigenous to the religious tradition (the phenomenon of counter-acculturation or "defensive culture"). The unique nature of Islam is emphasised in comparison to all other existing ideologies and social systems.

The long-term aim is to destabilise and replace the present régimes, experienced as un-Islamic, illegitimate and unjust, by an ideal Islamic state, in which the Sharīʿa dominates public and private life. However, this objective presupposes the creation of a *homo islamicus* and must therefore be considered utopian. This aim is legitimised by the concepts of the *ḥākimiyya* (divine sovereignty) and of the contemporary *djāhiliyya*, influenced by Abu ʾl-ʿAlāʾ Mawdūdī (1903-79) and Sayyid Ḳuṭb (1906-66) [*q.vv.*].

As a result of the more or less inevitable failure of this aim, and because of the suppression by the state power, there occur controversies about strategy inside the extremist groups, which can lead to further schisms and increasing radicalisation.

In order to convert aims into practice, the following methods, which correspond to the "prophetical model", are applied: *daʿwa* (mission), *hidjra* (emigration), and (offensive) *djihād* [*q.vv.*]. These strategies can be pursued successively, but also separate from one another, depending on the method followed/utilised to seize power: a "gradualist approach" (including the undermining of the existing system with legal means), a "tendency towards withdrawal" or "a tendency towards conquest". Both dimension and intensity of the resort to violence depend on the political context and on the scope of the concept of *takfīr* [*q.v.*], used for sanctioning violence.

As in other cultures, extremist movements in Islamic societies have always found their origin in socio-economical, political, cultural and psychological crises during periods of upheaval and transition. These movements have been successful at mobilising the lower and middle strata of society which have been marginalised politically as well as socially. Their successes can be traced back mainly to the fact that such movements emphasise the (Islamic) ideal of equality and justice, and recently also to the broad supply of free social assistance, made possible through foreign support. However, the élite character of the movements, expressed in doctrine and organisation (centralised structure, charismatic form of leadership), contradicts this idealised picture.

TATHLĪTH (a.), the verbal noun of *thallatha*, means literally "to make or call three". It is the normal Muslim designation for the doctrine of the divine Trinity, in the same way as *tawḥīd* [*q.v.*] is used to designate the divine Unity. Its form expresses the Muslim understanding that the Christian doctrine entails plurality within the Godhead, and indicates that it has never been accepted in Muslim religious thought.

Condemnations of Christian beliefs about God start with the Ḳurʾān. In addition to denying that Jesus is identical with God (e.g. V, 17, 72), or taken by God as his son (e.g. IX, 30-1, XIX, 35), it warns Christians against saying God is three (IV, 171) or one of three (V, 73), and clears Jesus of claiming divinity for his mother and himself besides God (V, 116). Though the forms of belief which these verses may be refuting in their immediate historical context could well be heretical (discussions in G. Parrinder, *Jesus in the Qurʾan*, London 1965, 134-7; N. Robinson, *Christ in Islam and Christianity*, London 1991, 20-1), it is definite that, from the earliest times, Muslims construed them in the light of such verses as XXIII, 91, XXV, 2 and CXII, 3-4, as rejections of all forms of Trinitarian belief. This understanding is expressed as early as 71/691 in the composite Ḳurʾānic inscription around the inner face of the arcade of the Dome of the Rock, which includes verses condemning Christian beliefs about Jesus and the Trinity (text in C. Kessler, *ʿAbd al-Malik's inscription in the Dome of the Rock: a reconsideration*,

in *JRAS* [1970], 4-6, incorporating IV, 171). These verses had particular force in a building intended to convey to Christians the potency of Islam [see KUBBAT AL-ṢAKHRA and AL-ḲUDS. B].

The first Arab Christian accounts of the Trinity written in the Islamic era, which date from the 2nd/8th century, reveal that their authors were fully conscious of the challenge of plurality. In reply they regularly used explanations and arguments inherited from patristic sources, among the most popular of which were numerical proofs based on the perfection of the figure three and analogies from the phenomenal world, e.g. the sun's disc, heat and rays, which intimate that the hypostases are in fact three functions of the one reality (see the anonymous *Fī tathlīth Allāh al-wāḥid*, from the mid-2nd/8th century, ed. and tr. M.D. Gibson, *On the triune nature of God*, in *Studia Sinaitica*, vi, London 1899, 74-8 (Arabic) (on the dating see S.K. Samir, *The earliest Arab apology for Christianity (c. 750)*, in *Christian Arabic apologetics during the Abbasid period (750-1258)*, ed. S.K. Samir and J.S. Nielsen, Leiden 1994, 57-114, though others suggest a slightly later date), and the debate between the Nestorian patriarch Timothy I and the caliph al-Mahdī, which took place in about 165/781, in A. Mingana, *The apology of Timothy the Patriarch before the Caliph Mahdi*, in *BJRL*, xii [1928], 159 ff., 198 ff.; Abū ʿĪsā Muḥammad b. Hārūn al-Warrāḳ [*q.v.*], *al-Radd ʿalā al-thalāth firaḳ min al-Naṣārā*, ed. D. Thomas, *Anti-Christian polemic in early Islam*, Cambridge 1992, 149). These arguments remained integral parts of the debate as it developed in the classical period, though they never proved as cogent in the new context as they had in the old.

By the time the first surviving sustained Muslim attacks appeared at the beginning of the 3rd/9th century the main issues in contention had become clear. The outlines of explanation employed by the main Christian denominations were well known to Muslims, and, more significantly, they were being presented in a shared Arabic vocabulary which served to focus the debate even more sharply upon the question of plurality. For the terms employed, usually *djawhar* (less often *ṭabīʿa*) for "substance" (οὐσία) and the Syriac borrowing *uḳnūm* (pl. *aḳānīm*) for "hypostasis" (ὑπόστασις), and the ways they were glossed, emphasised the differentiations within the Godhead and made it relatively easy for Muslim polemicists to argue that there must be more than one eternal.

There is considerable variety in the detail of Muslim attacks at this time, and three of the main surviving works exemplify the differences in approach. One of the earliest comes from the Zaydī Imām al-Ḳāsim b. Ibrāhīm al-Rassī's *al-Radd ʿalā al-Naṣārā* (I. di Matteo, *Confutazione contro i Cristiani dello zaydita al-Qāsim b. Ibrāhīm*, in *RSI*, ix [1921-2], 301-64), where among other arguments the author identifies the hypostases as *ashkhāṣ* "separate individuals" (an identification supported at this time by such Christian authors as Theodore Abū Ḳurra and Ḥabīb b. Khidma Abū Rāʾiṭa) who are distinct and equal and are one in *ṭabīʿa*, nature (314.23-316.3), and employs the essentialist proof that since the titles "Father" and "Son" derive from the act of begetting they designate a contingent relationship rather than the eternal actuality of God (318.15-319.13). Following a more established form of logic, the philosopher Abū Yūsuf Yaʿḳūb b. Isḥāḳ al-Kindī [*q.v.*] employs the Aristotelian categories enumerated in Porphyry's *Isagoge* (A. Périer, *Un traité de Yaḥyā ben ʿAdī*, in *ROC*, xxii [1920-1], 3-21, where portions of al-Kindī's *al-Radd ʿalā al-Naṣārā* are quoted). He describes the hypostases as *ashkhāṣ*, individuals, each with its own *khāṣṣa*, individuating property, and shows that as such they cannot be eternal for three reasons: the description itself indicates they are composite (4.12-7); since they can be treated as Aristotelian predicables they must each include a number of categories within themselves (6.18-10.8); and, according to Aristotle, the proposition that they are both one and three, if not absurd, entails them being part of a species or genus (11.3-12.4). Each of these severely philosophical proofs relies on the principle that what is composite must derive from an anterior cause and so is not eternal. Adopting yet another approach, the Shīʿī theologian Abū ʿĪsā Muḥammad b. Hārūn al-Warrāḳ, who in his *Radd ʿalā al-thalāth firaḳ min al-Naṣārā* (ed. Thomas, *Polemic*) composed one of the fullest and most influential attacks on the doctrine in the whole of the early period of Islam, accepts the explanations presented by the main Christian denominations without placing interpretative glosses on them, and subjects all aspects of them to a long and searching enquiry, from which he concludes that they are either incoherent or inconsistent with accepted norms of reason. He allows his opponents to speak for themselves, though like his two contemporaries al-Ḳāsim b. Ibrāhīm and al-Kindī, he treats the constituents of the Godhead as a series of discrete and separate entities, and so can repeatedly demonstrate that the doctrine is in actuality *tathlīth*, making God three.

As the arguments of these Muslim thinkers show, the problem with the doctrine for Arabic speakers was that, in the form in which it was expressed, it represented a plurality of real existences within the Godhead. Christian theologians did not find a means of overcoming this, although they employed many strategies. An innovation in the 3rd/9th century was to formulate the doctrine according to the logic of the *kalām*, which was, of course, the common ground of theological discourse for Muslim and Christian Arabic speakers, in which the hypostases were presented as *ṣifāt*, attributes of the divine essence, or something similar (see e.g. S. Griffith, *The concept of* al-Uqnūm *in ʿAmmār al-Baṣrī's apology for the doctrine of the Trinity*, in *Actes du premier congrès international d'études arabes chrétiennes (Goslar, septembre 1980)*, ed. S.K. Samir, Rome 1982, 169-91; idem, *The* Kitāb Miṣbāḥ al-ʿAql *of Severus Ibn al-Muqaffaʿ: a profile of the Christian creed in tenth century Egypt*, in *Medieval Encounters*, ii [1996], 15-42). Typically, this took the form of saying that the Son and Holy Spirit are respectively the *ʿilm* or *nuṭḳ*, reason, and *ḥayāt*, life, of the Father, two irreducible attributes by which he is *ʿālim* or *nāṭiḳ*, endowed with reason, and *ḥayy*, living, meaning that the three realities can be distinguished from one another formally but are in actuality identical, since, according to *kalām* understanding, the divine attributes were not distinct from the being of God. This attempt to explain the doctrine in a manner familiar to Muslims may have been ingenious but it proved unsustainable, not least because there was no compelling reason to limit the *ṣifāt* to these two, or, according to Muʿtazilī thinking, to consider them distinguishable from the being of God in any way. Muslim theologians made short work of refuting the doctrine in this form (see e.g. Abū ʿAlī al-Djubbāʾī [*q.v.*] quoted in ʿAbd al-Djabbār, *Mughnī*, v, ed. M. Khuḍayrī, Cairo 1958, 80, 91-5; al-Nāshiʾ al-Akbar [*q.v.*], *K. al-Awsaṭ fi ʾl-maḳālāt*, in *Frühe muʿtazilitische Häresiographie*, ed. J. van Ess, Beirut 1971, 87 [Arabic]).

Intellectually, the 3rd/9th century marks one of the most fruitful periods of encounter between Muslims and Christians, and many of the arguments employed

against the Trinity by the *mutakallimūn* at that time greatly influenced polemicists in the next century, such as the As̲h̲ʿarī Abū Bakr al-Bāḳillānī [*q.v.*] and the Muʿtazilī ʿAbd al-D̲j̲abbār b. Aḥmad [*q.v.*] (see Thomas, *Polemic*, 42 ff.). Against what seem to be increasingly desperate opponents, these theologians employed many arguments which had stood the test of time to show that the separate itemisation of realities within the Godhead must entail plurality of eternals. Of course, there were new arguments: al-Bāḳillānī refutes the proposition that God can be *d̲j̲awhar* on the grounds that, according to *kalām* classifications (as opposed to the Aristotelian categories of the Christian opponents), if He were, He would have to be a substrate for accidents (*K. al-Tawḥīd*, ed. R.J. McCarthy, Beirut 1957, 75 ff.). But the main approach appears to have been generally agreed, and ʿAbd al-D̲j̲abbār's arguments, for example, which are substantially borrowings from earlier polemicists (*Mug̲h̲nī*, v, 86-113), serve as a convenient summary for the forms of proof employed against the doctrine up to the end of the 4th/10th century. The same can be said of the situation in al-Andalus, where at about the same time Ibn Ḥazm's [*q.v.*] attack on the Trinity bears close similarities to earlier arguments, though true to his Ẓāhirī sympathies, the latter curtly observes that if the three hypostases are all one then each must be the other, and also questions the justification for identifying God's attribute of *ʿilm* as His Son, something not commented on previously (*K. al-Fiṣal fi 'l-milal wa 'l-ahwāʾ wa 'l-niḥal*, Cairo 1317, i, 50). In the following centuries Andalusian Christians also employed methods which had appeared in earlier *kalām* debates in the east to defend the doctrine (see T. Burman, *Religious polemic and the intellectual history of the Mozarabs, c. 1050-1200*, Leiden 1994, 163-72). The issue remained that Christians argued for a unity which differed from the absolute, dense oneness of Islamic doctrine. They continued to insist upon what may be called an open oneness in terms which retained connections with Greek philosophical triads, and for this reason had no difficulty in accepting the form *tat̲h̲līt̲h̲* for the doctrine with its implication of triple reality. Their conception of divine Unity could not be accommodated in a definition with which Muslims would agree.

Despite the fact that Christians habitually cited scriptural authority for their doctrine (particularly Gen. i. 26 and Matt. xxviii. 19), the Biblical sources were not discussed in most Muslim responses, presumably because any text which sanctioned a violation of *tawḥīd* must be corrupt [see TAḤRĪF]. One of the exceptions to this attitude was Ibn Taymiyya [*q.v.*], who in his *al-D̲j̲awāb al-ṣaḥīḥ li-man baddala dīn al-Masīḥ*, Cairo 1905, ii, 87-156, places the whole debate in the context of revealed teachings and argues that, since none of the prophets would have taught anything other than divine Unity, the Trinity must be based upon misinterpretation of the Bible. He dismisses the philosophical terminology discussed so hotly by his predecessors as unwarranted jargon, though he touches the same theme as they, that the Christian doctrine does not conform to what God has revealed, whether this is found in the study of scripture or rational enquiry. M. ʿAta ur-Rahim, *Jesus, a Prophet of Islam*, London 1979, 9 ff., makes exactly the same point as he, and supports it with the tried argument that the doctrine resulted from the introduction of Christian beliefs into the world of Greek philosophical concepts.

Maybe the most thorough and influential refutation of the doctrine in modern times was that made by Raḥmat Allāh b. K̲h̲alīl al-Kayrānawī in his *Iẓhār al-ḥaḳḳ*, Constantinople 1867 (reissued many times and translated into many languages), which he wrote in the years following the debate in Agra in 1854 between himself and other Indian Muslims and the German missionary C.G. Pfander. In this he uses the Bible to show that there is no strong scriptural basis for the Trinity (i, 263-83), and logical arguments inherited from earlier times, supplemented by others inferred from such teachings as transubstantiation, to show that there is no rational validity in it (i, 283-8). Like all his predecessors in the succession from the Ḳurʾān, he demonstrates that it inescapably signifies a plurality in the Godhead which violates *tawḥīd*. It cannot be supported in reason and should not be accepted in faith.

(D. THOMAS)

TAʿṬĪL [see TAS̲H̲BĪH WA-TANZĪH].

ṬĀʿŪN [see WABAʾ].

TAWĀBIL [see AFĀWĪH, in Suppl.].

TAWADDUD (A.), the title of one of the tales from the *Thousand and One Nights* (no. 387, according to Chauvin). The son of a wealthy merchant, having squandered his heritage, finds himself without any possession other than a young female slave, Tawaddud, who is well versed in all branches of knowledge. On the latter's advice, he introduces her to the caliph Hārūn al-Ras̲h̲īd who, wishing to put her to the test, organises a disputation (*munāẓara*) between her and ten scholars, including the renowned Ibrāhīm al-Naẓẓām [*q.v.*], presented here as the most eminent man of his time. One by one, Tawaddud defeats each of her adversaries, stripping them of their *ṭaylasān*, insignum of their rank; charmed, the caliph showers her master with presents, gives him back his slave and makes him a member of his inner circle.

The narrative element, reduced to its simplest form, belongs to a type of tale abundantly represented in the *Nights* (cf. e.g. *Anīs al-d̲j̲alīs*, no. 58, according to Chauvin); it also evokes "stories with riddles", a genre well known in international folklore, and in particular, those where it is a woman who finds the solution, thus proving her superiority over men. It is, however, the content and the nature of the questions addressed (about 200) which have most of all excited the interest of specialists. In reference to the religious disciplines, discernible here is an ideological hard core which clearly belongs in the context of the "Sunnī restoration" of the 5th-6th/11th-12th centuries: the defeat of al-Naẓẓām, a famous Muʿtazilī—and a poor loser to boot—in confrontation with Tawaddud, who explicitly evokes Sunnism and the S̲h̲āfiʿī law school, is eloquent in this respect. It would, however, be a mistake to exaggerate the homogeneity of the whole, which bears the marks of successive additions, and which combines, with questions of deep doctrinal importance others which relate to a more "popular" vision, favouring spectacular erudition and spicy or sensational subjects, and sometimes taking the form of riddles.

The tale is also known in a Spanish adaptation, *La Doncela Teodor*, of which the earliest version dates back to the 13th century and which, in an enlarged form, became from the end of the 15th century onwards a classic of itinerant story-telling, before providing inspiration for a comedy by Lope de Vega (1617).

(J.-P. Guillaume)

ṬAWĀF (a.) verbal noun of *ṭāfa* with *bi* of place, "encircling"; in the language of religious cults the running round or circumambulation of a sacred object, a stone, altar, etc.

There are traces of the rite having existed among the Israelites, cf. especially Ps. xxvi. 6, and the ceremony of the feast of booths in the time of the Second Temple, where the altar is circumambulated once in the first six days and seven times on the seventh. The rite, however, was also found among Persians, Indians, Buddhists, Romans and others and is therefore very old. It played a very important part in the religious ceremonial of the ancient Arabs. We find the synonymous *dawār* (from *dāra*) also used. Thus Imru' al-Ḳays, *Muʿallaḳa*, 63, compares the wild cows with young women in long trailing robes, who perform the circumambulation (*duwār*).

In Mecca, the Kaʿba which enclosed the Black Stone, sacred from very ancient times, used to be circumambulated, and Muḥammad adopted this old custom when he established the rites of his religion and centred them round the Kaʿba. When, in the year 8/630, he made his victorious entry into his native town, he is said by Ibn Hishām, 820, and al-Ṭabarī, i, 1642, to have performed the *ṭawāf* riding on his camel, touching with his crooked staff the *rukn* (the eastern corner of the Ḳaʿba where the stone was). This was, however, exceptional, and according to Ibn Hishām, it was only shortly before his death at the time of the "farewell pilgrimage" that he laid down the authoritative rules for the circumambulation. It may, however, be assumed with certainty that he observed ancient traditional forms ("handed down from Abraham": Ibn Hishām, 51, l. 20) so that we can deduce from Muslim practice what the ancient pagan custom was; one feature of the latter was that the circumambulation had to be performed seven times in succession (see above on the feast of booths), the first three at a greater speed, beginning and ending at the Black Stone and keeping the Kaʿba on the right at all times; one should make a special effort to kiss the stone or at least touch it (*taḳbīl, istilām*). However, if Wellhausen is correct, it was an innovation that the *ṭawāf* which previously took place only at the *ʿumra* [*q.v.*] was inserted by Muḥammad in the great *Ḥadjdj* when the pilgrims visited Mecca. This suggestion is nevertheless disputed, see ḥadjdj in *EI*[1], at II, 199, where sūra III, 91, is quoted against it (but the expression *ḥadjdj al-bayt* is hardly decisive, since Muḥammad may have decided on the expansion of the rites of the *ḥadjdj*, if the expression was not inserted in the text later). The following are certainly Muslim innovations: the *ṭawāf al-taḥiyya* or *al-ḳudūm* (circumambulation of greeting or arrival) and the *ṭawāf al-wadāʿ* (circumambulation of departure, cf. Burckhardt, *Travels in Arabia*, London 1829, 284), which are, it is worth noting, not obligatory. Of the old pagan customs, one at least was strictly forbidden by the Prophet, sc. making the *ṭawāf* naked; see sūra VII, 29; Ibn Hishām, 921; and cf. Ibn Saʿd, iii/1, 6, l. 12, where there is a reference to a wooden object at the Kaʿba, where the heathen laid their clothes at the circumambulation. The pavement surrounding the Kaʿba on which the course was run is called *al-maṭāf*. At the al-Ḥaṭīm wall [see kaʿba] they run close to the outer side of it, not as usual alongside the Kaʿba.

The *ṭawāf*, except for the special forms mentioned above, is strictly compulsory and therefore it became an important factor in Islam. When the rule of the anti-caliph ʿAbd Allāh b. al-Zubayr made the visits of the faithful to Mecca difficult, the caliph ʿAbd al-Malik, is said to have proclaimed that a *ṭawāf* around the Dome of the Rock in Jerusalem would have the same value as that around the Kaʿba (cf. Goldziher, *Muhammedanische Studien*, ii, 35). The complete omission of this rite would have meant a serious gap in early Islamic religious practice, but doubts about the whole story have been raised [see ḳubbat al-ṣakhra]. In any case, if there really had been such an innovation, it must have soon disappeared with its cause, and in orthodox Islam any *ṭawāf* except that around the Kaʿba became more and more pointless. That the old ritual custom survived in the lower strata of Arab life is revealed in an interesting fashion by Ḥasan b. ʿAlī al-ʿUdjaymī al-Makkī, d. 1113/1702 (*Ihdāʾ al-laṭāʾif min akhbār al-Ṭāʾif*, cf. J. Horovitz, in *MSOS*, x [1907], 33, and Brockelmann, S II, 536), who says that the Bedouin endeavoured to perform the *ṭawāf* not only around the graves of their ancestors but also around the tomb of Ibn al-ʿAbbās in al-Ṭāʾif.

(F. Buhl*)

ṬAWĀʾIF [see mulūk al-ṭawāʾif].

TAWAKKUL (a.), verbal noun or *maṣdar* of Form V of *wakala* "to entrust [to someone], have confidence [in someone]", a concept in Islamic religious terminology, and especially that of Ṣūfism, with the sense of dependence upon God. Tor Andrae pointed out that the verb *tawakkala* meant "to trust someone in the same way as I would trust my *wakīl*", i.e. the person whom I have chosen to be my procurator or *homme d'affaires*, to look after my business and to govern and dispose on my behalf. Here he was drawing largely on al-Ghazālī's etymological analysis of *tawakkul* in his *Iḥyāʾ*, Cairo 1352/1933, iv, 223, where he states that it is derived from *wakāla*, power of attorney or deputyship, "hence one says that one entrusts one's affairs (*wakala*) to someone, i.e. one

relies on him. The one to whom one consigns one's affairs is called an agent or trustee (*wakīl*). With respect to the one in whom one trusts, one says that one abandons oneself to one's agent. Thus one entrusts one's soul to him and depends firmly on him... Hence *tawakkul* expresses the heart's confidence in the One Trustee (*al-wakīl al-wāḥid*)" (sc. God).

In the earliest Ṣūfī writings is found just such a conception of "religion as *tawakkul*", the sum of all acts of pious devotion, the essence of the feeling of "absolute dependence", which, as Schleiermacher observed, itself is religion. In the Ḳur'ān and *Ḥadīth* trust in God is a central topic. In the Ḳur'ān, *tawakkul* is mentioned some 60 times (II, 256, 283, III, 75, 122, 159-61, etc.), with such typical admonitions as "So put your trust in God, if you are believers" (V, 23). In *Ḥadīth*, we find e.g. "If you trust in God Almighty as it truly demands, He will certainly supply your daily bread just as He provides the birds who fly forth with empty stomachs in the morning but return surfeited at dusk" (*Iḥyā'*, iv, 211).

In early Ḳur'ānic exegesis, in al-Sulamī's recension of the *Tafsīr* ascribed to Dja'far al-Ṣādiḳ [*q.v.*], his description of the interior topography of the heart anticipates later Ṣūfī conceptions of *tawakkul* as an inner spiritual attitude rather than an external practice (ed. P. Nwyia, in *MUSJ*, xliii/4 [1967], 181-230); and early debates in Ṣūfism on the propriety of *tawakkul* in the spiritual life often focussed on the exegesis of Ḳur'ānic verses, e.g. Sahl al-Tustarī (d. 283/896 [*q.v.*]) on XI, 6, "As long as one who trusts in God (*al-mutawakkil*) perceives secondary causes (*al-asbāb*), he is a false claimant".

From early Islamic times onwards, there were heated debates about the respective virtues of "earning a living" (*kasb, takassub, iktisāb* [see KASB]) versus pure trust in God (*tawakkul*) (summary of these in Abū Ṭālib al-Makkī, *Ḳūt al-ḳulūb*, Beirut n.d., ii, 5-6). Like other technical terms in Islamic thought, these discussions partook of the parity phenomenon, where ideas were discussed in terms of linguistic pairs of opposites representing contrary philosophico-mystical or mystico-theosophical positions, so that *tawakkul/kasb* was often paired with *djabr/ikhtiyār*, determinism vs. freewill (see e.g. the tale of the lion and the beasts of the chase in Rūmī's *Mathnawī*, ed. and tr. Nicholson, i, vv. 900-1200, 1263-1371). It was the 'Irāḳī school of Baghdād, followers of al-Djunayd (d. 298/910 [*q.v.*]) and his reliance for sustenance on God's Providence alone, who became the main exponents of the doctrine of *tawakkul* in early Islam, whereas the Khurāsānian school of Nīshāpūr, following the teachings of Abū Yazīd Ṭayfūr al-Bisṭāmī (d. 260/874 [*q.v.*]) based their doctrine on *malāma*, blame, and advocated the virtues of *kasb*. But these were general tendencies rather than clear-cut divisions, and we find individuals who did not fit easily into this categorisation; thus Abū Turāb Nakhshabī (d. 245/859), although a member of the Khurāsān school, was also famed for his *tawakkul* (Djāmī, *Nafaḥāt al-uns*, Tehran 1370/1991, 49). Those fearful, like the Baghdādī Ruwaym (d. 298/310), of reliance on excessive *tawakkul*, stressed the Prophet's *sunna* on the virtues of *kasb*, and debates on the limits of *tawakkul* abounded in the 3rd-4th/9th-10th centuries. According to Hudjwīrī, *Kashf al-maḥdjūb*, tr. Nicholson, Leiden and London 1911, 146, Abū Ḥamza al-Khurāsānī, an early advocate of *tawakkul*, reportedly fell into a pit and refused to call out to be rescued by a party of travellers lest he be thought to have committed himself to anyone but God (cf. further, Nicholson, *The mystics of Islam*, London 1914, 41 ff.). Perhaps the best-known advocate of *tawakkul* within the Baghdādī school was Ibrāhīm al-Khawwāṣ (d. 290/903), who carried the idea of self-abandonment to God to its extreme; al-Djunayd commented on his death that "the expanse of *tawakkul* on the surface of the earth has been rolled up" ('Abd Allāh al-Anṣārī al-Harawī, *Ṭabaḳāt al-ṣūfiyya*, Tehran 1362/1983, 348). But most Ṣūfīs by now were increasingly aware of the subtlety of the *tawakkul* doctrine, literal interpretation of which they tended to regard as naive. Thus al-Ḥallādj found it objectionable that al-Khawwāṣ based his entire mystical doctrine on *tawakkul*, taking it as "real faith" (Hudjwīrī, *Kashf*, 290). A subtle point was raised in such critiques as this and others: the sincerity of one's own devotion is blemished by consciousness of one's own reliance, and the annihilation of self (*fanā'* [*q.v.*]) must underlie true realisation of *tawakkul*. It is clear that most Baghdādī Ṣūfīs acknowledged the subtle connection of the two.

It was not long before many mystics began to criticise the classical doctrine of *tawakkul* as wanting in spiritual sophistication, especially those Khurāsānians who had little regard for the concept anyway. Abū Bakr al-Wāsiṭī (d. 320/931) considered it, with *zuhd*, renunciation, *riḍā*, contentment, and *taslīm*, submission, as one of the four stations which he regarded as unbefitting of true wisdom (*ma'rifa*), i.e. it was suitable only for dull pedestrians along the Ṣūfī path.

But the dominant attitude which prevailed amongst the mystics was that it was the interior reality, not the external paraphernalia, of *tawakkul* which really mattered. The great Ṣūfī poet Bābā Ṭāhir (*fl.* 5th/11th century [*q.v.*]) devoted the 26th chapter of his *Aphorisms* (*Kalimāt-i ḳiṣār*, ed. Dj. Mashkūr, Tehran 1354/1975) to the topic of trust, and voices the idea paradoxically: *al-tawakkul nafy al-tawakkul* "trust in God is the negation of trust in God", explained by a commentator as "the one who truly trusts in God denies himself any attachment to *tawakkul* in the sense that he has neither confidence in, nor pays attention to, his own trust". Here, the poet approaches al-Wāsiṭī's view that *tawakkul* is unbefitting of wisdom. It was also recognised that *tawakkul* and *tawḥīd* were interconnected and involved the attainment of perfect inner peace, as emphasised by al-Ghazālī in *Iḥyā'*, iv, 210 (cf. A. Schimmel, *Mystical dimensions of Islam*, Chapel Hill, N.C. 1975, 119).

Whilst there were debates about the degrees and authenticity of *tawakkul*, the classical Ṣūfīs nonetheless generally concurred that there was a moral quality which involved abandonment of freewill and volition whilst beholding God as the supreme source of causality, as the definitions cited by 'Abd Allāh al-Anṣārī, *Ṭabaḳāt*, 338, show; in these last, human force and will are negated in favour of absolute divine Providence and Power. Thus *tawakkul* came to be considered a key component, a pillar of faith, *īmān*, as by al-Ghazālī, who devoted over 40 pages of his *Iḥyā'* to the subject of *al-tawḥīd wa 'l-tawakkul* and who laid down four degrees of *tawḥīd* revealed through the *'ilm al-mukāshafa*, science of mystical unveiling. A similar schema of four degrees, with *tawakkul* corresponding to one of them, was laid down by the 8th/14th century author Maḥmūd Shabistarī [*q.v.*] in his short Persian philosophical treatise *Ḥaḳḳ al-yaḳīn* (Tehran 1365/1986, 310-11), and nearly all the Ṣūfī manuals, whilst enumerating the "stations" (*maḳāmāt*) in different orders, list *tawakkul* as amongst the initial stages of the Ṣūfī way, preceded by *zuhd* (cf. e.g. Hudjwīrī, *Kashf*, 181). Al-Ghazālī further discerned three degrees of trust: (1) that of the confidence (*thiḳa*) of a client in his legal agent; (2) a

stronger kind, like the absolute reliance of an infant on its mother, which is however unconscious and lacks any deep knowledge of her abilities; and (3), the highest degree, when the devotee trusts in God "like a corpse in the hands of the corpse-washer", but is nevertheless conscious that his soul is being moved by the Eternal Will of the Divine Power. This tripartite typology of *tawakkul* proved, in fact, very popular in later Ṣūfī expositions, such as that of the great Čishtī saint Niẓām al-Dīn Awliyā' (d. 725/1325 [*q.v.*]).

TAWAKKUL b. BAZZĀZ [see ibn al-bazzāz al-ardabīlī, in Suppl.].

TAWALLUD (a.), essentially indicating "cause and effect without intermediate point of volition", also means the generation of plants and animals directly from inanimate matter. Next to *tawallud*, this process may also be referred to as *takhalluḳ al-ḥayawān min ghayr al-ḥayawān* or *kawn min tilḳā' nafsihi*.

The idea that living beings could come into existence not only from parent individuals but also directly from inanimate matter was as widespread in Islamic culture as it was in ancient Greece and mediaeval Europe, and references to it can be found in a wide variety of texts. A rare reference to people who denied the possibility of spontaneous generation is found in al-Djāḥiẓ, *Ḥayawān*, v, 348-9.

The underlying notion is that, given the right circumstances, the four elements can, of their own accord, not only produce mineral substances but also plants (see e.g. *De Plantis*, §§ 113, 176, 205) and live animals, possibly including even human beings. It is then a matter of discussion how far transcendent powers need to be involved in this process. The matter was extensively discussed by Aristotle; well-known instances are *De Anima*, 415.a.26, *Historia Animalium*, 539.a.18-25, and *De Generatione Animalium*, 715.b.25 ff., 762.a.20 ff.

Within the context of Islamic philosophy, the problem of spontaneous generation is a side issue in the general discussion about generation (including sexual generation) in the sublunar world, a discussion which centres upon the role of the celestial world. The main point was that the movement of the celestial bodies, was supposed to act upon sublunar substances, causing movement and thus engendering processes of interaction between the elements that could eventually lead to the formation of animate creatures. Apart from causing movement, the celestial bodies did, in Neoplatonic view, also emanate soul-powers, which acted on, and fused with, earthly substances.

That spontaneous generation could take place in a more or less mechanistic way is the view set forth, for instance, in Ibn Waḥshiyya's *al-Filāḥa al-nabaṭiyya*. This also seems to be the implicit view of many authors referring to the subject, many of whom apparently were not fully aware of the philosophical problems involved. There is usually a strong emphasis on the decisive influence of the natural environment, since conditions of climate (which implicitly depended on the celestial bodies) and soil decided the nature of the mixture involved in the process of generation, and thus also of the plant or animal that emerged from it. This implied that generation of specific life forms was often bound exclusively to particular places on earth; this is emphasised, for instance, by Ḳusṭā b. Lūḳā in his description of the generation of the Medina or Guinea worm, *Medical regime*, 72-6.

Animals that were generally supposed to come into being by spontaneous generation were, in general, anything that came under the heading of *hawāmm wa-ḥasharāt*, crawling and swarming creatures (usually also including mice, rats, hedgehogs, lizards and snakes). Some of these could also come into being by sexual generation (*tawālud*). In case of *tawallud*, they originated either directly from earthy matter, often fermenting matter, or from organic substances. As proof of the first are usually cited half-formed field-mice, see for instance al-Djāḥiẓ, *Ḥayawān*, v, 348-9 (also mentioned by many other authors). Some amount of humidity was considered essential for the generative process: cf. Aristotle, *De Gen. An.*, 736.b.30 ff.: moisture contains *pneuma*, which, activated by heat, becomes the principle of life which acts upon the available matter. Examples include generation of snakes from hairs dropped in water, al-Bīrūnī, *Āthār*, 228; idem, bees from the flesh of oxen, and wasps from rotting meat; Ibn Sīnā, *Ḥayawān*, 76, about lobsters possibly generating from the eggs of other crustacaeans; gnats and worms generating in animal bellies, cf. Ibn Ṭufayl, *Ḥayy ibn Yaḳẓān*, 88. Animals could also be generated by plants: al-Djayhānī, quoted by al-Bīrūnī, *loc. cit.*: leaves turning into bees, and scorpions formed out of figs and basil. See on all these topics, Kraus, *Djābir*, ii, 107, and Ullmann, *Naturwissenschaft*, 54-6.

Some people also allowed for the possibility that larger animals, such as camels, could be generated spontaneously. The Ikhwān al-Ṣafā' (*Rasā'il*, ii, 155) say that originally all the "complete" (*tāmmat al-khilḳa*) animals, male and female, including man, originated from clay, under circumstances of perfect equilibrium which enabled matter to receive the ever-present form. Then they mated, brought forth and dispersed over the earth. The idea of a possible spontaneous generation of man is also brought up by Fakhr al-Dīn al-Rāzī, *Mabāḥith*, ii, 218-19, who discusses it in the context of the recreation of life after total extinction by deluge. The idea was pursued, mostly as an intellectual problem, by philosophers such as Ibn Ṭufayl and, in his wake, Ibn al-Nafīs. Ibn Ṭufayl describes the spontaneous generation of Ḥayy ibn Yaḳẓān out of mud as a result of the perfect equilibrium of the mixture and ideal constellation of the celestial bodies; this allowed the creature to form and to join with the emanated celestial soul, "the spirit which is God's". Ibn al-Nafīs, who used the idea in a treatise justifying Mamlūk rule, the *Risāla Kāmiliyya*, presents it in a more orthodox version by leaving out the emanated soul; his creature, Kāmil, is generated simply by an autonomous chain reaction set off in a perfectly-balanced mixture of inorganic matter. For the possibility that the generation of living beings could also be brought about by man, see takwīn.

It was a matter of dissent whether the same species could come into being both by *tawallud* and by *tawālud*, sexual procreation. Aristotle does not allow for this possibility, but Ibn Sīnā, followed by many others, thought it perfectly possible. He cites (*Ḥayawān*, 385 ff.) a certain occurrence in Khurāsān: as a result of copious rain, a large number of silkworms suddenly appeared, obviously produced by the rain. From their cocoons butterflies emerged that laid eggs. Because of the poor quality of the silk, however, peo-

ple did not want to breed from those eggs, and left them unheeded. Had they taken care of them in the usual manner, Ibn Sīnā says, caterpillars would very likely have emerged, thus proving that spontaneously generated animals can indeed continue to breed in the usual manner.

(Remke Kruk)

al-TAWʾAMĀN [see minṭaḳat al-burūd̲j̲].

ṬAWĀRIḲ, Arabised form of the original Berber Twāreg, conventionally in French and English Touareg, Tuareg, a Berber tribal people of the Inner Sahara, living in what is now Algeria, Libya, Niger, Mali and Burkina Faso.

1. Ethnography.

The Tuareg society is a society of nomadic cattle breeders organised in tribes and confederations of tribes. It is, moreover, a society strongly divided into classes or castes. The uppermost class are the nobles (*imaz̲h̲əg̲h̲ăn, imus̲h̲ay*; in the Hoggar: *ihăggarăn*). These have apparently come from outside and imposed themselves as rulers by subjecting an already existing society. Second come the maraboutic tribes (*inəsləmăn*), who by virtue of their religious status do not participate in warfare and depend on the nobles for their defence. Almost equal to these are the vassals (*img̲h̲ad*), Tuareg tribes who have had to accept the supremacy of the nobles. In the fourth place come the artisans, traditionally called blacksmiths (*inăḍăn*). Lowest-ranking are the negro slaves (*eklan*), owned by all four of the former castes. A particular status is that of the peasants of the oases, the so-called Hartanis [see ḥarṭānī] (*izeggaghăn*), who till the oases for the Tuareg owners of the soil. Intermarriage between the castes was traditionally rare.

Each tribe has an elected chieftain (*amg̲h̲ar* [*q.v.*]). The tribes were traditionally organised into 9 big confederations, each comprising up to 100 tribes, with an elected supreme chief called the *amănokal* [see aménokal]. His power was limited in times of peace, but he was the leader in time of war and decided on foreign affairs. The confederations corresponded to the main dialectal areas mentioned in 2. below plus a particular *amănokal* for the Udalăn of Burkina Faso. Since the times of colonial rule, the power of the *amănokal* has been extremely reduced. Chieftainship was traditionally inherited by the son of a sister of the old *amănokal*. This was formerly viewed as a vestige of an earlier matriarchical society, but modern anthropologists tend to be more reluctant to draw such farfetched conclusions. It is remarkable that the Tuaregs have never been able to unite into one supreme Tuareg state; tribes and confederations have never consented to delegating power to such a superior unit. A partial exception is the sultan of Agadez.

Tuareg economy is based on cattle and camel breeding. In the Hoggar [see ahaggar], only goats, short-haired sheep and camels are bred. In Niger, Mali and Udalăn, besides these, large herds of zebu cattle are also kept. Nomadism is of the small-scale type, each tribe having its own territory. In the Hoggar, the sheep and goats are successively taken to places of recent rainfall. The camels were regularly taken to pastures in the Tamăsna (Niger). In the south, where regular annual rains are prevailing, a transhumance of cattle towards the salty pastures at the height of Ingal (Niger) and back again is performed every autumn after the rainy season, and is a great occasion of interchange of goods and news. In the Ayr mountains of Niger [see aïr] small irrigated terraced garden plots are cultivated with date palms, cereals and vegetables, and even tobacco.

Caravan trading is another basic feature of Tuareg economy and has never been totally replaced by lorry transport. Salt, medicinal plants and hides are brought to the south from where millet, sorghum and cloth are brought home.

In former times, guiding Arab caravans through Tuareg territory against payment of duties for protection gave another boost to the economy. There was also looting of the black farmers in the south, including capture of slaves (as well as intertribal razzias), which have come to a standstill since colonial rule.

The Tuaregs live in mobile red skin tents, except for the Ayr and Geres people of Niger who have mat tents. In modern times, canvas tents tend to price out the above. Permanent straw huts and banco buildings in the towns and villages are also known. The main piece of furniture is the conjugal bed, dismountable and often richly ornamented. Other equipment includes riding gear: a variety of camel and horse saddles, special women's saddles with a canopy above, as well as pack-saddles. Moreover, there are kitchen utensils, including decorated calabashes, earthenware jars and wooden bowls and spoons. Among arms must be mentioned a large sword, the best ones being of European make and still cherished as a traditional male attribute; daggers; lances; spears; and the now obsolete antelope-hide shield, and in modern times, of course, rifles. Bows and arrows are still in use among boys for hunting small game. Women's jewellery consists principally of huge silver ornaments, richly engraved. Gold is much less favoured. Both sexes, including children, wear amulets for protection, often with inlaid Ḳurʾānic verses (*tirăwt*).

Clothing consists for both sexes of a large, loose tunic with sleeves (*tekătkăt*), often dark indigo-coloured. Under it men wear large trousers with a low crotch, women a skirt. To these are added the famous head-veil with which the man covers his entire face, except for the eyes (*tăgulmust*). The veiled nomads were already

known to the Arabs (first mentioned by al-Yaʿḳūbī, end of 9th century). Numerous hypotheses as to the original function of the veil have been suggested (protection against dust and dessication, or against evil spirits?). What is certain is that today it is closely connected with sexuality and common decency. A grown-up man does not show his face to members of the elder generation, especially not his parents-in-law, and does not eat or drink in their presence. The veil is adopted during puberty and is a sign of readiness to marry.

For water supply, the Tuaregs depend on wells and waterholes in their arid or semi-arid country.

The Tuareg diet is monotonous. It consists principally of milk, cheese and millet porridge, supplied with dates when in season. Meat from slaughtered cattle is not an everyday food, but meat from hunting game gives a nice supply, and even the boys hunt smaller animals and fowl. Famous and indispensable is the Tuareg tea ceremony, with a large variety of green teas taken with huge amounts of sugar.

The tent is pitched opening to the west, so that one sleeps with one's head to the east, in the direction of Mecca, the man to the north and his wife to the south. It is divided into two halves by the conjugal bed, placed in the middle. The children sleep on the sand, boys to the north and girls to the south. Likewise, the husband's affairs are deposited to the north, the wife's to the south. Women enjoy great independence. They have their own property, including livestock, and traditionally tend the sheep and goats near the camp. They sell the offspring of sheep and goats, as well as cheese and milk, and dispose of their income. The tent is the woman's property and she takes it with her in case of divorce, which frequently occurs.

The girls stay in their parents' tent until marriage, while the boys leave the tent at the age of seven to learn to provide for themselves from their father and older comrades. Unmarried young people have free social intercourse and hold grand parties (*ăhal* or *tende*) for themselves. It is, however, expected of them not to beget children out of wedlock.

When a young couple takes a special liking to each other, the young man begins to visit his fiancée secretly at night in her parents' tent. When they have agreed to marry, the young man approaches his own parents, who again contact the young woman's parents in order to get the consent of both families. When general agreement is obtained, a bride-price (*taggalt*) is paid by the young man's father to his fiancée's father, as a token of the common responsibility assumed for the offspring of that union. Then the young man gathers up the nuptial gifts (garments), and his fiancée gathers together the tent and the household utensils. The wedding takes place thereafter, preferably in the autumn after the rainy season when everything abounds. The ceremonies include a very summary Islamic rite performed by a marabout and a very elaborate traditional feast. A special nuptial tent is pitched, where the young couple stay for some days.

Normally, the marriage is not consummated until the third day as a token of the bridegroom's love and respect for his bride.

Children are born in the matrimonial tent. The father is not present during birth and stays away from his wife for about 40 days after birth. The new-born child is the object of many precautions, as it is supposed to be specially exposed to the pursuit of evil spirits until it has received its Islamic (Arabic) name, given to it by the father under the guidance of a marabout. In addition, it will receive a pet name from its mother and the women of the family. The latter is often a traditional Tuareg name.

At the age of 7, boys are circumcised by a marabout. Girls are not circumcised in Tuareg society.

The bodies of the dead are washed according to a traditional routine and buried in the bush, the grave being covered by 7 slabs and thorny branches. Graves are not regularly visited. It is believed that the spirits of the dead haunt the dwellings of their living relatives until such time when they have passed out of general memory. Tuareg women have, however, a custom of sleeping on the tumuli of the ancients in order to get news and instructions from the dead.

The Tuaregs definitively converted to Islam rather late (*ca.* 15th century), and many pagan beliefs still exist among them. Under the influence of the Sokoto sultanate in the 19th century, they greatly progressed towards orthodoxy.

The Tuaregs possess an alphabet of their own, consisting of geometrical consonantal characters called *tifinag͟h*; see further, 2. below, and TIFINAG͟H. The immense literature of folktales, poems, proverbs and riddles is purely oral. New poetry is still regularly composed, although the quality of the greater poets is said to be in decline. The metres, like the Arabic ones, are built on the opposition of short and long syllables. There is also music for the monocord violin (*imẓad*) and the flute (*tasənsəq*), which is of great variety, with new pieces still being composed.

Nicolaisen, *Ecology and culture of the pastoral Tuareg* = Nationalmuseets Skrifter, Etnografisk Række, IX, Copenhagen 1963.

2. Language.

The Tuaregs speak a Berber dialect, or rather a separate Berber language, as it is not immediately mutually intelligible with northern Berber of Morocco and Algeria. The name Tuareg derives from Bedouin Arabic *Ṭwārəg*, a pl. of *Ṭārgi*, which is held to be a *nisba* adjective from Targa, the Berber name of the province of Fazzān [*q.v.*] in Libya, thus meaning a man from Fazzān. This dialectal form has been transposed into standard Arabic as *Ṭāriḳī/Ṭawāriḳ*. Several popular etymologies connecting it with the Arabic roots *t-r-k* and *ṭ-r-ḳ* must be discarded. This Arabic designation has given rise to the European name for the people and the language, originally Eng. Targi/Tuareg, Fr. Targi/Touareg. Modern scholars discard the original singular, using Eng. Tuareg, Fr. Touareg as a singular with a full European inflection: Pl. Tuaregs, Touaregs, fem. Touarègue(s).

The Tuaregs' name for their language is Tămažəq (Niger), Tămašăq (Mali), Tămahăq (Hoggar, Algeria), varying according to local dialect. Tamashek has become a general designation for the language in local African circles, e.g. the Literacy Services. The name is cognate with *tamaziɣt* [see TAMAZIG͟HT], the designation for central Moroccan Berber, which today has become a general designation for the Berber language. It is the fem. of *amaziɣ*, a central Moroccan Berber or a Berber in general. In Tuareg, Ămažəɣ means a Tuareg of the noble class or a Tuareg in general. The ordinary Tuareg designation for the people is Kel-Təmažəq, people of Təmažəq language, including all classes who speak Tuareg, even the slaves.

Tuareg is characterised by several, and partially

archaic, traits which distinguish it from northern Berber. The language has seven vowel phonemes: two short (ə ă) and five long ones (*a e o i u*), as opposed to three in northern Berber (*a i u*). A system of seven vowels is also established for the non-Tuareg dialect of Ghadāmis. Spirant plosives are unknown, except *ḏ*, which is spirant in the dialect of Ghāt and Djanet (*ð*). The number of Arabic loanwords is much fewer than in northern Berber. On the other hand, it has many loanwords from Hausa, Fulani, Songhay, etc. Tuareg has developed a special intensive perfect, e.g. *yəfrâs* "he has cut", as opposed to simple perfect *yəfrăs* "he cut".

Berber constitutes a separate branch of the Hamito-Semitic language family and is that branch which is closest akin to Semitic. The relationship is still easily perceptible in the grammatical system, including in Tuareg. Thus verbs and nouns have a consonantal skeleton of mostly 3 or 4 consonants, conveying the basic meaning, while vowels change during inflection. The verbs distinguish by vocalisation two basic tenses as in Semitic, imperfect and perfect: (*ad-*)*yəfrəs* "he will cut" or "he usually cuts", and *yəfrăs* "he cut". In addition, Berber has an intensive imperfect, characterised in the 1st conjugation by a gemination of the middle radical (cf. Akkadian *iparras*), and in Tuareg by an additional lengthening of the first vowel: *yəfarrăs* "he cuts (now or usually)". The nouns have both external and internal (broken) plurals like Arabic. Like Semitic they have 4 different feminine endings: *-t, -ăt, -a, -e*.

A special Berber, and Tuareg, trait is the state prefix of the nouns, which is held to be an original demonstrative. It varies according to the two numbers, the two genders, and the two states, called the free or absolute and the annexed state. The latter is the form of the subordinate phrase member and of the postposited verbal subject. In Tuareg, the initial *w-* (*y-*) of the masculine has been lost. Tu. *amγar*, ann. *ămγar* corresponds to Kabyle *amγar, wəmγar* "old man", pl. *imγarăn*, ann. *əmγarăn*, fem. *tamγart, tămγart/timγaren, təmγaren*.

The Tuaregs still use a form of the ancient Libyan alphabet, a system of geometrical signs. They call their letters *tifinaγ* (sg. *tafinəq*), which has also become the European name for the alphabet, *tifinagh* [see BERBERS. VI. Literature and art; and TIFINAGH]. Every second Tuareg seems to be able to use it, especially the women, for short messages and inscriptions on weapons and utensils.

Tuareg may be divided into eight main dialects, situated in the following regions: (1) Hoggar (Algeria), (2) oases of Djanet (Alg.) and Ghāt (Libya), (3) Adghagh (Mali), (4) Timbuktu-area (Mali and vassals of the Udalăn, Burkina Faso), (5) Western Iwellemmedăn (Meneka area, Mali, and noble Udalăn, Burkina Faso), (6) Eastern Iwellemmedăn (Azăwagh area, Niger), (7) Ayr (Niger), (8) Kel-Geres (Niger). The main dialectal cleavage separates nos. 7-8 from 1-5, no. 6 being an area of dialectal mixture.

Since 1966 Tuareg has enjoyed the status of national language (except in Algeria), selected for literacy campaigns in a modified Roman alphabet. Even before that, Christian missionaries used Roman transcriptions of the language for their Bible translations, etc.

ṬAWĀSHĪ [see KHĀṢĪ. I].

TAWĀTUR, verbal noun of form VI of a verb meaning "to come one after another". This article is meant as an extension of the art. MUTAWĀTIR [*q.v.*], the participle of the same verb.

Tawātur is a technical term in the science of *ḥadīth* [*q.v.*], which means roughly "broad authentication". It is often adverbially used. It indicates that a historical report or a prophetic tradition is supported by such a large number of *isnād* strands, each beginning with a different Companion or other ancient authority, that its authenticity/truthfulness is thereby assumed to be guaranteed. The reasoning behind this was that a sizeable number of people engaged in transmitting one and the same text would never by sheer coincidence, or indeed collusion, all relate a falsehood. As far as historicity is concerned, something transmitted *tawātur*[an] is considered unassailable by mediaeval *ḥadīth* scholars. Although the term was already in existence, *ḥadīth* theoreticians such as al-Rāmahurmuzī (d. 360/971 [*q.v.*]) and al-Ḥākim al-Naysābūrī (d. 405/1014 [*q.v.*]) did not make use of it in their handbooks. Later in the Middle Ages the term began to be applied on a wide scale, but in a somewhat loose manner. As from the time of Ibn al-Ṣalāḥ al-Shahrazūrī (d. 643/1245 [*q.v.*]), the concept was studied in more detail and definitions as to what precisely the word stood for became refined by a subdivision, in which *tawātur lafẓī*, i.e. the verbatim *mutawātir* transmission of a text, became distinguished from *tawātur maʿnawī*, i.e. transmission according only to the gist or one salient feature of a given text. Examples of the latter type are the custom to use the *siwāk* [*q.v.*], the tooth stick, or the concession (Ar. *rukhṣa* [*q.v.*]) of *masḥ ʿalā ʾl-khuffayn* [*q.v.*], i.e. wiping the shoes instead of washing the feet as part of the minor ritual ablution (*wuḍūʾ*). The many different traditions dealing with both issues do not individually meet the criterion of *tawātur lafẓī* by a long shot, but references to the issues in all of Islam's earliest written sources, when viewed together, allow the practices to be seen as having originated in early times. It is generally believed that the number of traditions supposedly transmitted *tawātur*[an] *maʿnawiyy*[an] far outnumber those transmitted *lafẓiyy*[an].

Collections comprising both types of *mutawātir* traditions are relatively late. The work entitled *al-Azhār al-mutanāthira fī ʾl-akhbār al-mutawātira* of al-Suyūṭī (d. 911/1505 [*q.v.*]) seems the first such collection, that is, according to what he himself said at least. The *ca.* one hundred traditions in it are arranged according to the *fiḳh* chapters to which they belong. This arrangement was copied by an early 20th-century author, Muḥammad b. Djaʿfar al-Kattānī (1857-1927), but he succeeded in gathering together many more, altogether some 310 traditions allegedly transmitted *tawātur*[an], which he dug up out of all sorts of relatively late sources.

When the number of *isnād* strands, or *ṭuruḳ*, is mentioned, which a certain tradition must be supported by to deserve to be classified under the qualification *tawātur*, figures differ considerably: from four or five to several hundred, cf. al-Tahānawī, *Dict. techn. terms*, ii, 1472. Perhaps the best-known *mutawātir* tradition

of all times is the saying ascribed to the Prophet transmitted *lafẓiyy^an^*: *man kadhaba ʿalayya mutaʿammid^an^ fal-yatabawwaʾ makʿadahu min al-nār*, "He who deliberately tells lies about me should seek for himself a place in Hell". Its earliest proliferation can on good grounds be attributed to the Baṣran traditionist Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]).

A well-known tradition generally held to be weak in spite of its multiple strands is *ṭalab al-ʿilm farīḍa ʿalā kulli muslim*, i.e. "searching for knowledge (sc. of traditions) is incumbent upon every Muslim", but the message couched in this tradition is approved by all, and that is why it is quoted whenever the phenomenon of *tawātur* is discussed. Another famous tradition *innamā 'l-aʿmāl bi 'l-niyyāt* (or *'l-niyya*), i.e. "actions are to be appraised by the intention(s) behind them", is likewise often adduced when *tawātur* is dealt with, but it is almost invariably relegated to the lesser status of *mashhūr*, "well-known" rather than *mutawātir*, because it is supported by one single *isnād* strand, which only branches off into multiple sub-strands reminiscent of *tawātur* at the fourth *ṭabaḳa*. These strands sprouting forth from one central "knot" in the *isnād* bundle supporting *innamā 'l-aʿmāl* produce perhaps the clearest example in the entire Islamic tradition literature of what is called the *madār*, i.e. "pivot". This crucially important technical term is already found in the works of mediaeval Muslim scholars such as ʿAbd Allāh b. ʿAdī (d. 365/976), as well as that of modern scholars like al-Kattānī and Aḥmad M. Shākir (d. 1958 [*q.v.*]). In this term *madār* we may discern these scholars' equivalent of what is called among certain western scholars the "[seeming] common link". Responsible for the proliferation of the quoted *mashhūr* tradition is this same *madār*, who is in all likelihood none other than Yaḥyā b. Saʿīd b. Ḳays al-Anṣārī (d. 143-6/760-3 [*q.v.*]). It is indeed astonishing that, although Muslim *ḥadīth* scholars used both technical terms, *tawātur* as well as *madār*, they never seem to have adduced the latter as the indispensible yardstick for the former to be valid, or to have illustrated features or uses of each in connection with the other in one and the same *ḥadīth* context.

(G.H.A. JUYNBOLL)

TAWĀZUN AL-SULUṬĀT, FAṢL AL-SULUṬĀT (A.), two terms of modern Arabic political terminology meaning respectively "the balance of powers" and "the separation of powers". For concepts of authority or government in the pre-modern Islamic world, see SALṬANA and SULṬĀN. Amongst many other terms with the connotations of power and authority, the word *shawka* has the particular one of physical, coercive power, irrespective of any legitimacy.

The ideas of the Enlightenment and the main principles of modern democracy were transmitted to the Middle East mainly by the translations and accounts of European political theories and institutions, written by Muslim students in Europe [see IṢLĀḤ]. The same is true of the notion of "separation of powers", which is particularly associated with Montesquieu's (1689-1755) *magnum opus, L'Esprit des lois* (1748); this Western concept was taken up in the Muslim world from the second third of the 19th century. It was the Egyptian Shaykh al-Ṭahṭāwī [*q.v.*] who named separation of powers *faṣl al-ḥukm* or *infiṣāl al-ḳuwwa al-ḥākima* in his *Manāhidj al-albāb*. Today, the term *faṣl (bayn) al-suluṭāt* is generally accepted. Like other reformers of the first generation, such as Khayr al-Dīn al-Tūnisī [*q.v.*], al-Ṭahṭāwī was not a constitutionalist and held an élitist concept of state and government; he himself favoured an "enlightened absolute monarch" and laid emphasis on the limits imposed on the ruler by the existence of moral norms.

In the 1870s and 1880s, the three classical powers (legislative, executive and judicial) were translated into Arabic by loan translations (compounds) or paraphrases; in doing so power was rendered *sulṭa* or *ḳuwwa*, rarely *saṭwa, sulṭān*, and *wilāya*. The contemporary commonly used words, *al-sulṭa al-tashrīʿiyya, al-sulṭa al-tanfīdhiyya* and *al-sulṭa al-ḳaḍāʾiyya*, are attested in the Arabic press as early as 1909. In the 1870s, the leaders of the Young Ottoman movement, above all Nāmiḳ Kemāl, and Persian reformers (like Mīrzā Ḥusayn Khān and Mīrzā Yūsuf Khān) were influenced by the ideas of separation of powers and popular sovereignty. With the call for the introduction of constitutionalism, parliamentary government, and the guaranty of civil rights and liberties [see MADJLIS; DUSTŪR; ḤURRIYYA] since the mid-19th century, reformist circles and statesmen tried to impose some form of restraints on the ruler's absolute power, which now was conceived as despotic. In an official document of 14 September 1879, the Egyptian President of the Council of Ministers, Sharīf, demanded for the first time a redefinition of the public powers (A. Schölch, *Ägypten den Ägyptern!*, Zürich-Freiburg i. Br. 1973, 152). However, the first constitutions turned out to be purely nominal; they were mainly promulgated from above to facilitate the administrative streamlining of the states. The reformers paid more attention to how reasoning on popular sovereignty or similar ideas might justify national self-determination. A decisive break with the Islamic past took place with the proclamation of the Provisional Constitution of the Turkish Grand National Assembly on 20 January 1921, in which all essential principles of democratic constitutions were embodied. Despite the subsequent spread of constitutionalism and of different democratic conceptions, a close examination of the contemporary political thought and state systems in the Muslim world demonstrates that, in most cases, traditional Islamic attitudes toward authority and power are still much in evidence, though arguments may have European roots. The instruments for the limitation and the balance of powers (*tawāzun al-suluṭāt*) remain insufficient.

In classical theory, the concept of separation of powers was, of course, unknown. The Prophet Muḥammad himself had concentrated the three powers of government in his hands. As the political leader of the believers and as a military commander, he held the executive power; as the promulgator of the divine law, the legislative power; and as a settler of disputes he also exercised the judicial power. Moreover, his charismatic authority was manifested in his religious and spiritual leadership. After the charismatic leader's death the complexity and totality of his authority had

to be segmented into different spheres. Whereas the Shīʿīs aspired to the preservation and perpetuation of the comprehensive and all-inclusive Muḥammadan charismatic authority on a lower scale [see SHĪʿA], the Sunnīs began, in a general and gradual process, to divide it into a number of different constituencies. The caliph inherited only a part of the Prophet's functions and powers. He appropriated the political authority, and delegated further governmental functions to other groups of the religio-political core élite and/or institutions.

In theory [see KHALĪFA; IMĀMA] true sovereignty in the *Umma* rested with God. He was the source of all authority. Rulers, like other men, were not independent agents but the channels through which God worked. As His vicegerents on earth they were obliged to supervise the application of the divine law. Power was conceived as a delegation of God (*wilāya*). The *Sharīʿa* was supreme in society, and the sphere of legislation was in principle removed from the competence of the ruler. The caliph possessed neither God's power of making laws nor the Prophet's function of proclaiming them. Later, an interpretive function was, however, gradually vested in the body of *ʿulamāʾ* and, in the ideal case, the caliph was supposed to be a *mudjtahid* [*q.v.*]. Theoretically, the caliph inherited only the judicial and executive power. It was never questioned that the executive and judicial power were united in his hands. As a residuary of the Prophet's spiritual power, the caliph was the religious leader of the community and was entitled to lead the prayer. Most Muslim jurists held that the unity of the *Umma* implied a unity of political authority. By analogy with the case of trusteeship, they generally interpreted the Ḳurʾānic principle of authority, which goes back to sūra IV, 59, as being exercised by the trustee in a "general trust". In the last resort, the ruler was responsible to God and to his conscience alone. The idea of choice of the ruler, symbolised by the ceremony of *bayʿa* [*q.v.*], was always preserved, but even in theory it was rather a recognition than a process of election. In theory, obedience was only obligatory as long as the caliph ordered nothing contrary to the *Sharīʿa*, but no efficient mechanisms of control or peaceful means for dethronement were provided.

All mediaeval Muslim political thinkers (jurists and theologians as well as philosophers and authors of "Mirrors for princes") agreed on the principle that government should be in the hands of one or a few, although they had different views on the regime's size and functions and on the preconditions a ruler should possess (family lineage, moral virtue, practical wisdom, intellectual excellence, etc.). "State" and authority" *per se* were not discussed in their writings until very recently. Several parallels can be indicated between classical and mediaeval Western political thought on the one hand and mediaeval Islamic political thought on the other, despite differences in approach and even differences in opinion about the role of divine providence in human affairs. But there is nothing within Islamic history comparable to the radical break with the past effected in Europe during the 16th and 17th centuries, then refined into a doctrine of liberal democracy in succeeding generations so that the notion of popular sovereignty became an unquestioned principle (Butterworth, 91). The caliph-imām was portrayed as the representative of God on earth, the trustee for the revealed law and the one charged to carry out God's commands. In later thought, obedience tended to become an absolute duty, and even a despotic ruler was regarded better than none at all. This development shows the pessimistic view of what humans are capable of if left to their own devices. In contrast to Montesquieu, who regarded despotism as the supreme evil, the traumatic experience of *fitna* [*q.v.*] in the 1st century A.H. resulted in the fear of the turbulence of people much more than in the dread of despotism; the longing for social cohesion and ideal harmony, allegedly having existed in the golden age of Islam, was predominant.

Thus it is no surprise that, with the disintegration of political unity, the caliph's authority was transferred to another absolute ruler, the sultan; the caliph continued—for reasons of religious legitimation—to exist as a shadow, but the real power lay in the hands of the new military élite. As long as the caliph/sultan was able to manage the established strategies for the preservation of the always precarious balance of power, he continued to be the centre of the system. Only in the period of weak rulers could the result be a struggle for influence between various groups or the shifting of the centre of power to another person of the core élite (the *wazīr*, etc.); but as long as the latter's appointment and dismissal depended on the caliph's/sultan's will, his power was inherently weak.

With the gradual prevalence of Turco-Persian governmental practices, secular law-making by the actual sovereign increased significantly; as a matter of form only, the ultimate infallibility of the *Sharīʿa* in all matters was still acknowledged. Although this discretionary power to apply and to complete the sacred law had existed before [see SIYĀSA], the Ottoman sultans, particularly, assumed the legislative power. A body of public law was thereby created, known by the name of *ḳānūn* [*q.v.*], and only matters pertaining to private law were eventually left to the *ʿulamāʾ* to decide in the light of the divine law. In essence it was natural kingship [see MULK] or even military dictatorship, i.e. government overtly based on mere force, tempered by respect for Islam, for the caliph and the religious élite, and indeed deriving from this its moral claim.

Following the Weberian typology of traditional political systems, the pattern of leadership dominant throughout most of Middle Eastern history has often been described as an authoritarian-patrimonial one. The patrimonial form of rule is an extension and expansion of the patriarchal system. The strength of this pattern had fluctuated greatly, but in general, Islam fostered patrimonial patterns through ideals and by stressing relations of emanation.

The Western impact served to modernise the patriarchal-patrimonial society and culture by producing new social and cultural forms and institutions which were modelled on Western experience and mediated through Westernised native élites. The traditional system and dependency joined together gave rise to a particular socio-political structure which has been described as neopatriarchal or neopatrimonial. H. Sharabi's concept of neopatriarchy refers equally to macro-structures (society, state, economy) and to microstructures (family, individual personality). It offers an explanation for the stability and continuity of traditional authority patterns. Sharabi characterises neopatriarchy by the following attributes: social fragmentation, authoritarian organisation, absolutist paradigms, and ritualistic practice. From the micro-structure to the macro-structure the values and attitudes of heteronomy are nurtured. The result is an individual who is forever afraid of life and of authority and thus permanently creates anew the possibility that masses of people can be governed by a handful of powerful individuals.

I. Harik presents a more differentiated typology

of the traditional Arab states according to the bases of their authority. The origins of the Arab states are different and can be traced back in most cases to a period before the 19th century. He identifies the following types: (1) In the "imām-chief system" the authority is invested in a sanctified leader; this system comprises dissenter communities like the Zaydī state of Yemen, the Ibāḍī Sultanate of ʿUmān and mainstream orthodox communities in the Ḥidjāz and Morocco. (2) In the "alliance system of chiefs and imāms", authority lies in the hand of a tribal chief, whose legitimate authority beyond the confines of his tribes originates in his identification and/or alliance with a prominent religious leader and his teachings. The prototype of this category is Saudi Arabia. (3) In the "traditional secular system" authority belongs to a dynasty free from religious attributes (e.g. Ḳaṭar, Baḥrayn, Kuwayt). (4) In the "bureaucratic-military oligarchy" authority originates in urban-based garrison commanders, who gradually develop an extensive bureaucratic apparatus; this group includes countries like Algeria, Tunisia, Libya, and Egypt. (5) The fifth category, the "colonially-created state system" emerged in the Fertile Crescent after 1920 at the hands of the colonial powers. With the exception of the last type, these states were in general locally rooted and enjoyed legitimacy in the eyes of their people; they had at least a core territory where their authority endured through the vicissitudes of time.

Nearly all modern Islamic constitutions have adopted the principle of separation of powers (for the Arab constitutions, see in detail al-Ṭamāwī, 51 ff.) and have created specific legislative, executive and judicial organs. But, apart from the aforementioned reasons, the far-reaching powers of the heads of state have quite often distorted the meaning of this democratic principle. A striking example is offered by the constitution of the Islamic Republic of Iran from 1979. Article 57 first acknowledges the separation of powers by enumerating them (*ḳuwwa-yi muḳannina, ḳuwwa-yi mudjriya, ḳuwwa-yi ḳaḍāʾiyya*) and underlining their independence from each other, but then restricts it by conceding their supervision to the *wilāyat-i amr* and *imāmat-i ummat*. The "*rahbar*" has the right to interfere directly or indirectly in all classical functions of the state. This article is symptomatic of the whole Iranian constitutional order; it is a combination of two political systems in the course of which the constitutional institutions are subordinate to the "Shīʿī-theocratic" ones.

Apart from the secularist, liberal democratic approach, modern Islamic political thought shows two main tendencies concerning the question of separation and balance of power: (1) The majority of the traditionalists and fundamentalists reproduce the classical Islamic political theory, although they often use democratic rhetoric to explain their monolithic conception. According to their view, the state leader (either named President, Caliph or Imam) possesses absolute, unrestrained power. Moral norms constitute the only check on him. The control of the executive power through the legislative ("consultative") council would be only effective in the case of the ministers ("assistants"), who are appointed by the head of state. The legislative power is restricted nominally to the right to issue such administrative regulations as will enable the *Sharīʿa* to be enforced. The absolute sovereignty belongs to God, not to the people. Thus the Ḳurʾān and the authentic teaching of the Prophet and the whole or a part of the corpus of mediaeval jurisprudence is the source of legislation. The judicial power is not independent, pluralism cannot be accepted. The fundamentalist criticism of the principle of separation of powers points to a widespread misunderstanding of what Montesquieu had in mind: What the latter had intended was not the total isolation of the three powers, but a separation sufficient to prevent anyone from monopolising governmental power and a balance to deter its abuse, i.e. a system of interlocking and mutually-checking interests and powers. First and foremost, this principle involves the absolute independence of the judiciary from all agencies of government. In the fundamentalist and traditionalist theory, the democratic principle is replaced by the monism of power, including, however, a separation of functions. This is a logical consequence of this concept, because in a nomocracy a system of checks and balances does not make any sense, for this is a purely secular, mechanical arrangement originating in the idea that, in making laws and carrying them out, man has no way of looking to precise, absolute norms.

(2) The liberal modernist position admits the separation and balance of governmental powers, either by arguing in an apologetic way that it had already existed in early Islam, or by using a well-known reformist argument: because the divine law did not prohibit the principle, it is allowed to be applied, provided that it is in the public interest [see MAṢLAḤA]. The human legislative power is extended, because the principles and/or the spirit of the *Sharīʿa* should be the major source of legislation. The sovereignty of the people is accepted and should be exercised by popularly-elected assemblies and in some cases also by referendum. According to their conception, the government is accountable to the parliament, the presidential power restricted, and potential excesses of statesmen can be checked effectively. But in the last resort, the modernist position is not convincing either; it remains often vague and ambiguous in its expressions and details.

TAWBA (A.), "repentance", verbal noun of *tāba*, "to repent, return (sc. from one's sins), be converted" to God (cf. Rabbinic *teshuba*). The definitive teachings on repentance in Islam are found in the Ḳur'ān, the *Ḥadīth*, and in the literature of piety, especially of the Ṣūfī type. The root *t-w-b* occurs frequently in the Ḳur'ān, mostly in Medinan passages, with the forms *tawba* ("repentance") and *tawwāb* ("oft-turning, relenting", of God) being exclusively Medinan. Verbal forms (e.g. *tāba, yatūbu*) often take *ilā* when referring to human repentance towards God; when God is the subject, *ʿalā* is used, as in II, 37 *rabbuhu . . . fa-tāba ʿalayhi innahu huwa al-tawwāb al-raḥīm* ("his [sc. Adam's] Lord turned towards him; for He is Oft-Returning, Most Merciful").

The Ḳur'ān's vocabulary of repentance is varied and nuanced. Two roots—almost exclusively of Meccan origin—are: *'-w-b*, with the forms *awwāb*, "frequent in returning, or repenting" (e.g. L, 32), *iyāb*, "return" (e.g. LXXXVIII, 25), and *ma'āb*, "place of return" (e.g. XXXVIII, 55, where it means Hell as the final stop for sinners); and *n-w-b*, Form IV (with *ilā*): as in *munībīna ilayhi* "[people] turning toward Him" in repentance (XXX, 31). A third, infrequent, repentance root is *n-d-m*, meaning "remorse, regret" for sin (for fear of punishment as much as a positive turning towards God), as in *nadāma* (XXXIV, 33) "repentance"; a second form is *nādimīn* (XLIX, 6) "[people] full of repentance" for harm inadvertently done to others. *T-w-b* dominated the Ḳur'ānic discourse on repentance by Medinan times, folding into itself the meanings contained in the terms just introduced. These other terms would later be used—especially by Ṣūfīs—in making distinctions within the semantic field of repentance. Hudjwīrī (d. 469/1077) asserts that "*tawbat* is to return from great sins to obedience; *inābat* is to return from minor sins to love; and *awbat* is to return from one's self to God" (*Kashf*, 295).

The *Ḥadīth* contains a variety of teachings on repentance and, as in the Ḳur'ān, often links it with seeking God's forgiveness (*istighfār*). The Prophet declared (according to Abū Hurayra): "God is my witness, that I seek forgiveness of God and turn to Him (*atūbu ilayhi*) more than seventy times a day" (al-Bukhārī). Ibn ʿUmar reported the Prophet as saying that: "God accepts the repentance (*tawba*) of a servant so long as the death rattle has not occurred (*mā lam yugharghir*)" (Ibn Mādja). Anas reported that Muḥammad said: "All of Adam's offspring are sinners, but the best of sinners are those given to repentance (*al-tawwābūn*)" (al-Tirmidhī).

Repentance discourse was well developed by the 4th/10th century, when it was widely considered to be the first station (*maḳām*) on the Ṣūfī path. Hudjwīrī defines *tawba* as "(1) remorse for disobedience, (2) immediate abandonment of sin, and (3) determination not to sin again" (*Kashf*, 294). He adds that contrition (*nadāma*) "may be due to three causes: (1) fear of Divine chastisement and sorrow for evil actions, (2) desire of Divine favour and certainty that it cannot be gained by evil conduct and disobedience, (3) shame before God" (*ibid.*, 295). Al-Ghazālī (d. 505/1111) included a detailed chapter on *tawba* in his *Iḥyā'*, holding that repentance is a free act, obligatory on every Muslim as a life-long spiritual discipline.

Early Ṣūfīs debated whether the sins of a true penitent should be remembered or forgotten. Hudjwīrī relates that Sahl al-Tustarī (d. 283/896 [*q.v.*]) held that "repentance consists in not forgetting your sins, but always regretting them . . . so that you will not be pleased with yourself on that account . . . [because] one who never forgets his sins will never become conceited. Al-Djunayd (d. 297/910 [*q.v.*]) and others [argued that] . . . repentance consists in forgetting the sin . . . . for remembrance of sin is a veil between God and those who contemplate Him" (Hudjwīrī, *op. cit.*, 296).

TAWBA B. AL-ḤUMAYYIR, Abū Ḥarb, an Arab poet, accounted of ʿAdnān or the North Arabs and a scion of the Banū Khafādja branch of the ʿUḳayl of the ʿĀmir b. Ṣaʿṣaʿa group.

He was born shortly before the advent of Islam near Medina, where his forebears had settled; he is said to have died, not in 85/704 or 76/695 or 75/694 or 71/690 as indicated by some ancient and modern sources (see introd. to his *dīwān*), but in the time of the caliph Muʿāwiya (41-60/661-80), according to Nallino (*Letteratura*), on the basis of a dubious anecdote related by al-Iṣfāhānī (*Aghānī*), according to which said caliph is said to have held a conversation with Laylā al-Akhyaliyya [*q.v.*] after the death of Tawba. The editor of Tawba's *dīwān* is more precise, placing his death in the year 55/674 or shortly after. Tawba appears in posterity in the guise of a dual personality: on the one hand, he was one of the first representatives of ʿUdhrī [*q.v.*], amorous poetry among the Bedouin, proclaiming his unhappy love for a kinswoman, Laylā al-Akhyaliyya, whom he was unable to marry; on the other, Tawba revealed himself as a bandit chieftain or brigand, a *ṣuʿlūk*, stealing camels and leading numerous incursions against neighbouring tribes hostile to his own. He is said to have met his death in the course of one of his incursions against the Banū ʿAwf b. ʿĀmir.

Tawba has left behind a *dīwān* which is said to have been compiled by Nifṭawayh (d. 323/934) and which al-Ḳālī allegedly took with him on his journey to al-Andalus. It was on the basis of a probable manuscript of this *dīwān* which apparently dates from the 6th/13th or the 7th/14th century (now in Fatih library, Istanbul) that Khalīl Ibrāhīm al-ʿAṭiyya edited the *dīwān*; this is presented in the form of 92 verses, divided between one short fragment of 2 verses and 4 poems comprising respectively 8, 14, 19 and 49 verses, to which should be added 6 other fragments totalling 12 verses, gleaned by the editor from ancient sources, in particular, the *Ḥamāsa* of Abū Tammām, the *Amālī* of al-Ḳālī and the *Aghānī* of al-Iṣfahānī, and six other verses of dubious attribution which may be disregarded.

It may be noted that, in addition to the poetic corpus, the editor also includes *Akhbār Laylā wa-Tawba*, cited by Ibn al-Nadīm (*Fihrist*, 167). The current state of the *dīwān* permits nothing more than general and entirely relative comments on the content and form of Tawba's poetry. The metres used by the poet are *ṭawīl* (8 times), *radjaz* (twice) and *kāmil* (once) and the rhymes *rāʾ* (three times), *hāʾ* (twice) and *bāʾ*, *tāʾ*, *fāʾ*, *lām*, *mīm* and *yāʾ* (once). Furthermore, it cannot be said to what degree the poet would have respected the tripartite structure of the classical *ḳaṣīda*, since the *nasīb* [*q.v.*] or amorous prologue features in only two of the eleven pieces considered. With his style and characteristic language Tawba shows himself to be an archaic, Bedouinising poet. The genre most frequently addressed is, naturally, amorous poetry or *ghazal*, where the important themes are the chastity of the poet and his fidelity to his loved one. Elsewhere, the poetry of boasting (*fakhr*), although decidedly less important, shows Tawba roaming the desert and facing all kinds of danger, testifying to his almost legendary warlike temperament. It may be noted finally that the fame of Tawba b. al-Ḥumayyir also owes much to his love for Laylā al-Akhyaliyya, who composed numerous odes dedicated to him.

AL-ṬAWFĪ, NADJM AL-DĪN [see AL-ṬŪFĪ].

TAWFĪḲ (A.), the verbal noun of the form II verb *waffaḳa* "to facilitate, make easy, direct aright", a term of Islamic theology. Here, *tawfīḳ* means "facilitating, helpfulness, predisposing towards", used especially of God's grace and help towards mankind. In Ḳurʾān, IV, 65/62, it is used by the Hypocrites of their own intentions; in XI, 90/88, by Shuʿayb [*q.v.*] for his hope from God of success in his prophetic mission amongst Midian; in IV, 39/35, of God's bringing harmony and peace amongst disputants. It is usually regarded by the Islamic theologians as being, with *hudā*/*hidāya* "God's guidance", the opposite of *khidhlān* [*q.v.*] "God's forsaking or abandoning a hardened sinner and withdrawing His grace from him".

TAWFĪḲ AL-ḤAKĪM, modern Egyptian writer, d. in Cairo 1987.

As the most significant figure in the development of modern Arabic drama as a literary genre, al-Ḥakīm played a major role in the cultural life of his native Egypt and of the Arabic-speaking world in general. Besides his activities in the realm of theatre, he also made major contributions to fiction and was a vigorous participant in his homeland's cultural politics throughout his life.

Born into a wealthy Alexandrian family (probably in 1898, although other sources list 1902), al-Ḥakīm moved to Cairo to complete his secondary education and then enrolled, like so many of his literary contemporaries, in the prestigious School of Law. However, he was already deeply involved in the theatre; while still a student he composed a series of plays for the ʿUkāsha Brothers' troupe (although, to avoid parental opprobrium, he used the pseudonym "Ḥusayn Tawfīḳ"). When the results of al-Ḥakīm's final exams in law proved mediocre, his father was persuaded to send him to Paris to obtain a doctorate in law there. This was to be a transforming event in his life: instead of immersing himself in legal studies, al-Ḥakīm devoted himself to a thorough investigation of European, and especially French, culture and most notably the theatre. He went to performances of plays by Shakespeare, Maeterlinck, Ibsen and Pirandello, for example, and felt inspired to write compositions of his own, both dramas and works of fiction, some of which were to be completed and published later. In 1928, al-Ḥakīm was summoned back to Egypt by his father and began a career as a public prosecutor in the Delta region of Egypt. The 1930s also see the beginning of his fame as a littérateur: the publication in 1933 of both his important contribution to the development of the novel, *ʿAwdat al-rūḥ* (1933; *Return of the spirit*, 1990), and his pioneering drama, *Ahl al-Kahf* (*The People of the Cave*, 1933) based on the story of the Seven Sleepers of Ephesus (a version of which is found in Ḳurʾān, sūra XVIII), was followed by a number of other important contributions to both fiction and drama. Thereafter, al-Ḥakīm combined the career of littérateur with that of civil servant and journalist: he worked in turn for the Ministries of Education and Social Affairs, and became the head of

the National Library (Dār al-Kutub) in 1951. In 1954 he was elected a member of the Arabic Language Academy, and that status (and the award of the State Prize for Literature in 1961) ensured that he remained until his death a senior figure on the Egyptian literary scene. During the presidency of Anwar al-Sādāt, he caused a stir with his pamphlet (later, a book), *ʿAwdat al-waʿy* (1974; *The return of consciousness*, 1985), in which he expressed his opinions about the course of the Egyptian revolution under Sādāt's predecessor, Djamāl ʿAbd al-Nāṣir (Nasser). The final days of his public career were spent working as a columnist for the Cairo newspaper *al-Ahrām*.

The play *Ahl al-Kahf* was greeted by the great Egyptian critic, Ṭāhā Ḥusayn (d. 1973 [*q.v.*]) as a major milestone in Arabic literary history, in that its treatment of a serious universal theme and its attention to the stylistic demands of language were such as to place it firmly into the milieu of literature (as defined by the critical tradition). It was to be followed by other multi-act dramas based on themes culled from a variety of cultural sources, among the most famous of which are: *Shahrazād* (1934; *Shahrazad*, 1981), *Pygmalion* (1942), and *al-Malik Ūdīb* (1949; *King Oedipus*, 1981). While admired for their literary merits, these and other plays like them confronted two major problems connected with the dramatic genre in Arabic at the time: the lack of an indigenous tradition for the training of actors and directors; and, above all, the features of Arabic itself where the literary language is not the medium of habitual conversation. Al-Ḥakīm's initial reaction to these issues was to suggest that his plays were intended as *masraḥ dhihnī* (a translation of the French term, "théâtre des idées"), plays to be read but not necessarily acted on stage. During the 1940s, al-Ḥakīm was presented with the opportunity to write a series of shorter one-act plays, initially published in newspapers and journals, and later as two collections, *Masraḥ al-mudjtamaʿ* (1950) and *al-Masraḥ al-munawwaʿ* (1956). "Ughniyyat al-mawt" ("Death song," 1973, 1977) from the former collection, a wonderful evocation of an Upper Egyptian village in the throes of a blood feud, is an excellent example of al-Ḥakīm's mastery of dramatic tension.

These experiments in the shorter-length drama demanded by the press medium allowed al-Ḥakīm to hone his skills to good effect. Elected to the Arabic Language Academy and assured by the personal admiration of President Nasser of a favoured position in the cultural life of his country, al-Ḥakīm now extended his dramatic purview. Certain plays composed following the 1952 Revolution may be seen as commentaries on aspects of changing Egyptian social and political realities: *al-Aydī al-nāʿima* (*Soft hands*, 1954) is clearly a gesture of support for the egalitarian instincts of the earliest stages of the process of change; *al-Sulṭān al-ḥāʾir* (1960; *The Sultan's dilemma*, 1973, 1974, 1977), a well-crafted drama about the issues surrounding the manumission of a Mamlūk sultan, can also be seen as a subtle questioning of the nature of law and just rule in contemporary, as well as former, times. While these and many other plays like them continue the process of furnishing the Arabic literary tradition with a repertoire of dramas that take on large philosophical and historical topics, other plays by al-Ḥakīm set out to be more experimental and innovative. With *al-Ṣafḳa* (*The deal*, 1956) he explores further the problems associated with the language of drama; in a play that reflects Egypt's concerns at the time with land reform, al-Ḥakīm attempts to fashion what he terms a "third language" placed along a spectrum between the implied norms of the literary and colloquial registers of Arabic. This concern with the impact of dialogue on audience was also much in evidence in a later play, *al-Warṭa* (*The fix*, 1966), which concerns a university teacher conducting research into criminality. Experimental in an entirely different way was *Yā ṭāliʿ al-shadjara* (1962; *The tree climber*, 1966), an interesting essay in absurdist drama. It is perhaps ironic that this play seems to have been one of al-Ḥakīm's most successful performance texts, in that his continuing search for solutions to the issues of language became irrelevant; in the world of the absurd, the literary language provided a splendid medium for the conveyance of the concept of irreality.

The 1930s were, as noted above, a significant decade in the development of the Arabic novel in Egypt, and al-Ḥakīm was a prominent participant in the process. The autobiographical element is especially evident in his earliest essays in the novel form: *ʿAwdat al-rūḥ* (1933; *Return of the spirit*, 1990) recounts the tensions of a Cairo family as seen through the eyes of Muḥsin, a young boy who has been sent by his parents to live with his relatives in the capital city. The time is that of the political and social turmoil of 1919, and into the fabric of the narrative is woven the then popular theme of Pharaonism, with its celebration of the continuities of Egyptian history. The resulting work is not a little diffuse, but there is no denying the efficacy with which al-Ḥakīm's dramatic sense permits him to create a vivid and authentic family environment. In *ʿUṣfūr min al-shark* (1938; *Bird from the East*, 1966), the same character, Muḥsin, travels to France. The meeting and confrontation of cultures is here handled with an excessively heavy symbolism which makes this work one of several early novelistic essays on a topic that finds more accomplished expression among writers of the next generation. With *Yawmiyyāt nāʾib fi 'l-aryāf* (1937; *The maze of justice*, 1947, 1989), however, al-Ḥakīm provides one of the classics of the early Arabic novel, as a public prosecutor finds himself forced to apply completely alien legal principles on unsuspecting peasants who persist in adhering to their time-honoured customs and beliefs. The resulting work is a masterly portrait, full of character and incident and narrated with an attractively ironic humour. Alongside these and other novels, al-Ḥakīm also published a small repertoire of short stories.

Al-Ḥakīm's role as something akin to a cultural statesman is reflected in his contributions to other forms of writing. He wrote about the problems of theatre and published two works of autobiography: *Sidjn al-ʿumr* (1965; *The prison of life*, 1992) about his earlier life and *Ẓahrat al-ʿumr* (*The flower of life*, 1943)—a series of letters to a friend—about later years. As *ʿAwdat al-waʿy* (mentioned above) clearly shows, he regularly inserted himself into the public controversies of his homeland, and his broad reputation as one of Egypt's, indeed the Arab world's, most illustrious intellectuals guaranteed his opinions a ready audience. His many works in dramatic and novelistic form can be seen as an eloquent testimony to the struggles and difficulties faced by writers during the earlier stages of the long process of generic development in modern Arabic literature, and his major monuments in both genres will clearly endure.

Bibliography: 1. Works. (a) Plays. *Ahl al-Kahf* (1933); *Shahrazād* (1934); *Pygmalion* (1942); *al-Malik Ūdīb* (1949); *Masraḥ al-mudjtamaʿ* (1950); *al-Aydī al-nāʿima* (1954); *al-Masraḥ al-munawwaʿ* (1956); *al-Ṣafḳa* (1956); *al-Sulṭān al-ḥāʾir* (1960); *Yā ṭāliʿ al-shadjara* (1962); *al-Warṭa* (1966). (b) Novels. *ʿAwdat al-rūḥ*

(1933); *Yawmiyyāt nā'ib fi 'l-aryāf* (1937); *'Uṣfūr min al-sharḳ* (1938). (c) Other works. *Zahrat al-'umr* (1943); *Sidjn al-'umr* (1965); *'Awdat al-wa'y* (1974).

TAWFĪḲ PASHA, MUḤAMMAD, Khedive of Egypt 1879-92.

Born in 1852, he was the eldest son of the Khedive Ismā'īl Pasha b. Ibrāhīm Pasha [*q.v.*] and, it is said, one of the women of the harem. Despite the dubious circumstances of his birth he was nevertheless heir-apparent and rather suffered from that position. His half-brothers were sent abroad to be educated while Tawfīḳ had to remain at home, being taught by traditional Muslim teachers. His father allowed him no role in public affairs and showed him very little affection as a child. He was rather shy and retiring and gave the impression to those who met him that he would rather have retreated to his estates than ascend the throne. He was cowed by his father as long as the latter reigned and never quite shook off the terror his father had inspired. Bearing this burden, he has been described as a weak person, vindictive and rather pathetic, being all the things his father was not. Yet it was his fate to be called to rule Egypt during one of the most decisive periods of its history, and, in a sense, to reap the whirlwind his father had sown.

Tawfīḳ became Khedive on 26 June 1879 after his father Ismā'īl had been deposed by the Ottoman Sultan 'Abd al-Ḥamīd II [*q.v.*] on the insistence of the European powers, representatives of which were at the time in Egypt attempting to straighten out the financial chaos caused by Ismā'īl. Tawfīḳ had already been president of the Council of Ministers under his father, appointed again on the insistence of Britain and France, who saw him as a pliable young man whom they might be able to control. He fell prey to the struggle between Ismā'īl and his European ministers and was soon dismissed. He had, however, had early experience of being trapped in the disputes between the Europeans and Egypt.

Although the Sultan had deposed Ismā'īl, real power in Egypt lay with the British and French. When the former tried to reassert Ottoman authority in Egypt, it was pointed out to him that the privileges of the Khedive were held under Anglo-French guarantees and that he could only rule over Egypt in co-operation with the European financial controllers. So Tawfīḳ had to attempt to govern a bankrupt, insolvent Egypt under foreign financial control and, in addition, had to face an increasingly rebellious army. Discontent had been growing among Egyptian officers who felt they were discriminated against in favour of the Turco-Circassians. Colonel Aḥmad 'Urābī [*q.v.*] emerged as their leader; young, dynamic and Egyptian, he soon came to the fore and was able to articulate the army's grievances. In February 1882 Tawfīḳ was forced to appoint him Minister of War. To the Egyptians, 'Urābī was leading a national movement of protest against the Khedive's policies; to the British and French he was the leader of a "mutiny" against the Khedive's authority. Tawfīḳ could exert little influence, and found himself both the captive and enemy of the revolt led by the army. Britain and France announced that they intended to support him, and in May a joint naval squadron appeared off Alexandria. The powers demanded the banishment of 'Urābī from Egypt. The government resigned, but Tawfīḳ was forced by popular pressure to reinstate 'Urābī as Minister of War.

The British in particular were disturbed by this move and, on the pretext of restoring order, bombarded Alexandria in July. This caused the final break between Tawfīḳ and 'Urābī. Tawfīḳ sought the protection of British troops in Alexandria and dismissed 'Urābī, while the latter proclaimed himself head of a movement of national resistance which moved to depose the Khedive. The British then invaded Egypt in support of the "legitimate authority", and after defeating 'Urābī's army restored the Khedive to the throne. In Egyptian eyes, he now held office thanks to the military might of the British army and he himself felt beholden to a foreign conquering power. From then on (1883) until his death in 1892 he was very much the flexible puppet of Lord Cromer (British Consul-General in name but the exerciser of British authority in practice).

The British were there to stay, and Tawfīḳ had to work with them, despite being considered a traitor to Egyptian nationalism. He co-operated with the British in restoring Egyptian finances, and reorganised the government, the judiciary and some parts of education, notably in law and agriculture. British control was tightened in most aspects of government with the appointment of British advisers and technical experts.

Tawfīḳ's relations with the nationalists were tense but he failed in his vindictive attempt to have 'Urābī hanged, the latter being eventually exiled. Viewed as a weak ruler and British puppet, Tawfīḳ could not have acted otherwise as long as he wished to avoid the fate of his father. Unless he abdicated, he had either to co-operate with the British or face exile and deposition. In co-operating, however, he was forever

tarred with having accepted British domination and having surrendered Egyptian independence to a foreign power.

TAWḤĪD (A.), in the true sense of the term, the act of believing and affirming that God is one and unique (*wāḥid*), in a word, monotheism. For the Muslim, it is believing and affirming what is stated by the first article of the Muslim profession of faith: "there is no other god but God" (*lā ilāha illā llāh*). Often, this first *shahāda* is specifically called *kalimat al-tawḥīd*, just as the name *sūrat al-Tawḥīd* is sometimes given to sūra CXII (*al-Ikhlāṣ*) which declares that God is *aḥad*, and that He has no equal (cf. al-Ṭabrisī's commentary).

While the term *tawḥīd* is itself absent from the Ḳur'ān (as is the verbal form *waḥḥada*), the principle that God is single is definitely proclaimed there in many instances. To cite only a few examples, 13 times God is described as "sole divinity" (*ilāh*^{un} *wāḥid*), and 29 times it is said of Him *lā ilāha illā huwa* "[there is] no divinity other than He" (not to mention other formulae of identical meaning). This is most often expressed in refutation of polytheist "associators" [see SHIRK] but also, sometimes, in refutation of the Christians (IV, 171; V, 73; IX, 31), of the Jews (IX, 31) or of the Dualists (XVI, 51).

This oneness of God is something which the theologians, not content with invoking the above-mentioned verses, are at pains to demonstrate rationally, their major argument being that of "reciprocal hindrance" (*tamānu'*). If there were two gods, they assert, there would inevitably arise between them, at one time or another, a conflict of wills. Since it is impossible that their two contrary wills could be realised simultaneously, then either one of the two would admit himself powerless in this instance, or both would do so; now, a powerless being could not be a god (cf. D. Gimaret, *La doctrine d'al-Ash'arī*, Paris 1990, 252-4, with references included). It is also claimed that the premisses of this argument may be observed in Ḳur'ān XXI, 22: "If there were numerous gods instead of one, [the heavens and the earth] would be in a sorry state".

The profession of monotheistic faith being characteristic of Islam, it should come as no surprise that certain authors have defined the totality of Muslims by the expression *ahl al-tawḥīd*: thus, among others, the Sunnī traditionalist Ibn Khuzayma (*K. al-Tawḥīd*, ed. Harrās, Beirut 1973, 306, 325, 327, 329), the Imāmī al-Shaykh al-Mufīd (*Awā'il al-maḳālāt*, Nadjaf 1973, 117, 119, 120, 124, 127, 128; variant, *al-muwaḥḥidūn, ibid.*, 118, 121, 123, 125, 131), also al-Ash'arī (*Maḳālāt*, Wiesbaden 1963, 146, 326, 571). However, certain movements in Islam have claimed to represent strict monotheist orthodoxy better than others and have therefore reserved the expression for themselves; such is the case with the Mu'tazilīs, who called themselves *ahl al-tawḥīd wa 'l-'adl* [see MU'TAZILA] and sometimes simply *ahl al-tawḥīd* (cf. al-Pazdawī, *Uṣūl al-dīn*, Cairo 1963, 35; Abu 'l-Mu'īn al-Nasafī, *al-Tabṣira*, Damascus 1990, 200) or indeed the Muwaḥḥidūn [*q.v.*], the Almohads, disciples of the *mahdī* Ibn Tūmart.

In Ṣūfī literature, the notion of *tawḥīd* has given rise to intense speculation; from a simple concept, it is transformed into a spiritual experience. A well-known text of al-Djunayd distinguishes four steps, starting from the simple attestation of unicity which is sufficient for ordinary believers, and culminating in the highest rank reserved for the élite, when the creature totally ceases to exist before his Lord, thus achieving *al-fanā' fi 'l-tawḥīd* (cf. R. Deladrière, *Junayd, enseignement spirituel*, Paris 1983, 150-2). In the *Iḥyā'* (Cairo 1968, iv, 305), al-Ghazālī proposes a categorisation which is in part comparable. On the Ṣūfīs' views of *tawḥīd*, see in particular the *Risāla* of al-Ḳushayrī, Cairo 1974, 581-8.

The importance in Islam of the dogma of divine unicity—although it is actually only *one* of the characteristics of God, among others—accounts for the fact that the word *tawḥīd* has, in certain cases, been invested with a much broader meaning. In the work of certain theologians, it has come to denote the totality of discussion of God, His existence and His various attributes: thus with the Mu'tazilī 'Abd al-Djabbār (cf. *al-Mughnī*, v, 259, l. 1: *tamma al-kalām fi 'l-tawḥīd*), but also with the Ḥanbalī Abū Ya'lā (*al-Mu'tamad*, Beirut 1974, §385). Going yet further, in the titles of certain books, it is sometimes the totality of the "principles of religion" (*uṣūl al-dīn*), as defined by the various theological schools, which the word ultimately represents. Such is the case, among others, of the *K. al-Tawḥīd* of al-Māturīdī, of the work of the same title by the Imāmī Ibn Bābawayh, or, more recently, of the *Risālat al-Tawḥīd* by Muḥammad 'Abduh. Finally, in current usage, the expression *'ilm al-tawḥīd* (or *tawḥīd* alone) denotes theology in general, and constitutes the modern equivalent of *'ilm al-kalām* [*q.v.*] (cf. Gardet-Anawati, *Introduction à la théologie musulmane*, Paris 1948, index of technical terms, s.v. *tawḥīd*).

(D. Gimaret)

ṬAWĪL, lit. "the long one", an Arabic metre, the first metre in al-Khalīl's metrical system [see 'ARŪḌ]. Its most frequent type, *ṭawīl*-2, runs as follows:

/⏑–⏓/⏑–––/⏑–⏓/⏑–⏑–/
/⏑–⏓/⏑–––/⏑–⏓/⏑–⏑–/

(⏓ = either short or long syllable). The two other types differ only with respect to the last foot of the line (⏑––– for *ṭawīl*-1; ⏑–– for *ṭawīl*-3), and, exceptionally, with respect to the last foot of the first hemistich in lines with internal rhyme, as the rhyming feet must be metrically identical. In ancient poetry, the second foot of either hemistich sometimes has the form ⏑–⏑–. An occasional feature, mainly restricted to first lines of ancient poems, is *kharm*, the absence of the line's initial short syllable.

Data on metrical variations within this metre are given in G.W. Freytag, *Darstellung der arabischen Verskunst*, Bonn 1830, 129-31, 161-78, and W.F.G.J. Stoetzer, *Theory and practice in Arabic metrics*, Leiden 1989, 147-8. Statistical data on the use of *ṭawīl* as compared with other metres are given in J. Bencheikh, *Poétique arabe*, ²Paris 1989, 203-27 (with data from Bräunlich and Vadet); D. Frolov, *Klassičeskiy arabskiy stikh*, Moscow 1991, 171-84; and B. Paoli, *Aux sources de la métrique arabe*, in *BÉt.Or.*, xlvii [1995], 183-215. For Andalusian poets, see D. Frolov, *Notes on the history of 'Arūḍ in al-Andalus*, in *Anaquel de Estudios Árabes* vi [1995], 87-110.

Although in ancient Arabic literature poems in *ṭawīl* outnumber those in any other metre, *ṭawīl* is rare in modern Arabic (but see e.g. Nizār Ḳabbānī's poem *Uktubī lī*, in *Ḳālat lī 'l-samrā'*, [5]Beirut 1964, 48-52).

In *nabaṭī* [*q.v.*] poetry (vernacular poetry from Nadjd) *ṭawīl*-like metres do occur: 10 out of al-Dindān's 31 poems published by P.M. Kurpershoek in *Oral poetry and narratives from Central Arabia*, i, *The poetry of ad-Dindān*, Leiden 1994, have a *ṭawīl*-like structure. The frequent *nabaṭī* pattern /‒‒⏑‒‒‒⏑‒‒/ is often explained as an acephalous catalectic *ṭawīl* (A. Socin, *Diwan aus Centralarabien*, iii, Leipzig 1901, 58-64; S.A. Sowayan, *Nabaṭi poetry*, Berkeley etc. 1985, 162; H. Palva, *Artistic colloquial Arabic*, Helsinki 1992, 150 ff.; idem, *Quantitative or accentual? Metrical problems of the contemporary Bedouin qaṣīda*, in L. Johanson and B. Utas, *Arabic prosody and its applications in Muslim poetry*, Uppsala 1994, 91-7; P.M. Kurpershoek, *Oral poetry and narratives from Central Arabia*, ii, *The story of a desert knight*, Leiden 1995, 131-2).

Bibliography: Given in the article.

(W. Stoetzer)

ṬAWĪL, Banū, also called the Banū Shabrīṭ, an indigenous family of the Iberian peninsula, integrated into Andalusī society as *muwallads*, converted to Islam at some time near the first Muslim conquests, and playing a distinguished role in political life from the end of the 2nd/8th century until the 4th/10th one.

They originated from, and had their sphere of action in, the Upper March (*al-thaghr al-aʿlā*) of al-Andalus, in particular, the region of Huesca [see washka], from where they extended their power to other parts of the march, including Barbastro. Like other great *muwallad* families of the Upper March, they began by collaborating with the Umayyad *amīrs* of Cordova, until their rise in fortunes allowed them to set themselves up against the central power from the middle of the 4th/10th century onwards, thereby beginning a period of autonomous authority in the Upper March, and disputing power there with other *muwallad* families. They even, in pursuit of this aim, had relations with the Christian lines dominant in Pampeluna and the Pyrenean enclaves, allying with them, if need should arise, against both Carolingian and Umayyad control.

They had a common ancestor, called Sh ... h, according to the geographer of Almeria al-ʿUdhrī, thus transcribing a non-Arab name. This same author, who provides the most information about the Banū Ṭawīl, cites amongst members of the family, in chronological order, a Shabrīṭ (end of the 2nd/8th century and beginning of the next one), his two sons ʿAbd Allāh and Mūsā; and ʿAbd al-Malik and Walīd (both sons of ʿAbd Allāh). A son of this ʿAbd al-Malik was the famous Muḥammad al-Ṭawīl ("the Tall", a nickname which became applied to the whole family), who married Sancha, daughter of Aznar Galindo II of Aragon and who fell in 301/913 during an expedition against the lands of Barcelona, leaving behind a daughter and six sons: ʿAbd al-Malik (d. 306/918), ʿAmrūs (d. 323/935), Fortún (d. 327/939), Mūsā (d. 434/954), Yaḥyā (d. 340/951) and Lubb (d. 344/955). The sources further mention the names of two succeeding generations, including a nephew of this Mūsā b. Muḥammad al-Ṭawīl called al-Walīd b. ʿAbd al-Malik. Notable amongst them is the use of the Romance name Fortún.

(Maria J. Viguera)

TA'WĪL (a.), verbal noun of the form II verb *awwala* (derived either from *awl* "return" or from *iyāla* "putting into right condition, managing properly"), signifies explanation, exposition, or interpretation as it is literally related to the notion of "returning to its origin or source". The word occurs in the Ḳur'ān seventeen times. In XII, 6, 21, 36, 37, 44, 45, 100, 101, and XVIII, 78, 82, it implies explanation or interpretation of a dream or an event. In III, 7 (occurs twice), it also means interpretation; in VII, 53 (occurs twice) and X, 39, it is used to denote the occurrence of a forewarned event, which implies foretelling or divination. However, in IV, 59, and XVII, 35, it indicates the end, result, or final sequel of a thing, hence it is similar in meaning to *ʿāḳiba*, *ma'āl* or *maṣīr*. The compilers of the *Muʿdjam alfāẓ al-Ḳur'ān al-karīm* (Cairo 1409/1988, i, 103), have taken *ta'wīl* in these two verses in its general meaning of explanation (*tafsīr*).

The word *tafsīr* [*q.v.*], on the other hand, occurs only once in the Ḳur'ān (XXV, 33) and connotes explanation or interpretation. Since the latter is also used as a technical term for the exegesis of the Ḳur'ān, there is considerable discussion in Arabic sources concerning the precise meaning of both *ta'wīl* and *tafsīr* and their relationship to each other (see A. Jeffery (ed.), *Muḳaddimatāni fī ʿulūm al-Ḳur'ān: wa-humā muḳaddimat Kitāb al-mabānī wa-muḳaddimat Ibn ʿAṭīya*, Cairo, 1954, 172-3; al-Zarkashī, *al-Burhān fī ʿulūm al-Ḳur'ān*, ed. Muḥammad Abu 'l-Faḍl, [2]Beirut 1972, ii, 146-53; al-Suyūṭī, *al-Itḳān fī ʿulūm al-Ḳur'ān*, ed. Abu 'l-Faḍl, Beirut 1988, iv, 167-73). From what we know of the early history and development of *tafsīr*, it seems that in the beginning both words were used synonymously. There is no hard evidence to suggest that *maʿānī* (meanings) was the earliest term used for the titles of works on Ḳur'ānic interpretation and that *ta'wīl* was introduced late in the 3rd/early 10th century and was supplanted in the following century (J. Wansbrough, *Quranic studies. Sources and methods of scriptural interpretation*, Oxford 1977, 117-246; the historical sequence of five categories of *tafsīr*: narrative, legal, textual, rhetorical, and allegorical, suggested by him is open to debate; A. Rippin, art. *Tafsīr*, in *Encyl. of Religion*, ed. M. Eliade; F. Rahman, *Approaches to Islam in religious studies. Review essay*, in *Approaches to Islam in religious studies*, ed. R. Martin, Tucson 1985, 198-202). Both al-Ṭabarī (d. 310/923) and al-Māturīdī (d. 333/944) use the word *ta'wīl* in the very title of their Ḳur'ān commentaries: *Djāmiʿ al-bayān ʿan [wudjūh] ta'wīl āy al-Ḳur'ān* (ed. Maḥmūd Shākir and Aḥmad Shākir, Cairo 1954-69; abridged tr. J. Cooper, *The commentary on the Qur'ān*, Oxford 1987); and *Ta'wīlāt al-Ḳur'ān* (ed. Ibrāhīm and S. ʿAwaḍayn, *Tafsīr al-Māturīdī al-musammā ta'wīlāt ahl al-sunna*, Cairo 1971, one volume only published), respectively. It should be noted that

the terms *ta'wīl* and *ahl al-ta'wīl* are used more profusely as synonyms for *tafsīr* and *ahl al-tafsīr* by al-Ṭabarī in his commentary. Al-Nasā'ī (d. 303/915) in his *Sunan* (Beirut n.d.), whose main concern is legal and who does not devote any *kitāb* (book) to *tafsīr*, very often devotes a whole chapter to explain a Ḳur'ānic verse related to the issue. All those chapters are entitled *ta'wīl ḳawl Allāh*. Even much later, al-Nasafī's (d. 701/1301-2), al-Bayḍāwī's (d. *ca.* 716/1316), and al-Khāzin's (d. 741/1340) commentaries are also entitled *Madārik al-tanzīl wa-ḥaḳā'iḳ al-ta'wīl* (Cairo 1330/1912), *Anwār al-tanzīl wa-asrār al-ta'wīl* (ed. Fleischer, Leipzig 1846-8), and *Lubāb al-ta'wīl fī ma'ānī al-tanzīl* (Cairo 1321/1903), respectively.

'Ā'isha 'Abd al-Raḥmān (*al-I'djāz al-bayānī li 'l-Ḳur'ān*, ²Cairo 1987, 210 ff.; eadem, *al-Tafsīr al-bayānī li 'l-Ḳur'ān*, Cairo 1962; and I. Boullata, *Modern Qur'ān exegesis. A study of Bint al-Shāṭi''s method*, in *MW*, lxiv [1979], 103-13), on the other hand, has shown that the Ḳur'ān chooses its vocabulary meticulously and that no word can be replaced by what some philologists call a synonym, even when it is derived from the same root. In his *Tafsīr* (ed. 'Abd Allāh Shiḥāta, Cairo 1969, i, 4-5), Muḳātil b. Sulaymān (d. 150/767) implies a clear distinction between *tafsīr*, as what is known on the human level, and *ta'wīl*, as what is going to happen in the future and is known to God alone. Ibn Ḳutayba (d. 276/889) also draws a fine distinction between the two terms, as his book on Ḳur'ānic rhetoric is entitled *K. Ta'wīl mushkil al-Ḳur'ān* (ed. Aḥmad Ṣaḳr, Cairo 1373/1954), while his philological commentary on uncommon words is entitled *K. Tafsīr gharīb al-Ḳur'ān* (ed. Ṣaḳr, Cairo 1378/1958).

In his *K. al-Zīna* (ms. Hamdani collection, fols. 254-5; a portion of it is edited by H. al-Hamdānī, Cairo 1956-8), which deals with the etymology of Islamic nomenclature, the Ismā'īlī Abū Ḥātim al-Rāzī (d. 322/934-5), states that the philologists disagree with regard to the meaning of *ta'wīl*. One group maintains that it is exactly the same as *tafsīr* while the other asserts that it is different from the latter. When al-Rāzī asked Tha'lab (a philologist, d. 291/904) about the meaning of *ta'wīl*, the latter stated on the authority of Ibn al-A'rābī (a philologist and a *rāwī*, d. *ca.* 231/845-6) that *ta'wīl*, *tafsīr* and *ma'nā* are virtually all one; however, he added that *ta'wīl* means knowledge of the true state of affairs (*ma'rifat al-ḥaḳā'iḳ*), which is the source (*al-'ayn*), the reality (*al-ḥaḳīḳa*) and the end (*al-'āḳiba*). Al-Rāzī further states that those who contend that *ta'wīl* and *tafsīr* are different things affirm that *tafsīr* is what the commonality (*al-'āmma*), i.e. the Sunnīs, relate from the exegetes (*mufassirūn*), while *ta'wīl* signifies [discovery] of subtle, hidden meaning known only to the outstanding scholars (*al-'ulamā' al-mutḳinūn*). He then illustrates the difference between *tafsīr* and *ta'wīl* as follows: A man has a dream and goes to an interpreter (*mu'abbir*). The interpreter happens to be an Arabic-speaking person while the man who had a dream does not speak Arabic. Hence a translator (*mutardjim*) has first to translate the man's dream for the interpreter. The speech of the man is thus about his dream, while the utterance of the translator is called *tafsīr* and the interpretation of the interpreter is called *ta'wīl*.

A close scrutiny of a multitude of definitions of the two terms in a wide variety of sources reveals that, what was at stake in this debate, concerned the ways in which traditional material could be used for exegetical purpose. *Ta'wīl*, in the understanding of most scholars, was based upon reason and personal opinion (*ra'y*), whereas *tafsīr* was based upon material transmitted from the Prophet himself or his Companions or the Successors in the form of *ḥadīth* (or *athar*); hence the former is generally defined as *tafsīr bi 'l-ra'y* (interpretation by the use of reason), while the latter as *tafsīr bi 'l-ma'thūr* (interpretation according to what has been handed down). *Tafsīr* is thus appropriately described as concerned with *riwāya* (transmission of reports), while *ta'wīl* with *dirāya* (to know the meaning by a sort of artifice or cunning skill). Al-Zarkashī's *al-Burhān* and al-Suyūṭī's *al-Itḳān*, therefore, enumerate various qualifications of a *mufassir* and list the most important sources of *tafsīr*.

When one examines the question of exegetical methodology in al-Ṭabarī's *tafsīr*, which is quite tradition-oriented and regarded as an exemplary example of *tafsīr bi 'l-ma'thūr*, it becomes obvious that the verse III, 7, was decisive to the development of Ḳur'ānic hermeneutics, as he refused to recognise the respective *muḥkam* or *mutashābih* character of constituent verses, because it can lead to distortion (J. McAuliffe, *Quranic hermeneutics. The views of al-Ṭabarī and Ibn Kathīr*, in *Approaches to the history of the interpretation of the Qur'ān*, ed. A. Rippin, Oxford 1988, 46-62).

The dispute over *tafsīr* and *ta'wīl* (or *tanzīl* and *ta'wīl* in Shī'ī parlance), as these terms evolved over a period of time, can be traced back to the earliest sectarian disputes, especially between the Sunnīs and the Shī'īs wherein sūra III, 7, plays a crucial role. The original text of the Ḳur'ān, being without punctuation marks, does not indicate stops and pauses, hence grammatically it is also possible to read the phrase beginning with the conjunction *wāw* (and) and the substantive *al-rāsikhūna fī 'l-'ilm* (those firmly-rooted in knowledge) in the above verse as the second subject of the preceding phrase. Thus it means that both God and *al-rāsikhūna fī 'l-'ilm* share a portion of *ta'wīl* (al-Kulaynī, *al-Uṣūl min al-kāfī*, ed. A.A. al-Ghaffārī, i, 213 ff.; al-Ḳummī, *Tafsīr al-Ḳummī*, ed. Ṭayyib al-Mūsawī al-Djazā'irī, Beirut 1991, i, 124; al-Ḳāḍī al-Nu'mān, *Da'ā'im al-islām*, ed. A.A. Fyzee, 3rd ed. Cairo 1969, 22; al-Ṭūsī, *al-Tibyān fī tafsīr al-Ḳur'ān*, ed. Aḥmad al-'Āmilī, Beirut n.d., ii, 400; al-Ṭabrisī, *Madjma' al-bayān fī tafsīr al-Ḳur'ān*, ed. al-Rasūlī and al-Ṭabāṭabā'ī, Tehran 1379/1959, ii, 410). With such a reading, the task of interpretation was not merely linguistic or involving lexical concerns, but the door was opened for sectarian, allegorical, and esoteric *tafsīr*. Therefore, as long as *ta'wīl*, as it developed separately from *tafsīr*, did not contradict the obvious literal meaning of the Ḳur'ān or *ḥadīth*, the growing Sunnī orthodoxy had no reason to deny it its right to exist. However, when it diverged widely from the traditional sources and various groups used it as a suitable device to justify their claims and doctrines by interpreting the Ḳur'ānic verses, the situation was changed and *ta'wīl* became a technical term for the allegorical, esoterical exposition of the Ḳur'ān, especially with the Shī'īs (the Imāmīs or Twelvers [see ITHNĀ 'ASHARIYYA] and the Ismā'īlīs [*q.v.*]) and the Ṣūfīs, and formed a valuable and necessary supplement to the more external philological exegesis which now became distinguished as *tafsīr*.

Both the Shī'īs and the Ṣūfīs developed their own style of exegesis wherein they emphasised the difference between *tafsīr* and *ta'wīl*. The foremost principle of Shī'ī *tafsīr* is that the Ḳur'ān has an outer dimension (the *ẓāhir*) and an inner dimension (the *bāṭin*); the elucidation of the inner dimension, called *ta'wīl*, is derived directly from the Imāms, the ultimate authority in matters of interpretation of the Ḳur'ān, as they are the repositories of special knowledge (M. Ayoub,

The speaking Qur'ān and the silent Qur'ān. A study of the principles and development of Imāmī Shīʿī tafsīr, in *Approaches to the history of the interpretation of the Qur'ān*, 177-98). *Taʾwīl* not only plays an important role in the Shīʿī-Ismāʿīlī formulation of a synthesis of reason and revelation based on Neo-platonism and Shīʿī doctrine, but it is also considered a science *par excellence* (I. Poonawala, *Ismāʿīlī* taʾwīl *of the Qur'ān*, in *ibid.*, 199-222). For the Ṣūfīs, *taʾwīl* was a kind of spiritual realisation of the meaning contained in the Ḳurʾān and could be achieved through following the disciplines laid down by the Ṣūfī masters. The *tafsīr* of Sahl al-Tustarī (d. 283/896) exemplifies the Ṣūfī trend of exegesis known as *al-taʾwīl al-kashfī* (illuminating, unveiling). Thus there emerged two distinct approaches to the Ḳurʾānic exegesis known as *tafsīr* and *taʾwīl*: the former could be accomplished by anyone who had the proper qualifications as it concerned the exoteric meaning, while the latter could be performed only by the Imāms or the Ṣūfī master since it involved knowledge of a special kind to interpret the esoteric meaning.

ṬAWĪLA [see larin].

al-ṬAWĪLA, a town and district (*ḳaḍāʾ*) lying to the north-west of the main town of Yemen, Ṣanʿāʾ [*q.v.*], about 55 km/34 miles as the crow flies, and at the summit of Djabal al-Ḳarāniʿ at the height of 2,400 m/7,870 feet. It overlooks the area of al-Maḥwīt to the west and Ḥarāz to the south. Josef Werdecker (*A contribution to the geography and cartography of North-West Yemen*, in *Bull. de la Société Royale de Géographie d'Egypte* [1939], 139) placed the town in 15° 30' latitude and 43° 42' longitude.

Wilson (*Gazetteer*, 223-4) can find no reference to the town before 607/1210. He suggests that it may have been first developed as a stronghold by the Zaydī Imām al-Manṣūr ʿAbd Allāh b. Ḥamza (583-614/1187-1217). Al-Ṭawīla was visited by Eduard Glaser in late 1883 during his famous expedition to northern Yemen. He says (see Werdecker, 38) that "the little town, which is not without walls, is only made noteworthy by its fairly large market-place". It is now quite a sizeable town and the administrative centre of the *ḳaḍāʾ*.

Bibliography: Apart from Werdecker's study based on Glaser's expedition notes, see also Ḥusayn b. ʿAlī al-Waysī, *al-Yaman al-kubrā*, Cairo 1962, 63; R.T.O. Wilson, *Gazetteer of historical North-West Yemen*, Hildesheim 1989, 223-4.

(G.R. Smith)

TAWḲĪʿ (a.), the verbal noun of the form II verb *waḳḳaʿa* in the sense of "to indite, register the decree of a ruler", hence with the meaning of a document with a signature or device (*ʿalāma*), equivalent to the ruler's signature.

1. As an administrative term.

From the meaning given above, *tawḳīʿ* comes to acquire the general sense of "edict, decree of the ruler" and its being drawn up in a written form. More particularly, it has the special meaning of the titles of the ruler (roughly equivalent to the *ṭughrā* [*q.v.*] of the Ottoman sultans) to be inscribed in the chancellery, which gives the document validity, in contrast to *ʿalāma*, the mark or device of the ruler put on it with his own hand, which was regarded as his signature. The use of the two words is, however, to some extent indiscriminate, for *tawḳīʿ* was also used for motto.

In the *inshāʾ* [*q.v.*] literature, edicts (*tawḳīʿāt*) of the Sāsānid emperors are mentioned. Under the Umayyads is said to have arisen the custom—no doubt really an old Oriental one—of the caliph himself deciding (*waḳḳaʿa*) in public audience on petitions (*ḳiṣaṣ*) brought to him; the secretaries had then to put the caliph's *tawḳīʿ* into writing. For the ʿAbbāsid period, Ḳudāma mentions a special *dīwān al-tawḳīʿ* (office for edicts). It may be considered an important increase in the power of the vizier under the ʿAbbāsids that Hārūn al-Rashīd for the first time entrusted the Barmakī Djaʿfar b. Yaḥyā with the right of dealing with petitions (*al-tawḳīʿ ʿalā 'l-ḳiṣaṣ*). According to Ibn al-Ṣayrafī, there was in the Fāṭimid *dīwān* a special secretary for dealing with petitions. This secretary for the *tawḳīʿāt ʿalā 'l-ḳiṣaṣ* was one of the highest in rank. Under the Mamlūks, the private secretary (*kātib al-sirr*) received the right of *tawḳīʿ ʿalā 'l-ḳiṣaṣ*. As a general rule, however, the sultans exercised it themselves here also.

Amongst the Turkish dynasties which began to enter the Islamic world from the late 4th/10th century onwards, the use of emblems—these being probably brought by the Turks from their tribal, steppe past, as in the case of the *tamgha* [*q.v.*]—became notable. Such emblems were later to assume a specifically Islamic Turkish form in the ruler's stylised signature, the *ṭughrā*. But alongside this form of validation of documents, Turkish rulers followed the ʿAbbāsid caliphs in the use of pious personal mottoes (which the sources call variously *ʿalāma* or *tawḳīʿ*) likewise affixed to official documents.

The Fāṭimids in Egypt had adopted the practice of using a motto from the ʿAbbāsids. There is a paucity of information concerning ʿAbbāsid usage in this field, but one might mention a document given *in extenso* by the Ghaznawid historian Abu 'l-Faḍl Bayhaḳī. In this, the new ʿAbbāsid caliph al-Ḳāʾim announces the death of his father al-Ḳādir and his own succession to the throne (422/1031), and the beginning of the letter mentions al-Ḳāʾim's "exalted signature" (*al-tawḳīʿ al-ʿālī*), *iʿtiḍādī bi 'llāh* "my request for aid is sought from God" (*Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 295). The Fāṭimids tended to use for this the term *ʿalāma* (*q.v.*; this article, however, contains nothing about the *ʿalāma*

as used east of the Maghrib, and deserves S.M. Stern's dismissal of it as "slapdash", *Fāṭimid decrees, original documents from the Fāṭimid chancery*, London 1964, 123 n. 1) rather than *tawḳīʿ*, which seems to have been more current in the lands further east. According to al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270/1853, i, 403, the *ʿalāma* or motto of all the Fāṭimid caliphs was *al-ḥamdu li llāh rabb al-ʿālamīn* (cf. Stern, *op. cit.*, 124 ff.).

The Ghaznawids in the eastern Persian lands, in many respects heirs to the ʿAbbāsid administrative tradition, thus followed what was by now a well-trodden path. The anonymous general Persian history, the *Mudjmal al-tawārīkh* (written 520/1126), contains a list of what the author calls *alḳāb wa kunyat wa tawḳīʿ-i Maḥmūdiyān*, giving Maḥmud of Ghazna's motto as *wa 'llāh huwa 'l-maḥmūd*, that of his son and successor Muḥammad as *tawakkaltu ʿalā 'llāh*, and so forth (ed. M.S. Bahār, Tehran 1318/1939, 428). It then gives a similar list for all the Great Saldjūḳs, beginning with Ṭoghril Beg's *iʿtimādī ʿalā 'llāh* (whose attribution to this ruler is, however, dubious, see Stern, *op. cit.*, 146 and n. 1), and there is similar information on the sultans—with some discrepancies—scattered through Rāwandī's history of the dynasty, the *Rāḥat al-ṣudūr* (see the discussion in Stern, *op. cit.*, 143-7). Even some Saldjūḳ viziers, on the evidence of al-Bundārī, had their mottoes. The practice was transmitted to the dynasties who succeeded the Ghaznawids and Saldjūḳs in the east. Thus the historian of the Khʷārazm Shāhs, al-Nasawī, gives mottoes (*ʿalāmāt*) for ʿAlāʾ al-Dīn Muḥammad and his son Djalāl al-Dīn (*ibid.*, 148-9).

One thus discerns a distinct confusion between the uses of *tawḳīʿ* and *ʿalāma*, whilst, amongst Turkish dynasties, *ṭughrā* subsequently appears as a third designation, although this last is more usually used for an emblem, the successor to a tribal mark (see further, DIPLOMATIC, at vol. II, 303a, 311b; H. Horst, *Die Staatsverwaltung der Grosselğūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 34-6, who notes that, in some documents of the Khʷārazm Shāhs, *tawḳīʿ* also means "seal"). For *tawḳīʿ* = seal (gradually to be replaced by *muhr*) in Turkmen dynasties and Ṣafawid documents, see H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 51.

In the Mamlūk administrative system, *tawḳīʿ* was also used as the name of particular classes of diplomas of appointment, and according to Ibn Faḍl Allāh, it was applied to the diplomas of all officers, the lower as well as the upper, up to the great governors (*nuwwāb*), and therefore became the word most used for appointment generally. A little later it came into use for the appointments of "turban-wearers" (*mutaʿammimūn*), i.e. the *ʿulamāʾ* and *dīwān* officials. According to al-Ḳalḳashandī in his *Ṣubḥ al-aʿshā*, *tawḳīʿ* was the fourth and lowest as well as the most extensive group of diplomas of appointment (*wilāyāt*).

In the Ottoman empire, the imperial edicts were dealt with by a special official, the *nishāndjî* [*q.v.*] or *tewḳīʿī*, who was responsible for the documents bearing the sultan's style and titles. He was one of the highest officials in the kingdom (the *Erkān-i dewlet*) and a member of the imperial *dīwān*. A device written by the sultan himself was no longer in use here; in Ottoman diplomatic *ʿalāmet*, like the Persian word *nishān*, means the imperial sign-manual (the *ṭughrā*), the style of the sultan drawn in the chancery of the *nishāndjî* by a special assistant, the *ṭughrākesh*. *ʿAlāmet* was in this case synonymous with *tawḳīʿ*.

Bibliography: See also W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 152 ff. and index; F. Kraelitz, *Osmanische Urkunden in türkischer Sprache*, Vienna 1921, 18 ff.; and the *Bibls.* to DIPLOMATIC and NISHĀNDJÎ.

2. As a type of script.

The script known as *tawḳīʿ* came into use in the *dīwāns* of the Mamlūks, the Turkmen dynasties and the Ṣafawids, as well as in those of the Ottomans. In it, the letters were compressed and rounded, often with many of the letters not usually joined to a following one, in fact joined up. From the 10th/16th century onwards, it was ousted in the Ottoman administrative departments by the so-called *dīwān* script. See KHAṬṬ. ii. In Persia, and iii. In Turkey, with an illustration of the *tawḳīʿ* script at Pl. XXXV, 4.

TAWḲĪT [see MĪḲĀT].

TAWRĀT (A.), Ḳurʾānic spelling *Twryh*. There are linguistic problems connected with the term, but it is certainly not from Hebr. *Torah*. It may represent a "crossbreed" between Hebr. *Torah* and Aramaic *Ōriyyah*. The term *Twryh*, appears in the Ḳurʾān 18 times, all in sūras from the Medinan period (of these, 13 times in sūras III and V). In half of these verses the word appears together with *Indjīl* [*q.v.*], and both designate two of the pre-Islamic heavenly Scriptures revealed to Jews and Christians respectively. The *Tawrāt* was revealed after the time of Ibrāhīm and Isrāʾīl (III, 65, 93), contains the law of God (V, 48) which the "People of the Book" [see AHL AL-KITĀB] should obey in order to be rewarded in Paradise (V, 65, 66, 67). Those who do not apply the law imposed upon them by the *Tawrāt* are "like an ass carrying books" (LXII, 5); The *Tawrāt* was confirmed by Jesus (see ʿĪSĀ and III, 48, V, 46, LXI, 6) and contains a prediction of the coming of *al-nabī al-ummī*, i.e. Muḥammad (VII, 157). Only one other Biblical book is mentioned explicitly in the Ḳurʾān, the Psalms of David [see ZABŪR], from which one verse is quoted exactly (cf. XXI, 105, with Ps. xxxvii. 29). Other pre-Islamic revelations mentioned include the *Ṣuḥuf Ibrāhīm* and *Ṣuḥuf Mūsā* (LII, 36, and LXXXVII, 19), the latter perhaps being another term for *Tawrāt*.

Actual quotations from the Torah in the Ḳurʾān are very few and inexact (cf. V, 45 with Exod. xxi. 25-6, and III, 87, with Gen. xxxii. 33). Some are taken from other books of the Hebrew Bible (cf. XLVIII, 29, with Ps. i. 3, lxxii. 16, or xcii. 14) and from the Mishna (see v. 32, which gives the original version of Sanhedrin iv. 5). This fact proves that the word had the wide meaning of the whole corpus of Jewish Scriptures, as Torah in ancient Jewish literature itself (see Bacher, *Exegetische Terminologie*, i, 197 ff.), but only late Muslim authors differentiate explicitly between "the wider and the specific meaning" of *Tawrāt* (see Ibn Ḳayyim al-Djawziyya, *Hidāyat al-ḥayārā*, Beirut n.d., 176-7). Some Ḳurʾān commentators and dictionaries acknowledge the foreign origin of the term (see al-Zamakhsharī, to III, 2, and *TʿA*, s.v. *w-r-y*, and cf. A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 95-6).

The Ḳurʾān contains, however, a large amount of repeated Biblical material together with Midrashic elaborations and other additions and adaptations, based on the laws and stories of the Pentateuch and the Former Prophets of the Hebrew Bible (the Later Prophets are unknown to the Ḳurʾān) as well as material from the New Testament, usually without

mentioning an exact source. These were later elaborated upon in Ḳur'ān commentaries, historiographies and in the literary genre of Tales of the Prophets [see ḲIṢAṢ AL-ANBIYĀ'], all of which contain very few exact quotations from the Hebrew Bible but a large amount of Biblical material. The contradictions between the Ḳur'ānic and Biblical stories, and the denial of both Jews and Christians that Muḥammad was predicted in their Holy Scriptures, gave rise to the Ḳur'ānic accusation of the falsification of these last by Jews and Christians respectively [see TAḤRĪF]. Also, according to Muslim theologians, the *Tawrāt* was abrogated and superseded first by the *Indjīl* and then by the Ḳur'ān [see NASKH].

The term *Tawrāt* was apparently known in pre-Islamic times (see the verse attributed to the unknown Jewish poet al-Sammāk, quoted by Ibn Hishām, 659, tr. J. Horovitz, *Jewish proper names*, in *HUCA*, ii [1925], 194, and the verse of Kulayb b. Rabī'a, in Ibn Sa'd, ii/1, 80), but it occurs seldom in pre-Islamic and early Islamic poetry (see e.g. Ibn Hishām, 712: Ḥassān b. Thābit; *Aghānī*,[3] xiii, 265: 'Abd al-Raḥmān b. Ḥakam). The term *Zabūr* [*q.v.*] also occurs in poetry as a general term for pre-Islamic Holy Scriptures.

In the *Ḥadīth*, the term appears frequently, and the *Tawrāt* is usually quoted by well-known personalities such as 'Abd Allāh b. 'Abbās and his disciples or Abū Hurayra, as well as by Jewish converts to Islam or by people of Jewish descent like 'Abd Allāh b. Salām, Ka'b al-Aḥbār and Wahb b. Munabbih. The *Tawrāt* is considered to be the holy scripture revealed to Mūsā, but again, very few quotations are actually based on verses from the Pentateuch or the Hebrew Bible or on sayings from Jewish lore (cf., e.g., al-Tirmidhī, *Sunan, Tafsīr*, on sūra XVII, trad. 12, with Prov. iv. 2). According to a widespread *Ḥadīth*, Muḥammad instructed his followers neither to accept sayings from the *Tawrāt* (translated for them by the *Ahl al-Kitāb*) nor to consider them untrue, but to stick to their own belief (al-Bukhārī, ed. Krehl, e.g. book 97, *Tawḥīd, bāb* 51, or book 65, *Tafsīr* on sūra II, *bāb* 11). Nevertheless, some traditionists are said to have read the *Tawrāt* every week, stating that each time the reading is finished God's mercy comes down (Ibn Sa'd, vii/1, 161).

Most quotations from the *Tawrāt* are not based on any known text, a phenomenon which became more and more widespread in mediaeval Muslim literature and has continued thus up to our times. Muslim authors explain that these unknown, often Ḳur'ānic-like quotations are taken from the "true", unfalsified *Tawrāt*. One can find even whole reconstructions of the "true", uncorrupted *Tawrāt*—sometimes called *Munādjāt Mūsā*—or of the Psalms (see Sadan, in *Bibl.*). On the other hand, Muslim authors used exact or almost exact translations of Biblical verses to prove that Muḥammad was indeed predicted in the Hebrew Bible (and in the New Testament), as stated in sūras VII, 157, and LXI, 6. This theme was apparently developed in Muslim literature by Christian converts to Islam and modelled after the Christian *Testimonia* as an answer to early polemics by Christians. In the *Ḥadīth* literature, the examples are few (see one which echoes faintly Isa. xlii. 2-3, in al-Bukhārī, book 34, *Buyū'*, trad. 50, or book 65, *Tafsīr* on sūra XLVIII, *bāb* 3). An early list of Biblical predictions of the coming of Muḥammad is to be found in the *Risāla* of Ibn al-Layth (*Djamharat rasā'il al-'Arab*, ed. A.Z. Ṣafwat, iii, 308-13), which he composed for Hārūn al-Rashīd and which was directed to the Byzantine emperor, urging him to embrace Islam. Approximately at that time a specific literary genre appeared in Arabic literature called *Dalā'il al-nubuwwa* or *A'lām al-nubuwwa* ("Proofs or signs of prophethood"), which became very popular from the 3rd/9th century onwards. Books belonging to this genre tried to prove the authenticity and validity of Muḥammad's message through stressing the miracles he performed, his unique personality, his worldly success, etc., and the Biblical predictions of his coming. Two of the earliest existing examples of this literature, which contain many Biblical verses explained typologically, are the converted Nestorian 'Alī b. Rabban al-Ṭabarī's [*q.v.*] *K. al-Dīn wa 'l-dawla* (written *ca.* 855, ed. and tr. A. Mingana, *The book of religion and empire*, Manchester 1922, 1923), and Ibn Ḳutayba's *Dalā'il al-nubuwwa*, which has survived only partially in Ibn al-Djawzī's *al-Wafā bi-aḥwāl al-Muṣṭafā*, Cairo 1966, i, 62-72 (see tr. of Ibn Ḳutayba's list of Biblical predictions by C. Adang, *Muslim writers on Judaism and the Hebrew Bible*, Leiden 1996, 267-77). Later Muslim authors follow them with shorter lists of repeated Biblical verses (esp. from Genesis, Deutero-Isaiah and the Psalms), which are taken to predict not only the epithets and the coming of Muḥammad but also the rise and conquests of Islam, its way of worship, the *Ḥadjdj*, etc. (see H. Lazarus-Yafeh, *Intertwined worlds. Medieval Islam and Bible criticism*, Princeton 1992, 75-110).

It is unclear whether mediaeval Muslim authors had direct access to an Arabic translation of the Hebrew Bible. Muslim authors (Ibn al-Nadīm, al-Mas'ūdī, Ibn Ḥazm) knew about early Bible translations—the Samaritan and the "Christian" Septuagint—as well as about Jewish and Christian Arabic translations (Ibn al-Nadīm mentions *inter alios* Saadia and his translation, see *Fihrist*, 23, tr. Dodge, i, 43-5; al-Mas'ūdī, *Tanbīh*, 112 ff., mentions Ḥunayn b. Isḥāḳ, Abū Kathīr of Tiberias and others). They even used them; Mālik b. Dīnār of 2nd/8th century Baṣra visited the library of a Christian monastery for this purpose (see Abū Nu'aym al-Iṣfahānī, *Ḥilyat al-awliyā*, ii, 375, 381). Most of their information, however, seems to have been gathered orally from Jews, up to the 9th/15th century, with the exception of a few Muslim authors like Ibn Ḳutayba and Ibn Ḥazm, who may have had at least parts of the Hebrew Bible in full translation before them (Lazarus-Yafeh, *op. cit.*, 111-29). Only with Burhān al-Dīn al-Biḳā'ī (d. 885/1480) do Bible quotations become exact and lengthy and the whole context of the quoted verses clear (see his 22-volume Ḳur'ān commentary, *Naẓm al-durar fī tanāsub al-āyāt wa 'l-suwar*, Ḥaydarābād 1969-84). On Nadjm al-Dīn al-Ṭūfī's Biblical scholarship, see AL-ṬŪFĪ.

The ambivalent attitude to the *Tawrāt* is apparent also in contemporary Arabic literature. Modern studies still try to prove, with the help of linguistic scholarship, the prediction of Muḥammad in the Bible (e.g. Ḥusām Arshad, *al-Bishāra bi-Muḥammad fī 'l-Tawrāt*, Cairo 1986, based on Ps. lxviii. 5); other studies use modern Bible scholarship to prove that the Pentateuch is composed of different layers and has thus been falsified [see TAḤRĪF].

TAWRĪḲ (A.), the verbal noun from the form II verb *warraḳa*, literally, "the act of putting forth leaves, branches", used as a term of art and architecture in the sense of arabesque, pattern of vegetal adornment and decoration. *Al-tawrīḳ* was taken into mediaeval Spanish usage as *ataurique*, whence Pedro de Alcala's definition *pintura de lazos morisca*, tavrîq (Dozy and Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'Arabe*², Leiden 1869, 214). See further, ARABESQUE. (Ed.)

TAWRIYA (A.), also called *īhām*, roughly "double entendre", "Doppelsinnwitz", a frequently discussed figure in Arabic literary theory. Based on *ishtirāk*, homonymy, the figure depends on the "nearer" meaning (*maʿnā ḳarīb*) of a noun, adjective, or a verbal form "hiding" (*warrā*) the "farther" meaning (*maʿnā baʿīd*) intended by the poet. Personal names and place names may also hide this farther meaning. The *tawriya* is also known by a confusing number of other names: *tawhīm*, *takhyīl* [*q.v.*], *tawdjīh*, *mughālaṭa maʿnawiyya*, etc.

Probably the first scholar to devote a monograph to the *tawriya* was al-Ṣafadī (696 or 697-764/1296-7-1363; see S.A. Bonebakker, *Some definitions of the Tawriya and Ṣafadī's Faḍḍ al-xitām ʿan at-tawriya wa-'l-istixdām*, The Hague 1966 (here abbreviated *B.*). Al-Ṣafadī distinguishes four types: the *tawriya mudjarrada* or "bare *tawriya*" where the context of the homonym does not show "adjuncts", "attributes" (*lawāzim*; others: *ḳarā'in*, *B.* 15 ff., 57, 60, 75), i.e. elements in the context which point to either of the two meanings of the term on which the *tawriya* is based; the *murashshaḥa*, which contains attribute(s) supporting the *maʿnā ḳarīb* (or *al-muwarrā bihī*), which is *not* intended by the poet; the *mubayyana* supporting the meaning that is actually intended (*maʿnā baʿīd* or *al-muwarrā ʿanhu*); and, finally, the *muhayya'a*, which contains what is needed to discover the *tawriya* which would otherwise not be clear.

Al-Ṣafadī's theories and his four subdivisions were apparently not fully shared by other scholars, as appears, for instance, from Badr al-Dīn Ibn Mālik (d. 686/1287), *Miṣbāḥ*, Cairo 1341/1923, 119-20; *B.* 55, which actually preceded al-Ṣafadī's work, and from studies by later authors such as al-Ḳazwīnī (d. 739/1338-9), *Talkhīṣ al-miftāḥ*, in *Shurūḥ al-talkhīṣ*, Cairo 1317-9/1897-1901, iv, 332-6 (*B.* 57-9); [al-Ruʿaynī] al-Andalusī's (d. 779/1377) commentary on Ibn Djābir *apud* al-Suyūṭī, *Sharḥ ʿuḳūd al-djumān*, Cairo 1358/1939, 115 (*B.* 15-6 n. 17); ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731), *Nafaḥāt al-azhār*, Cairo 1341, 76-7 (*B.* 104); this is best illustrated by discussions on the rationale of al-Ṣafadī's theory of the *tawriya mudjarrada*, see W. Heinrichs, in *Oriens*, xx [1968-9], 399-403, see also 403-7 (important review of the *tawriya* theory); and *B.* 15-7. See also Ibn Maʿṣūm, *Anwār al-rabīʿ*, ed. Sh.H. Shukr, Nadjaf 1388-9/1968-9, v, 5-15 who takes issue with several of his predecessors.

The first author to deal with the *tawriya* may have been Usāma b. Munḳidh (d. 584/1188), *al-Badīʿ fi 'l-badīʿ*, ed. ʿA.ʿA. al-Muhannā, Beirut 1407/1987, 97-8, but he does not discuss the figure in great detail. The same is true of the Persian-Arabic *Ḥadā'iḳ al-siḥr* by Rashīd al-Dīn Waṭwāṭ (d. 578/1182-3), ed. ʿAbbās Iḳbāl, 39-42, who uses the term *īhām*. Both authors offer interesting examples.

Some scholars tried to find examples of the *tawriya* in ancient poetry or interpreted as *tawriyas* examples from the Ḳur'ān, such as *al-Raḥmānu ʿalā 'l-ʿarshi 'stawā*, (Ḳur'ān XX, 5) where *istawā* is supposed to have the meaning of "dominating", "possessing", not "settling in a place", ruled out since this would lead to anthropomorphism, see Ibn Ḥidjdja (d. 837/1434), *Khizānat al-adab*, Cairo 1304/1886-7, 240; *B.* 24-7, see also 101-3.

A related figure is the *istikhdām* (*B.* 18-20, 30-1), based on a compound sentence where the main clause and the subordinate each "make use of" one of the double meanings of the term on which the figure depends, e.g. *waswās* "confusion, perplexity" and "jingling" of ornaments, in *wa-idhā mashat tarakat bi-ṣadrika ḍiʿfa mā bi-ḥuliyyihā min kathrati 'l-waswāsī* where "confusion" applies to the heart, and "jingling" to the ornaments (*ḥuliyy*).

The *tawhīm* (false suggestion) and the *ibhām* (amphibology; *B.* 20, 22, 52-3) in their proper sense stand, strictly speaking, in no relation to either the *tawriya* or the *istikhdām*, but are often mentioned in connection with it. There exists, however, a *tawhīm al-tawriya* or *īhām al-tawriya* (*B.* 22, 29-30) "suggesting a *tawriya*" where the poet falsely creates the impression that his line of poetry contains a *tawriya*. This possibility suggests implicitly that the critics did not accept a *tawriya* or *istikhdām* that was not clearly supported by the context.

ṬĀWŪS, Ṭāʾūs (a.), masculine substantive (pls. *ṭawāwīs, aṭwās*) drawn from the Greek ταώς and denoting the peacock (*Pavo*) of the family of the Phasianidae, originally from Asia and comprising four species: (a) the blue peacock (*Pavo cristatus*); (b) the spiciferous peacock (*Pavo muticus*); (c) the Congo peacock (*Afropavo congensis*); and (d) the black peacock (*Pavo nigripennis*).

1. In Muslim lore.

This attractive and majestic large-tailed bird, an attribute in Greek and Latin Antiquity of the goddess Hera/Juno, was of no interest to the Arabs other than in the magnificence of its plumage, since it was regarded as maleficent and inauspicious; according to some beliefs, it is said to have been the cause of the entry of the Devil into Paradise and of the expulsion of Adam, with the injunction that he was never to return there for the whole duration of the terrestrial world; for this reason, the keeping of peacocks was not recommended. Furthermore, according to al-Damīrī, it is said that when Adam planted the vine, Satan came, cut the throat of a peacock over the plant and drank the bird's blood. When the vinestock sprouted foliage, the devil slaughtered a monkey there and drank its blood. When the grapes appeared, the demon slaughtered a lion there and drank its blood. When, finally, the grapes reached maturity, Satan slaughtered a pig there and drank its blood; this explains why one who is addicted to wine acquires the attributes of these four animals. Thus when he begins to drink he is soon crawling on hands and knees, his complexion becomes bright and he acquires the beauty of the peacock. But as the first symptoms of intoxication become evident, he waves his arms and dances like a monkey; as his intoxication increases, he adopts the behaviour of a lion, roaring and incapable of following a consistent line of thought. Finally, when thoroughly inebriated, he wallows like the pig, helpless and drifting into sleep.

Two proverbs summarise the Arab world's opinion of this beautiful bird; one is *azhā* or *aḥsan min ṭāwūs* "more magnificent than a peacock!", while the other introduces a gloomy prophecy with *as̲h̲ʾam min ṭāwūs* "more ill-omened than a peacock!".

In his *Kitāb al-Ḥayawān*, as quoted by al-Damīrī, al-D̲j̲āḥiẓ gives some observations of the behaviour of peacocks. The peahen begins laying at three years of age; her clutch may be from five to twelve eggs. The male, driven by erotic fever and jealousy, may go so far as to break the eggs with violent pecking; he also often entrusts the clutch to a hen until the hatching of the chicks. Mating takes place in the spring. The peacock, justly nicknamed *Abu 'l-was̲h̲y* "he of the splendid coat", loses its livery in the autumn and regains its brilliant plumage in the spring, thus following the cycle of the leafing of trees.

In the Middle Ages, by contrast with Muslim opinion, Christianity showed a high regard for the peacock, calling it "the noble bird" and considering its meat "the food of the valiant"; thus, when carving the roasted bird, the knight enunciated the "vow of the peacock" or "vow of courage" or even "vow of love". In heraldry, the peacock was represented as "rouant", i.e. "making a wheel" or "peacocking" with the spreading of the variegated fan of its tail. In decorative art, the peacock was a motif often reproduced as an adornment on objects and for Christians it was a symbol of the Resurrection. In gastronomy, as it had been among the Romans, the meat of the peacock was considered a choice dish; Muslim opinion was somewhat divided as to the permissibility of consuming this meat, but as a general rule it was allowed in Sunnī circles.

Despite these disagreements, Arab naturalist authors who wrote on the subject attribute to the peacock certain specific qualities. Thus the peacock willingly kills venomous snakes and begins to dance, spreading wings and tail, when it senses a poisoned dish. The flesh of the peacock, which doctors proscribed on account of its heaviness, needed soaking in vinegar; it was reckoned to be an aphrodisiac and a treatment for maladies of the joints. The marrow of the bones mixed with honey was believed to cure colic and other stomach ailments. Similarly, the blood mixed with honey, gall and vinegar was a remedy for abdominal complaints and, mixed with salt, it was an effective ointment for the healing of purulent boils. Finally, the excrement of the peacock, when roasted and pulverised, constituted a powder effective in the removal of freckles from the face.

In oneiromancy, seeing a peacock in a dream would foretell an advantageous marriage with a stranger; it would also guarantee successful progeny.

On the description of the peacock in poetry, see e.g. al-Nuwayrī, *Nihāyat al-arab*, x, 216-17. On Malak Ṭāwūs, the Peacock Angel, see yazīdiyya.

From the same root (*ṭ-w-s*) is derived the word *ṭāwūsiyya*, denoting, from the family of Saturnidae, the greater peacock moth (*Saturnia pyri*) and the lesser peacock moth (*Saturnia pavonia*) and from the family of Nymphalidae, the peacock butterfly (*Vanessa io*).

(F. Viré)

2. In art.

The splendid plumage of the male peafowl, whose colourful tail can be expanded erect like a fan, was a recurring motif in Islamic art since its very beginning. Taken over from Persian Sāsānid representations, particularly textiles and precious metals, the bird was depicted in nearly all media, and is always recognisable by its crest of three dots on short stems and its tail. In the majority of cases, the bird is shown either single or in antithetical pairs. In the last case, the long necks may be intertwined. The beauty of the tail, which often had royal or paradisiacal connotations, is enhanced in configurations in which the bird is shown *en face* with the tail deployed. Because of its symbolic meaning, the tail was also attached to other creatures like al-Burāḳ [*q.v.*], the Sīmurg̲h̲ [*q.v.*] or a harpy.

The beauty of the bird made it particularly suitable for decorative purposes. Single peacocks with raised, ovoid tails covered with "peacock eyes" occupy the inside of some 9th to 10th century Mesopotamian lustre painted bowls or fill the centre of the medallions of a 10th century Spanish textile fragment. They figure on Eastern Iranian and Sāmānid pottery, on 12th century North Persian champlevé dishes, on pot-

tery vessels manufactured in 12th to 14th century Persian workshops; in Turkey it remained a popular ornament as late as the 18th to 19th centuries. Similarly antithetical peacocks, facing a central design or linked by their necks, begin to decorate art objects from *ca.* the 9th century onwards. On one of the earliest examples—a Persian bronze ewer in the Hermitage on which they form its sole decoration—they face a palm tree, pick at one of its leaves and deploy their tails as if to reveal all their beauty. Often shown with intertwined necks they were a popular motif on Spanish Umayyad ivories, Ṭā'ifa period stone carvings and Almoravid silks. The most impressive of the latter is a chasuble in Toulouse, the Basilica of St. Sernine, on which the deployed tails of each pair form roundels which, horizontally aligned, are woven in different colours.

Since among all the birds only the male peafowl can expose its colourful tail feathers in a complete fan, Hispano-Islamic, and particularly Persian artists also depicted this ostentatious display. On the ivory pyxis of al-Mug̲h̲īra (357/968), this pose occurs twice, once in the upper register between the main medallions on the body of the pyxis, and again on the domed lid. On the body, the stately peacock, seen *en face*, is flanked by two peahens, while on the domed lid two peacocks with deployed tails face each other.

In Persia, the earliest examples are paintings on the inner walls of the K̲h̲arrāḳān tomb tower, dated 460/1067-8. A gold coin of the founder of the Ḳād̲j̲ār dynasty, Ag̲h̲a Muḥammad K̲h̲ān, minted in Iṣfahān in 1210-11/1795, ranks among the latest specimens which portray the bird *en face*.

In mediaeval Islam, the peacock was associated with (a) royalty; (b) the prophet Sulaymān [*q.v.*], and (c) light and paradise. Al-Damīrī, in his dream interpretation, refers to al-Maḳdisī, according to whom the [peacock] indicates a "foreign" (Persian) king, and a dream about friendly relations with peacocks promises brotherly relations with the king of Persia. Thus many Persian 12th to 13th century ceramics depict an enthroned royalty with one or two peacocks in front or behind his throne. The same idea recurs in illustrated manuscripts. On the frontispiece of Sa'dī's *Bustān* in the Bodleian Library (ms. Fraser 73, fol. 2a, *ca.* A.D. 1515), one of the two genii who hovers over the canopy of an enthroned prince carries a peacock. Or, in a fragmentary *S̲h̲āh-nāma* manuscript from *ca.* 1590-1600 (Dublin, Chester Beatty Library, Cat. no. 277), the picture of a peacock with deployed tail is shown above the seat of Farīdūn. A striking example of the close relation between Persian kingship and the bird is the gold coin of Ag̲h̲a Muḥammad K̲h̲ān, mentioned above, that shows a peacock with a huge deployed tail on its obverse. Finally, one is reminded of the famous "Peacock Throne" in Tehran, which almost certainly received its name from its precious stones, that suggested the plumage of the peacock [see further, TAK̲H̲T-I ṬĀWŪS].

The connection between the peacock and the throne of Sulaymān is referred to already by al-T̲h̲a'labī, who describes his throne as being surrounded by four golden palm trees, on the branches of which sit golden peacocks and eagles. In particular, 15th to 16th century S̲h̲īrāz manuscripts show Sulaymān enthroned like a Persian king, with an angel holding a peacock over his head, or with peacocks sitting in front of or behind his throne.

The association of the peacock with light, paradise and the Afterlife is suggested by paintings which depict the bird in conjunction with motifs that conjure up similar ideas. In the wall paintings inside the K̲h̲arrāḳān Tomb Tower, for example, peacocks enclosed in sun-disk-like medallions that alternate with six- and eight-pointed stars, were almost certainly meant to convey wishes for a heavenly abode. This also seems to explain the peacocks at the portal of the tombchamber of Hārūn-i Wilāya at Iṣfahān. Similarly, in numerous *Manṭiḳ al-ṭayr* manuscripts, large, colourful peacocks in assembly with other birds represent the "search for God".

Bibliography: A monograph on the peacock remains to be written. For numerous examples, see Ingeborg Luschey, *The pictorial tile cycle of Hašt Behešt in Isfahan and its iconographic tradition*, Rome 1978, 159-69. For the peacock tail, see Eva Baer, *Sphinxes and harpies in medieval Islamic art*, Jerusalem 1965, index. (EVA BAER)

ṬĀWŪSIYYA, a heterodox S̲h̲ī'ī sect of the later 19th and early 20th centuries in Persia. It is named after a certain Ag̲h̲ā Muḥammad Kāẓim Tunbākū-furūs̲h̲ of Iṣfahān, known as *Ṭāwūs al-'urafā'*, "Peacock of the (Ṣūfī) initiates" from his elegant dress, who broke away from the Ni'mat-Allāhiyya [*q.v.*] Ṣūfī order. On the death of Raḥmat 'Alī S̲h̲āh S̲h̲īrāzī, who represented the Ni'mat-Allāhīs in Iṣfahān, Ṭāwūs refused to recognise his successor there, and, on his expulsion from Iṣfahān in 1281/1864-5, moved to Tehran, dying there in 1293/1876.

He was succeeded as *ḳuṭb* of the group which had formed around him by one Ḥād̲j̲d̲j̲ī Mullā Sulṭān Gunābādī, who may be considered as the real founder of the Ṭāwūsiyya. He had studied at Mas̲h̲had and the *'atabāt* of 'Irāḳ; he had taught at Tehran, but had fallen under suspicion for alleged Bābī sympathies; and then later, he joined Ag̲h̲ā Muḥammad in Iṣfahān. Dying in 1327/1909, he was succeeded by his sons Nūr 'Alī S̲h̲āh and Ṣafī 'Alī S̲h̲āh.

Ḥād̲j̲d̲j̲ī Mullā Sulṭān's Ṣūfī doctrines involved three stages of teaching, from initiation to perfection, on the evidence of his disciple Ḥād̲j̲d̲j̲ī S̲h̲ayk̲h̲ 'Abbās 'Alī Kaymān (whose works, including the *Kitāb-i rāz-gus̲h̲ā ki pāsuk̲h̲-i pand̲j̲āh pursis̲h̲ ast*, written in Tehran in 1350/1931-2 and published there around the same time, are an important source for the sect). In the first, he merely regarded himself as a learned man, to be imitated as a *mard̲j̲a' al-taḳlīd* [*q.v.*]; in the second, he claimed the imāmate; and in the third stage he claimed, by allusion and suggestion rather than directly, quasi-divine powers as the appointed representative of God on earth, designated for every age, the *muk̲h̲-tār-i muṭlaḳ* "Supremely Chosen One", who is called *payg̲h̲ambar, imām, ḳuṭb, g̲h̲awt̲h̲*, etc. The degrees of initiation amongst the Ṭāwūsiyya were certainly Ṣūfī in nature, but Ḥād̲j̲d̲j̲ī Mullā Sulṭān himself claimed to synthesise the religions of the whole world.

As for Ṭāwūsī ritual, it presents certain features which relate it to the Ahl-i Ḥaḳḳ [*q.v.*]. Notably, during the ceremony of initiation (*tas̲h̲arruf*) in the presence of the *dalāl*, initiator, followed by *bay'at* of the *murīd* alone with the *ḳuṭb*, the initiate contracts several obligations: obedience, charity, secret of the *d̲h̲ikr*, service for 12 years; presentation of the *dīg-i d̲j̲ūs̲h̲* (boiling pot), and offers five things: nuts, a ring, a coin, a piece of cloth and sweet-meats (which have acquired a particular virtue). The custom of *dīg-i d̲j̲ūs̲h̲* (boiled meat presented by the *murīd*, who carries the boiling pot on his head to the *ḳuṭb* who distributes it to his guests) exists, says S̲h̲ayk̲h̲ Kaywān, among the 'Alī-Ilāhīs. "It is the custom for them to carry once a week the boiling pot to their superior, to make up for prayer omitted and as soon as the superior

1. Peacocks facing palm tree. Bronze ewer, 9th to 10th century. Hermitage, St. Petersburg.

2. Peacocks with intertwined necks. "Pila of Jativa". Spain, *ca.* mid-11th century.

3. Peacock with deployed tail. Detail from frontispiece of Farīd al-Dīn ʿAṭṭār's *Manṭiḳ al-ṭayr*, painted about 1600. New York, Metropolitan Museum of Art.

says "thy gift is accepted", the omitted prayer becomes accepted by the Lord. They call this custom *niyāz*, offering, as distinct from *namāz*, prayer. Hast thou said thy prayer? No, but I have offered *niyāz*." Among the Ṭāwūsiyya the custom of *dīg-i djūsh* seems to be connected with the custom, called *ʿaḳīḳa* [*q.v.*], on the seventh day after the birth of a child, when the parents sacrifice a lamb and give the meat to the poor. Here we have the comparison between the new-born child and the initiate, the latter receiving a new soul.

As to the term *niyāz*, the Ṭāwūsiyya have it also, but it is applied to an assembly in which there is no offering but which has a very elaborate ritual, not only of participation in preparation but also the actual ceremony itself, of which Kaywān refuses to give the real significance. He says, among other things, that the ʿAlī-Ilāhīs and the Ṣūfīs "are in the same valley". The former, observing *ḥaḳīḳat*, are, however, superior to the latter who stop at *ṭarīḳat*. Formerly, the rite of "breaking the nut" (*djūz shikastan*) was performed by the superior of the ʿAlī-Ilāhīs alone and the Ṣūfī *ḳuṭbs* had to give him for this purpose the nuts received from the disciples. Connections with the Ahl-i Ḥaḳḳ must not be neglected, in spite of the differences which are also to be noted, remembering the part played by Bābā Ṭāhir among the Ahl-i Ḥaḳḳ, as one of the divine manifestations, and the fact that Mullā Sulṭān ʿAlī Gunābādī is the author of commentaries in Arabic and Persian on the work of Bābā Ṭāhir [*q.v.*]. F.M. Stead, in *MW* (1932), 184-9, even mentions "one of the branches of the ʿAlī Ilāhī Cult, known as the Tausi or Peacock sect ... venerates the devil", but this would suggest rather a connection with the Yazīdīs [see YAZĪDIYYA], of which we have been unable to find any indication. The Ṭāwūsī teaching has, on the contrary, so far as we can judge, been strongly influenced by Bābī conceptions (the charge made against Ḥādjdjī Mullā Sulṭān was perhaps not entirely without foundation), and in consequence affords us a typical example of modern heterodox syncretism in Shīʿī circles, which has assimilated in its own way Ṣūfī, ʿAlī-Ilāhī and Bābī ideas.

Bibliography: The above is based essentially on the works of Shaykh Kaywān. (B. NIKITINE*)

TAWWĀBŪN (A.) "penitents", the self-imposed title of an early Shīʿī movement that arose in response to the defeat and martyrdom of Imām Ḥusayn and his companions at Karbalāʾ in 61/680. The movement was led by five former close associates of ʿAlī, chief of whom was Sulaymān b. Ṣurad, whose honorific *shaykh al-shīʿa* suggests his prestige among his fellows, mostly elderly Arab males of Kūfa. This cohort of one hundred men over sixty felt a profound sadness and guilt for not having either been able or sufficiently willing to support Ḥusayn and his comrades at Karbalāʾ. Scholarly consensus holds that the *Tawwābūn* were a genuinely religious society who vowed revenge for Ḥusayn's blood or death as martyrs in the process of atoning for the ignominious loss of their hero at the hands of the Umayyads.

For three years the movement remained underground, but with the death of the Umayyad caliph Yazīd in 64/683 and the political confusion that followed, Sulaymān b. Ṣurad saw a chance for action. He gathered his followers and persuaded many new people to join the movement. Although 16,000 volunteers pledged support, when the time arrived for battle against the 30,000 troops of the Umayyad governor in ʿIrāḳ, ʿUbayd Allāh b. Ziyād [*q.v.*] (who had been responsible for the Karbalāʾ massacre), only 4,000 (all Arabs, with no *mawālī*) gathered at Nukhayla near Kūfa in Rabīʿ II 65/November 684 in support of Sulaymān b. Ṣurad and his leadership circle, pledging "revenge for the blood of Ḥusayn." Soon the force was reduced by absentees to 3,000. Sulaymān b. Ṣurad led the *Tawwābūn* first to Karbalāʾ, where great lamentation was raised (and the ritual visit to Ḥusayn's burial place was instituted). Sulaymān b. Ṣurad's forces then advanced, finally engaging the Umayyads at ʿAyn al-Warda, near the Syrian border. A three-day battle broke out on 22 Djumāda I 65/ January 685 with the *Tawwābūn* crying "Paradise! Paradise for the Turābīs!" (al-Masʿūdī, ed. Pellat, iii, § 1980; Jafri, 231-2, 234; "Turābīs" = followers of ʿAlī, whose *kunya* was Abū Turāb). Sulaymān b. Ṣurad was the first of the leaders to fall and at the end only a few *Tawwābūn* survived.

Bibliography: The main source, quoted at length by al-Ṭabarī, is the respected ʿIrāḳī historian Abū Mikhnaf (d. 157/774). See Balādhurī, *Ansāb*, v, 204 ff.; Ṭabarī, ii, 497 ff., tr. G.R. Hawting, *The History of al-Ṭabarī*, xx, Albany 1989, 80-97, 124-59; Masʿūdī, *Murūdj*, ed. Pellat, iii, §§ 1976-82; J. TAWWADJ, TAWWAZ, a town in the western part of the mediaeval province of Fārs in Persia. It lay on or near the Shāpūr river midway between Kāzarūn [*q.v.*] and the Gulf coastland, but the place fell into ruin by later mediaeval times and its site is no longer known for sure. For further details on the town, see SHĀPŪR, river, to whose Bibl. should be added Sir Arnold Wilson, *The Persian Gulf*, London 1926, 74-5; J. Markwart-G. Messina, *A catalogue of the provincial capitals of Ērānshahr*, Rome 1931, 94-5; Barthold, *An historical geography of Iran*, Princeton 1984, 163. (C.E. BOSWORTH)

TAWZAR [see TŪZAR].

AL-**ṬAYĀLISĪ**, ABŪ DĀWŪD SULAYMĀN b. Dāwūd b. al-Djārūd, famous Baṣran collector of *ḥadīth* [*q.v.*], nicknamed "the mountain of knowledge", who died in 203 or 204/819-820 at the age of *ca.* seventy years. He was a *mawlā* of the clan of al-Zubayr b. al-ʿAwwām [*q.v.*] and originally hailed from Persia. He is said to have owed his *nisba* to his custom (?) of wearing a certain Persian upper garment or hood (*ṭaylasān*, pl. *ṭayālisa*), a scarf-like wrapper worn around the head and neck, but the *nisba* more obviously relates to a maker or seller of *ṭaylasāns*, the cowl worn by scholars. He was renowned for his memory; he boasted that he could recite 30,000 traditions without pause. He was especially acclaimed for the many traditions he said that he had learned with Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]), the greatest Baṣran traditionist of his time. Al-Ṭayālisī died after drinking a medicine made of the semecarpus anacardium nut (*balādhur*, cf. Steinschneider in *WZKM*, xi [1897], 319, no. 315).

Al-Ṭayālisī is particularly famous for his collection of traditions, called the *Musnad*. It is preserved in an ancient Ḥaydarābād edition of 1321/1903 which contains 2,768 traditions, some two dozen of which strike one by their remarkable length. Since this number is positively modest in comparison with the figures of tens of thousands of traditions which all the sources

agree in attributing to him, it could be maintained that what we have in that *Musnad* does not constitute the entire collection but is only that part comprising solely prophetic traditions transmitted with more or less uninterrupted *isnād* strands by Companions, the so-called *musnad* [*q.v.*] strands. When his *Musnad* is compared with the collections entitled *Muṣannaf* made by his younger colleagues ʿAbd al-Razzāḳ al-Ṣanʿānī (d. 211/827 [*q.v.*]) and Abū Bakr b. Abī S̲h̲ayba (d. 235/849 [*q.v.*]), each of which does indeed contain several tens of thousands of reports, the surmise is tenable that al-Ṭayālisī's *Musnad*, as we have it now, is a collection from which all the reports supported by less well-attested *isnād* strands have been removed according to the *isnād* criteria of post-classical times: it does not contain Companion reports (*mawḳūfāt*), hardly any Successor reports of the type called *mursal* [*q.v.*] and no personal opinions of early *fuḳahāʾ* that go by the term *aḳwāl*, all three categories occurring in abundance in the *Muṣannaf*s mentioned. Although this is not substantiated in the Ḥaydarābād edition or anywhere else as far as can be ascertained, al-Ṭayālisī's *Musnad* as we have it now may be an anonymously abridged version of an original corpus several times the size of the present *Musnad*, a corpus that is apparently no longer extant. But what this presumably larger collection may have contained in addition to the Ḥaydarābād *Musnad* is not entirely lost: Ibn Abī S̲h̲ayba's *Muṣannaf* quotes dozens of reports on the authority of al-Ṭayālisī which cannot be traced in his *Musnad* and which may therefore conceivably have been part of the massive original. Since he allegedly relied so heavily on his memory, a certain number of mistakes he made in *isnād*s were imputed to him (only ten out of 40,000, according to some authorities), but they did not damage his overall reputation too much.

Bibliography: Ibn Ḥad̲j̲ar al-ʿAsḳalānī, *Tahd̲h̲īb al-tahd̲h̲īb*, Ḥaydarābād 1325, iv, 182-6; Mizzī, *Tahd̲h̲īb al-kamāl*, ed. R.ʿA. Maʿrūf, xi, 401-8; for some of al-Ṭayālisī's mistakes, see ʿAbd Allāh b. ʿAdī al-D̲j̲urd̲j̲ānī, *al-Kāmil fī ḍuʿafāʾ al-rid̲j̲āl*, ed. Beirut 1988[3], iii, 278-81, and al-K̲h̲aṭīb al-Bag̲h̲dādī, *Taʾrīk̲h̲ Bag̲h̲dād* ix, 24-9. His *Musnad* was edited again with the traditions arranged according to *fiḳh* chapters by Aḥmad ʿAbd al-Raḥmān al-Bannā al-Sāʿātī as *Minḥat al-maʿbūd fī tartīb musnad al-Ṭayālisī Abī Dāwūd*, 2 parts in 1, Cairo 1372/1952.

(G.H.A. Juynboll)

AL-ṬAYĀLISĪ, D̲j̲aʿfar b. Muḥammad [G̲h̲ulām T̲h̲aʿlab] b. D̲j̲aʿfar [b. Ḥātim al-Wāsiṭī], a philologist, who lived in the middle of the 4th/10th century. A pupil of the Kūfan and Baṣran schools of philology, he probably was a son of the *g̲h̲ulām* T̲h̲aʿlab Abū D̲j̲aʿfar Muḥammad b. D̲j̲aʿfar (d. 327/938-9; Yāḳūt, *Irs̲h̲ād*, vi, 464). He was connected directly with Ibn Durustawayh (d. 346/957 [*q.v.*]) and to Abū ʿUmar Muḥammad b. ʿAbd al-Wāḥid [al-Zāhid al-Muṭarriz] (d. 345/957), another close pupil (*g̲h̲ulām*) of T̲h̲aʿlab's [*q.v.*].

His small work *Kitāb al-Mukāt̲h̲ara ʿinda 'l-mud̲h̲ākara* shows al-Ṭayālisī as a talented beginner. In a short introduction, he explains that it is his intention to present poets with similar names (*ism*) or surnames (*laḳab*) (87 of the former and 32 of the latter from pre-Islamic and Islamic times) with the purpose of distinguishing them from well-known bearers of this name or surname. He begins with the famous al-Aʿs̲h̲ā Maymūn b. Ḳays [*q.v.*] and adds 15 other bearers of this *laḳab*, together with verses and anecdotes, but omits, for example, the well-known Aʿs̲h̲ā Hamdān [*q.v.*]. The number of verses given by him which are otherwise unknown is not without importance. In the course of the work, the articles become shorter, to end as simple lists of names. The longest article is that on ʿUmāra (no. 56), a great-grandson of the poet D̲j̲arīr [*q.v.*]; it contains information on Wāsiṭ [*q.v.*] and on poems by Jews. A first, inadequate, edition after a modern copy (1317/1899) of an old manuscript (614/1217), was published by R. Geyer in *SB AK. Wien*, cciii (1927), Abh. 4; M. Tāwīt al-Ṭand̲j̲ī published a second edition, based on the old manuscript and on an even older one (523/1129), in *Şarkiyat Mecmuası* (Ankara), i (1956), Appendix.

Bibliography: Brockelmann, S I, 43, 184; Sezgin, ii, 97, 101, 247. (R. Sellheim)

TAYAMMUM (a.), the recommendation or permission to perform the ritual ablution with sand instead of water in certain cases, is based on two passages in the Ḳurʾān, IV, 43/46 and V, 7/9. The latter passage runs as follows: "And if you are in a state of impurity (*d̲j̲unub*[an]) purify (*fa-ṭṭahharū*) yourselves. But if you are ill, or on a journey or if you come from the privy or you have touched women and you find no water, take fine clean sand (*ṣaʿīd*[an] *ṭayyib*[an]) and rub your faces and hands with it." Sūra IV, 43/46, is nearly identical except that the phrase "with it" is lacking from the sentence "and rub your faces and hands with it". According to the S̲h̲āfiʿīs (see al-Bayḍāwī on IV, 46), "with it" means that there must be some sand in the hand. The Ḥanafīs, on the other hand, consider the rite valid even if the hand has only been touched by a smooth stone. The word seems to have as its root-meaning "intention, desire" (see Lane, s.v. ʾ-*m*-*m*), and is regarded as "weaker" than either the *g̲h̲usl* or the *wuḍūʾ* (al-Ḥalabī, *Multaḳā al-abḥār*, Beirut 1409/1989, i, 30, commentary).

Drawing from the *Mīzān al-kubrā* of al-S̲h̲aʿrānī (Cairo 1279, i, 143 ff.), the points of difference between the *mad̲h̲hab*s may be summed up as: *a*) the material (earth, sand, etc.); *b*) the obligation to look for water; *c*) the question how far face and hands are to be rubbed and into what legal categories these rubbings fall; *d*) the question what one should do if one finds water after he has already begun the *ṣalāt*; *e*) the question whether a single *tayammum* suffices for two *farḍ* rites; *f*) the question whether one who has performed the *tayammum* before his *ṣalāt* may act as *imām* for a person who has performed the ablution with water; *g*) the question whether *tayammum* is permitted before the *ṣalāt* at festivals and for the dead, if one is not on a journey; *h*) the question whether one who is not travelling, and has difficulty getting water for a *ṣalāt*, the legal time for which is about to expire, should repeat the *ṣalāt* performed after *tayammum* as soon as he has found water; *i*) the question whether it is permitted to use the little water one has for a partial washing and do *tayammum* for the rest; *j*) the question of what is to be done in cases of injury; *k*) the question whether the *ṣalāt* is to be repeated in four cases in which it has been performed after *tayammum*.

There is agreement among the *mad̲h̲hab*s on the point that *tayammum* is only performed for the face or hands, regardless of whether the Muslim is *muḥdit̲h̲* [see ḤADAT̲H̲] or *d̲j̲unub*; whether it occurs in place of a washing of all or any parts of the body is a matter of indifference (al-Nawawī, on Muslim, *Ṣaḥīḥ*, Cairo 1283, i, 406).

In the *Talmud* (*Berakot*, fol. 15a), a permit to use sand in case of want of water similar to that of the Ḳurʾān is given, and Cedrenus, *Annales*, ed. Hylander, Basle 1556, 206, tells how on an occasion in a journey

through the desert, Christian baptism was performed with sand.

(A.J. Wensinck-[A.K. Reinhart])

ṬAYBA [see al-Madīna].

ṬAYF al-KHAYĀL (a.), "the vision of the beloved", a motif of classical Arabic poetry. The two terms are explained as synonyms denoting an "apparition" or "phantom" coming in sleep. *Ṭayf* is derived from *ṭ-y-f/ṭ-w-f* "to move" or "move around". *Khayāl* (rarely *khayāla*, pl. *khayālāt*), from *kh-y-l* "to surmise" or "create" an image in one's fancy of a thing, basically means "an incorporeal form or image" (Lane, ii, 385c), anything seen indistinctly like a shadow. The terms occur separately, as a rule. Their combination first appears in Islamic texts and is sometimes reversed (*khayāl al-ṭayf*).

The original structure of the motif in the *nasīb* [*q.v.*] of the *Djāhiliyya* [*q.v.*] appears to be as follows: The poet on his desert journey rests at night. His companions are asleep, but he keeps awake or is awakened and suddenly perceives the fleeting image of his beloved, whose tribe dwells far away. He is startled, even frightened, and ponders how she was able to cross the mountains and deserts separating them. Emotions of longing and sorrow are evoked, but eventually he recovers and sends the *ṭayf al-khayāl* back. Mediaeval and modern scholars alike explained the *ṭayf al-khayāl* as a vision in a dream. However, several elements in the narrative, e.g. the poet's reaction and the deceptive character of the phenomenon, suggest that originally the *ṭayf al-khayāl* was conceived as an apparition confronting the poet in the external world (cf. R. Jacobi, *The Khayāl motif in early Arabic poetry*, in *Oriens*, xxxii [1990], 50-64). This interpretation agrees with the etymological evidence and with the function of the pre-Islamic *nasīb*, to free the poet from his emotional involvement in a past love affair.

Since the early Islamic period, the *ṭayf al-khayāl* is described by poets as a vision in a pleasant dream. The motif is favoured in Umayyad poetry and elaborated in accordance with a new ideal of love, i.e. constancy after separation. In the *nasīb* of the panegyrical *ḳaṣīda* [*q.v.*] the original narrative is changed in several ways. Poets now dwell on the beauty of the "vision", the pleasures of love enjoyed while asleep, and the disenchantment in the morning. They sometimes introduce elements of the *raḥīl* [*q.v.*] to the patron or use the motif as a transition (*takhallus*) to the following section of the ode [see nasīb]. *Ghazal* [*q.v.*] poets, on the other hand, concentrate on its psychological aspects and praise the *ṭayf al-khayāl* as the only means of communication between lovers kept apart.

This last aspect is developed with added sophistication in ʿAbbāsid poetry. The narrative structure of the motif is dissolved, but traditional elements are still alluded to, e.g. the *ṭayf al-khayāl*'s perilous desert journey. Poets reflect on the nature of the phenomenon, its causes and effects, the relation between the beloved and her "vision". Occasionally the roles are reversed, the poet's *ṭayf al-khayāl* visiting the beloved. The meeting of "two visions" (*ṭayfān/khayālān*) is a variant employed with ingenuity by several poets, e.g. Abū Nuwās and al-Buḥturī [*q.vv.*] (cf. R. Jacobi, *Al-Khayālāni—a variation of the Khayāl motif*, in *JAL*, xxvii [1996], 2-12). The motif never lost its appeal to later poets, and is also discussed by mediaeval critics. Al-Sharīf al-Murtaḍā (d. 430/1044) in his monograph *Ṭayf al-khayāl* (ed. Ḥ.K. al-Ṣayrafī, Cairo 1381/1962) contrasts praise (*madḥ*) and blame (*dhamm*) of the *ṭayf al-khayāl*, illusion and reality (5 ff.). Evidently, love in a dream had its attractions in a society where the meetings of lovers must have been both dangerous and difficult.

(Renate Jacobi)

TAYM ALLĀH b. Thaʿlaba, an Arab tribe belonging to the branch of the Rabīʿa b. Nizār (tribes of ʿAdnān) and forming part of the great ethnical group of the Bakr b. Wāʾil. Genealogy: Taym Allāh b. Thaʿlaba b. ʿUkāba b. Ṣaʿb b. ʿAlī b. Bakr b. Wāʾil. We also find it mentioned under the form Taym Allāt, which may be the correct name, for a Muslim (or Christian) alteration of the name Allāt to that of Allāh is not at all unlikely, while the opposite is hardly conceivable.

This tribe, as usual with so many other tribes of Arabia, formed an alliance (*ḥilf*) with the sister tribe of the Banū Ḳays b. Thaʿlaba, and each of them was closely associated with the Banū ʿIdjl and the Banū ʿAnaza. This confederation bore the name *al-Lahāzim* (the word *lihzima*, according to the lexicographers, signifies the mastoid bone, and similar expressions are not unusual to indicate the solidity of an alliance); it was afterwards extended to the Banū Māzin b. Ṣaʿb and even, it appears, to the two great Bakrī subdivisions, the Banū Dhuhl and the Banū Shaybān. After Islam the Banū Ḥanīfa, another Bakrī tribe, also entered the alliance (al-Mubarrad, *Kāmil*, ed. Wright, 276, 1-2; *Naḳāʾiḍ*, ed. Bevan, 47, 10, 305, 9, 764, 9, and, especially, 725, 15. Wüstenfeld, misled probably by the statement in Ibn Ḳutayba, *K. al-Maʿārif*, ed. Wüstenfeld, 48, thought that the name *al-Lahāzim* referred only to the Taym Allāh; cf. also Reiske, *Primae lineae*, 253 n. *f*, 255 n. *h*). The Taym Allāh took part with their allies in the wars of the Bakr b. Wāʾil against the Tamīm, and we find them specially concerned with the battles of Zubāla, Nibādj, Taythal, Djadūd and al-Waḳīṭ (the last two fall within the Islamic period). It does not appear, however, that they distinguished themselves by any particular exploits or that they numbered among their leaders any person of note. In the two latter expeditions, the command was held by al-Ḥawfazān b. Sharīk and by Abdjar b. Djābir, both of the Banū ʿIdjl. At a more remote period, the Taym Allāh had fought with the rest of the Bakrīs against the Lakhmid tribes of al-Ḥīra: they are mentioned in the stories of the *Yawm Uwāra*.

The Taym Allāh were Christians, like almost all the Bakr b. Wāʾil (cf. al-Ṭabarī, i, 2032 ult.), but they were early converted to Islam and we find them fighting in the wars of conquest and the civil wars; one of them, for example, Iyās b. ʿAbla, took part in the murder of the Caliph ʿUthmān (*Naḳāʾiḍ*, ed. Bevan, 918 ff.). But it was mainly in the history of the eastern provinces that the Taym Allāh played a part in the first two centuries of the Hidjra; among the members of this tribe who made a mark in his-

tory, the best-known is ʿAws b. Thaʿlaba b. Zufar b. Wadīʿa, who is also known as a poet (notice in Ibn Ḥadjar, *Iṣāba*, Cairo 1325, i, 82, quoted from the *Ṭabaḳāt al-shuʿarāʾ* of Diʿbil and the *Muʿdjam al-shuʿarāʾ* of al-Marzubānī; verses in Yāḳūt, *Muʿdjam*, ed. Wüstenfeld, i, 830, with reference to two ancient statues at Palmyra) and was governor of Khurāsān; during the civil war of 65/684-5 he valiantly defended Harāt against the troops of Muṣʿab b. al-Zubayr, commanded by ʿAbd Allāh b. Khāzin and held out for a whole year, with the support of all the Bakr b. Wāʾil of Khurāsān, until he fell (al-Ṭabarī, ii, 484-90; al-Balādhurī, *Futūḥ*, ed. de Goeje, 414-15). Another poet of the Taym Allāh, Nahār b. Tawsiʿa (who was called the best poet of the Bakr in Khurāsān) took part in the campaigns of Ḳutayba b. Muslim, whom he had once satirised but finally joined (Ibn Ḳutayba, *K. al-Shiʿr*, ed. de Goeje, 342-3; *Ḥamāsa*, ed. Freytag, 431-2; *Naḳāʾiḍ*, ed. Bevan, 359-60, 364-5, 368; al-Ṭabarī, ii, *passim*; al-Ḳālī, *Amālī*, ii, 201-12, etc.).

There were several other tribes, especially in the south, called Taym Allāh or Taym Allāt; Ibn al-Kalbī mentions the following: T. b. Asad b. Wabara; T. b. Zahw (?) b. Marr b. ʿAmr b. al-Ghawth b. Ṭayyiʾ; T. b. Ḥikāl... b. Māzin b. al-Azd; T. b. Rufayda b. Thawr b. Kalb; T. b. ʿĀmir al-Adjdār... b. Kalb; T. b. al-Namir b. Ḳāsiṭ; T. b. Wadm b. Wahballāt... b. Kalb.

A fraction of the Banū Taym Allāh installed itself in the high valley of the Wādī Taym (Allāh), which bears its name in Syria, at the foot of the Djabal al-Shaykh; this was one of the places of origin of the Druze during the 5th/11th century and numerous heretical groups still lived there in the 7th/13th century (see Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1987, i, 368-759, ii; and Ibn al-Athīr, *al-Kāmil*, index).

Bibliography: Wüstenfeld, *Geneal. Tabellen*, B 17 (*Register*, 447); Ibn al-Kalbī-Caskel, i, Tafeln, nos. 150, 296-7, ii, Register, 543; Ibn Durayd, *K. al-Ishtiḳāḳ*, ed. Wüstenfeld, 212-13.

(G. Levi Della Vida)

TAYM b. MURRA, a subdivision of Ḳuraysh [*q.v.*] whose pedigree is Taym b. Murra b. Kaʿb b. Luʾayy b. Ghālib b. Fihr.

All of the important figures among the Taym before Islam and in its early days belonged to the genealogical line of ʿAmr b. Kaʿb b. Saʿd b. Taym. They included Abū Bakr [*q.v.*], Ṭalḥa b. ʿUbayd Allāh [*q.v.*] and Ṭalḥa's paternal uncle, Maʿmar b. ʿUthmān (cf. M. Lecker, *Biographical notes on Abū ʿUbayda Maʿmar b. al-Muthannā*, in *SI*, lxxxi [1995], 71-100, at 77-83, 96-7; Mālik b. Anas [*q.v.*] was reportedly a *mawlā* of the Taym; on p. 263a of the entry about him read, instead of Ḥumayr, Ḥimyar; M.J. Kister, *The massacre of the Banū Qurayẓa: a re-examination of a tradition*, in *JSAI*, viii [1986], 61-96, at 77-9). The central figure among the Taym on the eve of Islam was ʿAbd Allāh b. Djudʿān [*q.v.*] (b. ʿAmr b. Kaʿb); "during his lifetime the Taym were like the members of one family and were fed by him".

In pre-Islamic Mecca the Taym were part of the coalition of Muṭayyabūn [see la'aḳat al-dam] and, later, of the coalition of Ḥilf al-Fuḍūl [*q.v.*] which was established in the court of ʿAbd Allāh b. Djudʿān.

The rise of Islam gave the former merchant, Abū Bakr, precedence over more prestigious Ḳurashīs. The leading families of the Taym accumulated in early Islam great fortunes, much of which came from agriculture. Abū Bakr received from the Prophet an orchard in Medina which had formerly belonged to the Banu 'l-Naḍīr [*q.v.*] and developed it by planting in it palm-shoots. Ṭalḥa, who was the first to sow wheat in Medina, had fabulous revenues from his estates in Arabia and ʿIrāḳ and is said to have supported all the destitute Taymīs.

Few Taymīs held positions of authority in early Islam. One of them was governor of Mecca under ʿUmar b. al-Khaṭṭāb; Muḥammad b. Abī Bakr [*q.v.*] was ʿAlī b. Abī Ṭālib's [*q.v.*] governor in Egypt; and Ṭalḥa's son, who was the cousin of Muʿāwiya I [*q.v.*], was put by this caliph in charge of the *kharādj* of Khurāsān.

The Taym rose to some prominence under ʿAbd Allāh b. al-Zubayr [*q.v.*], himself a grandson of Abū Bakr on his mother's side. A grandson of Ṭalḥa was then in charge of the *kharādj* of Kūfa (where his family owned a large estate); a great-grandson of ʿAbd Allāh b. Djudʿān was Ibn al-Zubayr's *ḳāḍī* and *muʾadhdhin*; a grandson of Maʿmar was governor of Baṣra; and another grandson was governor of Fārs. In the ʿAbbāsid period, several Taymīs officiated as judges, mainly in Medina and Baṣra, and as commanders of the *shurṭa* in Kūfa.

(M. Lecker)

TAYMĀʾ, an ancient oasis settlement of northwestern Arabia, now in Saudi Arabia (lat. 27° 37' N., long. 38° 30' E.). According to the mediaeval Islamic geographers, it lay in the region called al-Mahadjdjāt, and was four days' journey south of Dūmat al-Djandal [*q.v.*]; al-Muḳaddasī, 107, 250, 252, localises it at three stages from al-Ḥidjr [*q.v.*] (in fact, Taymāʾ is some 110 km/70 miles from al-Ḥidjr/Madāʾin Ṣāliḥ), four stages from Tabūk [*q.v.*] and four from the Wādī 'l-Ḳurā [*q.v.*]. It lies in a depression, the length of which J.A. Jaussen and R. Sauvignac put at 3.2 km/2 miles, with a breadth of 460 m/1,500 feet. The subterranean waters collected and burst forth into a well 12-14 m/40-45 feet deep and about 18 m/60 feet in diameter, according to the same two travellers (*Mission archéologique en Arabie*, Paris 1909, ii, 133-63, Tables lxi-lxiv).

A Taymanite caravan is mentioned on a cuneiform tablet of *ca.* 740-730 B.C. and then in inscriptions from the time of Sennacherib and Esarhaddon (7th century B.C.) (Akkad. *Te-ma, Te-ma-a, Te-ma-ʾ*), and in the Old Testament (Hebr. *Têmāʾ, Tēmāʾ*) as a major caravan town and oasis (Isa. xxi. 14; Jer. xxv. 23; Job vi. 19), apparently associated with Tema, "a son of Ishmael" (Gen. xxv. 15; 1 Chron. i. 30). Together with Dedan, it was the major urban centre of North Arabia. In early Christian times it came within the Nabataean realm. Various inscriptions in Imperial Aramaic and in the early North Arabian language Taymanite (formerly called Thamudic A; see thamudic) and then, from later times, in Nabataean, have been found there (see R. Degen, *Die aramäische Inschriften von Taimāʾ und Umgebung*, in *Neue Ephemeris für semitische Epigraphie*, ii, Wiesbaden 1974, 79-90; F.M. Cross Jr., *A new Aramaic stele from Taymāʾ*, in *Catholic Biblical Qtly.*, xlviii [1986], 387-94; A. Livingstone and K. Beyer, *Die neuesten aramäischen Inschriften aus Taima*, in *ZDMG*, cxxxvii [1987], 285-96).

Taymā' appears in pre-Islamic Arabic poetry, as in Imru' al-Ḳays, *Muʿallaḳa*, v. 76: "it (the rain storm) does not leave a palm-tree in Taymā' nor a house unless it is built of stone". Like other oases in North Arabia, it was settled by immigrant Jews or Jewish proselytes. Among them was al-Samaw'al b. ʿĀdiyā [*q.v.*], the lord of the citadel of al-Ablaḳ al-Fard, mentioned by al-Aʿs͟hā and other poets. The Jewish inhabitants were not inclined to be friendly to Muḥammad, but when they learned how their co-religionists in the Wādī 'l-Ḳurā, who had resisted, had been treated, they voluntarily submitted and were thus allowed to retain their lands on payment of a yearly tribute (*d̲j̲izya*) (*ca.* 7/628); nevertheless, they were expelled from the land, like the other Jews in Arabia, by ʿUmar (al-Balād̲h̲urī, *Futūḥ*, 34-5). In the 4th/10th century, Ibn Ḥawḳal describes it as more thickly populated than Tabūk and as the market and provisioning centre for the Bedouin of the surrounding area (*mumtār al-bādiya*) (ed. Kramers, 34, tr. Kramers and Wiet, 33). Al-Hamdānī says that, in his time, the region of Taymā' was in the territory of the Banū Ṭayyi' (*Ṣifa*, ed. Müller, i, 131). Al-Muḳaddasī (*loc. cit.*) gives a more detailed picture of its situation in a well-watered, wide depression with a spring, many wells, some of which have fallen in, fine gardens, and many palm trees with excellent dates; on the other hand, he censures the avarice of the inhabitants and laments the lack of distinguished scholars from this town. In the next century, al-Bakrī refers to its wealth in dates, figs and grapes (ed. Wüstenfeld, i, 208-9). The densely populated town had a wall, a *farsak̲h̲* in length, running along a brook.

Of modern travellers, Doughty was in Taymā' in 1877, when the settlement had recently peacefully recognised the authority of Ibn Ras͟hīd of Ḥā'il [*q.v.*], but was still paying an annual *k̲h̲uwwa* [*q.v.*] or protection money to the older masters of the region, the Banū Ṣak̲h̲r. He describes the famous well-pit, al-Ḥaddād̲j̲, which irrigated the palm groves of the central one of Taymā''s three quarters (*Travels in Arabia Deserta*, new ed., London 1921, i, 285-300 and index). Huber and Euting were there in 1884, and it was then that Huber purchased the famed 6th century B.C. stele, now in the Louvre. Euting gives a good description of the town, with its narrow streets and houses surrounded by orchards. Of antiquities, he found the ruins of temples and a quadrangular building with towers at the corners. Of the citadel of al-Ablaḳ, the ruins of which, according to Yāḳūt, were still visible in his time, he could find no traces; Jaussen and Savignac describe some peculiar round tumuli, the sides of which in the form of stairs led up to a small square building (J. Euting, *Tagbuch einer Reise in Inner-Arabien*, Leiden 1896-1914, ii, 148 ff., 199 ff.).

Philby visited Taymā' in 1951, just after its semi-independent chieftain ʿAbd al-Karīm of the Rummān family had been assassinated, with full Suʿūdī control for the first time exercised over it. He found Taymā' a "once prosperous, and now wretched, locality" (*The land of Midian*, London 1957, 72-103), but in recent decades Taymā', benefiting from its position on the main Jordan-Tabuk-Medina highway, has become more populous and prosperous. In 1413/1992 the population was 18,088, made up of 15,129 Saudis and 2,959 non-Saudis.

AL-ṬAYR [see AL-ṬĀ'IR].

ṬAYYI' or **ṬAYY**, *nisba* Ṭā'ī, an Arab tribe, which like others such as al-Azd and Kinda, emigrated from the Arabian south and settled in the north, in the plateau of S͟hammar [*q.v.*], which contained the two ranges Ad̲j̲a' and Salmā, called after the tribe D̲j̲abalā Ṭayyi'. As a result of their occupation of S͟hammar, the north Arab tribe of Asad lost some of its territory but the two tribes fraternised and were called "the two allies", al-Ḥalīfān. The two main subdivisions of the tribe were al-G̲h̲awth and D̲j̲adīla, part of whom lived on the mountain, called D̲j̲abaliyyūn, part on the plain, called al-Sahliyyūn, and the third on the sands, called al-Ramliyyūn.

Ṭayyi' played an important role in pre-Islamic times, and its name became the generic one for the Arabs in the Syriac sources, *Ṭayyāyē* (West Syriac pronunciation, *Ṭayōyē*). It had important relations with Persia and its clients, the Lak̲h̲mids of ʿIrāḳ; and with Byzantium and its clients, the G̲h̲assānids of al-S͟hām. One of them, Ḥassān, lent his horse to K̲h̲usraw Parwīz, when the latter fled from Bahrām Čūbīn, and the last Lak̲h̲mid king, al-Nuʿmān [*q.v.*], married two women from the tribe, which, however, refused him *d̲j̲iwār* when he fled from K̲h̲usraw. After the death of al-Nuʿmān, Iyās b. Ḳabīṣa settled with some of his tribesmen from Ṭayyi' in al-Ḥīra [*q.v.*] and became its governor, A.D. 602-11; he also commanded the Perso-Arab troops against the tribe of Bakr at the battle of D̲h̲ū Ḳār [*q.v.*]. Ṭayyi''s relations with the G̲h̲assānids were chequered, but they improved when after the Ḥarb al-Fasād, the Fasād War, between al-G̲h̲awt̲h̲ and D̲j̲adīla, the latter, who were Sahliyyūn, left for Syria and settled near Aleppo-Ḳinnasrīn, where they had a *ḥāḍir*, known as Ḥāḍir Ṭayyi'. The tribe adopted Christianity, but some of them obviously remained pagan, since these are known to have worshipped two idols, al-Fils and Ruḍā, the former of which was destroyed by ʿAlī b. Abī Ṭālib at the command of Muḥammad.

Ṭayyi' continued to play an important role in Islamic times. It sent a delegation to Muḥammad in Medina and adopted Islam. One of them, Rāfiʿ b. ʿAmīra, was the guide of K̲h̲ālid b. al-Walīd during his famous march from ʿIrāḳ to Bilād al-S͟hām. That part of Ṭayyi' that had moved to Aleppo-Ḳinnasrīn in the 6th century fought with Byzantium, and Abū ʿUbayda found them in their *ḥāḍir* in 17/638, when some of them adopted Islam while others did not. Those of the Ṭayyi' that remained in Bilād al-S͟hām formed part of the Umayyad *ad̲j̲nād* and fought under Ḥābis b. Saʿd with Muʿāwiya against ʿAlī at Ṣiffīn in 37/657. Some members of the tribe distinguished themselves in this early Islamic period: al-Ṭirimmāḥ, the K̲h̲ārid̲j̲ite poet; ʿUrwa b. Zayd al-K̲h̲ayl, who took part in the conquests, in Rayy and against the Daylamīs; and Ḳas͟hʿam, who fought and killed Dāhir, the Indian king. They did well in ʿAbbāsid times also: Ḳaḥṭaba, the prominent leader of the *daʿwa* for the ʿAbbāsids in K̲h̲urāsān, was one of them, and so was al-Hayt̲h̲am b. ʿAdī, the well-known *ak̲h̲bārī*, as well as two of the foremost poets, Abū Tammām and al-Buḥturī. The one, however, who entered the annals or world literature was the proverbially-generous pre-Islamic

poet Ḥātim, after the foremost poet of the German language assumed his name in the *West-östlicher Diwan*.

For the very important rôle the Ṭayyiʾ played in Syria in the 4th/10th century during the Crusades, see e.g. Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1987-9, index s.v. Ṭayy and s.v. Banū Djarrāḥ [see DJARRĀḤIDS].

Like some of the Arab tribes in Bilād al-Shām, a part of the Ṭayyiʾ emigrated to Umayyad al-Andalus; since then, vague recollection of their Arabian provenance is still echoed in the Arabia of the 20th century, in the region of Shammar.

(IRFAN SHAHÎD)

AL-ṬAYYIBIYYA, a branch of the Ismāʿīliyya [*q.v.*] with several subdivisions. The Ṭayyibiyya split off from the rest of the Mustaʿlī Ismāʿīlīs soon after the death in 524/1130 of the Fāṭimid caliph al-Āmir bi-Aḥkām Allāh, recognised as the twentieth *imām* of the Mustaʿlī Ismāʿīlīs. The official Mustaʿlī *daʿwa* organisation in Cairo recognised al-Āmir's cousin and successor on the Fāṭimid throne, al-Ḥāfiẓ, and the later Fāṭimids as the rightful *imāms*. However, some Mustaʿlī groups in Egypt and Syria as well as the majority in Yaman acknowledged the rights of al-Āmir's infant son al-Ṭayyib to the imāmate, rejecting the claims of al-Ḥāfiẓ and the Mustaʿlī Ḥāfiẓī *daʿwa*. These Mustaʿlī Ismāʿīlīs were initially known as al-Āmiriyya, but later, after the establishment of the independent Ṭayyibī *daʿwa* in Yaman, became designated as al-Ṭayyibiyya.

In Yaman, which remained the chief stronghold of Ṭayyibī Ismāʿīlism for several centuries, the cause of al-Ṭayyib was originally championed by al-Malika al-Sayyida al-Ḥurra, the effective ruler of Ṣulayḥid Yaman, who like her predecessors in the Ismāʿīlī Ṣulayḥid dynasty [*q.v.*] had acknowledged the suzerainty of the Fāṭimids. The queen al-Sayyida had earlier sided with the Mustaʿlī camp in the Nizārī-Mustaʿlī schism. By the final years of al-Āmir's rule, however, al-Sayyida had drifted apart from the Fāṭimid régime; and the Ḥāfiẓī-Ṭayyibī schism in Mustaʿlī Ismāʿīlism provided the opportunity for al-Sayyida to assert her independence. The Ṣulayḥid queen now became the official leader of the Ṭayyibī community in Yaman, severing her ties with Cairo. Al-Sayyida's decision was fully endorsed by the *dāʿī* al-Dhuʾayb b. Mūsā al-Wādiʿī, the then administrative head of the Mustaʿlī Ismāʿīlī *daʿwa* in Yaman. Due to close relations between Ṣulayḥid Yaman and Gudjarāt, the Ṭayyibī cause was also upheld in western India, which was eventually to account for the bulk of the Mustaʿlī Ṭayyibī Ismāʿīlīs, known there as Bohras (Bohorās [*q.v.*]).

Nothing is known about the fate of al-Ṭayyib, who seems to have been murdered in his infancy. However, it is the belief of the Ṭayyibīs that al-Ṭayyib survived and went into concealment, and that the Ṭayyibī imāmate subsequently continued secretly in his progeny, during the current period of *satr* initiated by al-Ṭayyib's own concealment. At any rate, until her death in 532/1138, al-Sayyida made every effort to consolidate the *daʿwa* on behalf of al-Ṭayyib. It was soon after 526/1132 that al-Sayyida declared al-Dhuʾayb as *al-dāʿī al-muṭlaḳ*, or the *dāʿī* with absolute authority empowered to conduct the *daʿwa* activities on behalf of the hidden Ṭayyibī *imām*. This marked the foundation of the independent Ṭayyibī *daʿwa* (*al-daʿwa al-Ṭayyibiyya*) in Yaman. Having earlier broken her relations with the Fāṭimid state, she had now also made the Ṭayyibī *daʿwa* independent of the Ṣulayḥid state, which ensured the survival of Ṭayyibī Ismāʿīlism after the downfalls of both the Fāṭimid and Ṣulayḥid states.

On al-Dhuʾayb's death in 546/1151, Ibrāhīm b. al-Ḥusayn al-Ḥāmidī [*q.v.*] succeeded to the leadership of the Ṭayyibī *daʿwa* as the second *dāʿī muṭlaḳ*. Ibrāhīm (d. 557/1162) introduced the *Rasāʾil Ikhwān al-Ṣafāʾ* into the religious literature of the Ṭayyibī community in Yaman, and also formulated a new synthesis in the doctrinal domain, combining the Fāṭimid *dāʿī* Ḥamīd al-Dīn al-Kirmānī's cosmological system based on ten separate intellects as expounded in his *Rāḥat al-ʿaḳl* with mythical elements. Ibrāhīm al-Ḥāmidī's major work, *Kitāb Kanz al-walad* (ed. M. Ghālib, Wiesbaden 1971), provided the basis of the distinctive Ṭayyibī gnostic *ḥaḳāʾiḳ* system and was used as a model for later Ṭayyibī writings on the subject. The Ṭayyibī *ḥaḳāʾiḳ* found their fullest description in the *Ẓahr al-maʿānī* (ed. M. Ghālib, Beirut 1991) of Idrīs ʿImād al-Dīn (d. 872/1468), the foremost Ṭayyibī historian and the community's nineteenth *dāʿī muṭlaḳ*. In both Yaman and India, the Ṭayyibīs have preserved a good portion of the Ismāʿīlī religious literature produced during the Fāṭimid and later times.

In Yaman, Ḥarāz remained the traditional stronghold of he Ṭayyibī *daʿwa*. In general, the Ṭayyibīs of Yaman maintained peaceful relations with the Ayyūbids, Rasūlids and Ṭāhirids, but their hostile relations with the Zaydīs were often marked with open warfare. Meanwhile, the growth of the Ṭayyibī community of western India was closely supervised by the *dāʿī muṭlaḳ* in Yaman who regularly appointed the heads of the Ṭayyibī Bohra community there. Large numbers of Hindus converted to Ṭayyibī Ismāʿīlism especially in Cambay, Patan, Sidhpūr and, later, in Aḥmadābād, where the headquarters of the Indian *daʿwa* were established. In 946/1539, the position of *dāʿī muṭlaḳ* passed to an Indian, and in 974/1567 the twenty-fifth *dāʿī* Djalāl b. Ḥasan transferred the central headquarters of the Ṭayyibī *daʿwa* from Yaman to Gudjarāt. On the death of Dāʾūd b. ʿAdjabshāh, the twenty-sixth *dāʿī*, in 999/1591 (or less probably in 997/1589), his succession was disputed, causing the Dāʾūdī-Sulaymānī schism in the Ṭayyibī community. The great majority of the Ṭayyibī Bohras, comprising the bulk of the Ṭayyibī community, acknowledged Dāʾūd Burhān al-Dīn b. Ḳuṭbshāh (d. 1021/1612) as their twenty-seventh *dāʿī*; henceforth they became known as Dāʾūdīs. A small group of the Yamanī Ṭayyibīs, too, supported the Dāʾūdī cause. On the other hand, a minority, consisting of the bulk of the Yamanī Ṭayyibīs and a small group of Ṭayyibī Bohras, upheld the succession of Sulaymān b. Ḥasan (d. 1005/1597), the deputy of Dāʾūd b. ʿAdjabshāh in Yaman. These Ṭayyibīs became designated as Sulaymānīs. Henceforth, the Dāʾūdīs and Sulaymānīs followed different lines of *dāʿīs*. In both cases, the office of *dāʿī muṭlaḳ* soon became hereditary, each *dāʿī* designating his successor by the rule of the *naṣṣ*.

The forty-second Dāʾūdī *dāʿī* Yūsuf Nadjm al-Dīn (1200-13/1785-98), transferred the headquarters of the Dāʾūdī *daʿwa* to Sūrat, where the famous seminary known as the Sayfī Dars was founded by his brother

and successor ʿAbd ʿAlī Sayf al-Dīn (1213-32/1798-1817). The administrative headquarters of the Dāʾūdī *daʿwa* were established in Bombay, at the Badri Mahal, in the time of the fifty-first *dāʿī*, Sayyidnā Ṭāhir Sayf al-Dīn (1333-85/1915-65), the father of the present *dāʿī* Sayyidnā Muḥammad Burhān al-Dīn. In India, several groups split off at various times from the Dāʾūdī Bohra community. The total size of the Dāʾūdī community is currently estimated at around 800,000. Since 1088/1677, the position of the *dāʿī muṭlaḳ* of the Sulaymānī Ṭayyibīs has remained in the Makramī family of the Banū Yām, with minor interruptions. After being expelled from Ḥarāz in 1289/1872 by the Ottomans, the Sulaymānī *dāʿīs* established their headquarters in Nadjrān [*q.v.*], in northeastern Yaman, now in Saudi Arabia. There have been no schisms in the Sulaymānī community, currently numbering to about 50,000 persons who live mainly in the northern areas of Yaman. There are only a few thousand Sulaymānī Bohras in India.

Bibliography: The main sources for the early history of the Ṭayyibī *daʿwa* in Yaman are Idrīs ʿImād al-Dīn b. al-Ḥasan's *Nuzhat al-afkār*, 2 vols., and his *ʿUyun al-akhbār wa-funūn al-āthār*, vii, which are still in manuscript form. The later history of the Ṭayyibiyya, in Yaman and India, is covered in Ḳuṭb al-Dīn Sulaymāndjī, *Muntazaʿ al-akhbār* (unpubl.), relating the events until 1240/1824, and in Muḥammad ʿAlī Rāmpūrī's *Mawsim-i bahār* (Bombay 1301-11/1884-93), iii, completed in 1299/1882. Full bibliographical references to the literature of the Ṭayyibiyya are to be found in I.K. Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Calif. 1977, 133-250.

(F. DAFTARY)

TĀZĀ, a town of northeastern Morocco (lat. 34° 16' N., long. 4° 01' W.) about 100 km/60 miles east-north-east of Fās [*q.v.*] (Fez). It lies in a trough between the Rīf [*q.v.*] massif and the northern spurs of the Middle Atlas which is drained by the Wadi Inaouene (Innāwen), an affluent of the Wadi Sebou. This trough carries the historic highway from Fez and Meknès to Oujda, Tlemcen and northwestern Algeria, and is also the route of the railway likewise connecting these points. Tāzā, situated at a gap between the mountains some 3 km/2 miles wide only, thus marks the rough boundary between the central Maghrib and the Extreme Maghrib (*al-maghrib al-aḳṣā*) [see AL-MAGHRIB. I, II]. The great importance of the east-west route through this depression, and the strategic and economic advantages secured by occupation of the site of Tāzā, in part defended by the steep ravine of the Wadi Tāzā flowing northwards to the west of the town, must have early encouraged a foundation of some significance there. Traces of habitation from Neolithic times have been found, although the role of the place in Classical Antiquity, including Roman and Byzantine times, is unclear.

In early Islamic times (2nd-4th/8th-10th centuries), Tāzā was the most important settlement in the region occupied by one of the groups of the Miknāsa, semi-nomadic Berbers. According to Ibn Khaldūn, it was they who founded the *ribāṭ* of Tāzā. This statement is evidently inaccurate in this form. Tāzā was not yet reckoned a *ribāṭ*. It must nevertheless have played an important part in the defence against the Idrīsids as partisans of the Fāṭimids of Ḳayrawān, then against the Fāṭimids as partisans of the Umayyads of Cordova. Tāzā, however, as a fortified town and a *ribāṭ*, was properly a foundation of the Almohads. In 528/1133 ʿAbd al-Muʾmin, having made himself master of the High and Middle Atlas, had arrived in the depression of Tāzā. There the conqueror seems to have suspended his advance. It was not till later that he tackled the ranges of the Rīf and did not yet attempt to descend into the plains to meet Almoravid forces. He seems, however, to have felt the necessity of holding the important strategic point, of building a citadel there and placing a garrison it it. Those who held this frontier post of the Almohad dominions were naturally assimilated to the men of the *ribāṭs* (we know that the struggle against the Almohads had the attractions of a holy war). To call the new fortress a *ribāṭ* was giving it the value of a pious work. As a matter of fact, Tāzā never played the religious rôle of a *ribāṭ*. It remained, as before, a military post guarding the road to Fās. A great part of the ramparts built by ʿAbd al-Muʾmin seems to have survived. It is a curtain of rubble flanked by towers unequal in size, with the remains of an outer wall in front of it at places.

For lack of defenders, Almohad Tāzā hardly made any resistence to the Marīnids, who took it in 613/1216. Its new lords also devoted attention to its defences; they restored the great mosque on two occasions (693/1294 and 754/1353) and endowed it with *madrasas*. In their time, Tāzā for once at least did its duty in guarding the pass when it was attacked by the ʿAbd al-Wādid sultan of Tlemcen, Abū Ḥammūd II, who besieged it for a week in 784/1382 and was forced to retrace his steps.

At the beginning of the 16th century, we have a description of Tāzā by Leo Africanus. He regards it as the third town of the kingdom; it was administered as a kind of appanage allotted to the second son of the Waṭṭāsid sultan of Fās. The population, which numbered about 5,000 householders, including many Jews, lived under a continual menace from the mountaineers around.

To secure control of the springs which watered the town, and to protect himself against the attacks of the Turks of Algiers, a Saʿdian Sharīf—perhaps Aḥmad al-Manṣūr in the late 10th/16th century—provided it with a *bastiyūn*, which still stands in the southeastern corner of the enceinte. It is noteworthy, however, that, as a result, this fortress of Tāzā never served as a defence against enemies from the east, but rather became "a citadel ready at hand for every pretender who rebelled in those regions against the *Makhzen* who had built it" (H. Basset and Campardou). This was the case in 1004/1596 when al-Nāṣir, a nephew of al-Manṣūr, rebelled against the sultan and made Tāzā his base of operations, and again in 1074/1664 when the first of the ʿAlawid sultans al-Rashīd made it his headquarters for his attack on Fās, and in 1084/1673 when Aḥmad b. Muḥriz held out there against his uncle, Sultan Mawlāy Ismāʿīl.

Mawlāy Ismāʿīl erected various religious buildings in the town, but Tāzā was by now becoming a place of secondary importance only. In 1844 Mawlāy ʿAbd al-Raḥmān led the Ghiyāṭa tribesmen of the Tāzā region against the French general Bugeaud, but the

Moroccan forces were defeated at the Wadi Isly. It was also from Tāzā that Mawlāy al-Ḥasan in 1874 led a punitive expedition against these same Ghiyāṭa. Mawlāy ʿAbd al-ʿAzīz despatched thither a powerful *maḥalla* [*q.v.*] or expeditionary force in 1895 in order to strengthen his authority there; but in 1902 the pretender Bū Ḥmāra [*q.v.*] (Abū Ḥimāra) seized power at Tāzā and proclaimed himself sultan there, and was not finally dislodged and captured till 1909. The town was much damaged in the unrest and fighting of 1903-5; the Jewish quarter or *mellāḥ* [see MALLĀḤ] was destroyed, and its inhabitants fled to Melilla, Debdou and Tlemcen, only in part returning after the French occupation.

Tāzā was occupied by French troops on 10 May 1914, and used as a base for operations in the Rīf and in the mountains to the south against the Ghiyāṭa and Wazā'īn, who were not finally reduced until 1928. Under the Protectorate, Tāzā grew in population. On the uppermost terrace, at an altitude of 585 m/1,920 feet, lay the old town, with its walled medina. On the middle terrace, at an altitude of 500 m/1,640 feet, there was laid out in 1914 the military encampment and, from 1920 onwards, a new town, which eventually acquired a population of several thousand Europeans. The railway station was on the lowest terrace, at an altitude of 445 m/1,460 feet. With a population of around 35,000 before the Second World War, by the 1980s Tāzā had a population of 108,000. It is the administrative centre of the *muḥāfaẓa* or province of Tāzā, which in the 1980s had a population of 616,000.

The monuments of the very interesting medina of Tāzā include walls of Almohad construction, strengthened by the Marīnids; a Great Mosque, founded in the 6th/12th century by ʿAbd al-Mu'min before that of Tinmal [*q.v.*]; the mosque of the Andalusīs, with an Almohad minaret; the Dār al-Makhzan palace, probably by Mawlāy al-Rashīd in the 11th/17th century, now almost wholly in ruins; and the massive, square Basṭiyūn, in the ancient *ḳaṣba* (see above).

(G. Marçais*)

TĀZARWĀLT, Tāzerwālt, conventionally Tazeroualt, a district of the extreme southwest of Morocco, within the Anti-Atlas mountains.

The region was probably originally occupied by Masmūda [*q.v.*] Berbers, but it only became of general significance in the history of Morocco with the career and charisma of the Idrīsid *sharīf* [see SHURAFĀ'] Aḥmad ū-Mūsā (d. 971/1563 [see ḤMAD U-MŪSĀ]). Aḥmad's *ḳubba*, containing also the tombs of some of his descendants, became the site of a major twice-yearly pilgrimage and fair (*mawsim*, or *amuggār* in the Berber Tashelḥit dialect) located at Sīdī Aḥmad ū-Mūsā (44 km/27 miles to the east of Tīznīt). Political power in Tāzarwālt was acquired by the saint's great-grandson, the marabout ʿAlī Abū Damīʿa (often referred to as Abū Ḥassūn), who became head of the *zāwiya* there in 1022/1613 and who fortified the town of Īlīgh in 1034/1625, making it his capital, from where he ruled until his death in 1070/1659. Taking advantage of the weakening of the Saʿdian dynasty after the death of Sultan Aḥmad al-Manṣūr (1012/1603), ʿAlī was able to monopolise the western Saharan trade, with the help of Jewish traders who were attracted to Īlīgh and who established a *mellāḥ* [see MALLĀḤ]. ʿAlī also secured vast territories in the Atlas and Saharan regions by the mid-11th/17th century. During this period, a new ruling dynasty emerged from the ʿAlawī *shurafā'* of the southeastern district of Tāfīlālt [*q.v.*], which brought an end to Tāzarwālt's political power when Mawlāy al-Rashīd destroyed the fortress of Īlīgh in 1081/670 and dispersed ʿAlī's heirs into the Sahara.

Political power in Tāzarwālt was revived in Īlīgh at the end of the 18th century by the maraboutic family of Abū Damīʿa under the *sharīf* Hāshim b. ʿAlī (murdered 1825) and, especially, by his son Ḥusayn (d. 1886). Utilising the *mawsims* and a growing Jewish community in Īlīgh to conduct trade, Tāzarwālt became the most important commercial emporium in southwestern Morocco, linking European commerce from the port of Essaouira [see AL-SAWĪRA] with the trans-Saharan trade. Although recognising the sovereignty and the spiritual authority of the ʿAlawī sultans over all Morocco, Tāzarwālt constituted a virtually independent maraboutic principality until the late 19th century.

Following the expeditions of Mawlāy al-Ḥasan I in 1882 and 1886 to the Sūs, Īlīgh was brought under the authority of the sultan, and the town of Tīznīt became the centre of *Makhzen* authority in southwestern Morocco. A new mausoleum was built at Sīdī Aḥmād ū-Mūsā in the years between the two royal expeditions. The Tāzarwālt region, like the Sūs in general, was disturbed during the resistance from 1912 of the pretender Aḥmad al-Hība [*q.v.* in Suppl.] at the onset of French rule, and Īlīgh's trade was largely cut off from the coastal ports. The Sūs as a whole and the region of Tāzarwālt were not finally brought under control by the French Protectorate authorities until 1934. A census taken in 1936 counted 1,906 Muslim and 220 Jewish inhabitants in Tāzarwālt.

After Moroccan independence in 1955, Sīdī Aḥmad ū-Mūsā became the central government's administrative centre for Tāzarwālt, and its shrine continued to be the site of a major pilgrimage and fair (approximately 67,000 pilgrims came to the *mawsim* in summer 1981). Īlīgh's commercial and political significance was eclipsed when the government closed its weekly market and when, at the end of the 1950s and in the early 1960s, the remnants of the Jewish population emigrated, mainly to Israel.

(D. Schroeter)

TAʿZĪR (A.), a term of Islamic law meaning discretionary punishment, e.g. by the *ḳāḍī*, for the offences for which no *ḥadd* [*q.v.*] punishment is laid down. It appears to be one of the *aḍdād* [*q.v.*], words with opposing meanings, since it means both showing respect (*taʿẓīm*) and disrespect by disciplining (*taʾdīb*) the person concerned.

Although the word does not occur in the Ḳurʾān and Sunna, both of them seem to contain practical examples of *taʿzīr* which involve the unspecified punishment of crimes that are not subject to textual punishments (*ḥudūd*). An example would be the case of a recalcitrant wife (*nāshiz*). In Ḳurʾān, IV, 34, the concept of "discretion", which is the bedrock of *taʿzīr*, seems to be underlined in such words as "And those [women] you fear may be rebellious, admonish them to their beds apart and beat them. If they then obey, do not look then for any way against them". In the Sunna, *taʿzīr* can also be traced in similar cases that are not subject to *ḥudūd*, such as in the Prophetic statement that, if a person does not give *zakāt*, he should be disciplined by taking part of his wealth in addition to the *zakāt*. Verbal reprimand (*tawbīkh*) is recorded in a few traditions, including one in which the Prophet said about a person who was being punished for drinking, "reprimand him (*wabbikhūh*)". *Taʿzīr* as a conveniently-executed punishment plays a major rule in the practice of the *muḥtasib*, since it can easily be applied at his discretion in the market place [see ḤISBA]. The distinction between *ḥadd* and *taʿzīr* is summarised by Muḥammad b. ʿIwaḍ al-Sunāmī, an Indo-Muslim scholar (d. 734/1333), in the following way. *Ḥadd* is specified by the text, unlike *taʿzīr* which is at the discretion of the *Imām*; *ḥadd* lapses if based on suspicion (*shubha*), whereas *taʿzīr* is obligatory if there are grounds for suspicion. *Ḥadd* is not applicable to a minor (*ṣabī*), while *taʿzīr* can be applied to minors. He also observes that *taʿzīr* cannot be seen as a purifying punishment (*taṭhīr*) (see further, *EI*[1] art. s.v.) when applied to a *dhimmī*, since the concept is only valid for Muslims.

The amount of *taʿzīr* should be lower than the lowest *ḥadd*, at least in theory. The Prophet is reported to have said, "he who extends the punishment of a non-*ḥadd* offence to that of *ḥadd* is a transgressor". This principle is seen by Schacht in his *Origins* as an early principle based on an abstract arbitrary decision rather than a positive doctrine, a principle evidently ignored by the modern penal laws in some Muslim countries. One example of this is the Egyptian law, which allows the death sentence to be implemented for *taʿzīr* crimes (article 77 and following). The Ḥanafīs accept this *taʿzīr* capital punishment which they term "killing as an act of punishment for the sake of upholding public order" (*al-ḳatl siyāsat^an*). Although *taʿzīr* can be executed in many ways, as also *ḥadd*, al-Sunāmī records the following instruments, which indicate that *taʿzīr* normally falls within the area of minor offences: the hand, whip, stick, and *dirra*, which is a whip of ox-hide, or made of strips of hide on which date-stones have been stitched.

TAʿZIYA (A.), verbal noun from form II *ʿazzā* "to mourn, console, express sympathy with", the Shīʿī passion plays, the only form of serious drama ever to have developed in the Islamic world before the early modern period (for subsequent developments, see MASRAḤ; to the *Bibl.* of section 1. here should be added P.C. Sadgrove, *The Egyptian theatre in the nineteenth century, 1799-1882*, London 1996; S. Moreh and Sadgrove, *Jewish contributions to nineteenth century Arabic theatre. Plays from Algeria and Syria, a study and texts*, Oxford 1996). The *taʿziya* is mostly performed in Persia and, to a certain extent, amongst the Shīʿī communities of the western Gulf shore and in Lebanon.

It re-enacts the suffering and death of the Prophet's grandson al-Ḥusayn [*q.v.*], third Imām of the Shīʿa, in a rebellion against the Umayyad caliphate at Karbalāʾ (61/680 [*q.v.*]). This battle actually took place on ʿĀshūrā day, 10 Muḥarram; this is now regarded as a martyrdom mourned vicariously by Shīʿīs worldwide. In Persia, the rituals of mourning for al-Ḥusayn came under royal patronage when Shīʿī Islam was established as the state religion in the 16th century under the Ṣafawid dynasty. On the Indian subcontinent, *taʿziya* signifies the bier and mausoleum of al-Ḥusayn carried in procession during Muḥarram (see below).

The *taʿziya* as a form of ritual theatre stems from the mid-18th-century fusion of ambulatory and stationary rites that had coexisted for over a millennium. At first, *taʿziya* plays were performed at crossroads, in market places and town squares; later they were performed in the courtyards of inns and private houses. Finally, special structures called *takiyas* or *Ḥusayniyyas* were built for their staging; some by the well-to-do as a pious public service; others with contributions from the citizens of the local district. Some *Ḥusayniyyas* were large, seating thousands of spectators, others were only large enough for family and friends. Many *takiyas* were temporary, erected by members of the community especially for the services from Muḥarram into the following month of Ṣafar, when the fortieth-day observances for the dead would take place.

The most famous *taʿziya* theatre was Takiya Dawlat, the Royal Theatre in Tehran, built in the 1870s by Nāṣir al-Dīn Shāh, of whose splendour many Western visitors speak; but the building's structure was fundamentally weak, and the entire edifice had to be torn down in 1946.

Although the *takiya* became a major feature in Persian towns in the second half of the 19th century, a distinct *takiya* architecture did not evolve. There are, however, characteristics common to almost all *takiya* that preserve and enhance the dramatic interplay between actors and spectators. This is theatre-in-the-round. The main performing space is a stark, curtainless, raised platform in the centre of the building or courtyard. The shape of this central stage may vary from round to rectangular. The stage is surrounded by a broad circular strip which is covered by sand. This latter space is used for battles on foot and on horseback, as well as for sub-plots and action representing journeys, the passage of time, and changes of scene, the latter being indicated when performers jump from the stage and circle it. The actor may announce to the spectators that he is going to a certain place; when he climbs back on to the stage, it means that he has arrived there.

The action extends from the stage, through the sand-covered circle and into the audience. In unwalled *takiya*s, skirmishes often take place behind the audience. This centrifugal movement of the action, from the stage in the centre out to the *takiya*'s periphery and back, envelops the spectators and draws them into the play's action. The audience itself often becomes an actor outright.

Stage décor in the *taʿziya* is minimal, as the setting is meant to evoke the desolate, bleak desert of Karbalāʾ. The few props are symbolic as well: for example, a basin of water represents the Euphrates River; the branch of a tree stands for a grove of palms.

In the Takiya Dawlat during the reign of Nāṣir al-Dīn Shāh, the costumes were rich and splendid, though no attention was given to their historicity. To this day, the costumes are designed above all to help the audience identify and recognise the characters and their nature. The heroes dress predominantly in green; the villains wear red. Green symbolises Paradise and the family of the Prophet and thus Islam; red symbolises bloodshed, cruelty and oppression. The male actors who play women are dressed in baggy black garments covering them from head to toe, and their faces are veiled; thus even bearded men can play female roles as long as their voices do not give them away. When a protagonist drapes a white sheet of cloth over his shoulders which represents a burial shroud, it indicates that he is prepared to give up his life and will shortly be killed.

In addition to the colours of the costumes, there is another clear division between the protagonists and antagonists in the *taʿziya*. The protagonists sing their parts in the classical Persian modes (*dastgāh*); the antagonists speak theirs. All parts, heroic or villainous, are in rhymed verse.

The singers are accompanied by drums, trumpets, *nay* (reed flutes), large brass cymbals, and the *karnā*, a six- to eight-foot long piece of hollow bamboo with a cow's horn at the end. The instrumental music also serves to introduce battle scenes, as background music to scenes without dialogue such as travel scenes, and is played during pauses in the action.

In the past, actors were chosen in accordance with their physical suitability for a role, but those playing protagonists also had to have good singing voices. Both amateur and professional actors used to read their lines from folded scripts small enough to hold in the palms of their hands, although professional actors knew their lines by heart. Holding a script in one's hand also indicated that the actor was only a role-carrier, in other words, that he was not the character he portrayed. Nowadays, the members of professional troupes know most of their lines by heart, or if not, they pretend to and avoid referring to their scripts in a conspicuous manner. Frequently the antagonists are made to appear ridiculous and grotesque by their role-carriers, who deliberately "out-herod Herod", exaggerating their gestures and shrieking their lines at the top of their lungs.

The traditional attempt to distance the actors from the characters they portray is often swept aside in recent productions of *taʿziya*. Under the influence of films and television, the actors identify with the personages they represent to such a degree that they are carried away by their roles, as may also be their audience, with potentially explosive consequences.

The *taʿziya* director is at the same time the producer, music director, stage manager, public relations coordinator, and prompter. He is responsible not only for the music and *mise-en-scène* but for all props, arrangements with the local authorities, and financial returns.

The core of the *taʿziya* repertory is the plays devoted to the Karbalāʾ tragedy and the events surrounding it. The passage of al-Ḥusayn from Medina via Mecca to his martyrdom and those of his sons and followers is represented in some ten plays in as many days. In these plays, a hero singlehandedly fights the entire enemy army, allowing the rest of the protagonists, grouped on the central stage, to reflect on their state and to engage in discourse of a philosophical and religious nature. There is only one fixed day and play in the Muḥarram repertory: the martyrdom of al-Ḥusayn on ʿĀshūrāʾ. The other plays may be performed in varying order. Usually the sequence starts on the first day of the month of Muḥarram with a play devoted to the death of Muslim b. ʿAḳīl [*q.v.*], al-Ḥusayn's emissary to Kūfa. This is followed in daily sequence by the martyrdom of two of Muslim's children, and then by plays about the martyrdom of various members of al-Ḥusayn's family and his companions. On the sixth of Muḥarram, *The martyrdom of Commander Ḥurr* is usually performed (al-Ḥurr b. Yazīd [*q.v.*] left the forces of the Umayyad caliph Yazīd I and went over to al-Ḥusayn). On the seventh, *The martyrdom of Ḳāsim the Bridegroom* is reenacted; on the eighth, *The martyrdom of ʿAlī Akbar* (the eldest and favourite son of al-Ḥusayn); and on the ninth, *The martyrdom of ʿAbbās* (one of al-Ḥusayn's half-brothers; ʿAbbās was his standard-bearer). The basic repertory of the *taʿziya* does not necessarily end with al-Ḥusayn's death. The performances may continue after ʿĀshūrāʾ to include the tragic lot of al-Ḥusayn's womenfolk, who were taken as captives to Damascus.

The Shīʿī cult of martyrology caused new plays about other Shīʿī martyrs before and after Karbalāʾ to be added to the *taʿziya* stock. Since the mid-19th century, plays based on the Ḳurʾān, *ḥadīth*, and even current events have been written and performed. However, such plays retain their ties to the Karbalāʾ tragedy through the employment of the *gurīz*, or "digression", a direct verbal and pictorial reference to the events of Karbalāʾ shown through the staging of a short episode from al-Ḥusayn's passion in the form of a tableau, a panoramic vista or a brief scene. This expansion of the repertory was followed by the

expansion of the performing time from the months of Muḥarram and Ṣafar to the entire year.

The *taʿziya* troupes of today are often family businesses, although they depend only partially on the income from performances. Nowadays, professional troupes usually stay in one place for ten days to two weeks, giving a different play every day. Sometimes there are two performances a day, one in the evening. A play can last from two to five hours.

In the 1930s, Riḍā S̲h̲āh's government, considering the *taʿziya* a backward ritual, imposed restrictions on its performance in urban areas, and the *taʿziya* retreated to the countryside. Āyatullāh K̲h̲umaynī (Khomeini), however, used the *taʿziya* and other popular S̲h̲īʿī rituals and beliefs as a means of mass mobilisation for the Islamic Revolution. During Iran's eight-year-long war with ʿIrāḳ, the heroism depicted in the *taʿziya* was enlisted to increase the fighting spirit of the Iranian combatants and to bring solace to those who had lost their loved ones.

In Muḥarram processions in the Indian subcontinent, *taʿziya* signifies the bier on which al-Ḥusayn's headless body was carried from the battlefield to its final resting place; it also stands for his tomb. The sizes and shapes of these portable *taʿziyas* vary greatly, from small, coffin-like structures to immense floats which are either carried by a crowd of men on their shoulders or moved along on wheels. *Taʿziyas* of whatever size are made of papier-mâché, coloured paper and bamboo. Usually it resembles neither the cenotaph nor the mausoleum of al-Ḥusayn it purports to be. Even in this age of photography, film and international travel, when artists and artisans have the opportunity to become acquainted with al-Ḥusayn's actual tomb, the original is seldom depicted, as the builders of the *taʿziya* believe the artistic creation itself is a form of piety and of homage of al-Ḥusayn. The *taʿziya* more often resembles the architecture of a standard Indian mosque than it does al-Ḥusayn's mausoleum. Large and small *taʿziyas* in their thousands are carried in the Muḥarram processions. Those who take part in the processions like to touch the *taʿziyas*, as they are alleged to possess healing powers. Quite frequently, after the procession is over, the *taʿziyas* are buried or submerged in water, the latter doubtless a Hindu influence on this Muslim ritual.

In the mid-19th century, the *taʿziya* was brought to the Caribbean basin by East Indian indentured labourers. On the island of Trinidad, *taʿziyas*—called *tad̲j̲a*, due to phonetic transformation—are still being built, paraded, and immersed in water during the month of Muḥarram.

TAZWĪR (a.), verbal noun of the form II verb *zawwara*, stemming from *zūr*, defined in the lexica as *kad̲h̲ib*, *bāṭil*, i.e. falsehood, falsification, embellishment of the truth (cf. Ḳurʾān, XXII, 31/30, XXV, 5/4, 72, and LVIII, 2). *Tazwīr* can therefore be used for the falsification or forgery of a document or piece of writing.

All three categories of manuscripts, that is, official documents, codices and single leaves (usually calligraphs or miniatures), have been objects of falsification. That forgery was known in the early years of Islam may be attested by the fact that, according to Arabic sources, Hārūn al-Ras̲h̲īd substituted the use of paper for parchment in the chancery as it was more difficult to erase a text written on paper or to scratch it out without this being noticed. Also, before paper was introduced into the government offices some caliphs preferred papyrus to parchment for their correspondence for the same reason. In order to prevent the counterfeiting of documents certain measures were developed. One such measure used in the drafting of contracts was to write out the original figure in question in the form of two equal parts instead of the full amount. Also, any erasures (*kas̲h̲ṭ*) and cancellations (*ḍarb*) had to be marked as such and the number of lines, as well as the number of sheets (*waṣl*) forming the document had to be accounted for (see e.g. *D̲j̲awāhir al-ʿuḳūd* of Muḥammad al-Asyūṭī, Cairo 1955, i, 12-13).

Forgeries relating to authorship in the Middle Ages and earlier may not have been common, most probably because of the extensive use of certificates of audition (*samāʿ* [see samāʿ. 2.]) and the widespread knowledge of the author's works, the chains of their transmitters and the memorisation of their contents by many; however, there are many pseudo-works (not always intentional), and, especially in the occult sciences, many misattributions of works, e.g. to al-G̲h̲azālī or Ibn al-ʿArabī.

Forgeries involving the arts of the book, such as calligraphy, were certainly widespread. The favourite targets were master calligraphers. D.S. Rice, for example, discovered five faked colophons with attributions to Ibn al-Bawwāb [*q.v.*] and it is well known that Yāḳūt al-Mustaʿṣimī's [*q.v.*] calligraphy was in such great demand that this led to the production of many facsimiles (not always acknowledged as such) and/or forgeries. The problem here is nevertheless somewhat complicated due to the prevalent and well-known phenomenon of imitation (*taḳlīd*). Thus it is not always possible to state whether the forgery was intended or not and whether it was intended for financial profit, since imitation constituted a fundamental element of the calligrapher's training and a form of admiration for the master. Islamic literature has recorded a number of cases of imitation involving such famous cal-

ligraphers as Ibn Muḳla [*q.v.*], Ibn al-Bawwāb, Yāḳūt and Shaykh Ḥamd Allāh. It is said, for example, that Ibn al-Bawwāb copied one of the thirty volumes of the Ḳur'ān previously executed by Ibn Muḳla. The volume in question was missing from the royal library, and the Būyid Bahā' al-Dawla [*q.v.* in Suppl.] ordered that it be completed. The result was such that when the newly-executed volume was presented to him, he could not distinguish it from the others and the set was retained as being in the hand of Ibn Muḳla. Yāḳūt al-Mustaʿṣimī is said to have imitated the work of Ibn al-Bawwāb, whilst Shaykh Ḥamd Allāh imitated that of Yāḳūt.

Forgery for financial profit thrived among book collectors. Pieces of calligraphy signed by famous masters would fetch quite a lot of money and were often forged. Yāḳūt al-Ḥamawī in his *Irshād al-arīb* relates a number of stories involving counterfeits. That these were not isolated cases is evident from the fact that the famous treatise *ʿUmdat al-kuttāb* (see *RIMA*, xvii, [1971]) of al-Muʿizz b. Bādīs [*q.v.*] has a section on how to make paper look old (*taʿtīḳ*). A number of cases of some very notorious forgers have come down to us. One of them was Muḥammad al-Aḥdab (d. 371/981), who came to be known as al-Muzawwir (i.e. "the forger"). He is reported to have been able to forge the hand of any calligrapher. The existence of quite a number of forgeries in this field can be confirmed when investigating extant illuminated codices in various collections around the world. As an example, a collection of 18 Ḳur'ānic codices and 13 fragments preserved at McGill University Library contains two evident cases of forgery: one involving a Mamlūk Ḳur'ān attributed to Ibn Muḳla (*ḥarrarahu Ibn Muḳla al-Wazīr al-Aʿẓam*) and the other, a single parchment leaf supposedly from the famous *Muṣḥaf al-Ḥāḍina* ascribed to ʿAlī b. Aḥmad al-Warrāḳ, 410/1020.

Because of the great appeal and value of single images, one-page paintings and illuminated folios were particularly subject to forgery. The famous 10th/16th century painting of the "Seated scribe" by Bihzād [*q.v.*] and many 11th/17th century drawings of Riḍā ʿAbbāsī [*q.v.*] were often faked. Closer to our times, a number of cases of outright forgeries involving the alteration of images have come to light. The production of these fakes was done purely for commercial reasons and was aimed at collectors, who often failed to pay attention to the compatibility of text and image. The alterations involved, for example, the shaving of damaged images and pasting them on to folios from other manuscripts, adding an extra folio to create a bifolio, and separating illustrations from the verso and recto.

One should also mention here a number of early codices of the Ḳur'ān ascribed to the caliphs ʿUthmān and ʿAlī, as well as to some Imāms and Companions of the Prophet. The codices ascribed to ʿUthmān and ʿAlī are most certainly not authentic and belong to a much later period. Ṣalāḥ al-Dīn al-Munadjdjid put forward a suggestion that the reason for their ascription to the two caliphs was political and/or religious. F. Déroche believes that the misattributions were possible "because the scripts used in these Qur'ans looked so ancient to the Muslims of later periods that they believed they could only have been made in the 1st century." He and many other scholars are also of the opinion that a high proportion of the few surviving examples of colophons from the first centuries of Islam are nothing more than fakes.

Finally, one should note the existence of modern forgeries for the Western market, one notorious example being that of a forged manuscript of Kay Kāwūs's [*q.v.*] *Ḳābūs-nāma*.

(A. Gacek)

TAZYĪF (A.), forgery of coins. There are many words associated with counterfeit coins: *tazyīf*, forgery, from *zāfa*, to be adulterated, forged, hence *zā'if* and *zayf*, pl. *zuyūf*, false coin, and *muzayyif*, forger; *zaghala*, to adulterate, counterfeit, hence *zaghal*, counterfeit coin; *ḳalaba*, to change, transform, hence Arabic *ḳallāb*, a counterfeiter, Arabic, Persian and Turkish *ḳalb*, false, base, impure, *ḳalpazan*, counterfeiter, from the Persian *ḳalb-zan*; *ḳallada*, to falsify, hence *taḳlīd*, counterfeit, and *muḳallad*, counterfeited. The term *bahradj*, counterfeit money, appears also in Arabic. Pejorative terms for coins include *bāṭil*, false, unsound, currency cancelled or withdrawn from circulation, *radhī*, bad, corrupt; *sattūḳ*, *suttūḳ*, base coins coated with gold or silver, *maghshūsh*, adulterated, alloyed, base coin, *ḳarḍ*, clipping coins with scissors. Laudatory terms are *ibrīz*, purified gold, *djayyid*, good, excellent, *khāliṣ*, *khāṣṣ*, *ṣafī*, *ṣurāḥ*, pure unmixed (metal), and *ṣaḥḥ*, the paraph or official mark on an ʿOthmānli gold coin testifying to its authenticity.

The chief motivation behind forgery, both ancient and modern, is to realise the material benefits derived from cheating people for gain, although forgery may also be used as an economic and political weapon in war, either to destabilise an enemy currency or to supplement the existing monetary stock to pay an army advancing through enemy territory. The falsification of precious metal currency used to be the main area of forgers' activities, but now that coins have no more than nominal values, the forger has turned to paper currency, other financial instruments and objects, and even brand-name items as a way to achieve riches. For the purpose of this article, however, the forgers' arts will be examined as they were traditionally practised in the Islamic world.

Despite repeated injunctions in the Ḳur'ān to deal fairly in commerce by giving full weight in exchange for both money and goods, several commonly used ways of exploiting public trust by falsifying the coinage and public weight standards are mentioned in Arabic, Persian and Turkish records. One was to roll or hammer out blanks from base metal, usually copper, which was both common and close in weight to silver, then plate it within thin sheets of gold or silver, strike it

into coin with official dies, mix the false pieces with the good and place the result in circulation. When well made by mint operatives, such pieces were hard to detect, because their outer skins were of virtually pure metal. Over time, however, the high points on the lettering and the edge wore away, leaving dark areas that revealed their core material. The skill needed for this method of counterfeiting required the complicity of the mint administration, if not the government authorities themselves, but a simpler process could be practised by a wider group, although it yielded poorer results at much higher risks of detection. This involved making a mould of a genuine coin and using it to cast counterfeits which could be rubbed in quicksilver to give a silvery appearance to dirhams [*q.v.*] or gold dust for dīnārs [*q.v.*]. Because the manufacturing process demanded little skill and no access to genuine dies, it was ideal for freelance counterfeiters who could quickly move from place to place with a minimum amount of equipment to escape detection and capture. It is said that the first type of counterfeit was often accepted in commerce but refused by the treasury. Today such pieces are regularly found in hoards of gold and silver coins, where they went undetected until surface corrosion revealed the corruption within. The second type was accepted only by the gullible.

The well-deserved distrust of coins by merchants and exchange dealers led to the frequent disfigurement of the thick fabric of Mug͟hal muhurs and rupees by "test marks" (small drillings into the surface or edges of the flan). The common practice of clipping the edges of thinner coins may also have been a way of detecting counterfeits while illegally acquiring a stock of precious metal. The widespread persistence of clipping may have been the main reason why the ʿAbbāsids abandoned a strict, fixed weight standard for their coinage early in the 3rd/9th century. The careful manufacture and regular weight of the dīnār and dirham under the Umayyads and early ʿAbbāsids had permitted payments by tail (numbers of actual coin), but clipping made this difficult to enforce, thus payment by weight (mass of metal) became the rule in Egypt, Syria and Iran for many centuries.

Another common way of cheating the public was to adulterate or debase the alloy of the coinage. In theory, Islamic dīnārs and dirhams were made from virtually pure gold and silver, but in practice the mint and government could, and frequently did, find it easy and profitable to adulterate the metal and pass off the results as coins of good alloy. These did not fool the experts, moneychangers and receivers for the treasury, but they often went undetected by the public. Similarly, oppressive régimes could force bad money on the people they ruled, which, once beyond their sway, was discounted to reach its real worth in precious metal. Moneychangers would maintain elaborate charts of cross-rates between the coinages of different governments which they altered in line with intelligence received on current minting practises.

Yet another way of counterfeiting was to strike more coins from a given weight of metal than the regulations allowed, and pocket the difference. This was the usual method of forgery under the Ottomans, where the government established the total number of *aḳčes* [*q.v.*] to be struck from a 100-dirham weight of silver. With a multiplicity of mints under loose governmental control, it was relatively easy to adulterate the silver and thus illegally and unobtrusively to expand the money supply.

There are two modern approaches to the forgery of Islamic coins. First, imitations of trade coins are produced to satisfy the demands of a mass market for gold in the Middle East. For instance, copies of popular gold bullion coins of the 19th and 20th centuries can bring the manufacturers profit from the small premium of coined over uncoined gold. The widespread faking of gold coins of the Ottoman ruler Meḥemmed V Res͟hād (r. 1327-36/1909-18 [*q.v.*]) during the 1950s and 60s was due to the exaggerated premium, often 50% or more, over the price for similar pieces of other sultans, willingly paid by country people in Turkey. This demand was met by jewellers in Syria and Lebanon as a sideline of their usual business. There was no faking of Islamic coins to satisfy the collector market until the mid-1980s, when the high prices paid for certain coins, especially Umayyad dinars of the year 77 A.H. and those bearing the mint name *Maʿdān Amīr al-Muʾminīn bi ʾl-Ḥid͟jāz* attracted the attention of well-known counterfeiters of classical Greek and Roman coins. The usual technique is to make moulds and casts using dentistry equipment. Another way is to select coins with common mint names such as *Miṣr* and *Wāsiṭ*, then to tool the letter forms to resemble rare or more popular mints like *Makka* and *Filasṭīn*. The commonest trick is to alter the unit *tisʿa* into *sabʿa* to transform a common Umayyad dīnār of the year 79 into the rare date 77. Unfortunately the growing interest in Islamic coins is certain to increase the number of counterfeits produced to meet this demand.

(R.E. Darley-Doran)

TEBESSA, written by Yāḳūt, *Buldān*, Beirut, ii, 13, as Tabissa, the Theveste of classical times, a town of eastern Algeria, situated 235 km/146 miles south of ʿAnnāba or Bône and 19 km/13 miles west of the modern Tunisian frontier (lat. 35° 21' N., long. 8° 06' E., altitude 850 m/2,790 feet).

The site of the town, on an elevated plain, has been inhabited since prehistoric times, as the dolmens at Gastel, petrographs on the rocks of Saf-Saf, *inter alia*, show, and legend attributed the foundation of the town to Hercules. It was a dependency of Carthage from the 7th century B.C. and passed under Roman domination after the Third Punic War (149-146 B.C.); Vespasian's stationing there the *Legio III Augusta* gave Theveste, now a *municipium*, a great boost, thanks also to the rich surrounding plain, and under Hadrian (117-38) it had 50,000 inhabitants. Septimius Severus erected it into a *colonia* and gave its people Roman citizenship. It furnished Rome with much of the *annona*, and received magnificent buildings, attested by the surviving ruins: an amphitheatre for 7,000 people, the Temple of Minerva, the Arch of Caracalla, and other buildings.

Christianity appeared there from the opening of the 3rd century, and the town produced such martyrs as St. Crispin (A.D. 305). There was also a Manichaean presence, and a Donatist council was held there, although Donatism did not take deep root. With Christianity made the official cult under Theodosius I (379-95), there was erected just north of Theveste the basilica of St. Crispin, the finest of Christian North Africa. But decline began with the Vandal occupation, and, during the Byzantine re-occupation, the town was

reduced to the citadel, a rectangle of 320 m by 280 m surrounded by a strong rampart with three gates.

It is not known exactly when Theveste passed under Arab domination, but this must have been by 84/703 when the Maghrib was definitively conquered. It now became part of the domains of successive dynasties, from the Aghlabids to the Ḥafṣids. Having lost its strategic importance, its history in mediaeval times was relatively untroubled until the Hilālian invasion (443/1052 [see HILĀL, BANŪ]), in which it suffered severely. Its name appears nowhere in Ibn ʿIdhārī's *Bayān*. It passed under Shīʿī Fāṭimid control without a struggle, and after 294/907 was used as a base for completing the conquest of Ifrīḳiyā from the Aghlabids; under the Fāṭimids it became the chef-lieu of a *kūra*. The Nukkārī Abū Yazīd, the "Man on the Donkey", seized it in 332/944 and demolished part of the wall. In 390-1 the Zīrid Bādīs had to intervene to save Tebessa from the attacks of rebels. In the time of the Ḥafṣid Abū Bakr (718-46/1318-46), the town enjoyed a semi-independence under a local *shaykh*, Muḥammad b. ʿAbdūn, until 739/1339. In 1573 there was a Turkish garrison there, stationed in the locality of the present church. Intermarriage with local women produced the element of the *kulughlīs* [see KUL-OGHLU], which became dominant and spread the Ḥanafī *madhhab* at the expense of the traditional Mālikism. After Constantine fell into French hands in 1837, the Turkish garrison withdrew to Tunisia, and to fill the political void and protect the town from nomad attacks, some of the local notables appealed to the French.

Hence French occupation began in 1842 but was not definitive till 1851. In 1865 the troops of the Tunisian rebel Ibn Ghidhāhum [*q.v.* in Suppl.] were crushed on the heights of Tebessa. In the general revolt of 1871, Muḥyī al-Dīn, son of the *amīr* ʿAbd al-Ḳādir, tried unsuccessfully to seize the town on 25 May, and was afterwards disavowed by his father. In 1881 it functioned as an important military base for the submission of southern Tunisia. In 1957 the "Ligne Morice", an electrified fence meant to cut off Algerian *mudjāhidūn* from their bases in Tunisia, stretched 200 km/125 miles from Bône to Tebessa. Since Algerian independence, Tebessa has been the chef-lieu of a *wilāya* or province and it now has a population of 67,000.

The decline of Tebessa's prosperity since classical times may have resulted from desertification and also from changes in the axes of trade; during the Arab period, there was no more prosperity from olive trees. It was not a major stage on trade routes, and is first mentioned, very briefly, by al-Muḳaddasī amongst the geographers (partial tr. Pellat, *Description de l'Occident musulman au IVe-Xe siècle*, Algiers 1950, 18/19). But on the evidence of al-Bakrī, who mentions its fruit and walnut trees and its role as a centre for the caravan trade (*Masālik*, Tunis 1992, § 1389), it enjoyed a revival of prosperity until the Hilālian invasions. The threshing of corn was done, as elsewhere, by animal power motivating sharp stones and iron blades, the *djarūsha*, the ancient *tribulum* (Brunschwig, *Ḥafṣides*, ii, 208), a technique not entirely disappeared today. But decline accelerated in the 6th/12th century, and Yāḳūt, *loc. cit.*, noted the extensive ruins and the Arab *ṣaʿālīk* there, i.e. the Banū Hilāl; the only manufacture was carpet weaving, carpets for use in tents, which has lasted until the present time. At the end of the 19th century, Pierre Castel noted the manufacture at Tebessa of carpets with a short pile and quite handsomely produced (*Tébessa, histoire et description d'un territoire algérien*, Paris 1905, i, 132). For Leo Africanus, the ruins of Tebessa recalled the Coliseum at Rome, but he found the inhabitants gross and rebellious and the land there infertile (*Waṣf Ifrīḳiyā*, Beirut 1983, ii, 63-5).

In the colonial period, Tebessa benefited from peace and security, and Castel noted the speedy increase of population, which included a Jewish element (*ibid.*, ii, 166). In the present century, Tebessa has been linked by narrow-gauge railways with Oued Kébérit and the standard-gauge line to Bône, and with Constantine via Ouled Rahmoun and continuing into Tunisia; it has also become an important road junction. The phosphate and iron mines of the region are especially valuable, the latter producing 60% of Algeria's iron ore (J. Despois, *L'Afrique blanche*, i, *L'Afrique du Nord*, Paris 1958, 431).

TEGÜDER, AḤMAD, third Īl-khān in Persia [see ĪL-KHĀNS], seventh son of Hülegü [see HÜLĀGŪ] and the eldest surviving at the time of his accession, ruled 680-3/1282-4.

He was the first Īl-khān to be converted to Islam, at which time he received the additional name Aḥmad. It was no doubt as a result of his conversion that he attempted to put an end to the long-standing hostilities between the Īl-Khānate and the Mamlūks of Egypt and Syria; but his embassies were received without enthusiasm by the Mamlūk sultan Ḳalāwūn [*q.v.*]. He had been the majority preference for the succession over Arghun, the son of his brother and predecessor Abaḳa, but relations between Tegüder and Arghun deteriorated throughout the reign. In mid-1284 Tegüder managed to take Arghun into custody, but neglected to have him executed. Within a matter of a few weeks the tables were turned: the *amīr* Buḳa, a former supporter of Tegüder, changed sides and released Arghun. Tegüder was captured and executed in Djumādā I 683/August 1284. It seems unlikely that it was Tegüder's espousal of Islam which cost him the support of the Mongol *amīrs*: his fall is more plausibly attributable to lack of vigour and competence and an unwise disposition towards clemency.

TEKĀLĪF (t.), the Ottoman Turkish form of the pl. of the Arabic verbal noun *taklīf* "the act of imposing something [on someone]", in this case, taxation. In Ottoman Turkish usage, *tekālīf* was used in the general sense of taxes, more or less synonymously with other terms like *resm* [*q.v.*]. Writings on fiscal topics distinguished *tekālīf-i sherʿiyye*, canonical taxes in accordance with the *Sharīʿa* (e.g. the *zakāt*, *ʿushr*, *kharādj* and *djizya*) from *tekālīf-i fewḳalʿāde* "extraordinary ones", which could include *ʿörfī* ones, those imposed by the sultan and his servants according to custom, also called *ʿawāriḍ* "accidentally arising taxes" [*q.v.*], and *tekālīf-i shāḳḳe* "oppressive, onerous" ones.

TEKE-ELI "the country of the Teke", a region in southern Anatolia around the Gulf of Antalya. Roughly corresponding to the classical areas of Lycia and Pamphylia, which constituted the western and eastern parts of Teke-Eli respectively, it took its name from the Teke *beys* who, as leaders of the Teke-oghullarî [*q.v.*] Türkmen, established a principality there in the 8th/14th century. Except for the alluvial plains at the mouths of, and along, several rivers, especially those to the east of Antalya [*q.v.*], Teke-Eli was a rugged, mountainous country traversed by north-south branches of the Taurus range. In the Lycian part of the country, the Bey Dağları mountains rise to 3,070 m. In the 8th and 9th/14th and 15th centuries, the most important city in this region was the port of Antalya. Others of note were Finike, Elmalı [*q.v.*], İstanoz (Korkuteli), and Ḳarā Ḥiṣār [*q.v.*] (Perge).

This region, the coast of which was densely settled in Byzantine times, suffered severely from Türkmen raids in the first half of the 7th/13th century. These raids, which had begun in the previous century, seem to have intensified after Kay Khusraw I, the Saldjūḳ sultan of Rūm, conquered Antalya in 603/1207 and made it the home port for his Mediterranean fleet. The Türkmen presence in Lycia and Pamphylia also increased significantly after the Mongols invaded central Anatolia and defeated the Sultanate of Rūm in 641/1243. At the end of the 7th/13th century, the Türkmen family of the Ḥamīd-oghullarî [*q.v.*] established a principality in Pisidia immediately to the north of Pamphylia and quickly took control of Antalya and the coastal plain. By 721/1321, Antalya was in the hands of a branch of this family, the Teke-oghullarî, who proceeded to acquire the rest of Pamphylia as well as Lycia, thus founding their own principality. This state, the capital of which was either Elmalı or Antalya, survived more or less for about a hundred years. During this time, Teke-Eli was rather thoroughly Turkified. By the early 9th/15th century, the metropolitan seats of Antalya, Perge, and Side had disappeared. Nevertheless, the former city retained Greek and Jewish quarters, and pockets of Byzantine-Greek speaking populations survived in remote parts of Lycia as late as the 19th century. Turkification appears to have contributed to the nomadisation of the region and a decline in agriculture. The upper mountains and valleys provided excellent pasture for sheep. In particular, Teke-Eli became well known for camel raising.

The Türkmen groups who settled in Teke-Eli were closely bound to their old traditions and customs. Heterodox beliefs, expressed above all in various forms of Ṣūfism, were rife among them, as were varieties of ʿAlawī beliefs. The Bektāshiyya [*q.v.*] took root in this region shortly after the death of the patron of the order, Ḥādjdjī Bektāsh in 660/1270. The shrine of Abdāl Mūsā (*fl.* 8th/14th cent.), considered by some to be the second master of the Bektāshiyya, was located in Elmalı. Ḳalandarīs [*q.v.*] were also common and, as Ibn Baṭṭūṭa, who was in Antalya in 732/1332, testifies, the *akhīs* [*q.v.*] were well organised there. The Teke *beys* patronised these groups and endowed many of their lodges (*tekkes*, *zāwiyas*), which were found in all the major towns.

In 762/1361, the Lusignans of Cyprus captured Antalya. It remained in their hands until 774/1373. In 792/1390, Bāyezīd I took the city. He lost it briefly to the Ḳaramān-oghullarî [*q.v.*], but retook it and its coastal plain in 800/1397. After Tīmūr defeated Bāyezīd at Ankara in 804/1402, his son Shāh Rukh plundered Teke-Eli and restored the Teke-oghullarî to some degree. In 826/1423, however, during the reign of Murād II, all of Teke-Eli fell permanently under Ottoman rule, becoming a *sandjaḳ* of the Ottoman Empire. The Ottomans reaffirmed all the privileges (*berāt*, *nishān*, etc.) that the Ḥamīd-oghullarî and Teke-oghullarî had granted the local notables. Thus the *sipāhīs* and others retained their positions.

Nevertheless, there was later much religious ferment in this region directed against the Ottoman state. The Türkmen there were attracted to various Shīʿī or ʿAlawī movements. In 1500, some of them visited Ardabīl as *murīds* of Shāh Ismāʿīl. Indeed, many Teke Türkmen joined Shāh Ismāʿīl and went on to play an important role in the founding of the Ṣafawid state. In 1511-12, in Teke-Eli itself, Shāh Ḳulu Bābā Tekeli led an uprising of these Türkmen. Before their revolt was crushed, there was much destruction and loss of life. According to the Ottoman cadastral surveys, the cities of Teke-Eli suffered a significant drop in population because of this uprising and Bāyezīd's subsequent deportation of many of its supporters.

TEKE-OGHULLARÎ, a Türkmen dynasty that ruled a principality located around the Gulf of Antalya from *ca.* 708/1308 to 826/1423.

The origin and date of appearance of the Teke-oghullarî are obscure. According to Yazîdjî-oghlu ʿAlī, they were descended from the Igdir Türkmen who were one of the tribes constituting the *üč oḳ* branch of the Oghuz (*Taʾrīkh-i āl-i Saldjūḳ*, written 827/1423-4 or 840/1436-7 and based on Ibn Bībī's *al-Awāmir al-*

ʿAlāʾiyya, Turkish text ed. Houtsma, Leiden 1902, 88, 322). When Kay Khusraw I, the Saldjūḳ sultan of Rūm, conquered Antalya in 603/1207, he settled the Igdir in that region and gave it to them as winter quarters. Yazîdjî-oghlu adds that the *ketkhudā* (chief) of the Igdir had a son named Teke, who appears to have lived in the last quarter of the 8th/14th century.

After the Saldjūḳ Sultanate of Rūm was defeated in 641/1243 by the Mongols and transformed into a shadow state, it gradually dissolved into a number of Türkmen principalities, or *beyliks*, that were subject to the Mongol governors of Anatolia. Near the end of the 7th/13th century, one of these principalities was founded by the Ḥamīd-oghullarî [*q.v.*] in the classical region of Pisidia. At the beginning of the following century, they also controlled Antalya to the south. Abu 'l-Fidāʾ states that Falak al-Dīn Dündar Bey of the Ḥamīd-oghullarî captured Antalya and gave it to his brother Yūnus (*Taḳwīm al-buldān*, Dresden 1846, 210). This probably occurred no earlier than 708/1308, when the Saldjūḳ Sultanate of Rūm disappeared. Up to then, the coast of Antalya appears to have belonged to the Saldjūḳs of Rūm. The descendants of Yūnus conquered all the territory around Antalya, the classical regions of Lycia to the west and Pamphylia to the east, and thus established their own principality.

Yūnus' son Maḥmūd succeeded him in Antalya, and another son Sinān al-Dīn Djālis (or Djālish) Khiḍr (Sinān al-Dīn Djālis and Khiḍr may have been two different brothers) ruled in Istanoz (Korkuteli), while his slave Zakariyyāʾ held Ḳarā Ḥiṣār (Perge) and several other towns (al-ʿUmarī, *Masālik al-abṣār*, ed. Taeschner, *Al-ʿUmarīs Bericht über Anatolien nach den Masālik al-abṣār*, Leipzig 1929, i, 48). Maḥmūd was a close associate of the Mongol governor Demirtash. When the latter revolted against the Il-Khānid ruler Abū Saʿīd Bahādur Khān in 727/1327, Maḥmūd was forced to flee with him to the Mamlūk court in Cairo, where he was imprisoned. Khiḍr then took control of Antalya. According to al-ʿUmarī, he had 12 cities and 25 fortresses. Ibn Baṭṭūṭa met Khiḍr in Antalya in 732/1332 (tr. Gibb, *The travels of Ibn Baṭṭūṭa*, Cambridge, 1958-71, ii, 421). Al-Ḳalḳashandī reports that Khiḍr was succeeded by his son Dadī. Maḥmūd's son Mübāriz al-Dīn Meḥmed subsequently replaced him (*Ṣubḥ al-aʿshā*, viii, 17).

Meḥmed was the most dynamic member of the dynasty. He was undoubtedly the Teke mentioned by Yazîdjî-oghlu. He appears to have used the title Teke Bey, which was then applied to both his dynasty and the territory that they ruled, Teke-Eli [*q.v.*] (*ibid.*, v, 346, viii, 17). Indeed, the chronicles of the Lusignan dynasty of Cyprus, against which Meḥmed spent much of his life fighting, often refer to him as the *amīr* of Taka/Takka. In 762/1361, Peter I took Antalya by storm. Meḥmed failed to retake the city. Although he later raided Cyprus, he eventually paid homage to Peter. After Peter was murdered in 770/1369, Meḥmed attacked Antalya again, probably in 771/1370, but failed once more. Finally, as a result of their difficulties with the Genoese, the Lusignans negotiated the return of Antalya to Meḥmed in 774/1373. The latter, who had the title *sulṭān al-sawāḥil*, died at some time after 779/1377. In that year, he built a *türbe* in Antalya for his son ʿAlī. This is the only significant surviving Teke structure, which is in the traditional style of the Saldjūḳs of Rūm.

Meḥmed was succeeded by his son ʿOthmān Čelebi who resided in Istanoz, leaving Antalya to his own son Muṣṭafā. During this time, the principality lost its former importance. In 792/1390, it was conquered by Bāyezīd I, and Muṣṭafā fled to Egypt. When the Ottoman governor of the region, Fīrūz Bey, was transferred to Menteshe-Eli [*q.v.*], the region fell under the influence of the Ḳaramān-oghullarî [*q.v.*]. In 800/1397, Bāyezīd returned to defeat the Ḳaramān-oghullarî and re-incorporated the region in his empire. In 804/1402, after Tīmūr defeated Bāyezīd at Ankara, he sent his son Shāh Rukh on an expedition to Teke-Eli. He restored much of the principality, minus Antalya, Ḳarā Ḥiṣār, and other cities, to ʿOthmān who remained in Istanoz. ʿOthmān subsequently formed an alliance with the Ḳaramān-oghullarî in an attempt to take Antalya, but he was killed by the Ottoman *subashî* (constable) of Ḳarā Ḥiṣār in 826/1423. This ended the dynasty and marked the final absorption of its remaining territory into the Ottoman Empire. Although the Teke-oghullarî founded a *de facto* independent state, no coinage struck by them has been positively identified.

Şehabeddin Tekindağ) (these latter two authors differ on a number of points).

(G. Leiser)

TEKFUR, Tekvur, a title used in late Rūm Saldjūḳ and early Ottoman times. It is most probably of Armenian origin (< *taghavor* "crown bearer", MP *tāg-āwāra* (see Hubschmann, *Armenische Grammatik*. i. *Armen. Etymologie*, Leipzig 1897, s.v.; I. Mélikoff-Sayar, *Le Destān d'Umūr Pacha*, Paris 1954, 47 n. 6, and index, 144b) or, less likely, from the Greek name Nikephoros > Nikfor > Tekfur (see Zenker, *Türk.-arab.-pers. Handwörterbuch*, Leipzig 1866, s.v.; E. Zachariadou, *Hist. and legends of the early sultans 1300-1400* [in Gk.], Athens 1991, 215). It was employed by historians in Persian and Turkish mainly to denote Byzantine lords or governors of towns and fortresses in Anatolia (Bithynia, Pontus) and Thrace. It often denoted Byzantine frontier warfare leaders, commanders of *akritai*, but also Byzantine princes and emperors themselves (whence the 13th-century *tekvurs* of Trebizond, and the late 13th-century "Emperor's Palace", Tekfur Sarayî, in Constantinople (refs. in C. Mango, art. s.v. in *The Oxford dict. of Byzantium*, Oxford 1991, 2021-2; cf. P. Wittek, *Das Fürstentum Mentesche*, Istanbul 1934, 39).

Ibn Bībī [*q.v.*] refers in the 13th century to the first emperor of Trebizond, Alexius I Grand Comnenus (1204-22), as "Kir Aleks, *tekvur* of Djānit (= Pontus)" (see German tr. H.W. Duda, Copenhagen 1959, 64 ff.; Gk. tr. A. Savvides, in *Archeion Pontou*, xxxix [1984], 185 ff.), and to the ruler of Cilician (Little) Armenia as *tekvur* (Duda, 238-9, 336 n. 220). In the *Dede Korkud* epic, there is reference to the Grand Comnenus *tekfur* of Djānit in *ca.* 1352, i.e. Alexius III (1349-90), who subjected the Türkmen *amīr* of the Aḳ Ḳoyunlu [*q.v.*], Turalî Khān, to the task of performing three miraculous feats to gain the hand of his daughter (ed. Fahrettin Kırzıoğlu, Istanbul 1952, 117-18, ed. E. Rossi, Vatican City 1952, 180-1; Eng. tr. G.N. Lewis, Harmondsworth 1974, 119; cf. A.A. Bryer, in *Dumbarton Oaks Papers*, xxix [1975], 134-5, and in *Byz. and Modern Greek Studies*, xi [1987], 197 ff.).

Several powerful Muslim equivalents of *tekfurs*, like Köse Mīkhāl [see mīkhāl-oghlu, and cf. H. İnalcık, in *SI*, ii [1954], 103-4; A. Failler, in *Rev. Etudes Byzantines*, lii [1994], 110), were at times allies or vassals of ʿOthmān I [*q.v.*], when the latter was bey of a semi-nomadic Türkmen band in conflict with the

tekfurs who controlled summer and winter pasture in northwestern Anatolia (see İnalcık, in *Camb. hist. of Islam*, i, 267). In 710/1308 Meḥmed Bey of the Aydïn Oghlus accepted the surrender of the Byzantine *tekfur* of Keles or Kilas in the Aydïn amīrate's territory (Mélikoff-Sayar, *op. cit.*, 47 ll. 29-32). Between 761-2/1359-61, according to Yakhsï Faḳīh, in ʿĀshïḳ-pasha-zāde, German tr. R. Kreutel, Graz 1959, 80, Gk. tr. in Zachariadou, *op. cit.*, 192-3 and n. 201, the *tekfurs* of Thracian Messene or Misini and Didymoteichon or Dimetoka [*q.v.*] surrendered their fortified towns to Orkhān (and not to Murād I; cf. İnalcık, in *Archivum Ottomanicum*, iii [1971], 196 n. 45, 197) (see P. Schreiner, *Byz. Kleinchroniken*, ii, Vienna 1977, 289-91; P. Soustal, *Thrakien, tabula imperii Byzantini*, 7, Vienna 1991, 242-3; T. Gregory, art. *Didymoteichon*, in *Oxford dict. of Byz.*, 620).

Finally, Meḥemmed II Fātiḥ's conquests after the conquest of Constantinople in 1453 show him as a perceived reviver of the Byzantine empire under Muslim rule, in that Kemāl-pasha-zāde states (facs. ed., Ankara 1954, 186, 613) that he sought to leave "no-one amongst the Byzantine Greeks who could be named *tekfur*", thus eliminating in turn the Despotate of the Morea [see MORA; MEZISTRE in Suppl.] in 1460-1 and the Empire of Trebizond [see TRABZON] in 1461, and annexing the semi-autonomous Greek states of Thessaly [see TESALYA] between 1454-70 and of Epirus by 1479.

Bibliography: Given in the article.

(A. SAVVIDES)

TEKIRDAGH, modern Turkish TEKİRDAĞ, the former RODOSTO, a town and port of Turkey, on the European coast of the Sea of Marmara (eastern Thrace), named after the schistous massif of the Tekir Dağ or Tekfur Dağı (924 m/3,030 feet) which skirts the coast to the southwest, and also the administrative centre of the province (*il*) of the same name.

The town stands on the site of the ancient Bisanthe (Βισάνθη), later Rhaidestos (Ῥαιδεστός). In *ca.* 759/1357 it fell to the Ottomans after they crossed the Straits (see von Hammer, *GOR*, i, 147). The old Ottoman chronicles give details of the ruse used by the general Evrenos Beg [*q.v.*] in order to gain control of the fortress (see on this, Johannes Leunclavius, *Hist. musul. turc.*, Frankfurt 1591, cols. 224, 43 ff.). Under the Ottoman empire, the town, then part of the *wilāyet* of Edirne and the seat of a Greek archbishop, did not play any significant role in politics, but it was the home for several notable figures in the intellectual history of Turkey, such as Nāmïḳ Kemāl [*q.v.*], who was born there in 1840. A certain Aḥmed Luṭfī b. Ḥādjdjī Ḥasan in 1160/1747 compiled a list of the contemporary poets originally from Tekfūr Daghï (see Babinger, *GOW*, 284 n. 1, and on this topic, R. Hartmann, in *OLZ* [1929], n. 1, col. 43 n. 1).

Rüstem Pasha [*q.v.*], Grand Vizier to Süleymān the Magnificent 951-60/1544-53, had the architect Sinān [*q.v.*] construct there a fine mosque (the present Rüstem Paşa Camii), a covered market (*bedesten*) and a hospice for the poor, where travellers passing through the town were fed and sheltered gratis (see von Hammer, *Rumeli und Bosna*, Vienna 1812, 61). Ḥādjdjī Khalīfa [*q.v.*] describes the place Rodosdjïḳ, as he calls it, towards the middle of the 11th/17th century, as being a town strongly fortified, coming within the *sandjak* of Gallipoli, with fine streets, a capacious *ʿimāret* for the poor, baths and caravanserais. The house where the hero of Hungarian independence Francis II Rakoczi died on 8 April 1735 after 18 years of exile with several of his companions, including Count Anton Eszterhazy, has now been made into a museum (see the inscriptions in the Roman Catholic church at Rodosto published by von Hammer as an appendix in his *Umblick auf einer Reise von Constantinopel nach Brussa*, Pesth 1818, 198 ff.). Other travellers in the early 19th century like Lord Keppel (1829, see his *Narrative of a journey across the Balkan*, London 1831, i, 68, 126 ff.) described Rodosto as a miserable place, but the town, having developed as far as the surrounding intensively-cultivated market gardens and extensive vineyards, had grown to around 40,000 inhabitants, at least half of whom were Greeks, by the beginning of the 20th century.

The town and its *sandjak*, like the greater part of Thrace, were invaded by the Bulgarians at the time of the First Balkan War of 1912, but in the end restored to the Ottoman empire. It was attached to Greece, together with the whole of eastern Thrace, by the Treaty of Sèvres (10 August 1920) and occupied by the Greek army until its recapture by the Turkish army in October-November 1922. The exchange of Greek and Turkish populations provided for by the Treaty of Lausanne (14 July 1923) brought the town's population—it was now the centre of a *wilāyet* and henceforth officially called Tekirdağ—down to 14,387 at the first census of Republican Turkey in 1927. Since then, the town has grown once more from its role as the commercial and administrative centre of the province and as an industrial centre processing the products of a rich, mechanised agriculture and viniculture (the first wine factory in the country was there) and accommodating the spill-over from the industrial growth of greater Istanbul. In 1990 it had a population of 80,442.

The *il* of Tekirdağ (6,218 km^2) comprises nine districts (*ilçe*): Tekirdağ Central, Çerkezköy, Çorlu, Hayrabolu, Malkara, Marmara Ereğlisi, Muratlı, Saray and Şarköy. Its rich agriculture includes the mechanised cultivation of cereals and sunflowers on the plateaux and hillsides of the Ergene basin and vines in the coastal districts of Tekirdağ and Şarköy. Crossed by the railway, the road and the motorway from Istanbul to Edirne which links Turkey with western Europe, the province has vigorously developed varied industries (agricultural and food processing, textiles, mechanical and chemical industries), including in the extensive industrial estate of Çerkezköy. Its population increases regularly, leaping from 132,122 in 1927 to 468,842 in 1990.

Bibliography: In addition to references given in the article, see on Rodosto's commercial role, W. Heyd, *Hist. du commerce du Levant*, Leipzig 1885, i, 243, 257, 285, 431, 512, ii, 177; A. Boué, *Recueil d'itineraires dans la Turquie d'Europe*, Vienna 1854, i, 145; Aḥmad Rifʿat, *Lughat-i taʾrīkhiyye we djoghrāfiyye*, ii, Istanbul 1299/1882, 270 ff.; Sāmī Bey Frāsheri, *Ḳāmūs al-aʿlām*, iii, 1661 ff. See also the historical works of the local scholar Hikmet Çevik, *Tekirdağ tarihi araştırmaları*, Istanbul 1981; the monograph of Osman Yalçın, *Tekirdağ*, Istanbul 1981; and the art. *Tekirdağ* in *Yurt Ansiklopedisi*, ix, 6964-7000, x, 7007-61, very full on the province and with many useful references for the town.

(F. BABINGER-[M. BAZIN])

TEKISH B. IL ARSLAN, Abu 'l-Muẓaffar Tādj al-Dunyā wa 'l-Dīn, one of the Khʷārazm Shāhs of Anūshtigin's line, reigned 567-96/1172-1200. The name (thus vocalised in Maḥmūd al-Kāshgharī, tr. Atalay, i, 368) means something like "confronted, attacked, struck [in battle]"; see Hikmet Bayur, *Harizmşah Alâü'd-Dîn "Tekiş" 'in adı hakkında*, in *Belleten*, xiv, no. 56 [1950], 589-95.

Tekis͟h had been governor of D̲j̲and [*q.v.* in Suppl.] during his father's lifetime, and only succeeded to the throne after a struggle with his younger brother Sulṭān S͟hāh, who was supported by his mother Terken K͟hātūn [*q.v.*]. Although Tekis͟h owed his throne to help from the Ḳara K͟hitay [*q.v.*], he came to chafe against their demands for tribute; however, he successfully repelled a Ḳara K͟hitay invasion of K͟hwārazm under the Gurk͟hān Fu-ma (576/1181) and subsequently, in 578/1182, led an expedition into Transoxania and temporarily occupied Buk͟hārā. Tekis͟h's wife, another Terken K͟hātūn, was a Ḳangh͟lï or Ḳïpčaḳ [*q.vv.*] princess, and connections with the steppes to the north of K͟hwārazm, the Das͟ht-i Ḳïpčaḳ [*q.v.* in Suppl.], enabled the S͟hāh to recruit large numbers of Ḳïpčaḳ tribesmen into his armies (not all of these were necessarily Muslims, and the K͟hwārazmian troops in Persia were later to achieve an unenviable reputation for their violence and barbarity). Nevertheless, he had on various occasions to lead expeditions against recalcitrant steppe peoples, e.g. in 591/1194-5 against D̲j̲and and Sïg͟hnāḳ [*q.v.*].

Tekis͟h's rival Sulṭān S͟hāh had established himself at Marw, and the S͟hāh became involved in a three-cornered struggle in northern K͟hurāsān with his brother and the G͟hūrids [*q.v.*], who were endeavouring to extend their power westwards. In this tortuous warfare, Tekis͟h was on one occasion allied with the Ḳara K͟hitay against the G͟hūrids, but the K͟hwārazmians were not finally victorious against the G͟hūrids here until after Tekis͟h's own death. In the last decade of his life, Tekis͟h also saw the possibility of expansion into northern and western Persia, where the last Great Sald̲j̲ūḳ sultan, Ṭog͟hrïl III b. Arslan [*q.v.*], was at odds with the Eldigüzid Atabegs of Ād͟harbāyd̲j̲ān [see ELDIGÜZIDS]. In 588/1192 a K͟hwārazmian army advanced as far as Rayy, and two years later, Tekis͟h defeated and killed Ṭog͟hrïl there. He could then occupy the whole of D̲j̲ibāl as far as Hamad͟hān, and the ʿAbbāsid caliph al-Nāṣir [*q.v.*] had willy-nilly to invest him with the governorship of K͟hurāsān, Turkistān and western Persia. But in 591/1195 the K͟hwārazmians defeated a caliphal army, and relations were always uneasy; the news of Tekis͟h's death in Ramaḍān 596/July 1200 was the signal for a general massacre of K͟hwārazmian troops in D̲j̲ibāl.

Tekis͟h had expanded his original province of K͟hwārazm into a vast empire, which was now handed on to his second son ʿAlāʾ al-Dīn Muḥammad, only to fall prey within two decades to the ferocity of the Mongols.

Bosworth, in *Camb. hist. of Iran*, v, 163-4, 181-3, 188-92. See also K͟HWĀRAZM-S͟HĀHS.

(C.E. BOSWORTH)

TEKKE, TEKIYYE or TEKYE (T.), from Arabic *takiyya* pl. *takāyā*, derived, via *takīʾa*, from form VIII of the root *w-k-ʾ*, which signifies "to rely on", "receive support", and, in the nominal forms *takiyya* and *muttakaʾ*, "place or thing on which one relies, where one rests" (R. Blachère *et al.*, *Dictionnaire arabe-français-anglais*, Paris 1970, ii, 1062-3). The term (in its Turkish form *tekke* or *tekiyye*, Pers. *takiya* or Ar. *takiyya*), conventionally denotes an establishment belonging to a group of Ṣūfīs, where the latter gather around a *s͟hayk͟h*, perform their ritual (*d͟hikr*) and their devotions, etc. It is thus similar in meaning to such words as *ribāṭ*, *k͟hānḳāh*, *dergāh*, *zāwiya* and *āsitāne*, also used to refer to various types of dervish convent (see, in particular, the views of J. Chabbi on the *ribāṭ* as an establishment for mystics and its relations with establishments of the same order, *k͟hānḳāh*, *zāwiya* and *tekke*, in RIBĀṬ).

No study has apparently yet been undertaken which would make it possible to determine in definitive fashion under what circumstances the word *tekke/takiyya* was, or is, employed in preference to the other terms cited, according to times and regions. It seems that its use was first developed in an Ottoman context, from the 10th/16th century onwards. It was at this time that the *zāwiya*, an institution corresponding to establishments formed of cells adjoining a prayer-hall and designed for a "mobile" Ṣūfism (i.e. for the accommodation of dervishes and transient guests), was losing its importance. The development of the *tekke* would thus be associated with the rise of an organised Ottoman network of brotherhoods, controlled by the state and responding to the needs of mystical communities more stable and more permanent than was previously the case (cf. Semavi Eyice, *İlk osmanlı devrinin dini-içtimai bir müessesesi. Zâviyeler ve zâviyeli-camiler*, in *İktisat Fakültesi Mecmuası*, xxiii/1-2 [Ekim 1962-Şubat 1963], 3-80; A.Y. Ocak-S. Farûki, art. *Zâviye*, in *İA*; M. Kara, *Din, hayat, sanat açısından tekkeler ve zaviyeler*, [3]Istanbul 1990). In fact, in the central provinces of the Ottoman empire (Anatolia and Rumelia), the term *zāwiya* continued to be used as a synonym of *tekke*, the latter often (although not invariably) bearing the implication of a smaller scale. In *waḳf* documents, as well as in biographical collections, it is the term *zāwiya* which remains the most often found, at least until the 18th century. In the works of Ṭas͟hköprüzāde and Med̲j̲dī, *al-S͟haḳāʾiḳ al-nuʿmāniyye*, Istanbul 1985, and *Ḥadāʾiḳ al-S͟haḳāʾiḳ*, Istanbul 1989, composed in the second half of the 10th/16th century, it seems that only the term *zāwiye* is used. In the same period, in the *Menāḳib-i s͟herīf ve ṭarīḳatnāme-yi pīrān we mes͟hāyik͟h-i ṭarīḳat-i ʿaliyye-i k͟halwetiyye* of Yūsuf Sinān, Istanbul 1290/1873, the word *k͟hānḳāh* is used for important establishments, whereas centres founded in *ḳaṣaba*s are called *zāwiye*; in the *Ḥadāʾiḳ al-ḥaḳāʾiḳ* of ʿAṭāʾī ([*q.v.*], written in 1633-4, Istanbul 1989), it is still *zāwiye* which is most often encountered, but it should be noted that the author writes (603) of a certain Hōd̲j̲a K͟husrew organising the building, in Istanbul *ca.* 994/1585-6, for the *s͟heyk͟h* Ramaḍān, of a mosque and a *k͟hānḳāh*, known by the name of Bāzergān Tekyesi, and subsequently he states (608) that in the Rūmeliḥiṣār quarter there existed the *zāwiye* of ʿAlī Baba "currently called Durmus͟h Dede tekyesi" or "Bektās͟hīler tekyesi". A logical conclusion to be drawn from this could be that contemporary usage preferred to use *tekke* as a generic term, rather than the more technical terms *zāwiye* and *k͟hānḳāh*. Thus Ewliyā Čelebi [*q.v.*], who wrote in a Turkish very close to the spoken language, most often uses the word *tekke* in his *Seyāḥat-nāme* when he supplies the number of dervish establishments in the towns and cities which he has traversed and when he cites some of them by name (although he still uses, occasionally, the words *zāwiye*, *k͟hānḳāh* and *āsitāne*). A study which would clarify these hypotheses has yet to be undertaken.

Since the end of the Ottoman period, in Anatolia and in the Balkans, it has essentially been scale which distinguishes a *tekke* from a *zāwiye*. A *tekke* is a building, or a complex comprising several buildings, specifically designed for the confraternal life, whereas the *zāwiye* is a place where dervishes congregate, in a building

which is not necessarily exclusive to them (usually a section of a residential house or a mosque). As for the *āsitāne*, they are the principal centres of certain brotherhood networks, the term *dergāh* also being common (and perhaps the preferred usage when the tomb of a major saint is associated with the establishment). The *tekke* generally comprises a section for ritual (*semāʿkhāne* or *tewḥīdkhāne*), a room reserved for the tombs of the *sheykhs* (*türbe*) (on the spatial relationship between these two entities, cf. B. Tanman, *Settings for the veneration of saints*, in R. Lifchez, *The dervish lodge*, Berkeley-Los Angeles 1992, 130-71), a *ḥarem* (accommodation for the *sheykh*'s family), a *selāmlïk* (reception rooms and units for the lodging of dervishes and transient guests), a kitchen, sometimes a mosque, a niche intended for spiritual retreats, etc. (on this subject see especially Lifchez, *The lodges of Istanbul*, in *ibid.*, 73-129, and M.B. Tanman, art. *Tekkeler*, in *Dünden bugüne İstanbul ansiklopedisi*, Istanbul 1994). The word *tekke* has also become a generic term denoting Ṣūfī establishments; whence the expressions "*tekke* literature", "*tekke* music", etc.

In the Arab provinces, the term *tekke/takiyya* (sometimes considered a Turkish word) only appears in the Ottoman era [see e.g. AL-ḲĀHIRA]. According to G. Delanoue (*Moralistes et politiques musulmans (1798-1882)*, Cairo 1982, i, 249), in Cairo the *takāyā* were distinguished from the *zawāyā* because they were "convents for Turkish and Persian Ṣūfīs". In fact, among the *takāyā* of Cairo, some were intended specifically for non-Arab dervishes, others were establishments linked to *ṭuruḳ* imported from the Turkish provinces: the Mawlawiyya *takiyya*, the Gulshaniyya *takiyya*, the Demirdāshiyya *takiyya*, the Ḳaṣr al-ʿAynī *takiyya* (of the Bektāshiyya), the Uzbak *takiyya*, the Bukhāriyya *takiyya*, the Ḥasan al-Rūmī *takiyya*, etc. In Alexandria, too, there was a "*takiyya* of Turkish Ḳādirī dervishes" (F. de Jong, *Ṭuruq and Ṭuruq-linked institutions in nineteenth century Egypt*, Leiden 1978, 77-86, 120). However, according to this same author (29-30), around the end of the 19th century the distinction between the two terms *zāwiya* and *takiyya* does not seem to have been very consistent. The larger establishments, having substantial revenues deriving from *awḳāf* and sheltering a community of Ṣūfīs administered by a *shaykh*, were in general called *takāyā*, whereas *zawāyā* tended to be institutions of more modest scale but also eligible to receive financial subsidies. In Damascus, the terms utilised to denote Ṣūfī establishments were primarily those of *ribāṭ*, *khānḳāh* and *zāwiya*. According to E. Geoffroy (*Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans. Orientations spirituelles et enjeux culturels*, Damascus 1995, 166-75), *khānḳāhs* were associated with a controlled and subsidised Ṣūfism, whereas the *zawāyā* accommodated an "unofficial" Ṣūfism, compatible with the principle of spiritual poverty and unselfishness. The Ottomans, for their part, constructed *zawāyā and tekiyyes* but not *khanḳāhs*. As in Egypt, the word *tekke* is thus applied to establishments of dervishes associated with the Ottomans or with Turkish *ṭuruḳ* such as the Mawlawiyya; e.g. *takāyā* of the Mawlawiyya in Damascus, but also in Ḥimṣ, Antioch, Lattakia, Tripoli and Aleppo (see de Jong, *Les confréries mystiques musulmanes au Machreq arabe*, in A. Popovic and G. Veinstein, *Les ordres mystiques musulmans dans l'islam. Cheminements et situation actuelle*, Paris 1985, 214). In short, it seems that in the Arab provinces, *tekkiye/takiyya* would have denoted Ṣūfī establishments which conformed to one or more of the following three criteria (these criteria often going in pairs): association with Ottoman authority and/or Turkish dervishes, a relatively large scale, and support from fairly substantial *waḳfs*.

Outside the Ottoman domain, use of the word does not seem to have been widespread. In Persia, according to R. Gramlich (*Die schiitischen Derwischorden Persiens. Dritter Teil: Brauchtum und Riten*, Wiesbaden 1981, 2), only old-style Khāksārs called their "convent" a *takiyya*, the term having been subsequently replaced by that of *khānḳāh*, the word customarily used in these regions. In India, *takiyya* seems to apply only to small-scale dervish establishments (M. Gaborieau, *Les modes d'organisation*, in A. Popovic and G. Veinstein, *Les voies d'Allah*, Paris 1996, 207).

It should be noted finally that today, in certain regions where the brotherhoods have virtually disappeared, such as Greece, the term *tekke* (in Greek, *tekkés*) is frequently employed to denote a *türbe* (saint's tomb). It may be supposed that, in the majority of cases, this shift in meaning derives from the fact that such tombs were often associated in the past with a *tekke*.

(NATHALIE CLAYER)

TELINGĀNA or TILANG, a region of the mediaeval Deccan, i.e. South India. The name comes from *telingā*, *trilingā*, referring to the three lingams of Śīva, the region being noted in ancient India for three famous temples there dedicated to the godhead. It lay in the northeastern part of what later became Ḥaydarābād State and the adjacent part of Madras, extending to the shores of the Bay of Bengal and bounded on the northeast by the Godivari river, beyond which lay the other Hindu kingdoms of Kalinga and Orissa.

Telingāna figures frequently in accounts of the Khaldjī and then Tughluḳī Dihlī Sultans as they endeavoured to extend their authority into the eastern Deccan, and then in those of their successors in the south, the Bahmanīs [*q.v.*], likewise extending their power; its Hindu rulers at times submitted to the Muslims, but equally often fought off Muslim control.

Bibliography: See *Imperial gazetteer of India*[2], xxiii, 275-6, vii, 367.

(ED.)

TELKHĪṢ, from the form II Arabic verb *lakhkhaṣa* "to make a précis", meant in the official language of Ottoman Turkey a document in which the most important matters are summed up for presentation to the sultan. The officials who had these papers prepared and presented them to the sultan were the Grand Vizier and the *Shaykh al-Islām*. On account of its change of significance, *telkhīṣ* is included among the *ghalaṭāt-ï meshhūre* [*q.v.*] "popular solecisms", cf. Muḥammad Ḥafīd, *al-Durar al-muntakhaba al-manthūra fī iṣlāḥ al-ghalaṭāt al-mashhūra*, Istanbul 1221/1806, 115; Pakalın, iii, 449; *İA* art. *Telhis* (Cengiz Orhonlu).

(J.H. KRAMERS)

TELKHĪṢDJI, or in the official style, TELKHĪṢĪ, was the individual of the Ottoman Turkish administration appointed to prepare the précis called *telkhīṣ* [*q.v.*] and to take it to the palace, where it was handed over to the chief of the eunuchs. The *telkhīṣdji* was therefore an official of the Grand Vizier's department; in addition to preparing the *telkhīṣ*, he took part in several official ceremonies. The *telkhīṣdji* of the *Shaykh al-Islām* was not—at least in the later period—in direct communication with the palace; documents presented by him had to pass first of all through the hands of the Reʾīs Efendi and of the Grand Vizier.

TELL [see TALL].

TELL BĀSHIR [see TALL BĀSHIR].

TELL EL-**KEBĪR** [see AL-TALL AL-KABĪR].

TEMESHWĀR, ṬĪMĪSHWĀR (?), the Ottoman rendering of Magyar Temesvár, Romanian Timişoara, a town and centre of a *wilāyet* in Ottoman Hungary, belonging to Romania since 1919.

First mentioned in an 1177 charter, Temesvár acquired regional importance as the seat of a county; even the royal court functioned here between 1315 and 1323. Situated near the Ottoman-Hungarian border, it gained strategic significance. In *ca*. 1480 a captainship-in-general was created around Temesvár in order to organise the defence of the eastern frontiers; the fortress resisted an Ottoman attack in 1551.

Although the Turkish sources mention the *sandjaḳ* of Temesvár as early as 1542, this is merely a sign of political ambitions. The creation of a *beglerbegilik* of lower rank and a *liwā* of this name was possible only after the capturing of the town by the forces of the second Vizier Aḥmed Pasha on 27 July 1552. The seat of the *wilāyet* was in Lippa (Lipova) between 1555 to *ca*. 1557-8, and alternatively in Jenö (Yanova, Rom. Ineu) from 1658 until 1693. The often-changing territory of the province was divided into six *sandjaḳ*s in 1568, into five around 1632, and into eight in 1658. Besides, the timariots of three *liwā*s in Rūmeli were also subordinated to Temesvár in the 16th century. The number of *ḳaḍā*'s amounted to twelve in 1664 and ten after 1699. By and large, this latter administrative scheme was taken over by the Habsburg authorities after 1716-17, when Prince Eugene of Savoy led his successful campaigns against the region.

The financial balance of the treasury of the *wilāyet* showed a large deficit until 1567, while a considerable surplus can be witnessed from 1569 onwards, by means of which the shortfalls of the Buda treasury were partly covered.

There were some 4,000 paid soldiers in the castles and approximately 3,000 timariots, together with their *djebelü*s in the province throughout the Ottoman rule.

The first *ṭapu defteri*s in the province were finished in 1554, and renewed in 1567-69 and 1578-79 (several studies based on the 1579 register of Temesvár were published by Tibor Halasi-Kun; for details, see his bibl. in *Acta Or. Hung.*, xlvii [1994], 13-4). The relevant volumes testify to great population movements in Temesvár. While the ratio of the Hungarian element constituted two-thirds of all Christians in 1554, it diminished to less than one half of them by 1578, with an even more radical numerical decrease. Immigrating Muslims took their place, keeping the town among the most populous cities in Ottoman Hungary with some 7-8,000 souls. The rest of the settlements of the *wilāyet* had almost completely lost their Hungarian inhabitants by 1554, presumably mainly due to earlier Ottoman incursions. Comparing 16th century *mufaṣṣal defteri*s, a *djizye* list of 1711, and a Habsburg house register of 1717, a slight population growth between the 16th and the 18th centuries can be ascertained, which gave way to stagnation at the level of 180 to 200,000 people for the years before and after the reconquest.

TEMUČIN, TEMÜDJIN [see ČINGIZ-KHĀN].

TENEDOS [see BOZDJA-ADA].

TEPEDELEN [see ʿALĪ PASHA TEPEDELENLI].

TEPTYAR, the Russian rendering of Tat. Bashk. *Tiptär*, a social term and subsequently ethnonym, the "people of the register" (< Pers. < Arab. *daftar* "book, record, register" ult. Gr. διφθέρα), used of a grouping speaking a Tatar dialect (influenced by Bashkir) in Bashkortostan/Bashkiria.

It denoted populations of Volga Tatar, Mishär, Bashkir, Čuvash and Volga Finnic origins which were allowed to settle on and farm Bashkir lands after the Russian conquest of the Tatar Volga khānates (mid-16th century). The Finnic element, in the early 19th century, was estimated at 20-25%. Initially obliged to pay part of the *yasaḳ* (tribute) due from their Bashkir overlords, the Teptyar, in 1737, because of their support of the Tsarist government, were given their lands and their fiscal obligations were mitigated and regularised. Further legislation in the early 19th century created eight cantonments with the obligation of military service. Having begun as a social class, which subsequently acquired certain privileges, the Teptyars were in the course of the 19th century transformed into a distinct ethnic grouping in which the Turkic (Tatar and Bashkir) elements predominated. In the middle years of that century, there were still distinctions between the increasingly Sunnī Muslim majority and pagan minority (largely Finnic), some of whom were being converted to Islam by Tatar and Bashkir missionaries. Sizeable numbers were absorbed into the Bashkir people. The 1858 census appears to indicate that some 300,000-350,000 of the one million Bashkirs were Teptyars. In the 1927 census, only 27,387 persons listed themselves as Teptyars without any other ethnic designation.

TERAḲḲĪ-PERVER DJUMHŪRIYYET FİRḲASİ (Progressive Republican Party), the first opposition party of the Turkish Republic. It was founded on 17 November 1924 by a number of leading members of Muṣṭafā Kemāl (Atatürk)'s People's Party (Khalḳ Fırḳası). Among the founders of the party were a number of military and civilian figures who had played a leading role in the national resistance movement out of which the republic was

born: Kāẓim Ḳarabekir (the party chairman), ʿAlī Fuʾād (Cebesoy), Refʾet (Bele), ʿAdnān (Adıvar) and Ḥüseyin Raʾūf (Orbay [*q.v.*]). The reasons for their leaving the People's Party were both personal and political. They objected to the growing autocratic tendencies of Muṣṭafā Kemāl and to their own gradual marginalisation, but they also favoured a slower pace of reforms. At first, they had tried to influence policies from within the ruling party, but when that turned out to be impossible, they started preparations for a new party during the summer of 1924. The actual split took place in November over the government's alleged mishandling of the population exchange with Greece.

In the immediate aftermath of the split, Muṣṭafā Kemāl adopted a conciliatory line, replacing prime minister ʿIṣmet (İnönü) [*q.v.* in Suppl.], who was considered a hard-liner, with the moderate Fetḥī (Okyar [*q.v.*]). In this way he managed to limit the number of defections to 32, far less than expected. From the end of 1924, however, the hard-liners in the People's Party, led by Redjeb (Peker) became more influential. When a Kurdish revolt broke out in February, they forced Fetḥī out of office and reinstated ʿIṣmet. The new government was given dictatorial powers with the "Law on the Maintenance of Order" on 4 March, under which political opposition became almost impossible. The P.R.P. was closed down by the government on 3 June for encouraging religious reaction. This was a pretext, since both the behaviour of its representatives in parliament and the two official publications of the P.R.P., its manifesto and its 58-article programme published on 18 November 1924, made it clear that the party was moderate, rather than reactionary. It was in favour of decentralisation, separation of powers and liberal economic policies, but supported the basic Kemalist tenets of republicanism, nationalism and secularism.

TERDJĀN, present-day Tercan, is an *ilçe* (*kaza*) of the *il* (*vilâyet*) of Erzincan [see ERZINDJAN], in eastern Turkey, on the Tuzla branch of the Euphrates between Erzurum [*q.v.*] and Erzincan.

Terdjān, in the frontier territory between Byzantines and Armenians, then between Byzantines and Muslims, and later between Ottomans and Russians, was called variously Tertzan, Deržan and Terghān under Aḳ Ḳoyunlu [*q.v.*] domination. Also known as Mama Khātūn, from the nearby tomb of a reputed princess of the Turkish principality of the Saltūḳids [see SALTUḲOGHLU], Terdjān was in Ottoman times a *sandjaḳ* of Erzincan, itself part of the *eyālet* of Erzurum. The area was described as largely Armenian by Ibn Baṭṭūṭa, who also encountered Turkish-speaking Muslims. According to Ewliyā Čelebi, Selīm I [*q.v.*] received the news of the submission of the Kurdish tribes while on the plain of Tercan during the Čāldirān campaign in 920/1514, and it is at this time that the area was incorporated into Ottoman territory. The victory of Meḥemmed II [*q.v.*] over Uzun Ḥasan [*q.v.*] in 878/1473 (also according to Ewliyā Čelebi) is sometimes called the Battle of Tercan, evocative of its strategic position as part of the continually contested borderlands of eastern Anatolia.

TERDJÜMĀN (A., T.).

1. In the sense of "dragoman, interpreter" [see TARDJUMĀN. 2.].

2. In mysticism.

Here it is a technical term used by the members of *futuwwa* [*q.v.*] groups and also by the Turkish dervish orders of the Mawlawiyya and Bektāshiyya [*q.vv.*], for speech utterances, generally in verse, recited during the ritual, or, outside this, during the accomplishment of some piece of work or some particular act. These formulae, which are made up of a prayer, are theoretically pronounced in order to seek pardon for some offence. This term can also denote a sum of money or a sacrifice made in order to secure pardon for an offence.

In practice, the Bektāshīs and Mawlawīs often mix up the term *terdjümān* with that of *gül-bank* or *gülbenk* [see GÜLBĀNG], in principle reserved for longer prayers, in prose (sometimes recited in unison). According to Birge, amongst the Bektāshīs, the *terdjümāns* are recited by persons like the *mürshid* or the *rehber*, who occupy a precise function during the ritual (*aynidjem*); the words recited correspond to the reciter's function as well as to the situation in the course of the ritual. One should note that, amongst the ʿAlawīs-Bektāshīs, there exist *terdjümāns* in prose (*dār terdjümānī*, *meydān terdjümānī*, etc.).

Bibliography: J.K. Birge, *The Bektashi order of dervishes*, London-Hartford, Conn. 1937, 166-7; and above all, the very full art. *Tercüman* in *İA* (Abdülbaki Gölpınarlı). (Nathalie Clayer)

TEREK, a large river of the northeastern Caucasus region (length 600 km/373 miles, with a breadth in some places of up to 547 m/1,500 feet). It rises from the glaciers of Mount Kazbek in the central Caucasus, and cuts its way through spectacular gorges, eventually into the Noghay steppe to a complex delta on the western shore of the Caspian Sed. Even the lower course through the plains is too swift for navigation to be possible on it, but much water is now drawn off for irrigation purposes.

During the golden period of Arabic geographical knowledge (4th/10th century), the land of Terek must have belonged to the kingdom of the Khazars [*q.v.*]. This portion of the Khazar dominions is not described by Arab geographers, and the Terek is not mentioned. The name seems to appear for the first time in the history of the fighting between the Golden Horde Khān Berke [*q.v.*] and the Il Khānid Hülegü or Hūlāgū [*q.v.*], at the beginning of 661/Nov.-Dec. 1262, in Rashīd al-Dīn (ed. Quatremère, *Hist. des Mongoles*, 394). Ḥamd Allāh Mustawfī mentions the Terek (ed. Le Strange 259, tr., 250: Turk) along with the Itil (Volga) as a river in Dasht-i Ḳïpčaḳ [*q.v.* in Suppl.]. The lands of the Terek at that time belonged to the kingdom of the Golden Horde, and the peoples there probably adopted Islam at the same time as the latter in the 8th/14th century. A few years after the conquest of Astrakhān [*q.v.*] in 1554, Russian Cossacks began to appear on the Terek and formed the "Terski Cossack army" (*Terskoe kazačye voisko*); at first independent of Moscow, it was afterwards incorporated in the Russian empire. For much of the 19th century, the line of the Terek represented the frontier of Russian settlement in the Caucasus, and the Cossack fortified villages then established on its northern bank formed the setting for Tolstoy's novel *The Cossacks*.

For the political life of the Muslim world, the Terek lands have never been of great importance; even the

fortress of Ḳizlar on the north bank of the Terek (the modern city of Kizlyar) was, in spite of its Turkish name, built by the Russians in 1735.

(W. Barthold-[C.E. Bosworth])

TERENGGANU, a state of Malaysia, located on the east coast of the Malay peninsula. The first evidence of a Muslim ruler is provided by the Terengganu Stone, one of the most important Islamic finds in Southeast Asia and the earliest example of Malay written in Jawi, the modified version of the Perso-Arabic script. The partly illegible date has been read as between 702/1303 and 789/1387. The content deals with debt relationships and punishments for perjury and sexual transgressions.

Terengganu was under Malacca [*q.v.*] and its successor Johor until 1186/1722, when an independent ruler was installed. From about 1188/1775, Terengganu came under Siamese overlordship, which may have sharpened Islamic feelings, especially when combined with periodic British intervention. The first *Muftī* was appointed in the early 19th century and Sultan Omar (1255-93/1839-76) gave greater attention to the enforcement of *Sharīʿa* law, with members of the local Sayyid community gaining prominence in religious affairs. By the beginning of the 20th century, Terengganu was known as a centre for Islamic studies. Although there was little Islamic organisational structure, a network of Muslim schools provided an effective channel for communication. Terengganu's *ʿulamāʾ* wielded considerable influence among the largely Malay population, and their leadership was enhanced after the inception of British rule in 1919. A peasant revolt between 1922 and 1928 was led by *ʿulamāʾ*. In recent times, rural Malay poverty has resulted in some electoral support for the Islamic party PAS, although this only succeeded in gaining control of government between 1959 and 1961.

(Barbara Watson Andaya)

TERKEN KHĀTŪN, the name of the wives of various Turkish rulers of the eastern Islamic world in mediaeval (essentially pre-Mongol) times. In old Turkish, *terken* was a royal title, often but not invariably applied to females, and in these cases being roughly equivalent to "queen". It may be a loan word in Turkish, being found, according to G. Doerfer, amongst the Kitan or Western Liao, the later Ḳara Khitay [*q.v.*] of Central Asian Islamic history (see his *Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1963-7, ii, 495-8 no. 889; Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 544). *Khātūn*, on the other hand, derives from Sogdian *xwt'yn* "wife of the lord or ruler", and is already used in the Orkhon inscriptions for the wife of a Kaghan; it is spelt by Kāshgharī as *ḳātūn* in Turkish and *khātūn* in Arabic (tr. Atalay, i, 410; cf. Doerfer, *op. cit.*, iii, 132-41 no. 1159; Clauson, *op. cit.*, 602).

In the history of the Saldjūḳs and Khwārazm Shāhs, Terken as applied to a male appears as a component in the name of one of the sons of the later Kirmān Saldjūḳ *amīr*, sc. Terken Shāh b. Ṭoghrïl Shāh. However, much more frequent are queens bearing the name Terken (usually written T.rkān) Khātūn. These include a wife of the Khwārazm Shāh Il Arslan, mother of the claimant to the throne Sulṭān Shāh, and then a wife of Il Arslan's other son Tekish [*q.v.*] and mother of ʿAlāʾ al-Dīn Muḥammad (see Barthold, *Turkestan down to the Mongol invasion*³, 337, 349, 350, etc.; İ. Kafesoğlu, *Harezmşahlar devleti tarihi (485-617/1092-1229)*, Ankara 1956, index). But the most celebrated Terken Khātūn was the Saldjūḳ queen (originally a Kara Khānid princess), the wife of Malik Shāh [*q.v.*], who played a leading role in the political life of the court during that sultan's reign and thereafter. Her own household was a focus of opposition to the powerful vizier Niẓām al-Mulk [*q.v.*], and she vigorously promoted the interests of her own sons as future heirs to Malik Shāh's authority. When her husband died in 485/1092, she endeavoured, from her base at Iṣfahān, to place her four-year old son Maḥmūd on the throne against Berk-yaruḳ and his support from most of the Niẓāmiyya [*q.vv.*]; however, she could not make much headway against Berk-yaruḳ, and both she and the young Maḥmūd died in 487/1094 (see C.E. Bosworth and A.K.S. Lambton, in *Camb. hist. of Iran*, v, 76-7, 82, 103-5, 220-1, 255, and the *Bibl.* to MALIK SHĀH).

(C.E. Bosworth)

TERNATE, the most northerly one of a chain of volcanic islands west of Halmahera, in northeastern Indonesia. On it is located the chef-lieu of the Kabupaten (residency) Maluku Utara (Northern Moluccas). The island has a population of 78,000, most original Ternateans being Muslim, but a number of newcomers (officials, teachers, service personnel, etc. from neighbouring islands) are Christians. Its area is 64.39 km².

Known in older times for its spices, especially nutmegs and cloves, Ternate had once been a member of the "alliance of the four [volcanic] mountains", besides Tidore [*q.v.*], Jailolo and Bacan, but in the 15th-16th centuries Ternate rose to especial power and prominence. Muslim traders had appeared in the area whilst the Hindu Javanese empire of Mādjapahit still exercised its influence (sc. before 1478), calling the region "the royal islands" (*djazīrat al-mulūk*). Zayn al-ʿĀbidīn, son of Kaicil Gapi Baguna, who reigned 1486-1500, is said to have adopted the Islamic title of *sulṭān* and to have been the first Muslim ruler in the region and to have studied under a famed scholar of Java, Sunan Giri. Closeness to the Javanese tradition facilitated Ternate's acquiring a grip on nearby areas such as southeastern Sulawesi, formerly in the Javanese sphere of influence. Eventually, Halmahera was subdued and Ternate's influence extended to Buru, the Banggai islands, parts of north and central Sulawesi and the islands of Sangihe and Talaud; at times, even parts of Mindanao, the Sulu Islands and northern Borneo came within its sphere.

In 1522 the Portuguese obtained permission to build a factory and some forts in Ternate and the areas under its control, but their efforts to monopolise the spice trade and, to some extent, their Christian evangelising zeal, caused strained relations with Ternate, though many inhabitants, and even some local rulers, preferred the Portuguese to the cruel and exploitatory rule of the Ternate sultans. Baabullah (1570-83), after the killing of his father by the Portuguese, waged

a violent war against indigenous Christians, killing and forcibly converting thousands of them. The Portuguese were expelled from Ternate, but in 1578 got permission to build a fort on Tidore island. By now other European powers, including England, the Netherlands and Spain, were competing in the region, and the latter were able to exert pressure from Manila so that sultan Modafar (Muẓaffar) allowed reconstruction of the old Portuguese fort of São Paolo, which was used by Spain till 1666, including as a centre for Roman Catholic missionary work.

In 1606 the Dutch made an agreement with the sultan concerning the return of converts between Islam and Christianity and vice-versa to their respective territories, with the Dutch thereby acknowledging the political independence of Ternate. The Dutch East India Company (VOC) gradually acquired a monopoly of the spice trade, although the local chieftains or *sangajis*, who ruled under the sultan's supreme suzerainty, resisted this in order to retain their own trading relationships. But the Dutch were able to take advantage of internal strife in the region, and in return for aid to the Sultan Mandarshah in 1650-2, the ruler agreed that all clove trees outside the areas directly controlled by the Dutch should be cut down. The VOC's supremacy in the spice trade was officially acknowledged by Ternate in 1683 and by the Sultan of Tidore in 1687. Pensions were paid to the ruling families to compensate for their loss of income, but the actual growers were impoverished, causing unrest, insurrections and an increase in piracy.

Nevertheless, Ternate still resisted Dutch control successfully when king William IV was an exile in England from the French-dominated Batavian Republic and suggested that the Dutch possessions should be placed under British custody, and it did not surrender until 1810. The end of its history came in 1915, when, after an abortive revolt, Sultan Uthman was exiled to Java and his territory placed under direct Dutch rule, with a "council of the *sangaji*" to care for the interests of the residency.

Bibliography: See art. s.v. in *EI*[1]; Katrin Polman (ed.), *The North Moluccas. An annotated bibliography*, The Hague 1981 (= Bibliographical series, 11).

(O. Schumann, shortened by the Editors)

TERSĀNE (t.), "dockyard, maritime arsenal". The word seems to derive from the Genoese *tersana*. In the Ottoman period, the term referred in particular to the Ottoman Imperial Arsenal—the *tersāne-yi ʿāmire*—on the eastern side of the Golden Horn, at Galata, opposite Istanbul.

The dockyard at Galata [see ghalaṭa, in Suppl.] was not the first Ottoman naval installation. The Sultans had maintained a fleet at Gallipoli [see gelibolu], probably from the time of its reoccupation in 779/1377. During the 1390s it was the base from which Bāyezīd I's [*q.v.*] fleet raided the coasts and islands of the Aegean, and was to retain its place as the largest Ottoman dockyard until the extension of the arsenal at Galata in the second decade of the 10th/16th century. Documents from this century also record the existence of small naval arsenals at Iznikmid (Izmit) and Sinop. However, although Sinop was a regular site of naval construction, it does not appear to have had any storage facilities for equipment, or permanently employed craftsmen or administrators.

After his conquest of Galata in 1453, Meḥemmed II [*q.v.*] inherited the naval installations of the Genoese, and established the Ottoman arsenal, presumably on the site of the Genoese *vetus tersana*, on the Golden Horn. Selīm I's [*q.v.*] plans to enlarge the fleet led to a major extension of the arsenal during the last years of his reign, with work continuing during the early years of his successor. It seems to have been at this time that Galata superseded Gallipoli as the largest Ottoman naval dockyard, with 123 docks by 1557. The 1526 map of Pīrī Reʾīs [*q.v.*] shows the arsenal as stretching along the eastern side of the Golden Horn from ʿAzab Ḳapïsï almost to Hasköy, and containing, apart from the docks, a storehouse for oars, the administrative offices (*Dīwān-khāne*) of the Admiral (*Ḳapudan Pasha* [*q.v.*]), a depot and the arsenal garden. During his tenure of the admiralty between 1546 and 1549, Soḳollu Meḥmed Pasha [*q.v.*] built a warehouse behind each dock to house the equipment of each galley, and walled off the area to make it invisible from the land.

Before the late 11th/17th century, Ottoman warfleets consisted almost entirely of oared galleys. Since the construction of these ships was within the capacity of any skilled shipwright, the Ottoman government frequently ordered the construction of hulls at coastal and river sites, especially around the shores of the Black Sea and on the Sakarya river, bringing them to Galata or Gallipoli only for fitting out with rigging and artillery. With the introduction of galleons as the standard warship in the late 11th/17th century and with steamships and ironclads in the 19th century, this practice was no longer possible. Galleon-building became the preserve of the arsenals. However, the destruction of the Ottoman fleet by the Russians at Çeşme in 1184/1770 emphasised the shortcomings of Ottoman warships, leading the Admiral Djezāʾirli Ghāzī Ḥasan Pasha [*q.v.*] to undertake naval reforms, which included the construction of an engineering school (*Mühendis-khāne-yi baḥrī-yi hümāyūn*) at the Galata Arsenal in 1190/1776, and to introduce new shipbuilding techniques under the supervision of the French engineers, Le Roi and Durest. The first steamship was built in the Galata arsenal by the American Foster Rhodes in 1254/1838. An arsenal, building and repairing ships, still exists on the same site.

(C. Imber)

TESALYA or Teselya, the Ottoman name for Thessaly, the geographical part of central Greece between Greek Macedonia on the north, Sterea Hellas on the south, Epiros on the west and the Aegean Sea on the east. Its cardinal strategic and economic importance resulted in a series of raids and settlement throughout the late mediaeval period by Franks, Catalans, Navarrese, Serbs and Albanians, until the initial stages of the Ottoman conquest in the late 14th century, heralded by raids on the part of the Aydïnoghlu Turcomans of Umur Beg [*q.v.*] between 1336-41 (see Enweri, ed. Mélikoff, 87 v. 1159; cf. P. Lemerle, *L'Emirat d'Aydïn*, Paris 1957, 157).

The gradual Ottoman annexation by a series of non-violent capitulations occurred in three phases: 1386-7, *ca.* 1392/3-1396/7 and *ca.* 1414/23 onwards, until the period 1454-70 (detailed refs. in A. Savvides, *Problems on the Ottoman conquest and the expansion of the conqueror in the Thessalian area* [in Greek], in *Th.H.*,

xxviii [1995], 33-64). A steady source of cereal provisioning of Venice and, since the 15th century, of the Ottoman Empire (H. İnalcık, *The Ottoman Empire... 1300-1600*, London 1973, 134, 145; idem, *The Ottoman economic mind and aspects of Ottoman economy*, in M.A. Cook (ed.), *Studies in the economic history of the Middle East*, Oxford 1970, 214), Tesalya administratively became a *sandjak* with its seat at Tirhala [*q.v.*] within the massive *wilāyet/eyālet* or *beylerbeylik* of Rumeli [*q.v.*], whose chef-lieu was at Manastir [*q.v.*] (A. Kurat-J. Bromley, in Cook (ed.), *A history of the Ottoman Empire to 1730*, Cambridge 1976, 178). The sparsely-populated area made the conqueror bring in settlers from Anatolia, especially from Konya (the "Konyalis" or "Koniarēdes" in Greek), who settled in the valleys together with the descendants of the conquerors (the *ewlād-i Fātiḥ*), while local Christian resistance moved to the mountainous regions of Olympos and Kissabos on the north, Pindos on the west and Pelion in the east. Tesalya was thus distributed in *tīmārs* and *zi'āmets* [*q.vv.*] to Muslims, to Islamicised ex-Christian *sipāhīs* [*q.v.*] and Jewish communities, or in *wakfs* [*q.v.*] or pious foundations, while the ruling house retained some privileged areas as crown lands (see N. Beldiceanu, *Timariotes chrétiens en Thessalie 1454-5*, in *Südost-Forschungen*, xliv [1985], 45-81; cf. idem, *Une acte sur le statut de la communauté juive de Trikala, 1497*, in *REI*, xl/1 [1972], 129-38). The Ottoman tax registers (*taḥrīr defteri*) for 1454-5 and 1506 give important information on early Ottoman Tesalya (see Beldiceanu and P. Nasturel, *La Thessalie entre 1454/5 et 1506*, in *Byzantion*, liii [1983], 104-56). Of particular importance were the privileges granted to Christian ecclesiastical/monastic institutions, like the Meteora monasteries of Kalampaka, destined to become an outpost of Orthodoxy in the early Tourkokratia (see J. Alexander, *The monasteries of Meteora during the first two centuries of Ottoman rule*, in *Jahrbuch d. österr. Byzantinistik*, xxxii/2 [1982], 95-103; D. Sophianos, in *Trikalina*, xi [1991], 101-34 and xiv [1994], 37-68; idem, in *Mesaionika & Nea Hellenika*, iv [1992], 177-282) and the monastery of Dousikon near Trikala, founded by the Larissa metropolitan St. Bessarion (1527-40) (cf. Alexander, *The Ottoman Turkish documents of the holy monastery of Dousikon: the monastery until the mid-16th century* [in Gk.], in *Trikalina*, xiv [1994], 101-20; Th. Nemas, *ibid.*, 129-48, on the contribution of Meteora and Dousikon in the development of the Trikala area in the Tourkokratia).

The gradually deteriorating conditions of banditry in the area, however, necessitated the institution of autonomous enclaves known as *armatoliks* [see MARTOLOS], firstly applied here and most notably at Agrapha, probably since Meḥemmed II's years, later recognised by Süleymān II Ḳānūnī in 1525 (cf. E. Mpoukouvālas, *The armatolik of Agrapha* [in Gk.], Athens 1980) and then spread throughout the Greek territories with extensive grants, salaries and privileges (*ulūfe*) to the *martoloi*. In 1570 a Venetian force raided the area of Phanarion-Karditsa/Fenarbekir, while the following period witnessed a series of Greek abortive insurrections: in 1600-1 led by the Larissa/Yeñishehir [*q.v.*] metropolitan; in 1612 fomented by the Duke of Nevers, who had laid claims to the lost Byzantine imperial title; in the late 17th century (during the Turco-Venetian war of 1684-99) in Agrapha, Pharsalos/Čataldja, Karditsa/Fenarbekir and Tyrnabos (see G. Drongoules, *Tyrnabos and its region in the first years following the Turkish conquest* [in Gk.], in *Acts 1st Congr. of Tyrnabian Stud.* [1991]); and in 1769 led by the Larissean landlord Gregory Papazōgles. Moreover, Thessaliotes based on Olympos and Chasia participated in the Turco-Russian war of 1769-74, although Albanian troops of the Porte quelled the insurgents once more.

By mid-17th century the prevailing banditry, in combination with the decline in Ottoman provincial administration and military effectiveness, had resulted in the transformation of the Thessalian *tīmārs* and *zi'āmets* to *čiftliks* [*q.v.*], as in the characteristic case of Aghia-Ayia/Büyük-Köy, north-east of Larissa, the main occupation of the inhabitants in the plains being cattle-raising and agriculture (cotton production) as opposed to the thriving mountainous guilds (*synetairismoi* in Greek), like that of Agrapha (with a distinctive development in handicrafts and dyes) and the female guild of Tirhala. A rapid growth of the area's major commercial centres took place since the 17th century, with notable local fairs and markets, like those at Larissa/Yeñishehir (a city visited by the sultan Meḥemmed IV himself in 1668: see C. Spanos, in *Makedoniko Hemerologio* [1972], 349-52; İ.H. Uzunçarşılı, *Osmanlı tarihi*, iii/1 [1983³], 415-16), Elasson, Trikala/Tirhala, Ampelakia, Zagora, Halmyros/Ermie, Tyrnabos, Kalampaka, Karditsa/Fenarbekir, Pherrai, Velestinon/Ferendjik, the birthplace of the precursor of Greek independence, Rhēgas Pheraios, and Livadi, north of Elasson (on which see recently, B. Spanos, in *Th.H.*, xxvii [1995], 145-68). On the prevailing conditions see [in Gk.]: D. Tsopotōs, *Land and farmers in Thessaly during Turkish domination*, Athens 1974², N. Pantazopoulos, *Communal life in Thessalian Magnesia during Turkish domination*, Thessalonika 1967; L. Arseniou, *Thessaly during Turkish domination*, Athens 1984; on the main settlements see R. Lawless, *The economy and landscapes of Thessaly during Ottoman rule*, in F. Carter (ed.), *An historical geography of the Balkans*, London-New York-San Francisco 1979, 501-33; C. Spanos, *Thessalian settlements... 1613/14-19th century* [in Gk.], *Th.H.*, xxiii [1993], 81-112 and xxiv [1993], 112-80.

Of major importance were the various Ottoman monuments in Tesalya, like the *tekke* of Ḥasan Baba in Tempe valley (see A. Vakalopoulos, *The fortresses of Platamon and Oriā of Tempe and the tekke of Hasan Baba* [in Gk.], Thessalonika 1972), the mosque of 'Ömer Bey in Larissa [see YEÑISHEHIR], the Bektāshī *tekke* in Pharsalos (see ČATALDJA and L. Vairakliotes, in *Th.H.*, xxx [1994], 239-40), the pious foundations in Karditsa/Fenarbekir/Fener (see Beldiceanu-Nasturel, in *Byzantion*, liii [1983], 112) and, above all, the celebrated *medresse* of 'Othmān b. Turalī (d. 1567), governor of Trikala, a work of the famous architect Sinān [*q.v.*] according to Ewliyā Čelebi (*Seyāḥat-nāme*, i, 172, viii, 203-4) and Ibrāhīm Pečewi (*Tārīkh*, i, 45) (refs. in TIRHALA, also in *EI*¹). Valuable pertinent information is drawn from the accounts of various travellers in the area like Kātib Čelebi, Ewliyā Čelebi (his visit in Larissa in 1668), and the English doctor Edward Brown (*Rélation de plusieurs voyages*, Paris 1674) in the 17th century; Paul Lucas (*Voyage... fait par ordre du roi dans la Grèce, l'Asie Mineure, la Macédoine...*, i-ii, Amsterdam 1714), the English theologian Richard Pococke (*Voyages en Orient..., la Grèce, la Thrace etc.*, i-iv, Paris 1772), the Swedish orientalist Jacob Jonas Björnstähl (*Briefe auf seinen ausländischen Reisen...*, Rostock-Leipzig 1777-83) in the 18th; François-Charles Pouqueville (*Voyage de la Grèce*, i-vi, Paris 1826-7², Gk. tr.-comm. N. Molpheta, Athens 1995) between 1798 and 1801; and, finally, in the 19th, William M. Leake (*Travels in Northern Greece*, i-iv, London 1835, repr. Amsterdam 1967, cf. iv, 261-328) in 1809, David Urquhart (*The spirit of the East*, i-ii, London 1839) in 1830 and Léon Heuzey (*Excursion dans la Thessalie turque en 1858*, Paris 1927).

ʿAlī Pas̲h̲a Tepedelenli [*q.v.*] was appointed *derbend-nāẓir* of Rumeli in 1780 and his rule in Tesalya, following his Albanian chieftains' liquidation of the 1808 local uprising, resulted in the privatisation of state land, which heralded the period of the private *čiftliks* (cf. C. Spanos, in *Th.H.*, xviii [1990], 97-118). ʿAlī Pas̲h̲a's attempts, however, to impose heavy taxation on the thriving commercial centres resulted in the latter's decline, while the population declined, too, estimated at *ca.* 200,000 in 1820 on account of the 1813 plague (in 1688, too, a plague had decimated the inhabitants of Bathyrema at Aghia/Büyük-Köy; see D. Agraphiotes, in *Acts 1st Congr. of Larissean Studies* [1992], 155-75 [in Gk.]).

In the Greek War of Liberation (1821-30), in spite of the hesitant attitude of the local *kod̲j̲abas̲h̲īs*, Tesalya initially participated in actions at Pelion, Magnesia (1821), in Olympos and Chasia (1822) as well as in Karditsa/Fenarbekir and Halmyros/Ermie, but all these attempts were crushed by Meḥmed Res̲h̲īd Pas̲h̲a (the "Kioutachēs") and Maḥmūd Pas̲h̲a (the "Drāmales") [*q.vv.*] (see S. and E. Shaw, *Hist. of the Ottoman Empire and modern Turkey*, ii, Cambridge 1978, 18). The predominant rôle of Larissa/Yenis̲h̲ehir as seat and passing-point of Ottoman armies constantly moving to and from Southern Greece and the Peloponnese [see MORA] proved a negative factor in the Tesalyan rebellion's success.

Following the creation of the Greek Kingdom (1830), Tesalya became the Ottoman Empire's frontier zone with the Greeks and new abortive uprisings occurred in 1841, in 1854 during the Crimean War (southern and western Thessaly) and, especially, in 1877-8 during the Turco-Russian war (Magnesian Pelion), where a provisional government was temporarily established. In the 19th century during the *Tanẓīmāt* [*q.v.*] era, the Porte took measures to improve social and economic conditions for Christians (*K̲h̲aṭṭ-ı̊ S̲h̲erīf* of Nov. 1839, *K̲h̲aṭṭ-ı̊ Humāyūn* of Febr. 1854), yet the continuation of the *čiftlik* system resulted in a real predicament of the farmer workers in the field (the "kollēgoi"), who thus became completely dependent on their landlords, to whom they were forced to deliver half of their produce, with the lamentable result that in 1881, the year of Greek annexation of Tesalya, most of the land belonged to a few magnates. In the second part ot the 19th century about 460 villages out of 658 farm estates/*čiftliks* were owned by great landlords (İnalcık, *Land problems in Turkish history*, in *MW*, xlv [1955], 227).

The same era, however, witnessed the beginning of a new upsurge in the development of Tesalya's urban centres, the notable new addition being Volos/Golôs, near Byzantine Demetrias (see J. Kordatos, *Hist. of Volos and Aghia province*, Athens 1960; D. Tsopotos, *Hist. of Volos*, Volos 1991 [both in Gk.]; and WOLOS). By 1880 the entire area's population was estimated at *ca.* 285,000 Greeks, *ca.* 40,000 Turks and *ca.* 40,000 Jews. The 1878 Treaty of Berlin allocated Thessaly to Greece and the annexation occurred on 26 June 1881, except for the Elasson territory, north of Larissa and Tyrnabos. Edhem Pas̲h̲a briefly recaptured Tesalya in the 1897 Greco-Turkish war (Shaw, ii, 190, 196, 206-7) but soon afterwards the 1881 treaty's items were slightly modified and adhered to until, in 1912, Greek troops finally annexed the Elasson region as well.

TES̲H̲RĪFĀT [see MARĀSIM. 4].

TEWFĪḲ BEY [see EBÜZZIYA TEVFIK].

TEWFĪḲ FIKRET (originally named Meḥmed Tewfīḳ, Fikret being the pen-name which he assumed), late Ottoman Turkish poet, b. 1867, d. 1915 in Istanbul. He was the son and the second child of Ḥüseyin Efendi, from a Čerkes family of notables of Çankırı, and the governor of ʿAkkā, and of K̲h̲adīd̲j̲e Refīʿa, from the island of Chios. He started his elementary education in the Aksaray Maḥmūdiyye Wālide Rüs̲h̲diyyesi, and moved to Galatasaray Lycée at nine. His mother died in 1879, after which he and his sister were brought up by his grandmother and uncle's wife. At Galatasaray, he was taught literature by the leading authors of the time, such as Muʿallim Nād̲j̲ī, Muʿallim Feyḍī and Red̲j̲āʾī-zāde Ekrem, and started writing poetry himself under their influence. Eventually he became, in 1898, a civil servant in the Ministry of Foreign Affairs. In 1890, he began to teach French at the Gedikpas̲h̲a Tid̲j̲āret Mekteb-i ʿĀlīsi, and during the same year, married his uncle's daughter Nāẓima, who was studying to be a teacher.

In 1892, he won a poetry competition run by the Journal *Mirṣād*, and in 1894, began to teach Turkish literature at the Galatasaray Lycée, editing the journal *Maʿlūmāt* with his friends Ḥüseyin Kāẓīm and ʿAlī Ekrem. In 1895, his son K̲h̲alūḳ, who became the subject of many of his poems, was born, but in this same year, he left Galatasaray and began teaching at Robert College. By this time, Fikret was a recognised poet, and in 1896 he was appointed to edit the literary journal *T̲h̲erwet-i Fünūn* [*q.v.*] around which the literary movement known by the name of the journal or as *Edebiyyāt-ı d̲j̲edīde* [*q.v.*] was taking shape with the contributions of young authors such as K̲h̲ālid Ḍiyā, D̲j̲enāb S̲h̲ehābeddīn, Meḥmed Raʾūf and Süleymān Naẓīf. He had by this time become familiar with the work of such French poets as François Coppé, Leconte de Lisle, Baudelaire, Verlaine, etc. In 1900, Fikret published his collection of poems under the name *Rübāb-i s̲h̲ikeste*; during this period, his poems express his rebellion against the oppression of the Ḥamīdian regime, and his love for freedom of speech and liberty. Also, the Ottoman defeat in the Graeco-Ottoman War of 1898 impelled him to write his patriotic poems. In 1901, he ceased editing *T̲h̲erwet-i Fünūn*, and later the journal closed down. By now he had become well-known with his poems *Sīs* (written in 1901, but not published until 1908) and *Tārīk̲h̲-i ḳadīm* (written in 1905), again in revolt against the social and political trends of the time. After the restoration of the Constitution (1908), Fikret wrote *Rüd̲j̲ūʿ* and *Dog̲h̲an günes̲h̲e* reflecting his hopes for a brighter future, and began to publish *Ṭanīn* newspaper with his friends Ḥüseyin D̲j̲āhid and Ḥüseyin Kāẓīm. He was offered the post of Minister of Education, but refused, and became instead Director of Galatasaray, which was going through a period of decline, and which he tried to revitalise; but following a dispute with the conservative Ministry of Education, he resigned and went back to teach at Robert College. In 1910, he published an enlarged edition of *Rübāb-i s̲h̲ikeste*, and in 1911,

Khalūḳʾun defteri in his own handwriting, whose poems had the themes of love, optimism for the future of humankind and hope, and idealism. He believed that human beings were capable of changing the world for the better with their intelligence, as long as they set themselves free of ancient traditions and superstitions. During this period, his poems and articles which criticised religion, society and the government (especially the Committee of Union and Progress) [see ITTIḤĀD WE TERAḲḲĪ] produced a reaction which attacked his personality and beliefs. Meanwhile, his son Khalūḳ became a Christian in Glasgow, and emigrated permanently to the United States, causing further criticism of Fikret. When *Ṭanīn* became the semi-official newspaper of the C.U.P., he left it, and also resigned from several of his societies. In 1912, following the closure of the Ottoman parliament, he wrote his famous poems *Doḳsan beshe doghru* and *Khān-ī yaghmā*. Fikret opposed Turkey's participation in World War I, and his satirical poem *Sandjak-ī sherīf hudūrunda* reflected his bitterness. His unpublished poem *Tārīkh-i ḳadīm* (1905) was circulating in manuscript form and became very popular, but this led the eminent poet Meḥmed ʿĀkif [*q.v.*] to accuse Fikret of being anti-Islamic and corrupting the younger generation; Fikret replied in *Tārīkh-i ḳadīme dheyli* (1914), this time denying all organised religion, and repeating his belief in secularism as the only way of progress. Fikret's poems of this era, for example *Khān-ī yaghmā*, satirise the way the country was being impoverished by corrupt administrators and bureaucrats. They are powerful in language and style, and contain many memorable lines, such as

Eat, gentlemen eat; this tasty feast is yours:
stuff yourselves until you gag and burst

and became popular even before they were actually published. In 1914, he also published his collection of children's poems *Shermīn*, which he wrote in syllabic metre [see PARMAḲ ḤISĀBI] using simple syntax and lexicon, and it is the best early example of children's poetry in Turkish.

On 18 August 1915, Fikret died after a long illness of chronic diabetes in Istanbul. Following his will, he was later buried (1961) in Aşiyan, on the grounds of his home on the Bosphorus, which is now a museum. Following his death, as during his lifetime, much was written about his personality, political and social beliefs; while he was criticised at the time for being a materialist by more religious elements, he has been celebrated as a humanist by his admirers.

Although Fikret wrote many articles on art, literature and society, and translated poems from Western languages, which were published in journals and newspapers, he is best known as a poet. One of the innovations he brought to Turkish poetry is his introduction of dialogues and natural conversations to his poems which made them closer to prose (for example in *Khasta čodjuk* and *Balīkčīlar*). He used quantitative metre, *ʿarūḍ/aruz*, masterfully, and his careful choice of patterns reflected the topic and the mood of his individual poems. His command of the Turkish language helped to make his verses visually vivid and memorable. Fikret succeeded in showing that poetry, like other forms of art, had to be meticulously composed, and that the language of poetry had to be refined and educated. Fikret is remembered and often quoted for his firm belief in freedom of thought and speech, which he expressed in his memorable line:

I am a poet, my thoughts are free, wisdom free, conscience free.

(ÇIĞDEM BALIM)

TEWFĪḲ MEḤMED [see ČAYLAḲ TEWFĪḲ].

TEWFĪḲ PASHA [see TAWFĪḲ PASHA].

THĀʾ, the fourth letter in the Arabic alphabet. In the *abdjad* order [*q.v.*] it has a numerical value of 500.

The phoneme represented by this letter may be defined as the voiceless member of the apico-interdental triad of fricatives, as opposed to the voiced /dh/ [see DHĀL] and the "emphatic", i.e. velarised, /ẓ/ [see ẒĀʾ]. Sībawayh (ed. Hārūn, Cairo 1395/1975, iv, 433) describes the point of articulation for the triad as "between the tip of the tongue and the tips of the incisors" and he is followed herein by—*inter alios*—Ibn Djinnī (*Sirr ṣināʿat al-iʿrāb*, ed. Ḥ. Hindāwī, Damascus 1405/1985, 47; and cf. M.H. Bakalla, *Ibn Jinni: an early Arab Muslim phonetician*, London and Taipei 1402/1982, 76), al-Zamakhsharī (*al-Mufaṣṣal*, Cairo 1323/1905-6, 394), and al-Sakkākī (*Miftāḥ al-ʿulūm*, ed. Nuʿaym Zarzūr, Beirut 1403/1983, 12). This is also true for their modern standard pronunciation. Strangely, however, al-Khalīl calls these sounds *lithawī*, because, according to him, their point of articulation is the gums (*litha*), in which case they are clearly "gingivals" (more commonly called alveolars) rather than interdentals (*al-ʿAyn*, ed. M. al-Makhzūmī and I. al-Sāmarrāʾī, n.p. [Baghdād] 1400/1980, i, 58). It seems, then, that al-Khalīl describes a different realisation of these sounds. This pronunciation is also corroborated by the description of Ibn Sīnā in both versions of his treatise on phonetics (*Asbāb ḥudūth al-ḥurūf*, ed. M.Ḥ. al-Ṭayyān and Y. Mīr ʿAlam, Damascus 1403/1983, 79-80, 122; cf. the tr. of the second version in Kh. I. Semaan, *Arabic phonetics. Ibn Sīnā's Risālah on the points of articulation of the speech-sounds*, Lahore 1963, 44). He describes it as essentially a fricative /t/, thus as a dental or alveolar fricative. Writing as a physician and physicist outside the tradition and terminology of the grammarians and orthoepists, his testimony carries special weight. The term *lithawī* continued to be used, even by phoneticians who clearly describe interdentals (see e.g. Zakariyyāʾ b. Muḥammad al-Anṣārī, *al-Daḳāʾiḳ al-muḥkama fī sharḥ al-Muḳaddima al-Djazariyya fī ʿilm al-tadjwīd*, ed. N. Nishāwī, Damascus 1400/1980, 36). Scholars have noted the discrepancy (Bravmann, 74-5; Cantineau, 40-1; Fleisch, 213-14), though without much comment. G. Wallin (*ZDMG*, xii [1858], 618) observed the pronunciation of /th/ among the Arabian Bedouins and describes it as articulated with the tip of the tongue against the rim of the upper gums; this accords well with the term *lithawī*. If this should be the original Arabian pronunciation of this sound, the interdental realisation may have developed later (under Aramaic influence?). Since al-Khalīl and Sībawayh were contemporaries, both pronunciations must have been current at the time.

The phoneme /th/ occurs only as a radical, never as a derivational affix. It belongs to the "sun letters" (*al-ḥurūf al-shamsiyya*), which require assimilation of the /l/ of a preceding article, though in pronunciation only, not in spelling. For optional assimilations, see Cantineau, 42-3.

There are a number of cases in which words containing /th/ have variants with /f/ in its place: *djadath/djadaf* "grave", *lithām/lifām* "veil", *thūm/fūm* "garlic" (*fūm* attested in Ḳur'ān, sūra II, 61). The explanation for this is that the auditory impressions of /th/ and /f/ are barely distinguishable (cf. S.H. al-Ani, *Arabic phonology. An acoustical and physiological investigation*, The Hague and Paris 1970, 34; both appear as "random noise", the /th/ a little weaker than the /f/). The converse has happened with the word *fam* "mouth", which must have developed into **thu/im(m)* to account for the modern dialect forms *thəm* (Oman, cf. A. Brockett, *The spoken Arabic of Khābūra*, Manchester 1985, 69), *thəmm* (Mardin, cf. O. Jastrow, *qəltu-Dialekte*, 39), *ithim* (Dēr iz-Zōr, *ibid.*), and the well-known *təmm* in Syrian Arabic.

In loan-words and foreign names, /th/ represents pretty regularly the post-vocalic spirantised /t/ (= /th/) of Aramaic: *kummathrā* > *kummathrā* "pear", *karrāthā* > *kurrāth* "leek", and likewise the Greek /θ/: θεολογία > *uthūlūdjiyā*, Πυθαγόρας > *Fīthāghūras*.

In Neo-Arabic, /th/ and the other interdentals (/dh/ and /ẓ/ [= ḍ]) are, according to a rule of thumb, preserved in the dialects of the Bedouins and former Bedouins, while shifted to the dentals (/t/, /d/, and /ḍ/) in those of sedentary populations. However, there are sizeable exceptions to the second part of the rule (see W. Fischer and O. Jastrow (eds.), *Handbuch der arabischen Dialekte*, Wiesbaden 1980, 50, 104-5, 142, 174, 208, 251; for details of the complex situation in Mesopotamian Arabic, see Jastrow, *qəltu-Dialekte*, 34-9; and for ʿUmān, see C. Holes, *The Arabic dialects of South Eastern Arabia in a socio-historical perspective*, in *ZAL*, xxxi [1996], 34-56, esp. 43-4): the interdentals are preserved in various Palestinian, Syrian, Mesopotamian, Tunisian, and ʿUmānī rural and some Algerian and Mesopotamian urban dialects; they are shifted to the sibilants (/s/, /z/, /ẓ/) in certain Mesopotamian dialects and in Uzbekistan; and to the labiodentals (/f/, /v/, /ṿ/) in the Siirt group of Mesopotamian dialects. The shift of the interdentals to dentals is attested already in pre-Islamic times in transliterations of Arabic names in Greek inscriptions: *Αρετας* for *al-Ḥārith* and *Ḥāritha*, *Γαυτος* for *Ghawth*; however, spellings with /θ/ are also attested (Cantineau, 41).

Speakers of sedentary dialects in which the interdentals have been shifted to dentals use another sound-shift, when borrowing words from Standard Arabic: they try to imitate the interdentals by using the equivalent sibilants. This often leads to root-splitting: *talāte* "three" vs. *musallas* "triangle" (the root *th-l-th* engenders two new roots: *t-l-t* and *s-l-s*). In addition, the three representations of Standard Arabic /th/, i.e. /th/, /s/, and /t/, are often used for stylistic purposes to characterise the formality of a speech situation. For details on this highly complex and regionally varying situation, see T.F. Mitchell, *Pronouncing Arabic*, ii, Oxford 1993, 265-70.

For a similar substitution of /th/ by the dental affricate /ts/ amongst Maghribī Arabic speakers, see Cantineau, 41.

The grapheme for /th/ was originally identical with that for /t/, a fact that results from the "cognate principle" of Nabataean spelling: since Aramaic /t/ etymologically corresponds to both /t/ and /th/ in Arabic, both these phonemes are represented by the Nabataean grapheme for /t/ (see W. Diem, *Untersuchungen zur frühen Geschichte der arabischen Orthographie. II. Die Schreibung der Konsonanten*, in *Orientalia*, N.S. xlix [1980], 67-106). Thus the name *Ghawth*[un] appears as *ʿwtw* in Nabataean inscriptions. The three dots on top that serve as a diacritical mark to distinguish the grapheme for /th/ from other "one-tooth" letters is attested for the first time on the dam inscription of al-Ṭā'if, dated 58/677-8. On the early palaeographic development of the grapheme for /th/, see Beatrice Gruendler, *The development of the Arabic scripts*, Atlanta, Ga. 1993, 40-3.

In Persian and the "Persianate", i.e. those languages affected culturally by Persian, languages, the letter /th/ in Arabic loan-words is pronounced /s/.

(W.P. HEINRICHS)

AL-THAʿĀLIBĪ, ʿABD AL-ʿAZĪZ (b. Tunis 1876, d. 1 October 1944), Tunisian political figure and founder of the Liberal Constitutional Party (*al-Ḥizb al-Ḥurr al-Dustūrī*), commonly called the "Vieux-Destour" as opposed to its successor in 1934, the "Néo-Destour".

Of Algerian origin, he studied at the Zaytūna Mosque, but was early attracted to politics and journalism, and in 1896 founded a cultural weekly, *Sabīl al-rashād*, suspended a year after its first appearance. He made several journeys within the Maghrib and to Crete, Greece and Turkey, in which last place he came into contact with ʿAbd ül-Ḥamīd II's *imām* and adviser Abu 'l-Hudā al-Ṣayyādī. In Egypt, he was in touch with the leading figures of Arab nationalism in exile there, including Rashīd Riḍā, Muhammad Kurd ʿAlī, ʿAbd al-Raḥmān al-Kawākibī [*q.vv.*], etc., as well as Muḥammad ʿAbduh and ʿAlī Yūsuf, chief editor of the newspaper *al-Mu'ayyid*.

Returning to Tunis in 1902, he became known for his strongly nationalist and reformist views, as a disciple of Shaykh Sālim Bū Ḥādjib and of Bashīr Ṣafar, who was a graduate of the Ṣādiḳiyya [*q.v.*]. Between 1904 and 1912, he took part, in person or by his pen, in all the great movements of resistance to the French presence, notably the "Jeunes Tunisiens" of ʿAlī Bāsh Ḥamba, until in March 1912 the French authorities, in accord with the Bey, expelled al-Thaʿālibī, Bāsh Ḥamba and five others; but after an amnesty he returned in August 1913 and then travelled widely in the Near East, Yemen, India and Southeast Asia, returning home when the First World War broke out. On Bāsh Ḥamba's death in 1918, he was in the forefront of the formation of the "Jeunes Tunisiens" and in 1920 founded *al-Ḥizb al-Ḥurr al-Dustūrī*. It had a directing committee and cells scattered throughout the Regency, and, unusually, was open to Tunisian Jews as well as Muslims. Its financial backing came from rich bourgeois of Tunis, Djerba, etc. Its initial strategy was to isolate the French Residency and the ruling group by arousing public opinion in France and loosening links with the Beylical palace. Its demands included a constitution, election of a parliament and responsible government.

In July 1919 al-Thaʿālibī left for France, and had contacts with President Herriot, head of the Radical

Party and with members of the parties of the left. In December 1919 he published, with his fellow-party member Aḥmad Saḳḳāʾ, a violently anti-French pamphlet called *La Tunisie martyre.* In March 1920 *al-Ḥizb al-Ḥurr al-Dustūrī* came into the open, and decided to send a delegation to France and one of 40 notables to the Bey, but on 23 June 1920 al-Thaʿālibī was arrested in Paris for plotting against state security and imprisoned in Tunis. Two delegations sent to Paris achieved nothing, whilst the delegation to the Bey suffered harassment from the Resident-General, but al-Thaʿālibī, freed and in June 1921 granted an amnesty by the Bey, had some successes, including publication of the opinion of two French jurists that the 1861 Constitution granted by the Bey was incompatible with the law of the Protectorate established in 1881; hence the Bey, in collaboration with the French authorities, should re-introduce the Constitution. At the same time, the Resident-General Lucien Saint helped create dissensions within the Destour Party. A new, very moderate party, the "Reform Party", was formed under Ḥasan Gellātī; a Ministry of Justice was created and entrusted to Ṭāhir Khayr al-Dīn, son of the general Khayr al-Dīn [*q.v.*]; and the Bey Nāṣir gave an interview to a newspaper correspondent in which he was reported to have denounced the actions of the Destour, one which later, under pressure from the Destour, he denied; nevertheless, he was forced to abdicate. Demonstrations were organised on 5 April 1922 in front of the palace. The Party maladroitly charged the Bey with defending its demands before the Resident-General; the latter promised to satisfy them, but made the Bey revoke his abdication and publish a denial.

In July 1922, Lucien Saint by-passed the Party by creating a Grand Council and councils of the caïdate, and adopting the role of strong supporter of reforms. The Party's representative in Paris, Farḥāt Ben ʿAyyād, returned to Tunis and accepted a high post in the Tunisian administration, and his defection, and that of others, had deleterious effects on the Party's evolution. The dislocation of the Party and the new Bey Ḥabīb's hostility to al-Thaʿālibī drove the latter into exile in July 1923 for fourteen years. From 1925 onwards he taught philosophy at the Āl al-Bayt University in ʿIrāḳ. In 1930 he settled in Cairo, and in 1931 organised, with al-Ḥādjdj Amīn al-Ḥusaynī [*q.v.* in Suppl.], *muftī* of Jerusalem, the Islamic Congress in Jerusalem (7-17 December).

Returning to Tunis in 1937, he found the Party sunk in lethargy. It had split in 1933, and on 2 March 1934 the Néo-Destour had been founded. The new party gave an enthusiastic welcome to the old leader of the Destour, but after timid efforts at conciliation, it hooted the old Shaykh off the stage when he returned from the Sahel in September 1937. It even made attempts on his life at the time of the Mateur incidents.

Al-Thaʿālibī then retired from political life and devoted himself to study, publishing in 1938 a life of the Prophet (see *Bibl.*). After the bloody events of 9 April 1938, the Liberal Constitutional Party ceased all political activity, and only its weekly *al-Irāda* continued to appear until after Independence in 1956, al-Thaʿālibī himself having died in 1944.

He left behind a varied and abundant oeuvre. In addition to his press work, he published *L'esprit libéral du Coran* (in French, with C. Banattar), Paris 1905; *La Tunisie martyre* (see above, also in Arabic, *Tūnis al-shahīda*, Beirut 1984); and *Muʿdjiz Muḥammad Rasūl Allāh*, 2 vols. Tunis 1938, also Beirut 1984. Various works of his have appeared at Beirut recently, most of them edited by Ḥ. Saḥlī, including *Masʾalat al-manbūdhīn fi ʾl-Hind* (1984); *Rūḥ al-taḥarrur fi ʾl-Ḳurʾan* (1985); *Muḥāḍarāt fi ʾl-taʾrīkh al-ḳadīm* (1985); *Taʾrīkh Shimal Ifrīḳiyā* (1987); *Khalfiyyāt al-Muʾtamar al-Islāmī bi ʾl-Ḳuds* (1988); *Riḥla Yamāniya*, in press.

AL-THAʿĀLIBĪ, ʿAbd al-Raḥmān b. Muḥammad b. Makhlūf al-Djazāʾirī, Abū Zayd, Mālikī theologian and Ḳurʾānic scholar of North Africa (786-873/1384-1468).

Born in Algiers, he studied in the eastern Maghrib and Cairo, and made the Pilgrimage, before returning to teach in Tunis, where he died. His main work is a Ḳurʾānic commentary, *al-Djawāhir al-ḥisān fī tafsīr al-Ḳurʾān* (printed Algiers 1323-8/1905-10), but he wrote several other works on aspects of the Ḳurʾān, on the Prophet's dreams, on eschatology, etc., most of them still in manuscript.

(Ed.)

AL-THAʿĀLIBĪ, Abū Manṣūr, the author of a history in Arabic, the *Taʾrīkh Ghurar al-siyar* or *al-Ghurar fī siyar al-mulūk wa-akhbārihim*, which he dedicated to the Ghaznawid Abu ʾl-Muẓaffar Naṣr b. Sebüktigin, governor of Khurāsān, d. 412/1021. According to Ḥādjdjī Khalīfa, tr. Flügel, iv, 319 no. 8592, this universal history comprised four volumes, going from the Creation to Maḥmud of Ghazna [*q.v.*] in the author's own time. From the first part, H. Zotenberg published a text and French translation, *Histoire des rois de Perse*, Paris 1900. It is especially valuable in that al-Thaʿālibī used the same sources for early Persian national history as Firdawsī in the *Shāh-nāma*, in many places using them more accurately than other Arabic historians like al-Ṭabarī. The author seems to have used the New Persian *Book of Kings* prepared *ca.* 950 for the local ruler of Ṭūs, Abū Manṣūr Muḥammad b. ʿAbd al-Razzāḳ. A section on the years of the early Islamic period 75-158/694-775 is also extant in manuscript.

This author was given a separate entry in *EI*¹ by C. Brockelmann under the heading "al-Thaʿālibī, Abū Manṣūr al-Ḥusayn b. Muḥammad al-Marghanī" (see

also his *GAL*, S I, 581-2), since he thought it unlikely that this al-Tha'ālibī could be identical with the much more celebrated *adīb* and philologist of Nīshāpūr Abū Manṣūr 'Abd al-Malik al-Tha'ālibī. However, F. Rosenthal noted that Brockelmann's full name for the author was taken from one manuscript only, and could have been a copyist's addition. All we firmly know from the text of the *Ghurar al-siyar* is that the author was called Abū Manṣūr al-Tha'ālibī *tout court.* On stylistic grounds, and from the appearance of certain characteristic locutions, Rosenthal originally followed Zotenberg and G. Gabrieli in identifying the author with the great Abū Manṣūr 'Abd al-Malik al-Tha'ālibī (*From Arabic books and manuscripts: III. The author of the Gurar as-siyar*, in *JAOS*, lxx [1950], 181-2). In this case, one should consult the following article. However, Rosenthal no longer regards this identification as at all firmly established (personal communication), and the whole question remains open.

(C.E. Bosworth)

al-THA'ĀLIBĪ, Abū Manṣūr 'Abd al-Malik b. Muḥammad b. Ismā'īl (350-429/961-1038), prominent connoisseur and critic of Arabic literature and prolific author of anthologies and works of literary scholarship.

Born in Nīshāpūr, he spent his entire life in the eastern Islamic world, participating in and above all documenting the extraordinary cultural efflorescence which in his generation was making of the city and region a serious rival to Baghdād and 'Irāḳ. Despite his considerable fame, biographical notices in later sources offer few details about his life, and can be supplemented only modestly by information gleaned from his own writings. His family background was apparently undistinguished, and of his education we know only that he studied *adab* with the famous Arabic stylist Abū Bakr al-Khʷārazmī [see al-khʷārazmī]. We are told that he worked for a time as a schoolmaster, but he also seems early in his life to have forged ties with the Mīkālīs [*q.v.*], the most prominent family in Nīshāpūr, and especially with the cultured littérateur Abu 'l-Faḍl 'Ubayd Allāh b. Aḥmad al-Mīkālī, who was to remain a close friend throughout his life, as well as Abu 'l-Muẓaffar Naṣr b. Sebüktegin, the governor of Khurāsān and brother of the reigning Ghaznawid monarch Maḥmūd. An early journey to Bukhārā, during the death throes of the Sāmānid dynasty which Maḥmūd was to supersede, was followed by at least two sojourns in Djurdjān, where he stayed with members of the city's leading family and dedicated a series of works to the ruling *amīr*, Ḳābūs b. Wushmgīr [*q.v.*], whom he had probably met during the latter's long exile in Nīshāpūr before recovering his throne. From Djurdjān, al-Tha'ālibī was invited by the Khʷārazmshāh Ma'mūn b. Ma'mūn to his court in al-Djurdjāniyya; during his stay there he dedicated works to both the Khʷārazmshāh and his vizier, Abū 'Abd Allāh al-Ḥāmidī, and enjoyed the illustrious company of such fellow protégés as Ibn Sīnā and al-Bīrūnī [*q.vv.*]. He then moved on to Ghazna, capital of the recently established Ghaznawid dynasty, residing there for some time before returning, probably by way of Harāt, to Nīshāpūr, where he spent his later years and died at an advanced age.

The bibliography of al-Tha'ālibī's works is extensive and presents numerous problems, which modern scholarship is only gradually managing to unravel. The longest of several lists of titles compiled by mediaeval biographers is that of al-Ṣafadī (*Wāfī*, xix, 194-9), which numbers eighty-six but which certainly includes a number of duplications as well as erroneous attributions. A total of approximately thirty authentic works have been printed. Virtually all of them consist of compilations of Arabic poetry and artistic prose, philological discussions, or collected anecdotes from Islamic political and cultural history. Al-Tha'ālibī did not aspire to contribute seriously to any of the intellectual debates of his day, either religious or secular, except to a limited extent in the field of literary criticism; his primary objective was to celebrate the aesthetic possibilities of the Arabic language and its literature and to retail, rearrange, and preserve the legacy of that literature for his contemporaries and later generations.

By far his most celebrated work is the *Yatīmat al-dahr fī maḥāsin ahl al-'aṣr* (recent ed. M.M. 'Abd al-Ḥamīd, Cairo 1956-8), a four-volume anthology of poetry and artistic prose intended as a comprehensive survey of the entire Arabic-Islamic world in the second half of the 4th/10th century. The arrangement is geographical, ranging from Andalusia (sketchily covered) to Khurāsān and Transoxania (the fourth and richest volume of the book). A total of 470 poets and writers are included, with individual sections extending to fifty or a hundred pages for such major figures as al-Mutanabbī, Abū Firās, the Būyid viziers Ibn al-'Amīd and Ibn 'Abbād, and Badī' al-Zamān al-Hamadhānī [*q.vv.*]. Critical comment, while not completely lacking, occupies a relatively minor position in the work, as does biographical information, the bulk being given over to poetic and prose selections. Late in his life, al-Tha'ālibī composed a supplement to this work, the *Tatimmat al-yatīma* (ed. A. Iḳbāl, 2 vols., Tehran 1353/1934), following the same principles of organisation and including writers who had emerged to prominence during his own adult lifetime. The obvious attractiveness and utility of the *Yatīma*, and the example of the author's own *Tatimma*, encouraged the production over the following centuries of numerous sequels, of which the most important are the *Dumyat al-ḳaṣr* of al-Tha'ālibī's own student al-Bākharzī and the massive *Kharīdat al-ḳaṣr* of 'Imād al-Dīn al-Iṣfahānī [*q.vv.*].

Al-Tha'ālibī's enthusiasm for anthologising may have been initially encouraged by his friend Abu 'l-Faḍl al-Mīkālī, as suggested by an early collection of poetry from all periods, arranged by genre, *al-Muntaḥal* (ed. Aḥmad b. Abī 'Alī, Alexandria 1321/1901), which is attributed in various manuscripts to both men (see also Sezgin, *GAS*, ii, 77-8, where it is called *al-Muntakhab al-Mīkālī*), and may represent a revision by al-Tha'ālibī of his friend's work. Later in his life he was repeatedly asked to extract his particular favourites from the material which he had collected, with a decided emphasis on recent and Eastern poets, in a number of slim anthologies, dedicated to various patrons, such as *Aḥsan mā sami'tu* (ed. A.'A. Tammām and S. 'Āṣim, Beirut 1989) and *Man ghāba 'anhu al-muṭrib* (ed. N.'A. Sha'lān, Cairo 1984). A more specialised collection of descriptive erotic poems on young men, the *K. al-Ghilmān*, remains in manuscript. Other works concern themselves as much with prose as with poetry, such as *al-I'djāz wa 'l-īdjāz* (ed. M. al-Ṭūndjī, Beirut 1992; French tr. O. Petit, *La beauté est le gibier des cœurs*, Paris 1987), which begins with examples of rhetorical figures in the Ḳur'ān and *ḥadīth* and proceeds to offer prose selections and anecdotes from a wide range of political and literary figures, balancing these in its second half with verses by major poets from the pre-Islamic era to the author's own day. A similar combination of prose and poetry appears in

the *Khāṣṣ al-khāṣṣ* (ed. M.M. al-Djinān, Beirut 1994), a virtual epitome of a number of al-Thaʿālibī's earlier works.

More in the tradition of collections of prose *fuṣūl*, brief sentences or paragraphs in rhymed prose arranged by topic and intended as a reference for aspiring prose stylists and epistolographers, are two early works, *al-Mubhidj* (Cairo 1322), which is dedicated to Ḳābūs, himself a noted stylist, and the more ambitious *Siḥr al-balāgha* (ed. ʿA. al-Ḥūfī, Beirut 1984), which was rewritten three times, each time dedicated to a different dignitary, the final version being intended for the library of Abu 'l-Faḍl al-Mīkālī. The material in both these works is presented without attribution (except for the final chapter of the *Siḥr al-balāgha*, excerpting phraseology from the writings of such figures as Badīʿ al-Zamān and Abū Bakr al-Khwārazmī), and may thus be considerable more "original" than what we find in al-Thaʿālibī's more straightforward anthologies—albeit only to a limited degree.

Another group of works, while essentially compilations, focus on one or another rhetorical principle or trope. For example, both *al-Ẓarāʾif wa 'l-laṭāʾif* and *al-Yawāḳīt fī baʿḍ al-mawāḳīt* present poetry and prose in paired "praise and blame" of various things; these two works survive in a single combined edition put together by al-Thaʿālibī's younger contemporary Abū Naṣr al-Maḳdisī and entitled (confusingly) *al-Laṭāʾif wa 'l-ẓarāʾif* (Cairo 1300, and other editions). Similar material appears in *Taḥsīn al-ḳabīḥ wa-taḳbīḥ al-ḥasan* (ed. Sh. al-ʿĀshūr, Baghdād 1981), "making the bad seem good and the good seem bad", and *al-Kināya wa 'l-taʿrīḍ* (or *al-Nihāya fī fann al-kināya*, ed. M.F. al-Djabr, Damascus 1994), on euphemisms. All sorts of elegant examples of quoting from the Ḳurʾān are collected and discussed in *al-Iḳtibās min al-Ḳurʾān al-Karīm* (ed. I.M. al-Ṣaffār, 2 vols., al-Manṣūra 1992). Paronomasia is treated in *al-Mutashābih*, also known as *Adjnās al-tadjnīs* (ed. I. al-Sāmarrāʾī, in *Madjallat Kulliyyat al-Ādāb, Djāmiʿat Baghdād*, x [1967], 33-6), and is also the subject of *al-Anīs fī ghurar al-tadjnīs* (ed. H. Nādjī, in *Madjallat al-Madjmaʿ al-ʿIlmī al-ʿIrāḳī*, xxxiii [1982], 369-80), whose authorship, however, is somewhat problematical. A related trope, the use of two or more semantically related terms in a single figure (*talfīḳ*), is the subject of *al-Tawfīḳ li 'l-talfīḳ* (ed. Ibrāhīm Ṣāliḥ, ²Damascus 1990). Examples of the rhetorical exercise of recasting verses in elegant rhymed prose are collected in *Nathr al-naẓm wa-ḥall al-ʿiḳd* (Cairo 1317, and other editions).

More broadly philological are three of al-Thaʿālibī's most popular works. The first half of the two-part *Fiḳh al-lugha wa-sirr al-ʿarabiyya* (ed. M. al-Saḳḳā, I. al-Abyārī and ʿA. Shalabī, Cairo 1938) is lexicographical, grouping vocabulary by semantic field, while the second half, cribbed primarily from the *Fiḳh al-lugha* of Ibn Fāris [*q.v.*], discusses a variety of grammatical and lexicographical topics. *Al-Tamthīl wa 'l-muḥāḍara* (ed. ʿA.M. al-Ḥulw, Cairo 1961) is a comprehensive collection of proverbial and quasi-proverbial expressions, culled from the widest variety of sources. Equally rich, despite its apparently narrower base, is the *Thimār al-ḳulūb fī 'l-muḍāf wa 'l-mansūb* (ed. M.A. Ibrāhīm, Cairo 1965), an alphabetically-arranged lexicon of two-word phrases and clichés, which teems with recondite and fascinating lore.

Some further collections of miscellaneous information are less tied to formal linguistic characteristics. The *Mirʾāt al-murūʾāt* (Cairo 1898, and other early editions, all defective) assembles more anecdotal material under the rubric *murūʾa*, "honour, virtue", than one might expect, and the *Bard al-akbād fī 'l-aʿdād* (Istanbul 1325) does the same under the numbers two to ten. The *Laṭāʾif al-ẓurafāʾ* (facs. ed. Q. al-Samarrai, Leiden 1978; also edited as *Laṭāʾif al-luṭf* by ʿU. al-Asʿad, Beirut 1980) is a straightforward collection of entertaining anecdotes, while the delightful *Laṭāʾif al-maʿārif* (ed. I. al-Abyārī and H.K. al-Ṣayrafī, Cairo 1960; English tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968) would appear to assemble bits of historical lore purely for their entertainment value.

A unique excursion into serious historiography which may have been made by al-Thaʿālibī is represented by the *Ghurar al-siyar* or *Ghurar akhbār mulūk al-furs wa-siyarihim* (other variants also), a universal history from the creation to the author's own time of which only the first half, up to the caliphate of Abū Bakr, is extant, and of which only the section dealing with pre-Islamic Persian history has been published; see the preceding article regarding the question of its authorship. While the published section of this work is of unquestionable importance for elucidating the background of the *Shāh-nāma* of Firdawsī [*q.v.*], it is striking that neither here nor anywhere else does the putative author al-Thaʿālibī ever make reference to his illustrious Persian contemporary. He was, in fact, a consistent and strident supporter of the Arabic language and its literature, and, despite his occasional references to bilingual poets and Arabic translations of Persian verse, his works are essentially silent about the extraordinary efflorescence of New Persian literature that was taking place, especially at the Ghaznawid court, during his lifetime.

Two other apparently uncharacteristic works by al-Thaʿālibī are the Fürstenspiegel which he composed at the Khwārazmian court for the *amīr* Maʾmūn and his vizier al-Ḥāmidī, *Ādāb al-mulūk* (ed. Djalīl al-ʿAṭiyya, Beirut 1990), and *Tuḥfat al-wuzarāʾ* (ed. Ḥ. al-Rāwī and I.M. al-Ṣaffār, Baghdād 1977), the text of the latter apparently representing a re-working by a much later author, the title of al-Thaʿālibī's original work being uncertain. A number of other works in manuscript may eventually be shown to be his as well, and some of the many preserved titles of lost works are certainly also authentic. Several works attributed to him in print are, however, to be rejected, including in particular *al-Djawāhir al-ḥisān fī tafsīr al-Ḳurʾān* (Algiers 1985), a Ḳurʾānic commentary by his much later namesake ʿAbd al-Raḥmān b. Muḥammad al-Thaʿālibī (d. 873/1468-9), and *al-Farāʾid wa 'l-ḳalāʾid* (Cairo 1317, in the margin of *Nathr al-naẓm*, and, with quite a divergent text, Cairo 1327, under the title *al-Amthāl al-musammā bi 'l-Farāʾid wa 'l-ḳalāʾid*), which is to be assigned rather to the rather obscure Abu 'l-Ḥusayn al-Ahwāzī, although yet another version, published with the title *Aḥāsin al-maḥāsin* and attributed to the equally obscure Abu 'l-Ḥasan b. al-Ḥusayn b. al-Ḥasan al-Rukhkhadjī (in *Madjmūʿat khams rasāʾil*, Istanbul 1301) probably represents a case of plagiarism by the latter author.

Scattered through al-Thaʿālibī's various works are quite a number of his own verses, which are on the whole quite unremarkable. His student al-Bākharzī reports having a volume of these in his possession (*Dumyat al-ḳaṣr*, ed. S.M. al-ʿĀnī, Baghdād and Nadjaf, 1971, ii, 226), but no *dīwān* has come down to us. Al-Bākharzī, the son of one of his closest friends, was the most prominent of his students; he and several others are generously accorded publicity by their master in his *Tatimmat al-yatīma*.

(E.K. Rowson)

THABĪR, a mountain outside Mecca, on the north side of the valley of Minā [*q.v.*]. Yāḳūt, *Muʿdjam al-buldān*, ed. Beirut, ii, 72-4, enumerates several mountains of this name, and also gives a tradition that Thabīr was, with Ḥirāʾ [*q.v.*] and Thawr, one of the three most significant mountains outside Mecca. It seems to have played a role in the ceremonies of the pre-Islamic *ḥadjdj* or pilgrimage outside Mecca. In Umayyad times, in the early 8th century A.D., the governor of Mecca Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*], on the orders of Sulaymān b. ʿAbd al-Malik, piped water from a spring on Mount Thabīr to the courtyard of the Great Mosque in the centre of Mecca.

Bibliography: See also Azraḳī, *Akhbar Makka*, ed. Ṣāliḥ Muḥammad Djamāl, Madrid 1385/1965-6, ii, 107; M. Gaudefroy-Demombynes, *Le pèlerinage à la Mekke*, Paris 1923, 74-5. (Ed.)

THĀBIT, ʿAlāʾ al-Dīn ʿAlī, (modern Tkish. Sabit), Ottoman poet born at Užice in Bosnia *ca.* 1060/1650, died at Istanbul 11 Shaʿban 1124/5 September 1712. Thābit had his early education locally, but then moved to Istanbul. He showed early aptitude for poetry, but entered the ranks of the scholarly and judicial hierarchy, serving in a series of posts across the Empire. His *dīwān* includes many poems written to men in power soliciting posts or bemoaning his financial straits between appointments.

Classified by Gibb (*HOP*, iv, 15) as a Traditionalist, between the Classical and Modernist periods, Thābit ranks second only to Nābī [*q.v.*] among 11th/17th-century poets, and himself influenced such men as Nedīm and ʿIzzet Molla [*q.vv.*]. Described as possessing an original but undisciplined poetic temperament (J. Rypka, *Beiträge zur Biographie, Charakteristik und Interpretation des türkischen Dichters Sabit*, Prague 1924), Thābit brought innovation to the literary tradition with wide use of the popular language, proverbs and popular sayings, but his frequently ribald humour tended to be considered "below the dignity of poetry" (Gibb, iv, 16; and see Abdülbâki Gölpınarlı, *Divan şiiri. XVII. yüzyıl*, İstanbul 1954, 22).

In addition to his *dīwān* (Turgut Karacan, doctoral diss. Atatürk Üniversitesi 1981) and a translation and commentary on the *Ḥadīth-i arbaʿīn*, Thābit's works include the following *mathnawīs*: (1) *Zafer-nāme* ("Book of Victory"), twice printed by the Ebüzziya Tevfik Press, also referred to as *Ghazā-nāme* or *Selīm-nāme*, a work of some 426 *bayts* relating in epic tones the participation of the Crimean Khān Selīm Giray [*q.v.*] in Süleymān III's [*q.v.*] Austrian campaign. It includes a description of Selīm's reception by Süleymān and of his victory over the Russian-Polish army at Perekop. (2) *Edhem ü Hümā* ("Edhem and Hümā"), the story of a pious young man of Balkh who falls in love with his ruler's daughter but, convinced that he cannot win her, immediately dies, giving up his life for love. (3) Three short *mathnawīs* entitled *Berber-nāme* ("The Barber Book"), *Dere-nāme* ("The Valley Book", also known as *Ḥikāye-yi Khodja Fesād* "The Story of Hodja Fesād"; see Karacan, *Derename*, Sivas 1990), and *ʿAmr-i Layth*.

THĀBIT B. ḲURRA, Abu 'l-Ḥasan b. Zahrūn al-Ḥarrānī, outstanding mathematician and scientist, born probably in 21/826 at Ḥarrān [*q.v.*], died at Baghdād on Thursday, 26 Ṣafar 288/19 February 901 aged 77 lunar years (see R. Rashed, *Mathématiques infinitesimales*, 139-45). His maternal language was Syriac, he knew Greek very well, and wrote his scientific work in Arabic. Famed primarily as a mathematician, he wrote original works in all the practical sciences of his age.

Originally a money-changer in Ḥarrān, his meeting with the eldest of three famous mathematicians and astronomers, the Banū Mūsā [*q.v.*], was a turning-point in his career and his life. When he met Thābit, Muḥammad b. Mūsā appreciated his intelligence and linguistic skills so much that he decided to take Thābit back with him to Baghdād. It was under the Banū Mūsā that Thābit received his education in mathematics, astronomy and also philosophy. He succeeded the Banū Mūsā as head of their school and himself founded a veritable dynasty; there were many famous scholars amongst his descendants, including his grandson Ibrāhīm b. Sinān, a mathematician of genius.

Thābit's scientific output was divided between translations and research work. The names are known of a considerable number of Greek texts which he rendered into Arabic, and which included as well as Archimedes' *The sphere and the cylinder*, or Books V-VII of Apollonius's *Conics* (in fact, lost in the original Greek), Nicomachus of Gerasa's *Introduction to arithmetic*. He further revised many translations made by others, such as Euclid's *Elements*, Ptolemy's *Almagest* and others.

His work in astronomy is important. The ancient Arabic bio-bibliographical works list between 30 and 40 titles in this subject, only nine of which have come down to us under his name. These treatises have been edited, with translations and commentaries, but out of these one should omit the *Book on the solar year*, falsely attributed to him. We thus possess just eight complete works and a few fragments of others on which to work in order to pronounce on his contribution to astronomy. The great interest of this last rests on three crucial points: the connection between observation and theory, Thābit himself being more of a theoretician than an observer; the mathematisation of astronomy; and the conflicting relationships between "physical astronomy" and "mathematical astronomy".

All through his work is to be found a very clear exposition of the link between theory and continuous observation of the stars. Moreover, if Ptolemy had preserved in his work a large share of empiricism,

Thābit nevertheless took up a certain number of pieces of reasoning and geometrical models from Ptolemy, treating them then in a rigorous mathematical way and reducing this part of the empiricism in them. Finally, Thābit placed the accent—we find this above all in the sparse fragments of his work—on the conflict between a global conception of the universe and a purely theoretical and mathematical analysis of the movement of each of the bodies in that same universe. This conflict would subsequently become one of the driving forces for the progress of research in astronomy all through the history of the development of Arabic astronomy.

Thābit's mathematical work, the part not directly linked with mathematical astronomy or statics, is also considerable. It embraces both geometry and also geometrical algebra and the theory of numbers. Thus he wrote three magistral treatises on "infinitesimal mathematics". In the first, *The measure of the section of a cone, called a parabola,* he gives the area of a part of a parabola by using a method different from that of Archimedes. In the second, *The measure of paraboloids,* he calculates the volumes in a manner different from that of Archimedes in his *Conoids and spheroids*—which moreover had no more been rendered into Arabic than Archimedes' studies on the parabola. Finally, in his *On the sections of the cylinder and on its lateral surface,* he determined the area of an ellipse and of elliptical segments. It was in this treatise that he developed the new geometrical methods elaborated by the Banū Mūsā.

Furthermore, the study of infinitesimal processes runs through Thābit's work in various parts. In astronomy, he had recourse to procedures meant for examining the problem of the visibility of the crescent moon, as also in his study *How the movement of the ecliptic appears to be held back, accelerated or retained at a midpoint according to the place of the eccentric where it is produced.* In the field of statics, Thābit equally applied infinitesimal processes in his book *al-Karastūn.*

Many other spheres were covered by his activity, including the theory of numbers with the first theorem on amicable numbers which bears his name.

Thābit, a talented translator, was thus also one of the outstanding mathematicians of all time. His fame both in the Islamic East and the Islamic West, the Latin translations of certain of his works and the Hebrew ones of others, bear adequate witness to this. In the history of Arabic mathematics, leaving out the name of Thābit b. Ḳurra means not being able to understand the history of the mathematical sciences between the 9th and 12th centuries.

Bibliography: This is vast. For a list of his works (respectively in medicine, mathematics, astronomy, astrology and meteorology), see Sezgin, *GAS*, iii, 260-3, v, 264-72, vi, 163-70, vii, 151-2, 269-71. For secondary literature, see *Dict. of scientific biography*, xiii, New York 1976, 288-95. On his work as a translator, see e.g. W. Kutsch, *Thābit b. Qurra's arabische Übersetzung der* Arithmetikè Eisagogè *des Nikomakos von Gerasa zum ersten Mal herausgegeben*, Beirut 1959. On his mathematical works, see especially R. Rashed, *Mathématiques infinitésimales entre le IXᵉ et le XIᵉ siècle*, i, London 1996, 139-673, and also B.A. Rosenfeld and A.P. Yousschkevitch, *Thabit matematičeskie tractari*, Moscow 1984. On his astronomical works, see R. Morelon, *Thābit ibn Qurra, œuvres d'astronomie*, Paris 1987, and idem, *Thābit ibn Qurra and Arab astronomy in the 9th century*, in *Arab Sciences and Philosophy. A Historical Journal*, iv (1994), 111-39. On his works in the field of statics, see W.R. Knorr, *Ancient sources on the medieval traditions of mechanics*, Florence 1982 (= Suppl. agli Annali dell'Istituto e Museo di Storia della Scienza, fasc. 2). On his influence in the medieval Latin world, see e.g. F.J. Carmody, *The astronomical works of Thābit b. Qurra*, Berkeley-Los Angeles 1960; also F. Buchner, *Die Schrift über der* Qarastūn *von Thābit b. Qurra*, in *Sb. phys.-med. Sozietät in Erlangen*, lii-liii (1920-1), 141-88; A. Björnbo, *Thābit's Werk über Transversalensatz*, in *Abh. zur Gesch. der Naturwissenschaften*, vii (1924).

(R. Rashed and R. Morelon)

THĀBIT ḲUṬNA, Abu 'l-ʿAlāʾ Thābit b. Kaʿb b. Djābir, of the Banū Asad b. Ḥārith of Azd or one of their clients, minor poet of the Umayyad period (b. in Baṣra at an unknown date, probably in the 640s, d. 110/728).

He was mainly notable for his participation in expeditions on the eastern frontiers of Khurāsān, and even became governor of one of its component provinces. He had close ties of friendship with the governor Yazīd b. al-Muhallab b. Abī Ṣufra, and remained faithful to him until his death at al-ʿAkr in ʿIrāḳ in 102/720 when he tried to seize power from the Umayyads by attacking Maslama b. ʿAbd al-Malik, a policy in which he was encouraged by Thābit [see MUHALLABIDS]. In the course of one of his campaigns with Yazīd he was wounded in the eye and henceforth wore a kind of cotton pad over the eye, whence his nickname Thābitᵘ Ḳuṭnaᵗᵘⁿ. But after Yazīd's death, he rallied to the Umayyads and took part in expeditions against Transoxania under Ashras b. ʿAbd Allāh al-Sulamī, in the course of which he was killed in 110/728.

His *dīwān* existed in ancient times (see Sezgin, ii, 377), but has not survived; however, Mādjid Aḥmad al-Sāmarrāʾī has tried in his *Shiʿr Thābit Ḳuṭna al-ʿAtakī* (Baghdād 1390/1970) to reconstitute it, basing himself on al-Djāḥiẓ, *Ḥayawān*; Ibn Ḳutayba, *Shiʿr*; al-Ṭabarī, *Taʾrīkh*; the *Aghānī*; Ibn al-Athīr; and al-Baghdādī, *Khizāna*. Apart from a few doubtful verses, the *dīwān* is made up of 13 poems and 27 fragments with a total of 221 verses, in seven metres, mainly *ṭawīl* (14 times), *basīṭ* (9 times) and *wāfir* (8 times). Since short fragments make up two-thirds of his known work, it is not possible to say how much Thābit respected the conventions of the classical *ḳaṣīda*. His language is rather archaic, and is to be grouped with old, and especially, Bedouin poetry in general. He uses the usual genres: personal and tribal *fakhr*, and satires against persons like the minor poet Ḥādjib al-Māzinī or against a family or clan, like the Banu 'l-Kawwāʾ al-Yashkuriyyūn, who were opponents of his friend Yazīd b. al-Muhallab. Most of his poetry is, in fact, connected with this latter person, including encomia, exhortations to battle and elegies.

But most important is the heresiographical aspect of Thābit's poetry. There is a poem in his *dīwān* which at its beginning expresses the ideas of the Murdjiʾa [*q.v.*]: abstention from judgement on the Rightly-Guided Caliphs and the Umayyads and their actions, since God alone is competent to judge; these questions are clearly connected with the dominating topic for early Islam, the nature of the caliphate or imāmate.

(T. El Achèche)

THĀDJ, an ancient pre-Islamic walled site in northeastern Arabia, some 90 km/56 miles

almost due west of the port of Djubayl on the Arabian Gulf (see General map, Potts, *Arabian Gulf*, xx). Located in Wādī al-Miyāh, the site covers an area of about 990 m by 825 m and lay on the trans-Arabian route linking southern Arabia with ʿIrāḳ, and in Islamic times both al-Hamdānī and Ibn Khurradādhbih mention the route, called by the 7th/13th century traveller Ibn al-Mudjāwir (214) *Ṭarīḳ al-Raḍrāḍ*, the "Gravel Road". It has in recent years been suggested that the ancient emporium of Gerrha was Thādj (see e.g. Beeston, *Observations*, 7 n. 5, and Potts, *Thaj*, 87-91). The published Hasaitic inscriptions (written in the Monumental South Arabian script, but in the north Arabian language) are listed by Potts, *Arabian Gulf*, 70-1.

Potts (*Arabian Gulf*, 34-5, after Mandaville, *Thaj*, 15-19) also lists in neat chronological order the mention of Thādj by the pre-Islamic and early Islamic poets and in the Arabic works of geography and travel. Water and stone structures are commonly alluded to as being found at the settlement: "the flowing wells of Thādj" of ʿAmr b. Kulthūm (pre-Islamic), Rashīd b. Ḳays b. Shihāb al-Yashkurī's "a castle of stone" (pre-Islamic), etc. Thādj is variously described in these works as being in the area of al-Yamāma (al-Aṣmaʿī, 2nd-3rd/8th-9th century), on the outskirts of al-Baḥrayn (Abū ʿUbayda, 3rd/9th century), a village in al-Baḥrayn (al-Bakrī, 5th/11th century) and a spring several nights' journey from al-Baḥrayn (Yāḳūt, 7th/13th century). Abū ʿUbayda adds that the taxes of Thādj were sent to al-Yamāma and that it belonged to Banū Ḳays b. Thaʿlaba and ʿAnaza b. Asad.

(G.R. SMITH)

THAGHR [see AL-THUGHŪR].

AL-**THAGHRĪ**, ABŪ SAʿĪD YŪSUF b. Muḥammad al-Ṭāʾī, ʿAbbāsid commander of the middle decades of the 3rd/9th century, who presumably derived his professional *nisba* from service along the Byzantine frontiers (*thughūr* [*q.v.*], sing. *thaghr*; al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, iii, 136-7, gives two scholars with this same *nisba*, connected respectively with Tarsus and Adana). Nothing is known of him beyond the fact that he was the patron of his fellow-Ṭāʾī, the poet al-Buḥturī [*q.v.*]. (ED.)

THAILAND (formerly Siam), Islam in. Thailand is now and has always been overwhelmingly Buddhist (about 90% of the population). Islam is the second largest religion, although data on numbers are difficult to establish with certainty. The best estimate seems to be that there are about a million and a half or perhaps more in Thailand. Of these about half are ethnic Malay-Muslims, concentrated in the four southern provinces [see PATANI]. The remainder is made up of a number of disparate groups, of which we may identify the following. First, the Muslim-Thai, i.e. those who are ethnically Thai and culturally Thai in all respects except that they are Muslim. Second, the Cham [see ČAM] from western Cambodia, who are mainly concentrated in the east coast districts and in Bangkok. Their numbers have increased from the 1970s with the refugee exodus from Cambodia. Third, the West Asian group, comprising Persians and Arabs. This group is prominent in business and also in Muslim administration, having close ties with government and government officials. Fourth, there is a heterogeneous group of South Asians, mainly from the Pandjāb and Bengal. Finally, there are the Thai-Malay, i.e. ethnic Malays who have acculturated themselves into Thai society, speaking Thai and taking Thai wives. Over the course of time, they will probably assimilate with the Muslim-Thai. Apart from the Persians, the great majority are Sunnī Shāfiʿīs, though the Ḥanafī school also has adherents.

Thailand is often described as a "bureaucratic polity," and this is demonstrated in the national system for the administration of Islam. There is a three-tier system of control.

(i) The Mosque Committee. The functions of the Committee are specified in fairly detailed legislation (the Mosques Acts of 1947, 1955, and Regulations of 1948, 1949). The main duties are to manage the mosque and its property according to Islamic and state law, to ensure the proper observance of Islam, and to provide for and maintain the registration of the mosque. Registration is not compulsory, but without it a mosque is not entitled to government financial aid. The great majority of mosques (well over 2,000) are registered.

(ii) The Provincial Committee for Islamic Affairs. Each of the provinces of Thailand has such a Committee. Primarily, it has two functions: first to supervise the competence and practice of the mosque committees, and, second, to act as adviser to and liaison with the secular provincial authorities.

(iii) The Central Committee for Islamic Affairs. This Committee, located in Bangkok, is the apex of the Islamic administration system. It is headed by the Chulamontri (Sheikhul Islam), the King's adviser on matters relating to Islam. He is appointed directly by the King, on the advice of the Minister for the Interior, and can only be removed by the King. His tenure is for life. The Committee is located jointly in the Ministry of Interior (Dept. of Local Authority) and Ministry of Education (Dept. of Religious Affairs). The Committee has responsibility for the overall supervision of mosques, provincial committees, and for the allocation of finance. It also has attempted a number of translations from Arabic to Thai with variable success. However, its primary function is to incorporate Islam and the Muslims into the state administration, again with varying degrees of success, especially in the south [see PATANI].

The main problem for Muslims, or for any other minority in Thailand, lies in government policy. This oscillates between integration and assimilation. While a good degree of religious freedom has always been permitted, a plurality of culture has never been accepted. So far as Islam is concerned, it will be of little concern to the Thai authorities, provided that individual Muslims have achieved a reasonable degree of assimilation. On the other hand, where Islam is identified with a non-Thai culture, as in the Malay-Muslim south, then conflict is inevitable.

Bibliography: Omar Farouk, *The Muslims of Thailand*, in Lutpi Ibrahim (ed.), *Islamika*, Kuala Lumpur 1981, 97-120; R. Scupin, *Cham Muslims of Thailand*, in *Jnal. of the Institute of Muslim Minority Affairs*, x (1989), 486-92.

(M.B. HOOKER)

AL-**THĀʾIR FI ʾLLĀH**, ABU ʾL-FAḌL DJAʿFAR b. Muḥammad b. al-Ḥusayn al-Shāʿir, Zaydī ʿAlid ruler of Hawsam [*q.v.*] 319-50/931-61.

His mother was a daughter of his paternal grand-

father's brother, the Zaydī imām al-Nāṣir li ʾl-Ḥaḳḳ [see AL-ḤASAN AL-UṬRŪSH], who had been active in Hawsam teaching Zaydī Islam among the Gīlīs and the Daylamīs before conquering Āmul and Ṭabaristān. As Zaydī ʿAlid rule collapsed in Ṭabaristān, al-Thāʾir was able to establish it further west in Hawsam on a durable basis. Following the example of al-Nāṣir li ʾl-Ḥaḳḳ, he repeatedly invaded Ṭabaristān, seizing Āmul, but was never able to hold the town for more than a few months. The first time, in 320/932, he was allied with the Daylamī Mākān [*q.v.*]. In three further invasions between 337/948 and 341/953, he was first allied with the Ustandār of Rūyān, then with the Ziyārid Wushmgīr, and finally with the Būyid Rukn al-Dawla. He died in 350/961 and was buried in Miyān Dih, 30 km/20 miles east of Hawsam (Rūdisar), where his tomb still exists. His descendants, several of whom adopted his regnal name al-Thāʾir fi ʾllāh, continued to rule in Hawsam, at times in competition with descendants of al-Nāṣir li ʾl-Ḥaḳḳ and other ʿAlids. When Lāhīdjān in the 6th/12th century replaced Hawsam as the centre of Zaydī scholarship in eastern Gīlān, a branch of the family was active there.

(W. MADELUNG)

AL-**THAḲAFĪ**, IBRĀHĪM B. MUḤAMMAD, Abū Isḥāḳ, Shīʿī writer and scholar, b. at an unknown date around the beginning of the 3rd century A.H., d. 283/896.

His ancestors, from the Thaḳīf, had always been faithful partisans of the ʿAlids, and his great-grandfather, the Companion Saʿd b. Masʿūd, had been governor of al-Madāʾin for ʿAlī, with his loyal qualities displayed at the battle of Ṣiffīn [*q.v.*] in 37/658 (al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, iii, 144). Regrettably little is known of Ibrāhīm's life and intellectual development, but he was brought up in Zaydī Shīʿī circles in Kūfa, showing a tendency, however, when he grew up for a moderate Imāmism. His vast knowledge and talents were appreciated by his contemporaries (cf. Ibn al-Nadīm, *Fihrist*, ed. Tadjaddud, Tehran 1350/1971, 279; Yāḳūt, *Irshād*, i, 294-5). His moderation and objectivity caused him to leave his natal town under pressure from extremist Shīʿīs after having difficulties with the dissemination of his *al-Maʿrifa fi ʾl-manāḳib wa ʾl-mathālib* (sc. of the *Ahl al-Bayt*), and despite receiving offers from colleagues in Ḳumm, he preferred to move to the freer atmosphere of Iṣfahān, where he lived till he died.

Al-Thakafī was a fertile author. According to Abū Djaʿfar al-Ṭūsī, *Fihrist*, Nadjaf 1380/1961, 27-8, he wrote some 50 works, mainly on Imāmism and ʿAlid history, fields in which he was a recognised authority. One may mention particularly the *K. al-Imāma al-kabīr*, *K. al-Ashriba*, *K. al-Ruʾyā*, *K. al-Taʾrīkh* (a universal history), *K. Ṣiffīn*, *K. al-Djamal* (i.e. the Battle of the Camel), *K. Maḳtal Amīr al-Muʾminīn* (sc. ʿAlī), *K. Maḳtal al-Ḥusayn*, *K. Rasāʾil Amīr al-Muʾminīn wa-akhbārihi*, etc. From all this rich production, only one work has survived, the *K. al-Ghārāt* or *al-Istinfār wa ʾl-ghārāt* (ed. ʿAbd al-Zahrāʾ al-Khaṭīb, Damascus-Beirut 1410/1990), dealing with the conflict of ʿAlī and Muʿāwiya and stressing the latter's raids into the lands controlled by ʿAlī after Ṣiffīn and the arbitration at Dūmat al-Djandal [*q.v.*]. The Muʿtazilī Ibn Abi ʾl-Ḥadīd gives long passages from it in his *Sharḥ Nahdj al-balāgha* (Cairo 1385-7/1965-7, ii, 6, 9-15, 85-8, 113-25, 286, 291, 294, 301; iii, 127-48; iv, 34-53, 57, 80, 83-7, 89-92, 94, 96-100, 106; vi, 56-1010, 128, 136-7; vii, 46-7) used by the editor al-Khaṭīb to supplement the unique Ẓāhiriyya ms. of the *K. al-Ghārāt*.

Bibliography: See also Samʿānī, iii, 137; Ṣafadī, vi, 120-1; Abū ʿAlī al-Astarābādhī, *Muntahā al-maḳāl*, Tehran 1302/1884, 25-6; Āghā Buzurg Ṭihrānī, *Dharīʿa*, v, 62, 64-5; ʿĀmilī, *Aʿyān al-Shīʿa*, v, 414-23; Khʷānsārī, *Rawḍāt al-djannāt*, 2; Baghdādī, *Īḍāḥ al-maknūn*, i, 45, 355; al-Ḥasan al-Ṣadr, *Taʾsīs al-Shīʿa*, Kāẓimiyya 1370/1951, 72; Brockelmann, S I, 225; Ziriklī, *Aʿlām*, i, 56; Kaḥḥāla, *Muʾallifīn*, i, 95, 109; Sezgin, *GAS*, i, 321; ʿAbd al-Zahrāʾ al-Khaṭīb, *Maṣādir Nahdj al-balāgha*, Nadjaf 1386/1966, i, 62-4; idem, introd. to ed. of the *K. al-Ghārāt*, 3-8.

(MOKTAR DJEBLI)

AL-**THAḲAFĪ**, YŪSUF B. ʿUMAR, governor of ʿIrāḳ between 120/738 and 126/744 under the Umayyad caliphs Hishām b. ʿAbd al-Malik and al-Walīd II b. Yazīd b. ʿAbd al-Malik. His father, ʿUmar, was a cousin of al-Ḥadjdjādj [*q.v.*], both being grandsons of al-Ḥakam b. Abī ʿAḳīl of the B. Saʿd b. ʿAwf of Thaḳīf. As governor, his residence was in al-Ḥīra rather than in al-Kūfa, the more usual gubernatorial seat.

Before his appointment over ʿIrāḳ, Yūsuf had been governor of Yemen, where he had been installed by the caliph Hishām, probably in 106/725. Reports about his activities there mainly concern his suppression of various Khāridjite rebellions. There is also a tradition that he was responsible for the death of Wahb b. Munabbih [*q.v.*] during his governorate in Yemen.

Hishām commanded him to go to ʿIrāḳ in 120/738 in order to depose and take over from Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*]. Much of the material relating to Yūsuf in the sources concerns the circumstances of his takeover from Khālid and his subsequent prolonged and interrupted attempts to extract from the latter the wealth he had accumulated during his lengthy governorship over ʿIrāḳ. After the death of Hishām, al-Walīd b. Yazīd is reported to have sold the former governor to Yūsuf for a considerable sum of money, and Khālid died under Yūsuf's torture at the beginning of 126/late 743. The other major event connected with Yūsuf's period of office was the revolt of Zayd b. ʿAlī b. Ḥusayn b. ʿAlī [*q.v.*] in al-Kūfa in 121-2/739-40, which was suppressed by him.

The coming of Yūsuf to ʿIrāḳ was associated with an intensification of the rivalry between Yemen and Muḍar and with a shift from Yemeni to Muḍarī dominance. Thaḳīf were part of Ḳays (Muḍar), and Yūsuf replaced the Yemeni governors and officials with men of his own. There are accounts in the sources of Yūsuf's maltreatment and torture of several of Khālid's appointees. It is not clear how far he was responsible for the appointment of Naṣr b. Sayyār [*q.v.*] over Khurāsān. Naṣr is generally portrayed as owing his appointment to the caliph Hishām, but some reports have Yūsuf playing a part (others show him as being opposed to Naṣr), while al-Ṭabarī (ii, 1665) cites a verse which claims that Yūsuf himself chose Naṣr for the job.

His own fall from office followed the murder of al-Walīd II and the succession of Yazīd III b. al-Walīd as caliph (Djumādā II 126/April 744). When

the latter sent Manṣūr b. Djumhūr al-Kalbī to replace him as governor over ʿIrāḳ, Yūsuf fled to the Balḳāʾ, where he was subsequently captured. Imprisoned in Damascus, as Marwān b. Muḥammad advanced towards that town late in 744 or early in 745 in the aftermath of the death of Yazīd III, Yūsuf was killed in his prison, together with the two sons of al-Walīd II who were also prisoners there. The sources refer both to Yūsuf's stupidity and his cruelty, and to his lavish public displays of generosity.

(G.R. HAWTING)

THAḲĪF, a tribe of the so-called Northern Arabian federation Ḳays ʿAylān [*q.v.*], more precisely, of the Hawāzin [*q.v.*]. Before Islam the Thaḳīf controlled the walled town of al-Ṭāʾif [*q.v.*]; groups of the Thaḳīf, some settled and some nomadic, still live in al-Ṭāʾif and its vicinity.

In the early Islamic period, the Thaḳīf were divided into two rival subdivisions, the less prestigious Aḥlāf or "allies" and the Mālik. The Aḥlāf included the ʿAwf branch of Thaḳīf as a whole and a group from the Djusham branch, while the Mālik were the descendants of Mālik b. Ḥuṭayṭ b. Djusham. Although there is evidence of fighting between the two subdivisions before Islam, they probably neutralised each other, thereby safeguarding internal peace in al-Ṭāʾif. The division of the Thaḳīf was reflected, e.g., in the battle of Ḥunayn [*q.v.*] shortly after Muḥammad's conquest of Mecca, where each subdivision fought under its own banner.

The relationship between the Thaḳīf and the Ḳuraysh was a matter of major importance in Islamic history. Already before Islam the two tribes were trade partners, while at the same time competing for agricultural land in the fertile area surrounding al-Ṭāʾif. Intermarriages were commonplace. For example, al-Mughīra b. Shuʿba [*q.v.*] was married (at different times) to three daughters of Abū Sufyān [*q.v.*]. ʿAbd al-Raḥmān b. ʿAbd Allāh al-Thaḳafī (Ibn Umm al-Ḥakam), whom Muʿāwiya I [*q.v.*] appointed governor of al-Kūfa [*q.v.*], was the caliph's nephew. Abu 'l-ʿĀṣ b. Umayya, the grandfather of Marwān I b. al-Ḥakam [*q.v.*] b. Abi 'l-ʿĀṣ, had four daughters who married prominent Thaḳafīs. Obviously, when the Marwānids [*q.v.*] came to power, their Thaḳafī in-laws were their natural partners.

The Thaḳīf were among the staunchest Arabian tribes in their opposition to Muḥammad. After his unsuccessful siege of al-Ṭāʾif in 8/630—supported by Ḳurashīs who feared a Thaḳafī takeover of their estates near al-Ṭāʾif—Muḥammad changed his tactics. He played against the Thaḳīf their Bedouin allies who, under Mālik b. ʿAwf [*q.v.*] al-Naṣrī, blockaded their town. The Thaḳīf delegation who under this pressure came to Medina to negotiate conversion to Islam managed nonetheless to secure for the tribe some significant concessions (M.J. Kister, *Some reports concerning al-Ṭāʾif*, in *JSAI*, i [1979], 1-18, at 1-11). Muḥammad's peaceful victory for evermore established the supremacy of the Ḳuraysh over the Thaḳīf.

The Thaḳīf were soon to occupy in the Islamic state a position befitting their cultural level and prestige and their share of power was larger than that of many stronger tribes. The conquests opened up for them new economic horizons, especially in ʿIrāḳ, and they benefited from the liberal policy of the rulers with regard to economic activities by the governors. Their success made them a popular target for inter-tribal polemics and Shīʿī propaganda, and hostile claims concerning their origin abounded. For instance, the Thaḳīf were said to have descended from the Thamūd [*q.v.*] (Kister and Plessner, *Notes on Caskel's Ǧamharat an-nasab*, in *Oriens*, xxv-xxvi [1977], 48-68, at 60-1).

During the "golden age" of Arabic philology, detailed attention was given to the Thaḳīf. For example, al-Madāʾinī compiled *Akhbār Thaḳīf* ("Accounts about the Thaḳīf") and *Man tazawwadja fī Thaḳīf min Ḳuraysh* ("The Ḳurashīs who married into the Thaḳīf"), Ibn al-Kalbī compiled *Mathālib Thaḳīf* ("The faults of the Thaḳīf") and al-Zubayr b. Bakkār dedicated a monograph to the pre-Islamic poet Umayya b. Abi 'l-Ṣalt [*q.v.*]. Several monographs dealt with the famous governors Ziyād b. Abīhi and al-Ḥadjdjādj b. Yūsuf [*q.vv.*].

(M. LECKER)

THAʿLAB (A.), masculine substantive (pls. *thaʿālib*, *thaʿāl*[in]) denoting the fox (*Vulpes vulpes*), carnivore of the canine tribe, belonging to the class of Canidae and the family of Vulpinae; in Persian *wāwi*, *rūbāh*, and in Turkish *tilki*. The vixen is called *thaʿlaba*, *thuʿala*, *thurmula*, *thuʿlubān* and the fox-cub is *hidjris* and *tanfal*. Furthermore, the fox bears the nicknames of *Abu 'l-Ḥuṣayn*, *Abu 'l-Nadjm*, *Abu 'l-Nawfal*, *Abu 'l-Wathab*, and *Abū Hinbiṣ*, while the vixen is *Umm ʿUwayl*.

The guile which is the dominant feature of the fox is acknowledged by the expressions *amkar min thaʿlab* "more cunning than a fox" and *arwagh min thaʿlab* "more crafty than a fox". Guided by innate mistrust, it uses numerous ploys when in search of food; thus it only approaches prey furtively and indirectly (*thaʿlaba*, *tathaʿlaba al-radjah*, *rawaghān*), preferring hard and dry ground (*tawbīr*) so as to avoid leaving footprints and, finally, feigning death (*tamāwut*), inflating itself to the maximum and lying with paws in the air, resembling a corpse several days old. By this means it catches the porcupine (*shayham*) which it devours gladly. To repel potential enemies such as the wolf, it leaves particularly vile-smelling droppings (*sulāḥ*) in its wake. To rid itself of infestation by fleas, the fox goes and wallows in a swamp, leaving only the end of its muzzle out of the water and holding between its fangs a ball

of vegetal material on which all the fleas seek refuge; once it is covered with these parasites, the fox throws the ball into the water, thus drowning its occupants. A country where foxes abound is called *mut̲h̲aʿlib*. The Arabophone countries know only the geographical forms of the fox *pallidus* and *niloticus*.

According to al-Damīrī, the fox has certain properties which counterbalance its reputation. The quality of its pelt has always made it a highly-prized item of clothing, supplying both warmth and elegance. Its head, placed in a dovecote, drives away all the pigeons. One of its fangs, fastened to an infant, suppresses the pain of teething; applied to an epileptic it brings rapid relief, as does the gall when dried, pulverised and inhaled through the nostrils. Its flesh is beneficent in the treatment of elephantiasis (*d̲j̲ud̲h̲ām*), although Islamic law prohibits its consumption. Its fat is a useful ointment in the treatment of gout (*nikris*) and otitis (*iltihāb al-ud̲h̲un*). One of its testicles, hung on an infant, has the same effect as its fang in soothing teething pain. One of its ears, when applied to a neck affected by scrofula (*k̲h̲anāzīr*), suppresses them rapidly. Its testicles, pulverised and dissolved in boiling liquid, have an aphrodisiac property; its excrement, applied to the penis in the form of a lotion, has the same effect. The blood of the fox, smeared on an infant's head, causes the hair to grow, even if the child has scabies (*d̲j̲arab*). Finally, holding its testicles in the hand dispels all fear of dogs.

In oneiromancy, seeing a fox presages an affectionate spouse and a happy conjugal life. The term *t̲h̲aʿlab* occurs in the expression *dāʾ al-t̲h̲aʿlab* "fox disease", applied to alopecia and baldness, while *ʿinab al-t̲h̲aʿlab* "fox grape", denotes the currant. In astronomy, *al-t̲h̲aʿlabiyyāt* applies to several stars of the Great Bear. Finally, *t̲h̲aʿlab* is, in the context of the date-palm, a synonym of *fasīl*, secondary growth which needs to be pruned away.

T̲H̲AʿLAB, Abū 'l-ʿAbbās Aḥmad b. Yaḥyā b. Zayd b. Sayyār al-S̲h̲aybānī (*mawlā* of the Banū S̲h̲aybān), famous grammarian and philologist of the so-called "Kufan school". He was born in 200/815-16 in Bag̲h̲dād, where he lived and worked throughout his entire life. T̲h̲aʿlab died, old and deaf, in a road accident on 13 D̲j̲umādā I 291/2 April 904 and was laid to rest in Bag̲h̲dād's Bāb al-S̲h̲ām cemetery.

T̲h̲aʿlab was, we are told, a Ḥanbalī, pious and trustworthy, famous for his reliability in Arabic, ancient poetry, Ḳurʾān and *ḥadīt̲h̲*. Even his alleged Baṣran rival al-Mubarrad [*q.v.*] credited him for being the most learned of all the Kūfans. Due to his reputation, T̲h̲aʿlab attained a prominent position in high places. He was the friend of the Ṭāhirid governor of Bag̲h̲dād, Muḥammad b. ʿAbd Allāh [*q.v.*], and he was responsible for the education at court of the governor's children.

According to T̲h̲aʿlab himself, he commenced studying Arabic at the age of sixteen. Within ten years he had memorised all known books by al-Farrāʾ [*q.v.*] whom he had never personally met. T̲h̲aʿlab learned grammar from al-Farrāʾ's pupil Salama b. ʿĀṣim (d. *ca.* 240/854) and lexicography from al-Kisāʾī's pupil Muḥammad b. Ziyād al-Aʿrābī [see ibn al-aʿrābī]. T̲h̲aʿlab's pupils include al-Ak̲h̲fas̲h̲ al-Aṣg̲h̲ar [see al-ak̲h̲fas̲h̲), Ibn al-Anbārī (Abū Bakr) and G̲h̲ulām T̲h̲aʿlab [*q.vv.*]. T̲h̲aʿlab taught al-Farrāʾ's famous *K. al-Ḥudūd* in Bag̲h̲dād, where he subsequently became known as the *imām al-Kūfiyyīn* in the field of Arabic grammar and lexicography.

T̲h̲aʿlab wrote over 40 books on Ḳurʾānic studies, lexicography, and poetry, but his main contribution was to the field of grammar. Among his extant published grammatical works are *K. al-Faṣīḥ* (ed. ʿĀṭif Madkūr, Cairo 1984) on *laḥn al-ʿāmma* [*q.v.*] and *al-Amālī* or *K. al-Mad̲j̲ālis* (ed. ʿAbd al-Salām Muḥammad Hārūn, 2 vols., Cairo 1969), a collection of reports on philological discussions which provide valuable insights into the academic culture of the 3rd/9th century [see mad̲j̲lis].

As an ardent defender of Kūfan linguistic views against the Baṣrans, T̲h̲aʿlab was deeply involved in the traditional rivalry between the so-called ʿIrāḳī schools of grammar [see naḥw]. He had little affinity with Baṣran grammatical theories, but he read the *Kitāb* of Sībawayhi [*q.v.*] apparently to keep pace with al-Mubarrad, to whom he had already lost several of his most promising students (notably Abū Isḥāḳ al-Zad̲j̲d̲j̲ād̲j̲ [*q.v.*]). The apogee of the Baṣran/Kūfan dichotomy is conventionally considered to be the many disputes between T̲h̲aʿlab and al-Mubarrad. It is from these debates that the significance of T̲h̲aʿlab as a grammarian becomes manifest since, contrary to his opponent al-Mubarrad, he emphasised *samāʿ* rather than the use of *ḳiyās* and *ʿilla* [*q.vv.*] in grammatical issues (e.g. al-Zad̲j̲d̲j̲ād̲j̲ī, *Mad̲j̲ālis*, 94-7).

(Monique Bernards)

T̲H̲AʿLABA, a common old Arab proper name (more rarely T̲h̲aʿlab) and eponym of a number of subdivisions of the larger tribal divisions of ancient Arabia. Thus we have the T̲h̲aʿlaba b. ʿUḳāba of the great tribe of Bakr b. Wāʾil (Yamāma as far as Baḥrayn); the T̲h̲aʿlaba b. Saʿd b. D̲h̲ubyān of the tribe of G̲h̲aṭafān in the Nafūd region; the T̲h̲aʿlaba b. Yarbūʿ of the tribe of Tamīm; the T̲h̲aʿālib Ṭayyiʾ clans of the Ṭayyiʾ [*q.v.*]. A T̲h̲aʿlaba b. ʿAmr b. Mud̲j̲ālid is mentioned as the first phylarch of the G̲h̲assānid dynasty [see g̲h̲assān]. The "Roman Arabs of the house of T̲h̲aʿlaba" mentioned by Joshua Stylites as taking part in the wars with the Lak̲h̲mids [*q.v.*] are either of G̲h̲assānid origin (Nöldeke) or belong to the Bakrī T̲h̲aʿlaba (G. Rothstein, *Die Dynastie der Laḫmiden in al-Ḥîra*, Berlin 1899). Amongst the South Arabian tribes, we have Azdī and Kinānī T̲h̲aʿlaba. A T̲h̲aʿlaba clan of the Aws in Yat̲h̲rib and a T̲h̲aʿlaba

b. al-Fiṭyawn of the Jewish Ḳaynuḳāʿ may also be mentioned. A member of this clan, called Mukhayrīḳ, distinguished for his learning and generally hostile to the Prophet, is said to have adopted Islam and fallen at Uḥud (al-Ṭabarī, i, 1424; Ibn al-Athīr, iii, 24 ff.).

Bibliography: Ibn Durayd, *K. al-Ishtiḳāḳ*, ed. Wüstenfeld; Ṭabarī, index, s.v.; Wüstenfeld, *Geneal. Tabellen, B,* and *Register*, Ibn al-Kalbī-Caskel, i, Tafeln, no. 128, ii, Register, 547-53; I. Shahîd, *Byzantium and the Arabs in the sixth century*, i/2, Washington 1995, 832. (H.H. Bräu)

AL-**THAʿLABĪ**, AḤMAD B. MUḤAMMAD b. Ibrāhīm Abū Isḥāḳ al-Nīsābūrī, Ḳurʾān exegete and collector of stories, d. Muḥarram 427/November 1035. Al-Thaʿlabī is famous today for two works. His massive *tafsīr, al-Kashf wa 'l-bayān ʿan tafsīr al-Ḳurʾān*, remains unpublished except for the bibliographical introduction (ed. I. Goldfeld, *Quranic commentary in the Eastern Islamic tradition of the first four centuries of the hijra: an annotated edition of the preface to al-Thaʿlabī's "Kitāb al-kashf wa 'l-bayān ʿan Tafsīr al-Qurʾān"*, Acre 1984). The work raised concerns in the past for its reliability: its sources include those traditionally deemed untrustworthy within the *tafsīr* tradition (e.g. Muḳātil b. Sulaymān; Muḥammad b. al-Sāʾib al-Kalbī [*q.vv.*]), and this probably accounts for its being ignored for publication down to today. The *Maʿālim al-tanzīl* of al-Baghawī (d. 516/1122 [*q.v.*]) is said to be a condensed version of al-Thaʿlabī's work.

The second famous work by al-Thaʿlabī is his book on the stories of the prophets [see ḲIṢAṢ AL-ANBIYĀʾ], *ʿArāʾis al-madjālis fī ḳiṣaṣ al-anbiyāʾ*, which gives a taste of the character of his *tafsīr*. Printed many times (Būlāḳ 1286 probably being the earliest) and available in several inexpensive mass editions, it is a work of popular imagination designed for education and entertainment. Organised according to the historical sequence of the prophets, many of the accounts are elaborations from the same sources used by al-Ṭabarī (see the analysis in T. Nagel, *Die Qiṣaṣ al-Anbiyāʾ. Ein Beitrag zur arabischen Literaturgeschichte*, Bonn 1967, 80-102). It has become the standard source of Islamic prophet stories, alongside the work of al-Kisāʾī [*q.v.*].

Bibliography: Dhahabī, *al-Tafsīr wa 'l-mufassirūn*, ²Cairo 1967, i, 227-34; see Goldfeld's edition, 9, for other biographical sources; Nöldeke, *GdesQ*, ii, 173-4; Brockelmann, I, 350; an English tr. of *ʿArāʾis al-madjālis* is expected soon. (A. Rippin)

AL-**THAʿLABĪ** (or AL-TAGHLIBĪ), MUḤAMMAD B. AL-ḤĀRITH, little-known Arab prose writer, quite possibly of Persian descent, who wrote around the middle of the 3rd/9th century the extant mirror of princes *K. Akhlāḳ al-mulūk* [see NAṢĪḤAT AL-MULŪK] for al-Fatḥ b. Khāḳān (killed 247/861 [*q.v.*]), favourite of the caliph al-Mutawakkil.

In the existing late and undated mss. this work is wrongly attributed, if at all, to al-Djāḥiẓ [*q.v.*]. In one of the mss. it bears the false title *K. al-Tādj*; in another one it is called, still not quite correctly, *K. al-Tādj fī akhlāḳ al-mulūk*. Aḥmad Zakī Pasha, consequently, published the work in his edition under al-Djāḥiẓ's name and with the title *K. al-Tādj fī akhlāḳ al-mulūk*. At the same time, Zakī spent much effort in the introduction to his edition to prove the authorship of al-Djāḥiẓ. Several European scholars followed his arguments. However, the best experts on this great prose writer, O. Rescher, Ḥ. al-Sandūbī, and Ch. Pellat (as well as G. Richter and J. Fück) categorically denied al-Djāḥiẓ's authorship, *inter alia* because of the "decidedly Iranian worldview" ("entschieden iranischen Einstellung", Rescher, *Excerpte*, 266) of the author of *K. Akhlāḳ al-mulūk*, which is exactly the opposite of that of the anti-Shuʿūbī al-Djāḥiẓ. J. Fück (*ʿArabīya*, Berlin 1950, 72) and Ch. Pellat (*Couronne*, 14-15) had already assumed al-Thaʿlabī to be the true author of the book, since a work with the title *Akhlāḳ al-mulūk* is ascribed to an author of that name both in al-Masʿūdī's *Murūdj al-dhahab* (ed. Pellat, i, Beirut 1965, 13-14) and in Ibn al-Nadīm's *Fihrist* (ed. Flügel, i, 148); al-Masʿūdī expressly states that this book was dedicated to al-Fatḥ b. Khāḳān, and Ibn al-Nadīm establishes a connection between the author and al-Fatḥ also.

The definitive identification of the author with Muḥammad b. al-Ḥārith al-Thaʿlabī was made possible through the discovery of a later mirror for princes entitled *K. Ādāb al-mulūk* (cf. Schoeler, *Verfasser*, 223 ff.; idem, *Arabische Handschriften*, no. 159). So far, two manuscripts of this compilation have surfaced; in one of them (Berlin ms. or. oct. 2673, dated 630/1233) it is ascribed to an otherwise unknown Abu 'l-Ḥasan ʿAlī (?) b. Razīn al-Kātib (?) (cf. Schoeler, *loc. cit.*); in the other (Ankara [?], dated 847/1444) to Aḥmad b. al-Ṭayyib al-Sarakhsī (d. 286/899 [*q.v.*]), the well-known disciple of the philosopher al-Kindī (cf. Rosenthal, *From Arabic books*..., XVI, 150 ff.). This *K. Ādāb al-mulūk* is based for the most part on a *K. Akhlāḳ al-mulūk* by Muḥammad b. al-Ḥārith al-Thaʿlabī (or al-Taghlibī; the diacritics vary), a work that is mentioned as a source already in the foreword and quoted repeatedly with its author's name. Comparisons between these quotations and the corresponding passages in the printed so-called *K. al-Tādj* (cf. Schoeler, *Arabische Handschriften*, no. 159, p. 159, and pl. no. 39; Rosenthal, *loc. cit.* 109, appendix) prove unambiguously the identity of both works.

The decidedly Persian mentality of al-Thaʿlabī and his strong interest in the Persian past (F. Gabrieli, in *RSO*, xi [1926-8], 292-305, and A. Christensen, *L'Iran sous les Sasanides*, ²Copenhagen 1944, have both attempted to reconstruct from his book Sāsānid court etiquette and mores) emerge quite clearly from this work and suggest that its author was of Persian descent. By the author's own testimony in the foreword to the *K. Akhlāḳ al-mulūk* (*K. al-Tādj*, 3) we know for certain that he has written another book with the title *Akhlāḳ al-fityān wa-faḍāʾil ahl al-biṭāla* "The mores of the *fityān* [see FUTUWWA] and the virtues of the mountebanks". In addition, Ibn al-Nadīm attributes to him a collection of *Rasāʾil* and a *K. al-Rawḍa* "Book of the Garden". Otherwise nothing is known about him. He is not identical with the singer and musician Abū Djaʿfar Muḥammad b. al-Ḥārith b. Buskhunnar (or Bashkhīr) who was active under the caliphs al-Maʾmūn, al-Wāthiḳ, and al-Mutawakkil (thus a contemporary of al-Thaʿlabī) and who is the object of two short articles in the *K. al-Aghānī* of Abu 'l-Faradj al-Iṣfahānī (³xii, 48-53, xxiii, 176-80).

Bibliography: (Ps.-)Djāḥiẓ, *K. al-Tādj fī akhlāḳ al-mulūk*, ed. A. Zakī Pasha, Cairo 1322/1914, French tr. Ch. Pellat, *Le Livre de la Couronne*, Paris 1954; O. Rosenthal, *From Arabic books and manuscripts. XVI. As-Sarakhsī (?) on the appropriate behavior for kings*, in *JAOS*, cxv (1995), 105-9; G. Schoeler, *Verfasser und Titel des dem Ǧāḥiẓ zugeschriebenen sog.* K. al-Tādj, in *ZDMG*, cxxx (1980), 217-25; idem, *Arabische Handschriften* (VOHD, Bd, xvii, Reihe B, 2), Stuttgart 1990. (G. Schoeler)

AL-**THAʿLABIYYA**, a station on the Kūfa to Mecca Pilgrimage route, the so-called Darb

Zubayda [*q.v.* in Suppl.]. It lay in Nadjd in what is now the northeastern corner of Saudi Arabia, towards the ʿIrāḳī border, in approx. lat. 28° 50' N., long. 43° 20' E. some 180 km/112 miles north-north-east of Fayd [*q.v.* in Suppl.]. It is mentioned by such geographers as Ibn Khurradādhbih, Ibn Rusta, Ḳudāma and al-Muḳaddasī, and such pilgrims as Ibn Djubayr and Ibn Baṭṭūṭa passed through it. It was the birthplace of the 2nd/8th century poet Ibn Muṭayr [*q.v.*]. Today, the site of al-Thaʿlabiyya is in the shallow valley and grazing ground of Shaʿīb al-Bidʿ, and its remains include a *birka* or cistern.

Bibliography: A. Musil, *Northern Neğd*, New York 1928, 27; S.A. Al-Rashid, *Darb Zubaydah. The Pilgrim road from Kufa to Mecca*, Riyād 1980, 85-6 and *passim*, Pl. xv at 377. (Ed.)

THALLĀDJ (A.), the seller of snow or ice (*thaldj*) in the mediaeval caliphate (the *nisba* al-Thaldjī, known for a certain number of traditionists, relates to the Banū Thaldj, a branch of Kināna; see Ibn al-Kalbī-Caskel, *Ğamharat an-nasab*, i, Table 280, ii, 553; al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, iii, 144-5; for traditionists with the *nisba* of al-Thallādj, see *ibid.*, iii, 156-8). *Thaldj* is mentioned in *ḥadīth*, there being attributed to the Prophet the sayings *Allāhumma barrid ḳalbī bi 'l-thaldj* "O Lord, cool my heart with snow!" and *Allāhumma ghsil khaṭāyāya bi 'l-mā' wa 'l-thaldj wa 'l-barad* "O Lord, wash away my sins with water, snow and hail (or *bard* "coolness")!" (Wensinck, *Concordance*, i, 298-9).

Snow and ice, probably derived from the Zagros Mountains region adjacent to the plains of Mesopotamia, were commodities sold at high prices in ʿIrāḳ during the caliphate, being used medicinally as a treatment for some forms of illness and for cooling drinks. Al-Tanūkhī tells how a *thallādj* of Baghdād made his fortune by selling ice to the Ṭāhirid governor of Baghdād, ʿUbayd Allāh b. ʿAbd Allāh b. Ṭāhir (d. 300/913 [*q.v.*]), who paid 10,000 dirhams for a *raṭl* of ice for treating his ill slave girl Shādjī (see *Nishwār al-muḥāḍara*, ed. Abood Chalchy, Beirut 1391-3/1971-3, i, 125-7). According to Hilāl al-Ṣābi', the vizier Ibn al-Furāt, on his re-appointment to office in the early 4th/10th century, entertained his partisans by offering drinks made with 40,000 pounds of ice (*K. al-Wuzarā'*, ed. Amedroz as *The Historical remains*, Leiden 1904, 63). The Būyid vizier Ibn Baḳiyya [*q.v.*] was able to supply his master ʿIzz al-Dīn Bakhtiyār with 30 *raṭls* of ice, and Miskawayh records that when Ibn Baḳiyya fell from power and was arrested, 6,000 *raṭls* of ice were found in his wine store ready for a feast he was going to give to the army leaders (*The eclipse of the ʿAbbasid Caliphate*, ii, 374, tr. v, 410).

Concerning sources of supply, the mountain regions of western Persia and Kurdistan were sources for the urban centres of ʿIrāḳ, but occasionally there was bitter winter weather on the plains when hail stones or ice could be gathered (cf. mention of such weather in Ibn al-Djawzī, *Muntaẓam*, vi, 33, 118-19). Al-Samʿānī mentions that the grandfather of a certain Abu 'l-Ḳāsim al-Thallādj, ʿAbd Allāh al-Thallādj, used to gather snow for himself at Ḥulwān, but came to supply it for the Regent al-Muwaffaḳ when the latter was seeking for it (*Ansāb*, iii, 156-7). In Syria, the mountains of the western part of the province, the peaks of which retained their snow cover for virtually all the year (cf. the name Djabal al-Thaldj given to Mount Hermon), supplied snow for Syria and for export to Egypt; cf. Muḥ. Saʿīd al-Ḳāsimī, *Ḳāmūs al-ṣināʿāt al-shāmiyya/Dictionnaire des métiers damascains*, Paris-The Hague 1960, i, 72-3. On the Persian plateau, the people of Sāwa and Āba in Djibāl let water freeze in pits during the winter and then used the ice in summer (Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, tr. Le Strange, 66, 68). It must have been ice from the frozen rivers of Khwārazm in the severe winters there or snow which was used to pack the leaden containers in which the famous *bārandj* ("coloured") melons of Khwārazm were exported to the ʿIrāḳ of al-Ma'mūn and al-Wāthiḳ, each container, if it arrived safely, being valued at 700 dirhams (al-Thaʿālibī, *Laṭā'if al-maʿārif*, tr. C.E. Bosworth, *The book of curious and entertaining information*, Edinburgh 1968, 142).

Bibliography (in addition to references given in the article): Djāḥiẓ, *Ḥayawān*, ed. Hārūn, v, 67-70; Badīʿ al-Zamān al-Hamadhānī, *Maḳāmāt*, ed. Meyerhof, *The medico-philosophical controversy between Ibn Buṭlān of Baghdad and Ibn Riḍwān of Cairo*, Cairo 1937. (M.A.J. Beg)

THĀLNĒR, a town of the northwestern Deccan or South India, situated on the middle course of the Tāptī River in lat. 21° 15' N., long. 74° 58' E. (see the map in GUDJARĀT, at Vol. II, 1126).

Its fame in mediaeval Indo-Muslim history arises from its being the first capital of the Fārūḳī rulers [see FĀRŪḲIDS] of Khāndēsh [*q.v.*] before they later moved to Burhānpūr [*q.v.*]. It had been a centre of Hindu power in western India when Malik Rādjā Aḥmad chose it towards the end of the 8th/14th century. It was captured in 914/1509 by the Gudjarāt Sultan Maḥmūd Begaṛhā [*q.v.*], who installed his own candidate on the Fārūḳī throne there. In 1009/1600-1 it fell into Mughal hands and then in 1730 into those of the Marāṭhās [*q.v.*], from whom it was captured after a fierce struggle by Sir Thomas Hislop and incorporated into British India. At present, it is only a small settlement in the Jalgaon District of Maharāshtra State of the Indian Union.

Thālnēr has notable tombs of the first four Fārūḳī rulers and also their palace; see on these, HIND. vii, at Vol. III, 446b, and MAḲBARA. 5, at Vol. VI, 127b.

THAMISṬIYUS, the Arabic rendering of the Greek name Themistius (*ca.* A.D. 317-88), identified by Ibn al-Nadīm as "a scribe of Julian the Apostate", for whom he was noted as having written a book *On Administration* (*Kitāb fī 'l-Tadbīr*), together with a *Risāla* (critical ed. by C. Prato and A. Fornaro, *Epistola a Temistio/Guliano Imperatore*, Lecce 1984). He was known to the Arabs chiefly as an Aristotelian commentator, being credited with commentaries on the following works: *Categoriae; Analytica priora; Analytica posteriora; Auscultatio physica; De coelo et mundo; De generatione et corruptione; Metaphysics Lambda; Ethics; Topics; De Anima*, possibly to be identified as the *Kitāb al-Nafs* listed by Ibn al-Nadīm as one of Thamisṭiyus's own works. To these ʿA. Badawī adds a commentary on the *De Animalibus*, attributed to Themistius by its manuscript but not by the bibliographers (*Commentaires sur Aristote perdus en grec et autres épîtres*, Beirut 1986). M. Steinschneider (*Die arabischen Übersetzungen aus dem Griechischen*, repr. Graz 1960, 100) refers to a translation by Mattā b. Yūnus [*q.v.*] of the *Iʿtibār al-ḥikam*

wa-taʿakkub al-mawāḍiʿ, also assigned to Themistius. Ḥunayn b. Isḥāḳ composed a work on the *Categories* "in accordance with the doctrine of Themistius", and Ibn al-Nadīm notes a commentary on the *Poetics*, adding that its attribution to Themistius has been considered false.

For the relationship between Islam and philosophy, the most important question addressed by Themistius was that of the intellect. A.F. al-Ahwānī rejects Yūsuf Karam's view that because of his views on the *intellectus agens* and the *intellectus materialis* Themistius can claim Ibn Rushd as one of his followers, while Ibn Sīnā follows Alexander Aphrodisiensis (*Talkhīs Kitāb al-Nafs li-Abi 'l-Walīd b. Rushd*, Cairo 1950, introd. 54). The topic has been covered by F.M. Schroeder and R.B. Todd (*Two Greek Aristotelian commentators on the intellect*, Toronto 1990). In turn, it is affected by the point touched on by Bruno Colpi, where he notes the various identifications of Themistius as a philosopher, an orator, a sophist and an eparch (*Die παιδεῖα des Themistios*, Bern 1987, 13). For the Arab translators, and later for the philosophers who used their works, it must be thought that the primary importance of Themistius lay in his recasting of obscurities rather than in his development of ideas.

(M.C. Lyons)

THAMŪD, an old Arabian tribe that flourished in ancient times but had disappeared from the ethnographic map of Arabia before the rise of Islam.

References to it in the non-Arabic sources from the Assyrian inscription of Sargon II in 715 B.C. to the *Geography* of Ptolemy (A.D. 136-65) attest both its antiquity and its Ḥidjāzī location; otherwise they are not informative. But a bilingual Greek-Aramaic inscription of the 2nd century, found in Ruwāfa in the northern Ḥidjāz, indicates that the tribe had entered the Roman cultural and political orbit and had intimate connections with Rome: *inter alia*, it erected a temple for the two Augusti, Marcus Aurelius and Lucius Verus. The *Notitia dignitatum*, a 5th century Byzantine military document, lists two Thamūdī units as serving in the Byzantine army, one in Palestine and the other in Egypt. But after this, the Thamūdīs disappear from the extant sources, and so apparently does the tribe, but it is not clear exactly when and how. The Arab poets of the century before the Hidjra already knew Thamūd as a thing of the past, and so did the genealogists, who consequently relegated it to the tribal limbo that included such groups as Ṭasm [*q.v.*] and Djadīs.

A new lease of life was granted Thamūd with the rise of Islam, when the Ḳur'ān resuscitated it from oblivion and gave it prominence in 21 sūras. Since then it has continued to live in the consciousness of the Arabs and the Muslims till the present day. The Ḳur'ān provided a view of Thamūd from the Arab perspective, with many significant details. It presented Thamūd as a godless people, a group of unbelievers who consequently were visited with condign punishment; their abode was located in al-Ḥidjr [*q.v.*] in central Ḥidjāz, and the name of their Prophet was Ṣāliḥ. When they hamstrung the "camel of God," his miracle, they were overtaken by a *ṣayḥa* or *radjfa* or *ṣāʿiḳa*, ("cry", "earthquake", "thunderbolt") which destroyed them and their abode, al-Ḥidjr, the name of which was later Islamised as Madā'in Ṣāliḥ. It became an accursed spot and a place of ill-omen even during Muḥammad's lifetime, and as such, it was treated during his march against Tabūk in 9 A.H. when he forbade his soldiers to refresh themselves at its wells. The secular arm of Arabic literature was not slow to avail itself of Ṣāliḥ and Thamūd, and the two appear in mediaeval Arabic poetry in the appropriate contexts.

In modern times, the usage of Thamūd in its adjectival derivation, Thamudic [*q.v.*], has been given as an umbrella title to thousands of inscriptions found in central and northern Arabia, left behind by various tribes, but actually to connect it with the tribe of Thamūd is very hazardous [see THAMUDIC, first paragraph]. All these inscriptions are conceived in Arabic but written in a variety of the Sabaic script, a clear indication that these tribes moved in the Sabaean orbit, the dominant one in the Peninsula in ancient times, when the caravans of the latter traversed Arabia, especially along the *via odorifera*, on a segment of which one of these tribes, Thamūd, lived.

(Irfan Shahîd)

THAMUDIC, a modern misnomer applied to all those texts in Ancient North Arabian scripts which have not yet been classified more precisely as Taymanitic, Dedanitic (previously "Dedanite" and "Liḥyanite", see under LIḤYĀN), Hasaitic, Hismaic, or Ṣafaitic [*q.v.*]. It is therefore a *Restklassenbildung*, or "undetermined" category, and does not refer to a particular script or dialect. The name is purely conventional and there is no evidence that the inscriptions were in any way connected with the tribe of Thamūd [*q.v.*].

Writing was endemic in pre-Islamic Arabia, both among the sedentaries and especially among the nomads, who covered the rocks of the desert with their informal inscriptions and drawings. From possibly as early as the 8th century B.C. to at least the mid-3rd century A.D., numerous North Arabian alphabets were in use throughout the peninsula, though, at present, inscriptions are relatively rare on the Gulf coast. Texts in the various "Thamudic" scripts have been found as far north as the Syrian Ḥawrān, as far south as the Ramlat al-Sabʿatayn in central Yemen, and from western ʿIrāḳ to upper Egypt.

J.R. Wellsted (*Travels in Arabia*, London 1838, ii, 189) and T.G. Carless (*JBBRAS*, ii [1845], 273-5, pl. xxii) copied some Thamudic inscriptions on a rock near Wadjh in 1831, and G.A. Wallin transcribed a few more in Wādī 'l-ʿUwaynid, north of Tabūk, in 1848 (*J.R.Geog.S.*, xx [1850], 311-13). In 1858 J.G. Wetzstein also copied a handful of Thamudic (e.g. *Corpus Inscriptionum Semiticarum*, v, 3558-9, 3575), together with many Ṣafaitic inscriptions in southern Syria, though these remained unpublished until 1929. It was only after C.M. Doughty, C. Huber and J. Euting had recorded large numbers of Thamudic texts in northern Arabia in the 1870s and 1880s that

a partial decipherment was possible (see J. Halévy, in *Revue sémitique*, ix [1901], 316-55, and E. Littmann, *Zur Entzifferung der thamudenischen Inschriften*, Berlin 1904). A few years later, A. Jaussen and M.-R. Savignac published more reliable copies of some 760 inscriptions, again from northwest Arabia (*Mission*, i, ii). In 1936 and 1950-1, H.St.J.B. Philby copied 2,000 Thamudic texts in southern and northern Arabia, but he took no photographs and his copies are so careless that they are worse than useless. In 1951, G. and J. Ryckmans, on the Philby-Ryckmans-Lippens expedition to central and south-western Saudi Arabia, recorded 9,000 graffiti which could not be classified as South Arabian, Dedanitic, Hasaitic or Ṣafaitic and were therefore labelled "Thamudic", thus vastly increasing the range of script-types and different dialectal and onomastic features covered by this rubric (see below, "*Southern Thamudic*"). In 1952 G.L. Harding published over 500 inscriptions from southern Jordan and in the 1980s thousands more were recorded in the same area (see below, *Hismaic*).

The study of Thamudic has been characterised by two different approaches. The first, espoused by H. Grimme (*Die Lösung des Sinaischriftproblems*, Münster 1926) and A. van den Branden (e.g. in *St. Isl.*, vi [1957], 5-27), ignored the fact that the category was a modern creation and assumed that there was a single "Thamudic" script, explaining differences in letter-forms and ductus as the result of chronological, and isolated geographical, developments. However, their arguments were based on comparisons of single letter-forms extracted from undated texts known only from hand-copies of dubious accuracy, and have failed to convince. In 1950, Van den Branden published a collected edition of the 2,000 Thamudic inscriptions then known (*Les inscriptions thamoudéennes*), and in 1956 a further 2,000 copied by Philby (*Les textes thamoudéens de Philby*). However, the intractability of the material, the poor quality of most of the copies, and severe faults in the editor's methodology, mean that little reliance can be placed on the readings or interpretations in these works.

A second approach was initiated by F.V. Winnett in 1937 (Winnett, *A study*). He accepted the miscellaneous nature of the category and recognised that, before the texts could be interpreted, they had to be sorted into groups on the basis of the type of script employed, and then the values of the signs within each group established. Winnett's systematic analysis identified five such groups, to which he gave the neutral labels A, B, C, D, and E, and established the values of most of the letter-forms within each. Although numerous problems remained, Winnett's study laid the foundations for all later work on the subject.

In 1970, he revised his classification, using geographically-based names: Nadjdī (for the former Thamudic B), Ḥidjāzī (for C and D) and Tabūkī (for E) (Winnett and Reed, *Ancient records*, 69-70, and pl. 1). However, these names are misleading since none of these groups is restricted to the region after which it was named, and the former alphabetic labels have generally been retained. Subsequently, it has been possible to identify "A" and "E" as separate scripts, thus removing them from the "Thamudic" category. The remaining types, and the 9,000 texts from south-west Arabia, await more detailed analysis.

Taymanitic (formerly "Thamudic A")

Winnett's detailed (but largely unpublished) studies of his former "Thamudic A" convinced him that the features of its script and orthography were sufficiently clear for it to be removed from the "Thamudic" *Restklassenbildung*. Since virtually all the known texts in this script had been found in the vicinity of Taymā', he named it Taymanite (now "Taymanitic"). Its principal features are: the introductory particle *lm*, *b* for *ibn* in genealogies, possibly a third non-emphatic unvoiced sibilant, /s³/ (see M.C.A. Macdonald, in *JSS*, xxxvi [1991], 11-35), the use of the same letter for /dh/ and /z/, an asterisk-like sign for /th/ and the common, but not invariable, use of word-dividers. Taymanitic is probably one of the earliest of the Old North Arabian alphabets and may be referred to as "the Taymani script" in an 8th century B.C. hieroglyphic Luwian text from Carchemish (see Macdonald, *Reflections*, and references there).

Hismaic (formerly "Thamudic E" or "Tabūkī Thamudic")

G.M.H. King has shown that this is a distinct Ancient North Arabian script which can therefore be removed from the Thamudic category. Over 3,000 inscriptions of this type have been found in southern Jordan in the Ḥismā, the sand desert which stretches from Wādī Ramm into northwestern Saudi Arabia (editions by Harding (1952) and King, plus the largely unpublished collections of W.J. Jobling and D. Jacobson). Thus Hismaic is a more appropriate label than Winnett's "Tabūkī Thamudic" since, so far, only a few hundred of these texts have been found in the region of Tabūk. E.A. Knauf has also suggested calling them "South Ṣafaitic", but they are clearly distinct from Ṣafaitic and this label is misleading and should be avoided.

The most remarkable feature of the Hismaic script is the representation of the phonemes /g/ and /th/ by signs which in other South Semitic scripts have quite different values.

{ /g/ in Hismaic
{ /th/ in Thamudic B, Ṣafaitic and South Arabian

{ /th/ in Hismaic
{ /ḍ/ in Thamudic B and Ṣafaitic
{ /dh/ in South Arabian

The phoneme /ḍ/ is represented by two concentric circles in Hismaic (as occasionally in Ṣafaitic, and possibly also in Thamudic D).

In contrast to Ṣafaitic, long genealogies are rare in the texts, many of which are declarations of love, sexual braggadocio, and accounts of hunting. However, as in Ṣafaitic, other texts are "artists' signatures" referring to adjacent drawings. Most inscriptions are introduced by the particle *l* followed by the author's name, but some, particularly the "artists' signatures", begin *w* N *khṭṭ* "And N is [the] inscriber". Relatively few social groups are mentioned, most of them only once. Affiliation to a social group is introduced by the phrase *dh 'l*, as in Ṣafaitic, though there is one example of *mn 'l* as in Nabataean. No example of the *nisba* has yet been identified.

There are frequent prayers to *lt* (especially in the form *dhkrt lt* N, "may Lt be mindful of N", also found in Nabataean texts from this area), Dushara (usually in the etymologically correct form, *dhs²ry* [see DHU 'L-SHARĀ]) and *ktby*, all of whom were also worshipped by the Nabataeans in the same region. There are prayers to *lh* (also invoked in Ṣafaitic texts), who was not worshipped by the Nabataeans (at least under this name), but whose name occurs frequently in their theophoric names. A suffix particle *-m* is used with the names of the deities *lt* and *lh* at the beginning of certain prayers, suggesting a parallel with Arabic *allāhumma*.

Among the names attested in this script there are a number of "basileophoric" compounds using the

names of Nabataean rulers (e.g. *tm-ʿbdt* = Taym-ʿUbādat, *ʿbd-ḥrṯt* = ʿAbd-Ḥāriṯhat, *ʿbd-sḳlt* = Abd-Shaḳīlat), which is hardly surprising given the geographical proximity of these texts to Petra. These names are at present the only dating evidence available for these inscriptions.

Thamudic B

Texts in this category are more numerous than in any other type of Thamudic, and though the largest concentrations have so far been found in Nadjd and the area between Madāʾin Ṣāliḥ and Taymāʾ, scattered examples have been recorded in Yemen, Egypt, the Negev, Jordan and Syria. The values of most of the signs are fairly securely established, except that for /ẓ/. Names are introduced by the particles *l* and *nm* (a dialectal variant of the particle *lm* used in Taymanitic). The definite article and vocative particle are *h* (as in Ṣafaitic). The deities invoked in the inscriptions are *lh, dṯn, rḍw* (all of whom are also found in Ṣafaitic), *ʿtrs¹m*, and *nhy* (possibly a dialectal variant of *-lhy* in Nabataean theophoric names, see J. Starcky, in *Supplément au Dictionnaire de la Bible*, vii, Paris 1966, col. 985). The last three correspond to the deities *Ruldaiu, ʿAtarsamain*, and *Nuhai* in the Assyrian Annals (see J.B. Pritchard (ed.), *Ancient Near Eastern texts*, ³Princeton 1969, 291-2; and Ephʿal, *The ancient Arabs*, Leiden 1982, 118-23), whose images were carried off by the Assyrian king Sennacherib between 691 and 689 B.C., from their sanctuary at Dūma, modern al-Djawf [see DŪMAT AL-DJANDAL].

If, as seems likely, the chariot shown in a rock-drawing from the Tabūk region, with a caption in Thamudic B, represents an Assyrian or Babylonian vehicle, the inscription could date from any time between the invasions of Tiglath-Pileser III, *ca.* 733-2 B.C., to those of Nabonidus, *ca.* 552-42 B.C. (see Macdonald, *Hunting, raiding and fighting. . . .*).

Thamudic C

Relatively few texts in this script have been recorded so far, and most are known only from unreliable copies. A number of letters have not yet been satisfactorily identified, notably those for /dh/, /ṣ/, /ḍ/, /ṭ/ and /ẓ/. Furthermore, the texts which Winnett (*A study*, 34-7, pl. V), placed in this category probably represent two different scripts. In one of these (C1), mainly from Khashm Ṣanaʿ north of Madāʾin Ṣāliḥ, /r/ is represented by a straight line and /n/ by a zig-zag, while, in the other (C2), mainly found at Aṣābiʿ and Djabal Djildiyya, east of Ḥāʾil, /r/ appears to be represented by a shallow curve and /n/ by a straight line. As in Hismaic and Thamudic D, a large number of texts are declarations of love.

Thamudic D

There are still doubts about the form of /dh/, /z/, /ṣ/ and /ẓ/ in this script and about the values of the line with a circle at either end and the grid. There is some evidence that the sign of two concentric circles represents /ḍ/, at least on some occasions. The letter /s²/ is a rayed circle, which is radically different from any of the signs representing the same phoneme in the other North Arabian scripts.

Many of the inscriptions begin with a formula usually interpreted as "*zn* (or *dhn*) N" "This is N" (see the discussion in Winnett and Reed, *Ancient records*, 108). In other contexts, however, the initial sign cannot be read as /z/ or /dh/, and is almost certainly /ʾ/ (see already Littmann, *Entzifferung*, 32-4). This suggests that the formula should be read "*ʾn* N" and translated as "I am N", a type of signature also found in Thamudic B and Hismaic.

There are still considerable difficulties in the interpretation of the longer texts in this script, but some appear to be declarations of love, *mḥb* and *ʿs²ḳ* being the most common words. A Thamudic D text (JS Tham 1), written vertically beside the Arabo-Nabataean inscription JS Nab 17 (dated to A.D. 267), repeats the name and patronym of the deceased.

"Southern Thamudic"

As expected, these texts are very different from those in the north and share some features of script, morphology and onomastics with South Arabian. They are not yet published, but see the excellent survey of their content by J. Ryckmans (*Aspects nouveaux*).

(M.C.A. MACDONALD and G.M.H. KING)

THĀNĀ, a town of western peninsular India, 21 km/15 miles from the Arabian Sea coast and 32 km/20 miles to the north-north-east of Bombay (lat. 90° 14' N., long. 73° 02' E.; see the map in GUDJARĀT, at Vol. II, 1126).

Thānā was in pre-Muslim times the centre of a great Hindu kingdom, but was conquered in 718/1318 by the Sultan of Dihlī Mubārak Shāh Khaldjī. It soon afterwards became an outpost of the Bahmanid sultanate of the Deccan, but was at times disputed by the Sultans of Gudjarāt, who seized it, e.g. in 833/1430 (see HIND. iv, at Vol. III, 418b). By 1529 it was tribute to the Portuguese, then twice sacked by them until in 1533 it was made over to the Portuguese by treaty, remaining under their rule till 1739, when the colonial power also lost the nearby fort of Bassein; a fort and a cathedral remain from this period of Thānā's history. When there were fears of a Portuguese fleet setting out from Lisbon to retake their former possessions, a British force occupied Thānā in 1774. It is now the chef-lieu of a District of the same name in Maharāshtra State of the Indian Union, largely

Marāthī-speaking but with the linguistic boundary with Gudjarātī beginning just to its north.

Bibliography: *Imperial gazetteer of India*², xxiii, 289-304. (C.E. Bosworth)

THANĀ'Ī, the pen-name of Khʷādja Ḥusayn, Indo-Persian poet of the 10th/16th century, d. 996/1587-8.

Born in Mashhad, Thanā'ī, writing about himself in the introduction to his *dīwān*, states that, despite having talent, he initially lacked perseverance and that he took up the poetic vocation following a dream which offered him the requisite guidance. He eventually found for himself a generous patron in the person of Sulṭān Ibrāhīm Mīrzā, governor of Khurāsān, who was a poet in his own right using Djāhī for his pen-name. Thanā'ī's association with him lasted until 984/1577, when Ibrāhīm Mīrzā was executed by Shāh Ismā'īl II. After the death of his patron, Thanā'ī reportedly tried to enter the Ṣafawī court, but a *kaṣīda* of his was received unfavourably. Thanā'ī decided to leave Persia and go to India, where his fame was already known. Upon his arrival, therefore, he entered the ranks of poets at the court of Emperor Akbar, and received much favour, but apparently it did not satisfy his expectations as he left the imperial service to attach himself to various Mughal dignitaries, eventually to 'Abd al-Raḥīm Khān-i Khānān (d. 1036/1626-7 [*q.v.*]), with whom he remained until his death.

During his literary career, Thanā'ī entered into several literary contests and confrontations with fellow-poets, such as Mīrzā Muḥammad Ḳulī Khān Maylī, Mīrzā Muḥammad Walī Dasht Bayāḍī, Ghazālī Mashhadī, Fayḍī, and 'Urfī. It is reported by Badā'ūnī that Thanā'ī, after coming to India, lost the esteem which he enjoyed previously in intellectual circles, and fell victim to the jealousies of fellow-poets. The same source, however, also tends to suggest that the poet retained a popular appeal since, he states, copies of Thanā'ī's *dīwān*, as those of 'Urfī's, could be found in every market-place and bookshop, and were much sought after.

Thanā'ī's *dīwān*, with an estimated total of some 5,000 couplets, comprises poems in such verse-forms as *ḳaṣīda*, *ghazal*, *rubā'ī*, *ḳiṭ'a* and *mathnawī*. Though he wrote many *ghazals*, he is known essentially as a writer of *ḳaṣīdas*; these are addressed mainly to the patrons for whom he worked, but some of them are also directed at the Shī'ī Imāms. The poet displays tendencies indicating a departure from the traditional style. Possibly because of this he has been blamed by his critics for being abstruse and incomprehensible. Thus the author of *Ātashkada* states that "either no one understands the meanings of his verses or his verses have no meanings". On the other hand, the poet was praised lavishly by his admirers, among whom 'Abd al-Bāḳī Nihāwandī, who pays him the generous tribute that he invented meanings and ideas so strange and startling as one could hardly find in ancient or later poets.

(Munibur Rahman)

THANAWIYYA (a.), in Arabic heresiography, the dualists.

The word does not appear in the Ḳur'ān or in Tradition, but a *K. 'alā 'l-thanawiyya* had been written by Abu 'l-Hudhayl (d. 227/841 ?) and a *K. risālatihi fi 'l-radd 'alā 'l-thanawiyya* by al-Kindī (d. ca. 256/870), according to the *Fihrist* (ed. Tadjaddud, 204 l. 27, 318 l. 24). One finds the same word also in e.g. al-Nāshi' al-Akbar, and it became current in the 4th/10th century. However, this abstract, technical term seems to have been preceded by another one, to be found in *al-Radd 'alā aṣḥāb al-ithnayn*, the identical title for two treatises by Hishām b. al-Ḥakam (d. 179/795 ?) and Ibrāhīm al-Naẓẓām (d. 231/845 ?) respectively, as well as in the *Iḳtiṣāṣ madhāhib aṣḥāb al-ithnayn wa 'l-radd 'alayhim* of Abū 'Īsā al-Warrāḳ (according to the *Fihrist*, 224 l. 2, 206 l. 13, 216 l. 11). The expressions *ahl al-ithnayn* (e.g. in 'Abd al-Djabbār) and *ahl al-tathniya* (in al-Bāḳillānī) are also found.

These different names for the "dualists" cover several religious and sectarian groups. Three of them were at the centre of Muslim scholars' interest: (1) the Manichaeans; (2) the Bardesanites [see DAYṢĀNIYYA; KUMŪN], disciples of the Syriac thinker Bar Daysan (A.D. 154-222); and (3) the Marcionites (*marḳiyūniyya*), adherents of the celebrated Marcion, a Christian from Bithynia who lived for several years in Rome and was condemned by the Church in A.D. 144. The constant appearance of this triad has an historical origin; grouping the three doctrines together as connected with each other, already done in the 4th century by Ephrem of Edessa and the bishop Maruta of Maipherkat (see Drijvers, 106-7, 123-4; Teixidor, 70-1, 141 ff.), was traditional in Syriac writings and became introduced into Arabic by authors like Abū Ḳurra, bishop of Ḥarrān. Muslim authors usually present the three groups in the order as given above, but many of them knew that this was not the chronological order.

However, other religions or sectarian movements became added to the above ones. A good example is the following passage "In his *K. al-Ārā' wa 'l-diyānāt*..., al-Ḥasan b. Mūsā mentions, amongst the sects of the dualists, the Manichaeans (*mānawiyya*), sometimes called *manāniyya*, the Mazdakites, the Bardesanites, the Marcionites, the Māhānians and also the Mazdaeans" ('Abd al-Djabbār, *Mughnī*, v. 9). Al-Ḥasan al-Nawbakhtī (d. at the beginning of the 4th/10th century) depends on Abū 'Īsā al-Warrāḳ (d. 247/861 ?) so closely that we certainly have there one of the oldest Muslim lists of the dualists.

The Mazdaeans or Zoroastrians [see MADJŪS] are explicitly included there, as they were to be by al-Māturīdī and al-Khʷārazmī; but most authors, often hesitatingly, class them separately. The character of Mazdaeism as a national religion in the former Sāsānid

empire must have determined this special treatment. Possibly account was also taken progressively of the monotheistic aspects of Mazdaean doctrine, at least in the form in which these were expressed in the great works written down in the post-Islamic period.

The Mazdakites [see MAZDAK] are considered by al-Nawbakhtī as related to the Manichaeans, whence their place in the list. Likewise, the Māhānians (*māhāniyya*) follow the Marcionites because they seem to be a special sect of the latter. Other Islamic authors mention some additional groups as dualist, the most notable being the Kantaeans (*kantawiyya*), a Mandaean sect, on which see the article of Madelung cited in the *Bibl.*, 221-4.

Amongst these dualist doctrines, Manichaeism has premier place in all respects, hence will be further considered here.

Mani, son of Pattēg, was born in A.D. 216 in the northern part of Babylonia, near Ctesiphon, and probably died in 277 [see MĀNĪ B. FATTIK]. In 240 he abandoned the Elkesaite sect of "baptisers" and devoted himself to spreading his message of hope: travels in India and Persia, the writing of nine works (the seven main ones in Syriac) and the organising of the "Church of Light". In the course of a history extending over a millennium, Manichaeism was to extend from the western limits of the Mediterranean to the island of Formosa. It has been possible to say of it that "this oecumenical (i.e. universal) religion, a missionary one by right and in fact, is in the end—and this is the third characteristic aspect of it—a religion of the Book" (H.-Ch. Puech, *Le manichéisme. Son fondateur, sa doctrine*, Paris 1949, 66).

In the course of its own expansion, Islam was to encounter Manichaeism early. The latter faith may possibly have left some traces amongst the Arabs of al-Ḥīra [*q.v.*] (having been implanted there during the reign of ʿAmr b. ʿAdī). At all events, it had not disappeared from nearby Mesopotamia nor from Khurāsān. It was in ʿIrāḳ, the heart of the ʿAbbāsid empire, that it was finally to awaken the attention of the Muslims.

The first written notice of it apparently goes back to 110/728, if it is true that Wāṣil b. ʿAṭāʾ had already finished, towards the age of thirty, his book *al-Alf masʾala fi ʾl-radd ʿalā ʾl-mānawiyya* (or, according to another source, *al-manāniyya*). In the 3rd/9th century, three works were likewise explicitly concerned with refuting the Manichaeans, but some fifteen or so were likewise aimed at them, under the generic term of the Dualists (of which they were the major part) or else under the ambiguous title of Zanādiḳa [see ZINDĪḲ]. In these early times, the Manichaeans' name took three differing forms. *Mānawiyya* has remained the usual one up to the present day. *Manāniyya* is, in form, placed at the side of the *Ḥarrāniyya*, "Ḥarrānians", by al-Khʷārazmī, *Mafātīḥ*, 37. These two words are sometimes used indistinguishably in the same work, e.g. in the *Tawḥīd al-Mufaḍḍal* attributed to Djaʿfar al-Ṣādiḳ (see Monnot 1974, 290-1) or in ʿAbd al-Djabbār's *Mughnī*. The term *māniyya* is found in al-Djāḥiẓ, *Ḥayawān*, Cairo 1356-66/1937-47, iv, 81, and al-Masʿūdī, *Murūdj*, §§ 211, 3447, *inter alios*.

Some of the authors just mentioned belong to the 4th/10th century. There are preserved for us Muslim writings or compilations from this time onwards which give a precise and at times detailed description of Manichaeism. Four names stand out here: the systematic expositions of ʿAbd al-Djabbār, of Ibn al-Nadīm above all, and of al-Shahrastānī, which are completed by the pieces of information, to the point and of great interest, given by al-Bīrūnī.

The greater part of these texts were already utilised in the 19th century by such scholars as G. Flügel and K. Kessler. The great Islamic authors did, in fact, have a remarkable knowledge of Manichaeism. Ibn al-Nadīm gives a long account of its founder's life which the Manichaean codex of Cologne, a Greek text discovered in Egypt several decades ago, was to confirm. Ibn al-Nadīm again and al-Bīrūnī remain basic sources concerning Mani's works, their titles and contents (with citations). The Muslim authors give a careful exposition of Manichaeism's central doctrine, sc. the eternal existence of two opposing principles; al-Shahrastānī, in a celebrated table with two columns, outlines their antithetical properties. The mixture of light and darkness, and then the salvation of the luminous particles and the role played in this by the "column of glory" are described according to the corresponding myths. The organisation of the Manichaean church is only rapidly alluded to, but the ritual of its prayers and its moral code are set down. Concerning the prophetic system, ʿAbd al-Djabbār, in particular, throws a vivid light. The divisions, schisms and sequels of Manichaeism are set forth by various authors, notably Ibn al-Nadīm. In sum, these presentations of the faith are on a level with those of the Syriac authors or of St. Augustine, and form one of the most successful episodes of Muslim history of religions.

In fact, this last developed out of preoccupations completely pragmatic in origin. As we have seen, the first writings on the dualists were refutations. The great works of dialectical theology continued this polemic, but this fight did not always have the same character.

At the outset, the struggle against dualism was indissolubly linked with the repression of *zandaḳa*. The subject will be treated in ZINDĪḲ, but one may note there that the Arabic word comes from a Middle Persian term which already had, along with the meaning of "heretic" in a broad sense, the very precise one of "Manichaean". The Arabic word retained this ambivalence. At times it clearly denotes Mani's disciples, but sometimes it betrays a much more fuzzy dualist tendency, in sum, all types of strongly deviant thought felt as subversive of the Islamic order. The *zindīḳs* are reported to have spread their pamphlets even as far as the caliphal capital. In 163/779 al-Mahdī unleashed against them a persecution which continued till the death of his successor al-Hādī in 170/786. According to al-Masʿūdī, *Murūdj*, § 3447, the former caliph is said to have commissioned disputants and controversialists (*djadaliyyūn*) to carry on a parallel campaign by means of the pen. The most celebrated work of this genre is *al-Intiṣār* written a century later by al-Khayyāṭ against Ibn al-Rāwandī.

In parallel with this general fight against the *zindīḳs*, Muslim authors early applied themselves to the detailed refutation of dualism proper. In what has come down to us of the relevant writings, the doctrines of the Bardesanites and the Marcionites are sometimes treated separately. It is, however, Manichaeism which is at the centre of this polemic, and it is this which is attacked almost continuously, even when not explicitly named. The dialectical struggle with the dualists was launched by the Muʿtazila, and these and others carried it on energetically for three centuries. But incontestably, the most developed and most trenchant refutation is that of ʿAbd al-Djabbār.

He never cites the Ḳurʾān. Only isolated and late authors saw a condemnation of the dualists in VI, 1, "Praise to God who has created the heavens and the earth, and established the darknesses and the light,

after which the unbelievers ascribe equals to their Lord!". Sūra XVI, 51, would appear more relevant: "God has said, Do not take for yourselves two gods. He, God, is a unique god; to Me, then, show reverence and fear!", but the commentators are content to see here merely a condemnation of *shirk* (al-Rāzī specifies, in the abstract, of duality, *ithnayniyya*) without any allusion to the dualists. Another passage contains an idea which polemics were later to bring forward, that is, the existence of a supplementary god at the side of God would lead to a competition between them. This is in XXIII, 91, "God has not taken for Himself any offspring, and there is no other god alongside Him; for in that case, each god would have gone off with what he had created, and each one would have tried to dominate the other". But, in fact, it was elsewhere, namely, in connection with XXI, 22, "If there were any other gods in the heavens or on the earth except God, the heavens and the earth would collapse into ruin...", that Muslim exegesis set forth the argument of mutual prevention (*tamānu'*): if there were two gods, each one would prevent the other from realising his will, to the point that neither of the two would have the all-powerfulness without which there is no divinity. Al-Rāzī, in his *Tafsīr al-kabīr*, Cairo 1352/1933, repr. Tehran n.d., xxii, 150-4, gives several variations on this argument, in which he discerns a *hudjdja tāmma fī mas'alat al-tawḥīd* (151).

This *tawḥīd*, the doctrine of the One, is the foundation-stone of Muslim theology. The *mutakallimūn* also fought bitterly against the dualist cosmogony of their adversaries. They made the attack above all from three viewpoints. First, the argument of *tamānu'* just mentioned. Then they asserted that the transcosmic light and darkness of Manichaeism were only bodies ('Abd al-Djabbār) or accidents (al-Bāḳillānī). And finally, they exploited in all senses the contradictions inherent in the theory of the three moments (separation, mixing and return to the separation of the two principles).

The refutation equally attacked what one might call "ontological dualism", sc. the cleaving of the universe into two opposing series of realities, good and bad by nature. The Mu'tazilī scholars of the 3rd/9th century already had ready in regard to this a complete arsenal of arguments, which later *'ilm al-kalām* was to preserve: the ambivalence of the night (whose darkness may be beneficial), arguments of avowal, forgetfulness and repentance, and much more. All this shows that the same substance can successively receive opposing accidents, and that the same subject can successively set up contrary actions. These last actually emanate from one and the same agent, "the living ensemble" (*al-djumla al-ḥayya*). 'Abd al-Djabbār, who upholds this formula, goes much further. He does not limit himself to uphold in this way, after the unity of God, the unity of man. He realises that the problem of evil is at the root of the debate, and intends to prove that physical evil (and especially, pain) must be dissociated from moral evil. Finally, he adds insistently that ontological dualism will make praise and blame (*al-dhamm wa 'l-ḥamd*) linked to the observance or breaking of the commandments. In the end, one comes back to the fight against *zandaḳa*. Just as the Muslim authors defended the conception of God, the ultimate guarantee of the Prophetic revelation, they defended the idea of the Law, the imminently binding force of the Community, in order to protect this last against the erosion of dualism.

THĀNESAR, THĀNESWAR (meaning "place of the god"), a town of northern India, especially notable in accounts of the raids of the Ghaznawids and Ghūrids [*q.vv.*]. It is situated in the eastern Pandjāb on the banks of the Saraswati River, some 32 km/20 miles north of Karnāl, in the direction of Ambāla (lat. 29° 59' N., long. 76° 50' E.). In the mediaeval Islamic sources (e.g. al-'Utbī, Gardīzī), the name usually appears as Tānīsar or Tānīshar.

Mentioned by the Chinese Buddhist pilgrim Hiuen-Tsang, it was famed for its Hindu shrine, with a bronze idol Čakraswāmi "lord of the wheel", hence was the object of a plunder raid in 405/1014-15 by Maḥmūd of Ghazna [*q.v.*], in the course of which a Hindu army was defeated on the banks of the Sutlej River, Thānesar sacked and the idol carried off. Al-Bīrūnī says that, in his time, the idol was on public

display in the *maydān* of Ghazna together with the *lingam* of Mahādēva brought from Somnath (see his *India*, tr. E. Sachau, London 1910, i, 117, and for the details of the raid, M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 103-4). But no lasting Ghaznawid control was established there, for in 435/1043-4, a confederation of Hindu rulers, including the Paramāra king of Mālwā, Bhoja, recaptured Thānesar, Hānsī, Nagarkot, etc. from Mawdūd's governor (Bosworth, *The later Ghaznavids, splendour and decay*, Edinburgh 1977, 32-3). It must have remained under Hindu control till the end of the 6th/12th century, when in 588/1192) the Ghūrid sultan Muʿizz al-Dīn Muḥammad [see MUḤAMMAD B. SĀM] defeated Prithvī Rādjā III at the second battle of Tarain or Tarāwari near Thānesar (see R.C. Majumdar (ed.), *The history and culture of the Indian people, V. The struggle for empire*, Bombay 1957, 110-15), after which the Ghūrids and their commanders and then the Sultans of Dihlī brought it within their territories. Even thereafter, the shrine remained, such was its sanctity; the Dihlī Sultan Sikandar Lōdī planned to despoil it, and Awrangzīb desecrated the shrine. Thānesar also has the most impressive *madrasa* surviving from Mughal times, that of Shaykh Čille (see Subhash Parihar, *A little-known Mughal college in India. The Madrasa of Shaykh Chille at Thanesar*, in *Muqarnas*, iv [1992], 175-85). Thānesar later passed under Sikh control and then, in 1850, into British hands.

The modern town is now called, after the ancient name for its district, Kurukshetra, and is in the Karnāl District of Haryana State of the Indian Union.

Bibliography: In addition to references in the article, see *Imperial gazeteer of India*[2], xxiii, 305.

(C.E. BOSWORTH)

THĀNESARĪ, the *nisba* of three Indo-Muslim scholars connected with the town of Thānesar [*q.v.*] in the eastern Pandjāb.

1. MAWLĀNĀ AḤMAD, one of the many disciples of the Čishtī saint Naṣīr al-Dīn Maḥmūd b. Yaḥyā, called Čirāgh-i Dihlī (d. 757/1356 [*q.v.*]), achieved a reputation for piety and learning, and wrote a celebrated *Ḳaṣīda dāliyya*. He is said to have engaged in a dispute with a descendant of the great Ḥanafī legal scholar ʿAlī b. Abī Bakr al-Marghīnānī [*q.v.*] before Tīmūr when the latter was in Dihlī, but to have subsequently retired to teach at Kālpī [*q.v.*], where he died in 820/1412.

Bibliography: See that to *EI*[1] art. s.v. (M. Hidayet Hosain). (ED.)

2. DJALĀL AL-DĪN MUḤAMMAD B. MAḤMŪD (d. at Thānesar 989/1582), eminent scholar of the Islamic sciences and a major figure in the Ṣābiriyya branch of the Čishtiyya and the chief disciple and *khalīfa* of the holy man ʿAbd al-Ḳuddūs Gangōhī (d. 944/1537 [*q.v.* in Suppl.]). His family had moved to Balkh from India; his biographers mention his descent from the second caliph ʿUmar and a spiritual affiliation to the Čishtī saint Farīd al-Dīn Gandj-i Shakar [*q.v.*].

The Mughal emperor Akbar visited Djalāl al-Dīn whilst on his way to quell the revolt in Kābul of his half-brother Muḥammad Ḥakīm. Djalāl al-Dīn also met and was praised by the historian Badāʾūnī [*q.v.*], but his great connection was with Gangōhī, and 18 out of 54 letters in the Shaykh's collection *Muntakhab-i maktūbāt-i ḳuddūsiyya* (Dihlī 1313/1895) are addressed to Djalāl al-Dīn, in some of which he addressed Thānesarī as *shaykh al-islām* and *ahl al-kamāl*. The legacy of Djalāl al-Dīn was carried on through a succession of his *khalīfas*, several of whom played a prominent role in events in 19th and 20th century India, including Muḥammad Ḳāsim Nānōtawī (d. 1880) and Rashīd Aḥmad Gangōhī (d. 1905), who were founders of the *Dār al-ʿUlūm* at Deoband (in 1867), and their successors (Iʿdjāz al-Ḥaḳḳ Ḳuddūsī, *Shaykh ʿAbd al-Ḳuddūs Gangōhī awr unkī taʿlīmāt* [a basic work], Karachi 1961, 540-73). Djalāl al-Dīn's works include his *Maktūbāt*; a mystical treatise, *Irshād al-ṭālibīn*; and *Taḥaḳḳuḳ arāḍī 'l-Hind*, in which he defended the ownership rights of Muslim settlers on land granted to them by the state (ed. and Urdu tr. S.S.A. Nadwī, Karachi 1963) (*ibid.*, 539; Storey, i, 17, 1198; Storey-Bregel, i, 141).

Bibliography (in addition to works mentioned in the article): Badāʾūnī, *Muntakhab al-tawārīkh*, Eng. tr. T.W. Haig, iii, Calcutta 1899-1925; ʿAbd al-Ḥaḳḳ Dihlawī, *Akhbār al-akhyār*, Dihlī 1891; Dārā Shukūh, *Safīnat al-awliyāʾ*, Āgra 1853; Ghulām Sarwar, *Khazīnat al-asfiyāʾ*, i, Kānpur 1902; Raḥmān ʿAlī, *Tadhkira-yi ʿulamāʾ-i Hind*, Urdu tr. Karachi 1961; Kh. A. Niẓāmī, *Tārīkh-i mashāyikh-i Čisht*, i, Dihlī 1980.

(SAJIDA S. ALVI)

3. NIẒĀM AL-DĪN B. ʿABD AL-SHAKŪR, the nephew, son-in-law and *khalīfa* of 2. above. He incurred Djahāngīr's displeasure through his contacts with the emperor's rebellious son Sulṭān Khusraw, hence had to leave India for Balkh, where he settled and died in 1035/1626 or the next year. He wrote a commentary on the *Fātiḥa* and the last two *ḥizb*s of the Ḳurʾān, probably called the *Riyāḍ al-ḳuds*, and his *Malfūẓāt* [*q.v.* in Suppl.] are also extant.

Bibliography: Storey, i, 18; Storey-Bregel, i, 144.

(ED.)

THAʾR (A.), blood revenge. The present entry deals with the practice as it has existed among Arab villagers and Bedouin in modern times; for the practice in pre-modern times, see ḲIṢĀṢ. In these societies, if Killer kills Victim, then it is in many circumstances legal for a member of the group to which Victim belongs, or under whose protection Victim stands, to kill a member of Killer's group (and in particular, Killer himself). The effect of such retaliation will usually be to wipe out any claims that Victim's group had on Killer's group as a result of the original homicide.

The groups involved (vengeance groups) consist only of men (women and children being generally under the protection of the group to which their closest adult male agnates belong), and they function in essentially the same way with respect both to homicides and to bodily injuries. Such groups will almost always include the closest adult male agnates of killer and victim. There is a great deal of variability as to who else belongs to the vengeance group, and generally the sources provide few details. But we know, for instance, that among the Bedouin of Cyrenaica and the Western Desert of Egypt the vengeance group (called the *ʿamār al-dam*) may number from several score to several hundred men (Safia Mohsen, *Quest for order among Awlad Ali*, diss. Michigan State University 1970, unpubl., 43-4; Peters 60, 87). The vengeance group in this area may sometimes consist of all and only the adult male descendants in male line of a single male ancestor; but in other cases it may include the men of several patrilineal descent groups, some of which are agnatically unrelated to others, or some of whose members have adult male relatives outside the vengeance group who are closer to them agnatically than some of the men who are in it. The *ʿamār*, like most vengeance groups, also functions as a blood-money group, and has explicit rules regulating such matters as the distribution among its members of blood-money received (whether for homicide or for bodily injury) and the circumstances under which

members are to contribute to blood-money payments [see DIYA]. Among the Aḥaywāt Bedouin of central Sinai and their neighbours, essentially the same system obtains, but here the vengeance and blood-money group is called a *damawiyya* or *khamsih*, and is much smaller, averaging perhaps as few as five or ten members.

The composition of the vengeance group does not only vary from one community to another; it often also varies in the same community according to the relationship between killer and victim, or between their respective groups. As a rule of thumb, it may be said that the greater the social distance between the two, the larger the vengeance groups are likely to be (cf. Peters, 59-83). Thus the Aḥaywāt follow the rule that if a man from one tribe kills a man from another, then, all else being equal, any man of the killer's tribe is a legitimate object of vengeance (cf. J.L. Burckhardt, *Notes on the Bedouins and Wahábys*, London 1831, i, 320-1); though the Aḥaywāt also have (oral) treaties with certain neighbouring tribes which provide that between the parties an inter-tribal killing is treated as if it were intra-tribal, i.e., the only groups involved are the *damawiyya*s of killer and victim.

Arab customary law usually recognises circumstances in which a retaliatory killing is not permitted (so that if it does take place, the original victim's group will be liable to the original killer's group). Among certain tribes of Transjordan, for instance, this is the case if the victim is killed while sexually interfering with the mother or sister of the killer (Musil, *Arabia Petraea*, Vienna 1908, iii, 359); and a similar rule probably exists on the Middle Euphrates (Farīḳ al-Muzhir Āl Firʿawn, *al-Ḳaḍāʾ al-ʿashāʾirī*, Baghdad 1941, 24-5).

The law also recognises circumstances in which, even if the victim's group kills a member of the killer's group in retaliation, this will not clear the killer's group of all liability arising from the original homicide. Among the Bedouin of central Sinai, for instance, a woman's life is valued at four times as much as a man's life (at least if she is killed by a man); so that if the victim's group were to kill a man of her killer's group, this would still not settle the account.

The law is such that most homicide disputes could, in principle, be settled by blood revenge; and the desire to take revenge on one side, and the fear of such revenge on the other, are often very real; but probably in most communities only a small minority of cases actually are settled in this way. This has been remarked, for instance, of the ʿAnaza (Burckhardt, *op. cit.*, 152), of the tribes of Northern Yemen (P. Dresch, *Tribes, government, and history in Yemen*, Oxford 1989, 49) and of the tribes of southern ʿIrāḳ (Muṣṭafā Muḥammad Ḥasanayn, *Niẓām al-masʾūliyya ʿind al-ʿashāʾir al-ʿirāḳiyya al-muʿāṣira*, Cairo 1967, 198; H.R.P. Dickson, *The Arab of the desert*², London 1951, 528; Dickson claims that it is otherwise "in the desert and in Najd proper"). It is supported by the most detailed study to date of homicide among the Bedouin: out of 36 cases that occurred between 1910 and 1963, and in which either killer or victim or both were Bedouin of the Faḍl tribe, only four killers were substantially motivated by the desire to avenge an earlier homicide (all four earlier homicides being included among the 36); but at least two of the four revenge homicides were illegitimate, in that there had earlier been a settlement of the original killing (Fadl al-Faour, *Social structure of a Bedouin tribe in the Syria-Lebanon region*, diss., University of London 1968, unpubl., Table XXI and 242, 325 n. 96, 360). Occasionally the reason why revenge is not taken is that the victim's group has no inclination to seek it (for instance, if the killing was clearly an unhappy accident); more often because the killer's vengeance group succeeds in fleeing. Above all, *thaʾr* is uncommon because law and custom, while ready in the proper circumstances to countenance blood revenge, do not generally encourage it, and instead offer a variety of institutions whose effect is to produce a peaceful settlement. Among these may be mentioned blood-money, asylum, various devices which allow some members of the killer's vengeance group to gain immunity from retaliation, and mediators.

Bibliography: F.H. Stewart, *Tribal law in the Arab world: a review of the literature*, in *IJMES*, xix (1987), 473-90, lists most of the earlier literature. For Yemeni customary law, see ṬĀGHŪT. Recent publications on regions other than the Yemen include Aḥmad ʿUwaydī al-ʿAbbādī, *Djarāʾim al-djināyāt al-kubrā ʿind al-ʿashāʾir al-urdunniyya*, ʿAmmān 1986; idem, *al-Ḳaḍāʾ ʿind al-ʿashāʾir al-urdunniyya*, ʿAmmān 1988; Shabetai Levi, *Ha-Beduim be-midbar Sinai* ("The Bedouin of the Sinai Desert"), Jerusalem 1987; Stewart, *Texts in Sinai Bedouin law*, 2 vols., Wiesbaden 1988-90; Kamāl al-Ḥulw, ʿAbd Allāh al-Ḥulw and Saʿīd Mumtāz Darwīsh, *al-Ḳaḍāʾ al-ʿurfī fī shamāl Sīnāʾ*, n.p. 1989; idem, *Customary law in North Sinai*, n.p. 1989; Sulayman N. Khalaf, *Settlement of violence in Bedouin society*, in *Ethnology*, xxix (1990), 225-42; Muḥammad Ḥasan Abū Ḥammād Ghayth, *Ḳaḍāʾ al-ʿashāʾir fī ḍawʾ al-sharʿ al-islāmī*, Jerusalem 1990; Muḥammad ʿAdnān al-Bakhīt, Amīn al-Ḳudāt and Aḥmad al-ʿAwāyisha (eds.), *al-ʿUrf al-ʿashāʾirī bayn al-sharīʿa wa ʾl-ḳānūn*, ʿAmmān 1990; E.L. ṮHAṬṬĀ, in Persian orthography *T.t.h*, conventionally Thatta or Tatta, a town of lower Sind, situated by the Indus some 100 km/60 miles from its debouchment into the Indian Ocean and about the same distance to the east of Karachi (lat. 24° 44' N., long. 67° 58' E.). In mediaeval Islamic times, it was a city of considerable political and commercial significance, but is now a small town, the chef-lieu of a district of that name in the Haydarābād Division of Sind in Pākistān.

1. History.

The actual name seems to have the general connotation of a settlement on the bank of a river. Ṯhaṭṭā's rise and decline has been linked with its position vis-à-vis the lower Indus channels, being most important when it was near to the river, as in the time of the Dihlī Sultanate [*q.v.*], when a channel of the Indus apparently separated it from the Maklī hill [*q.v.*]; its site clearly moved several times. Ibn Baṭṭūṭa does not mention it in his account of his sailing down the Indus (734/1333-4), but it seems to have existed by then, on the evidence of its mention by the poet Amīr Khusraw Dihlawī [*q.v.*]; it was near Ṯhaṭṭā that Muḥammad b. Tughluḳ [*q.v.*] died in 752/1351. After the mid-8th/14th century, it was ruled by the independent Djāms of the Sammā dynasty [*q.v.*]; in 926/1520 it was annexed by the Arghūns [*q.v.* and ḤUSAYN SHĀH ARGHŪN] and ruled by them and their epigoni

the Tarkhāns. In 1555 it was sacked by the Portuguese. The great commander, the Khān-i Khānān [*q.v.*] ʿAbd al-Raḥīm, seized it for the Mughals in 1003/1595, and from 1021-1150/1612-1737 it came within the *ṣūba* of Multān in the Mughal empire, with a succession of 58 governors during this period.

At this time, Thaṭṭā was highly flourishing, and in the middle decades of the 17th century, the English East India Company had a factory there. Capt. Alexander Hamilton in 1699 described it as the emporium of Sind, and as being two miles from the Indus and linked to it by a network of canals. But plague and drought later caused a decline, especially as the Kalhōra chiefs and then the Tālpūr Mīrs, who controlled Lower Sind after the Mughals, moved their capital elsewhere [see SIND. 1.], although from 1772 to 1775 the East India Company once more had briefly a factory there, with a further attempt in 1799. In 1155/1742 Nādir Shāh was there with his army. In 1831 Alexander Burnes estimated its population at only 5,000, with less than 40 merchants there. The present town is on the mound of the old city, with streets higher than the floor level of the older mosques of the city.

THAWBĀN B. **IBRĀHĪM** [see DHU 'L-NŪN, ABU 'L-FAYḌ].

AL-**THAWR** [see MINṬAḲAT AL-BURŪDJ].

THAWRA (A.), uprising, revolt, or revolution, from the root *th-w-r* "to rise/arise" or "to stir/be stirred up" (Turkish *inkilap*; Persian *inḳilāb*). In the 20th century, *thawra* has come to imply a praiseworthy venture, a quest for political liberation and socio-economic justice. In earlier times, however, the term and the notion it expresses went through certain vicissitudes of import.

Revolt against a ruling authority, known in Islamic political experience from the outset, was at first regarded with ambivalence. It was condemned—often, though not always, by those in power and their supporters—as a potential source of dangerous schism and disorder, *fitna* [*q.v.*]. It was also commended, as a legitimate and even essential means to remove a sinful ruler, who should not be obeyed by the believers. This last principle was quoted e.g. by the ʿAbbāsids in justification of their forceful seizure of power from the allegedly irreligious Umayyads. But the lack of a prescribed and recognised procedure for replacing evil-doing rulers, and the instability that often followed such violent transfers of power, led to the subsequent abandonment of this principle. As anarchy proved to be the worst of all political options, the duty to resist bad government gradually gave way to a more quietist acceptance of any authority provided it was Islamic. Sunnī jurists and thinkers of the late ʿAbbāsid period (notably al-Māwardī [*q.v.*] in the 5th/11th century, and others) echoed this change of concept by prescribing that effective rule was vital to the community's proper functioning and that popular obedience was vital to assuring such effectiveness. This view seems to have prevailed in Muslim political thinking until the 20th century. And while violent rivalries for power and revolts against those wielding it did occur in Islamic states, as often as elsewhere, they were widely regarded with distinct disfavour, as being perilous to the community and the faith.

The view that revolt and rebellion were evil was reflected in reactions by Arab writers to revolutionary events in the West, of which they became aware from the late 18th century onwards. Thus early Arab reaction to the French revolution was outright condemnatory. The Egyptian historian al-Djabartī [*q.v.*] noted with disdain how the French, who "rebelled against their *sulṭān* and killed him", thereby became a people with "no religious faith (*dīn*), comprising no religious community (*milla*)" (*Taʾrīkh muddat al-faransīs bi-Miṣr*, ed. S. Moreh, Leiden 1975, 11; idem, *Maẓhar al-taḳdīs*, Cairo 1969, 22). His compatriots ʿAbd Allāh Abu 'l-Suʿūd and Ḥasan Ḳāsim, both of whom wrote accounts of the French Revolution in the 1840s, vehemently condemned it as a calamitous assault by the bloodthirsty riffraff on the legitimate monarch (ʿAbd Allāh Abu 'l-Suʿūd, *Naẓm al-laʾālī*, Būlāḳ 1841, 182-96; Ḥasan Ḳāsim, *Taʾrīkh mulūk faransā*, Būlāḳ 1847, 223-70, *passim*). In Arabic writings until the last quarter of the 19th century, the French Revolution was frequently referred to as *al-fitna al-faransāwiyya*. Other anti-government outbursts in Europe and elsewhere—from the 1830-1 revolutionary wave in France and Belgium, through the Italian War of Independence and the 1857-8 Indian Mutiny, to the Irish anti-British protest action of 1881—were decried in similar terms. In Arabic accounts of these events, derogatory terms such as *ʿiṣyān* (disobedience), *shaghab* (disturbance), *fasād* (disorder) and *shiḳāḳ* (trouble), in addition to *fitna*, were used regularly.

Thawra and verbs derived from the same root, seldom occurring in such contexts prior to the mid-19th century, became more popular thereafter. Like its counterparts, *thawra* had traditionally carried unfavourable associations and its use thus reflected an unmistakably negative attitude. "This [word] *thawra*", one Lebanese writer suggested in 1879 in a discussion of the French Revolution, implied "the disturbances (*iḍṭirābāt*) that took place in the year 1792 among the people, their killing of their king Louis XVI ... his wife and sister ... and their staining the glory of their great civilisation by this beastly cruelty and their notorious atrocities (*fawāḥish*), vices (*radhāʾil*) and terrible *fitna*" (Nawfal al-Ṭarābulusī, *Zubdat al-ṣaḥāʾif*, Beirut 1879, 428). A contemporary multivolume encyclopaedia, al-Bustānī's *Dāʾirat al-maʿārif*, offered this definition for the term: "A *thawra* in political jargon is what the Arabs call *fitna*. It means a big change and a serious unrest ... [leading to] conspiracy, then to disturbances; finally .... the foundations of government are shaken, much blood is shed, and complete upheaval prevails" (vi, Beirut 1882, 337-8). As late as 1908, Rashīd Riḍā, congratulating the Young Turks on their ascent to power, praised them for reinstating the constitution "without bloodshed and without involving the country in the anarchy (*fawḍā*) of a *thawra*, nor in anything similarly distasteful and repugnant" (*al-Manār* [July 1908], 68).

During the last third of the 19th century, a few open-minded writers in Egypt, Lebanon and the Ottoman capital began to express a more favourable view of revolution, especially as associated with another increasingly popular idea, the quest for political freedom (*ḥurriyya* [*q.v.*]). Adīb Isḥāḳ [*q.v.*], e.g., writing in Cairo, hailed "the French *thawra*" which "shook the foundations of despotism and ... split the liver of oppression with the arrow of light and truth" (*al-Durar*, Cairo 1909, 103, 159). According to another con-

temporary account, "the remarkable *thawra* of 1789" led the French to "the peak of learning, science and civilisation" (*al-Djanna*, Beirut [19 May 1871]). Such acclamatory use of *thawra*, though made by just a handful of writers, gradually lent some balance to the term, which thus acquired a complimentary sense along with (not yet instead of) its derogatory implications. Its broadening range of reference rendered it applicable to all revolts and revolutions including, eventually, one's own.

Yet what made *thawra* an attractive notion was its association not with civic and political freedom but with another idea, clearer and easier to appreciate: the struggle against alien domination. It was used in this sense already in the 1880s, to describe Aḥmad ʿUrābī's [*q.v.*] revolt in Egypt and that of the Mahdī [see AL-MAHDIYYA] in the Sudan, but it became widely popular only after World War I, as applied to the protest movements that arose in countries of the Middle East against the foreign tutelage imposed on them, as well as against Zionist settlement in Palestine. In such contexts, *thawra* acquired the meaning of a wrathful outburst against the community's oppressor, i.e. a quest not for individual but for national liberation. The revolts in Egypt (1919), ʿIrāḳ (1920) and Syria (1925-7) were all thus described. *Thawra* remained a political battle cry, even after formal independence had been achieved in much of the region, resounding especially in slogans of nationalist movements still striving for self determination.

Once the battle for national liberation was won, and popular attention in the Arabic-speaking countries shifted to domestic affairs, the revolutionary idea was expanded further still. Leaders of military *coups d'état* that recurred throughout much of the Middle East from the late 1940s onwards purported to introduce a new brand of change which they termed *thawra*—a total transformation of the old order that would eliminate political corruption and weakness, remedy socio-economic ills and restore national glory. Thus the officers who took power in Egypt in 1952 claimed that "revolution is the only means to a better Arab future, free of the elements of oppression and exploitation"; seizing power was the "first step in the march toward a social revolution (*thawra idjtimāʿiyya*), a process of fundamental rehabilitation "until social justice is achieved for the nation" (*al-Mīthāḳ al-waṭanī*, Cairo 1962; Djamāl ʿAbd al-Nāṣir, *Falsafat al-thawra*, Cairo n.d., 23-6). Similarly, the officers who carried out the 1969 coup in Libya announced that "the dream of freedom, socialism and unity has been realised . . . we have executed a *thawra* which will secure your dignity, restore the usurped homeland and raise high the Arab nation's banner" (*al-Ahrām* [1 September 1969], 1). Employed in this way in every coup and counter-coup, the term acquired the meaning of a forceful attempt to reform the unacceptable existing order, in addition to its earlier sense of an angry revolt against foreign control. It represented a promising alternative to everything deplorable in the community's past and present. As a consequence, revolutionary leaders found it expedient to identify themselves directly as "the *thawra*", the very embodiment of the ideal, using the word to mean the actual governing authority which could make decisions, execute policies, even be assaulted by its enemies.

Thawra thus came to signify a rather broad and somewhat imprecise idea, denoting at once an urge for a change, the change itself, and even those who executed it. Having previously meant an undesirable development, the term was transformed by historical circumstances to imply a desirable one—so much so that in the later part of the 20th century it came to be employed in juxtaposition, previously inconceivable, with Islam: *thawra islāmiyya*, namely, revolution designed to restore the good old order of early Islam. At one time viewed as a threat to the faith and the community, *thawra* thus became an attractive political option, a preferred tool not merely for installing a novel order but also for rejuvenating an ancient one.

(A. AYALON)

THERWET-I FÜNŪN, literally, "Riches of the arts", a late Ottoman Turkish literary movement named after the journal with the same title which ran from 1896 until its closure in 1901. (The movement has also been referred to as *Edebiyyāt-i djedīde*).

When Tewfīḳ Fikret [*q.v.*] became the editor of *Therwet-i Fünūn* in 1896, the journal was transformed from a scientific journal into an artistic and literary one, publishing the works of a group of authors who reflected the belief in "art for art's sake". After the journal was closed, the members of the group continued to write, but the movement lost its momentum and died away.

In poetry, the movement broke with the established traditions of *Dīwān* poetry, such as the sacred unity of the couplet and replaced it by the unity and overall beauty of the composition. All forms of *ʿarūḍ* [*q.v.*] were used for e.g. the *müstezād* (the rhymed addition to each half-line), and new forms such as the sonnet were introduced to Turkish literature. Rhyme ceased to be "for the eye only", and words which did not rhyme when written but which rhymed when pronounced were used. Under the influence of the French Parnassians and Symbolists, in order to express their innermost feelings and sensations, the poets borrowed heavily from Persian and Arabic, and either constructed compound words with new meanings or attached new meanings to words in order to create descriptive phrases like "jasmine-coloured hours" or "the colourless state of dying". They also used non-standard syntactic structures without verbs of action, or short, half-finished sentences. They made abundant use of metaphors, similes and various forms of symbolism, as opposed to the dominant "simplicity of expression" movement among their contemporaries. They were interested in the real, physical world and in nature, as opposed to the metaphysical dimension of life. Thus observation and description of everyday events became important as subject matter.

In novel and short story writing, under the influence of realism and naturalism, the authors introduced observation and detailed descriptions of human feelings to Turkish literature, as well as female characters, who were thinking, feeling, strong individuals like their male counterparts. This contrasted with the inferior status of females dominant in the *Tanẓīmāt* [*q.v.*] period prose.

The authors of the *Therwet-i fünūn* knew foreign languages and western literatures well. Most of them were university graduates and came from the prestigious Ottoman schools. The more traditional literati of the times accused them of being too westernised

and of adopting a totally secular approach to literature; while their more populist contemporaries accused them of introducing foreign words into Turkish contrary to the prevalent movement of the nativisation of vocabulary, and of not addressing the social problems of the common folk and of snobbery.

The better known authors of the movement are Khālid Ḍiyā or Ẓiyā (Uşaklıgıl) (1867-1945), Tewfīḳ Fikret (1867-1915), ʿAlī Ekrem (Bolayır) (1867-1937), Ḥüseyin Suʿād (Yalçın) (1867-1942), Aḥmed Ḥikmet (Müftüoğlu) (1870-1927), Süleymān Naẓīf (1869-1927), Djenāb Shihābeddīn (1870-1934), Ḥüseyin Sīret (Özsever) (1872-1959), Aḥmed Reshīd (Rey) (1870-1955), Meḥmed Sāmī (1866-1917), Ḥüseyin Djāhid Yalçın (1875-1957), Meḥmed Raʾūf (1875-1931), Fāʾiḳ ʿAlī (Ozansoy) (1867-1950), Djelāl Sāhir (Erozan) (1883-1935), and Ismāʿīl Ṣafā (1867-1901).

The movement came into being when the Ottoman empire was in the process of dismantlement, when there was uncertainty about the future of the state and heavy censorship under ʿAbdülḥamīd II, and although the authors were attacked by their contemporaries, the changes which they introduced into late Ottoman literature (both in poetry and prose) were long-lasting. The movement should be seen within the context of the westernisation of Ottoman Turkish literature after 1860.

THIḲA (A.), pl. *thiḳāt*, qualification used in the science of *ḥadīth* [*q.v.*] to describe a transmitter as trustworthy, reliable.

Through over-use it gradually lost this positive meaning and, more often than not, it is a virtually meaningless epithet. When not used alone, the term appears often in strings of qualifications which, taken at first sight, seem to be contradictory. The biographical dictionaries of *ḥadīth* transmitters abound in examples of people mentioned as *thiḳa* as well as *ḍaʿīf* "weak", or *matrūk* "to be ignored". More or less the same phenomenon can be observed in the case of another degenerated qualification such as *ṣāliḥ* [*q.v.*] "pious", or *ṣadūḳ* "veracious". The *ridjāl* [*q.v.*] literature contains multi-volume collections of transmitters depicted in these withered terms, more than anything else reflecting the overall ignorance on the part of the *ridjāl* critics as to the (de)-merits of the transmitter they describe as *thiḳa*. The *K. al-Djarḥ wa 'l-taʿdīl* of Ibn Abī Ḥātim (d. 327/938) and the *K. al-Thiḳāt* of Ibn Ḥibbān al-Bustī (d. 354/965 [*q.v.*]) are among the best-known of such collections. The latter also wrote a *K. al-Madjrūḥīn*. In this lexicon, the term *thiḳa* is used to indicate transmitters who are definitely not "reliable", e.g. in a special chapter (76-80) he distinguishes several categories of traditions transmitted by *thiḳāt* which may not be admitted as evidence, such as those by *thiḳāt* who continuously make simple mistakes, habitually transmit traditions on the authority of weak or mendacious transmitters, and obscure their identities by calling them by their *kunyas* instead of their names and vice-versa, or resort to other forms of the deceit called *tadlīs* [*q.v.*]. Ibn Ḥibbān mentions several famous transmitters as exponents of every category. Among these *thiḳāt* are listed the best-known traditionists of all times such as Sufyān al-Thawrī and al-Aʿmash [*q.vv.*].

Bibliography: Ibn Ḥibbān al-Bustī, *K. al-Thiḳāt*, Ḥaydarābād 1973-83; idem, *K. al-Madjrūḥīn*, ed. ʿAzīz Bey, Ḥaydarābād 1970; Ibn Abī Ḥātim, *K. al-Djarḥ wa 'l-taʿdīl*, Ḥaydarābād 1952-3; for more references, see the *Bibl.* to ṢĀLIḤ. (G.H.A. JUYNBOLL)

AL-**THUGHŪR** (A.), pl. of *thaghr*, one of whose basic meanings is "gap, breach, opening", a term used for points of entry between the Dār al-Islām and the Dār al-Ḥarb [*q.vv.*] beyond it.

It is more specifically used in the plural for the lines of fortifications protecting the gaps along such frontiers as that in south-eastern Anatolia between the Arabs and Byzantines (see 1. below) and for the march lands in al-Andalus between the Arabs and the Christian kingdoms to the north (see 2. below). But it is not infrequently employed by the Islamic geographers and historians in reference to other regions on the peripheries of the Islamic lands, such as those of the Caucasus, Central Asia and eastern Afghānistān facing the various peoples of the Caucasus, the Turks of the steppelands and others. Thus the *Ḥudūd al-ʿālam* styles Dihistān [*q.v.*], to the south-east of the Caspian Sea, a *thaghr* against the Oghuz; Tiflis one against the infidels (sc. the Georgians, Alans, etc.); and Aswān one against the Christian Nubians (tr. Minorsky, 133, 144, 152). Furthermore, it was used in reference to those coastlands of the *Dār al-Islām* open to maritime attack, e.g. for ports along the North African coast, bordering the Mediterranean or Atlantic, so that Alexandria, vulnerable to Greek naval attacks in the early centuries of Islam and to Frankish ones in the Crusading and Mamlūk periods, is sometimes called the *thaghr al-Iskandariyya*. Aden, facing the Gulf of Aden and the Indian Ocean beyond, and strongly fortified, is similarly described in the title of the work of the 9th/15th century local historian Abū Makhrama, *Taʾrīkh thaghr ʿAdan* (Brockelmann, S II, 239-40); the author lived into the time when the Portuguese were appearing on the coasts of East Africa and were about to enter Arabian coastal waters.

1. In the Arab-Byzantine frontier region.

Here, the *thughūr* were the forward line of fortresses in a region sometimes called the *ḍawāḥī* or *ḍawāḥī 'l-Rūm* "outer lands [of the land of the Greeks]", constituting a kind of no-man's-land; behind the *thughūr* lay the line of fortresses in the rear, the *ʿawāṣim* [*q.v.*] or "protecting [strongholds]". In such a Greek source as Constantine Porphyrogenitus's *De caeremoniis*, the *thughūr* are styled τὰ Στόμια (ed. Bonn, i, 657), and Syriac historians speak of "the land of the Tagrā", as in Michael Syrus (ed. Chabot, iii, 20-1, 467) and in Barhebraeus, *Chronicon* (ed. Abbeloos-Lamy, i, 339-40). The later Arabic historians like al-Balādhurī and the geographers posit a neat two-tier system of the forward *thughūr*, bases for raids and conquest, and the rearward protecting *ʿawāṣim*, a zone of settlement, and attribute its formation to Hārūn al-Rashīd, who entrusted these last to members of the caliphal family like ʿAbd al-Malik b. Ṣāliḥ and his own son al-Ḳāsim, aiming to associate the ʿAbbāsid family personally with the *djihād* against Byzantium; but M. Bonner has recently suggested that the system of Hārūn's time was really the culmination of a long evolutionary process.

The *thughūr* formed an arc running from Tarsus [see ṬARSŪS] in Cilicia along the line of the Taurus Mountains to Marʿash [*q.v.*] (the Syrian *thughūr*) and then on to Malaṭya [*q.v.*] (the Djazīran or Mesopotamian *thughūr*). Al-Iṣṭakhrī (early 4th/10th century) mentions in this connection the fortresses of Malaṭya,

al-Ḥadath, Marʿash, al-Hārūniyya, al-Kanīsa (al-Sawdāʾ), ʿAyn Zarba, al-Maṣṣīṣa, Adhana and Ṭarsūs (55-6). Slightly later, Ibn Ḥawḳal makes the point that all the *thughūr* are administratively dependent on the province of Syria, and the Djazīran ones are only so-called because the *ribāṭs* there are manned by the men of Mesopotamia (ed. Kramers, 165, 168, tr. Kramers and Wiet, 163, 164-5). The *Ḥudūd al-ʿālam* (372/982) borrows largely from al-Iṣṭakhrī, but re-arranges the fortresses of the *thaghr-hā*, and ends them in the south-west with Awlās (Eleusa), as being the last town of Islam on the coast of the Sea of Rūm (tr. 148-9). Al-Dimashḳī (8th/14th century) lists the Mesopotamian *thughūr* as Malaṭya, Kamakh, Shimshāṭ, al-Bīra, Ḥiṣn Manṣūr, Ḳalʿat al-Rūm, al-Ḥadath al-Ḥamrāʾ and Marʿash, and those of Syria as Ṭarsūs, Adhana, al-Maṣṣīṣa, al-Hārūniyya, Sīs and Ayās (ed. Mehren, 214). But by the time this latter author was writing, the *thughūr* had ceased to have any significance as outposts against the infidels, for the embattled Rupenid kingdom of Little Armenia, which alone of the former Christian powers of the region survived Mamlūk pressures until 776/1375 [see SĪS], was no serious military threat to the Muslims. The terms *ʿawāṣim* and *thughūr* lingered on in Mamlūk administrative geography, but anachronistically, as when al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, iv, 228-9, lists the *niyābas* of the *thughūr* and *ʿawāṣim* and adjoining lands: eight along the Syrian march (Malaṭya, Dabragī (Diwrigī), Daranda, Abulustayn (Elbistan), Ayyās, Ṭarsūs and Adhana, Sirfandakār and Sīs) and three in the Mesopotamian lands to the east of the upper Euphrates (al-Bīra, Ḳalʿat Djaʿbar and al-Ruhā or Edessa).

During the five centuries or so of confrontation and warfare between the Arabs and Byzantines, and then with the Franks and Armenians also, the fortunes of war swung backwards and forwards, so that fortresses of the zone of the *thughūr* might be abandoned by one side, left desolate and then rebuilt and repeopled by the other side; this process can clearly be seen in the history of such points as Malaṭya and Tarsus [*q.vv.*]. Life in these march regions bred a tough and self-reliant people, and on the Muslim side, volunteers (*mutaṭawwiʿa* [*q.v.*]) were attracted as *ghāzīs* or fighters for the faith from as far away as Khurāsān and Transoxania, settling in their own *ribāṭs* [*q.v.*]. We possess a specially valuable documentation for this way of life and its exponents in such geographers as Ibn Ḥawḳal and from the surviving extracts from the later 4th/10th century work of a local writer of Tarsus (see C.E. Bosworth, *The city of Tarsus and the Arab-Byzantine frontiers in early and middle ʿAbbāsid times*, in *Oriens*, xxxiii [1992], 268-86; idem, *Abū ʿAmr ʿUthmān al-Ṭarsūsī's* Siyar al-thughūr *and the last years of Arab rule in Tarsus (fourth/tenth century)*, in *Graeco-Arabica*, v [Athens 1993], 183-95).

Beirut, ii, 79-81, s.v. *al-Thaghr*, and above all, the *Bibl.* to ʿAWĀṢIM, which notes such especially important references as Le Strange, *Eastern lands of the Caliphate*, 128 ff., Honigmann, *Die Ostgrenze des byzantinischen Reiches von 363 bis 1071*, and Canard, *H'amdanides*, i, 241-86, with maps I and IX facing pp. 240, 248. See also now M. Bonner, *The naming of the frontier: ʿAwāṣim, Thughūr, and the Arab geographers*, in *BSOAS*, lvii (1994), 17-24. (C.E. BOSWORTH)

2. In al-Andalus.

In the context of the mediaeval history of the Iberian Peninsula, the term *al-thughūr* has, in addition to its general sense, a specific meaning applicable to what English-speaking historians of Muslim Spain normally render as "the Marches". In the absence of any direct or indirect indication to the contrary, this expression is to be taken as the designation of three major frontier zones brought into existence by the Hispano-Umayyads, viz. the Upper, the Middle and the Lower. In the earliest days of Umayyad rule these *thughūr* seem to have amounted to little more than outlying bands of sparsely populated, or even uninhabited, territory dividing Muslim forces from entrenched indigenous Christians determined to resist subjection. Garrisoned in a line of strategically placed castles and fortresses, the Muslim troops were detailed to consolidate Islam's position in the territory it had gained and to form an effective barrier against possible enemy incursions. Just as their mission was military, so was the command under which they operated. As time passed, these early fortified lines assumed increasingly greater proportions and developed into sizeable regional entities, governed from what were, in effect, regional capitals dominating not only a well-organised system of fortifications, but also a greater or lesser spread of towns, villages and hamlets. The inhabitants of the latter were sustained by the produce of surrounding cultivable land—from which, however, one should not infer a density of population, with all that that implies, comparable to that characterising the southern heartlands of al-Andalus. Whatever geographical, political and administrative variables there may have been in the history of the *thughūr*, their essentially military character remained a constant.

Of the original three marches, the most northerly and accordingly the most remote from Umayyad Cordova was the Upper March (*al-thaghr al-aʿlā*), which, probably because of its remoteness from the capital, was also designated the Farther March (*al-thaghr al-aḳṣā*), an expression which, in an appropriate context, has a narrower sense applicable only to the very northern reaches of the March, centred on Huesca and Barbiṭāniya (see below). Two other names known to have been given to the Upper March are the Great March (*al-thaghr al-akbar*) and the Supreme March (*al-thaghr al-aʿẓam*).

Like all other *thughūr* in al-Andalus of whatever kind of whatever period, the Upper March was never a region bounded by immutable, neatly drawn frontiers, but, rather, a variable entity expanding and contracting with the vicissitudes of war waged by Muslims and Christians in their efforts to gain or maintain the upper hand. Thus, in the earliest days of its existence, the Upper March covered, in theory, an area comprising territory north of the Pyrenees. However, the Christian conquest of Pamplona (Banbalūna [*q.v.*]) in 183/799 and Barcelona (Barshalūna [*q.v.*]) in 185/801 marked the start of a new era during which the Upper March was to emerge as a much more durable and, at the peak of its development, a somewhat more clearly identifiable entity. As such, it is said to have comprised, in broadly descending order from the north-east to the south-west, the areas, or zones (*aḳālīm*), centred on Barbiṭāniya (an area between present-day Boltaña in the north and Barbastro (Barbashturu [*q.v.*]) in the south), Huesca (Washḳa [*q.v.*]), Tudela (Tuṭīla), Saragossa (Saraḳusṭa [*q.v.*]), Lérida (Lārida [*q.v.*]), Calatayud (Ḳalʿat Ayyūb [*q.v.*]) and Bārūsha (precise location uncertain, but situated south of Daroca (Darūḳa) and including today's Molina de Aragón (Mulīna). Add to which the region of Tortosa (Ṭurṭūsha)—omitted from the foregoing list only because of its limited scope precluding inclusion of a centre well to the south-east of Saragossa on the

lower reaches of the Ebro. Viewed at a later period on a lesser scale and from a different perspective, the Upper March is seen as comprising only its lands to the west of Lérida, its eastern parts constituting a separate regional grouping designated the Eastern March (*al-thaghr al-sharkī*). In the 4th/10th century, this *thaghr* took a southward course from Lérida through Fraga (Ifrāgha [*q.v.*]), eventually reaching Tortosa and continuing thence to the Mediterranean coast. Whatever changes, administrative or otherwise, may have accompanied the emergence of this Eastern March, one change that did not take place was the removal of supreme command from Saragossa, which from the outset had been the capital, or mother city (*umm*), of all territories constituting the Upper March.

For the Umayyads, the Upper March was to prove both a source of strength and a source of weakness. It was a source of strength in that its strong defences enabled the central government to maintain as secure a hold as possible on its southern heartlands, but a source of weakness in that Cordova's rulers had only too often to devote much time and energy to devising means of coping with the ambitions of those of their commanders for whom, as for certain local overlords also, subordination to Cordova stood in the way of their realising their aspirations to autonomy.

Since much of the history of the Upper March is inseparable from that of Saragossa, which is well adumbrated in M.J. Viguera's article [see SARAKUSTA], and is also intertwined with the geographical and political history of the Spanish Aragon so capably unravelled in P. Chalmeta's article on this province [see ARAGHŪN in Suppl.], only one or two points remain to be noticed here. First, immediately following the demise of the Umayyads, the northern reaches of the old realm enjoyed a greater degree of stability than most parts of al-Andalus, thanks to power already acquired in Saragossa by those who had long sought absolute independence. These were, first, the Tudjībids and, secondly, the Hūdids, their successors, who held on to their *ṭā'ifa* kingdom [see MULŪK AL-ṬAWĀ'IF] until the occupation of Saragossa by the Almoravids (al-Murābiṭūn [*q.v.*]) in 503/1110. Despite Almoravid intervention, the city was to fall to Alfonso I of Aragon in 512/1118, and by mid-century Christian control of all the territories of the old Upper March was virtually complete. Though now subject to Christian rule, the vast majority of the Muslim population of those territories chose not to emigrate but accept Mudéjar [*q.v.*] status and to stay put. The origins of this stratum of society were not to be forgotten, for in the Spanish *tagarinos*—a term used particularly in 17th-century European sources (Fr. "Tagarins") to denote primarily the Moriscos of Aragon, but also those of Valencia and Catalonia—we find a clear echo of *thaghr*/*thaghrī* (adj.).

That in early Umayyad times there were three major *thughūr*, viz. the Upper, the Middle (*al-awsaṭ*) and the Lower (*al-adnā*), is an undisputed fact. Precisely when this tripartite division came into being is unclear, but there is no doubt that it existed in the 3rd/9th century. Originally, the Muslim line of defence for the Lower March was based on Mérida (Mārida [*q.v.*]) and ran westward through Badajoz (Baṭalyaws [*q.v.*]) over part of the Estremadura and part of central Portugal down to the Atlantic coast. The Middle March, which began more or less where the old Upper March ended in the region of Bārūsha (see above), descended in a south-westerly direction, passing, by the end of the reign of Muḥammad I (238-73/852-86), through a chain of fortified towns and cities, including Madrid (Madjrīṭ [*q.v.*]), Talamanca (Ṭalamanka), Canales (Ḳanālish), Olmos (Wulmush) and Calataifa (Ḳal'at al-Khalīfa), towards its seat of government, Toledo (Ṭulayṭula [*q.v.*]) and thence to territories bordering on the Lower March.

As times and situations changed, so did the *thughūr*. In the reign of the great 'Abd al-Raḥmān III (al-Nāṣir) (300-50/912-61 [*q.v.*]), whose tireless and conspicuously successful military activities firmly secured his realm against Christian encroachment, we find mention of just two major *thughūr*, of which one is designated *al-akṣā* and the other *al-adnā*. Of the former nothing need be added here to what has already been said. The latter, however, calls for comment, for the Lower (or Near/Hither) March had come to denote a modified Middle March. Control of this *thaghr*, a bulwark against Castile and the Kingdom of Leon, was removed from Toledo to Medinaceli (Madīnat Sālim [*q.v.*]), a town situated well to the north on the verge of the Upper March and transformed on the orders of 'Abd al-Raḥmān III into a heavily fortified base for *ṣawā'if* (sing. *ṣā'ifa* [*q.v.*]). And so, before or around the middle of the 4th/10th century, *al-thaghr al-adnā/awsaṭ* denoted a vast area which it is best to describe here only in the loosest and most general terms with reference to places that can be easily located on modern maps of Iberian Peninsula. So, if we take Toledo on the Río Tajo as our starting-point, the *thaghr* ascended northward through Madrid in the direction of the Sierra de Guadarrama and the Río Duero (Portug. Douro). In the north-east it took in, among other places, Uclés, Cuenca, Huete, Santaver, Guadalajara and Medinaceli, while in the north-west it ran through Talavera, Coria and Coimbra.

Until the end of the 4th/10th century no major changes took place in the general pattern of these frontier zones as it stood at the time of al-Nāṣir's death in 350/961, but not long before 400/1009 the caliphate that he had instituted began to lose control of al-Andalus, and, as disintegration set in, the Christians turned Muslim disunity to whatever advantage they could whenever they could. Not surprisingly, then, major changes in the configuration of the border territories took place in the period running from the definitive conquest of Toledo by Alfonso VI of Leon and Castile in 478/1085 to shortly after the mid-6th/12th century, by which time the long Christian follow-up to the taking of Saragossa was very near its end. Following the disappearance of the territories once controlled from Toledo and Saragossa, no defensive system comparable to that represented by the *thughūr* as devised and developed by the Umayyads emerged to replace it. Accordingly, it was only a matter of time, once Ferdinand III of Castile and Leon had taken Cordova (633/1236) and Seville (646/1248), before Muslim rule in the Iberian Peninsula was eliminated from all but the small kingdom of the Naṣrids [*q.v.*] of Granada.

Relevant to the subject of *thughūr* in al-Andalus are one or two terms on which comment may be helpful. First, there is reason to believe that *al-thaghr al-sharkī* and *al-thaghr al-djawfī* (adj. "northern", but to be taken as applying in particular to the north-west), which occur in a 7th/13th-century text, are terms which had, as Muslim frontiers receded, come to replace *al-thaghr al-akṣā* and *al-thaghr al-adnā*, respectively. Secondly, *al-thaghr* and *bilād al-thaghr*, when unqualified, almost always denote the old Upper March. For further and better particulars Bosch Vilá's *Algunas consideraciones* (see *Bibl.*), though in need of updating, is useful.

One final point: the complex subject of the place of the *thughūr* in the administrative system of al-Andalus has been felt to be beyond the scope of this article.

(J.D. LATHAM)

THULĀ, an historic, walled town of about 4,000 people (al-Waysī, 65, published in 1962) situated at about 45 km/28 miles from the main town of the Yemen, Ṣanʿāʾ [*q.v.*], and placed by Werdecker (139), after Glaser, in 15° 36' latitude and 43° 53'. The town is overlooked by an impregnable fortress perched on the mountain above which can be seen from very great distances all around. Tradition tells us that the town takes its name from a certain Thulā b. Lubākha b. Akyān b. Ḥimyar al-Aṣghar. It is also the centre of a district (*kaḍāʾ*) of the same name.

The town is undoubtedly of ancient origin. Al-Hamdānī (107), writing in the 4th/10th century, simply states that it is a stronghold (*ḥiṣn*) and a village belonging to the Marrāniyyūn of Hamdān, and it is clear that the town took on more political and military importance during the Ayyūbid (569-626/1173-1228) and Rasūlid (628-845/1230-1441) periods and particularly under the later Zaydī Imāms. The town is associated in particular with the Zaydī Imām al-Muṭahhar b. Sharaf al-Dīn who died in 980/1572. His tomb lies inside the *madrasa* of his son, Sharaf al-Dīn, within the walls of Thulā (see Golvin and Fromont, *Thula*, 42-6, and photographs 30-5, pp. 196-8). The major architectural features of the town, mosques, *madrasas*, tombs and gates, of the latter, nine in all, can all be seen in Golvin and Fromont, 17, fig. 2, which is a general plan, and the work as a whole is an excellent study of the architecture of Thulā.

Thulā was visited by both Niebuhr in the 18th century and Glaser in December 1883. The latter wrote a particularly detailed account of the town (see both Grohmann's art. *Thulā*, in *EI*¹, and Werdecker, 38-9, both written from Glaser's manuscript account). Glaser reckoned Thulā to be the second largest town in the Yemen after Ṣanʿāʾ, and its narrow streets were flanked with regularly-built houses in yellowish-red stone. Glaser first thought the ascent to the citadel to be impossible, but he was assisted by local climbers and a strong rope. He calculated the *ḥiṣn* to be of some antiquity. He mentions cisterns and about twenty granaries called *madāfin*, cone-shaped structures made out of sandstone and about six or seven metres deep. He also mentions caves hewn out of the rock called *djurūf*.

THULUTH [see KHAṬṬ].

THUMĀMA B. ASHRAS, ABŪ MAʿN AL-NUMAYRĪ, Muʿtazilī theologian, d. 213/828.

Of Arab descent (and proud of it), he entered upon a secretary's career. He served under the Barmakids and was put under arrest after their downfall in 186/802. However, in 192/807 his reputation had so far been restored that Hārūn al-Rashīd had him join his expedition to Khurāsān. When, one year later, the caliph died at Ṭūs, Thumāma stayed in the East with al-Maʾmūn, obviously as one of his administrative advisers. In 201/817 we find him among those who, by their signature, bore witness to the document where al-Maʾmūn proclaimed ʿAlī al-Riḍā as his successor. Yet he never held a high official post, neither at Marw where al-Maʾmūn resided until 202/818 nor later at the court of Baghdād when the caliph had returned to ʿIrāk in 204/819. Publicity was much greater, though, in the old capital than it had been in Khurāsān; he therefore became the hero of numerous anecdotes in *adab* literature. People saw in him a kind of *éminence grise*, influential in a way but mainly famous for his wit and his detached and liberal irony. His feeling for Arabic style and his interest in eloquent speech made him a typical representative of the state bureaucracy.

As a theologian he did not write as much as did most of his Muʿtazilī colleagues, nor does he seem to have had the ambition of developing an overall "system". He agreed with Muʿammar [*q.v.*] in assuming that all beings have a "nature" (*ṭabīʿa*), but at the same time he was convinced that those who really act are only God and man. Man is distinguished among all creatures by his will; this is what he has in common with God. By his will he may direct nature, or rather, the natures, i.e. his own one as well as that of other beings. This does not, however, exclude the fact that beings, whether living or inanimate, also function by themselves. Effects are not caused by a personal originator (*muḥdith*) as he said, rejecting by that the concept of *tawallud* developed by his contemporary Bishr b. al-Muʿtamir [*q.v.*]. The consequences of his theory come out most clearly in his epistemology. Knowledge is not acquired but spontaneous, and man becomes responsible for it only when he wills it. An unbeliever therefore deserves punishment only when he consciously rejects the truth; pagans who have never heard about Islam are not subject to any retribution, positive or negative, but simply become dust when they die (a fate which, according to sūra LXXVIII, 40, the real unbelievers would be happy

to undergo instead of Hell). There is, of course, the juridical difference between believers and unbelievers, but this only concerns their treatment as long as they are alive. Internal convictions cannot be ascertained by the external appearance.

In law, Thumāma no longer found the *idjtihād* as developed by the old Kūfan school sufficient. He aspired after a more systematic method, perhaps deductive reasoning, but we lack any precise information. In political theory, he took up Ḍirār's idea that a non-Arab, even somebody as despised as a Nabaṭī in ʿIrāḳ, deserves more respect for having accepted Islam than a member of Ḳuraysh who profited from it, and that he should therefore be preferred as a candidate for the caliphate in the (somewhat theoretical) case that both of them should enter into competition. With this doctrine, as well as with his epistemology and the corresponding definition of the unbeliever, Thumāma may have influenced al-Djāḥiẓ.

(J. VAN ESS)

THÜREYYĀ, MEHMED, Ottoman biographer (1261-1326/1845-1909).

Meḥmed Thüreyyā was born in Istanbul, the son of Meḥmed Ḥüsnü Bey, an Ottoman civil servant. In 1863 he joined the translation office of the Bāb-î ʿĀlī, and for some time was also on the staff of the newspaper *Djerīde-yi Ḥawādith*. He was appointed in 1886 to the Council of Education, where he served until his death in 1909. He was buried in the Ḳaradja Aḥmed cemetery at Üsküdar (Ö.F. Akün, art. *Süreyya*, in *IA*, ix, 247).

He wrote or compiled more than forty volumes, said to include a multi-part Arabic-Persian-Ottoman-Chagatay-Tatar dictionary, four novels, and several volumes on Ottoman and Islamic history. Most of these apparently perished during a major fire in 1916 (Akün, 248). Only two of his works were published. The first of two volumes of *Nukhbetü 'l-wakāyiʿ* ("Selected events"), an annotated register of government appointments from 1831 to 1875, appeared in 1876 (the second volume remained unpublished). His principal work, *Sidjill-i ʿOthmānī*, a biographical dictionary of famous Ottomans, appeared in four volumes (1308-16/1890-9). Previous Ottoman biographical compendia, each specialising in a certain professional or social group, constituted Thüreyyā's main sources, in addition to government records and surviving tombstones. Combining data from these various sources, *Sidjill-i ʿOthmānī* was intended to provide a comprehensive listing of Ottomans from all professions and ranks, from the earliest Ottoman period up to 1316/1899. Despite the brevity of its entries and the now proven unreliability of some of these, it immediately became, and remains, a standard work of reference, an Ottoman "national biography". It is especially valuable for lower-ranking Ottomans not sufficiently prominent to appear in other compendia or in major historical sources. The first volume of an incomplete modern Turkish edition, *Osmanlı devletinde kim kimdi?* ("Who was who in the Ottoman state?"), appeared in 1969, but has not been continued.

Bibliography: Akün, art. *Süreyya*; Babinger, *GOW*, 385-87; Bursalî Meḥmed Ṭāhir, *ʿOM*, iii, 36-7; G. Oransay (ed.), *Osmanlı devletinde kim kimdi?*, i, Ankara 1969, 7-9. (CHRISTINE WOODHEAD)

ṬIBĀʿA [see MAṬBAʿA].

ṬIBĀḲ (A.), a rhetorical figure mostly translated "antithesis" and consisting in the inclusion, in a verse or colon, of words of opposite meaning, as in *ḥulamāʾu fī 'l-nādī idhā mā djiʾtahum—djuhalāʾu yawma ʿadjādjatⁱⁿ wa-likāʾi* "restrained in the tribal council, when you come to them,—unrestrained on the day of a dust-cloud and battle" (Zuhayr).

Synonymous terms are *muṭābaka* and, especially in earlier theorists, *muṭābaḳ* (from *ṭābaḳtu bayna 'l-shayʾayn* "I made the two things congruent" [see Ibn al-Muʿtazz, *Badīʿ*, 36]). From the same root one also finds *taṭbīḳ* (attested first in Abū Hilāl al-ʿAskarī [d. 395/1005]), which seems to be a secondary formation in the sense of "to create a *muṭābaḳ*". In later writings one encounters also *taḍādd* and *mutaḍādd*. Al-Yazdādī (d. after 403/1013) says that he called (*sammaytuhu*) this figure *mutaḍādd*; at about the same time one finds Ibn Sinān al-Khafādjī (d. 466/1074) using *taṭādd* and *mutaḍādd* as terms in his definition of *muṭābaḳ*.

The earliest terminology is rather inhomogeneous. Thaʿlab (d. 291/904 [*q.v.*]) calls this figure, quite sensibly, *mudjāwarat al-aḍdād* "juxtaposition of opposites", whereas he uses the term *muṭābaḳ* in the sense of *tadjnīs* [*q.v.*]. This same "aberrant" use of *muṭābaḳ* is also found in Ḳudāma (d. 320/932 [*q.v.*]) and Ibn Wahb (1st half 4th/10th century; he prefers the form *muṭābaḳa*). Al-Ḥātimī (d. 388/998 [*q.v.* in Suppl.]) reports a discussion between al-Akhfash al-Aṣghar (d. 315/927 [see AL-AKHFASH. iii]) and Abu 'l-Faradj al-Iṣbahānī (d. 356/967 [*q.v.*]), in which the latter asks about the two meanings of *muṭābaḳ* and al-Akhfash sets the record straight according to the majority view (Bonebakker, *Materials*, 38). Ḳudāma does discuss antithesis as well, calling it, however, by the idiosyncratic name of *takāfuʾ* "balancing". Ḳudāma's deviation from the consensus—with regard to both terms, *muṭābaḳ* and *takāfuʾ*—is much talked about in later sources (with great sophistication by al-Sidjilmāsī [*q.v.*]), mostly with the general tenor that in principle a quarrel about terminology is pointless. Strangely, however, the term *takāfuʾ* is revitalised later by some to denote a specific type of *ṭibāḳ*, one in which one term (thus Nadjm al-Dīn Ibn al-Athīr [d. 737/1337]) or both terms of the antithesis (thus Ibn Abi 'l-Iṣbaʿ [d. 654/1256]) are figurative.

Ibn al-Muʿtazz (d. 296/908 [*q.v.*]) is the first to use *muṭābaḳa* as a term to denote "antithesis". He includes it among the five figures that he singles out as constituting the *badīʿ* [*q.v.*] phenomenon. He probably does so because *muṭābaḳa* shares with the other *badīʿ* figures two characteristics: (a) it creates two (sometimes more) poles in a line (in this case the two antithetical words), and (b) it is often, particularly in *muḥdath* poetry, combined with the first and most important *badīʿ* figure, the loan metaphor (*istiʿāra*, cf. W. Heinrichs in *ZGAIW*, i [1984], 190-1). The first theorist to use the form *ṭibāḳ* seems to have been Abū Hilāl al-ʿAskarī [*q.v.*].

The main topics discussed by the theorists are the following:

1. The nature of the opposition. Whereas most definitions of *ṭibāḳ* are based on the word *ḍidd* "opposite" and exemplified by pairs such as "black" vs. "white" and "laugh" vs. "weep", there is some discussion whether a mere difference within the same category, such as e.g. "red" vs. "green", would also constitute a *ṭibāḳ*. Some subsume it under the *muṭābaḳa* category (thus e.g. Ḥāzim al-Ḳarṭādjannī), others establish a separate category parallel to *muṭābaḳ(a)* under an overarching heading (*mukhālif* under *taḍādd* in Ibn Sinān al-Khafādjī). The use of various colours in one

line acquires the status of a separate figure, mostly as a subcategory of *ṭibāḳ*, under the name of *tadbīdj* "brocading" (see Mehren, 99).

2. The combination of *ṭibāḳ* with other figures, most prominently the metaphor. Since a simple antithesis is rather artless, it is frequently interwoven with metaphorical structures, especially in "modern" poetry. Ibn Abi 'l-Iṣbaʿ distinguishes between antitheses with *ḥaḳīḳa* words and others with *madjāz* words; for the latter he revives the Ḳudāmian term *takāfuʾ* with this new meaning. An example would be Ibn Rashīḳ's line: *wa-ḳad aṭfaʾū shamsa 'l-nahāri wa-awḳadū nudjūma 'l-ʿawālī fī samāʾi ʿadjādji* "they extinguished the sun of day and they lit the stars of the lances in a sky of whirling dust". The author adds that this metaphorical antithesis would be an example of the "combination of figures" which he had discovered as a "figure" in its own right and termed *muḳārana* (for the latter see *Taḥbīr*, 603-6). Interestingly, Nadjm al-Dīn Ibn al-Athīr, though also introducing the term *takāfuʾ*, restricts it to cases in which only one of the opposites is metaphorical, as in Diʿbil's line: *lā taʿdjabī yā Salma min radjul^in—ḍaḥika 'l-mashību bi-raʾsihī fa-bakā* "don't be amazed, O Salmā, at a man, on whose head hoariness is laughing, whereas he is all tears", where, obviously, only *ḍaḥika* is metaphorical, while *bakā* is real. Ibn Maʿṣūm, who likewise introduces the distinction between *ṭibāḳ ḥaḳīḳī* and *ṭibāḳ madjāzī*, says that, ordinarily, the latter is defined as an antithesis based on words used figuratively. He finds this unsatisfactory and stipulates further that the actually intended meanings of the figuratively used words must be antithetical; otherwise, one is dealing with an *īhām al-ṭibāḳ*, a "make-believe antithesis". From this point of view the lines already quoted do not pass muster: neither Ibn Rashīḳ's "blotting out the sun" vs. "raising the lances and letting their heads glisten" nor Diʿbil's "being bright" vs. "weeping" are real-life opposites. The example for *ṭibāḳ madjāzī* that Ibn Maʿṣūm adduces is a line by al-Tihāmī (d. 416/1025 [*q.v.*]): *la-ḳad aḥyā 'l-makārima baʿda mawt^in wa-shāda bināʾahā baʿda 'nhidāmi* "he brought the glorious deeds to life after [a period of] death, and he [re]built their structure after [a period of] ruin". Here the two metaphorical antitheses "bringing to life/death" and "rebuilding/ruin" reflect a real-life opposition "existence/non-existence". From this point of view, the "make-believe antithesis" is a much greater frequency and vibrancy in "modern" poetry than the more pedestrian *ṭibāḳ madjāzī* of Ibn Maʿṣūm.

3. Observations on the literary history of *ṭibāḳ*. There are two vantage points from which one might view this history: "prose and poetry" and "Ancients and Moderns". As for the first, it is clear that *ṭibāḳ* was a prominent feature of early (and later) sayings (*ḥikam*) and speeches (*khuṭab*); it moulded their style and argument. Al-Bāḳillānī goes so far as to say that most of the speeches of eloquent people are *taṭbīḳ*. Small wonder that the scribes took a great interest in this figure and developed their own terminology: al-Khʷārazmī says that what the critics of poetry called *muṭābaḳa*, the scribes term *mukāfaʾa* (in view of Ḳudāma's *takāfuʾ* this reading is preferred to the *mukāfāt* of the ed. van Vloten). A large percentage of the *shawāhid* adduced to exemplify *ṭibāḳ* are sayings and aphorisms.

As for the second perspective, the critics agree that already the ancient Arabs produced a fair amount of *ṭibāḳ* in their poetry, maybe more than any other figure of speech (al-Āmidī, *Muwāzana*, i, 171; Ibn Aflaḥ, *Muḳaddima*, 7), although they sometimes missed a chance that later poets would not have (see Ḍiyāʾ al-Dīn Ibn al-Athīr, *Mathal*, iii, 181; and al-Muẓaffar al-Ḥusaynī, *Ighrīḍ*, 101, on the "modern" improvement by Abu 'l-Shīṣ on a well-known "ancient" line by ʿAmr b. Kulthūm). As with all *badīʿ* figures, the "Moderns" had a great predilection for *ṭibāḳ*. Some critics even say that it is the best of all the *badīʿ* figures (Ibn Wakīʿ, *Munṣif*, i, 49). Abū Tammām was particularly keen on it, with mixed results (Ḍiyāʾ al-Dīn Ibn al-Athīr, *Mathal*, iii, 175). Al-Mutanabbī is surprisingly credited with comparatively few (*ibid.*, 178). As already hinted at, the "modern" poets combined their *ṭibāḳ*s with other figures of speech, metaphor first and foremost. Ibn Maʿṣūm gives a list of various combinations with examples. He also points out that the more "recent" poets, such as Ibn Makānis (d. 794/1392), Ibn Nubāta (768/1366 [*q.v.*]), and Ibn Sanāʾ al-Mulk (d. 608/1211 [*q.v.*]), have a penchant for combining *ṭibāḳ* and *tawriya* "double entendre".

Finally, *ṭibāḳ* is not specifically Arabic, as Ḍiyāʾ al-Dīn Ibn al-Athīr points out: the pre-Islamic Persians used it and the Greeks as well. As Hippocrates said at the beginning of the "Aphorisms": *al-ʿumru ḳaṣīr^un wa-'l-ṣināʿatu ṭawīla* "vita brevis, ars longa".

Bibliography: *Ṭibāḳ* is dealt with in almost all works on rhetoric and poetics. Only substantive passages are listed below: Thaʿlab, *Ḳawāʿid al-shiʿr*, ed. R. ʿAbd al-Tawwāb, Cairo 1966, 62-4 (*mudjāwarat al-aḍdād*); Ibn al-Muʿtazz, *K. al-Badīʿ*, ed. I. Kratchkovsky, London 1935, 36-47 (*muṭābaḳa*); Ḳudāma, *K. Naḳd al-shiʿr*, ed. S.A. Bonebakker, Leiden 1956, 78-81 (*takāfuʾ*); idem, *Djawāhir al-alfāẓ*, ed. M.M. ʿAbd al-Ḥamīd, repr. Beirut 1399/1979, 7; Āmidī, *al-Muwāzana bayn shiʿr Abī Tammām wa 'l-Buḥturī*, ed. al-S.A. (W.P. Heinrichs)

ṬIBB (a.), medicine.

1. Medicine in the Islamic world.

Medical care in the Islamic world was pluralistic, with various practices serving different needs and sometimes intermingling. This medical pluralism allowed pre-Islamic traditional and magical practices to flourish alongside medical theories inherited from the Hellenistic world and drug lore acquired from India and elsewhere. The medical practices of pre-Islamic Arabia appear to have continued as the dominant form of care into the early days of the Umayyad caliphate. The nature of this medical care is known primarily through various *ḥadīths*, which later formed the basis of a genre of medical writing called *al-ṭibb al-nabawī* (see below).

Sources tell us virtually nothing about the medical care extended to the four Orthodox Caliphs and little about the medical care outside the court. There is a story of an Arab named al-Ḥārith b. Kalada [*q.v.* in Suppl.] who is said to have held learned discussions with the Sāsānid ruler Khusraw Anūshirwān, to have studied medicine at Gondēshāpūr (see below), to have been sufficiently known for his care that the Prophet referred sick people to him, and who, according to some traditions, was connected with the final illnesses of Abū Bakr and 'Umar [*q.vv.*]. The therapy that he advocated, according to later biographical literature, reflects traditional practices of using locally available plants rather than the Hellenistic tradition generally associated with Gondēshāpūr. The accounts of al-Ḥārith b. Kalada were elaborated over time and include conflicting elements making it difficult to assess the historical figure. For similar reasons, it is difficult to determine the authenticity of reports regarding Ibn Abī Rimtha, who was supposed to have been a contemporary of the Prophet and to have practised surgery. It is evident that a need was felt to justify and defend the use of medicine by appealing to accounts which showed the Prophet and early members of the Muslim community having recourse to doctors.

Only a few meagre details emerge regarding the physicians serving the early Umayyad caliphs. The first Umayyad caliph, Mu'āwiya [*q.v.*], is said to have employed a Christian physician of Damascus, Ibn Uthāl. The physician to the caliph 'Umar b. 'Abd al-'Azīz (99-101/717-20) is said to have been 'Abd al-Malik b. Abdjar al-Kinānī, a convert to Islam who reportedly studied at the surviving medical school in Alexandria. One of the few Umayyad physicians known by extant writings, and possibly the first to translate a medical treatise into Arabic, is Māsardjawayh [*q.v.*], sometimes called Māsardjīs, a Judaeo-Persian physician living in Baṣra. While some accounts have Māsardjawayh living at the end of the 2nd/8th or the beginning of the 3rd/9th century, others state that, for either the caliph Marwān I or 'Umar b. 'Abd al-'Azīz, he translated into Arabic from Syriac the medical handbook (*kunnāsh*) of Ahrun [*q.v.* in Suppl.], a 7th-century physician of the Alexandrian medical school.

Modern historians have usually assigned a prominent role in the development of Islamic medicine to the city of Gondēshāpūr [*q.v.*], in southwestern Persia, which in the 6th century was an outpost of Hellenism. It has been asserted that Gondēshāpūr had an important hospital and medical school which supported the translation of Greek and possibly Sanskrit texts into Middle Persian and Syriac, but this interpretation has been challenged by recent historians. There seems to be no evidence that there was a hospital in Gondēshāpūr or a formal medical school. There may have been a modest infirmary where Greco-Roman medicine was practiced and a forum where medical texts could be read, as was the case in other towns such as Susa nearby to the west. The alleged prominence of Gondēshāpūr as a medical centre with hospital was possibly due to the dominance of Nestorian Christians amongst the early physicians at the 'Abbāsid court who wished to claim the hospital as their idea and to establish a history to support their medical authority. Certainly, the Nestorian monopolisation of early medicine in Baghdād meant that the medicine they advocated, based upon Greek texts, was promoted over the rival practices of Zoroastrians and Indians or the native medicine of Arabia.

The influence of Gondēshāpūr upon early 'Abbāsid medicine (if our sources are reliable) is evident in the prominent role given the Bukhtīshū' [*q.v.*] family of Nestorian Christian physicians. For eight generations, from the mid-2nd/8th well into the second half of the 5th/11th century, twelve members of the family served caliphs as physicians and advisers, often sponsoring the translation of texts and composing original treatises. In 148/765 the caliph al-Manṣūr [*q.v.*], suffering from a stomach complaint, called Djurdjīs b. Djibrā'īl b. Bukhtīshū' to Baghdād from Gondēshāpūr, where he had been the leading physician and author of a Syriac medical handbook. He eventually returned to Gondēshāpūr, where he died after 151/768, but his son was called to Baghdād in 171/787, where he remained until his death in 185/801, serving as physician to the caliph Hārūn al-Rashīd. The subsequent generations of Bukhtīshū' remained in Baghdād. The court physician to the 'Abbāsid caliph al-Mutawakkil, the Christian physician Sābūr b. Sahl [*q.v.*], was also said to have practised medicine in Gondēshāpūr before coming to Baghdād.

Early in the 'Abbāsid caliphate, interest was directed toward medical and scientific works from older cultures, especially Greek—no doubt encouraged by the Christian court physicians who spoke or read Syriac and Greek. After translation was undertaken on a major scale, the Hellenistic and Byzantine medical

theories and practices were completely accepted and integrated into the learned medical thinking of the day. The most influential of the Greek writings to be translated into Arabic were the compendium on *materia medica* by Dioscorides [see DIYUSĶURIDĪS], various treatises by Rufus of Ephesus [see RŪFUS AL-AFSĪSĪ], the surgical chapter from the Greek encyclopaedia by Paul of Aegina working in Alexandria in the 7th century, and especially the voluminous medical writings and exposition of humoral medicine by Galen [see DJĀLĪNŪS]. The Hippocratic writings [see BUĶRĀṬ, in Suppl.], while extensively used by some Islamic physicians, were not in general as direct a formative influence as the Galenic writings.

Early in the 3rd/9th century a foundation called *bayt al-ḥikma* [*q.v.*], the House of Wisdom, was established in Baghdād for promoting the translation of foreign texts. The most productive translator (though his relationship with the enterprise called *bayt al-ḥikma* is unclear) was Ḥunayn b. Isḥāķ al-ʿIbādī [*q.v.*], another Nestorian Christian but originally from al-Ḥīra in southern ʿIrāķ. He translated into both Syriac and Arabic, often working in collaboration with others, including his son Isḥāķ b. Ḥunayn [*q.v.*] and his nephew Ḥubaysh [*q.v.*], the latter sometimes translating into Arabic the Syriac version made by Ḥunayn. Ten years before his death Ḥunayn recorded that of Galen's works alone, he had made 95 Syriac and 34 Arabic versions. Ḥunayn also composed original medical writings, including the very influential *K. al-Masāʾil fi 'l-ṭibb li 'l-mutaʿallimīn* and the ophthalmological treatise *K. al-ʿAshr maķālāt fi 'l-ʿayn*. Ḥunayn and other translators, such as the Melkite Ķusṭā b. Lūķā [*q.v.*], had access to the court as advisers and learned men, and through their translations, as well as original compositions, their work was fundamental to the establishment of the classical Arabic scientific and medical vocabulary.

There are a number of early physicians who are not known to have made translations themselves but whose writings reflect the very early period of adaptation of foreign material. Foremost amongst this group was another Nestorian Christian, Ibn Māsawayh [*q.v.*], whose father had been a physician in Gondēshāpūr before coming to Baghdād. Ibn Māsawayh composed a considerable number of Arabic medical monographs, on topics including fevers, leprosy, melancholy, dietetics, eye diseases and medical aphorisms. It was reported that Ibn Māsawayh regularly held a *madjlis* or assembly of some sort, where he consulted with patients and discussed subjects with pupils, amongst them Ḥunayn b. Isḥāķ. At times, Ibn Māsawayh apparently attracted considerable audiences, having acquired a reputation for repartee. Another important figure was ʿAlī b. Sahl Rabban al-Ṭabarī [*q.v.*], who died not long after 240/855. He not only summarised Greco-Roman practices in his compendium *Firdaws al-ḥikma*, dedicated in 235/850 to the caliph al-Mutawakkil, but also devoted a separate chapter to Indian medicine. Neither he nor subsequent writers, however, really tried to integrate the Indian material with Greco-Roman medicine. Approximately thirty other physicians who practiced before the last quarter of the 3rd/9th century are known by name and some by extant writings. By the end of the century the humoral system of pathology, particularly as had been advocated by Galen, formed the basis of nearly all the learned Arabic medical discourses.

Also in the 3rd/9th century there arose a genre of medical writing called *al-ṭibb al-nabawī*, or prophetic medicine, intended as an alternative to the exclusively Greek-based medical systems. The authors were clerics rather than physicians, and they advocated the traditional medical practices of the Prophet's day and those mentioned in the Ķurʾān and *ḥadīth* over the medical ideas assimilated from Hellenistic society, sometimes blending the two approaches. One of the earliest examples is the 3rd/9th-century Shīʿī collection *Ṭibb al-aʾimma*. At about the same time, Ibn Ḥabīb al-Andalusī [*q.v.*] composed *Mukhtaṣar fi 'l-ṭibb* based upon *ḥadīths* concerned with medicine, while in the next century Ibn al-Sunnī (d. 364/974) compiled a treatise on the subject that was used by later writers. In the 7th/13th and 8th/14th centuries, the genre became quite popular and it remains so today. The treatises by the historian al-Dhahabī [*q.v.*], the Ḥanbalī scholar Ibn Ķayyim al-Djawziyya [*q.v.*], and Djalāl al-Dīn al-Suyūṭī (d. 911/1505 [*q.v.*]) are still available in modern printings. Treatises on prophetic medicine flourished for centuries alongside those of the Greek-based humoral tradition. We know of a considerable number of treatises on *al-ṭibb al-nabawī*, but we do not have the names of any who were known for practising this type of medicine. The reason for this may be that our written sources are for the most part skewed toward the Greek-based system and omit details of other practices. It would seem that treatises on *al-ṭibb al-nabawī* were not considered detrimental to, or competitive with, medical practices based primarily upon Hellenistic humoral medicine. Islamic plague tracts also had as their primary focus the collecting and interpreting of various *ḥadīths* considered relevant to the concepts of contagion and transmissibility of disease and the proper reaction to such occurrences [see WABĀʾ]. Plague tracts also attempted medical explanations and remedies for plague, and sometimes a history of plagues up to the time of composition.

Following the rather rapid appropriation of Greek medicine (with a few Persian and Indian elements) that occurred in the 3rd/9th century, the organisation of the vast body of knowledge into a logical and accessible format became a primary concern. In the 4th/10th and early 5th/11th centuries, four comprehensive Arabic medical encyclopaedias were composed that proved to be particularly influential. Yet no modern critical editions or translations of these encyclopaedias are available. Two of these fundamental works were written by Abū Bakr Muḥammad b. Zakariyyāʾ al-Rāzī [*q.v.*]: *K. al-Manṣūrī fi 'l-ṭibb* and *K. al-Ḥāwī*. The former, dedicated in 290/903 to the Sāmānid prince Abū Ṣāliḥ al-Manṣūr b. Isḥāķ, governor of Rayy, is a relatively short general textbook, while the latter was assembled posthumously from his working files of readings and personal observations. The *Ḥāwī* is a unique type of work in the history of medicine, and, even though it was so enormous that few could afford copies and was not tightly structured as mediaeval encyclopaedias usually were, it was frequently used by later physicians. It was not without its critics, however, for the *K. Kāmil al-ṣināʿa al-ṭibbiyya* by ʿAlī b. al-ʿAbbās al-Madjūsī [*q.v.*] was written in part as an attempt to redress the lack of proper organisation and insufficient attention to anatomy and surgery that is evident in the *Ḥāwī*. Al-Madjūsī dedicated his only treatise to the Būyid ruler ʿAḍud al-Dawla Fanā Khusraw [*q.v.*], and it is one of the most comprehensive and well-organised medical compendia of early medical literature. Its division into two discrete parts, theoretical and practical, established a format common to later mediaeval medical writings. The fourth medical encyclopaedia of fundamental importance was *K. al-Ķānūn fi 'l-ṭibb* by Ibn Sīnā [*q.v.*]. Composed

over a lengthy period of time as he moved westward from Gurgān to Rayy and then to Hamadān, the compendium consisted of five books: (1) general medical principles; (2) *materia medica*; (3) diseases occurring in a particular part of the body; (4) diseases such as fevers that are not specific to one bodily part; and (5) recipes for compound drugs. The first book sometimes circulated by itself under the title *al-Kulliyyāt*. Unlike al-Rāzī or al-Madjūsī, Ibn Sīnā did not name the sources from which he drew his material. These four attempts at collecting and systematising the rather unorganised Hellenistic and Byzantine medical literature were enormously successful in producing a coherent and orderly medical system. Their sheer size tended to emphasise their authoritative nature, reinforced by titles such as *al-Ḳānūn*.

The *Ḳānūn* was, however, not greeted everywhere with praise. In Spain, when Abu 'l-ʿAlāʾ Zuhr, who died in 525/1130 [see IBN ZUHR. III], was presented with a copy of the *Ḳānūn*, he so disliked it that he refused to put it in his library, preferring to cut off its margins for use in writing prescriptions for patients. He also wrote a treatise criticising the *materia medica* in the *Ḳānūn*. His students, like those of al-Rāzī before him, compiled his therapeutic procedures and case histories into a book, *K. al-Mudjarrabāt*, following his death in Seville. His son, Abū Marwān b. Zuhr [see IBN ZUHR. IV], wrote several important works, including *K. al-Iḳtiṣād* intended for a general audience and *K. al-Taysīr* concerned with therapeutics. His compatriot Ibn Rushd [*q.v.*] wrote *K. al-Kulliyyāt*, which became one of the most influential medical writings from Spain. It remains to be investigated whether Islamic medicine in Spain developed with less dependence upon the ideas of Ibn Sīnā than elsewhere. Available evidence suggests that the *Ḳānūn* of Ibn Sīnā had little influence in ʿIrāḳ, Syria and Egypt until the second half of the 6th/12th century, when Ibn al-Tilmīdh [*q.v.*], a physician at the ʿAḍudī hospital in Baghdād who died in 560/1165, wrote a marginal commentary in a copy he transcribed (in part from Ibn Sīnā's autograph copy) of the *Ḳānūn*; portions are extant in Cambridge, Browne ms. P 5(10), and Los Angeles, UCLA Biomedical Library, Coll. 1062, ms. 108. The influence of the *Ḳānūn* is detectable in the *K. al-Mukhtārāt fi 'l-ṭibb* written in Mawṣil in 560/1165 by Ibn Hubal [*q.v.*]. In Persia, the *Ḳānūn*'s influence is evident earlier, for the Persian handbook *Dhakhīra-yi Khwārazmshāhī* by Djurdjānī [*q.v.*], dedicated to the Khwārazmshāh Ḳuṭb al-Dīn Muḥammad (490-521/1097-127), is highly dependent upon the *Ḳānūn*.

Both al-Rāzī and Ibn Sīnā also wrote essays on individual topics. Al-Rāzī wrote an influential monograph on smallpox and measles, though the earliest essay on the subject was by Thābit b. Ḳurra [*q.v.*]. Amongst al-Rāzī's other essays was one on colic (*K. al-Ḳūlandj*) and one criticising Galen's medical philosophy (*K. al-Shukūk ʿalā Djālīnūs*). Some of his case histories are contained in his *K. al-Ḥāwī*, but many more (nearly 900) were recorded and assembled posthumously by his students under the title *K. al-Tadjārib*. Ibn Sīnā's medical monographs included essays on colic, on cardiac drugs and on bloodletting, as well as a didactic medical poem (*Urdjūza fi 'l-ṭibb*) that was especially popular (judging from the large number of extant manuscripts and commentaries, including one by Ibn Rushd). The 4th/10th-century writings of Isḥāḳ b. Sulaymān al-Isrāʾīlī [*q.v.*], particularly that on fevers, were widely read, as were the writings of his pupil, the Tunisian physician Ibn al-Djazzār [*q.v.*]. The court physician to ʿAbd al-Raḥmān III [*q.v.*], Abu 'l-Ḳāsim al-Zahrāwī, composed at Cordova an encyclopaedia of 30 books entitled *K. al-Taṣrīf li-man ʿadjiza ʿan al-taṣnīf* that had particular influence through its final book, which was devoted to surgery. In the second half of the 4th/10th century, Akhawaynī Bukhārī, a student of a pupil of al-Rāzī, composed the earliest medical compendium in Persian, *Hidāyat al-mutaʿallimīn fi 'l-ṭibb*. The general Arabic textbook, *K. al-Muʿāladjāt al-buḳrāṭiyya*, by Aḥmad b. Muḥammad al-Ṭabarī, court physician to the Būyid ruler Rukn al-Dawla [*q.v.*] is preserved in many manuscript copies and merits further attention from historians, while several of the treatises by the court physician to the ʿAbbāsid caliphs al-Muḳtadī and al-Mustaẓhir [*q.vv.*], Saʿīd b. Hibat Allāh (d. 495/1101), deserve detailed attention, especially his *K. al-Mughnī fī tadbīr al-amrāḍ* and his medical-philosophical essay *Fī khalḳ al-insān*.

In the 5th/11th century an acrimonious debate occurred between two important physicians. ʿAlī b. Riḍwān [*q.v.*] was a self-taught physician, burdened by an enormous ego and a quick temper. He was appointed chief physician by the Fāṭimid caliph al-Mustanṣir [*q.v.*], and attained great political power in Egypt, where he also wrote several treatises including *K. Dafʿ maḍārr al-abdān bi-arḍ Miṣr*, a discourse on climatological features of Egypt and their relation to public sanitation and disease, particularly plague. When Ibn Buṭlān [*q.v.*], a Nestorian Christian from Baghdād educated under the leading physician of the day, arrived in Fusṭāṭ in 441/1049 and challenged Ibn Riḍwān's position, an exchange of ten increasingly vitriolic essays took place. The debate ostensibly centred upon an issue in Aristotelian biology, but was in fact motivated by enmity and the desire to acquire social status or to protect it. Ultimately, Ibn Buṭlān was forced to leave, but rather than return to Baghdād he went first to Constantinople and then to a monastery, where he became a monk. Ibn Buṭlān composed a medical manual for the use of monks, a tract on how to detect illnesses in slaves that were for sale, a satirical piece exposing the shortcomings of a physician and other medical personnel (*Daʿwat al-aṭibbāʾ*), and the extremely popular *K. Taḳwīm al-ṣiḥḥa*, which in the course of 40 charts presents 210 plants and animals and 70 other items and procedures useful for maintaining good health. Neither Ibn Buṭlān nor Ibn Riḍwān appear to have been aware of the *Ḳānūn* of Ibn Sīnā.

Perhaps with Ibn Buṭlān's *Taḳwīm* as a model, synoptic charts became a common didactic element in Arabic medical literature. Such charts are found, for example, in the therapeutic handbooks of Ibn Djazla [*q.v.*] and Saʿīd b. Hibat Allāh, and in the treatises on *materia medica* of Ibrāhīm b. Abī Saʿīd al-ʿAlāʾī al-Maghribī (*fl.* mid-6th/12th cent.) and Ḥubaysh b. Ibrāhīm al-Tiflīsī (*fl.* end of 6th/12th century). As early as the 3rd/9th century, branch diagrams were used to illustrate the relationship between ideas or between related diseases. Ibn Māsawayh appears to have been amongst the earliest to employ them, though branch diagrams are also found in some Arabic copies of summaries (*djawāmiʿ*) of Galenic treatises. Another popular format for medical discourse was that of questions and answers. Ḥunayn b. Isḥāḳ employed the technique in his *al-Masāʾil fi 'l-ṭibb li 'l-mutaʿallimīn* and also in *al-Masāʾil fi 'l-ʿayn*. Others followed suit, such as Saʿīd b. Abi 'l-Khayr al-Masīḥī (d. 589/1193), court physician to the ʿAbbāsid caliph al-Nāṣir [*q.v.*], in his introductory guide to medicine, *K. al-Iḳtiḍāb*. Didactic medical poetry was also a common device,

though given little attention by modern historians.

The Ayyūbid and Mamlūk dynasties were noted for their patronage of physicians and hospitals. Al-Malik al-Nāṣir I Ṣalāḥ al-Dīn Yūsuf b. Ayyūb (Saladin) [*q.v.*] was said to have had no less than 18 physicians in his service, eight of them Muslim, five Jews, four Christians, and one Samaritan. These included the well-known Jewish physician and philosopher Maimonides (Ibn Maymūn [*q.v.*]) and Ibn Djumayʿ [see IBN DJĀMIʿ]. The latter had a number of students, including Ibn Abi 'l-Bayān al-Isrā'īlī [*q.v.*], the author of a formulary *Dustūr al-bīmāristān* for use in the Nāṣirī hospital.

Nūr al-Dīn Maḥmūd b. Zangī [*q.v.*] had founded a hospital in Damascus which was named after him the Nūrī hospital, and al-Malik al-Nāṣir I (Saladin) followed his example by founding in 567/1171 a hospital in Cairo called the Nāṣirī hospital. The development of urban hospitals was a major achievement of mediaeval Islamic society [see BĪMĀRISTĀN]. The relation of their design and development to earlier poor and sick relief facilities offered by some Christian monasteries has not yet been fully delineated, but it is evident that the mediaeval Islamic hospital was a more elaborate institution with a wider range of functions.

The Islamic hospital served several purposes: a centre of medical treatment, a convalescent home for those recovering from illness or accidents, an insane asylum, and a retirement home giving basic maintenance needs for the aged and infirm who lacked a family to care for them. It is unlikely that any truly wealthy person would have gone to a hospital, unless they were taken ill while travelling far from home. Except under unusual circumstances, all the medical needs of the wealthy and powerful would have been administered in the home. Though Jewish and Christian doctors working in hospitals were not uncommon, we do not know what proportion of the patients would have been non-Muslim. An association with a hospital seems to have been highly desirable for a physician, and some teaching occurred in hospitals, especially in Baghdād and later in Damascus and Cairo, but most medical instruction was probably acquired through private tutoring and apprenticeship.

The association of the Umayyad caliph al-Walīd I [*q.v.*] with the establishment of the first hospital in Islam has been demonstrated to be unjustified, and the formative role of Gondēshāpūr in their development has been overemphasised. Available evidence suggests that the first Islamic hospital was founded in Baghdād by order of Hārūn al-Rashīd. The most important of the Baghdād hospitals was that established in 372/982 by ʿAḍud al-Dawla and we possess the fullest information about the great Syro-Egyptian hospitals of the 6th/12th and 7th/13th centuries.

Following the death in 560/1165 of the head of the ʿAḍudī hospital in Baghdād, Ibn al-Tilmīdh, several physicians left Baghdād for Damascus and the Nūrī hospital. One of Ibn al-Tilmīdh's students to emigrate was Ibn al-Muṭrān (d. 587/1191), a Christian who converted to Islam and found in Ṣalāḥ al-Dīn a generous patron, enabling him to develop a personal library said to contain 10,000 volumes. Ibn al-Muṭrān's major writing, *K. Bustān al-aṭibbā' wa-rawḍat al-alibbā'*, consists of numerous quotations from earlier authorities interspersed with his own comments, somewhat in the style of al-Rāzī's *Ḥāwī* but on a smaller and more organised scale. The leading figure in the teaching of learned medicine in Syria and Egypt in the 7th/13th century was Muhadhdhab al-Dīn ʿAbd al-Raḥīm b. ʿAlī, known as al-Dakhwār (d. 628/1230), who had studied medicine with Ibn al-Muṭrān and in turn taught many students in Damascus, where he was associated with the Nūrī hospital. He established upon his death a *madrasa* [*q.v.*] which was devoted solely to instruction in medicine. The school opened in 628/1231, about a month after al-Dakhwār died, and it was still in existence in 820/1417 when it underwent repairs.

His two most famous students were Ibn Abī Uṣaybiʿa and Ibn al-Nafīs. Ibn Abī Uṣaybiʿa [*q.v.*] was born into a family of Damascene physicians and in his day was a noted oculist practicing at the Nūrī hospital. Today his name is more readily associated with his *K. ʿUyūn al-anbā' fī ṭabaḳāt al-aṭibbā'*, in which he gives the biographies of over 380 physicians and scholars. His work greatly expands the earlier bio-bibliographic accounts given by Ibn al-Ḳifṭī [*q.v.*].

Ibn al-Nafīs [*q.v.*], usually referred to in Arabic sources by his *nisba* al-Ḳurashī, was a noted jurist as well as a prolific writer of medical tracts. He undertook an enormous medical compendium called *K. al-Shāmil fī 'l-ṣināʿa al-ṭibbiyya*, which was projected to extend to 300 volumes, of which he completed only 80 (portions are preserved in nine manuscripts, one of which is an autograph [Palo Alto, Stanford University, Lane Medical Library, ms. Z 276]). He also wrote on ophthalmology and produced a commentary on *K. al-Masā'il fī 'l-ṭibb* by Ḥunayn b. Isḥāḳ.

While the earliest epitome of the *Ḳānūn* seems to have been that by al-Īlāḳī (*fl.* 460/1068), a pupil of Ibn Sīnā, it was not really until the late 6th/12th century that a serious need was perceived for aids to understanding the *Ḳānūn*. The Egyptian Jewish physician Ibn Djumayʿ, who died in 594/1198, composed possibly the earliest commentary on the *Ḳānūn*. In the 7th/13th and 8th/14th centuries, commentaries and epitomes followed in rapid succession, and it was this industry of glossing and condensing the *Ḳānūn* that assured the encyclopaedia its pre-eminent position in mediaeval medicine.

The most widely read of all abridgements of the *Ḳānūn* was that titled *K. al-Mūdjiz* written by Ibn al-Nafīs. He also composed a commentary on the entire *Ḳānūn* that became an authoritative work in its own right, and in it he criticised Ibn Sīnā for, amongst other things, spreading his discussion of anatomy over several different sections of the *Ḳānūn*. Ibn al-Nafīs then prepared a separate commentary on the anatomy which is preserved in several copies, one completed in 640/1242 some 46 years before his death (Los Angeles, UCLA Biomedical Library, Coll. 1062, ms. 80), and in it Ibn al-Nafīs described the movement of blood through the pulmonary transit (the pulmonary circulation) some three centuries before it was described by Europeans [see TASHRĪḤ]. Ibn al-Nafīs spent much of his life in Cairo, where he died in 687/1288 bequeathing his house and library to the recently-constructed Manṣūrī hospital there.

In Damascus, an important pupil of both Ibn al-Nafīs and Ibn Abī Uṣaybiʿa was the Christian physician Ibn al-Ḳuff [*q.v.* in Suppl.], who taught medicine in Damascus and composed what appears to be the only mediaeval Arabic treatise devoted solely to surgery. This manual (*K. al-ʿUmda fī ṣināʿat al-djirāḥa*) covered all aspects of surgical care except ophthalmology, which he considered to be a speciality with its own technical literature.

Only two areas of medicine developed their own extensive specialist literature: ophthalmology and pharmacology. Nearly every medical compendium had chapters on both subjects, but the most comprehensive

coverage was to be found in the large number of monographs devoted solely to eye diseases or simple and compound remedies.

Ophthalmology was a topic in which mediaeval Islamic writers displayed considerable originality [see ʿAYN and RAMAD]. Early in the 3rd/9th century, both Ibn Māsawayh and his student Ḥunayn b. Isḥāḳ wrote influential monographs on the subject. Though based to a large extent upon Greek sources, they already show considerable advancement in knowledge over that in the extant Greek writings, including knowledge of some previously unrecognised pathological conditions such as pannus (*sabal* in Arabic), for which intricate surgical procedures soon developed. One of the most highly-regarded ophthalmological manuals was that covering 130 eye ailments written by ʿAlī b. ʿĪsā [*q.v.*] who practised in Baghdād in the 4th/10th century, the *Tadhkirat al-Kaḥḥālīn*. A near-contemporary of his was ʿAmmār al-Mawṣilī [*q.v.*], who was originally from ʿIrāḳ but moved to Egypt where he dedicated his only writing, a treatise on eye diseases, to the Fāṭimid ruler al-Ḥākim [*q.v.*]. ʿAmmār's treatise discusses only 48 diseases, but contains some interesting clinical cases and a claim to have designed a hollow cataract needle for the removal of the cataract from the eye by suction. This method of removal was attributed by al-Rāzī in his *K. al-Ḥāwī* to a Greek physician, Antyllus, of the 2nd century A.D.; others, such as al-Zahrāwī, said they had heard of such a procedure, but had not seen it performed. The history and efficacy of this supposed method of cataract removal has been the subject of recent studies. The method of cataract treatment undoubtedly widely practiced since antiquity, was that of couching, in which the opaque lens (or "crystalline humour") is not removed but rather pushed to one side. There is evidence that in some locales there were people who did nothing but couch cataracts; they were probably itinerant and not highly trained in other medical matters. For example, Ḳuṭb al-Dīn al-Shīrāzī [*q.v.*] wrote in 682/1283 in his commentary on Ibn Sīnā's *Ḳānūn* that he carried out procedures such as bloodletting, suturing, the surgical removal (*laḳṭ*) of the eye conditions pannus and pterygium, but would not undertake couching of cataracts (*ḳadḥ*) as not befitting him.

For reasons as yet unknown, there was during the 6th/12th and 7th/13th centuries an unprecedented interest in composing Arabic treatises on ophthalmology. In Spain, Muḥammad b. Ḳassūm b. Aslam al-Ghāfiḳī [*q.v.*], of whom essentially nothing is known, wrote *K. al-Murshid fī ṭibb al-ʿayn*, consisting of nine chapters covering all aspects of the medical, surgical, and pharmaceutical treatment of the ocular disorders then recognised. The first chapter is of particular interest for its discussion of the ethics of oculists and a paraphrase of the Hippocratic oath. In Cairo, Fatḥ al-Dīn al-Ḳaysī (d. 657/1258) dedicated his ophthalmological manual to al-Malik al-Ṣāliḥ II Nadjm al-Dīn Ayyūb [*q.v.*]. His treatise, *K. Natīdjat al-fikar fī ʿilādj amrāḍ al-baṣar*, consists of seventeen chapters dealing with the anatomy and physiology of the eye and with the causes, symptoms, and treatment of 124 eye conditions, some apparently described here for the first time. About a decade later, another comprehensive ocular manual was composed in Syria by Khalīfa b. Abi 'l-Maḥāsin [*q.v.*], who meticulously cited the previous writers on the subject from whom he drew material. Al-Ḳaysī is not among them, and so we are left to conclude that al-Ḳaysī's treatise was not yet available in northern Syria, where Khalīfa apparently worked. The manual by Khalīfa includes a considerable amount of novel material, including diagrammatic charts of ophthalmological instruments and the first recorded instance of the use of a magnet to remove a foreign object from the eye—in this case a piece of a needle that had broken while couching a cataractous eye.

Another important 7th/13th-century ophthalmological treatise was *K. Nūr al-ʿuyūn wa-djāmiʿ al-funūn* whose author is commonly referred to as Ṣalāḥ al-Dīn b. Yūsuf al-Kaḥḥāl al-Ḥamawī; it has been demonstrated, however, that the treatise was composed by one Abū Zakariyyāʾ Yaḥyā b. Abi 'l-Radjāʾ (see G. Schoeler, in *Isl.*, lxiv [1987], 89-97). This particular manual is unusual in examining at length the optical explanation of vision, and it also has illustrations of instruments and an interesting diagram showing a quarter section of an eye along two different planes. A very thorough and systematic explication of 7th/13th-century ophthalmological knowledge was presented by Ibn al-Nafīs in his *K. al-Muhadhdhab fī ṭibb al-ʿayn*. Ibn Abī Uṣaybiʿa, in his biographical dictionary, devoted two chapters to his contemporaries in Syria and Egypt, and yet al-Ḳaysī was the only one of the Syrian-Egyptian oculists contemporary with him to receive his attention. It is curious that he omitted to mention Ibn al-Nafīs or Khalīfa or Ibn Abi 'l-Radjāʾ (ps.-Ṣalāḥ al-Dīn), though there is one manuscript copy, now in Damascus (Ẓāhiriyya ms. 4883 *ṭibb*, fol. 104b), of Ibn Abī Uṣaybiʿa's *K. ʿUyūn al-anbāʾ* which has a paragraph at the end of the treatise concerning Ibn al-Nafīs, but it appears to be an addition to a recent copy. In the following century, the Egyptian scholar Ibn al-Akfānī [see IBN AL-AKFĀNĪ. 3, in Suppl.] wrote an ophthalmological text, *K. Kashf al-rayn fī aḥwāl al-ʿayn*, and then prepared an abridgement of it. Later in the 8th/14th century Ṣadaḳa b. Ibrāhīm al-Shādhilī composed his *K. al-ʿUmda al-kuḥliyya fī 'l-amrāḍ al-baṣariyya* which contains some interesting evidence of the level and frequency of ocular surgery in his day. The decline in originality characteristic of the majority of medical compositions after the 8th/14th century can be seen in a manual written in the 9th/15th century by the Egyptian oculist Nūr al-Dīn ʿAlī b. al-Munāwī, for it actually consists of the abridgement which al-Akfānī wrote of his own treatise, alongside of which al-Munāwī placed the text of al-Akfānī's longer manual as well as the relevant passages from Ibn al-Nafīs's treatise on ophthalmology.

In pharmacology, Islamic writers surpassed their earlier models, primarily because their broader geographic horizons brought them into contact with drugs unknown to earlier peoples. Knowledge of medicinal substances was based initially upon the approximately 500 substances described by Dioscorides [see DIYUSḲŪRĪDĪS]. From the formularies of Sābūr b. Sahl and al-Kindī [*q.vv.*], and a treatise on the medical régime for pilgrims to Mecca (*R. fī tadbīr safar al-ḥadjdj*) written by Ḳusṭā b. Lūḳā, it is evident that by the 3rd/9th century many medicaments were being used that were unknown in Hellenistic medicine, including camphor [see KĀFŪR], musk [see MISK], and sal-ammoniac [see AL-NŪSHĀDIR], as well as commodities previously unknown to Europe, such as cotton [see ḲUṬN]. For other formularies, see AḲRĀBĀDHĪN. Numerous treatises were composed on *materia medica*, often with extensive philological interests [see NABĀT and ADWIYA]. Most influential of all was the manual by Ibn al-Bayṭār [*q.v.*], which was an alphabetical guide to over 1,400 medicaments in 2,324 separate entries, taken from his own observations as well as over 260 written sources which he quotes. His enormous manual formed the basis of

many subsequent guides to medicinal substances. New equipment was also developed for pharmaceutics. "Albarello" is the name given today in Europe to drug jars having a contracted waist, the earliest examples of which were made in Syria in the 6th/12th century. There was also a large and varied industry of mortar and pestle design and production.

The topic of poisons was of great interest in both antiquity and in mediaeval Islam. Snake and dog bites as well as the ill effects of scorpions and spiders and other animals caused much concern, while the poisonous properties of various minerals and plants, such as aconite, mandrake, and black hellebore, were exploited. A particularly important Arabic treatise on antidotes was written in 669/1270 in Syria by ʿAlī b. ʿAbd al-ʿAẓīm al-Anṣārī (unique copy, Bethesda, Md., National Library of Medicine, ms. A64). It not only describes plants found in Syria at the time, but incorporates extensive quotations from other treatises, including some otherwise lost today, such as a treatise on antidotes by the Egyptian physician al-Tamīmī (d. 370/980) and an illustrated herbal by the Syrian Ras̲h̲īd al-Dīn al-Manṣūr b. al-Sūrī (d. 641/1243) [see further, SUMM].

Other topics were sometimes the subjects of monographs, but they did not generate a large specialist literature. Such topics included anatomy [see TAS̲H̲RĪḤ], colic, haemorrhoids, skin diseases, forgetfulness, headaches, melancholia, fevers, bloodletting [see FAṢṢĀD, in Suppl.], embryology [see ʿARĪB B. SAʿD AL-KĀTIB AL-ḲURṬUBĪ], and care of children [see ṢAG̲H̲ĪR]. In the case of surgery [see D̲J̲ARRĀḤ and K̲H̲ITĀN], Ibn al-Ḳuff's book on it was not as influential as the surgical chapter from the encyclopaedia by al-Zahrāwī, which was illustrated with drawings of instruments and often circulated independently from the encyclopaedia. A Turkish version of al-Zahrāwī's surgical chapter was prepared for Meḥemmed II Fātiḥ [*q.v.*], but human figures were introduced into the illustrations, reducing the instruments to insignificance; it was probably never intended as a guide to a physician but rather as an entertaining present to a ruler. Other topics, such as leprosy [see D̲J̲UD̲H̲ĀM, in Suppl.] and malaria [see MALĀRYĀ] were discussed in encyclopaedias and have interested modern scholars, but were not themselves the subjects of monographs.

In certain regions the functioning of medical practioners was overseen by a *raʾīs al-aṭibbāʾ* and/or a *muḥtasib*. Though little is known about the actual duties of the former, a number of manuals were written as guides for the latter [see ḤISBA]. Prior to the 6th/12th century, the manuals only briefly mentioned the medical profession, and then mostly in relation to drugs, weights, and measures. Al-S̲h̲ayzarī (d. 589/1193), a physician working in Aleppo, wrote a manual requiring that the Hippocratic oath be administered to physicians, oculists examined for their knowledge of Ḥunayn b. Isḥāḳ's *K. al-ʿAs̲h̲r maḳālāt fi 'l-ʿayn*, bone setters tested with the Arabic version of Paul of Aegina's surgical chapter, and surgeons required to know a particular book by Galen. Later manuals repeated these requirements, but there is little evidence as to what extent such examinations were actually conducted. It has also been asserted that a mediaeval Islamic physician was granted a license (*id̲j̲āza*) following the completion of his education. There is, however, no evidence for a uniform, standardised, or controlled system of medical education, though there are preserved today a number of signed statements at the end of treatises that a student has read and understood a given text in the presence of the author or established physician. Such certifications are not equivalent to licensing a physician upon completion of an approved period of training, nor is the term *id̲j̲āza* found in such documents.

Magical and folkloric practices, as well as astrological medicine, also formed part of the medical pluralism. One of the most obvious uses of charms and incantations was to protect against epidemics, whose occurrences were devastating, unpredictable and little understood, but they were also used to protect against every sort of disease and misfortune as well as the evil eye. Certain verses of the Ḳurʾān were considered especially beneficial, and magical alphabets and other sigla were combined to form amulets, which (after the 6th/12th century) might include magic squares [see WAFḲ]. That such practices were not the sole domain of the poor is evident in the magic-medicinal bowls made for Ayyūbid and Mamlūk rulers. Large numbers of magic-medicinal bowls are preserved today, engraved with magical symbols and Ḳurʾānic verses. According to inscriptions on the early specimens, they were thought useful for a variety of ailments, including stomach complaints, headache, nosebleeds, scorpion stings, bites of snakes and mad dogs, and would assist in childbirth. Curiously, neither the magic-medicinal bowls nor the talismanic shirts (of which a considerable number of Ṣafawid, Ottoman and Mug̲h̲al examples are recorded) are mentioned in the written literature that has been so far examined. The writings of learned physicians, such as al-Rāzī, are not entirely devoid of sympathetic magic, for occasional references are found to sympathetic remedies involving magical principles. Throughout the society, in varying degrees, there was room for popular explanations and cures alongside the more learned approaches.

Early modern European influences can be seen in Ṣafawid medicine [see ṢAFAWIDS. IV. II. 1]. The earliest treatise on syphilis (*ātis̲h̲ak*) appears to be a Persian essay written in 977/1569 by ʿImād al-Dīn Maḥmūd S̲h̲īrāzī, who also wrote a separate tract on China Root (*čub-i čīnī*), the rhizome of an Old World species of Smilax advocated for syphilis and as a general panacea. This new drug for treating a new disease was rapidly incorporated into Arabic medical writings. For example, Dāwūd al-Anṭākī [*q.v.*] included in his *Tad̲h̲kira* a similar description of syphilis and China Root. Al-Anṭākī also relied heavily upon medieval Islamic writers and earlier Greek sources, for which he learnt Greek so as to study them directly.

At the Ottoman court of the 11th/17th century, the early-modern European concept of "chemical medicine" was introduced through the writings of the court physician to Meḥemmed IV [*q.v.*], Ṣāliḥ b. Naṣr b. Sallūm, who translated into Arabic several Latin writings by Oswald Croll (d. 1609), professor of medicine at the University of Marburg, and Daniel Sennert (d. 1637), professor of medicine at Wittenberg. Both men were followers of Paracelsus (d. 1541), who employed mineral acids, inorganic salts and alchemical procedures in the production of remedies. Many of the medicaments required distillation processes and plants that were indigenous to the New World, such as guaiacum and sarsaparilla. Ibn Sallūm's treatises not only reflected the new "chemical medicine" but also described for the first time in Arabic a number of "new" diseases, such as scurvy, anaemia, chlorosis, the English sweat (a type of influenza) and plica polonica (an East European epidemic of matted and crusted hair caused by infestation with lice). By the 17th century it is evident that Vesalius's *De humani corporis fabrica* printed in Basel in 1542 was known in the Ṣafawid and Ottoman empires [see TAS̲H̲RĪḤ]. At the same

time, at the Ottoman court there was a revival of interest in *terra lemnia* (an ancient Greek medicinal earth) as a remedy for plague.

In the early 18th century, there was continued Ottoman interest in Paracelsian medicine, though there was also opposition from practitioners of mediaeval humoral medicine. When plague befell Istanbul, Muṣṭafā III [*q.v.*] ordered a Turkish translation to be made of two treatises by Hermann Boerhaave (d. 1738), a Dutch medical reformer. These versions, made by the court physician Ṣubḥī-zāde ʿAbd al-ʿAzīz in collaboration with the Austrian interpreter Thomas von Herbert, attempted through explanations and glosses to harmonise the European medicine with the traditional medicine.

In the 19th century, profound changes occurred in the teaching of medicine, and as European medicine was introduced on a large scale, many European texts were translated into Arabic and Persian. In 1828 a medical school near Cairo was established at which French, Italian, and German professors taught European medicine, and in 1850 a military medical school, the Dār al-Fūnūn, was founded in Tehran where instruction was given in French by professors from Austria and Italy. Yet medical pluralism remains even today, with traditional and folkloric practices and treatises on *al-ṭibb al-nabawī* still forming part of the spectrum of medical care.

In the 5th/11th century, Arabic medical theories and practices began to filter into Europe. One of the earliest to be translated was an abbreviated version of Ḥunayn b. Isḥāḳ's *K. al-Masāʾil fī ʾl-ṭibb*, known in Latin as the *Isagoge*, which was fundamental in establishing the basic conceptual framework of medicine in Europe. The major writings of al-Madjūsī (Haly Abbas), al-Rāzī (Rhazes), and Ibn Sīnā (Avicenna) were all translated into Latin by the mid-7th/13th century. The name Mesue was associated with several influential Latin treatises, only some of which were actually written by Ibn Māsawayh. The writings of Isḥāḳ b. Sulaymān al-Isrāʾīlī and Ibn al-Djazzār had considerable circulation through Latin versions, as did the *K. al-Kulliyyāt* (*Colliget*) of Ibn Rushd (Averroes). The surgical chapter by al-Zahrāwī (Abulcasis) enjoyed great popularity in Europe, as did the *Taḳwīm al-ṣiḥḥa* of Ibn Buṭlān, known as *Tacuim* or *Tacuinum sanitatis*. With only a few exceptions, no Islamic medical writers who lived after Ibn Buṭlān are represented by Latin translations of their writings. A subject of debate is whether a Latin translation of Ibn al-Nafīs's description of the pulmonary circulation was available in the 16th century [see TASHRĪḤ].

In the 16th century, Europeans again became interested in medical practices in the Islamic world. For example, Leonhard Rauwolf travelled in Syria, Iraq, and Palestine from 1573 to 1575 to collect plant specimens and record customs. Before travelling there, he had read Latin translations of Avicenna, Rhazes and Averroes. In the next century, Joseph Labrosse (Fr. Angelus of St Joseph) went to Rome in 1662 to study Arabic for two years and then travelled to Iṣfahān to study Persian, where he used medicine as a means of propagating Christianity. Upon return to France he published in 1681 the *Pharmacopoea persica* which consisted of a Latin translation of the *Ṭibb-i shifāʾī* by Muẓaffar b. Muḥammad al-Ḥusaynī al-Shifāʾī (d. 974/1556) with comments by Labrosse. In the 18th century, two Latin translations of al-Rāzī's treatise on smallpox and measles were made at a time when there was much interest in inoculation or variolation for smallpox following the description around 1720 of the procedure in Turkey by Lady Mary Wortley Montagu, wife of the Ambassador Extraordinary to the Ottoman court. Pharmacopoeias in European vernacular languages continued to show the influence of Islamic pharmacology until the beginning of the 19th century.

Bibliography: For every topic, as well as individual physicians, see the comprehensive bibliography by M. Ullmann, *Die Medizin im Islam* (Hdb. d. Or. I,vi,1), Leiden 1970, and for those living before 430/1038 see Sezgin, *GAS*, iii. For Persian sources, see Storey, ii/2, E, and L. Richter-Bernburg, *Persian medical manuscripts at the University of California, Los Angeles. A descriptive catalogue*, Malibu, Calif. 1978. See also E. Savage-Smith, *Islamic science and medicine*, in *Information sources in the history of science and medicine*, ed. P. Corsi and P. Weindling, London 1983, 436-55.

For general surveys of Islamic medicine: Ullmann, *Islamic medicine*, Edinburgh 1978; L.I. Conrad, *The Arab-Islamic medical tradition*, in Conrad, M. Neve *et alii*, *The western medical tradition, 800 B.C. to A.D. 1800*, Cambridge 1995, 93-138; Savage-Smith, *Medicine*, in *Encyclopedia of the history of Arabic science*, ed. R. Rashed, London 1996, iii, 903-62; H.D. Isaacs, ch. *Arabic medical literature*, in *Camb. hist. Ar. lit*, iii, 342-63; M.W. Dols, *Medieval Islamic medicine. Ibn Riḍwān's Treatise "On the prevention of bodily ills in Egypt"*, Berkeley 1984, 3-72; F. Klein-Franke, *Vorlesungen über die Medizin im Islam* (Sudhoffs Archiv, Beiheft 23), Wiesbaden 1982. Still useful are M. Plessner, *The natural sciences and medicine*, in *The legacy of Islam*, 2nd ed., ed. J. Schacht and C.E. Bosworth, Oxford 1974; E.G. Browne, *Arabian medicine*, Cambridge 1921; D.M. Dunlop, *Arab civilization to A.D. 1500*, London 1971, 204-50; C. Elgood. *A medical history of Persia and the Eastern Caliphate*, Cambridge 1951; idem, *Safavid medical practice*, London 1970; and L. Leclerc, *Histoire de la médecine arabe*, Paris 1876.

Important volumes covering a range of topics include F. Rosenthal, *Science and medicine in Islam. A collection of essays*, Variorum, Aldershot 1990; M. Meyerhof, *Studies in medieval Arabic medicine. Theory and practice*, ed. P. Johnstone, London 1984; F. Sezgin (ed.), *Beiträge zur Geschichte der arabisch-islamischen Medizin. Aufsätze aus den Jahren 1819-1920*, 4 vols., Frankfurt-am-Main 1980. At Frankfurt-am-Main, the Institut für Geschichte der Arabisch-Islamischen Wissenschaften has also issued collections (ed. F. Sezgin, in the series "Texts and Studies") of reprinted secondary studies devoted to individual physicians, including ʿAlī b. al-ʿAbbās al-Madjūsī (1996), al-Rāzī (4 vols. 1996), Ibn Sīnā (4 vols. 1996), al-Zahrāwī (2 vols. 1996), Mūsā b. Maymūn (5 vols. 1996) and Ibn al-Nafīs (1997).

For Umayyad and early ʿAbbāsid medicine, as well as the origins of the hospital: G.R. Hawting, *The development of the biography of al-Ḥārith ibn Kalada and the relationship between medicine and Islam*, in *The Islamic world from classical to modern times. Essays in honor of Bernard Lewis*, ed. C.E. Bosworth, C. Issawi *et alii*, Princeton 1989, 127-40; M.-G. Balty-Guesdon, *Le* Bayt al-ḥikma *de Baghdad*, in *Arabica*, xxxix (1992), 131-50; F. Micheau, *The scientific institutions in the medieval Near East*, in *Encyclopedia of the history of Arabic science*, iii, 985-1007; Conrad, *Did al-Walīd I found the first Islamic hospital?*, in *ARAM*, vi (1994), 225-44; Dols, *The origins of the Islamic hospital. Myth and reality*, in *Bull. of the Hist. of Medicine*, lxi (1987), 367-90; Richter-Bernburg, art. *Boktīshūʿ*, in *EIr*, iv, 333-6;

Ḥunayn b. Isḥāḳ, *Masāʾil fi ʾl-ṭibb*, ed. Muḥammad ʿAlī Abū Rayyān *et alii*, Cairo 1978; idem, *Questions on medicine for scholars*, tr. P. Ghalioungui, Cairo 1980.

For *al-ṭibb al-nabawī*: I. Perho, *The Prophet's medicine. A creation of the Muslim traditionalist scholars*, Studia Orientalia lxxiv, Helsinki 1995; *Ṭibb al-aʾimma*, Beirut n.d.; *Islamic medical wisdom. The Ṭibb al-aʾimma*, tr. Batool Ispahany, London 1991; Ibn Ḥabīb, *Mukhtaṣar fi ʾl-ṭibb*, ed. C. Álvarez de Morales and F. Girón Irueste, Madrid 1992; Dhahabī, *al-Ṭibb al-nabawī*, in margins of ʿAbd al-Raḥmān al-Azraḳ, *Tashīl al-manāfiʿ fi ʾl-ṭibb wa ʾl-ḥikma*, Būlāḳ 1304/1887 and Cairo 1367/1948: Elgood, *Ṭibb-ul-Nabbi or medicine of the prophet*, in *Osiris*, xiv (1962), 33-192 (the treatise by al-Dhahabī was translated by Elgood but incorrectly attributed to al-Suyūṭī); Suyūṭī, *Manhadj sawī wa ʾl-manhal al-rawī fi ʾl-ṭibb al-nabawī*, ed. Ḥasan Maḳbūlī, Beirut 1986; Dols, *Majnūn. The madman in medieval Islamic society*, Oxford 1992, 211-60; Conrad, *Medicine. Traditional practice*, in *The Oxford encyclopedia of the modern Islamic world*, ed. J.L. Esposito, New York-Oxford 1995, iii, 85-91; Fazlur Rahman, *Health and medicine in the Islamic tradition. Change and identity*, New York 1987 (see review in *History of Science*, xxvi (1988), 418-25); J.C. Bürgel, *Secular and religious features of medieval Arabic medicine*, in *Asian medical systems*, ed. C. Leslie, Berkeley 1976, 41-62; G. Bos, *The Miswāk, an aspect of dental care in Islam*, in *Medical History*, xxxvii (1993), 68-79.

For plague tracts and theories of contagion: Dols, *The Black Death in the Middle East*, Princeton 1977; Conrad, *Epidemic disease in formal and popular thought in early Islamic society*, in *Epidemic and ideas. Essays on the historical perception of pestilence*, ed. T. Ranger and P. Slack, Cambridge 1992, 77-99; idem, *Ṭāʿūn and wabāʾ: conceptions of plague and pestilence in early Islam*, in *JESHO*, xxv (1982), 268-307.

For 4th/10th and 5th/11th-century physicians: A.Z. Iskandar, ch. *al-Rāzī*, in *Camb. hist. Ar. lit*, iii, 370-7; R. Kuhne, *El "Sirr ṣināʿat al-ṭibb" de Abū Bakr Muḥammad b. Zakariyyāʾ al-Rāzī*, in *al-Qanṭara*, iii (1982), 347-414, v (1984), 235-92, vi (1985), 369-95; Richter-Bernburg, art. *ʿAlī b. ʿAbbās Majūsī*, in *EIr*, i, 837-8; C. Burnett and D. Jacquart, (eds.), *Constantine the African and ʿAlī ibn al-ʿAbbās al-Maǧūsī. The "Pantegni" and related works*, Leiden 1994; J.L. Janssens, *An annotated bibliography of Ibn Sīnā (1970-1989)* (Ancient and medieval philosophy, ser. 1, 13), Leuven 1991; Richter-Bernburg, art. *Akawaynī Bokārī*, in *EIr*, i, 706-7; Abu ʾl-ʿAlāʾ Zuhr, *Kitāb al-Muǰarrabāt* (*Libro de las experiencias médicas*), ed. C. Álvarez Millán, Madrid 1994; Iskandar, *An autograph of Ibn al-Tilmīdh's "Marginal commentary on Ibn Sīnā's Canon of Medicine"*, in *Le Muséon*, xc (1977), 177-236; idem, *Another fragment from the autograph of Ibn al-Tilmīdh's "Marginal commentary"*, in *BSOAS*, xliv (1981), 253-61; Conrad, *Scholarship and social context. A medical case from the eleventh-century Near East*, in *Knowledge and the scholarly medical traditions*, ed. D. Bates, Cambridge 1995, 84-100; Dols, *Medieval Islamic medicine*; Ibn Buṭlān, *Le "Taqwīm al-ṣiḥḥa" (Tacuini sanitatis) d'Ibn Buṭlān*, ed. and tr. H. Elkhadem (Académie Royale de Belgique, Classe des Lettres, 7), Leuven 1990; Ibn Buṭlān, *The Physicians' dinner party*, ed. and tr. Klein-Franke, Wiesbaden 1985.

For Ayyūbid and Mamlūk physicians: Ibn Djumayʿ, *Treatise to Ṣalāḥ ad-Dīn on the revival of the art of medicine*, ed. and tr. H. Fähndrich (*Abh. K. M.*, xlvi/3), Wiesbaden 1983: D. Behrens-Abouseif, *Fatḥ Allāh and Abū Zakariyya. Physicians under the Mamluks* (Suppl. aux *AI*, Cahier 10), Cairo 1987. For commentaries on the *Ḳānūn*, see Iskandar, *A catalogue of Arabic manuscripts on medicine and science in the Wellcome Historical Medical Library*, London 1967, 33-64.

For ophthalmology and physiological optics: F. Sezgin (ed.), *Augenheilkunde im Islam. Texte, Studien und Übersetzungen*, 4 vols., Frankfurt am Main 1986; C.A. Wood, *Memorandum book of a tenth-century oculist*, Chicago 1936, repr. Birmingham, Alabama 1985; M. Feugère, E. Kunzel and U. Weisser, *Le aiguilles à cataracte de Montbellet (Saône-et-Loire). Contribution à l'étude de-l-ophtalmologie antique et islamique*, in *Jahrbuch d. Römisch-Germanischen Zentralmuseums Mainz*, xxxii (1985), 436-508; Savage-Smith, *Ibn al-Nafīs's "Perfected book on ophthalmology"*, in *J. for the History of Arabic Science*, iv (1980), 147-206; G. Russell, *The emergence of physiological optics*, in *Encyclopedia of the history of Arabic science*, ii, 672-715. For recent editions of five texts, see Savage-Smith [book review] in *Bull. of the Hist. of Medicine*, lxvi (1992), 296-300.

For pharmacology: *Dioscurides Triumphans. Ein anonymer arabischer Kommentar (End 12. Jahrh. n. Chr.) zur Materia Medica*, ed. and tr. A. Dietrich (*Abh. A.W. Gött.*, phil.-hist. Kl., ser. 3. clxxii, clxxiii), Göttingen 1988; *Die Dioskurides-Erklärung des Ibn al-Baitar*, ed. and tr. idem (*Abh. A.W. Gött.*, phil.-hist. Kl., ser. 3, cxci), Göttingen 1991; idem, *Die Erganzung Ibn Ǧulǧul's zur Materia medica des Dioscurides* (*Abh. A.W. Gött.*, phil.-hist. Kl., ser. 3, ccii), Göttingen 1994; M.M. Sadek, *The Arabic Materia Medica of Dioscorides*, Quebec 1983; Hūšang Aʿlam, art. *Botanical studies on Iran*, in *EIr*, iv, 391-401; *Qusṭā ibn Lūqā's medical regime for the pilgrims to Mecca*, ed. and tr. G. Bos, Leiden 1992; Bos, *The treatise of Ahrun on lethal drugs*, in *ZGAIW*, vii (1991-2), 136-71. For pharmaceutical equipment, see F. Maddison and Savage-Smith, *Science, tools and magic* (Khalili Coll. of Islamic Art. xii), London-Oxford 1997, i, 42-57, and ii, 290-318.

For recent studies of particular topics: Dols, *Majnūn*; idem, *Leprosy in medieval Arabic medicine*, in *J. of the Hist. of Medicine*, xxxiv (1979), 314-33; U. Weisser, *Zeugung, Vererbung und pränatale Entwicklung in der Medizin des arabisch-islamischen Mittelalters*, Erlangen 1983; A. Giladi, *Some observations on infanticide in medieval Muslim society*, in *IJMES*, xxii (1990), 185-200; idem, *Children of Islam*, London 1992; X. de Planhol, art. *Cholera*, in *EIr*, v, 504-11.

For surgery: *Albucasis, On Surgery and Instruments*, ed. and tr. M.S. Spink and G.L. Lewis, Berkeley-London 1973 (cf. rev. in *History of Science*, xiv [1976], 245-64); F. Sanagustin, *La chirurgie dans le Canon de la medécine (al-Qānūn fi-ṭ-ṭibb) d'Avicenna (Ibn Sīnā)*, in *Arabica*, xxxiii (1986), 84-122; S.K. Hamarneh, *Excavated surgical instruments from Old Cairo, Egypt*, in *Annali dell'Istituto a Museo di Storia della Scienze di Firenze*, ii (1977), 3-13; W. Floor, art. *Bloodletting*, in *EIr*, iv, 315-6.

For education: J. Chr. Bürgel, *Adab und iʿtidāl in al-Ruhāwī's Adab aṭ-Ṭabīb*, in *ZDMG*, cxvii (1967), 90-102; M. Levey, *Medical ethics of medieval Islam, with special reference to al-Ruhāwī's "Practical ethics of the physician"*, in *Trans. Amer. Philosophical Soc.*, N.S. lvii/3, Philadelphia 1967; G. Leiser, *Medical education in Islamic lands from the seventh to the fourteenth century*, in *J. of the Hist. of Medicine*, xxxviii (1983), 48-75; H.H. Biesterfeldt, *Some opinions on the physician's remuneration in medieval Islam*, in *Bull. of the History of Medicine*, lviii (1984), 16-27; Ruhāwī, *Adab al-Ṭabīb*, facs. ed. F. Sezgin, Frankfurt 1985; R.P. Buckley, *The Muḥtasib*, in *Arabica*, xxxix (1992), 59-117.

For magical/astrological medicine: Mad-

dison and Savage-Smith, *Science, tools and magic*, i, 59-147; Dols, *Majnūn*, 261-310; Klein-Franke, *Iatromathematics in Islam. A study on Yuḥanna Ibn aṣ-Ṣalt's book on "Astrological medicine"* (Texte und Studien z. Orientalistik, 3), Hildesheim 1984; P. Johnstone, *Tradition in Arabic medicine*, in *Palestine Exploration Quarterly* (1975), 23-37; G.C. Anawati, *Trois talismans musulmans en arabe provenant du Mali (Marché de Mopti)*, in *AI*, xi (1972), 287-339; J.A. Navarro and J. Martínez Ruiz, *Medicina, farmacopea y magia en el "Misceláneo de Salomón"*, Granada 1987; C. Burnett, *Magic and divination in the Middle Ages. Texts and techniques in the Islamic and Christian worlds*, Variorum, Aldershot 1997.

For early modern influences: Leiser and Dols, *Evliyā Chelebi's Description of medicine in seventeenth-century Egypt*, in *Sudhoffs Archiv*, lxxii (1987), 197-216, lxxiii (1988), 49-68; Savage-Smith, *Drug therapy of eye diseases in seventeenth-century Islamic medicine*, in *Pharmacy in History*, xxix (1987), 3-28; J. Raby, *Terra lemnia and the potteries of the Golden Horn. An antique revival under Ottoman auspices*, in *Byzantinische Forschungen*, xxi (1995), 305-42; J.W. Estes and L. Kuhnke, *French observations of disease and drug use in late eighteenth-century Cairo*, in *J. of the Hist. of Medicine*, xxxix (1984), 121-52; Kuhnke, *Lives at risk. Public health in nineteenth-century Egypt*, Berkeley 1990; N.E. Gallagher, *Egypt's other wars. Epidemics and the politics of public health*, Syracuse *ca.* 1990; H. Ziai, *UCLA Bio-Medical Library, 19th-century Persian medical manuscripts. A description*, typescript, Los Angeles *ca.* 1990.

For influence in Europe: D. Jacquart and F. Micheau, *La médecine arabe et l'occident médiéval*, Paris 1990; D.C. Lindberg, *The Western reception of Arabic optics*, and Jacquart, *The influence of Arabic medicine in the medieval West*, in *Encyclopedia of the history of Arabic science*, ii, 716-29, iii, 963-84; S. Lieberknecht, *Die Canones des Pseudo-Mesue, eine Mittelalterliche Purgantien-Lehre* (Quellen u. Studien z. Geschichte d. Pharmazie, 71), Stuttgart 1995; Savage-Smith, *John Channing, eighteenth-century apothecary and Arabist*, in *Pharmacy in history*, xxx (1988), 63-80; eadem, *Europe and Islam*, in *Western medicine. An illustrated history*, ed. I. Loudon, Oxford 1997, 40-53: N.G. Siraisi, *Avicenna in Renaissance Italy*, Princeton 1987.

(EMILIE SAVAGE-SMITH)

2. Medical exchanges between China and the Islamic world.

It has been often assumed that the battle near Talas in July 751, where Western Turks and Arabs destroyed the Chinese army, marks the end of direct Chinese influence in Central and Western Asia, but this assumption must be revised.

The two main channels of contact between the Chinese and the Muslim peoples during the Middle Ages were the continental Silk Road leading westwards from north-west China. The other one, the "Oceanic Silk Road", connected the south-west coast of China with India and Persia. This latter route especially served the exchange of herbal drugs and medical knowledge from both sides. This is evidenced, inasmuch as China is concerned, by the work *Hai yao ben cao* ("Materia medica from the Oceanic route"), written by Li Xun, a Persian who knew Chinese well and became famous also as a Chinese poet. He lived in the 9th/10th century A.D. Many kinds of herbs which were imported from Persia and other Muslim countries, as well as the names of Chinese herbs which were exported to these countries, have been recorded in the work *Song Hui Yao* ("Historical records of the Song dynasty"). The widespread use of Chinese herbal medicine by Muslim physicians is attested already by al-Kindī (3rd/9th century [*q.v.*]) in his pharmacopoeia.

Chinese medicine soon gained increasing influence. In his *Canon of Medicine*, Ibn Sīnā listed and recommended 17 medical herbs which, as he added, were "imported from China" (*yu'tā bihā [tudjlab] min bilād al-Ṣīn*). This is another piece of evidence of Sino-Arabic exchange of herbal drugs at that time. While the Muslim physicians generally followed Galen (Djālīnūs [*q.v.*]), Ibn Sīnā's pulse theory and pulse diagnosis followed more closely the Chinese pulse diagnosis, displayed e.g. in Wang Shu-he's book *Mai jing* ("Classic of pulses", 2nd century A.D.). There are many similarities between Ibn Sīnā's *Canon* and Chinese medical theories, e.g. in regard to the holistic understanding of the human body, the principles of combining medical herbal formulae, the process of aging and the rôle of the body fluids, alimentary therapy, etc.

Chinese medicine was especially promoted by the great historian Rashīd al-Dīn Faḍl Allāh Ṭabīb (*ca.* 645-718/*ca.* 1247-1318 [*q.v.*]), who served three Īlkhān rulers as Grand Vizier. Being himself also a physician, Rashīd al-Dīn was interested in Chinese medicine. He had contacts with Chinese physicians and ordered one of his pupils to go to China and collect Chinese medical books. He had them translated into Persian and edited them, together with an extensive preface of his own, under the name *Tansuḳ-nāma*, "Book of precious information"; the subtitle given by Rashīd al-Dīn is "The Īlkhān's treasure book of Chinese sciences". Of this book, divided into 4 parts, only one part, together with Rashīd al-Dīn's preface, has been preserved in a unique Istanbul manuscript.

Its main part has been identified as commentary of a commentary on the *Mai jue*, i.e. "Pulse poem", which was very popular in China during the Song and the Yin-Yüan dynasties (12th-14th centuries). At that time, the *Mai jue* was by mistake attributed to Wang Shu-he. This mistake was repeated also by Rashīd al-Dīn, although the correct name *Mai jue* is also mentioned in the *Tansuḳ-nāma*. The quotations from the *Mai jue* have been embodied into the *Tansuḳ-nāma* in its original Chinese version, transliterated into Arabic letters, together with explanatory remarks. The manuscript of the *Tansuḳ-nāma* contains also several drawings of high quality displaying inner organs, the circuit of life-energy (*Qi*) and astronomical computations. Thus although this work is only fragmentarily preserved, it is of great significance for the history of Chinese medicine being the first version, known so far, of Chinese medical literature transmitted to the Islamic West.

TIBBAT AL-KHURD [see BALTISTĀN].

TIBBU [see TUBU].

TIBESTI, a mountain massif of the central Sahara, forming part of the elevated land running from the Adrar of the Ifoghas [see ADRAR] in northeastern Mali to the Nuba mountains of Sudan.

It lies roughly between lats. 23° and 19° 30' N. and longs. 16° and 19° 30' E., being about 480 km/300 miles long and up to 350 km/200 miles wide, and includes the highest peak of the Sahara, the volcanic summit Emi Koussi (3,415 m/11,200 feet). Three great, deeply-cut dry wadis indicate, as elsewhere in the Sahara, a formerly more humid climate. There are oases, mainly in the north and centre of the massif, the chief one being Bardai. Most of Tibesti now falls politically within the Chad Republic, with its northeastern outlier in Libya and its westernmost tip on the frontier with Niger. The sparse population, mainly nomadic but with some sedentaries, is that of the Teda branch of the Tubu [*q.v.*] "people of Tibesti". The region was traversed and partly explored by Gustav Nachtigal in 1869, and more fully described by Col. Jean Tilho in the early 20th century, but it was not really pacified for France until 1930 or after. For the recent political history of the region, see the Appendix II "Tibesti since Nachtigal's visit", in Nachtigal, tr. Fisher, i, 423-33; ČAD, in Suppl.; and TUBU. 2.

TIBRĪZ [see TABRĪZ].

AL-TIBRĪZĪ, ABŪ ZAKARIYYĀ' YAḤYĀ B. 'ALĪ b. Muḥammad b. al-Ḥasan b. [Muḥammad b. Mūsā b. (Yāḳūt, *Udabā'*, vii, 286)] Bisṭām al-Shaybānī, *imām ahl al-adab* (Yāḳūt, *Mu'djam*, i, 823; *al-khaṭīb* is incorrect, see Ḳifṭī, *Inbāh*, iv, 22), celebrated Arab philologist (421-502/1030-1109). Born a son of the *khaṭīb* of Tabrīz [*q.v.*], the talented young man embarked on the *ṭalab al-'ilm* at an early age. He did not give it up until his appointment at the *madrasa* [*q.v.*] al-Niẓāmiyya (inaugurated 459/1067) in Baghdād as professor of the *adab* sciences, above all *naḥw*, *lugha*, *'arūḍ*, and *ḳawāfī*. Becoming in addition also the librarian, he died in the ninth decade of his life on Tuesday, 28 Djumādā II 502/2 February 1109.

Al-Tibrīzī's extended journeys for the sake of study give us, through his teachers and their *riwāyāt*, information about the sources and tendencies of his own works. As an inpecunious youth of *ca.* 22 years of age he travelled, with al-Azharī's [*q.v.*] *Tahdhīb al-lugha* in his backpack, from Tabrīz to Syria to join the great blind scholar Abu 'l-'Alā' al-Ma'arrī [*q.v.*]. After two years he moved on to Egypt, where Ibn Bābashādh (d. 469/1077; Brockelmann, I², 365, S I, 529), an erstwhile merchant from Daylam now working as a *naḥwī* and *lughawī* at the *dīwān al-inshā'* [*q.v.*] in Cairo, was introduced by the young man to the latest discussions of questions in Arabic philology. Probably following a *ḥadjdj*, al-Tibrīzī continued his studies of grammar and lexicography in Baghdād, and from there made a brief journey to Baṣra to study with the well-known al-Faḍl al-Ḳaṣabānī (d. 444/1052; Sezgin, *GAS*, ix, 115). After his return to Baghdād, he set out toward the West and joined, in Ṣaydā [*q.v.*], the son of Ibn Djinnī [*q.v.*], 'Alī (d. 457 or 458/1065), who as a philologist had specialised in *ḥadīth*, *tafsīr*, and above all Shāfi'ī law, and in Ṣūr [*q.v.*] or Tyre, Sulaym b. Ayyūb al-Rāzī (d. 447/1055). It is no surprise that among al-Tibrīzī's teachers other traditionists are also mentioned, e.g. the famous al-Khaṭīb al-Baghdādī [*q.v.*]. When in 456/1064 the two men met in Damascus and engaged in disputations, the latter did not hesitate to acknowledge his being a disciple of the much younger al-Tibrīzī (Yāḳūt, *Udabā'*, i, 255, vii, 286). When later al-Tibrīzī himself had become a famous professor, he in turn liked to call himself a disciple of his much younger colleague, the Shāfi'ī jurisconsult Ibn Barhān (d. 520/1126) who was much admired for his sharp mind. At what time he visited the great analyst of language, 'Abd al-Ḳāhir al-Djurdjānī [*q.v.* in Suppl.] in Gurgān, which the latter is said never to have left, is not easy to determine. For further, at times contradictory, information on his journeys, teachers, etc., see Fakhr al-Dīn Ḳabāwa's introduction to his edition (based on the autograph of 486/1093) of al-Tibrīzī's *sharḥ* on the *Ikhtiyārāt al-Mufaḍḍal*, 4 vols. Damascus 1388-92/1968-72.

Among al-Tibrīzī's numerous (*djamm ghafīr*) students, the following may be listed: al-Djawālīḳī [*q.v.*] who studied with him for seventeen years and followed him in his position at the Niẓāmiyya; Ibn Nāṣir al-Salāmī (d. 550/1155) through whom al-Tibrīzī is often quoted; Sa'd al-Khayr al-Anṣārī from Valencia (d. 541/1146) who as a merchant traveled as far as China; Abū Ṭāhir al-Sindjī (d. 548/1153 in Marw), one of the teachers of al-Sam'ānī [*q.v.*]; and Abū Ṭāhir al-Silafī [*q.v.*], who survived him the longest. Much was told about the great master, even that he habitually drank wine (cf. Yāḳūt, *Udabā'*, i, 253!), that he wore silk and a turban of gold brocade, and that he had an interest in boys. He also posed as a poet; however, he never filled the position of *ḳāḍī* in Baghdād (read *ḳāṭin* in al-Sam'ānī, *Ansāb*, s.v.; cf. Ibn Khallikān, s.v.).

Al-Tibrīzī's works were standard textbooks in *adab* instruction. They are (a) commentaries to classic works of poetry; (b) revised versions of, and glosses on, lexicographical monographs; (c) commentaries on introductions to syntax and on grammatical problems, also on the Ḳur'ān; and, finally, (d) a handbook on metrics and rhyme. *In toto* they consist of the following extant, and mostly printed, works:

(a) *Sharḥ* on the seven, or ten, *Mu'allaḳāt* [*q.v.*], see Sezgin, *GAS*, ii, 51, ix, 256 (ed. 'Abd al-Salām al-Ḥūfī, Beirut 1405/1985); *sharḥ* on *al-Mufaḍḍaliyyāt* [*q.v.*] or *Ikhtiyārāt al-Mufaḍḍal*, see *GAS*, ii, 54, ix, 257 (cf. S.A. Bonebakker, in *BiOr*, xii [1965], 245-7); the middle *sharḥ* on *al-Ḥamāsa* [*q.v.*], see *GAS*, ii, 71, ix, 259 (cf. Brockelmann, II², 658); *sharḥ* on the *Dīwān* of al-Nābigha [*q.v.*], see *GAS*, ii, 112 (for the one on Imra' al-Ḳays see O. Rescher, in *ZDMG*, lxviii [1914], 63); *sharḥ* on the *Lāmiyyat al-'Arab* of al-Shanfarā [*q.v.*],

see *GAS*, ii, 135; *sharḥ* on *Bānat Suʿād* of Kaʿb b. Zuhayr [*q.v.*], see *GAS*, ii, 231, ix, 272 (ed. ʿAbd al-Raḥīm Yūsuf al-Djamal, Cairo 1410/1990); *sharḥ*, with the title *al-Mūḍiḥ*, on the *Dīwān* of al-Mutanabbī [*q.v.*], see *GAS*, ii, 494, ix, 293; *sharḥ*, with title *al-Īḍāḥ*, on the *Dīwān* of Abū Tammām, see *GAS*, ii, 556 (cf. 555; viii, 132), ix, 299; *sharḥ* on *Saḳt al-zand* (*Dīwān*) of Abu 'l-ʿAlāʾ al-Maʿarrī, see Brockelmann, I², 296, S I, 452 (ed. Muṣṭafā al-Saḳḳā *et alii*, in *Shurūḥ Saḳt al-zand*, 5 vols. Cairo 1364-8/1945-9.

(b) *Tahdhīb* of *Iṣlāḥ al-manṭiḳ* of Ibn al-Sikkīt [*q.v.*], see *GAS*, viii (1982), 131-2 (ed. Fakhr al-Dīn Ḳabāwa, Beirut 1403/1983; Fawzī ʿAbd al-ʿAzīz Masʿūd, 2 vols. Cairo 1406/1986-7); *tahdhīb* of *al-Alfāẓ* of Ibn al-Sikkīt, see *GAS*, viii, 133; glosses on *Tādj al-lugha wa-ṣiḥāḥ al-ʿarabiyya* of al-Djawharī [*q.v.*], see *ibid.*, 216; cf. *tahdhīb* of *Gharīb al-ḥadīth* of Abū ʿUbayd [*q.v.*], *ibid.*, 87.

(c) *Sharḥ* on *al-Lumaʿ fī 'l-naḥw* of Ibn Djinnī [*q.v.*], see *GAS*, ix, 175 (cf. Ḳifṭī, *Inbāh*, iv, 24); *sharḥ* on *al-Maḳṣūra* of Ibn Durayd, see *GAS*, ix, 86 (ed. Ḳabāwa, Aleppo 1398/1978); *al-Mulakhkhaṣ fī iʿrāb al-Ḳurʾān*, see Brockelmann, I², 331 (G. Vajda, *Les certificats de lecture*, Paris 1956, i [596], cf. Ismāʿīl Pasha al-Baghdādī, *Hadiyyat al-ʿārifīn*, ii, 519).

(d) *al-Kāfī fī 'l-ʿarūḍ* (or *fī ʿilmay al-ʿarūḍ*) *wa 'l-ḳawāfī*, see Brockelmann, I², 331; S I, 492 (ed. al-Ḥassānī ʿAbd Allāh, in *MMMʿA*, xii/1 [1386/1966], 1-250) = *al-Wāfī*, etc. (ed. Ḳabāwa, Aleppo 1390/1970, ⁴Damascus 1407/1986); for *al-Badīʿ* which forms the last part of *al-Kāfī*/*al-Wāfī*, see *GAS*, ii, 107.

AL-TIDJĀNĪ, ABŪ MUḤAMMAD ʿABD ALLĀH b. Muḥammad, Arabic author who lived and worked in what is now Tunisia, born between 670/1272 and 675/1276, last mentioned in 711/1311. The family was of Moroccan origin; his great-great-grandfather Abu 'l-Ḳāsim had reportedly come to Tunis with the troops of the Almohads [see AL-MUWAḤḤIDŪN] under ʿAbd al-Muʾmin b. ʿAlī (d. 558/1163 [*q.v.*]).

1. *Life*. From that time till the disappearance of the last known member of the family, Aḥmad b. Muḥammad al-Tidjānī, d. 869/1464, the descendants of Abu 'l-Ḳāsim distinguished themselves for over three centuries in administrative and cultural life, notably under the Ḥafṣid dynasty [*q.v.*].

He was educated by his father and several notable scholars, such as the Moroccan Abū Bakr b. ʿAbd al-Karīm al-ʿŪfī, the Andalusī Abu 'l-Ḳāsim al-Kalāʿī, author of *al-Sīra al-kalāʿiyya*, and the Tunisian Abū ʿAlī ʿUmar. He had access to the rich library of the Ḥafṣids, and is known to have had in his personal possession numerous books, including the *Sīra* of Ibn Isḥāḳ, Yaḥyā b. Sallām's Ḳurʾān commentary and Ibn Rashīḳ's *ʿUmda*. From his youth onwards, Abū Muḥammad ʿAbd Allāh followed his father and other family members into the Ḥafṣid chancery and met many eminent secretaries, literary men, etc. He began his career under Sultan Abū ʿAṣīda Muḥammad II (694-709/1295-1309), but was soon brought by the prince Abū Yaḥyā Zakariyyāʾ al-Liḥyānī into his own personal circle as a secretary. Al-Tidjānī accompanied him, as his chief secretary, on his expedition of 706/1306 against the Spanish in Djerba/Djarba [*q.v.*], though when his master set off for the Pilgrimage, al-Tidjānī, perhaps for health or political reasons, returned from Tripoli to Tunis in Ṣafar 708/July-August 1308. Abū Yaḥyā al-Liḥyānī returned nearly three years later, and was hailed as sultan with the honorific al-Ḳāʾim bi-amr Allāh in Radjab 711/November 1311, nominating al-Tidjānī as head of his chancery. In 717/1317 al-Liḥyānī left Tunis for a tour of his dominions, leaving his power in the hands of his son Muḥammad, whose power was then contested by a rival member of the Ḥafṣid family, with a battle near Siliana to the north-west of Tunis in 718/1318. Whether al-Tidjānī was killed in this is unknown, but he now disappears from recorded history.

2. *Works*.

(a) Works now lost. These include a 1,000-verse commentary, *Adāʾ al-lāzim*, on Ḥāzim al-Ḳarṭādjannī's poem in praise of the caliph al-Mustanṣir; an *Aḥkām al-nikāḥ; al-Durr al-nāẓim fī 'l-adab wa 'l-tarādjim*, on poets and littérateurs of the Ḥafṣid age; notes on the *Ṣaḥīḥs* of al-Bukhārī and Muslim; *Nafaḥāt al-nisrīn*, a collection of letters between himself and the *ḳāḍī* Ibn Shibrīn, whom he knew in Tunis; and *ʿAlāmat al-karāma fī karāmat al-ʿalāma*, on the merits of secretaryship and on famous secretaries of the Ḥafṣid period.

(b) Work in manuscript. His *al-Wafāʾ bi-bayān fawāʾid al-Shifāʾ* is a commentary on the *Shifāʾ bi-taʿrīf ḥuḳūḳ al-Muṣṭafā* by the Ḳāḍī ʿIyāḍ [*q.v.*] (2 vols., ms. Zaytūna 1321), valuable for al-Tidjānī's biography and background.

(c) Published works.

(i) *Tuḥfat al-ʿarūs wa-nuzhat (mutʿat) al-nufūs*, first published Cairo 1301/1883 after a bad French tr. by A. Rousseau, *Touhfat el arous ou le cadeau des époux*, Algiers and Paris 1848, and, most recently, at London-Nicosia 1992, with an introd. by Djalīl al-ʿAṭiyya. This is far from being a pornographic work of the *Rudjūʿ al-shaykh ilā ṣibāhu* type, but is "a compendium on love and marriage . . . it gives advice on the choice of a wife with very full description of the marks of beauty arranged according to parts of the body and on their treatment, and on married life with means to heighten its enjoyment, all in the form of traditions and extracts from writers, roughly in chronological order" (M. Plessner, *EI*¹ art. s.v.). In it, the author tries to present the canon of beauty and of conjugal happiness amongst the Arabs.

(ii) *Riḥla*. This is the work by which al-Tidjānī became famous, early attracting the attention of Western orientalists. M. Amari translated extracts in his *Biblioteca arabo-sicula*, ch. 45; A. Bel also gave an extract and its tr. in his *Les Benoû Ghânya*, Algiers 1903; and a partial tr. of the whole was given by Rousseau in *JA* (1852-3). But the choice of extracts was arbitrary and none of the translations fully reliable (cf. Plessner, *loc. cit.*). The official press at Tunis in 1927 printed a French translation by W. Marçais, but this was never published, and the text was only satisfactorily edited and published in 1377/1958 by Ḥ.Ḥ. ʿAbd al-Wahhāb, with useful introduction and indices.

In it, al-Tidjānī relates his journey from Tunis to Tripoli and back, lasting two years and eight months during which the lengthy halts and delays had enabled him to record "everything that was of any interest in a comparatively small stretch of country... The *Riḥla* thus became a regular mine of geographical, scientific and particular historical information about the country passed through; extracts are also given in it from authors whose original works must now be regarded as lost, and copies of documents" (Plessner, *loc. cit.*). It is especially valuable for the literary historian of mediaeval Ifrīḳiyā, since it includes poems and fragments from the works of poets of Tunis and its vicinity, the Sahel of Sfax and southern Tunisia; the whole work was much used by R. Brunschwig for his *La Berbérie orientale sous les Ḥafṣides* (Paris 1940-7), H.R. Idris for his *La Berbérie orientale sous les Zīrides* (Paris 1962) and Ch. Bouyahya in his *La vie littéraire en Ifriqiya sous les Zirides* (Tunis 1972).

Traduction annotée*, in *REI*, lxiii (1990), 135-88.

(M. Plessner-[Taïeb El Achèche])

al-TIDJĀNĪ, Aḥmad b. Maḥmad b. al-Mukhtār (1150-15 Shawwāl 1230/1737-21 September 1815), founder of the Ṣūfī order (*ṭarīḳa*) called Tidjāniyya [*q.v.*] after him. The appellation Tidjānī comes from the name of the Algerian Berber tribe Tidjān or Tidjāna and was acquired by Aḥmad's family when one of his forefathers married a woman from this tribe. Some time after launching his *ṭarīḳa*, Aḥmad al-Tidjānī claimed descent from the Prophet Muḥammad, tracing his genealogy to al-Ḥasan b. ʿAlī b. Abī Ṭālib via Mawlāy Idrīs, the patron saint of Fās. Thereafter he called himself Aḥmad al-Tidjānī al-Ḥasanī.

The only detailed account of Aḥmad al-Tidjānī's life we have is the *Djawāhir al-maʿānī* which was composed by his trusted companion ʿAlī Ḥarāzim b. al-ʿArabī Barāda and completed in April 1800. Born in ʿAyn Māḍī in Algeria, Aḥmad al-Tidjānī had, according to ʿAlī Ḥarāzim's account, pious parents who died of the plague when he was sixteen years old. Five years after his parents' death Aḥmad left ʿAyn Māḍī in search of learning. After a stay in Fās, he went on the Pilgrimage to Mecca in 1186/1772-3. On the way to Mecca, during a stay in Medina, and on the way back to the Maghrib he met holy persons who recognised his Ṣūfī promise. In Egypt he was appointed *muḳaddam* of the Khalwatiyya *ṭarīḳa* [*q.v.*] by Maḥmūd al-Kurdī. After returning from the *Mashriḳ* in 1191/1777-8, he went to Fās, then to Tlemcen in Algeria. From there he moved to the oasis of Abī Samghūn. There he launched his *ṭarīḳa* in 1196/1781-2 when he announced that the Prophet Muḥammad appeared to him when he was awake, authorised him to start *tarbiya* ("Ṣūfī" education), and taught him the *awrād* (litanies) of his *ṭarīḳa*.

The turning point in Aḥmad al-Tidjānī's standing as the head of a Ṣūfī order was his emigration in 1789 from Abī Samghūn to Fās. Conflict with the Turkish authorities, whose exact nature is not known, seems to have caused him to leave Algeria and settle in Fās (al-Nāṣirī, *Istiḳṣā'*, Casablanca 1954-6, viii, 105). The sultan of Morocco Mawlāy Sulaymān (1792-1822), a reformist ruler who undertook a "renewal of the scholarly élite" of his capital, amongst other things through encouraging scholars from outside Fās to settle in it (El Mansour, *Morocco in the reign of Mawlay Sulayman*, 155), welcomed the learned refugee from Algeria. He gave Aḥmad al-Tidjānī a house, granted him a regular salary, enabled him to build his own *zāwiya*, and made him a member of his learned council. The prominent scholars of Fās reacted to the Algerian intruder with hostility. One of them, Abu 'l-Ḳāsim al-Zayānī (d. 1249/1833-4), echoes this hostility in his book *al-Turdjumāna 'l-kubrā* (al-Muḥammadiyya 1967) which he completed in 1233/1817-18, some two years after Aḥmad al-Tidjānī's death. In this book (461-2), al-Zayānī describes Aḥmad al-Tidjānī's teachings as *bidʿa* [*q.v.*] and the followers whom he had in Fās as a band of evildoers.

In Fās, Aḥmad al-Tidjānī embarked on a formulation of his teachings in a way which would enable him to gain acceptance in a community in which the veneration of *sharīf*s was a central element of religious as well as political life. ʿAlī Ḥarāzim relates that shortly after he arrived in Fās, the Prophet instructed Aḥmad al-Tidjānī to put the latter's teachings in writing for the guidance of later Ṣūfīs. Thereupon Aḥmad ordered ʿAlī Ḥarāzim to destroy the record he had kept of his sayings, justifying this order with the change which occurred in his circumstances and his *ḥāl* (mystical state) after he came to Fās (*Djawāhir*, i, 45). The record which ʿAlī Ḥarāzim made of the course of his master's life and of his teachings, as he heard them from him, was the *Djawāhir al-maʿānī*. Not being a man of much education with experience in the composition of books, ʿAlī Ḥarāzim drew heavily in composing *Djawāhir al-maʿānī* on the biography of the Moroccan *walī* Aḥmad b. Maʿn al-Andalusī by Muḥammad b. ʿAbd al-Salām al-Ḳādirī entitled *K. al-Maḳṣad al-aḥmad*, copying its preamble, chapter divisions, and the descriptions of learning and piety used in it. Aḥmad al-Tidjānī did not apparently notice this plagiarism and approved the work on 28 Shaʿbān 1216/January 1802 after ʿAlī Ḥarāzim had read it to him (*Djawāhir*, ii, 282).

This plagiarism became known in Morocco only after Salafī critics of the Tidjāniyya drew attention to it in the 1920s and had the *K. al-Maḳṣad* printed in 1932. In the first decade of the 19th century, the *Djawāhir al-maʿānī* achieved its prupose of providing an idealised picture of Aḥmad al-Tidjānī's life, and an account of his teachings which highlighted his claim to descent from the Prophet and to having received guidance directly from him. This claim, together with the support which Aḥmad al-Tidjānī received from the sultan, enabled him to build up his prestige as a Ṣūfī *shaykh* and as the head of a new *ṭarīḳa*. He could also win numerous followers and initiate into his *ṭarīḳa* learned Muslims from other parts of the Maghrib and West Africa, who contributed towards its expansion. After Aḥmad al-Tidjānī's death

in 1815, his *zāwiya* in Fās, in which he was buried, became a shrine visited by Tidjānīs coming from distant lands.

(Jamil M. Abun-Nasr)

TIDJĀNIYYA, a Ṣūfī *ṭarīḳa* which was founded by Aḥmad al-Tidjānī [*q.v.*] in the oasis of Abī Samghūn in Algeria in 1196/1781-2. Aḥmad al-Tidjānī settled in Fās in 1789, where he developed a local following and initiated into his *ṭarīḳa* Muslims from other parts of the Maghrib and West Africa, through whom it spread in these regions. The papers presented at the Paris conference of 1982 on the present state of the Ṣūfī orders, which were published by A. Popovic and G. Veinstein as *Les ordres mystiques dans l'Islam. Cheminements et situation actuelle*, document the presence of Tidjānīs in all countries of North and West Africa, in the Sudan and Ethiopia, in most countries of the Near East, in Indonesia as well as in Albania. The Tidjāniyya has now great influence in West Africa, especially in Senegal and Nigeria.

Shortly after arriving in the religious and political centre of Morocco in 1789, Aḥmad al-Tidjānī had his close companion ʿAlī Ḥarāzim b. al-ʿArabī Barāda write *Djawāhir al-maʿānī*, a book containing an account of his life and teachings which he himself approved. Tidjānī teachings which are contained in this book were elaborated by later scholars of the *ṭarīḳa*, especially by ʿUmar b. Saʿīd al-Fūtī (d. 1864 [*q.v.*]) in his *Rimāḥ ḥizb al-Raḥīm* (printed in the margin of the *Djawāhir*), but their central elements, whose acceptance distinguishes a believing Tidjānī from other Ṣūfīs, remained unchanged, to wit, the belief that the Prophet Muḥammad appeared to Aḥmad al-Tidjānī when he was awake, informed him that he was the *khatm al-awliyāʾ* and *ḳuṭb al-aḳṭāb*, and taught him the *awrād* of his *ṭarīḳa*. Through describing himself as *khatm al-awliyāʾ*, Aḥmad al-Tidjānī claimed that he embodied *wilāya* in the same complete form as the Prophet Muḥammad, as *khatm al-anbiyāʾ*, embodied prophethood. The Tidjānīs do not insist that no *awliyāʾ* would appear after their master, but they contend that all the *awliyāʾ*, including those who would come after him, derive spiritual sustenance from him. The title *ḳuṭb* ("pole") means in the Ṣūfī terminology the holder of the highest rank in the hierarchy of Ṣūfī saints. In the *Djawāhir*, the *ḳuṭb* is described as *ṣāḥib al-waḳt*, i.e. he who dominates the universe during his lifetime, to whom is entrusted *ism Allāh al-aʿẓam* (God's most exalted name). Being *ḳuṭb al-aḳṭāb,* and as such the chief of the holders of the highest rank in the Ṣūfī hierarchy, Aḥmad al-Tidjānī claimed to be God's viceregent; nothing can reach the creatures from God and God from the creatures except through him (*Djawāhir*, ii, 80).

Aḥmad al-Tidjānī's belief in his ascendancy over all other *awliyāʾ* led him to forbid his followers from joining any other *ṭarīḳa* besides the Tidjāniyya. In this way, he broke with a Ṣūfī tradition which he had accepted before launching his *ṭarīḳa* through joining several *ṭuruḳ* at the same time. This religious exclusiveness is based on Aḥmad al-Tidjānī's statement (cf. *Djawāhir*, i, 44) that his followers have a higher spiritual rank than the followers of other *awliyāʾ*. It was further developed by ʿUmar b. Saʿīd al-Fūtī (cf. *Rimāḥ*, ii, 18) who asserted that, because Aḥmad al-Tidjānī was the channel of all emanations from God, the spiritual rank of an ignorant Tidjānī is higher than that of a great non-Tidjānī *walī*.

The Tidjānīs' sense of spiritual superiority to other Ṣūfīs, offensive as it is in itself, has been held to be especially reprehensible religiously, because it is related to the Tidjānīs' belief that the recitation of the *awrād* which their master taught them was more efficacious as a means of attaining salvation even than reciting the Ḳurʾān. In the *Djawāhir* (i, 114), Aḥmad al-Tidjānī is quoted as having said that reciting *Ṣalāt al-Fātiḥ* (see below) once is more efficacious than reciting the Ḳurʾān 6,000 times. Furthermore, the Tidjānīs' belief in the great efficacy of their *awrād* led them to belittle *zuhd* [*q.v.*] as a means of salvation. While in Fās Aḥmad al-Tidjānī made no effort to affect austerity and was known to have worn sumptuous clothes and enjoy good food. ʿUmar b. Saʿīd al-Fūtī defined the notion of *zuhd* accepted by the Tidjānīs in a way which undermines its usual sense of asceticism. He says that true *zuhd* (*zuhd al-kamāl*) does not consist of the emptiness of the hand from the goods of the world, but of not attaching any value to what one possesses. He adds that, in the sense of emptiness of the hand, *zuhd* may be nothing more than the inability to earn one's living, a condition acceptable for women but not reconcilable with true manhood (*Rimāḥ*, ii, 42-3). The Tidjānīs justify turning their back on asceticism through the doctrine of the Malāmatiyya [*q.v.*], which emphasises that a true believer does not make his virtues known to others (cf. al-Kansūsī, *al-Djawāb al-muskit*, Algiers 1913, 14).

Criticism was directed against these and other aspects of Tidjānī teachings already during Aḥmad al-Tidjānī's lifetime. Since the 1920s Moroccan and Algerian reformers of the Salafiyya [*q.v.*] school attacked the Tidjāniyya on account of its teachings as well as on account of the cooperation of its leaders with the French colonial authorities (Abun-Nasr, *The Tijaniyya*, London 1965, 176-81). In Indonesia, the teachings of the Tidjāniyya have been denounced by reformist Muslims as *bidʿa* [*q.v.*] since the 1930s (Abdurrahman, *Die Tijaniyya in Indonesien*..., Hamburg 1990, 130-44). The attacks of religious reformers in Nigeria against the teachings of the Tidjāniyya since the 1970s, as well as the emphasis which Nigeria's Muslim leaders placed on Muslim religious unity as a means of securing political power in a religiously-divided country, have prompted *Shaykh* Ibrāhīm Ṣāliḥ b. Yūnis al-Ḥusaynī, Nigeria's most prominent Tidjānī scholar, to attempt a revision of his *ṭarīḳa*'s teachings (Loimeier, *Islamische Erneuerung*, Münster 1993, 112-209). Ibrāhīm Ṣāliḥ has defended his *ṭarīḳa* in two books, *al-Takfīr akhṭar bidʿa* (Cairo 1982) and *al-Mughīr* ([Beirut] 1986). In the latter book (65-70) he tried to retract some of the Tidjānī convictions which are held to be reprehensible by other Muslims, such as claiming that reciting the *Ṣalāt al-Fātiḥ* was more efficacious than reciting the Ḳurʾān, by asserting that some of the statements attributed to Aḥmad al-Tidjānī in the printed edition of the *Djawāhir*, which was first published in Cairo in 1927, contained many falsifications. He claims to have in his possession the original copy of this book in ʿAlī Ḥarāzim's handwriting, which Aḥmad al-Tidjānī approved and which does not contain these falsifications.

In spite of the controversy surrounding its teachings, the Tidjāniyya expanded rapidly, at first in the Maghrib and West Africa. In Algeria, the Tidjāniyya *zāwiya* in ʿAyn Māḍī headed by the founders' two sons was sufficiently strong in the 1830s to be able to challenge the authority of the Amīr ʿAbd al-Ḳādir [*q.v.*], the main leader of Algerian Muslim opposition to French colonial occupation. As a result, friendly relations developed between the Tidjāniyya and the French colonial authorities in Algeria, which were reinforced after the founder's grandson, also called Aḥmad, married a Frenchwoman, Aurélie Picard, in 1870 (Abun-Nasr, *op. cit.*, 74-6). In Tunisia, the Tidjāniyya was introduced into the capital and acquired great prestige through Ibrāhīm al-Riyāḥī (d. 1266/1849-50), Tunisia's most prominent scholar in his time. Ibrāhīm al-Riyāḥī met Aḥmad al-Tidjānī in Fās and was appointed by him as *muḳaddam* of the Tidjāniyya in 1804.

Since the middle of the 19th century, the Tidjāniyya has experienced its greatest expansion in West Africa. It was first introduced into Mauritania by Muḥammad al-Ḥāfiẓ of the Idaw ʿAlī tribe. He met Aḥmad al-Tidjānī in Fās and was appointed by him *muḳaddam* of his *ṭarīḳa*. The Tidjāniyya was spread into the Senegambia by Muḥammad al-Ḥāfiẓ's favourite disciple Mawlūd Fāl. ʿAbd al-Karīm b. Aḥmad al-Nāḳil from Futa Djallon, who was initiated into the Tidjāniyya by Mawlūd Fāl, passed it on to the distinguished scholar and holy warrior ʿUmar b. Saʿīd al-Fūtī. Under ʿUmar b. Saʿīd's leadership, the Tidjāniyya emerged as a serious rival for the allegiance of the Muslims in West Africa to the much older Ḳādiriyya. At the beginning of the 20th century, the Tidjāniyya had *zāwiya*s spread across West Africa from Senegal to Bornu and as far south as Ghana, where it was introduced by Hausa traders (Hiskett, *The development of Islam in West Africa*, 256). The Tidjāniyya expanded its religious influence in West Africa further during the colonial period, especially in Senegal. In this country its two leading centres, led by the Sy family of Tivaouane and the Niasse (Anyās) family of Kaolack, cooperated with the French colonial authorities. In this way the Tidjāniyya came to appeal not only to the simple peasants but also to the Muslim urban middle class which owes its existence to the colonial system (Coulon, *Le Marabout et le prince*, 89). At present, about half of the Muslims of Senegal, who make up about 94% of the total population, are Tidjānīs (Villalón, *Islamic society . . . in Senegal*, 71).

A revivalist movement from within the Tidjāniyya, which was initiated by the Senegalese Ibrāhīm Niasse (1900-75), has led to a rapid expansion of this *ṭarīḳa* since the Second World War in West Africa and the Republic of the Sudan. In 1348/1929-30 Ibrāhīm Niasse declared that Aḥmad al-Tidjānī told him in a vision that he was the *ṣāḥib al-fayḍa*, i.e. the channel of the infusion of grace which the Tidjānīs receive from their master (Maigari, *al-Shaykh Ibrāhīm Anyās al-Sanighālī*, 82-5). Thereafter, Ibrāhīm Niasse referred to his followers as *Djamāʿat al-Fayḍa* ("Community of Grace") and to himself as *Ghawth al-Zamān* ("Saviour of the Age"). He contributed towards the revival of the Tidjāniyya through developing *tarbiya* ("Ṣūfī" education) in a way which enabled Muslims who had not received an Arabic-Islamic education to be taken into the *ṭarīḳa*. Ibrāhīm Niasse started to acquire influence outside Senegal after he met the Amīr of Kano Abdullahi Bayero in 1937 during the Pilgrimage to Mecca. Although it is said that Bayero recognised Niasse as his *shaykh* at this time, it was only after the latter made several visits to Nigeria after 1945 that its leading Tidjānī religious personalities submitted to his spiritual authority. Since then, the Tidjāniyya has spread widely amongst the simple urban Muslims in Nigeria and has started to play an important role in local party politics.

The rites which the Tidjānīs are required to perform in addition to the religious obligations incumbent upon all Muslims are three: (1) Performing the *wird* of the Tidjāniyya in the morning and the evening. The *wird* consists of reciting *astaghfiru 'llāh* ("I beg forgiveness of God") 100 times, saying a prayer for the Prophet, preferably in the form of *Ṣalāt al-Fātiḥ* 100 times, and reciting the *haylala* (*lā ilāha illā 'llāh*) 100 times. *Ṣalāt al-Fātiḥ* is not said to have been taught to Aḥmad al-Tidjānī by the Prophet but to have been delivered from Heaven to the Ṣūfī *shaykh* Muḥammad al-Bakrī (d. 952/1545 [*q.v.*]) on a tablet of light. The Prophet is said, however, to have informed Aḥmad al-Tidjānī of its great efficacy in the remission of sins and assigned it as part of the Tidjānī *wird*. (2) Performing the *waẓīfa* at least once in the morning. The *waẓīfa* may be performed a second time in the evening. It consists of reciting *astaghfiru 'llāh* 30 times, reciting *Ṣalāt al-Fātiḥ* fifty times, saying the *haylala* 100 times, and reciting the prayer called *djawharat al-kamāl* 12 times. Tidjānīs believe on their master's authority (cf. *Djawāhir*, i, 105) that when they have reached the seventh recitation of *djawharat al-kamāl* in the *waẓīfa*, the Prophet and the four Orthodox Caliphs join their circle and remain there unseen as long as it is being recited. (3) The *ḥaḍra*, also called the *dhikr*, which takes place on Friday after the Tidjānīs have communally performed *ṣalāt al-ʿaṣr* and the *waẓīfa* which follows immediately after it. The Tidjānī *ḥaḍra*, like that of the other Ṣūfīs, consists mainly of repeating in unison *lā ilāha illā 'llāh*, or merely *Allāh, Allāh*. Since Aḥmad al-Tidjānī did not give specific instructions as to how many times this formula was to be repeated, many variations have appeared in the usage of the Tidjānīs, but the majority of the Tidjānīs recite the *haylala* 1,000 or 1,600 times in the *ḥaḍra* (Abun-Nasr, *op. cit.*, 50-7).

TIDJĀRA (a.), "trafficking, trade, commerce".

1. Introductory remarks.

The term is taken in the Arabic lexica to be the *maṣdar* or verbal noun of *tadjara* "to trade". Like many of the terms in the Arabic commercial vocabulary, this is a loanword from Aramaic and Syriac. Jeffery thought (*pace* earlier authorities as cited in Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 181-2, who derived *tidjāra* from an original noun *tādjir* "merchant", Syriac *tagārā*, verb *ʾettagar* "to trade", cf. *ʾagrā* "wage, fee, hire, reward") that *tidjāra* should be derived directly from Aramaic and Syriac, in which *tiggārā* and *tāgūrtā* respectively mean "*mercatura*, trading activity", with Arabic *tadjara* as a denominative verb and *tādjir* as its active participle, "one who trafficks, trades" (see his *The foreign vocabulary of the Qurʾān*, 90-1). The root is first attested in ancient Mesopotamia: in Akkadian we have *t/damk/gāru* "merchant, importer, commercial agent, etc.", and in Sumerian *damgàr* (see W. von Soden, *Akkadisches Handwörterbuch*, iii, 1314-15). A corresponding derivative has not so far been found in Epigraphic South Arabian, nor does it appear in classical Ethiopic; in W. Leslau's *Comparative dictionary of Geez, 571*, the headword is merely assumed, and the derivatives in modern Ethiopic languages probably go back to mediaeval times and cultural contacts with the Arabs.

The terms *tidjāra* and *tādjir* were known in pre-Islamic Arabian times, as North Arabian inscriptions and mentions in pre-Islamic poetry (Zuhayr, al-Aʿshā, etc.) attest. Early Islamic authorities noted that *tādjir* was said to be synonymous with *khammār* (see e.g. Madjd al-Dīn Ibn al-Athīr, *al-Nihāya fī gharīb al-ḥadīth wa ʾl-athar*, ed. al-Zāwī and al-Ṭannāḥī, Cairo 1383/1963, i, 181), i.e. this figure was especially connected with the wine-trade [see khamr. 2]; doubtless many of the first Aramaic-speaking merchants with whom the Arabs came into contact were dealers in the wine of Syria and ʿIrāḳ. That the terms were foreign ones may be shown by uncertainty amongst the Arab philologists over the broken plurals of *tādjir*; as well as the regularly-formed ones *tudjdjār, tidjār, tudjur, tadjr* (see Lane, *Lexicon*, s.v.), we also find *tudjār* listed by Ibn al-Athīr, *loc. cit.*

Tādjir does not appear in the Ḳurʾān, but *tidjāra* appears in nine places (II, 15/16, 282, IV, 33/29, IX, 24, etc.) with the sense of "merchandise" and sometimes with that of "trafficking", this last perhaps a derived sense.

Bibliography: Given in the article.

2. The attitude to merchants and trading in Tradition and in ethical works.

That Muḥammad, who himself belonged to the merchant class, was favourably disposed to trade was natural in a commercial republic like that of Mecca, whose prosperity depended to a fair extent at least on trade. At least, so we must interpret one of the oldest sūras of the first Meccan period, CVI, the time of the origin of which is just before the conflict with the Meccan aristocracy: "As often as the Ḳuraysh equip their winter and summer caravans, they shall worship the Lord of this House (i.e. the Kaʿba)". But even in this period, Muḥammad raises a warning voice against the evils which were beginning to be associated with trade; trade is to be conducted according to law and justice. "Woe to those who give short measure, who, when they receive good measure from other men demand the full measure and when they measure out or weigh out to them, defraud" (LXXXIII, 1 ff., cf. LV, 6-8; and from the third Meccan period, VI, 153, VII, 83). At a later period, this attitude of the Prophet underwent a certain change, which must date from the Meccan period, although there is only evidence of it in the Ḳurʾān from the Medinan period. Under the influence of Christian ascetic ideas, his attitude to trade was modified; he does not condemn it, it is true, but he now sees in it something which may detain believers from the worship of God and from performing the *ṣalāt*. This is most strongly marked in the description of the monastery in the Medinan sūra XXIV, 37: "Men whom no trade nor purchase keeps from the thought of God, from performing the *ṣalāt* and from paying the *zakāt* from fear of the day on which hearts and eyes shall be full of trouble." In any case, one can deduce from this passage that the Prophet was fully conscious of the deleterious influences of trade on religious life. The result of this train of thought was in the Medinan period an express prohibition of trading during the Friday service, in LXII, 9-11: "O ye who believe, when ye are called to the *ṣalāt* on Friday, hasten to the worship of God and cease trading; this is better for you, if ye knew it; and when the *ṣalāt* is over, then disperse yourselves in the land and strive after the benefits given by God and think often of Him that ye may prosper, and when they see trading and empty chatter, they turn to it and leave thee standing. Say: What is with God is better than chattering or trading and God is the best provider." On the other hand, the Prophet in the latest Medinan period expressly permitted trading during the Pilgrimage (II, 194). And yet he emphasises at the same time once more that family and clan, goods and chattels and stock in trade are not to be preferred to God and his Prophet (IX, 24). To this late period also belong the well-known Ḳurʾānic regulations for the conclusion of agreements (II, 282 ff.).

This attitude, on the whole well disposed to trade, is also that of Tradition, although it attacks with the greatest vigour speculation and other dishonest dealings. Trade is regarded as profitable and honourable, more remunerative than cattle-rearing or manual labour (al-Suyūṭī, *Kanz al-ʿummāl*, ii, nos. 2411, 4227, 4742). The honourable merchant enjoys great esteem; "the trustworthy, just, and believing merchant shall stand at the Day of Judgment among the witnesses of the blood", we are told in one tradition (Ibn Mādja, *Tidjārāt, bāb* 1); he enters Paradise. The dishonest merchant, on the other hand, must expect punishment: "On the day of resurrection the merchants will be classed with the liars, except him who has trusted in God and has been pious and righteous", we are told in another tradition (Ibn Mādja, *Tidjārāt, bāb* 3).

The prejudice of certain pious circles against the merchant class is even more sharply expressed in another tradition, which is, however, quite isolated: "The Prophet said: Merchants are liars. Then someone said to him: O Messenger of God, has not God permitted buying and selling? He replied: Certainly, but they talk and lie, they swear and do wrong" (Aḥmad b. Ḥanbal, iii, 428, cf. 444). On the other hand, it is regarded as pleasing to God to gain profit from trading for the support of one's family; thus in one tradition in Zayd, *Madjmūʿ al-fiḳh*, ed. Griffini, no. 539 (cf. no. 544), we read: "If thou makest a profit from what is permitted, it is a *djihād* (i.e. like fighting in the path of God) and if thou usest it for thy family and thy relations, it is alms (*ṣadaḳa*); and truly a permitted dirham which comes from trade is better than ten otherwise gained." In trading, it is recommended to be generous and conciliatory; one should give full weight and measure and in weighing, give overweight. The morning is recommended as particularly blessed and profitable for trading. One should be careful to avoid deceit and deception, which cancel the blessing (*baraka*) that rests upon trade. Defects in the goods should be pointed out to the purchaser. "If anyone sells defective goods without pointing this out, God will hate him for ever and the angels will for ever curse him" (Ibn Mādja, *Tidjārāt, bāb* 45). But if one has been guilty of such faults in trading, he can atone for it by almsgiving (*ṣadaḳa*). The Prophet is further said to have condemned the adulteration of goods, especially the adulteration of foodstuffs.

Trade is to be carried on by mutual agreement, but never under compulsion. An agreement already made can only be cancelled if buyer and seller have not yet separated; in this period it can also be cancelled by tacit agreement (Aḥmad b. Ḥanbal, ii, 536). A further sale can only be effected when one has obtained possession of the goods (*ḳabḍ* or *istīfāʾ*; the traditions in this connection speak only of foods (*taʿām*), but we are told by commentators that foods are only taken as examples, and in fact one tradition talks of a *bayʿ* in quite general terms (*ibid.*, iii, 402). If in disputes between the contracting parties neither is able to prove his point, the purchase either remains valid and the assertion of the seller is taken as authoritative, or both must abandon the transaction. If there are two claimants to be the purchaser, the first is held to be the actual purchaser.

The traditions in general have nothing to say against business being arranged for a definite date or on credit (*nasīʾatᵃⁿ*). But no increase of price must take place nor is a reduction allowed if payment is made at an earlier date (Mālik, *Buyūʿ*, tr. 81). The making of a deposit on a credit transaction is also allowed, as the Prophet once purchased provisions on credit and left his mailed coat as a pledge.

Tradition frequently objects to a practice of traders of protesting the quality of their articles with oaths; e.g. one tradition says: "Swearing furthers the disposal of goods but diminishes their blessing" (al-Bukhārī, *Buyūʿ*, *bāb* 26). According to another tradition, sūra III, 71, was revealed in this connection; this verse has, however, nothing to do with the swearing of oaths when selling; its associations are other and are purely religious.

A series of articles are excluded by Tradition from buying and selling: firstly, all that is not one's own property (Aḥmad b. Ḥanbal, ii, 189, 190); and secondly, those articles the use of which is forbidden or which are considered unclean—wine, swine, dogs, cats, idols (*aṣnām*) and *mayta* [*q.v.*] and also water; water according to a tradition is one of the three things which are *res communes*, the price of which is *ḥarām* (Ibn Mādja, *Ruhūn, bāb* 16).

Tradition strongly condemns a practice still very prevalent in the East, sc. haggling or bargaining; in selling also, one should not outbid one's fellows. Tradition also condemns the raising of prices (*nadjsh*) and speculation in or holding up of foodstuffs (*iḥtikār*; on this expression, cf. Fraenkel, *Fremdwörter*, 189). Anyone who holds up food supplies and thus raises prices "is a sinner" (Aḥmad b. Ḥanbal, ii, 351). "Him who holds up food supplies, God will punish with leprosy and bankruptcy" (Ibn Mādja, *Tidjārāt, bāb* 6); "the speculator is accursed" (*ibid.*); according to other traditions, he "will be thrown into the deepest hell-fire" (al-Ṭayālisī, 928). On the other hand, the Prophet is said to have declined as an injustice to fix prices for foodstuffs in a time of scarcity (Ibn Mādja, *Tidjārāt, bāb* 27, etc.). Generally speaking, however, Tradition condemns any speculation in foodstuffs. It is forbidden to buy or sell provisions wholesale without fixing weights and measures (*djuzāf*); food should not be sold again in the same place as it is purchased but only in the particular market-place intended for the purpose. One should not go out to meet caravans to purchase goods (*talaḳḳī*), and the townsman should not purchase from the man from the desert in order to sell again in the town at a profit; brokering (*simsar*) is therefore condemned.

Finally, there may be mentioned a whole series of branches of business and practices which are described by Tradition as forbidden:

1. The conclusion of two transactions in one contract, e.g. one portion of the goods on credit and another for cash (see Aḥmad b. Ḥanbal, i, 398).

2. *Bayʿ al-ʿurbān*, a form of sale in which an earnest-money (*ʿurbān* or *ʿurbūn* < Hebr. *ʿērābōn* < ἀρραβών; see Fraenkel, *op. cit.*, 190) is given which belongs to the vendor if the transaction is not carried through (Aḥmad b. Ḥanbal, however, considers earnest-money permissible; cf. Madjd al-Dīn Ibn al-Athīr, *Nihāya*, s.v.).

3. Auction (*bayʿ al-muzāyada*), which in three cases, however, is permitted: in direst poverty, in sickness or when deeply in debt.

4. *Bayʿ al-muzābana* (presumably also of Aramaic origin; see Fraenkel, 189), i.e. when any goods the weight, size or number of which is not known is sold in bulk for a definite measure, weight or number of another commodity, e.g. the still green fruit of a palm-tree for a definite measure of dates or the seed for a definite amount of provisions. The unreal and speculative in this transaction is seen by Tradition in the fact that the yield which cannot yet be defined may bring the purchaser more or less than he has given for it (cf. Aḥmad b. Ḥanbal, ii, 64). This rule is in the direction of the prohibition of profiteering. But according to one tradition of the Prophet, an exception was allowed, the *bayʿ al-ʿarāyā*; according to this, a poor man who does not possess a palm-tree of his own, in order to procure for his family fresh dates may purchase for dried dates the fruit of a palm on the tree, but it has to be valued. In the opinion of several traditionists, this transaction is limited to cases where not over five *wasḳ* are involved, while ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ transmits a tradition according to which the Prophet prohibited even this (Aḥmad b. Ḥanbal, ii, 183).

5. *Bayʿ al-muʿāwama*, the purchase of the yield of palm-trees for two or three years in advance. This is a question of the sale of things which are not yet in existence at the time of the contract.

6. *Bayʿ al-munābadha*. In this, the exchange is irrevocably concluded by the two parties handing over the goods without seeing or testing them beforehand. Another form of this transaction is *bayʿ al-ḥaṣāt* (cf. Ibn al-Athīr, *Nihāya*, s.v.) or *bayʿ ilkā' al-ḥadjar* (cf. Aḥmad b. Ḥanbal, iii, 59, 68, 71) when, as a sign of the conclusion of the agreement, a small stone is handed over in place of the goods (see al-Muṭarrizī, *Mughrib*, s.v. *nabadha*).

7. *Bayʿ al-mulāmasa*. In this, the transaction is also concluded without the goods being seen or examined beforehand, the covered goods being simply touched with the hand.

8. *Bayʿ al-gharar* "dangerous or hazardous trading". For this kind of transaction the traditions give a series of examples, e.g. the milk in the udder, an escaped slave, booty before its division, fish in the water, etc. (see e.g. Aḥmad b. Ḥanbal, i, 302, 388, iii, 42). The commonest example is the very complicated case of *bayʿ ḥabal al-ḥabala*, namely, the sale of a pregnant she-camel for slaughter with the prospect that it may produce a female young one, which will again bear young.

All these transactions are condemned by Tradition on account of the element of uncertainty in them. On money-changing (*ṣarf*) and the prohibition of profiteering (*ribā*), see ṢARRĀF, in Suppl., and RIBĀ. The above transactions are in all the older collections; a still larger number with a great wealth of detail are given in the later collections, e.g. *Kanz al-ʿummāl* (cf. H. Ritter, in *Isl.*, vii [1917], 28 ff., where a series of such traditions is translated).

In the traditions of the first three centuries, an open and honourable attitude in business is demanded of the merchant; he is to treat his customers "like his brother" and refrain from cheating them in any way. Tradition therefore also condemns any business in which there is an element of uncertainty, in which chance can play any part, so that no one may suffer injury. These fundamental principles of Muslim commercial ethics have found their classical expression in al-Ghazālī's *Iḥyā' ʿulūm al-dīn*, Cairo 1326, ii, 48 ff. According to al-Ghazālī (d. 505/1111), one should strive to earn one's living with a view to the next world. To him the acquisition of a livelihood is a means of attaining bliss; the world is a field sown, a preliminary to the next world. But al-Ghazālī does not regard trade as absolutely better than any other means of earning one's living. "Through trade," he says, "one can either attain a sufficiency or wealth and superfluity." He condemns the accumulation of wealth, in so far as it is not applied to good purposes. But if the merchant obtains a sufficient livelihood for himself and his family, it is at any rate better than begging. However, certain types of men do well to refrain from such activities, for example, the pious, mystics, the learned, and officials. Al-Ghazālī then gives his views on the ethics of commerce, of which only a brief résumé can be given here.

Even if a business is legal and irreproachable, yet it may be immoral and injurious to others, for not every prohibition makes the agreement invalid. Al-Ghazālī then distinguishes two kinds of business, those that injure the community and those that only injure the individual. To the first group belong speculation in foods, especially in corn (*iḥtikār*), and the putting into circulation of false coins [see TAZYĪF]. In the case of false money, the merchant has to pay attention to the following points: 1. If he takes false money, he should throw it down a well. 2. He must acquire a thorough knowledge of the coins current in the country. 3. If he pays another false money with the latter's consent, he is not free from guilt, as the other may put them into circulation again. 4. If he takes false money to oblige someone, he will only participate in the blessing which rests upon a good feeling in trade if he does it with the intention of throwing the false money into a well.

Al-Ghazālī then deals with the conduct of business which is only injurious to the individual. The guiding principle in trade is that one should only do to a fellow-Muslim as he would be done by. Therefore: 1. The seller should not praise the wares and not emphasise his statements by oaths; he must only emphasise such qualities in the goods as the customer cannot know without further trial, e.g. the capability of a slave. 2. He should tell all the faults of the goods, for example not show only the good sides of a material, nor should he exhibit materials in a dark room, etc., for this is deception and neglect of the "good counsel" to which his brother is entitled. The merchant must remember two things: firstly, that though he can dispose of his goods by concealing defects, he thereby loses the blessing which rests upon trading, and secondly, that the benefit of the goods of this world ceases with the end of life and that only the injustice and sin remain which were committed in trading. 3. The merchant must give just and full weight and measure. 4. He must quote the correct price of the day.

Al-Ghazālī then deals with the showing of little kindnesses and civilities in trading, i.e. one should allow the other an advantage which he is not strictly compelled to do. Such little civilities are: 1. If the seller refuses a price offered which is much above the market price. 2. If the purchaser allows himself to be charged too much when the vendor is a poor man. 3. If in the collection of arrears, one allows a remission or prolongation of the period. 4. If the debtor brings the money to his creditor to save him the trouble of coming for it. 5. If at his request the contracting party is allowed to annul an agreement to purchase that has been concluded. 6. If one sells to the poor on credit and only demands the payment when it is possible for them to pay, or keeps no record in one's books of the debt and leaves the payment completely at their discretion.

In his pursuit of profit, however, the merchant should not neglect the salvation of his soul. The merchant should therefore 1) begin his transactions with good intention (*niyya*) and good faith (*ʿakīda*); 2) he should conceive of trade as a "social duty", as a *farḍ al-kifāya*, as his trade is only a part of the complicated system of the whole; 3) he must not let the market of this world distract him from the markets of the next world, i.e. from visiting mosques and performing the *ṣalāts*; 4) in entering the market and in it itself he must often think of God; 5) he must not be too eagerly set on the market and trading, not be the first to enter it and the last to leave it, and must not cross the sea; 6) he must not only avoid what is forbidden, but also avoid all doubtful and suspicious business; he should enquire after the origin of goods and not deal with notorious swindlers or thieves; and 7) he must carefully watch his words and deeds in business, as on the Day of Judgment he will be called to account for them.

According to al-Ghazālī, the market for the merchant is the scene of his *djihād*, his "holy war", where he has to wage a war against his own self in his intercourse with his fellow-men. Since for al-Ghazālī, commerce is a preliminary and a preparation for the

next world, he therefore discards the ascetic ideal of fleeing from the world for the ordinary mortal as an evasion of the struggle.

Similar views, although not always of such high moral worth as in al-Ghazālī, are found throughout *adab* and *akhlāk* literature. For example, Tādj al-Dīn al-Subkī, the biographer of the Shāfi'ī jurists (d. 771/1370), in his *Mu'īd al-ni'am* discusses the merchant in several passages. In these he no doubt takes typical cases of his age. Thus the paper merchant should give preference to him of whom he knows is buying the paper for the preparation of scholarly works (*kutub al-'ilm*). On the other hand, he should not sell paper to anyone he suspects will use it for the preparation of heretical works, false documents, increases of taxation, etc. (ed. D. Myhrmann, London 1908, 188, tr. O. Rescher, Constantinople 1925, 138). The bookseller must not sell religious works (*kutub al-dīn*) to people who will destroy or criticise them. He furthermore must not deal in works by heretics or by astrologers nor in imaginative works like the *Sīrat 'Antar*, nor must he sell copies of the Ḳur'ān or works on Tradition and Law to unbelievers (cf. thereon al-Shāfi'ī, *Umm*, iv, 132, and W. Heffening, *Fremdenrecht*, 49, n. 5, where the "keine" should be deleted before "hanaf. Werke"). Lastly, the dealer in land must take care that he does not sell *waḳf* estates (ed. Myhrmann, 205, tr. Rescher, 150-1).

A more selfish morality, on the other hand, is championed in the book (ed. and tr. by Ritter) *K. al-Ishāra ilā maḥāsin al-tidjāra*, by Abu 'l-Faḍl Dja'far b. 'Alī al-Dimashḳī (5th-6th/11th-12th centuries), see *Ein arabisches Handbuch der Handelswissenschaft*, in *Isl.*, xvii (1917), 1 ff. The book consists of two parts, one dealing with the merchant and the other with his goods. On the subject of merchandise there are many other works, some independent and some in the well-known Muslim encyclopaedias, on which see Ritter, *op. cit.*, 17 ff. Here we are mainly concerned with the sections on the merchant. The classes of merchants distinguished are: 1. The wholesaler (*khazzān*). He endeavours to purchase his goods under the most favourable conditions in order to sell them again when there is a scarcity of them and the price has gone up. He must therefore keep accurately informed about the position of the market at the places of production and the security of the roads thither, so that he does not let the best time for buying and selling pass him by. A purchase of larger consignments is recommended to be carried through in four instalments at intervals of 15 days so that no loss may be suffered by a sudden change in price or by some other unforeseen circumstance. The wholesaler must also take account of the state of the government of the country, whether it is just and strong or if it is just but weak or tyrannical. 2. The travelling merchant (*rakkāḍ*). He must take special heed as to what goods he buys and must exercise great caution, for his journey may be prolonged or some unforeseen accident may happen to him, like danger on the road, which will delay him so that he must again sell the goods in the place where he has purchased them and thereby suffer considerable losses. He must also know the average prices which the goods he is buying will attain in his native land as well as the tariffs, lest he throw away his profit even before purchasing in a foreign country. He should also look out for a reliable agent and a suitable warehouse, etc. at his destination. 3. The exporting merchant (*mudjahhiz*). Here we have to deal with agencies. He must have a reliable agent in the place to which he is exporting; to him he sends the goods under reliable care; the agent then has to sell the goods and buy others, sharing the profit.

Besides much other valuable advice for the merchant and warnings against swindlers and deceivers, al-Dimashḳī's work also contains discussions of questions of economic theory such as the fixing of the market price, the "average price" about which the merchant must keep himself accurately informed.

Ibn Khaldūn in the chapters on trade in his *Muḳaddima*, ed. Quatremère, ii, 272 ff., Eng. tr. Rosenthal, ii, 309 ff., expresses himself in similar terms. He also classifies his observations under the heads of the wholesale and the travelling merchant, while he apparently omits the export merchant. He defines commerce as the art of increasing one's fortune by buying goods and selling them again at an increased price, either by storing them and awaiting an increase of price, or by taking them to another country where the price is higher.

Ibn Khaldūn's verdict on merchants in general is of interest; for the trade of merchant, one requires much skill, and the ability to praise his goods unduly and to deal cunningly and stubbornly with his customers, all things which affect a man's sense of honour and justice and unfavourably influence his character. It is the small trader who succumbs more readily to this influence as he has to deal with his customers day in and day out. It is otherwise with the merchant who, through some favourable circumstance, has risen rapidly to wealth and fortune and has attained a position of esteem; he is protected from the evil influences of trading as he can leave the actual dealing to his employees and has only to supervise them and give them general directions.

3. Economic history and legal aspects.

The complete picture of the economic history of Islamic trade between the 7th and 16th centuries is hampered by the selective provenance and non-archival nature of the sources, but this does not detract from our view of its magnitude and structures. The standard source material available for the study is literary in nature and lacks statistical evidence, which makes a quantitative analysis difficult. The findings of the Geniza [*q.v.*] letters concerning Jewish merchants greatly enhance our knowledge of details, but should, ideally, be used together with the Arabic sources. For the later Middle Ages, we benefit from the use of European archives, which permit a limited form of quantification. On the other hand, numerous collections of Islamic coins and other items, together with the excavations of seaports and trading stations, compensate somewhat for the lack of archives in the study of the nature and patterns of trade. In contrast to the general haphazardness of the sources, several regions, such as Egypt, and to some degree also, Spain, have yielded an adequate amount of source material. This makes a continuous history of trade there feasible, but we cannot assume that the economic history of one region was identical to another.

There are three chronological units in the economic history of the Islamic trade, defined by economic factors, such as supply and demand, legal and technical tools, monetary and market conditions, by type of

sources, and by dynastic and political shifts. An early period, 7th-10th centuries, concerned the trade with Asia and the Far East, and the main source of information is the geographers' works and merchant's guides. Politically and geographically, the shift to inland ʿIrāḳ, a region aligned towards the East, and away from the Mediterranean oriented Syria, was manifested by the ʿAbbāsid caliphate replacing the Umayyad dynasty. This period also saw the formation of the legal structures relating to Islamic trade, and with Islamic seafaring at its height, established Baghdād as a far more influential national and international centre of trade than Damascus had ever been. The second period, 11th-13th centuries, coincided with the changing regional and international conditions in the Far East and Southern Europe which triggered an economic, political and geographical shift away from the East back to the Mediterranean and to Mediterranean trade patterns. Under the political dominance of the Fāṭimid and the Ayyūbid dynasties in Egypt, we note the consolidation of trade in domestic production and port cities in Sicily, Tunisia, Muslim Spain and Egypt, converging into a tight trading Mediterranean network, largely portrayed by the Geniza documents. A third phase, 14th-16th centuries, saw the European merchants become dominant in the Levant trade, a process which had started in the 12th century, shipping items acquired through transit in the Islamic lands or grown and semi-finished there, to Europe as well as to other Islamic regions, in European ships. The Italian, French and Catalan archives reveal that Muslim traders were relegated to fulfilling a mainly intermediary role of supplying the transit trade, and minimal export of raw materials and semi-finished goods was left in their hands. The subsequent outline and annotated bibliography will follow this chronological division, and use it as a framework for presenting the development and structures of Islamic trade, focusing on the economic features and organisational dimensions as they become apparent in the sources. It will address what was particularly Islamic about this trade, and evaluate its performance, the sophistication of its tools and its role in the economic progress of the Islamic societies.

We have little solid historical evidence about the organisation of the Islamic trade during its first phase. However, thanks to the numerous geographical works written in the 9th and 10th centuries, and excavations in the port cities of the Persian Gulf, Red Sea and Indian Ocean, we know a great deal about the long-distance trade routes stretching over continents, linking the caliphate with Inner Asia, Africa and Eastern Europe. The main eastward overland route followed the ancient "Silk road", connecting Baghdād, through the Persian highlands, with Transoxiana and Inner Asia, while a maritime route linked Baṣra and its adjacent ports of Sīrāf and Ubulla, as the main point of entry for the short-distance maritime trade between East Africa and the Red Sea ports, and for the long-distance route through the Indian Ocean to India and China. Routes to and from Europe traversed the Rhone valley and the Mediterranean, embarking either in Byzantine territory or Frankish France, and landing in Antioch or Egypt. The overland European routes were either from northern Europe through al-Andalus and into North Africa, or through the land of the Slavs, the southern part of Russia and into Baghdād. The trade with Africa was conducted from two areas, one the *Bilād al-Zandj*, i.e. East Africa, and the other, *al-Sūdān*, i.e. West Africa, through five axes, all ending in the Red Sea and the Indian Ocean, and sending products to ʿIrāḳ, China and India. Merchants who settled in the southern Maghrib did reach Ghāna and the Western Sudan, but the developing trade with West Africa, and the trans-continental African trade as a whole, had to be managed and directed from commercial centres, some in the southern Maghrib or the northern Sahara oases, such as Sidjilmāsa, Nafzāwa, Tuwāt, Wargala and Darʿa. In subsequent times, the terminus of this section of the Saharan trade moved to Mediterranean North Africa.

The trading patterns which developed in the Islamic East were not merely a continuation of Roman and Persian trade patterns. Since both maritime and land itineraries were unchangeable and determined by geographical conditions, the Islamic urban development, the legal apparatus with the formulation of the contractual and financial instruments, and above all, the scale of production which underpinned Islamic trade, showed major differences. The Romans and Persians permitted incoming and outgoing Eastern trade to pass through certain cities only, and they imposed high duties on incoming goods and limited export to agricultural products and some manufactured goods. In comparison, Islamic duty rates on numerous and varied items were lower, with many exit and entry points, pointing to a far more comprehensive, sophisticated and intensive trading pattern. In fact, the domination of Islamic trade by Asian luxury imports was of short duration. The nature of this trade, as specified by the traders' manual of the pseudo-al-Djāḥiẓ and the travellers's guides, included slaves, furs, spices, rare metals, luxurious textiles, foodstuffs, precious stones, and even rare animals, luxury items imported to satisfy a demand created by individuals, who were a wealthy clientèle, concentrated in the palace. As more evidence surfaces and a more perceptive analysis can be applied to it, this image, while not inaccurate, is seen to be nonetheless misleading. A correct reading of the items traded shows that they originated in all parts of the Islamic regions and consisted of local raw materials, mined ores or manufactured metal utensils, agricultural products and foodstuffs, and products of the textile and leather industries, which were manufactured and finished in the eastern and northern regions of the caliphate, especially in Persia. As early as the 9th century, Islamic trade was already fuelled by regional production, handling locally manufactured items. Cloth came from eastern and northern Persia, silk and silk products, and carpets from Samarḳand, Marw and Nīshāpūr. Rayy and Yazd were also important centres of cotton manufacturing, while skins and hides were traded from Transoxania, Hamadān or Khʷārazm, soap was manufactured in Balkh and perfumes came from Fārs and Ādharbaydjān. Persia also supplied the caliphate with non-perishable food stuffs, honey, sesame oil, grease, dried fruit and dried fish. Precious metals were traded, silver more than gold, and wood from the Caspian forests as well as minerals, sal-ammoniac and petroleum from Bākū.

However, Persia, which probably had a manufacturing infrastructure in place earlier but nonetheless benefitted from the other changes brought by the coming of Islam, was not the only region to show patterns of trade linked to local production. Early and strong evidence of this trade is also found in Egypt, where the 9th-century papyri documents reveal the organisation of local trade in items manufactured to order for export, a pattern later confirmed by the Geniza documents. The limited archaeological evi-

dence of luxury imports along the overland road also contradicts the perception of the luxury trade. Even though excavations imply that it was largely supplied by the maritime road, they also suggest that demand for foreign items never developed in the Islamic regions and that local artisans quickly learned to produce similar-looking items. Only those items that were judged indispensable and could only be found outside the Islamic lands, such as slaves, who were used for labour, domestic and military service, and certain metals such as silver or timber, which the Islamic regions did not have in sufficient amounts, were imported. What is called international trade was more regional in nature, conducted between Europe, Byzantium and the neighbouring Islamic areas, and largely with locally-produced items. Russia, for instance, traded with Central Asia and not with the Near East, as the hoards of Sāmānid coins, rather than those of the caliphate, found in the Baltic and Russian areas, show. By the same token, Yemen and the Persian Gulf traded with countries in the Indian Ocean region, East Africa, Malaysia and China, rather than with the Mediterranean countries. North Africa and Spain traded with Western Europe rather than with the Islamic East. The lack of monetary unity within the Islamic lands during this first period also contributed to and prolonged this pattern of trade, with ʿIrāḳ, Central Asia and Spain remaining mono-metallic silver, and Egypt, Syria, Arabia and the Maghrib, mono-metallic gold. The hoards of Islamic coins found in Europe, which date from this period but which disappear later, indicate intensive monetary circulation, but also decentralised, independent regional mints in the Muslim regions, and point to trade patterns linked to market fluctuations in prices and supply, which could provide opportunities for quick profits.

A new cycle in the organisation of the Islamic trade can be detected during the second phase, that of the Fāṭimids and the Ayyūbids. The Asian trade did not disappear, but the centre of trade moved from ʿIrāḳ to Egypt and from the Far East to the Mediterranean, while its fundamental character, regional and manufacturing-oriented, intensified. Tunisia and Sicily, which served as the point of contact with Europe, slowly ceded their position to the Italian merchant cities in the 12th century. Despite the unification of the monetary system, regional specie did not disappear, as coins of one region were easily converted into coins of another without hampering the circulation of goods or payment for services. However, trade did suffer from the deterioration and dissipation of silver coins which occurred from the 11th century onwards and which was responsible for strong fluctuations in the rate of exchange of the dirham to the dīnār in all the Mediterranean regions. This fluctuated between 12 and 40 dirhams to the dīnār during the Geniza period, and was also affected by manipulations of its silver content by the mint. The balance of payments in Egypt and North Africa was probably compensated by a rise in quality of the gold coins, which was a testimony to the strength of the Saharan gold trade during the reign of the Fāṭimids but evidence of its decline under the Ayyūbids. The continuous minting of Islamic coins after the appearance of the Crusaders and by the Christian rulers in Spain was an acknowledgment of the role this money played in international transactions, requiring good-quality gold and silver coins.

The main features of the organisation of Islamic trade, especially the whole array of legal arrangements, investment contracts and financial instruments, as well as government institutions and the identity of traders, came into full view during the second period, and were mainly, but not exclusively described in the Jewish merchants' letters and accounts of the Cairo Geniza. Using Islamic legal arrangements for trading transactions, the Jewish documents show above all how Islamic law provided a congenial environment for the promotion of trade and other economic transactions. The contracts permitted investment of capital, gold, silver and currency in trade, regulated the practical aspects and legitimised the gain from financial dealings. Investment in trade could be silent, commenda (*kirāḍ* [*q.v.*]), and/or sharing trading transactions with partners (*shirka* or *sharika* [*q.v.*]). An investment partnership could comprise any size of capital investment, shares of the different participants, duration, whether a single venture or multiple ventures, all possibilities of investment shares, and division of profit between the investor(s) and the trading agent. Investment in trade could be made on credit, using instruments like the *ḥawāla* [*q.v.*], transfer of debt, and the *suftadja* [*q.v.*], letter of credit, while credit sales could consist of deferred payments for goods sold as well as advances for future delivery. All legal provisions were used in tandem or independently. They were probably used by Arab merchants in the period predating Islam and were certainly in practice from the 8th century onwards, and as demonstrated in the *fatwās* from the Mālikī West, they displayed a great degree of flexibility in implementation. The significant dimensions of the monetary circulation gave rise to two financial institutions which met the needs of the large commercial network and credit transactions of trade. The first, money changing, was needed because of the variety of coins in circulation, and the lack of unity in the systems of minting and payment. The second, merchant banking, which extended credit, helped in financing, assisted in the transfer of funds, and provided guarantees [see further, ṢARRĀF, in Suppl.]. In addition to investment in trade, the legal system regulated travel on the open sea and along the coast, ship leasing contracts, seasonal leasing, sharing profits and losses from wreckage, piracy and enemy attack, misconduct, jettison and salvaged goods.

Explicit and continuous sources on the elaborate system of taxes and customs imposed on trade are available for Egypt, covering most of the period between the 11th and 16th centuries with varied degrees of consistency, but intermittent information is also available for other regions. In addition to taxes on merchandise, there were tolls for passage, the Islamic state's taxes for the poor, and wages for porters, custom officials, weighers, brokers and criers. The rates for each of the categories, except for the canonical *ʿushr* or tenth, fluctuated in response to market conditions, supply and demand, labour shortages, local and political conditions, prices of merchandise and availability of precious metals and coins. On the whole, the structure of the taxation system shows remarkable stability over hundreds of years. The place and timing of payment of the different categories also varied. Tolls and taxes had to be paid on arrival or departure at the gates, but payments for services were due when the service was rendered and completed. Goods arriving by the maritime route could be assessed at sea, where registration of prices, merchandise and identification of merchants took place. The cargo was taxed after it was unloaded and weighed in front of the port officials in the agency building, *dār al-wakāla*. Some ships were taxed based on the total value of merchandise carried. Others, and probably most

commonly, were taxed according to the identity of the merchandise, which had a variety of rates. Tax was collected from the 2% paid to the brokers by the buyer. Items of local provenance, traded in territorial, small scale markets were also taxed, and many of the taxes were known to have been collected by tax-collectors, *ḍāmins*. Local traders who rented stores paid a monthly tax to the government in addition to their rent [see further, MAKS]. The staff involved in the activities surrounding the merchants at the port of arrival and departure, weighers, messengers of the customs' house, revenue officers, registrar, packers, inspectors of the workshops, warehousemen, mosque janitor, porters, watchmen, sealer and herald, were paid last. The Fāṭimid author al-Dimashḳī describes three prototypes of Islamic institutional merchants, differentiated by the nature of their mercantile activity: the hoarder, who stores goods and sells them when the price is high; the peregrinator, who transports wares from one country to another; and the shipper, who is stationary but sends shipments abroad (see in more detail, above, 2.). The occupational classification methodology of numerous sources from the three periods offers a better analysis of the different activities involved with trade. It appears that the largest group of commerce occupations were those selling raw materials grown, extracted or gathered in the countryside and brought unprocessed into the city. The second group of occupations were the middlemen, whose specialised occupational terms revealed a significant internal division by location, enumeration and selling techniques. The transport occupations, crucial to the maintenance of trade, were numerically less important but had a division of labour as specialised as the other groups. The riders of camels, mules, donkeys and horses, and the mariners, were respectively involved in the shipment over land and the maritime transport of bulk commodities over long distances, with porters and couriers moving smaller items in smaller quantities over short distances. Caravans, ranging from several animals to 500 camels, departed from urban centres, where camel owners, camel drivers and other organisers and participants, were also to be found. In spite of the general tendency to minimise the level of Muslim navigation, particularly in the Mediterranean, the use of navigational devices, the Arabic navigation manuals, the different kinds of boats and the variety of boat building occupations in port cities indicate the existence of maritime industries and a significant commercial fleet, which reached a peak in the 9th-10th centuries [see MILĀḤA; SAFĪNA]. Merchants who owned lighter boats also contributed to the development of river transportation, but the growth in ship building had come to an end in the 11th century, caused by factors ranging from lack of wood and monopolisation of the arsenals by the state, and by the use of forced labour corvée, notoriously the weakest link between production and trade. The diversified occupational structures of the commercial and industrial sectors, which provided the linkages for the economic activities of trade, were matched by the diversified scales of the markets. Daily and weekly markets which provided fresh food and locally produced items, were held in the city's quarters and outside the city's walls. A permanent larger-scale central market, selling larger quantities, of greater variety, higher value and luxury merchandise, some produced locally but most imported from regional markets, was located near the mosque [see further, SŪḲ]. The prices at this level responded to fluctuations in the exchange rate, new mints, offer and demand from local and distant producers, and availability of items. A seasonal or yearly market was held for the diffusion of merchandise, shown in inns and warehouses [see FUNDUḲ; KHĀN; WAKĀLA] and consisting of imported foreign manufactured goods or transit goods, brought by foreign merchants, which were items in demand in Islamic regions or European destinations.

How Islamic was Islamic trade? The nature of the merchants' alliances, and their religious and ethnic identity, were all significant for the performance of the Islamic trade, even though distinct groups in trade activities moved in and out of the scene according to the sources used. Jews, for instance, were fully delineated in the Geniza documents but completely ignored by al-Makhzūmī [*q.v.*], an important contemporary observer. The participation of Persians and Christians, prominent in the first phase, was enhanced by that of the Jewish Rādhānites (see AL-RĀDHĀNIYYA, and add to its Bibl., Ch. Verlinden, *Les Radaniya. Intermédiaires commerciaux entre les mondes Germano-Slave er Gréco-Arabe*, in *Graeco-Arabica*, (Athens), vi [1995], 111-24), Khāridjī traders, in particular those of the Ibāḍiyya [*q.v.*] subsect, and Armenians, but different ethnic groups were also subject to changes in the kind of trade they conducted, from one period to another, and from one region to another. Slaves, wheat and arms, all disappeared as items of Jewish trade in the 11th century. They became a major commodity handled by Muslim traders, carried in Muslim-owned boats and financed by large capital investment from Muslim princes and dignitaries. Jewish merchants were driven from the trade with India in the 12th century, leaving the lucrative spice trade in the hands of the Muslim Kārimī [*q.v.*] merchants, and by the beginning of the 13th century they could only be found in local trade. Muslim merchants lost the importation of slaves for the Mamlūk dominions to Genoa in the 14th century. The Jewish merchant of the Geniza documents based the decision whom to employ in his service, and with whom to establish trade partnership, upon social and family connections. Such patterns can be explained by the nature of the investment transactions in trade, which required personal trust and guarantees, better provided by blood or marriage alliances. Since the merchants originating in the Muslim regions, whether Muslims or not, used the same financial and legal tools, the chance of this pattern being repeated throughout is very likely. On the other hand, it also shows that the framework provided by the law for the conduct of trade, was not sufficient to generate institutional, impersonal, anonymous local, regional or international co-operation.

The most striking change in Islamic trade during the third period was the massive penetration of Islamic markets by foreign Christian merchants. This brought in its wake changes not only in patterns of trade but also in production, since the two were always linked. The presence of Christians, either Byzantine or Sicilians, was already noted in the Egyptian ports in the 11th and 12th centuries, through the instructions issued by the administration on how to handle their embarkation, taxation and buying of merchandise. But the lack of references in al-Makhzūmī to their presence in the Red Sea ports, which later became the focus of their interest, appears to indicate that, if they participated in the commerce on that stretch of the route, then either there were not many of them or they were held in complete equality with Muslims. Historically, the status of foreign merchants and foreign vessels in Islamic territories was legally organised by the awarding of a license to travel or engage in trade,

a safe-conduct *amān* [*q.v.*]. Such standard safe conducts could be issued by the *imām* or any legally-qualified Muslim, for a year or longer, and guaranteed safe passage for the merchandise, the rate of taxes the merchant had to pay, where he could sell his commodities, and how long he could stay, testamentary rights, freedom of worship, burial, dress, ship's repair, emergency rations, aid against attack by corsairs, and permission to address complaints to the head of the Muslim community. There was no distinction between local and foreign merchants. Each was given a *barā'a* [*q.v.*], proof of payment of the dues, and the Islamic state had the right to confiscate merchandise in times of civil war, or war between states, a general financial crisis, or if the merchant was unable to pay tariffs. The port and its premises, ships and sailors was subject to state jurisdiction and inspection, as were the goods in the port's warehouses and in the holds of vessels anchored in the harbour. The Crusades were greatly held responsible for changing the patterns of the Italian cities' trade with the Levant, but in fact, the structures of Islamic trade in the Mediterranean were being eroded and modified because of the impact and appeal of the growing European markets, to which it had never previously had access. Pisa, Genoa and Venice were participants and sometime partners of the Islamic trade of the Far and Near East before and during the Crusades, but their instrumental role in the transportation and naval warfare of the Crusaders, gave them beneficial status in the cities they conquered, especially the port cities of Jaffa, Ascalon, Caesarea, Acre, Tyre, Sidon, Beirut and Antioch. Their privileges, which included preferred tax-rates on trade transactions, also provided for quarters for any prolonged stay, internal legal freedom and the right to engage in importing and exporting activities. After the liquidation of the Crusading states, the Italian merchants' familiarity with the region's trade, and the foothold they had in the local markets, enabled them to make the link with the growing markets in Northern Europe, which now demanded and could afford oriental spices and other Eastern products. Thanks to their superiority in the Mediterranean shipping, they were also able to seize the regional Islamic trade proper and to increase the scale of their trading activities in the Islamic lands. Changing political conditions in the area favoured their penetration as well. The Mongol conquest of Persia and 'Irāḳ caused a shift in the Far Eastern trade, especially in spices, which had moved away from inland 'Irāḳ to the Persian Gulf and the Red Sea, where Egypt was a stable outlet. They became a permanent feature of the Islamic port with their consuls and their notaries. Muslim traders failed to notice the evolving markets in Northern Europe because they were never involved in European trade and were never in competition there. As a result, when European traders began to exploit the Levant trade products to feed their own markets, Muslim traders experienced not only the loss of the opportunity to trade the imported spices with the new markets but also lost their own regional markets, which acquired these spices as well as other products. The access of the European merchants to ports in the Western Mediterranean was regularised in the 12th century, when the Almohads, after conquering Tunisia, signed treaties with Pisa, establishing regular trade tariffs. Italian cities contributed to the development of the ports of Tunisia and Algeria, whereas Marseilles conducted active trade with Ceuta in northern Morocco, in addition to Bougie in Algeria, from the 13th century onwards. The Catalans and Portuguese focused their activities on the Atlantic ports of Morocco, where other factors played a similar role, benefitting the growth of the European economy. There, gold from the Sahara, arriving through Sidjilmāsa [*q.v.*], stimulated trade with the Atlantic ports such as Arzila, Anfa and Salé. Merchants from Marseilles who visited Bougie and Tlemcen were paid in gold dust for importing, glass, copper utensils, perfumes and spices, which were then traded across the Sahara. The great gold surplus in Morocco was reflected in the regular and lavish payments in gold, metal and coins which the Marīnids [*q.v.*] made for hiring Castilian cavalrymen and Aragonese ships in the 13th and 14th centuries. From the 14th century onwards, the Provençal and Aragonese archives, together with the acts of notaries from Majorca and Barcelona who resided in the Moroccan and Tunisian ports, reflect the same vigorous penetration by European merchants into Andalusian and North African markets. The Western Mediterranean trade, which was dominated by the Catalan ships, also displayed similar patterns of regional trade, re-exporting pepper, ginger, silk sugar, cotton, gallnuts, sumac and indigo, bought in Egypt or Syria. The only sector of the Islamic trade left in Muslim hands was that of the inland routes and the local markets.

The history of Islamic trade has been described as one of early success and later decline, resulting from the general impoverishment of the Islamic lands in the later Middle Ages, the decline in population, agricultural production, manufacturing, scarcity of resources and technical stagnation, all aggravated by the state's exploitation of producers and merchants, over-taxation, the monopolisation of sales and the discouragement of private initiative. Some historians have blamed the nature of the Islamic mercantile economy, which did not encourage production for export purposes and which distanced the merchant class from the state's political apparatus, all these being obviously at variance with the Italian case. This estimate, however, fails to take into account the role played by Islamic trade in the context of its own economy and society and to grant it its just place as a vigorous economic agent and as a catalyst of growth and prosperity for rural and urban centres. Trade fulfilled an economic role by stimulating the economy, encouraging production for existing markets and creating new ones, and by integrating the different manufacturing areas, thereby working as a double catalyst, by providing raw materials and manufactured items for finishing or for local specialisation, and by creating demand and markets for import products. The manufacturing sector of the Islamic economy had a large, diversified and well-structured system of production. Division of labour was prevalent and extensively developed, and industrial productivity was much greater than it had been before Islam; and this remained pretty much constant throughout. Trade played a historical role by integrating these sectors of productivity and generated industrial productivity by stimulating production and by relaying orders for markets, which had been identified or created for specific merchandise. The textile industry is a good example of how this mechanism worked. Merchants in the cities placed orders with weavers in the rural areas, or shipped locally-grown dyeing and tanning materials such as indigo, sumac, and gall-nuts from and through Egypt to other regions. This is well documented in the Geniza letters, and the Islamic *fatwās*, too, speak about linen cloth and indigo imported from Egypt and

bought by the dyeing workshops of Tunis. The stimulating aspect is also visible in the diffusion of raw material needed by the industries, or the moving of semi-finished items to urban centres for finishing, as is shown in the regular exchange of olive oil and textiles between Egypt and Tunisia. The integrational role of trade also contributed greatly towards the balance of payments in the regional economies. As long as regional trade functioned, the transit trade did not throw the regions out of balance, but in the last phase, the integrational role of trade failed because the economies of the participating regions fell out of balance. The buying of slaves, which became the main pillar of Egypt's political régime, constituted a major drain on its precious metal resources, and since parts of the spice cargoes in transit were consumed locally, trade in them did not provide as much revenue. Islamic trade promoted economic growth based not on markets abroad but on internal growth and regional integration. It was supported by a full range of industrial services, including wholesale and retail commerce occupations, marketing and financing and a developed transport system, which made up the largest and most diversified group of occupations in the urban centres. The link with the industrial sector is displayed by the fact that commercial occupations follow the division of labour in the manufacturing sector, and diversify according to the raw materials used in manufacturing. The key to an accurate evaluation of Islamic trade is to judge it by the role it played in integrating the different sectors—agriculture, manufacturing and services—in a model of peripheral/regional integration, rather than a model of centre/international integration. Based on regional exchange, it brought together neighbouring or remote regions rather than serving solely as contact between centre and peripheries. Through the integration of the different sectors into a fully-balanced economic system, it performed a central role in the urbanisation process and in the economic progress of Islamic societies during the period studied.

Bibliography: Two manuals dealing with the practise of trade, and one with its theoretical and moral dimensions, were composed in the 8th-11th centuries. The first was a merchant's guide, by an anonymous author, commonly referred to as pseudo-D̲j̲āḥiẓ, *Kitāb al-Tabaṣṣur bi 'l-tid̲j̲āra*, ed. Ḥ.Ḥ. ʿAbd al-Wahhāb, in *RAAD*, (1932), tr. Ch. Pellat, in *Arabica*, i (1954), 153-65. The second was a treatise by an author of the Fāṭimid period, Abu 'l-Faḍl D̲j̲aʿfar al-Dimas̲h̲ḳī, *Kitāb al-Is̲h̲āra ilā maḥāsin al-tid̲j̲āra*, Alexandria 1977. The third, a small Ḥanbalī treatise, denounced asceticism and called for the practice of trade and commerce, which it equated with manual labour: Abū Bakr al-K̲h̲allāl, *al-Ḥat̲h̲t̲h̲ ʿalā 'l-tid̲j̲āra wa 'l-ṣināʿa wa 'l-ʿamal wa 'l-inkār ʿalā man yadʿī al-tawakkul fī tark al-ʿamal*, ed. M.Z. al-Kat̲h̲rī, Damascus 1929. A fiscal manual composed in Ayyūbid Egypt by an employee of the Egyptian administration, Abu 'l-Ḥasan ʿAlī b. ʿUt̲h̲mān al-Mak̲h̲zūmī (d. 585/1189), was edited by Cl. Cahen and Yūsuf Rāġib, *Kitāb al-Minhād̲j̲ fī ʿilm k̲h̲arād̲j̲ Miṣr*, Suppl. aux Annales Islamologiques, Cahier n° 8, Cairo 1986. Cahen also used it for studying a variety of trade aspects in his *Makhzūmiyyāt. Études sur l'histoire économique et financière de l'Égypte médiévale*, Leiden 1977. Some of the surviving Islamic documents are mostly concerned with Egypt, such as the papyri, which provide information about the organisation of local and regional trade: see Rāġib, *Marchands d'étoffes du Fayyoum au III^e/IX^e siècle, d'après leurs archives (actes et lettres)*, 2 vols. IFAO, Cairo 1982-5, and Gladys Frantz-Murphy, *A new interpretation of the economic history of medieval Egypt*, in *JESHO*, xxiv (1981), 274-97. The Geniza documents, which also originated in Egypt, supply many details about trading techniques and goods, and they cover other regions in the 11th-13th centuries, such as Tunisia, Palestine and Aden as well as Egypt: S.D. Goitein, *A Mediterranean society*, i, *Economic foundations*, Berkeley and Los Angeles 1967. Notarial registers from the Italian, Provençal and Catalan archives contain commercial treaties between the Islamic states and European powers, as well as notarial registers of shipments of goods to Islamic lands; see e.g. M.L. de Mas Latrie, *Traités de paix et de commerce*, Paris 1866, i. A treaty signed in 894/1489 was published by J. Wansbrough, *A Mamluk commercial treaty concluded with the republic of Florence*, in S.M. Stern (ed.), *Documents from Islamic chanceries*, Oxford 1965, 39-79; see also his *The safe-conduct in Muslim chancery practice*, in *BSOAS*, xxxiv (1971), 21-35. The surviving collections of Arabic legal documents do not contain trade contracts, but see A.L. Udovitch, *At the origins of the Western commenda: Islam, Israel, Byzantium?* in *Speculum*, xxxvii (1962), 198-207, for the use of *fiḳh* for teasing out the legal arrangements. Legal discussion of commenda trade, as reflected in the *fatwās*, is treated in H.R. Idris, *Commerce maritime et ḳirāḍ en Berbérie orientale*, in *JESHO*, iv (1961), 225-39. On maritime law and trade, see H.S. Khalilieh, *Islamic maritime law. An introduction*, Leiden 1998. On the Arab chronicles dealing with the struggle with the Portuguese in the Indian Ocean and around the Aden area, and with the arrival of the Ottomans, see J. Chelhod, *Les Portugais au Yémen, d'après les sources arabes*, in *JA*, cclxxxiii (1995), 1-18. For a general view and a list of primary sources, as well as on the division of labour and specialisation of commercial occupations and the role of trade in economic integration, see Maya Shatzmiller, *Labour in the medieval Islamic world*, Leiden 1994.

There is no general history of the Islamic trade, but see the general survey of 10th-century trade in A. Mez, *Die Renaissance des Islâms*, chs. 24-9, and there are monographs on the trade of individual cities and regions and on various separate topics. The numerous monographs and articles dealing with individual aspects of trade in separate historical instances cannot all be mentioned here. However, on Meccan trade, see Patricia Crone, *Meccan trade and the rise of Islam*, Princeton 1987, and R. Simon, *Meccan trade and Islam, problems of origin and structure*, Budapest 1989. Regional studies are available for Egypt: Subhi Y. Labib, *Handelsgeschichte Ägyptens im spätmittelalter (1171-1517)*, Wiesbaden 1965, and for Spain, Olivia R. Constable, *Trade and traders in Muslim Spain. The commercial realignment of the Iberian Peninsula 900-1500*, Cambridge 1994. On the Levant trade, with an alphabetical list of items imported and exported by Muslim traders, see the classic work of W. Heyd, *Histoire du commerce du Levant au moyen-âge*, tr. F. Raynaud, 2 vols. Leipzig 1885. On the last phase of the Levant trade, with a comprehensive list of archival sources, E. Ashtor, *The Levant trade in the later Middle Ages*, Princeton 1983. On the trade with Asia, routes, items and organisation, B. Spuler, *Trade in the Eastern Islamic countries in the early centuries*, in D.S. Richards (ed.), *Islam and the trade of Asia*, Oxford 1970, 11-20. On luxury items destined for individual and limited clientele, G.T. Scanlon, *Egypt and China: trade and imitation*,

in *ibid.*, 81-97. On Indian Ocean seafaring, G.F. Hourani, *Arab seafaring*, Princeton 1951, new ed. 1995, with an updating by J. Carswell on recent excavations in this region. On the monetary evidence for the Eastern trade, N.M. Lowick, *Trade patterns on the Pesrsian Gulf in the light of recent coin evidence*, in D.K. Kouymjian (ed.), *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, Beirut 1974, 319-33. On taxation, Cahen, *Quelques problèmes économiques et fiscaux de l'Iraq Būyide d'après un traité de mathématique*, in *AIEO Alger*, x (1952), 326-63. Regarding the payment of customs dues in early ʿIrāḳ, see A. Ehrenkreutz, *Al-Būzajānī (A.D. 939-997) on the "Māʾṣīr"*, in *JESHO*, viii (1965), 90-2. For taxes on trade in Egypt, Hassanein Rabie, *The financial system of Egypt*, London 1972, 89-106. On the decline of Islamic trade, there are two insightful articles by Cahen, *Quelques problèmes concernant l'expansion économique musulmane au Moyen Âge*, in *Settimani de Spolète, 1964* (publ. 1965), 391-432, and *Quelques mots sur le déclin commercial du monde musulman à la fin du moyen-âge*, in M.A. Cook (ed.), *Studies in the economic history of the Middle East*, Oxford 1970, 11-31. For legal aspects, see above, 2., and also BAYʿ; ḤISBA; MUKHĀṬARA; SALAF; SHIRĀ. For the structure of Islamic markets and the activities carried on in them, see SŪḲ. For workers and their crafts, see ṢINĀʿA.

(MAYA SHATZMILLER)

TIDORE, a small volcanic island to the west of Halmahera belonging to the North Moluccan islands, now in northeastern Indonesia, part of the Administrative District of Halmahera Tengah (Central Halmahera) and administered as a *kecamatan*. Its *ca.* 38,000 inhabitants are mostly Muslims.

In the 13th century, the *kolano* or king of Tidore started to extend his kingdom, thus initiating continuous conflict with neighbouring Ternate [*q.v.*]. These two islands formed part of the original "Spice Islands", the home of cloves and nutmegs. Around 1430, a Muslim trader, called according to tradition Shaykh Manṣūr, began teaching Islam, and in *ca.* 1495 the ruler of Tidore, whose predecessors had used the Hindu title of *rādjā*, is said to have been converted and to have called himself *sulṭān*, with the honorific of Djamāl al-Dīn. As eager proponents of the new faith, subsequent rulers carried Islam as far as the shores of Irian or New Guinea. In 1521 some survivors of Fernando Magelhaes' expedition harboured at Tidore, and in 1522 the Portuguese were allowed to open a factory there. They soon clashed with the Sultan of Tidore, who rejected the Portuguese claim to a trade monopoly, and Tidore found here support from Spain, whilst Ternate supported the Portuguese. However, with the union of the two Iberian kingdoms in 1580, both Spaniards and Portuguese were established on Tidore, until in 1607 the Dutch United East India Company (VOC), backed by Ternate, conquered Tidore. Subsequently, the Dutch not only tried to prevent outside trading but also sought to prevent uncontrolled production of nutmegs and cloves by destroying trees, thereby impoverishing the traditional society of the North Moluccas.

At the end of the 18th century, with British assistance, a prince from the ruling family of Tidore, Nuku, tried to reassert his sultanate's power, and defeated the Dutch fleet in 1799; but after his death in 1805, Tidore lost all importance. After 1905, the throne became vacant and in 1909 the sultanate's autonomy was ended; the sultanate of nearby Jailolo on Halmahera had already disappeared from history when its last ruler was in 1832 exiled.

(O. SCHUMANN, shortened by the Editors)

T'IEN WU, a Chinese-speaking Muslim (Hui-min) religious teacher and commander from Yen-ch'a-ting district in Kansu province, Northwest China. He was a disciple of the Chinese Naḳshbandī-Djahriyya Ṣūfī order founder, Ma Ming-hsin [*q.v.*], also known as Ibrāhīm Wiḳāyat Allāh (1718-81). He was also *ahung* (*imām*) of a local mosque in the Hsiao-shan area. His birth date is not recorded in the official sources, but he died in a Muslim uprising in 1784.

On his return from T'ien-fang, sc. Arabia, Ma Ming-hsin started to propound new teachings and to train many *khalīfa* disciples (T'ien Wu included) to spread his teachings in the Northwestern provinces. This was to reform the Hua-ssu Men-huang, the so-called Ke-di-mu Lao-chiao (Ar. *Ḳadīm*), a Naḳshbandī-Khufiyya Ṣūfī order founded by Ma Lai-ch'ih, whose Islamic name was ʿAbd al-Ḥalīm (1681-1766). Ma Ming-hsin's reform was to purify the Ke-di-mu Lao-chiao's syncretised religious traditions and rituals. Because his followers performed *dhikr* in a loud voice, Ma Ming-hsin's group was called Che-ho-lin-yeh, the Djahriyya, to distinguish them from Hu-fei-yeh, the Khufiyya group of the Hua-ssu Men-huang. His fundamentalist reforms attracted a great number of poor Salar Muslim followers of the Hua-ssu Men-huang around the Hsün-hua area. This enraged the Khufiyya; quarrels started in 1769, and eventually armed fighting broke out in September 1780. In the course of these conflicts, local Imperial Manchu governors, who regarded the Djahrīs as heretics, sided with the Khufīs. In July 1781 the Khufīs, supported by Manchu forces, defeated the Djahrīs. Leading figures, together with their *pīr* Ma Ming-hsin, were all executed, and a massacre of the Djahrīs by the Manchu government followed. The families of the Djahrī dissenters were forced into exile to remote uncultivated lands in the East Turkestan (Hui-chiang, nowadays Hsin-chiang [= Sinkiang] province), Yunnan and Tibet borderlands. Through exile, the Djahriyya was thus spread more widely, and Djahrī exiles later took part in Muslim rebellions in these regions.

After its failure in the Hsün-hua and Ho-chou areas, the Djahriyya *djihād* movement was carried on by T'ien Wu. Since 1769 T'ien Wu had been actively preaching Ma Ming-hsin's teachings in the Yen-ch'a-ting, Wei-yüan, Chin-yüan, Ku-yüan-chou, and Kuan-ch'uang areas. On 30 May 1784, T'ien Wu, together with Ma Ming-hsin's nephew Chang Wen-ch'ing *ahung*, openly took up arms. According to the official Manchu Imperial court report, T'ien Wu's uprising was to avenge Ma Ming-hsin and Su Ssu-shih-san (Ma's would-be successor)'s martyrdom. However, in reality, it was rather a continuation of Ma Ming-hsin's reform calling for *djihād* against corrupt Khufīs and Manchu infidels. Shortly afterwards, on 8 June, T'ien Wu was wounded in battle and died.

On T'ien Wu's death, Chang Wen-ch'ing, other leading *ahungs* and their Djahrī followers made Shih-feng-pao in the Siao-san region their headquarters and continued their *djihād*, and from Shih-feng-pao the movement spread rapidly throughout Kansu province.

A vigorous fighting spirit helped the Djahrīs defeat the Manchu army in almost every battle, but some Djahrīs were suborned, so that the Djahrī forces disintegrated and suffered several defeats. Eventually the Manchu army captured Shih-feng-pao, and brutal massacre followed, with reportedly more than 11,000 Muslim dissidents were killed. The Djahrī remnants were either imprisoned or sent into exile, with captured women and children sold to Han Chinese as slaves and dispersed all over China. From then on, the Djahriyya order was totally banned by the Imperial government. Nevertheless, the Djahriyya movement did not come to an end with this suppression, and later, between 1862 and 1874, its militant spirit instigated the great Chin-chi-pao rebellion led by Ma Hua-lung [*q.v.*].

AL-**TĪFĀSHĪ**, Sharaf al-Dīn Abu 'l-ʿAbbās Aḥmad b. Yūsuf al-Ḳaysī, Egyptian scholar and man-of-letters (580-651/1184-1253).

Al-Tīfāshī is the author of a few works on sexual hygiene, the most well-known and quite representative being the *Kitāb Rudjūʿ al-shaykh ilā ṣibāh fi 'l-ḳūwa ʿalā 'l-bāh* (tr. into English by an anonymous writer under the title *The old man young again*, Paris 1898) which is divided into two parts. The first part deals with the physiology of the sexual organs and beneficial and noxious aspects of sexual intercourse, provides a large number of both simple and compound drugs which serve as aphrodisiacs, and describes magical practices to increase sexual potency; the second part deals with the secrets of women, their physiognomy, cosmetics, again aphrodisiacs, how to practice coitus, and teems with anecdotes and poems of a rather obscene nature.

Al-Tīfāshī, however, is particularly famous for his main work on mineralogy entitled *Azhār al-afkār fī djawāhir al-aḥdjār* "The blooms of thoughts about the precious stones". In 25 chapters, al-Tīfāshī describes 25 stones according to the following system: etymology, etiology, mines, quality and purity, medical and magical properties, value and price, defects, and substances which are supposed to improve or dull the shine of a stone. Al-Tīfāshī, who quotes his sources with great accuracy, drew upon a variety of both Greek and Arabic works on this and on related subjects, and his thorough compilation with its clear disposition thus became the most widespread and popular Arabic stone book.

TIFINAGH, the name of the indigenous writing system of the Berberophone Touareg people (Algeria, Niger, Mali). The name is a Touareg plural noun meaning "Phoenician letters" (sg. *tafinekk*).

Origin. The Tifinagh script is a descendant of the old Libyan-Saharan script, which in turn is a restyled and adapted version of the Phoenician-Punic script [see LĪBIYĀ. 2.]. The Touareg themselves ascribe the invention of the script to a legendary hero, variously known as Aniguran or Amamellen.

Traditional usage. The traditional Tifinagh script, known as *tifinagh ti-n-elesel* "original T.", exists in several regional versions. The "classical" Tifinagh alphabet is the version of the Hoggar region (southern Algeria) [see table in BERBERS. VI.].

Traditional Tifinagh is a consonant script, like its Semitic ancestor, but a dot (named *tégherit*) is used to indicate any word-final vowel, while /y/ and /w/ are sometimes used to write word-final *i/é* and *u/o*. The direction of writing is not fixed: texts may be written horizontally, vertically and in boustrophedon. Words are usually not separated. Various ligatures of two letters are used. In the Hoggar version, the letters have names which are formed by prefixing *yă-* to the represented consonants, e.g. *yăb* "letter b", *yăd* "letter d", *yăḍ* "letter ḍ" (Aïr *eba, eda, eḍa*). There is no fixed alphabetical order in which the names of the letters are recited.

Knowledge of traditional Tifinagh is widespread among the Touareg. Almost all children are given instruction in the script, a task traditionally undertaken by the women. Among some groups, about half of the women and one-third of the men are reportedly able to write Tifinagh without hesitation.

Tifinagh is used for short inscriptions on rocks (almost invariably of the type "X was here"), on tombstones, and on objects such as bracelets and weapons. It is also used for short letters and notes written on paper, leather or animal bones. Tribal chiefs and traders use it for simple administrative purposes. A few Christian religious texts have been published in traditional Tifinagh as well as a translation of *Le petit prince*. The script continues to be used in small government-sponsored publications in Niger.

Modern usage. The absence of vowel-signs has been felt as a serious shortcoming by some Touareg users of Tifinagh, and various schemes were developed to remedy this.

In the region of Timbuktu, Arabic vowel signs are used in conjunction with Tifinagh, with *tégherit* serving as "chair" for a word-initial vowel. (Touareg texts written entirely in vocalised Arabic script are also known from this area.)

Another system for writing vowels was developed in 1973 by a certain Ibrahim of Tamanrasset, nicknamed Mao. In this system, known as *tifinagh n-ăzzăman* "modern T.", a new sign in the shape of an hourglass representing *e* (schwa) has been added. Two diacritics are used in combination with /e/ and /y/ to form signs for the other vowels. The consonant letters of modernised Tifinagh are based on the traditional script of the Aïr region in Niger which, unlike that of Hoggar, does not distinguish the emphatic consonant phonemes from their unemphatic counterparts. In addition to this, the vowel *o* is not distinguished from *u*. The modernised Tifinagh is consistently written horizontally, from left to right.

I. 1. Tifinagh
2. Touareg Latin orthography
3. Alternative transcriptions

The Latin orthography presented here is the standard of Niger, based on the orthography adopted by Unesco in 1968. The vowel phoneme *ă*, difficult to discern even for native speakers, is represented either by *a* or by *ə* in Tifinagh as well as in Latin orthography.

II. 1. Tifinagh
2. Riffian Latin orthography
3. Alternative transcriptions

Standardised Latin, Arabic and Tifinagh orthographies for Riffian were adopted at an international conference held in Utrecht (Netherlands) in November 1996.

III. 1. Tifinagh
2. Kabyle Latin orthography
3. Alternative transcriptions

The conventional Kabyle Latin orthography is based on the transcription devised by J.-M. Dallet. The superscript dots which are used to indicate non-spirantised consonants are usually omitted in modern publications. Undotted *k* represents a voiceless palatal fricative ("Ichlaut") and undotted *g* represents a voiced palatal fricative.

Modernised Tifinag͟h has gained some currency among young Touareg in Algeria. One of its best known users is the French-domiciled Touareg poet Hawad, who also developed a cursive version. A bilingual French-Touareg edition of poems by Hawad using modernised Tifinag͟h was published recently (*Buveurs de braises*, Saint-Nazaire 1995). The modernised script is also used in a small Touareg magazine entitled *Amnas ihgawgawen* "The stammering camel" (first issue December 1991).

Neo-Tifinag͟h. In the early 1970s, a group of modern Kabyle scholars and students, united in the "Académie berbère" (founded 1967 in Paris), invented a script commonly known as Neo-Tifinag͟h (Kabyle: *tifinag͟h tiynayin*). This script is based on the traditional Tifinag͟h script of the Touareg and is used for the writing of Berber languages, in particular Kabyle (Taḳbaylit) and Riffian (Tarifiyt), which have no tradition whatsoever of being written in Tifinag͟h. Letters were added in Neo-Tifinag͟h to represent consonant phonemes not found in Touareg, as well as signs for the vowels. Various typographical changes were made to existing letters. The result is a script which resembles the traditional Tifinag͟h, but which is in fact incomprehensible to a literate Touareg.

Neo-Tifinag͟h is frequently used as a cultural icon in headings of magazines and the like. Although the Neo-Tifinag͟h script has acquired a cult status among young educated Berberophones, most of whom would support its adoption as the official Berber script, very few, if any, are able to read or write it at speed. Those who know the script were already fully literate in at least one other script (Arabic or Latin) before they learned Neo-Tifinag͟h: there are no Berberophones literate exclusively in Neo-Tifinag͟h. In addition to this, the technical problems involved in printing the script as well as government discouragement have prevented the publication of more than a handful of texts in Neo-Tifinag͟h (e.g. poems and a translation of the Gospel of St. John).

Bibliography: For extensive bibliographies, see BERBERS, LĪBIYĀ and the article *Écriture* in the *Encyclopédie berbère*. Also M. O'Connor, *The Berber scripts*, in P.T. Daniels and W. Bright (eds.), *The world's writing systems*, Oxford 1996, 112-16; F. Coulmas, *The Blackwell encyclopedia of writing systems*, Oxford 1996, s.v. *Tifinagh*. An excellent survey of the Touareg tradition is provided by M. Aghali Zakara and J. Drouin, *Recherches sur le tifinagh*, in *Comptes rendus du GLECS*, xviii-xxiii (1973-9), 241-71, 279-92. A table showing the regional variants of the traditional Tifinag͟h script as well as information on its use are found in K.-G. Prasse, *Manuel de grammaire touarègue*, 3 vols., Copenhagen 1972-4, i, 145-57. Information on modernised Touareg Tifinag͟h is provided by H. Claudot-Hawad, *Tifinar'. Du burin à la plume*, Dauphin 1985, and idem, *Tifinaγ. De la plume à l'imprimante*, in *Travaux du LAPMO*, Aix-en-Provence 1988. Vol. xi of *Études et documents berbères* (1994) contains articles on the various writing systems employed for the Berber languages, including (Neo-)Tifinag͟h. (N. VAN DEN BOOGERT)

ṬIFLĪ, AḤMED ČELEBI (d. 1071/1660-61), Ottoman poet and storyteller, born the son of ʿAbd al-ʿAzīz, in Trabzon according to most sources, the only exceptions being S͟heyk͟hī Meḥmed Efendi (*Waḳāʾiʿ al-fuḍalā*, i) and Meḥmed T͟hüreyyā (*Sid͟jill-i ʿOt͟hmānī*, 252) who claim that he was born in Istanbul. He began producing poetry as a child and so took the pen-name of Ṭiflī ("Child"). He was also called "Leylek (the Stork) Ṭiflī", because of his long neck.

In his day he was more famous as a storyteller (*maddāḥ* [*q.v.*]) and boon-companion of the sultan (*nedīm*) than as a poet. A member of the inner circle of Sultan Murād IV [*q.v.*], he, at one time or another, held the official positions of *S͟hāhnāmed͟ji* [*q.v.*] and *ḳiṣṣak͟hān* (storyteller), which brought him some prosperity and a comfortable life. Nefʿī [*q.v.*], in his famous satire with the *redīf*... *a köpek* ("O dog"), lampoons him for associating with the Grand Vizier Gürd͟jü Meḥmed Pas͟ha [*q.v.*] by reviling his reading of the *S͟hāh-nāme*. It is also said that he belonged to the Malāmiyye branch of the Bayrāmiyya [*q.v.*] dervishes and was an accomplished calligrapher. Ṭiflī was buried in Istanbul, and several poets, including Nāʾilī [*q.v.*], wrote chronograms (*tārīk͟h*) commemorating his death.

Ṭiflī's rather small *dīwān* exists in a number of manuscripts but has never been published in a printed edition. He has *ḳaṣīde*s to Sultan Murād and the viziers Mūsā Pas͟ha and D͟jaʿfer Pas͟ha and, in a prose story (Istanbul University, TY 250) called *Ḥikāyet-i K͟hʷād͟je Saʿīd veya Ṣanṣar Muṣṭafā Ḥikāyesi*, both Ṭiflī and Sultan Murād appear as characters. Another prose tale of his, *K͟hand͟jerli k͟hanim* ("Woman with a dagger"), was published by the D͟jerīde-yi Ḥawādit͟h Press and summarised by Ibnülemin Maḥmūd Kemal İnal in *TOEM*, xcvi (1928). There is no published study on Ṭiflī or his work, although there is at least one dissertation (Kaşif Yılmaz, Atatürk Univ. in Erzurum, 1983) and two recent (1991) master's theses (Berrin Uyar Akalın, Hacettepe Univ.; and Vicdan Özdingiş, Selçuk Univ.).

Bibliography: For a detailed list of sources, see *İA* art. *Ṭiflī* (Köprülüzade Mehmed Fuad). (MEHMET KALPAKLI and W.G. ANDREWS)

TIFLĪS, the form found in Islamic sources for the capital of Georgia, Tiflis or modern Tbilisi. The city is situated on hilly ground in the Kura river valley [see KUR] (lat. 41° 43' N., long. 44° 49' E.), and has a strategic position controlling the routes between eastern and western Transcaucasia which has ensured it a lively history.

The city is an ancient one, being founded in A.D. 455 or 458 when the capital of Georgia was transferred thither from nearby Mtsk͟heta. For the subsequent history of the city, from Byzantine and Sāsānid times through the long period of political, military and cultural contacts with e.g. the Muslim powers of Arrān, Ād͟harbāyd͟jān and Armenia, to the absorption of the Georgian monarchy into Imperial Russia and the period of Communist rule, the history of Tiflis is largely inseparable from that of Georgia as a whole; hence see for this, AL-KURD͟J. One need only note, in supplementation of this, that on 9 April 1991 Georgia became an independent republic, with its capital at Tbilisi.

Tiflis in Islamic descriptions. The Islamic geographers of the 3rd-4th/9th-10th centuries give few details about Tiflis. It was in Muslim hands froin the mid-1st/7th century until it was recovered as the Georgian capital by the Georgian king Bagrat IV (r. 1027-52), but according to al-Masʿūdī, *Murūd͟j*, ii, 65 = § 498, Muslim prestige and authority there had weakened after al-Mutawakkil executed the local governor of Tiflis, Isḥāḳ b. Ismāʿīl al-Ḳuras͟hī, in 238/852. It is described as large, with a double wall pierced by three gates. It spilled out across the river, and the

two parts were connected by a bridge of boats. The geographers especially mention its thermal springs, which supplied the baths with constant hot water. On the Kur river were water-mills (*ʿurūb*). Tiflis was an outpost of Islam, surrounded by *dār al-kufr*, and Abū Dulaf was unable to visit an interesting cave nearby, presumably because the countryside was in the hands of infidels. Al-Balādhurī has the interesting detail that the houses of Tiflis were built of pine wood (*sanawbar*). For the information of the geographers, see Le Strange, *Lands of the Eastern Caliphate*, 181; also *Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran (circa A.D. 950)*, ed. and tr. V. Minorsky, Cairo 1955, 35, § 14, comm. 73, and *Ḥudūd al-ʿālam*, tr. Minorsky, 144.

In the Il-Khānid period, Zakariyyāʾ b. Muḥammad al-Ḳazwīnī tells us that, on the one bank of the Kur at Tiflis could be heard the call of the *muʾadhdhin*, and on the other, the peals of the Christian *nāḳūs*. The Christians were in the majority. Ḥamd Allāh Mustawfī describes the houses of Tiflis as built one above the other, the roofs of the one being the courtyard of the next.

From the 17th century, we have the Turkish descriptions of Ḥādjdjī Khalīfa (his brief narrative refers to the years 1630-5, *Djihān-numā*, 394) and Ewliyā Čelebi (in 1648, *Seyāḥat-nāme*, ii, 315-19), and also the first detailed description by a European (Chardin, 1673, *Voyages*, ed. Langlès, ii, 72-88). Ewliyā gives many details of the citadels. The larger (that on the right bank of the Kur) was 6,000 paces in circumference and its walls were 60 ells (*dhirāʿ*) high. It had 70 towers and a garrison of 3,000 men. There was no protective ditch. There was a tower fitted up to supply the fortress with water (*ṣuluḳ ḳule*). In the large citadel there were 600 houses roofed with clay. In the smaller citadel (on the left bank) there were only 300 houses, but it was very strong on account of its walls. Pl. iii of Chardin's *Atlas* gives a general view of Tiflis, in which the traveller shows the 19 principal features (churches, palace, etc.).

For the 18th century, we have the descriptions by Tournefort (1701, *Relation d'un voyage au Levant*, Paris 1717, ii, 307-20, with a view, 314), and in Prince Wakhusht's *Geography* (the difficulties in which have now been cleared up by Brosset, *Hist. de la Géorgie*, i, 180). A panoramic plan of Tiflis was published by De l'Isle, *Avertissement sur la carte générale de la Géorgie*, Paris 1766 (the editor had received it during his sojourn in Russia from the "prince of Georgia"). The gazetteer by P. Iosselian (1866) is valuable, since it locates ancient buildings.

Old Tiflis consisted of four quarters, of which three lay on the right bank of the Kur (which here bends from north to south to north-west to south-east): 1. *Kala* or *Kalisi* (= Arabic *ḳalʿa*), the old quarter *intra muros* (between the streams Sololaki and Daba-khāna which flow into the Kur), with the citadel Narin-kala. 2. The town properly called Tbilisi, which grew up around the hot springs (according to Brosset, i/1, p. lxxx, it was founded by Armenian inhabitants). The town was situated on the bank of the Kur opposite and below the Kala. The Ṣafawid Shāh Ṣafī had settled a colony of Sayyids on the heights of Tʿabor (to the east of Daba-khāna), whence the Persian name of this district Sayyidābād. 3. The outer quarter Garetʿ-ubani near the race-course (*asparez*), above and to the north of the first two quarters. 4. The quarter on the left bank opposite the Kala was called Isani or Nisani (later Awlabar) and had the heights of Makhatʿa to the north of it. Isani corresponds to the Ṣughdabīl of the Arabs. It is the cemetery Sagodebel, in Georgian "place of groanings", mentioned in the *Life* of St. Abo; cf. Brosset, *Additions*, 136, and Schulze, *Das Martyrium d. hl. Abo von Tiflis*, *Texte und Untersuchungen*, 1905, xiii/4, 35. The same name occurs twice in the Georgian Chronicle (cf. Brosset, i, 407, 633).

Three citadels have to be distinguished at Tiflis: 1. The old citadel of Tʿabor (*Korči-kalʿa*) on the hill on the right bank of the Daba-khāna destroyed in 1618, in 1725, and finally in 1785; it defended the southern gate of the Kala, called the Gandja Gate. 2. The citadel Narin-Ḳalʿa on the hill of Kala. Before Islam, this fortress seems to have borne the name of Shuris-tsikhe (Wakhusht). It was dismantled in 1818 (cf. the picture in Gamba's *Atlas*). 3. The citadel of the left bank (Isani) served as a bridge-head; in 1728 the Turks began to fortify this place for the last time but left the work unfinished.

As to the royal palaces, the oldest was that of Metekhi on the left bank in front of the old bridge. In 1638 the Muslim king Rostom built a palace about 400 feet in length along the Kur in Tbilisi. Here Chardin was received by Shāh-Nawāz. A little farther to the south, King Wakhtang VI built a palace very richly adorned in the Persian style; it was destroyed by the Turks in 1725, see P. Iosselian, *Opisaniye drevnoshey Tiflisa*, Tiflis 1866 (on the mosques, see 239).

From the nature of the site, compressed between the Kur and the heights of the right bank, Old Tiflis attained no considerable extent (cf. Chardin). In the 19th century, the town began to extend far beyond its ancient limits, developing subsequently especially on the left bank along which run the railway lines (Tiflis-Bākū, Tiflis-Batum, Tiflis-Djulfā and Tiflis-Kakhetʿia).

Modern Tbilisi is a major cultural centre, the seat of the Georgian Academy of Sciences and possessor of a university and several other colleges. Its flourishing economy is based on such activities as engineering, textile, wine-making and food processing. A road and rail system links it with Sukhumi of the Black Sea, with Baku on the Caspian and with Erivan or Yerevan in Armenia and Kars in Turkey.

P o p u l a t i o n. In 1783, after the prosperous reigns of Tʿeimuraz and Erekle, the town had 4,000 houses with 61,000 inhabitants. In 1803, it had only 2,700-3,000 with 35,000 inhabitants. This was the result of Agha Muḥammad Ḳādjār's invasion in 1795, traces of which could everywhere be seen even in Gamba's time. The more exact figures for 1834 (Dubois de Mantpéreux, *Voyage autour du Caucase*, Paris 1839, iii, 225-75) give 3,662 houses, 4,936 families and 25,290 inhabitants, not including Russians. The population grew rapidly: in 1850 34,800, in 1865 70,000, in 1897 160,605. Of the last figure, the Armenians formed 38.1%, the Georgians 26.3% and the Russians 24.8%. The census of 1922 gave 233,958 inhabitants for Tiflis, of whom 85,309 were Armenians, 80,884 Georgians, 38,612 Russians, 9,768 Jews, 3,984 Persians, 3,255 Ādharbāydjānī Turks, 2,457 Germans, etc.; cf. the *Zakavkazye*, Tiflis 1925, 156-7. The population in 1991 was 1,271,440.

B i b l i o g r a p h y (in addition to references in the article): See that for AL-KURDJ.

(V. MINORSKY-[C.E. BOSWORTH])

AL-ṬIGHNARĪ, Abū ʿAbd Allāh Muḥammad b. Mālik al-Murrī, l e a d i n g m e m b e r o f t h e s c h o o l o f a g r o n o m i s t s i n a l - A n d a l u s which reached its peak in the 5th/11th century and flourished until the middle of the 8th/14th one. Unlike other agronomists of his age, such as Ibn Baṣṣāl, Abu 'l-Khayr and Ibn

Ḥadjdjādj, we have a few, if limited, biographical details on him. He stemmed from a Granadan family of noble Arab lineage at the time of the last Zīrids, but neither the exact date of his birth nor of his death is known.

According to his main biographer Ibn al-Khaṭīb, he came originally from a village of the Granadan Vega, now disappeared, called Ṭighnar. With the arrival of the Almoravids, he moved from Granada to Seville, where it is related that he pursued his studies in 494/1100. He then travelled to various towns of al-Andalus, North Africa and the East. He must have made the Pilgrimage, since Ibn al-ʿAwwām cities him in his treatise on agronomy as *al-Ḥādjdj al-Gharnāṭī*. He was a fine writer, but except for his treatise on agronomy, we possess only fragments of his poetry and prose. Despite the brevity of these last, they reveal a very terse and spare style. It could be inferred that he was also a physician, in light of the detailed knowledge of medicine shown in his treatise, but we have no sure indications that he ever practiced this skill.

His work on agronomy, the *K. Zuhrat al-bustān wa-nuzhat al-adhhān*, brought him considerable fame. It was written *ca.* 504/1110 and dedicated to the Almoravid governor of Granada Abū Ṭāhir Tamīm b. Yūsuf b. Tāshfīn. The original text, known only in an incomplete unicum (no. 2163, National Library, Algiers) had 12 *maḳālāt* or books and 360 *abwāb* or chapters, according to Ibn Luyūn [*q.v.*], who had a copy of it. Whatever the case, there exist as many as eleven copies of a résumé of the work, which include the first part, lacking in the original. The contents of al-Ṭighnarī's treatise are largely similar to the other Andalusian works on agriculture. He begins by considering different soils, fertilisers and hydrology, and follows this up with a series of practical counsels on domestic economy. Then there are chapters on plant growth: planting, sowing and grafting (an important and widespread practice), the treatment of diseases, and other agricultural tasks. It is possible that the last *maḳālāt*, certainly numbering more than three, lacking in all the mss., were devoted to the rearing of animals, as is the case in the treatises of Ibn al-ʿAwwām and Ibn Wāfid, but we do not know for sure.

Al-Ṭighnarī cites numerous sources, but does not limit himself to reproducing them: he uses a rigorous analysis to sift them and to verify them with a critical sense often associated with practical agricultural experience. Al-Ṭighnarī was, in his turn, used by other authors such as Ibn al-ʿAwwām and Ibn Luyūn. His treatise is probably the most systematic of the Andalusian ones, being on many points more detailed and precise than the others. Moreover, he includes many elements of a local nature on agricultural practice and the various types of plants characteristic of the various regions of al-Andalus, which makes the treatise both a highly original text and, at the same time, a specifically Andalusian one. Despite all the above, this unique text from al-Andalus remains unedited, apart from short published extracts; the present writer is at work on a critical edition.

TIGIN, TAKĪN (T.), in the oldest known Turkish *tégin*, an ancient Turkish title with the original meaning of "prince".

In the early Türk empire, it denoted the legitimate son or grandson of the Supreme Kaghan. It appears as such in the Orkhon [*q.v.*] inscriptions, one of which is known as that of Kül Tigin (literally "the younger brother [of Elterish Kaghan], the crown prince"), cf. Talât Tekin, *A grammar of Orkhon Turkic*, Bloomington 1968, 237. G. Doerfer (*Türkische und mongolische Elemente im Neupersischen*, Wiesbaden 1963-7, ii, 533-41, no. 922) and Sir Gerard Clauson (*A dictionary of pre-thirteenth century Turkish*, Oxford 1972, 483) have surmised that the word came into Turkish from some earlier, non-Turkish language; Doerfer suggests (*op. cit.*, ii, 541) that it came from the (unknown) language of the Juan-Juan who followed after the Huns and preceded the Türk empire. Since royal princes usually held high military and administrative office in the Türk empire, the title gradually became detached from the necessity of royal descent to becoming one of function, and its eminence as a title diminished.

Tigin retained its meaning of "prince" amongst the eastern Turks, e.g. amongst the Uyghurs, amongst local rulers of Farghāna such as Ṣuwār Tigin, and amongst the Karakhānids or Ilek Khāns [*q.vv.*]; thus amongst the onomastic of the latter rulers we find e.g. ʿAlī Tigin [*q.v.*], Arslan Tigin and Toghan Tigin. Further west, however, it decreased in status and could be applied to any Turkish military leader, even if the latter were a slave, as was the case with the founder of the Ghaznawids, Sebüktigin [*q.v.*] and the eunuch Saldjūḳ commander Sāwtigin. By the time of the Mongol invasions, it seems to have fallen out of use. It is almost unknown in Mongolian.

TIGRE [see DJABART].

TIGRIS [see DIDJLA].

AL-**TĪH**, properly Faḥṣ al-Tīh, the name in mediaeval Islamic usage for the desert forming the frontier zone between Palestine and Egypt and spanning the Sinai Desert.

The name itself is not found in the Ḳur'ān (which in sūra XXIII, 20, uses Sīnā', and in II, 60/63, 87/93, IV, 153/154, etc., Ṭūr, for the Sinai peninsula), but the verb from which it is presumably derived occurs as *yatīhūn* "they wander about in a confused, lost manner" (V, 29/25), said of the Children of Israel, condemned by God to wander distractedly through the Sinai Desert because of their refusal to Moses to enter the Holy Land.

Hence the mediaeval Arab geographers also call the Sinai Desert "the Desert of the Banū Isrā'īl". As early as the *Tabula Peutingeriana* we find the legend *Desertum ubi quadraginta annis errauerunt filii Israel ducente Moyse*, and on the map of Mādabā ἔρημες [ὅπου] τοὺς Ἰσραηλίτας ἔσωσ [εν] ὁ χαλκοῦς ὄφις and ἔρημος Σὶν ὅπου κατεπέμφθη τὸ μάννα καὶ ἡ ὀρτυγομήτρα. In the desert there was a fortress of the same name (De Guignes, *Perle des merveilles*, in *Notices et extraits*, ii, 31); there is a Wādi 'l-Tīh in the eastern part of it (Quatremère, *Mémoire sur l'Égypte*, i, 186). The desert of al-Tīh, which formed the most southerly district of Filasṭīn [*q.v.*], was 40 *farsakhs* long, about as much broad, and stretched from the district of al-Djifār (the region of al-Faramā', al-ʿArīsh and al-Warrāda) to the mountains of Sinai (Ṭūr Sīnā'); in the west, it was bounded by the Egyptian province of al-Rīf (Maspéro-Wiet, in

MIFAO, xxxvi, 101-2), in the east by the districts of Jerusalem and southern Palestine. According to the description of the Arab geographers, it consisted partly of stony and partly of sandy soil, contained also salt-marshes and red sandstone hills, a few palm-trees and springs. In the desert districts of Tīh Banī Isrā'īl, al-Dimashḳī mentions the Jewish towns of Ḳadas (Ḳadesh Barnea), Ḥuwayrik, al-Khalaṣa (Elusa), al-Khalūṣ (Lyssa), al-Saba' (Beersheba) and al-Madura. He had already mentioned al-Tīh among the districts of the kingdom of al-Karak, by which he seems to mean the lands that had once belonged to Reynaud of Châtillon. From the desert of al-Tīh one went down through the 'Aḳabat Busāḳ to Ayla (Yāḳūt, *Mu'djam*, i, 610); this road was first made passable for the pilgrim caravans in the time of the Ṭūlūnid Khumārawayh (270-82/884-96). It was two stages' ride from Ayla right through the desert to the sea of Farān. When in 652/1254-5 the Baḥrī Mamlūks fled from Cairo, a body of them wandered for five days in the desert; on the sixth, they discovered a great abandoned city with walls and marble halls, buried in the sand. They found vases and articles of dress, but these fell to dust at the first contact; there was also a reservoir with ice-cold water. When they reached al-Karak on the next day and paid for goods with dīnārs which they had found in the buried city, they learned that they belonged to the time of Moses and that they had been in the "green city of the Israelites".

The caravan and military road from Cairo to Syria ran in normal times through al-Djifār, without touching the desert of al-Tīh; only in the period when this was interrupted by the Frankish occupation did the route straight through the desert gain a certain strategic importance, as we see in the campaigns of Ṣalāḥ al-Dīn and in the building of the fortress of Ṣadr (now Ḳal'at Gindī). For the Sinai Desert in more recent and modern times, see SĪNĀ'.

(E. HONIGMANN*)

TIHĀMA, also not infrequently appearing as al-Tahā'im in mediaeval sources, the area of the Red Sea coastal plain stretching from 'Aḳaba in the north to the Bāb al-Mandab in the south of the Arabian Peninsula, some even claiming that it extends further along the southern Indian Ocean coast. Today, inhabitants of the Ḥidjāz [*q.v.*] divide Tihāma into three: Tihāmat al-Ḥidjāz from the north as far south as al-Layth, Tihāmat 'Asīr from al-Layth to Djīzān/Djāzān and, from the latter south, Tihāmat al-Yaman. Historically, it is the second and third areas that are of great importance here, and during the zenith of Rasūlid power in the Yemen (628-845/1230-1441 [see RASŪLIDS]), say in the late 7th/13th and 8th/14th centuries, Tihāma would have reached north to include the whole of 'Asīr; in fact, Tihāma then would have meant the combined areas of Tihāmat al-Yaman and Tihāmat 'Asīr.

As for the origin of the word, the root *t-h-m* is common in Semitic languages: e.g. the Hebrew plural *t'hōmōt* (e.g. in Exod. xv. 5, see Brown, Driver and Briggs, *A Hebrew and English lexicon*, Oxford 1962, 1063) appears to refer to the depths of the sea, in particular the Red Sea, and other languages have the word in the same meaning. In Arabic the root covers such connotations as "foul odour", "stench", "intense heat" and "unwholesomeness". *Taham* and *tihāma* carry a primary meaning of "land descending to the sea" (see Lane, i, 319-20). In the pre-Islamic Sabaic, the word is attested as a proper name THMT (for example CIH 537/6 and 596/6) and with a meaning in antithesis to that of *ṭwd* (which signifies "mountain"), i.e. "plain" (e.g. CIH 540/3 and 541/8).

1. *History*. Nothing much can be said in specific terms of the history of Tihāma before Islam and little more can be written of the early Islamic period, since the Islamic governors were posted only to Ṣan'ā' [*q.v.*], Ḥaḍramawt [*q.v.*] and al-Djanad near Ta'izz [*q.v.*] in the highlands. Hearing of a rebellion in Tihāma of two Arab tribes, al-Ashā'ir and 'Akk, the 'Abbāsid caliph al-Ma'mūn [*q.v.*] despatched to the Yemen a protégé of his *wazīr*, Faḍl b. Sahl, a man called Muḥammad b. Ziyād. Ibn Ziyād arrived in Tihāma in 203/819 and, having quelled the rebellions and generally pacified the coastal plain, he built a capital, Zabīd [*q.v.*], as he had been directed by the caliph, a town which was to become of huge importance in mediaeval times and which remains to this day, albeit much reduced in size and significance. Ibn Ziyād thus brought into being in Tihāma the earliest dynastic state in the Yemen, the Ziyādids. It is not possible to unravel the meagre and confused accounts of this early dynasty; suffice it to say that it appears to have lasted for about two centuries, controlling much of Tihāma and even beyond. The last firm date which we have for it is 409/1018.

Still extremely scant is our knowledge of the successor state in Tihāma, that of the Nadjāḥids (412-551/1021-1156 [*q.v.*]) who were black Abyssinian slaves. The reader is referred to the article s.v. for what historical information it is possible to collect. The year 551/1156 saw the killing of the last Nadjāḥid slave minister by the Mahdids [*q.v.*] and thus the dynasty passed into oblivion.

Before mention of the Mahdids, it is necessary to deal briefly with the Sulaymānids, Ḥasanī *sharīfs* originally from Mecca, who ruled over an area of Tihāma to the north centred on Ḥaraḍ during the period *ca.* 462-569/1069-1173. Apart from their incessant squabbles with the Nadjāḥids to the south, very little is known of these Sulaymānī *sharīfs*. In 560/1164 'Abd al-Nabī b. Mahdī had brought an end to Nadjāḥid rule in Zabīd and southern Tihāma and had marched north and heavily defeated a Sulaymānī army under Wahhās b. Ghānim. The latter was killed and his brother, Ḳāsim, is said to have appealed for help from the Ayyūbids [*q.v.*] in Egypt. When the Ayyūbids did arrive in Tihāma in 569/1173, an alliance was formed between them and the Sulaymānīs against the Mahdids. The former did continue in Tihāma, but it can be said that with the Ayyūbid conquest of the Yemen an end was brought to the effectual participation of the Sulaymānīs in the affairs of the land.

For the Mahdids (554-69/1159-1173), the Ayyūbids (569-626/1173-1228) and the Rasūlids (626-858/1228-1454), see also Smith, *Political history*, 130-8, where a

detailed account of the dynasties, including their activities in Tihāma, can be found. The Ayyūbid conquest brought a swift end to the Mahdids, and the Yemen province of the empire centred in Egypt was created. The Ayyūbids in just 57 years brought peace and stability by force to the southern highlands and Tihāma. Their successors, the Rasūlids, were able to build on the hard-won military conquests of the Ayyūbids to form a southern Yemen and Tihāma of unparalleled political stability and administrative and intellectual development. Zabīd became an educational and religious centre of tremendous importance in the Yemen and its fame spread far and wide throughout the Islamic world. Particularly under the Rasūlids' successors, the Ṭāhirids (858-923/1454-1517 [*q.v.*]), the town assumed political importance also, for the Ṭāhirid court moved from the southern highlands to Zabīd each year when it became the winter capital. Little is heard of Tihāma for some two centuries. When we read the detailed account of much of Tihāma written by Niebuhr (*Voyage en Arabie*, etc., Amsterdam and Utrecht 1776, i, 235-96), the lone survivor of the 18th-century Danish expedition, it is clear that the real heyday of the area had long passed. Thereafter, in fact, the region became a rather loose appendage of Zaydī authority centred in the northern highlands of the Yemen.

2. *Geography and agriculture.* Despite its oppressive climate (temperatures up to 45° C and a relative humidity of 70-90% in summer), Tihāma, approximately 30-60 km/48-160 miles wide, with its several wadis in which flood water runs down from the mountains westwards, is a major agricultural area. The important wadis are, from north to south, Wādī Ḥaraḍ, Mawr, Surdud, Sahām and Rimaʿ. The main agricultural products are cotton, sorghum, millet, sesame, watermelon, mango, banana, okra and tomato.

Löfgren, Leiden 1951-4, esp. 58-91; Francine Stone (ed.), *Studies on the Tihāmah*, Harlow 1985, *passim* (on the whole an excellent study, see G.R. Smith, *Studies on the Tihāmah*, in *JRAS*, 1986/1, 30-40, a review article); Smith, *The political history of the Islamic Yemen down to the first Turkish invasion (1-945/622-1538)*, in W. Daum (ed.), *Yemen: 3000 years of art and civilisation in Arabia Felix*, Innsbruck and Frankfurt [1988], 129-40; Francine Stone, art. *Tihāma*, in Aḥmad Djābir ʿAfīf *et alii*, *al-Mawsūʿa al-Yamaniyya*, i, Ṣanʿāʾ 1992, 286-9.

(G.R. Smith)

al-TIHĀMĪ, Abu ʾl-Ḥasan ʿAlī b. Muḥammad (d. 416/1025), Arab poet. His *nisba* points to the Tihāma [*q.v.*], the coastal plain on the Red Sea coast of Arabia, or to Mecca, which is sometimes synecdochically called "Tihāma". Ibn Khallikān (iii, 381) admits his ignorance as to which of these two locations is intended. He is said to have come from the lower classes (*min al-sūḳa*, al-Bākharzī, i, 188-9). The poet spent most of his life in Syria, where he attached himself in particular to the Djarrāḥids [*q.v.*], who tried, with limited success, to consolidate their little principality in Palestine, with al-Ramla as its centre. It is probably on their behalf that he was appointed, at an unspecified date, *khaṭīb* of al-Ramla. In 416/1025 he served as a secret messenger of the Djarrāḥid prince Ḥassān b. Mufarridj to the Banū Ḳurra Bedouins in Egypt, who had already a history of revolt against the Fāṭimids, but was intercepted, identified as al-Tihāmī, locked up in the Cairene Flag Arsenal jail (*khizānat al-bunūd*) on 25 Rabīʿ II/6 July 1025 and unceremoniously killed there on 9 Djumādā I/19 July of the same year. The nature of Ḥassān's scheme is not spelled out.

Al-Tihāmī's poetry was collected into a small *dīwān* which, according to Ibn Khallikān (iii, 379), consisted mostly of "selections" (*nukhab*). This is not clearly borne out by the existing editions of the *Dīwān*. Al-Bākharzī (i, 188) characterises al-Tihāmī's poetry as "more delicate than the religion of a sinner and more tender than the tears of a lover" (*adaḳḳu min dīni ʾl-fāsiḳ—wa-araḳḳu min damʿi ʾl-ʿāshiḳ*).

As for genres, the lion's share is taken up by panegyrics. Among his more than thirty *mamdūḥs* we find princes of the various Bedouin dynasties that had sprung up at the time: the ʿUḳaylid Ḳirwāsh (d. 391/1001; three poems, 66-8, 130-7, 283-7), the Djarrāḥids Mufarridj b. Daghfal (d. 404/1013; four poems, 62-6, 218-25, 324-30, 360-6) and his son Ḥassān (d. after 433/1041-2; three poems, 240-50, 262-6, 375-82), and also the Kurdish Marwānid Naṣr al-Dawla Abū Naṣr Aḥmad b. Marwān (d. 401/1011 [see naṣr al-dawla]; one poem, 333-50). The others are lesser luminaries: viziers (among them al-Wazīr al-Maghribī [*q.v.*], 82-96), *ḳāḍīs*, *kātibs*, and one fellow-poet, one Abū ʿAlī Ibn Nāfiʿ al-Ramlī (138-40). Other genres are poorly represented. Of note are four *sidjniyyāt*, written during his arrest in Cairo (104-12, 311-14, 424-7, 429-31) and three dirges written on the death of his little son (461-73 [inc. the three lines on 477], 478-86, 490-1). The first of these, some ninety lines in *kāmil* with the rhyme *-ārī*, is the most famous of his poems, often quoted or alluded to, and still well known at the present time (see ʿAṭawī's introd. to his ed. of the *Dīwān*, 5, and Brockelmann (see *Bibl.*) on an early modern commentary on it by Maḥmūd al-Sharīf).

Bibliography: The *Dīwān* has not yet been critically edited, although the number of extant mss. is quite considerable, see Sezgin, *GAS*, ii, 478-9. The ed. Alexandria 1893 (not seen) is clearly the only basis of that of Muḥ. Zuhayr al-Shāwīsh, Damascus 1384/1964, as well as that of ʿAlī Nadjīb ʿAṭawī, Beirut 1986 (quoted in the article).— Biographical and anthological sources. Thaʿālibī, *Tatimmat al-Yatīma*, ed. Mufīd Muḥammad Ḳamīḥa, Beirut 1403/1983, 48-53; Ibn Bassām, *al-Dhakhīra*, ed. Iḥsān ʿAbbās, iv/2, Beirut 1399/1979, 537-49; Bākharzī, *Dumyat al-ḳaṣr*, ed. Sāmī Makkī al-ʿĀnī, i, Baghdād 1390/1970, 188-99; Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, iii, 378-81; Brockelmann, S I, 147; Kaḥḥāla, iii, 278, vii, 219.

(W.P. Heinrichs)

TIHRĀN, the name of two places in Persia.

I. Tihrān, a city of northern Persia.
  1. Geographical position.
  2. History to 1926.
  3. The growth of Tihrān.
    (a) To *ca.* 1870.
    (b) Urbanisation, monuments, cultural and socio-economic life until the time of the Pahlavīs.
    (c) Since the advent of the Pahlavīs.

II. Tihrān, the former name of a village or small town in the modern province of Iṣfahān.

I. Tihrān, older form (in use until the earlier 20th century) Ṭihrān (Yāḳūt, *Buldān*, ed. Beirut, iv, 51, gives both forms, with Ṭihrān as the head word; al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, ix, 103-7, had given only the form al-Ṭihrānī), conventional European renderings Tehran, Teheran/Téhéran, etc., a city of northern Persia, a town of only moderate size and fame in earlier Islamic times, but since the end of

the 18th century the capital city of Persia (modern Iran). For speculations on the etymology of the name (none of them convincing), see Minorsky's *EI*[1] art. *Teheran,* at the beginning.

1. *Geographical position.*

It lies in lat. 35° 40' N., long. 51° 26' E. at an altitude of 1,158 m/3,800 feet, in a depression (*gawd*) to the south of the outer, southern spurs of the Elburz range [see ALBURZ], with the fertile Warāmīn [*q.v.*] plain, traditionally the granary of Tihrān, stretching southwards from the town's centre. To the east of the plain, a southern spur of the Elburz chain, the *Sih pāya* "tripod", forms a low barrier, and at the southern end of this lies the little town of Shāh ʿAbd al-ʿAẓīm [*q.v.*]. The ruins of the great pre-Islamic and mediaeval Islamic city of Rhages or Rayy lie between Shāh ʿAbd al-ʿAẓīm and the historic centre of Tihrān [see AL-RAYY]. The villages on the Elburz slopes to the north of Tihrān, such as Ḳulhak (Golhak), Tadjrīsh and Shamirān, have traditionally provided summer retreats for the people of Tihrān, avoiding the summer heat which forms part of the town's continental climate; and in the 19th century Shamirān also provided Tihrān's water supply (and supplies much of it today), by means of subterranean channels (*ḳanāts* [*q.v.*], *kārīz*). All these settlements, once separate, are now however within the vast urban sprawl of contemporary Tihrān (see below, section 3b).

For all its undeniable strategic position in the corridor connecting western Persia with Khurāsān, Tihrān's geographical position is not obviously one for a capital city; other cities of Persia, in the western highland region and south of the great central deserts, have had much more significant roles in political and military affairs and in the economic and commercial life of the country. Certainly, the choice of the hitherto undistinguished town of Tihrān by Agha Muḥammad Khān in 1200/1786 as his capital (see below, section 2), in order that he might be in close touch with the Ḳādjārs' Turkmen tribal followers in the Māzandarān-Gurgān plains region, did not immediately improve either the status or the amenities of the town. All early Western travellers describe early Ḳādjār Tihrān as mean and insignificant, lacking in public buildings, with a poor water supply, and extreme climate and an eccentric position in regard to the main roads crossing northern Persia. In any cases, centrifugal forces in the country, and the ancient traditions of provincial autonomy, were still strong at this time. Only towards the middle of the 19th century did Tihrān's position improve. With regard to communications, for connections with Māzandarān and the Caspian coast a road passable only by horses and mules was built by the Austrian engineer Gasteiger Khān in 1875. Between 1883 and 1892 a carriage road was begun by the Persians and finally finished by the English company of Lynch Brothers (150 km/95 miles). Communication with Russia used to be by Ḳazwīn-Tabrīz-Djulfā-Tiflīs. In 1850 a regular line by Russian steamers began to run between Bākū and Anzalī. Although, as the crow flies, the distance between Tehran and the Caspian is only 110 km/70 miles, the passage of the Alburz was always very difficult. In 1893 the Russians obtained the concession to build a carriage road from Rasht to the capital (it was opened as far as Mandjīl on 1 January 1890 and to Tihrān on 15 September 1899). Henceforth, the great majority of travellers took this route, which also became of considerable commercial importance. Only in the 20th century did Tihrān acquire the usual modern transport services by means of motor roads, airlines and railways (see below, section 3b).

(C.E. BOSWORTH)

2. *History to 1926.*

It is uncertain when the name Tihrān first appears in geographical and historical literature. De Goeje, in his edition of al-Iṣṭakhrī, 209 n. *k,* proposed to identify with Tihrān the B.h.zān, B.h.tān or B.h.nān mentioned by al-Iṣṭakhrī, *loc. cit.*; Ibn Ḥawḳal, ed. Kramers, 379, tr. Kramers-Wiet, 369; and al-Muḳaddasī, 375. But according to Yāḳūt, *Buldān,* ed. Beirut, i, 515 (although late and not very explicit), the place Bihzān, which represented the old site of Rayy, lay 7 *farsakhs* (?) from this latter town, while the same geographer places Tihrān, as one would expect, one *farsakh* from Rayy. The earliest reference to Tihrān is provisionally that of Ibn al-Balkhī's *Fārs-nāma,* ed. Le Strange, 134 (written before 510/1116); its author talks highly of the pomegranates of Tihrān, also mentioned by al-Samʿānī (in 555/1160), ix, 103. But independently of these references, the village of Tihrān must have existed before the time of Iṣṭakhrī (in 340/951-2), for al-Samʿānī mentions his ancestor Abū ʿAbd Allāh Muḥammad b. Ḥammād al-Ṭihrānī al-Rāzī, who died at ʿAskalān in Palestine in 261/874. According to Rāwandī's *Rāhat al-ṣudūr* (written in 599/1202), ed. Iqbál, 293, in 561/1166, the mother of the Saldjūḳ Sultan Arslān, who was on her way from Rayy to Nakhčiwān, made the first stop (the regular *naḳl-i maḳām* of the Persians) "near Ṭihrān". The sultan himself occasionally stayed near Dūlāb (the name of a place to the south-east of Tihrān, where the Russian cemetery now is). Ibn Isfandiyār in his history of Ṭabaristān (written in 613/1216; abridged tr. Browne, 19), narrating the wars of the kings of the Persian epic, says that Afrasiyāb's camp was pitched at the place where "Dūlāb and Ṭihrān" now are. Eight years later, Yāḳūt gave a brief note on Tihrān which he had visited just before the Mongol invasion. It was a considerable town, with 12 quarters. As the dwelling-houses in Tihrān were built underground, and the gardens around the town had very dense vegetation, the town was well protected and the government in its dealings with the inhabitants preferred to be tactful with them. Civil discord raged to such an extent in Tihrān that the inhabitants tilled their fields with the spade out of fear lest their neighbours should steal their animals. Zakariyyāʾ al-Ḳazwīnī (674/1275) compares the dwellinghouses in Tihrān to the holes of jerboas (*ka-nāfiḳāʾi ʾl-yarbūʿ*), and confirms Yāḳūt's account of the character of the inhabitants; cf. his *Āthār al-bilād,* ed. Wüstenfeld, 228.

All later writers note the subterranean dwellings, but only Ker Porter (*Travels,* i, 312) says in this connection that 200-300 yards from the Ḳazwīn gate he saw inside the town "an open space full of wide and deep excavations or rather pits", which served as shelters for the poor and stables for the beasts of burden (cf. pl. 57 in Hommaire de Hell, *Voyage*). This must be a reference to the old *darwāza-yi naw* (*pā-kāpuk*), to the south of which the quarter is called Ghār ("caves"). This name was also applied to the whole district stretching to the south of Tihrān. As to the troglodyte life in the vicinity of Tihrān, see Eastwick, *Journal,* i, 294: a village to the east of the

bridge of Karadj, and Crawshay-Williams, *Rock-dwellings at Rainah*, in *JRAS* (1904), 551, (1906), 217.

The growth of Tihrān was the result of the disappearance of other large centres in the neighbourhood. The decline of Rayy dates from its destruction by the Mongols in 617/1220. In the Mongol period, Tihrān is occasionally mentioned in the *Djāmiʿ al-Tawārīkh*: in 683/1284, Arghūn, after the victory gained near Aḳ-Khʷādja (= Sūmīḳān, see Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, 173) over al-Yanaḳ, Aḥmad Takūdār's general, arrived at "Ṭihrān of Rayy" (see Muḥammad Ḳazwīnī, *Ṭihrān*, 38). In 694/1294 Ghāzān, coming from Fīrūzkūh, stopped at "Ṭihrān of Rayy" (Dorn, *Auszüge*, 138). According to the *Nuzhat al-ḳulūb* (written in 740/1340; 55), Tihrān was a considerable town (*muʿtabir*), with a better climate than Rayy. Formerly (*mā ḳabl*), the inhabitants of Tihrān were very numerous. The last remark may support the hypothesis of the identity of Tihrān with B.h.zān (?).

In the Tīmūrid period, the village of "Ṭihrān of Rayy" is mentioned in 806/1403 as the place where the Shāh-zāde Rustam spent 20 days to assemble the troops with whom he marched against Iskandar-Shaykh Čalāwī (Sharaf al-Dīn Yazdī, *Ẓafar-nāma*, ii, 572 = ʿAbd al-Razzāḳ Samarḳandī, *Maṭlaʿ al-saʿdayn*; Dorn, *Auszüge*, 175). About the same time (6 July 1404), Tihrān (*ciudad que ha nombre Teheran*) was visited for the first time by a European traveller, the Spanish Ambassador Clavijo (ed. St. Petersburg 1881, 186, tr. Le Strange, London 1928, 166). At this time, the province of Rayy was governed by Tīmūr's son-in-law, the Amīr Sulaymān-Shāh (*Ẓafar-nāma*, ii, 591; Clavijo, 189, 351: Zuleman or Cumalexa Mirassà). He lived in Warāmin (Vatami). The town of Rayy (Xahariprey) was not inhabited (*agora deshabitada*). In the tower of Tihrān was a representative of the governor, and there was a house where the king stopped on his visits (*una posada onde el Señor suele estar quando allì venia*). Tihrān had no walls.

The Ṣafawids. Under the Ṣafawids, the capital was moved in turn from Ardabīl to Tabrīz and then to Ḳazwīn and finally to Iṣfahān. The district of Rayy was no longer of great importance. There were only two towns of note in it: Warāmin, which after a brief spell of glory under Shāh Rukh had rapidly declined, and Tihrān. According to Riḍā Ḳulī Khān (*Rawḍat al-ṣafā-yi Nāṣirī*), the first visits of the Ṣafawids to Tihrān were due to the fact that their ancestor Sayyid Ḥamza was buried there near Shāh ʿAbd al-ʿAẓīm. The prosperity of the town dates from Ṭahmāsp I, who in 961/1554 built a bazaar in it and a wall (*bāra*) round it which, according to the *Zīnat al-madjālis*, was a *farsakh* in length (Ṣanīʿ al-Dawla, *Mirʾāt al-buldān*: 6,000 *gām* "paces"). The wall had four gates and 114 towers, the number of the sūras of the Ḳurʾān (on each of the towers a sūra was inscribed). The figure of 114 towers is still given in Berezin's plan (1842). The material for the construction of the citadel was procured from the quarries of Čāl-i Maydān and Čāl-i Ḥiṣār, which have given their names to two quarters. Aḥmad Rāḍī, himself belonging to the district of Rayy, talks in laudatory terms of the incomparable abundance of the canals and gardens of Tihrān and the delights of the plateau of Shamīrān, and of the neighbouring district of Kand and Sulaḳān (ms. Bibl. Nat., Suppl. Pers., no. 357, fols. 436-67, the greater part of which is devoted to the great men of the old town of Rayy). According to the *Madjālis al-muʾminīn* of Nūr Allāh Shūshtarī, the village of Sulāghān was founded by the celebrated Sayyid Muḥammad Nūrbakhsh, founder of many religious movements, who died in 869/1464 [see NŪRBAKHSHIYYA].

In 985/1577, Tihrān was the scene of the execution of Prince Mīrzā, whose enemies had accused him to Shāh Ismāʿīl II of aiming at the throne. In 998/1589 Shāh ʿAbbās I, going against the Uzbek ʿAbd al-Muʾmīn Khān, fell severely ill at Tihrān (*ʿĀlam-ārā*, 275, tr. R.M. Savory, *History of Shah ʿAbbās the Great*, Boulder, Colo. 1978, ii, 589), which enabled the Uzbeks to seize Mashhad. It is said that this gave Shāh ʿAbbās a great dislike for Tihrān. It is, however, from his time that the building of the palace of Čahār Bāgh dates, the site of which was later occupied by the present citadel (*ark*). Pietro della Valle visited Tihrān in 1618 and found the town larger in area but with a smaller population than Kāshān. He calls it the "town of plane trees". At this time, a *beglerbegi* ("gran capo di provincia") lived in Tihrān; his jurisdiction extended as far as Fīrūzkūh. In 1627 Sir Thomas Herbert estimated the number of houses in Tihrān at 3,000.

The Afghāns. On the eve of the Afghān invasion, Shāh Ḥusayn Ṣafawī made a stay in Tihrān and it was here that he received Dürri Efendi, the ambassador of the Ottoman Sultan Aḥmed III [*q.v.*] (at the beginning of 1720; *Relation de Dourri Efendi*, Paris 1810). Here also was dismissed and blinded the grand vizier Fatḥ ʿAlī Khān Iʿtimād al-Dawla ("Athemat" of the Europeans), which precipitated the debacle; see Krusinski (publ. by Du Cerceau), *Hist. des révolutions de Perse*, Paris 1742, i, 295. Shāh Ḥusayn only returned to Iṣfahān (1 June 1721; La Mamye Clairac, *Histoire de la Perse*, Paris 1750, i, 200) to lose his throne. Ṭahmāsp II made a stay in Tihrān in August 1725, but, on the approach of the Afghāns, he fled to Māzandarān. European writers say that Tihrān resisted and Ashraf lost many men (Krusinski, *op. cit.*, 351; La Mamye Clairac, *op. cit.*, ii, 250; Hanway, *Historical account*, ii, 234). Some time afterwards, Tihrān fell in spite of the feeble attempt by Fatḥ ʿAlī Khān Ḳādjār to relieve the town (see Olivier, *Voyage*, v, 89 and *Mirʾāt al-buldān*). According to this last source, the *Darwāza-yi Dawla* and *Darwāza-yi Ark* gates date from this period, for the Afghāns everywhere showed themselves careful to secure the ways of retreat. The reference is, of course, to the old gates of those names.

After the defeat of Ashraf at Mihmāndūst (6 Rabīʿ I 1141/20 September 1728), the Afghāns in Tihrān put to death the notables and left for Iṣfahān. The inhabitants fell upon the impedimenta which they had left and, through negligence, a powder magazine was exploded (*Histoire de Nadir Chah*, tr. Jones, London 1770, 78). Ashraf himself was soon driven out of Warāmin, and Shāh Ṭahmāsp II returned to Tihrān.

Nādir Shāh. In 1154/1741, Nādir gave Tihrān as a fief to his eldest son Riḍā Ḳulī Mīrzā, who had hitherto acted as ruler of all Persia. The nomination to Tihrān was preliminary to the fall and blinding of the prince; see Jones, ii, 123; Hanway, ii, 357, 378; ʿAbd al-Karīm, *Voyage de l'Inde à la Mekke*, ed. Langlès, Paris 1825, 93.

During the fighting among the successors of Nādir, ʿAlī Shāh ʿĀdil (1160/1747) took refuge in Tihrān but was seized and blinded by Ibrāhīm's supporters (*Taʾrīkh-i baʿd-i Nādiriyya*, ed. O. Mann, 34). After the fall of the Nādirids, Tihrān passed into the sphere of influence of the Ḳādjārs, rivals of Karīm Khān Zand.

Karīm Khān. In 1171/1757-8, Sultan Muḥammad Ḥasan Khān Ḳādjār, after an unsuccessful battle with Karīm Khān near Shīrāz, retired to Tihrān where his army was disbanded. Having learned that he had

withdrawn from Tihrān, Karīm Khān sent his best general Shaykh ʿAlī Khān there with an advance-guard. With the help of Muḥammad Khān Dawalū, Muḥammad Ḥasan Ḳādjār was killed and Karīm Khān with his army (*ordu*) arrived at Tihrān in 1172/1759. The head of Muḥammad Ḥasan Khān was buried with all honour at Shāh ʿAbd al-ʿAẓīm. The next year, the order was given to build at Tihrān a seat of government (*ʿimārat*) "which would rival the palace of Chosroes at Ctesiphon", a *dīwān-khāna*, a *ḥaram* and quarters for the bodyguard; cf. Ṣādiḳ Nāmī, *Taʾrīkh-i Gītī-gushā*, Bibl. Nat., Suppl. Pers., no. 1374, fol. 29. Ṣanīʿ al-Dawla added to these buildings the Djannat garden, and he says that Karīm Khān intended to make Tihrān his capital. It was to Tihrān that Āḳā Muḥammad Ḳādjār, captured in Māzandarān, was taken to Karīm Khān, who treated him generously, for which he was very badly requited later. In 1176/1762-3, however, Karīm Khān decided on Shīrāz, to which he moved the machinery of government. Ghafūr Khān was left as governor in Tihrān.

The rise of the Ḳādjārs. Karīm Khān died on 13 Ṣafar 1193/2 March 1779. By 20 Ṣafar, Āḳā Muḥammad was in Shāh ʿAbd al-ʿAẓīm, and the next day he ascended the throne (*djulūs*) in the vicinity of Tihrān (*Mirʾāt*, i, 525). Tihrān, however, passed into the sphere of influence of ʿAlī Murād Khān, half-brother of Djaʿfar Khān Zand (ʿAlī Riḍā Shīrāzī, *Taʾrīkh-i Zandiyya*, ed. E. Beer, Leiden 1888, 8, 13, 25). In 1197/1783, Āḳā Muḥammad Khān made a first attempt to get possession of Tihrān, but the governor Ghafūr Khān Ṭihrānī managed to procrastinate, and an outbreak of plague forced Āḳā Muḥammad to withdraw to Dāmghān (*Mirʾāt*). After the death of ʿAlī Murād Khān (1199/1785) the town was besieged by Āḳā Muḥammad's troops. The inhabitants did not wish to surrender the fortress (*ḳalʿa*) before Āḳā Muḥammad had taken Iṣfahān. The news of the advance of Djaʿfar Khān Zand from Fārs caused Āḳā Muḥammad's troops to disperse. He was, however, received with open arms by the chiefs of Tihrān (*ḥākim wa ʿummāl*) and henceforward the town was his capital (*maḳarr-i salṭanat, dār al-salṭana* and later *dār al-khilāfa*), from which he led the expeditions which united all Persia under his rule. According to the *Maʾāthir-i sulṭānī*, tr. Sir Harford Jones Brydges, *Dynasty of the Kajars*, 18, Tihrān became the capital in 1200/1786 and the foundations of the palace were laid then. After the capture of Shīrāz, all the artillery and munitions of the Zands were taken to the new capital. The last Zand ruler, Luṭf ʿAlī Khān, blinded and kept prisoner in Tihrān, was put to death there in 1209/1794-5 and buried in the sanctuary of the *imām-zāde* Zayd; *ibid.*, 25, 30, 76, 82, 101.

After the assassination of Āḳā Muḥammad Shāh (21 Dhu 'l-Ḥidjdja 1211/16 June 1797), his brother ʿAlī Ḳulī Khān appeared before the capital, but the chief minister Mīrzā Shafīʿ would not allow him to enter. In the meanwhile, the heir to the throne Bābā Khān (= Fatḥ ʿAlī Shāh) was able to reach Shīrāz, and after the defeat of the second claimant Ṣādiḳ Khān Shaḳāḳī, was crowned in mid-1212/the beginning of 1798. The Shaḳāḳī [*q.v.*] prisoners were employed to dig the ditch of the capital (cf. Schlechta-Wssehrd, *Fatḥ ʿAlī Schah und seine Thronrivalen*, in *Sitz. A.W. Wien* [1864] ii, 1-31).

During the period of Anglo-French rivalry, a series of ambassadors visited Tihrān: on the one side Sir John Malcolm (1801 and 1810), Sir Harford Jones Brydges (1807), and Sir Gore Ouseley (1811), and on the French side, Gen. Romieu (d. at Tihrān in 1806), A. Jaubert (1806), and Gen. Gardane (1807). The Russians concentrated their efforts on Tabrīz, the residence of the Persian Crown Prince. It was only after the treaty of Turkmančay [*q.v.*] in 1828 that the Russian minister A.S. Griboedov paid a short visit to the capital. Just before his return to Tabrīz, Mīrzā Yaʿḳūb, one of the Shāh's chief eunuchs, an Armenian of Eriwān forcibly converted to Islam, presented himself at the Russian legation and asked to be repatriated by virtue of article 13 of the treaty.

This "apostasy" provoked an attack on the Russian embassy, and on 11 February 1829, 45 members of it were massacred (Griboedov, his secretaries, Cossacks and servants). The tragedy took place in the legation's quarters (house of the *zambūrakčibashi* near the old Shāh ʿAbd al-ʿAẓīm gate; now the street called Sar-pūlak in the Zargarābād quarter). On the death of Griboedov, celebrated in the annals of Russian literature, see *sub anno* Riḍā Ḳulī Khān, *Rawḍat al-ṣafā-yi Nāṣiri*, Tihrān 1274/1858; Mīrzā Taḳī Khān, *Taʾrīkh-i Ḳādjāriyya*, Tihrān 1273/1857, i, 221; Ṣanīʿ al-Dawla, *Taʾrīkh-i muntaẓam-i Nāṣiri*, iii, Tihrān 1301/1883, 144; *Relation des événements qui ont précédé et accompagné le massacre de la dernière ambassade russe en Perse*, in *Nouv. Annales des voyages* [1830], part 48, 337-67; Bergé, *Smert' Griboedova*, in *Russ. Starina* [1872], viii, 162-207; Malyshinsky, *Podlinnoye delo*, in *Russ. vestnik* [1890], vi, 160-233; Žukovski, *Persidskiye letopistsi*, in *Novoye Vremya* [1890], no. 5068; Allahverdiants, *Končina Griboedova po armianskim istočnikam*, in *Russ. Starina* [1901], no. 10, 44-68; V. Minorsky, "*Tsena krovi*" *Griboedova*, in *Russ. Misl.* (Prague 1923), iii, 1-15; D.P. Costello, *The murder of Griboedov*, in *Oxford Slavonic Papers*, viii [1958].

When the death of Fatḥ ʿAlī Shāh (19 October 1834) became known in the capital, his son ʿAlī Mīrzā Ẓill-i Sulṭān proclaimed himself king under the name of ʿĀdil Shāh and struck coins. But the heir to the throne Muḥammad Mīrzā arrived from Tabrīz, accompanied by representatives of Britain and Russia, and entered the capital without striking a blow on 2 January 1835. ʿĀdil Shāh only reigned for six weeks (cf. Tornau, *Aus. d. neuesten Geschichte Persiens*, in *ZDMG* [1849], 1-15). The succession of the next three Shāhs took place without incident [see ḲĀDJĀR] (even after the assassination of Nāṣir al-Dīn Shāh on 1 May 1896). The history of Tihrān under these Shāhs is that of all Persia. The tranquillity of the town was only disturbed by epidemics and the periodical migrations caused by famine; cf. the rioting on 1 March 1861, described by Eastwick, *op. cit.*, and Ussher, *Journey from London to Persepolis*, London 1865, 625.

Among the more important events may be mentioned the persecution of the Bābīs [*q.v.*], especially in 1850 after the attempt on Nāṣir al-Dīn Shāh's life. The movement against the concession of a tobacco monopoly to the Tobacco Monopoly Corporation in 1891 also started in Tihrān; see E.G. Browne, *The Persian Revolution of 1905-1909*, Cambridge 1910, 46-57.

The Constitutional Revolution. After the Persian Revolution, the capital, previously somewhat isolated from the provinces, rapidly became the political and intellectual centre of this country. The chronology of the events of the period was as follows: The *bast* [*q.v.*] of the merchants in the *Masdjid-i Shāh*, December 1905. The *bast* of the constitutionalists at the British legation from 20 July to 5 August 1906. The opening of the Madjlis in the palace of Bahāristān on 7 October 1906. The heir to the throne Muḥammad ʿAlī Mīrzā signs the constitution on 30 December 1906. Death of Muẓaffar al-Dīn Shāh on 8 January 1907. The assassination of the Atābeg Amīn al-Dawla

on 31 August 1907. Counter-manifestations by the "absolutists" from 13-19 December 1907. Bombardment of the Madjlis on 23 June 1908. Capture of Tihrān by the nationalist troops commanded by the Sipahdār-i Aʿẓam of Rasht and the Sardār-i Asʿad Bakhtiyārī on 13-15 July 1909. Abdication of Muḥammad ʿAlī Shāh on 16 July; accession of Sultan Aḥmad Shāh on 18 July 1909. See Browne, *The Persian Revolution*; D. Fraser, *Persia and Turkey in Revolt*, London 1910, 82-116; Vanessa A. Martin, *Islam and modernism. The Iranian revolution of 1906*, London 1989; and the *Bibls.* of DUSTŪR. iv, and *EIr*, art. *Constitutional Revolution*, ii (Vanessa Martin). On the events of 12 May 1911 to 11 January 1912, information can be found in Morgan Shuster, *The strangling of Persia*, London 1912. In 1915, Tihrān became involved in the First World War. The representatives of the Central Powers nearly carried Aḥmad Shāh off to Ḳum with them. The capital was outside of the zone of military operations proper, but on several occasions movements of troops took place in its vicinity (skirmish on 10 December 1915 near Rabāṭ-Karīm between Russian Cossacks and the Amīr Ḥishmat's gendarmes, who were on the side of the Central Powers; cf. Emelianov, *Persidskii front*, Berlin 1923). Down to 1917, Russian troops controlled the region between the Caspian and Tihrān. From 1918 British troops took their place; cf. L.C. Dunsterville, *The adventures of Dunsterforce*, London 1920. The division of Persian Cossacks commanded by the old Russian instructors was also employed to protect Persia against a possible offensive from the north. The Russian officers were dismissed on 30 October 1920. The greater part of the division was stationed at Ḳazwīn, where a British force under General Ironside was still quartered. On 21 February 1921, 2,500 Persian Cossacks, who had come from Ḳazwīn under the command of their general Riḍā Khān, occupied the capital. Sayyid Ḍiyā' al-Dīn formed the new cabinet (24 February-24 May) and Riḍā Khān was appointed commander-in-chief (*Sardār Sipah*; cf. J.M. Balfour, *Recent happenings in Persia*, London 1922). Towards the end of 1923, Aḥmad Shāh left the country, at the same time as the prime minister Ḳawām al-Salṭana (from 4 June 1921), who was accused of intriguing against the Sardār Sipah. The latter remained master of the situation and was finally crowned on 25 April 1926 [see RIḌĀ SHĀH].

(V. MINORSKY*)

3. *The growth of Tihrān.*

(a) To *ca.* 1870.

Yāḳūt's account of the houses of Tihrān suggests that the oldest part of the town is in the south (the Ghār quarter) and that it developed from south to north (i.e. from the desert to the mountain and to the springs). There is little left in Tihrān of the Zand period. The modern town has been entirely created under the Ḳādjārs. On its antecedents, see Chahriyar Adle, *Le jardin habité ou Téhéran de jadis, des origines aux*

Safavides, in idem and B. Hourcade (eds.), *Téhéran capitale, bicentenaire*, Paris-Tehran 1992, 15-37.

Olivier, who visited Tihrān in 1796, says that the town, which looked entirely new or rebuilt, was in the form of a square of a little more than 2 miles (?), but only half of this was built upon. The population did not exceed 15,000, of whom 3,000 were soldiers, and Olivier remarks with justice that "the gold scattered around the throne" did not fail to attract inhabitants. The palace in the citadel was built in the time of Āḳā Muḥammad S͟hāh. In the *Tālār-i taḵẖt-i marmar* were placed the pictures, glass and marble pillars taken from the palace of Karīm Ḵẖān in S͟hīrāz. Under the threshold of a door were buried the bones of Nādir S͟hāh so that the Ḳād͟jār prince could trample over them every day (Ouseley). On the accession of Riḍā S͟hāh, the bones were taken away.

According to General Gardane (1808), only the poor remained in Tihrān in summer, but in winter the population reached 50,000.

Morier (1808-9) says that Tihrān was 4½-5 miles in circumference. Kinneir, about the same time, put the summer population at 10,000 and the winter at 60,000. The town was surrounded by a strong wall and a great ditch with a glacis, but the defences were only of value in a country where "the art of war was unknown".

Ouseley (1811) counted 6 gates in Tihrān, 30 mosques and colleges and 300 baths; he put the population in winter at 40-60,000. Ker Porter (1817) mentions 8 (?) gates, before which large round towers were built (cf. his plan) to defend the approaches and control the exits. In winter, the population was from 60-70,000.

Fatḥ ʿAlī S͟hāh had considerably improved the town, but towards the end of his reign it passed through a period of neglect. According to Fraser (1838), there was not another town in Persia so poor-looking; "not a dome" was to be seen in it. Under Muḥammad S͟hāh, things were improved a little.

Berezin has given a particularly detailed description of the palace (*ḏarb-i dawlat-ḵẖāna*) with its four courts and numerous buildings (Dawlat-ḵẖāna, Daftar-ḵẖāna, Kulāh-i firangī ["pavilion"], Sandūḳ-ḵẖāna, Zargar-ḵẖāna, ʿImārat-i S͟hīr-i Ḵẖurs͟hīd, Sarwistān, Ḵẖalwat-i S͟hāh, Gulistān). The same traveller gives a plan of the palace and of the town, very important for the historical topography of Tihrān. At this date (1842), the town within its walls measured about 3,800 Persian *ars͟hīn* (roughly yards) from west to east and 1,900-2,450 from north to south, i.e. occupied an area of about 3 square miles (J.E. Polak's calculation, in *Topogr. Bemerkungen z. Karte d. Umgebung und zu d. Plane v. Teheran*, in *Mitt. der K.K. Geogr. Gesell.*, xx [1877], Vienna 1878, 218-25 (with a map 1:108,000 and a plan of 1:20,700 made by Comm. Krziž in 1857-8), at p. 223, as 83,750 m^2 is obviously wrong). The citadel (*ark*) was in the shape of a parallelogram (600 *ars͟hīn* west to east by 1,175 north to south, i.e. a fourth of the whole town). The north side of the *ark* touched the centre of the northern face of the outer wall. Gardens occupied the parts of the town next to the wall. The most animated quarter was that which lay to the south-east of the citadel in the direction of the S͟hāh ʿAbd al-ʿAẓīm gate. Only five gates are marked on this plan. The only open space, the Maydān-i S͟hāh close to the citadel on the south side, was not large (cf. the plate in Hommaire de Hell). Among the mosques, that of the S͟hāh and the *imāmzāda* of Zayd and Yaḥyā alone are of any importance. Gardane had seen the *Masd͟jid-i S͟hāh* being built in 1807. Its inscription, from the hand of the court calligrapher Muḥammad Mahdī, is dated 1224/1809, but according to Schindler, the mosque was not finished till 1840 (cf. Fraser, above).

The plan by Krziž (publ. Tihrān 1857) much resembles that of Berezin, but around the town he marks by dotted lines the bounds of a new extension of the town, which according to an explanatory note by Dr. Polak, had been begun considerably before 1857. Polak himself in 1853 had built a hospital to the north of the north gate of the town. These new buildings were few in number and not built under any regular scheme. In 1861 the town was still within the old square; the population was 80,000 in summer and 120,000 in winter (Brugsch).

Bosworth and C. Hillenbrand (eds.), *Qajar Iran. Political, cultural and social change 1800-1925. Studies presented to Professor L.P. Elwell-Sutton*, Edinburgh 1983, 199 ff. (V. Minorsky)

(b) Urbanisation, monuments, cultural and socio-economic life until the time of the Pahlavīs.

(i) *Urban development*

Despite the political role evolved by the Ḳād͟jārs, Tihrān retained the appearance of a traditional Persian Islamic township until the reign of Muḥammad S͟hāh (1834-48). Urban activity was centred *intra muros*, around the royal citadel of the Arg (or Ark) and the lanes of the Bāzār quarter, site of the ancient village of Tihrān, as far as the S͟hāh ʿAbd al-ʿAẓīm [*q.v.*] gate. Huge gardens were laid out in the very interior of the eastern quarters (ʿAwdlād͟jān, Čāla Maydān) and the western (Sangilad͟j). Besides the Arg, the town contained few large buildings. The only open public space was the small square, Maydān-i S͟hāh, between the Bāzār and the Arg, where the Russian legation was accommodated, while that of Great Britain was situated close to the S͟hāh ʿAbd al-ʿAẓīm gate (see Moghtader, 43, and Bérézine's plan from 1842-3 [Moscow 1852]: adapted and reprinted with captions by J. Calmard [1974], 124-6; redrawn, with quarters identified by Moghtader, extra-textual plate I).

Until the mid-19th century, the majority of European observers considered Tihrān a dismal township which, with its unhealthy climate, lack of water provision and dearth of prestigious monuments could never rival the ancient Persian capitals such as Tabrīz, Iṣfahān and S͟hīrāz, and could even be supplanted as capital by other sites of royal residence.

The real promotion of the city to the status of capital was owed to the initiatives of Nāṣir al-Dīn S͟hāh (1848-96 [*q.v.*]). But transformation was very gradual. The Islamic town is still clearly visible in the plan drawn by Krziz, published in December 1858 (not in 1857) (partially inaccurate and incomplete document; see Gurney, 56, no. 21; redrawn by Moghtader, extra-textual plate II and Plan of the Arg according to Krziz, 45). This colour-coded map supplies abundant information on the nature of buildings (mosques, businesses, residences, gardens, etc.). It indicates a first step towards urbanisation, as is confirmed by the earliest register of houses (not a true census) made at the S͟hāh's behest by an anonymous individual in 1269/1852 (Ettehadieh [1983], 200; *Āmār*, 37-345). The town is divided into five quarters (*maḥalla*): Ark, ʿAwdlād͟jān, Bāzār, Sangilad͟j and Čāla Maydān. This document gives information on the social, commercial

and professional infrastructure of the quarters, especially regarding their socio-religious aspect. Buildings are divided between: houses (those of officials, *nawkars*, those of subjects, *raʿāyās*, commoners and minorities); official edifices (palace or house in the service of the crown or of the civil service, *madrasas*, numerous *takyas* (Persian *tekyes*, communal places, primarily for the celebration of S͟hīʿī mourning rituals); commercial premises (those that are in operation, those that are closed or abandoned). Each quarter is divided into *pātuḳ* (on this term, signifying primarily the place where S͟hīʿī funereal flags are stored, see Calmard [1972], 36) and *gud͟har* (passage). This register gives the names of the owners of buildings or of tenants, if the property is part of a *waḳf*, etc. One section (336-45) relates to zones in the process of urbanisation beyond the five gates of the city.

The first projects of urbanisation, in the years 1851-2, related to the quarters of the Arg and the Bāzār and included the renovation of the public square, the Sabza Maydān, formerly the Maydān-i S͟hāh (Gurney, 52). But the sovereign was still intent on the construction of prestigious buildings *extra muros*, as is illustrated in particular by the erection, in 1856, of the first state-run *takya/tekye*, the Tekye Dawlatī of Niyāwarān which was to replace the *tekye* of Muḥammad S͟hāh's vizier Ḥād͟jd͟jī Mīrzā Āḳāsī (Calmard [1976-7 A], 157-162). The S͟hāh, the court and the nobility continued to flee the unhealthy atmosphere of the town, especially in the summer and in particular during the cholera epidemics which had afflicted Tihrān since 1823 (see X. de Planhol, *EIr*, art. *Cholera. I. In Persia*). The diplomat Arthur de Gobineau, who spent two periods of time in Tihrān (1855-8 and 1862-3), reckoned that one-third of the inhabitants of the city died of cholera in 1856 (*Trois ans en Asie*, Paris 1859, repr. Paris 1922, ii, 234). He noted, however, that in 1862, as a result of the S͟hāh's efforts, the city was embellished and "augmented by two substantial quarters"; the *bāzārs* were abolished and the majority of the ruins replaced by attractive buildings (A.D. Hytier, *Les dépêches diplomatiques du Comte de Gobineau en Perse*, Geneva-Paris 1959, letter dated 28 February 1862, 169).

However, during the 1850s, the city began to expand *extra muros*, as is shown by Polak's comments on another map of Tihrān and its surroundings established by Krziz. This extension took place principally towards the north, mainly in the direction of the summer palaces. Garden suburbs (Bāg͟h-i Sardār and Nigāristān) flanked the road leading from the S͟hamirān Gate to the Ḳaṣr-i Ḳād͟jār. From the Dawlat Gate, another road led to this palace via the garden-boulevard of Lālazār. Alongside another road were situated military installations, "proto-industrial" premises, a new hospital, etc. (Gurney, 56-7). Affluent new buildings were located in these zones, as well as poorer ones to the south, near the clay quarries and the brickworks. As is also noted by Polak, the city itself was choked within its delapidated walls, some quarters, such as that of Čāla Maydān, becoming unwholesome places to live (Moghtader, 44).

In the specific context of Ḳād͟jār Persia, the modernisation of Tihrān required at the very least expansion, to be achieved by the destruction of the ancient walls. While the motivation and procedure of the project remain obscure, the decision was taken in December 1867, when Nāṣir al-Dīn S͟hāh had been in power for almost twenty years (Gurney, 51-2). Among the motives leading to this decision, the following have been evoked:

1. Demographic changes. According to a critical study of European testimony, the population of Tihrān, during the summer months, had increased from 15,000 inhabitants in the 1790s to 100,000 at the beginning of the reign of Nāṣir al-Din S͟hāh (thesis of J. Brown, Durham 1965, quoted by Gurney, 54-5). Without supplying precise figures, the report of the census of 1269/1852-3 indicates urban development close to the gates: Muḥammadiyya and S͟hāh ʿAbd al-ʿAẓīm to the south; S͟hamirān to the north, in the extra-mural zones of Bāg͟h-i Sardār, properties of the Kalāntar, the Tak͟ht-i K͟hān, the Maḥalla-yi Barbarihā and immigrants from Afg͟hānistān (Gurney, 55).

Some fifteen years later, the report of the (incomplete) census of ʿAbd al-G͟haffār (Nad͟jm al-Mulk, later Nad͟jm al-Dawla) compiled at the very beginning of the changes, in February 1868, shows an expansion of the quarters of Čāla Maydān and Sangilad͟j, to the detriment of the gardens, and in particular a significant increase in the number of extra-mural houses, where some 15% of the population then lived, including numerous immigrants. It was also there, in the residential zones to the north of the ancient wall, that the Europeans and their embassies were to be installed (Gurney, 56 ff.).

2. Security needs. The establishment of the new quarters, especially the affluent ones to the north, required protection, to be supplied by a ditch, a rampart and twelve new gates guarded day and night. This also provided the means to control the populace, in the event of threats of revolt, tribal raids and cholera epidemics, as well as facilitating the levying of taxes on merchandise (Gurney, 59).

3. Flooding and its consequences. The new needs of urbanisation also required the development of carriageable roads and provision of water. This was problematic since, besides earthquakes and epidemics, this city, being situated on the plain at the foot of a mountain range, was subject to flooding. The catastrophic flood of May 1867 caused much damage in the north, affecting the access road to the palace, the new quarters, the gardens, the summer residence of the Russian legation, etc., as well as numerous quarters and roads extending as far as the sanctuaries of S͟hāh ʿAbd al-ʿAẓīm. The network of *ḳanāts* [*q.v.*] supplying the city with water having also been damaged, and with a cholera epidemic claiming numerous victims in August, the S͟hāh, who had been making the pilgrimage to Mas͟hhad, delayed his return to the city until mid-October. By this time, the ravages of the flood had been repaired and new architectural projects partially realised (see below). But the warning had been drastic.

4. Foreign influences. The introduction of new ideas and techniques, including photography, from the 1840s onward, the creation of the Dār al-Funūn (1851-2), where teaching was given by Europeans, the multiplication of contacts with Europe, especially through the creation of new embassies, were also factors of change. Besides the demolition of the ancient walls, the modernisation of Tihrān was first imposed on the Arg quarter, to the north-east of which a large square was created, the Maydān-i Tūp-k͟hāna, centre of the renovated capital. A new gate, Darwāza-yi Nāṣirī or S͟hams al-Imāra, breaching the wall of the Arg, and a new avenue (the future K͟hiyābān-i Nāṣirī) linked the citadel to the Bāzār. Among architectural projects realised during the 1860s, the S͟hams al-Imāra palace shows a European influence, as does the Bāg͟h-i Gulistān garden, transformed by a French gardener. As for the new rampart, it was designed by the French polytechnic engineer Alexandre Buhler, a teacher at

the Dār al-Funūn, on the model of the first system of fortifications of Vauban. The 1860s were the decade of modernisation of great capitals, including Istanbul and Cairo. Major architectural achievements were displayed at the prestigious universal exhibition held in Paris in 1867, where the moderniser of Egypt, Ismāʿīl Pas͟ha, was able to visit renovated Paris, guided by Baron Haussmann. This exhibition and the renovation of Paris influenced the urbanisation of Cairo, Istanbul and, indirectly, that of Tihrān. The reformist Mīrzā Ḥusayn K͟hān Mus͟hīr al-Dawla [see MUS͟HĪR AL-DAWLA], ambassador of Persia in Istanbul, attempted to persuade Nāṣir al-Dīn S͟hāh to participate. Some Persians, including courtiers, had seen Paris and the exhibition. Photographs, paintings, engravings and other documents, sent to Tihrān, showed the changes being undertaken in the major capitals. These diverse factors may have influenced the decision of the S͟hāh (Gurney, 64 ff.).

Solemnly proclaimed, the decision of December 1867 was not implemented by the reformer Mus͟hīr al-Dawla and his supporters, who came to power in December 1870. Begun before and at the time of the floods of 1867 with the renovation of the Arg, the modernisation of the city (and dealing with the related problems of property ownership) was entrusted to conservative officials already in office: Mustawfī al-Mamālik, minister of finance, and Mīrzā ʿĪsā, vizier of Tihrān. Projects of expansion, the construction of a rampart (which had no military or defensive function) and of the twelve gates, lasted some four years, until 1288/1871-2 (Gurney, 53, 67 ff.). As is shown by the plan of ʿAbd al-G͟haffār (published in 1892), the initial intention was to mark out the new quarters with rectilinear avenues flanked by trees and streams. The most prosperous quarter was the Maḥalla-yi Darwāza Dawlat, also called Dawlat, although it was never to become the quarter occupied specifically by administrative agencies of the state nor a European or foreign enclave. In fact, the northern residential zone predominantly remained the affluent quarter, the site of diplomatic winter residences. Examination of the 1892 map, in conjunction with the registrations of 1900 to 1902-3, shows that in the new quarters, of initially modern aspect, there were created sub-quarters of traditional structure, most of them centred around the palaces of princes and of dignitaries. At the end of the reign of Nāṣir al-Dīn S͟hāh, these new quarters were still property mostly held by the descendants of Mustawfī al-Mamālik and of Mīrzā ʿĪsā, thus illustrating the traditional social inequalities which were intensified with the growth of financial speculation (Gurney, 70-1; for the register of Ak͟hḍar ʿAlī S͟hāh, begun in 1317/1900 and concluded in 1320/1902-3, see Ettehadieh [1983], 200; and comparative table with preceding registers, 204 ff.; *Āmār*, 353-651).

In spite of governmental and private initiatives, modernisation remained limited. Always problematical, the supply of water was still operated by means of *ḳanāts* and water drawn from the Karad̲j̲ river, transported by a promenade-canal to the north of the city (from the 1840s onward). Public facilities appeared gradually: horse-tramways and street-lighting, with oil or gas (1880); carriages for hire (1891); steam railway, Tihrān to S͟hāh ʿAbd al-ʿAẓīm (1888-93); electrification, in the palace (1887) then in the city (1908; eight years after Mas͟hhad!). The creation of a modern police-force (1879) was followed by the promulgation of the first rules regulating urban policy and utilisation of public highways (1896). The first motor cars appeared *ca.* 1900 (initially in the service of the S͟hāh). Lorry transport, organised by the Russians, began to reach Tihrān in 1910. It was also after the tumult of the Constitutional Revolution (1905-6) that, to alleviate the congestion of Tihrān, regulations were enacted for the operation of carriages. With the intensification of carriage and then of motorised traffic, during and after the First World War, other measures were taken (see Moghtader, 48; Floor, 176 ff.) Public lighting remained poor, on account of deficiencies in the gas-works installed in 1880. In spite of the introduction of electricity (1908), until 1926 lighting was predominantly supplied by oil-lamps rather than by electric bulbs (Floor, 193). The chief of the new police force (1879), the Austrian "Count Monteforte", established an office for the control of prices and a section entrusted with maintenance of the highways and the removal of horse-dung. However, the condition of the streets remained deplorable; strewn with excrement and generally unpaved, they were muddy in winter and dusty in summer. Funds allocated to paving, raised by a tax on vehicles, effected little improvement. But despite their limited effects, the initiatives taken under the Ḳād̲j̲ār government in respect of urbanisation, traffic management and public hygiene, laid the foundations of an urban infrastructure worthy of a modern city (Floor, 194 ff.).

Although its appearance had changed little under the successors of Nāṣir al-Dīn S͟hāh, it seems that Tihrān experienced a relatively slow growth in population until the time of the Pahlawīs. But the figures are unreliable, particularly on account of seasonal migrations, fluctuating numbers of immigrants, temporary residents, etc. According to testimonies and the interpretation of reports, estimates vary. From the first "census" (ʿAbd al-G͟haffār, 1868), a population of 155,736 inhabitants has been estimated (Moghtader, 46, quoting N. Pakdaman [1974]). ʿAbd al-G͟haffār's estimate (in 1890-2) of 250,000 inhabitants, half of them living *extra muros*, is exaggerated (Moghtader, 48). A recent study has supplied more reliable numbers: 106,482 in 1883; 160,000 in 1891; 210,000 in 1922; and 310,000 in 1932. An increasing proportion of the population lived outside the walls or outside the administrative district of Tihrān. The figure of one-and-a-half million was not exceeded until 1956 (H. Zandjani, *Téhéran et sa population: deux siècles d'histoire*, in *Téhéran, capitale bicentenaire*, 251-66, 251-2).

(ii) *Built-up space and monuments*

Compared with that of prestigious former capitals of the Persian world, the architectural appearance of Tihrān remains rather disappointing. On account of their lack of interest, through negligence or arbitrary decision, few ancient constructions have survived, as is shown by the chronology of architectural projects sketched below.

Although benefiting by the destruction of Rayy by the Mongols (1220), the decline of Warāmīn and the attention of certain potentates, this large agricultural village, "garden of troglodytes", only became an important town under the last Ilk͟hānids in the 8th/14th century. According to Clavijo, ambassador to the court of Tīmūr, in 1404, the "city" (*ciudad*) possessed one residential palace. There were also at least two other palaces and some mausolea (Adle, 23 ff.; localisation of the residential palace in the Tīmūrid park, 31). The mausolea were situated within or on the periphery of the Tīmūrid town: Buḳʿa-yi Sayyid Ismāʿīl, Imāmzāda Yaḥyā, Imāmzāda Zayd and Imāmzāda Sayyid Naṣr al-Dīn (Adle, 32-3, with localisation and current state of the monuments). Under the Ṣafawids, in 1554, Ṭahmāsp I was responsible for the construction of

a Bāzār (partially covered) and a perimeter wall furnished with four gates and 114 towers (see above); frequently repaired, this wall survived until its demolition in 1868. Despite his contempt for Tihrān, Shāh ʿAbbās I had a Čahar Bāgh (garden-promenade) laid out, and constructed a palace-citadel (Arg). Shāh Sulaymān was responsible for the building of a *dīwān-khāna* where Shāh Sulṭān Ḥusayn received the Ottoman ambassador Dürrī Efendi in 1722 (Dhukā, 2-3; Karīmān, 120 ff.).

Despite these architectural projects, the proportion of open space broadly exceeded that of the buildings. In the 17th century, Tihrān retained its appearance of an "inhabited garden" (Adle, 35). The bone of contention between various potentates, the town and its inhabitants suffered during the Afghan interlude (1722-9), and also during the reigns of Nādir Shāh (1736-47) and of his successors, with the rivalry between the Ḳādjār tribal chieftains and Karīm Khān Zand (see above). The latter took the city from Muḥammad Ḥasan Khān Ḳādjār in 1759 and intended to make it his capital. In 1772 he had the walls restored and built structures (*ḥaram, khilwat-khāna, dīwān-khāna*) in the Ṣafawid Arg (Karīmān, 181 ff.). It was probably he who first provided the Arg with a rampart and a ditch, apparently non-existent in the Ṣafawid period. He entrusted this work to Ustād Ghulām Riḍā-yi Tabrīzī. Unable to maintain his position in the north, he established his capital at Shīrāz in 1176/1762-3 (Dhukā, 4 ff., 17).

Āghā Muḥammad Khān was well acquainted with Tihrān where, as a very young man, he had been sent, as a prisoner, to Karīm Khān (see above). Since his return to the north and his long struggle for power, he had organised the construction of palace-gardens at Māzandarān, at Astarābād (1791) and at Sārī, with a reception-hall opening on a *tālār* (monumental porch) with columns in the style of the Ṣafawid palaces. When making Tihrān his capital (1200/1786) he laid the foundations of the monumental complex of the imperial palace of the Arg, the Kākh-i Gulistān of Fatḥ ʿAlī Shāh and his successors. He enlarged the Zand palace (Dīwān-i Dār al-Imārā), incorporating into it elements from the palace of the Wakīl (Karīm Khān), brought back from Shīrāz, and had the Arg surrounded by a ditch. To the north-east of Tihrān, beyond Damāvand, he had a garden-pavilion constructed (Dhukā, 45 ff., 111 ff.; Karīmān, 187 ff.; Scarce [1983], 333-4). But the true founders of the metropolis of Tihrān were Fatḥ ʿAlī Shāh and his great-grandson Nāṣir al-Dīn Shāh, their way of life and manner of government being reflected in the style of their capital. Unlike his uncle Āghā Muḥammad, a traditional tribal khān, Fatḥ ʿAlī Shāh had a taste for luxury and ostentatious ceremonial and he maintained an extensive *ḥaram*. To satisfy his peripatetic predilections, appropriate to the way of life and political interests of his tribal family, in relation to Tihrān and its environs, he constructed and maintained extra-mural palatial gardens close to the northern fringes of the town (Nigāristān, 1810; Lālazar) or further afield (Sulaymāniyya, at Karadj, and in particular Ḳaṣr-i Ḳādjār in the Shamirānāt, 1807, which survived until the 1950s). Through piety or the need for prestige, he also endowed Tihrān with its first public buildings: the Masdjid-i Shāh, built according to the principles of traditional Persian architecture, near the northern entrance of the Bāzār, between 1808 and 1813; North Gate of the Bāzār on the Sabza Maydān adjacent to the Maydān-i Shāh; and Shāh ʿAbd al-ʿAẓīm Gate, the southern entrance to the city. Also owed to him are other more modest religious edifices: Masdjid Sayyid ʿAzīz Allāh (1824); Madrasa-yi Khān-i Marwī (1830); see Moghtader, 41-2, Scarce [1992], 75 ff. As for the citadel of the Arg, it seems that, from 1806 onwards, Fatḥ ʿAlī Shāh had set about transforming or renovating, with additions, the constructions of Karīm Khān and Āghā Muḥammad Khān. These changes were modified in their turn by Nāṣir al-Dīn Shāh in the course of the modernisations commenced in 1867. Among these architectural projects, which borrowed especially from the *tālārs* with columns of Iṣfahān, notable are: the monumental gate called Darb-i Saʿādat, also known as ʿĀlī Ḳāpū or ʿImārat-i Sardar, which opened on the garden of the throne room, Aywān-i Takht-i marmar, a monumental *tālār* sheltering an impressive marble throne, also called Takht-i Sulaymāniyya or Dīwān-khāna, serving as a reception room, much influenced by the architecture of Shīrāz under Karīm Khān; the ʿImārat-i Bādgir (palace with wind tower). Some of these constructions, as well as the Khilwat-i Karīm Khānī, were progressively incorporated into the palatial complex of the Kākh-i Gulistān, the biggest monumental structure of the Arg; the stages of the latter's construction remain uncertain. The Gulistān served as an administrative and residential centre, in winter, for Fatḥ ʿAlī Shāh, his extensive family and his allies (Dhukā, 47 ff.; Scarce [1983], 335 ff.; Karīmān, 201 ff.; Scarce [1991], 910 ff.; eadem [1992], 78 ff.).

Under Muḥammad Shāh (1834-48), with the *extra muros* development, the vizier Ḥādjdjī Mīrzā Āḳāsī had residences and gardens built in the north (Muḥammadiyya, ʿAbbāsābād). He had a 42 km-long canal dug to convey to Tihrān some of the waters of the Karadj river. In the Arg, he built an arsenal and a *takya*, near the Russian legation, for commemorations of Muḥarram and staging of *taʿziyas* [*q.v.*]. Religious buildings were also built in Tihrān: Masdjid Ḥādjdjī Riḍā ʿAlī, Imāmzāda Ismāʿīl in the *bāzār* (Karīmān, 212; Moghtader, 42; Calmard [1974], 100 ff.). Muḥammad Shāh and Ḥādjdjī Mīrzā also founded the quarters of the New Gate (Maḥalla-yi Darwāza-yi naw/Darvāza Muḥammadiyya) and ʿAbbāsābād, which would be populated by immigrants from Ādharbāydjān and from khānates which had fallen into Russian hands (Karīmān, 210-11).

Like Fatḥ ʿAlī Shāh, Nāṣir al-Dīn Shāh was an energetic builder. He maintained the Ḳādjār custom of abandoning or adapting the constructions of his predecessors. His migrations to summer residences were less wide-ranging, being concentrated essentially in the Shamirānāt. The development of contacts with Europe and the travels of the Shāh, from 1873 onwards, led to innovations in the architectural projects undertaken, with the renovation of Tihrān since 1867 (see above). The three-phase renovation was applied first of all to the constructions of the Arg and the Gulistān palace, which was redesigned between 1867 and 1892, according to a plan maintaining segregation between public and private zones. In the first phase (1867-73), he was responsible for the erection of the Shams al-ʿImāra, the first five-storey building seen in Persia. Commissioned at the same time, the Takya Dawlat, a large circular edifice covered with a *velum* during religious or civil ceremonies, was built later (completed in 1873?). An *andarūn* was built behind the Takht-i Marmar. In the second phase (1873-82), he obliterated the constructions undertaken by Fatḥ ʿAlī Shāh to the north of the palace, with the exception of the Takht-i Marmar. In their stead, he had built the imposing two-storey façade of the Gulistān palace, the

entrance hall of which, decorated with multiple mirrors, led to a large staircase of two flights, giving access to a massive rectangular chamber with alcoves. This Tālār-i Salām or Uṭāḳ-i Mūza (Museum) accommodated the S̲h̲āh's collections of heterogeneous objects. An orangery (Nārandjistān) was built and the walls of the palace decorated with ceramic tiles. In the third phase (1888-92), he ordered the construction of a new *andarūn*, the rooms of which opened on a courtyard, a private building in European style (K̲h̲ʷābgāh) and a small palace, Kāk̲h̲-i Abyaḍ. In the S̲h̲amirānāt, above and below the Ḳaṣr-i Ḳādjār, he had built, in 1888, the palaces of ʿIs̲h̲ratābād (K̲h̲ʷābgāh) and Salṭanatābād, its architectural style resembling that of the Gulistān palace. Other summer palaces were built, the northernmost being the Ṣāḥibḳirāniyya at Niyāwarān, after the obliteration of the palace constructed by Fatḥ ʿAlī S̲h̲āh and adapted by Muḥammad S̲h̲āh (Scarce [1991], 921 ff.; eadem [1992], 88 ff.).

Despite the sometimes ostentatious piety of Nāṣir al-Dīn S̲h̲āh (cf. his pilgrimages to S̲h̲āh ʿAbd al-ʿAẓīm where he was assassinated), his reign marks an overall decline in religious constructions. He seems to have confined himself to restoring or embellishing the constructions of Fatḥ ʿAlī S̲h̲āh (Masdjid-i S̲h̲āh, S̲h̲āh ʿAbd al-ʿAẓīm). He had two small *madrasas* built: S̲h̲ayk̲h̲ ʿAbd al-Ḥusayn (1862); the old Madrasa-yi Sipahsālār in the Bāzār-i Marwī (1866). But the most prestigious monument, the Masdjid-Madrasa-yi Sipahsālār, was financed and constructed by two of his viziers, Mīrzā Ḥusayn K̲h̲ān and his brother Mīrzā Yaḥyā K̲h̲ān, between 1879 and 1890. Erected to the north-east of the new town, it constitutes one of the most successful examples of the Persian architecture of the 19th century. Although it is of classical square design, with four *aywāns*, in a break with tradition its recessed main entrance, flanked by two minarets, opens on a vestibule giving access to a huge courtyard surrounded by arcaded loggias. The façade of the southern *aywān* is dominated by four imposing minarets. Although of classical crafting, the decoration with ceramic tiles shows European influences. Numerous secular buildings were also constructed in Tihrān under Nāṣir al-Dīn S̲h̲āh by princes or members of the nobility. In 1878, his eldest son Masʿūd Mīrzā Ẓill al-Sulṭān had a palace constructed close to the site of the Masdjid-i Sipahsālār. Although this building has been converted to become the Ministry of Education, its entrance façade remains a fine example of Ḳādjār style (D̲h̲ukā, 122 ff. and index; Karīmān, 212 ff.; Scarce [1983], 338 ff., eadem [1991], 921 ff.; eadem [1992], 82 ff.).

The summer palace of Nāṣir al-Dīn S̲h̲āh constitutes the apogée of civilian architecture under the Ḳādjārs. Among his successors, only Muẓaffar al-Dīn S̲h̲āh (1896-1907 [*q.v.*]) also undertook architectural projects, and this to a very limited extent. Decorations with ceramic tiles representing Persian motifs in a Euro-Persian style were effected in the Gulistān palace (1899). A lover of Persian gardens, he had a garden-palace constructed to the east of Tihrān, at Dus̲h̲ān Tepe, a country retreat especially favoured by Nāṣir al-Dīn S̲h̲āh (Scarce [1983], 341). The Ḳādjār style, influenced to an increasing extent by Europe, recurs in numerous private or public buildings (*takyas*, in particular) erected at the expense of princes, dignitaries, merchants or other individuals or groups. Revived in public or private construction projects, these architectural vestiges have gradually disappeared, especially since the 1960s, the destruction of Ḳādjār urbanism ultimately rendering the 19th-century city unrecognisable.

(iii) *Cultural and socio-economic life*

Like the city of Rayy on which it was dependent, Tihrān must have accommodated, at a very early stage, a S̲h̲īʿī community. Its inhabitants were also renowned for their belligerent, quarrelsome and rapacious nature; rebellious towards political authority, they were particularly reluctant to pay taxes (Adle, 27 ff., criticising Karīmān, 100 ff.).

The earliest known inhabitant of Tihrān is apparently, in the 3rd/9th century, the *muḥaddit̲h̲* Muḥammad b. Hammād Abū ʿAbd Allāh al-Ṭihrānī al-Rāzī, ancestor of al-Samʿānī (Adle, 21, and above). Other *ʿulamāʾ*, as well as numerous scholars, poets, politicians, etc., have been natives of Tihrān, especially since the Ṣafawid period and under the Ḳādjārs. Besides the *nisba* Ṭihrānī or Ṭihrānī Rāzī, they are often known by the names of the villages or quarters which ultimately constituted the extended area of Tihrān: Djaybāynī, Dulābī, Durus̲h̲tī/Turus̲h̲tī, Kanī, Ḳaṣrānī, Nārmakī, etc. (see Karīmān, 455 ff.). Since the Ḳādjār period, increasing numbers of immigrants, especially from the Caspian provinces, have become Tihrānīs, but use of the *nisba*, including that of adoption, has generally disappeared.

Cultural life developed with the establishment of the political power and the court of Fatḥ ʿAlī S̲h̲āh in Tihrān, at least during the winter period. Influenced by Europe since the mid-17th century, painting was in overall decline. But alongside the production of paintings in oil on canvas according to the European technique, a reversion to Ṣafawid models is observed, especially in the miniature, painting on lacquered papier-mâché or on glass, the art of the book and ceramics. The most attractive Ḳādjār paintings are those effected on lacquered or enamelled objects. In addition to traditional designs featuring flora and fauna, the art of the portrait—of the sovereign and of leading courtiers—occupies a significant position in this pictorial corpus, especially in the decorations of palaces. Interesting productions are supplied by architecture and its related décor, in secular as well as religious buildings, and by the arts of metalwork and of textiles (produced in traditional centres, marketed and used to a certain extent in Tihrān): see B.W. Robinson, *Persian painting under the Zand and Qajar dynasties*, in *CHIr*, vii, 870-89, at 874 ff.; Scarce [1983, 1991, 1992]. But it was in particular the literary revival (*bāz gas̲h̲t-i adabī*), beginning in Iṣfahān and S̲h̲īrāz in the 18th century, and the neo-classical poetry of the court which gave the greatest lustre to the Ḳādjār dynasty (see IRĀN. vii. Literature, D). However, the poets of the Ḳādjār period were for the most part residents of towns and provinces where literary production continued to be highly prized, and Tihrān lagged far behind Kās̲h̲ān, S̲h̲īrāz, Kirmān, Tabrīz, etc. (Ettehadieh [1992], 128, 136). The literary revival coincided with an upsurge in western influence in Persia, new ideas first penetrating the court of the prince ʿAbbās Mīrzā in Tabrīz, defeated militarily by the Russians (1813, 1828). After the premature death of this reforming prince (1833), cultural life was concentrated rather in Tihrān, which assumed a predominant role largely through the development of techniques of printing (typography, more aesthetic lithography, then return to typography [see MAṬBAʿA. 3.]) and modern methods of education, particularly following the creation in Tihrān of the Dār al-Funūn, on the initiative of the vizier Mīrzā Taḳī K̲h̲ān "Amīr Kabīr" in 1268/1851 (see J. Gurney and N. Nabavi, *EIr*, art. *Dār al-funūn*).

These modern methods were to facilitate access to

numerous ancient and contemporary texts, including travel literature, memoirs, history, etc. which were at that time widely distributed. Also assisted by this development was to be the publication of translations of works into European languages which, undertaken under ʿAbbās Mīrzā in Tabrīz, would be continued in Tihrān on the initiative of the vizier Ḥādjdjī Mīrzā Āķāsī. Under Nāṣir al-Dīn S̲h̲āh, Muḥammad Ḥasan K̲h̲ān T̲h̲ānī al-Dawla (later known as Iʿtimād al-Salṭana), trained at the Dar al-Funūn and then in France, was to be responsible for a department of translations. It was also in Tihrān in 1253/1837 that the first Persian newspaper appeared, the *Kāg̲h̲az-i ak̲h̲bār*, published by Mīrzā Ṣāliḥ. It lasted no more than a year or two. In 1851, Amīr Kabīr was responsible for the appearance of a kind of official periodical, published weekly, the *Wāķayiʿ-i ittifāķiyya* which became, in 1860-1, the *Rūznāma-yi dawlat-i ʿāliyya-yi Īrān*, then the *Rūznāma-yi Īrān* published by Iʿtimād al-Salṭana [see DJARĪDA. ii].

Other titles followed and publishing houses proliferated in Tihrān, as well as intellect/ual and educational activities, particularly for the benefit of women and especially in the wake of the Constitutional Revolution of 1905-6. Under the Ķādjārs, it was in Tihrān that the greatest number of books and journals was published, Tabrīz coming in second place (Ettehadieh [1992], 129 ff.) On literature and the press under the Ķādjārs, see in particular B. Fragner, *Persische Memoiren-literatur als Quelle zur neueren Geschichte Irans*, Wiesbaden 1979; Y. Aryanpur, *Az Ṣabā tā Nīmā*, 2 vols., Tihrān 1354/1974-5; P. Avery, *Printing, the press and literature in modern Iran*, in *CHIr*, vii, 815-69; M. Edjtehadi, *Zerfall der Staatsmacht Persiens unter Nāṣir ad-Dīn Schah Qāǧār (1848-1696)*, Berlin 1992; articles on Persian journals feature alphabetically, under their titles, in *EIr*).

Even before the appearance of the Persian opposition press (published abroad) criticising the autocratic power of the Ķādjārs, poets and other scholars had used their writings for the cautious expression of discontent and of demand for reforms. Criticisms of the court of Nāṣir al-Dīn S̲h̲āh were formulated by a noted courtier, Iʿtimād al-Salṭana, in his memoirs (*Rūznāma-yi k̲h̲āṭirāt*, ed. I. Afs̲h̲ār, Tihrān 1345-50/1966-71, and in a more virulent form in his polemical work intitled *K̲h̲alsa* or *K̲h̲ʷāb-nāma* (ed. Tihrān 1348/1969; see Calmard [1976-77 B], 172 ff.; Edjtehadi, *op. cit.* above; B. Alavi, *Critical writing on the renewal of Iran*, in *Qajar Iran*, 243-54, at 249-50). Originating from all quarters, criticism intensified with the constitutional movement (see below).

In an effort aimed at the centralisation of secular and religious powers, Fatḥ ʿAlī S̲h̲āh attempted to attract certain important Imāmī *mudjtahids* to Tihrān. But it was Iṣfahān which remained a kind of religious capital until the beginning of the reign of Nāṣir al-Dīn S̲h̲āh, numerous Imāmī *ʿulamāʾ* also residing in other religious centres in Persia and especially in the *ʿatabāt* [*q.v.* in Suppl.]; see Algar, 51 ff. When Sayyid Ḥasan Wāʿiẓ S̲h̲īrāzī established himself in Tihrān, with the approval of Fatḥ ʿAlī S̲h̲āh, he had *takyas* converted into *madrasas* (*ibid.*, 51). However, it was with the development of popular religion, especially of S̲h̲īʿī rituals, and the spread of *takyas* designed for performances of *taʿziya-k̲h̲ʷānī* or *s̲h̲abīh-k̲h̲ʷānī* that the Tihrānīs, of diverse origins regained their social cohesion (Calmard [1976-7 B], 189). With the taste for ceremonial and diverse spectacles (popular story-tellers, clowns, puppets, theatre of traditional comic improvisation, or that inspired by or based on European models, etc.), places of such entertainment increased in Tihrān. But the Takya Dawlat, which enjoyed great success from the 1870s onward, rapidly became a symbol of the ostentatious bad taste of the Ķādjārs. Abandoned after the Constitutional Revolution, this site of religious and secular ceremonies was destroyed in 1325/1946-7 (see Calmard, *Mécénat*, ii, 141 ff.; F. Gaffary, *Les lieux de spectacle à Téhéran*, in *Téhéran, capitale bicentenaire*, 141-52; P. Chelkowski, *Popular entertainment, media and social change in twentieth-century Iran*, in *CHIr*, vii, 765-814). With its composite character, the population of Tihrān was the reflection of a Persian society that had been in crisis since the end of the Ṣafawid period. Although the introduction of new ideas and competition for political or religious power often took place elsewhere, it was in Tihrān that conflicts were resolved, and it was there that the often confused aspirations for change gained solid expression. Messianic themes, variously articulated among *uṣūlī* and *ak̲h̲bārī* Imāmīs, among S̲h̲ayk̲h̲īs and Ṣūfīs, and in popular religion, found their full expression in the Bābism which was firmly repressed under the government of Amīr Kabīr (1848-51) and especially in Tihrān, after the failed Bābī insurrection against Nāṣir al-Dīn (15 August 1852), followed by the schism between disciples of Ṣubḥ-i Azal [*q.v.*], designated successor of the Bāb (the Bābī Azalī movement), and supporters of Bahāʾ Allāh [*q.v.*] (the Bahāʾī movement, with modernist and universalist themes): see D. MacEoin, *EIr*, arts. *Babism* and *Bahai faith or Bahaism*.

Despite the mistrustful attitude of Imāmism towards temporal power and reforms, certain Imāmī *ʿulamāʾ* collaborated with the Ķādjār administration. This was especially evident in regard to the attribution of the post of *Imām djumʿa* of Tihrān to a trusted ally of the monarchy (Algar, 161-2). But in general, the Imāmī *ʿulamāʾ*, who were then consolidating and politicising their leadership, were opposed to the politics of modernisation and objected in particular to the granting of concessions in the Persian economy to foreign firms, initially British ones, and then Russian or European ones after 1872. This struggle against foreign influence took concrete shape in the revolt against the granting of the monopoly on Persian tobacco to a British concessionaire after the S̲h̲āh's third visit to Europe (1889). Agitation began after the ruthless eviction of the reformist Asadābādī, known as al-Afg̲h̲ānī, from the sanctuary of S̲h̲āh ʿAbd al-ʿAẓīm in January 1891. Promoted by discontented merchants and certain *ʿulamāʾ* at the *ʿatabāt*, the general boycott of the consumption of tobacco, effective throughout Persia, including in the S̲h̲āh's *andarūn*, led to the cancellation of the concession in early 1892. Agitation was maintained in Tihrān by the most respected chief of the *ʿulamāʾ*, Ḥādjdjī Mīrzā Ḥasan Ās̲h̲tiyānī, acting on behalf of the *mardjaʿ-i taķlīd* [*q.v.*] Mīrzā Ḥasan S̲h̲īrāzī, in his letter denouncing the monopoly (N.R. Keddie, *Religion and rebellion in Iran. The Iranian tobacco protest of 1881-1892*, London 1966, index, under "Tehran"; Algar, 211 ff.).

Maintained in Tihrān by certain *ʿulamāʾ* and reformist or radical elements grouped into various associations (see M. Bayat, *EIr*, art. *Anjoman. i. Political*), agitation culminated under Muẓaffar al-Dīn S̲h̲āh [*q.v.*] in the so-called Constitutional Revolution of 1905-6. In this huge socio-religious movement there were found in Tihrān all the elements of the struggle against Ķādjār autocracy: conflicting attitudes of the pro- and anti-constitutionalist *ʿulamāʾ*; activism blended with conservatism on the part of the merchants and the "petite bourgeoisie"; ambiguity of demands, rang-

ing from an *ʿadālat-khāna* ("house of justice") to a constitution (*mashrūtiyyat*) and the establishment of an elected assembly, *madjlis*; expanded role of the press, of tracts (*shab-nāmas*); increasing presence of crowds; protests undertaken in the religious or diplomatic sanctuaries (*bast* [*q.v.*] and see also Calmard, *EIr*, art. *Bast*); etc. After the granting of a constitution and of a *madjlis*, the efforts of the constitutionalists were countered by a reaction, as much royalist as religious, under Muḥammad ʿAlī Shāh (1907-9 [*q.v.*]). Two religious leaders, bearing the honorific title of Āyat Allāh [*q.v.* in Suppl.] supported the constitution: Sayyid Muḥammad Ṭabāṭabāʾī, in favour of the reforms, and Sayyid ʿAbd Allāh Bihbahānī, allied to the leading merchants, opposed to customs and fiscal reform. Shaykh Faḍl Allāh Nūrī [*q.v.*] opposed the constitution. The stances adopted by political and religious leaders led to a virtual civil war between pro- and anti-constitutionalists (June 1908-July 1909, entry into Tihrān of northern revolutionaries commanded by the *Sipahdār-i aʿẓam* and of Bakhtiyārīs from Iṣfahān; and execution of Shaykh Faḍl Allāh). Muḥammad ʿAlī Shāh had organised the suppression of the insurrection in Tihrān by the Cossack Brigade and ordered the closure of the Madjlis; this was re-opened by his successor Aḥmad Shāh (1909-25 [*q.v.*]) in November 1909. This second legislature was marked by disagreements within the assembly, the continuation of the civil war, principally in the north but extending as far as Tihrān, and attempts at reform (by American financial experts led by Morgan Shushter). The Russian military threat caused the departure of Shushter and the fall of the Second Madjlis (December 1911) and of the revolutionary movement, parliamentary functions passing henceforward into the hands of the bureaucracy and of landowners (see Vanessa Martin, *Islam and modernism. The Iranian Revolution of 1906*, London 1989; E. Abrahamian, *Iran between two revolutions*, Princeton 1982, 69 ff.).

The weakness of Persia was clearly evident during the First World War. Occupied by Russian and Turkish troops, the land was the object of rivalry between the major powers (Russia, Turkey, Germany and Great Britain) which fomented local seditions. The sovereignty of Tihrān was much reduced. Russian revolutionary movements had more effect on Ādharbāydjān (Tabrīz) or Gīlān (the Djangalī movement [*q.v.*]) than on Tihrān, where foreign domination, especially Russian and later British (Anglo-Persian Accord of 1919, never implemented) was strongly resented. The *coup d'état* of the Cossack colonel Riḍā Khān in Tihrān (February 1921) was presented by the latter as intended to save the monarchy from revolution (Abrahamian, *ibid.*, 102 ff.). The too often fickle or opportunistic character of the Tihrānī population, as revealed at the time of the dramatic events of the Constitutional Revolution and its aftermath, have sometimes been severely criticised by intellectuals. This was notably the case of the eminent poet, writer, journalist and professor Muḥammad Taḳī Bahār (1886-1951). Scion of a family of wealthy merchants from Kashān, established in Khurāsān, he set out at a very early age for Tihrān where he became both an activist and a critical observer of events. A fervent patriot, in numerous poems he expresses his hatred of Tihrān (often called Rayy in poetry), the urban milieu and the Tihrānī population, whom he accuses of weakness, immorality, inconsistency, perversity, lack of patriotism, etc. (see H. Saraj, *La notion de patrie "Vaṭan" a travers la poésie de Moḥammad Taqi Ṣaburi dit Bahâr Malek al-Šoʿarâ (1886-1951)*, diss. University of Paris III, June 1997, 181 ff., 419 ff.).

Although promoted to the status of capital, in the 1840s Tihrān occupied only the second or the third place in commercial activity, after Tabrīz (report of the British consul Abbott, in Ch. Issawi, *The economic history of Iran, 1800-1914*, Chicago 1971, 118). However, although the city was then above all a distributive centre for merchandise, diverse factors were to facilitate the development of its economy. As had been the case with Iṣfahān or Shīrāz, Tihrān benefited by the centralisation common to the great Persian capitals: concentration of governmental revenues ("despotic capitalism"); population movements (rural exodus); the attraction of élites, of landowners and of tribal chiefs. These factors were to enable it to emerge in the 20th century as a place of economic importance in world commerce (see E. Ehlers, *Capitals and spatial organization in Iran: Esfahan, Shiraz, Tehran*, in *Téhéran, capitale bicentenaire*, 155-72).

(J. Calmard)

(c) Since the advent of the Pahlavīs.

On the accession of Riḍā Shāh, in 1925, the structure of Tihrān had not changed since the construction of new defensive walls during the reign of Nāṣir al-Dīn Shāh. The development of the city proceeded to the detriment of gardens and the region outside

the walls, particularly to the south of Darwāza Kār where an impoverished population lived in close proximity to the municipal brickworks. Despite the enlargement of certain streets, there were no modern buildings or avenues appropriate to the status of a capital city.

With the reign of Riḍā Shāh Pahlavī, the structures of the city were radically transformed and Tihrān became in truth the capital of the country. In 1930, the Law of the Municipality (*ḳānūn-i baladiyya*) led to the realisation of the first urbanisation plan with the construction of major avenues (Law of 1312/1933), crossing the ancient urban fabric or the line of the defensive walls (Habibi, 200). Iran was also endowed with a proper government (first national budget in 1933), which entailed the hasty construction of buildings for various ministries (Foreign Affairs, War, Finance and Justice) and public services (post, rail station and archaeological museum constructed by Godard, 1936) on the old parade ground (Maydān-i Mashḳ) and to the north of the quarter of Sangiladj which was completely demolished to be replaced later, in 1950, by the Pārk-i Shahr.

The city was henceforward organised on the basis of large rectilinear avenues, oriented north-south or east-west, fringed by trees. This chequer pattern definitively shattered the cultural and social logic of the quarters of the old Islamic town; henceforward, cultural and social differentiation was determined on the basis of sectors bordered by the major avenues, the more affluent living at a higher altitude, towards the north, and the poorer towards the south, at a level where the water of the numerous *djūbs* was polluted. The urban landscape was radically transformed by the creation of a new public space, around numerous squares (*maydān*) and along avenues flanked by services (banks and administrative premises) and shops with display-windows open on the street.

For the first time, Tihrān was endowed with modern buildings, constructed by foreign professional architects (André Godard, Maxime Siroux and Nicolai Marcoff) and especially by Iranians (Mohsen Foroughi, Vartan Avasessian, Gabriel Guevrekian, Ali Sadegh and Iraj Moshiri) (Marefat, 104-22). The new dominant architecture broke with tradition. It was characterised by a monumental European style, especially German (the station) combined with a "national style" of neo-Achaemenid inspiration (Ministry of Justice) and Ḳādjār elements which remained dominant in individual houses. These urbanisation projects entailed the destruction of a vast quantity of ancient monuments, in particular most of the ancient royal palaces of the Arg (with the exception of that of Gulistān and of Shams al-Imāra), of the famous Dawlat *takiyya* and of the twelve monumental gates (photographs in Bahrambeygui, 25-7).

The city was then bordered to the south by the Shūsh avenue, the railway and the station (constructed in 1938), to the east by the Shāhbāz avenues (17 Shahrivār), to the west the Simetri avenue and to the north by the major Shāh Riḍā avenue (now called Khiyābān-i 17 Shahrivār, formerly Kh.-i Inḳilāb) which today cuts the city in two and then marked the start of the modern quarters, notably including the University of Tihrān, of which the foundation-stone was laid in 1935. Tihrān was split into two parts, with a traditional centre around the bazaar, and a modern centre between Ṭūp Khāna square (Sipāh), Lālazar avenue and the new sector of embassies and banks to the north of Embassy avenue (Firdawsī).

Riḍā Shāh abandoned the Gulistān palace for the Marble Palace, construction of which began in 1935. In summer he resided in the palaces of Saʿdābād at Tādjrish, thus contributing to the accelerated development of these aestival quarters (*yaylāḳ*) of Shamirān in the foothills of the Elburz mountains, where wealthy citizens of Tihrān had long been accustomed to seeking refuge from the heat of summer. To the east of the old Shamirān road, the avenues of Kākh and Pahlavī (Filasṭīn and Walī ʿAṣr) were constructed, fringed by plane-trees, to link these two palaces and the two parts of the city, some 10 km/6 miles apart. Towards the south, the sanctuary of Shāh ʿAbd al-ʿAẓīm [*q.v.*] and the lower-class town of Rayy remained separated from Tihrān by ancient clay quarries and brickworks which had been relocated towards Warāmīn, at Ḳarčak and Ḳatumābād.

Despite the opening of an international airline by the German company Junkers between 1927 and 1932, then by Lufthansa from 1938 onward (Fleury, 214, 250), Tihrān remained in 1941 an incomplete and still quite mediocre capital, poorly connected with the rest of the world. Despite the excavation in 1930 of a new canal 52 km/32 miles in length, diverting water from the Karadj river towards what is now the site of the Kishāvarz boulevard (its predecessor was constructed in 1845), the traditional areas of the town were still supplied with water by *ḳanāts* and the modern quarters by wells. Running water was not to be installed until after the inauguration of the barrages of Karadj in 1961 and of Latyān (Djādj Rūd) in 1967 (de Planhol, 62). The population of the city nevertheless increased rapidly, from 210,000 in 1922 to 540,000 in 1940, although the area of the city grew only marginally, from 24.7 ha (area enclosed within the defensive walls of Nāṣir al-Dīn Shāh) to 32.2 ha.

Under the reign of Muḥammad Riḍā Pahlavī, the Iranian capital became a major international metropolis, with average annual growth in excess of 6%: 1.5 million inhabitants in 1956, 3 millions in 1966 (including Tādjrish and Rayy), 6 in 1986 (Zandjani, 252). In 1996, Greater Tihrān embraced some 10 million inhabitants including 7.5 for the city itself, henceforward surrounded by a massive suburban area. Since the 1960s, Karadj has developed very rapidly (15,000 inhabitants in 1956, 500,000 in 1991) with the influx of migrants seeking work in the new industrial zone (Bahrambeygui, 158). New towns have appeared like Islāmshahr (350,000 in 1991), Mihrshahr, Radjdjāʾīshahr and Ḳarčak, while ancient cities such as Warāmīn have expanded more slowly (Hourcade [1997], 168). The arrival in Tihrān, since the Ḳādjār period, of a substantial population originating from Ādharbāydjān has made Tihrān the biggest Azeri-speaking town of Iran. Since the 1970s, the origin of migrants has been more diverse, with the influx of numerous Kurds, especially in Karadj.

In 1972, Tihrān covered an area of 210 km², with a continuation of urban space between Tādjrish and Rayy, and was marked by a decisive social segregation between the affluent north and the impoverished south (Hourcade [1974], 36-40; Seger [1978] and [1992]. Towards the south, where many migrants congregated, development was blocked by industrial zones and by prohibitions on construction imposed by the urbanisation plan. Development of the city therefore took place towards the north, accelerated by the expansion of a new middle class and the installation of modern heating systems in houses, meaning that the summer quarters to the north of the city could be inhabited throughout the year. This movement engendered substantial property speculation which brought wealth to a new bourgeoisie (Vieille, 1970). The bazaar quarter,

inhabited by the many migrants from the provinces, rapidly became the centre of lower-class Tihrān; at the same time, what had been the modern centre at the beginning of the century was gradually abandoned by the affluent classes, while retaining its administrative function. To the north of the modern centre of the Nādirī-Istanbul avenues there developed, from 1960 onward, an American-style centre between Takht-i Djamshīd avenue (Ṭāliḳānī), site of the headquarters of the Iranian National Oil Company (NIOC) and Elizabeth II boulevard. A new modern centre was subsequently constructed between ʿAbbāsābād avenue and Vanak square. By leaving the Marble Palace and transferring to the new palace of Niyavārān in 1962, the royal family reinforced this new social geography of the city which resulted in prodigious daily shifts of population between the residential north and the centre.

The first urbanisation plan, realised in 1969 by the Victor Gruen and Farmānfarmāyān partnership, set the limits of the city (*maḥdūda*) for a period of 25 years (Hourcade [1992b], 211). To block the development of the capital towards the south, several urban clusters were envisaged in the direction of Karadj, along the piedmont. On the model of the Pārs quarter of Tihrān built in 1956 with Parsi funds from Bombay (de Planhol [1962], 71), or the programme of popular habitation of *Čahār ṣad dastgāh*, in 1947, numerous developments (*shahrak*) were constructed using public or cooperative funds: large hotels, museums, office buildings or luxury apartments, as well as more modest building projects near to the airport (Ektabān) and at Lavizān. Movement of transport within the city was guaranteed by a network of freeways, modelled on that of Los Angeles.

With the increase in oil prices in 1974, there was a new impetus to the expansion of the capital: a metro scheme was undertaken, and of particular importance was the sovereigu's decision to construct the *Shāhistān-i Pahlavī*, a new administrative, cultural and political district of international status on 554 ha of vacant, formerly military land between ʿAbbāsābād and Shamirān, according to plans drawn up by the British firm of surveyors Llewellyn Davis International. This very ambitious project threatened the development of other quarters of the city, abrogating the urbanisation plan of 1969 and exacerbating the housing crisis. In the south of the city illegal popular constructions proliferated for the accommodation of the huge numbers of new immigrants.

The Islamic Revolution, which began in provincial cities, reached Tihrān on 4 September 1978 (the day of the *ʿĪd al-fiṭr*) with the demonstration called by Āyatullāh Ṭālikānī between the Ḳaytariyya park to the north of the city and the University of Tihrān. Over more than three years, public demonstrations assembling on Shāh Riḍā Avenue (renamed Inḳilāb "Revolution") were much larger and more frequent than those which had accompanied the nationalisation of oil and the coup d'état against Muṣaddiḳ (Mosaddegh) in 1951-3, and contributed significantly to a change in the relationship between the city and its inhabitants. Although the north-south social segregation characterising the capital was not abolished, the population of the south became familiar for the first time with the modern centre and the northern quarters (visits to the residence of Āyatullāh Khumaynī at Djamārān) and changed the attitude towards public space which characterised the Islamic city (Hourcade [1980], 34). The relocation of the main political bodies and institutions (Directorate of the Islamic Republic, Presidency, Prime Ministry, Parliament and Justice) in the same quarter, around the Marble Palace, with Parliament (*Madjlis-i shūrā-yi islāmī*) in the former Senate and the Prime Minister's office in Pasteur Avenue, also revitalised the urban centre.

The Islamic Republic soon legalised the illegally constructed "revolutionary habitat" (1982), and demolished slums and shanties erected in former quarries (*gawd*) to the south of the city (Hourcade and Khosrokhavar), but major urbanisation projects, including the Shāhistān-i Pahlavī and the metro, were abandoned. The nationalisation of vacant urban land in 1981, then the introduction of a new urbanisation plan in 1992, marked the inception of a new urban policy. The construction of urban motorways was pursued, and a massive programme for the renovation of southern districts of the city was launched, with the construction of cultural centres (Bahman Centre in the former abattoirs) and sport facilities (Amir-Ebrahami [1998]), the improvement of public services and the opening in 1997 of the monumental Nawāb Avenue, giving access to the motorway leading to Ḳum and the new international airport. The destruction of old buildings in the ancient centre continues (Anwār), while the creation of numerous parks and public gardens favours the development of new public space. In the north of the city (Ilāhiyya, Niyāvarān) the construction of large tower-blocks has revolutionised the urban landscape of quarters, the social composition of which has also changed with the departure of the old imperial bourgeoisie and the arrival of new Islamic cadres. Since 1980, private cars have been banned from the city centre, between the bazaar and ʿAbbāsābād. This situation has accelerated the departure of residents and their replacement by offices, businesses, administrative premises and government agencies (*Atlas d'Iran*, 146). This new centre is the hub of the "Greater Tihrān" as defined by the new urbanisation plan of 1992, which includes the new suburbs and extends over more than 120 km from Abyak to Rudehen, and 30 km from Tādjrish to Ribāṭ Karīm; Ḳazwīn and Ḳum may now be considered suburbs of the capital (Hourcade [1997]).

With 14% of the total population of the country, Tihrān is not a city of inordinate size on the national scale, but its economic, administrative and cultural weight is excessive, since the capital accounts for a half of Iran's students, administrators and doctors and three-quarters of all industrial production (Khalīlī-Arāḳī, 54-6; Hourcade [1998], 20).

Tihrān remains a capital poor in public monuments. The infrastructure has only been developed since the 1960s and in particular since 1970, with the development of the industrial zone of Karadj, the construction of the first major hotels, modern hospitals, auditoria (Rūdakī Opera [Waḥdat]) and public buildings such as the Millī University (Shāhid Bihishtī) to the north of the city. Their architecture, sometimes original (carpet museum by Ḥasan Fatḥī), rarely benefits from a good environment and despite numerous statues in public squares, decorative monuments are rare. Those representing the Pahlavī sovereigns were demolished in 1979, often being replaced by modern sculptures (Filasṭīn Square) or those representing major historical figures (such as the statue of Rāzī erected on Kārgār Avenue in 1995). The Shāhyād Tower, constructed in 1972 near Mihrābād airport to mark the 2,500th anniversary of the foundation of the Persian Empire, has paradoxically become very popular as a symbol of Tihrān under the name of Āzādī ("freedom") Tower.

II. The former name of a village or small town in the modern province of Iṣfahān, in the *bakhsh* of Nadjafābād, lying to the west of that city in lat. 32° 41' N., long. 51° 08' E. in the lower Karwan district.

Al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, ix, 103-6 (cf. Yāķūt, *Buldān*, ed. Beirut, iv, 52), knew of this Ṭihrān as "a large village at the gate of Iṣfahān", although he says that it is less known than the Ṭihrān of al-Rayy. He nevertheless lists several *ʿulamāʾ* from this Ṭihrān, the oldest of whom being the traditionist Abū Ṣāliḥ ʿUķayl b. Yaḥyā al-Ṭihrānī, d. 258/872. In more recent times, the name of this place has become Tīrān, cf. Sir A. Houtum Schindler, *Eastern Persian Irák*, London 1896, 124, 127, 131, who mentions a Tīrān canal which brings water to certain suburbs of Iṣfahān. In *ca.* 1950 Tīrān had a population of 6,100 (*Farhang-i djughrāfiyā-yi Īrān-zamīn*, x, 52).

AL-ṬIHRĀNĪ, ĀGHĀ BUZURG, Twelver Shīʿī scholar and bibliographer (born Tehran 11 Rabīʿ I 1293/6 April 1876, died Nadjaf 13 Dhu 'l-Ḥidjdja 1389/20 February 1970. He stemmed from a merchant family. From 1315/1898 onwards he studied at Nadjaf. After the death in 1329/1911 of his teacher Shaykh Muḥammad Kāẓim Khurāsānī [*q.v.*], Āghā Buzurg went to Kāẓimayn and shortly afterwards to Sāmarrāʾ in order to study under Muḥammad Taķī al-Shīrāzī [*q.v.*]. Only in 1354/1936 did he return to Nadjaf, where he remained until his death. Āgha Buzurg's renown as a man of learning is based mainly on the following two reference books:

1. *al-Dharīʿa ilā taṣānīf al-shīʿa*, so far the most comprehensive and complete bibliography of works written by Shīʿīs. The new edition of Beirut 1983 is in 25 parts, contained in 28 volumes. According to the often transmitted "foundation myth", the composition of the *Dharīʿa* was provoked by the *Taʾrīkh Ādāb al-lugha al-ʿarabiyya* (4 vols., Cairo 1910-3) by the Lebanese Christian Djirdjī Zaydān [*q.v.*]. In this work the contribution of the Shīʿa to Arabic literature had allegedly not been properly appreciated. Consequently, Sayyid Ḥasan al-Ṣadr (d. 1354/1935), Shaykh Muḥammad al-Ḥusayn Āl Kāshif al-Ghiṭāʾ (d. 1373/1953-4) and their student Āghā Buzurg agreed to refute Zaydān's statements through appropriate publications about the Shīʿa and their culture.

While Kāshif al-Ghiṭāʾ composed a detailed criticism of Zaydān's work (see the note in *GAL*, S III, 407—*al-Murādjaʿāt al-rayḥāniyya* and *al-Nuķūd wa 'l-rudūd*, part ii), and Ḥasan al-Ṣadr occupied himself with the part taken by the Shīʿa in the foundation and development of Islamic learning (*Taʾsīs al-shīʿa li-ʿulūm al-islām*, Kāẓimiyya 1951; original title *al-Shīʿa wa-funūn al-islām*, Sidon 1912-13), Āghā Buzurg promised to draw up an index of Shīʿī works. For this purpose, he not only used memoirs, biographies, juridical works, library catalogues, handwritten lists of the inventories of private libraries, but also took advantage of his travels and pilgrimages to Persia (four times between 1931 and 1963, especially to Mashhad) and to Mecca in order to visit public and private libraries. On the occasion of his journey to Persia in 1931, his family name *Munzawī* ("the ascetic") was registered for the first time (cf. *al-Dharīʿa*, xv, 128); however, only his sons are known under this name.

The *Dharīʿa* contains *ca.* 70,000 Persian, Arabic, Turkish and Urdu titles of works composed by Shīʿī authors (according to some critics the assignment of certain works to the Shīʿa is not always justified, cf. ʿAlī Naķī Munzawī, 1971, p. *lām*). The works are arranged alphabetically according to their titles; apart from bibliographical indications, each work usually comprises a summary of the contents, information about the author and, in the case of larger thematic units, introductory remarks.

In order to have this work printed, Āghā Buzurg, after returning to Nadjaf, founded the Maṭbaʿat al-Saʿāda. Because of unfavourable political circumstances, he was, however, forced to sell the printing office. The first three volumes appeared in Nadjaf between 1936 and 1938, while the following ones, with the exception of volumes xiii and xiv which were also published in Nadjaf, were published in Tehran by his two eldest sons ʿAlī Naķī and Aḥmad Munzawī.

2. *Ṭabaķāt aʿlām al-shīʿa*. This work, a by-product of the *Dharīʿa*, contains biographies of Shīʿī scholars, arranged alphabetically according to centuries and names of the authors. During al-Ṭihrānī's lifetime, there appeared in Nadjaf two volumes on the 13th century A.H., and four volumes on the 14th century A.H. and part of the 5th century A.H. up to Shaykh Ṭūsī. The volumes on the 4th-10th centuries A.H. were published in Beirut or Tehran by ʿAlī Naķī Munzawī between 1971 and 1984.

In addition to these works in several volumes, numerous other published and un-published writings by Āghā Buzurg have survived, including:

– *Hadiyyat al-rāzī ilā 'l-mudjaddid al-Shīrāzī*, a biog-

raphy of Mīrzā Muḥammad Ḥasan al-Shīrāzī [*q.v.*], Nadjaf 1392/1972, Persian tr. Tehran 1362/1983; Āghā Buzurg's father Ḥādjdjī ʿAlī had already written in Persian a work on the tobacco protest, which included Mīrzā-yi Shīrāzī's *fatāwā* (see *Dharīʿa*, iii, 252).

– *Muṣaffā ʾl-maḳāl fī muṣannifī ʿilm al-ridjāl*, Tehran 1337/1958. This work contains the biographies of some 600 Shīʿī traditionists; an abridgement was published in Nadjaf in 1356/1937.

– *Tawḍīḥ al-rishād fī taʾrīkh ḥaṣr al-idjtihād* (*Dharīʿa*, iv, 493), on the restriction of *idjtihād* in Sunnī Islam.

– *al-Naḳd al-laṭīf fī nafy al-taḥrīf ʿan al-Ḳurʾān al-sharīf*. This work is, among other things, a defence of Ḥusayn b. Muḥammad Taḳī al-Nūrī al-Ṭabarsī's view, represented in *Faṣl al-khiṭāb fī ithbāt taḥrīf al-kitāb* (Tehran 1298/1919) about the "forgery" [see TAḤRĪF] of the Ḳurʾān. Notwithstanding the sympathy for Āghā Buzurg and the appreciation for this work, the publication was forbidden in a *fatwā* by Muḥammad Ḥusayn Kāshif al-Ghiṭāʾ "because of the prevailing circumstances".

Āghā Buzurg established in 1954 as a *waḳf* [*q.v.*], together with a part of his house, his library with some 5,000 printed volumes and 200 manuscripts, according to Amīnī (1990), among which were a number of rare ones. Notwithstanding multiple reverses of fortune, among others the early death of his first wife, then of his first-born son and of a grandson at an early age, the imprisonment and assassination of his son Muḥammad Riḍā as a result of the fall of Muṣaddiḳ [*q.v.*] in February 1955 (see for this event, his father's remarks in *al-Dharīʿa*, x, 166-7), Āghā Buzurg pursued "with iron discipline" until the end of his days his scholarly work and other activities (such as those of *imām al-djumʿa*).

ṬIHRĀNĪ, ḤĀDJDJĪ MĪRZĀ ḤUSAYN KHALĪLĪ (1236-1326/1821-1908), Persian *mudjtahid* noted for his role in supporting the constitutional movement of 1906-8.

He was born in Nadjaf and educated there. He began teaching at Nadjaf in the mid-1860s and rose to prominence in 1312/1894 with the death of Mīrzā Ḥasan Shīrāzī, the principal *mudjtahid* of the day. From then until his death in 1908, he presided over the conglomeration of *madrasas* that made up the teaching institution in Nadjaf and was accepted as *mardjaʿ al-taḳlīd* [*q.v.*] by Shīʿīs in Persia, ʿIrāḳ, Syria and India.

The question of constitutional rule in Persia only came to the fore during the last two or three years of Ḥādjdjī Mīrzā Ḥusayn's long life, although there had been signs of political engagement on his part as early as 1903, and in the autumn of 1905 he began writing to influential acquaintances in Tehran, urging the dismissal of Amīn al-Sulṭān, the minister whom he held responsible for the growth in Russian influence and for other related ills (Kasrawī, *Tārīkh-i mashrūṭa-yi Īrān*, i, 32). His activities on behalf of the constitutionalist cause were mostly carried out in collaboration with two other influential *mudjtahids* resident in Nadjaf, Shaykh ʿAbd Allāh Māzandarānī (d. 1330/1912) and Ākhūnd Muḥammad Kāẓim Khurāsānī (d. 1329/1911); the trio were collectively designated as the *ʿulamā-yi thalātha* ("the three scholars"). The first message of support they collectively sent from the relative safety of Nadjaf came during the migration to Ḳum of constitutionalists from Tehran in July 1906, and in January 1907 he signed a joint *fatwā* with his colleagues declaring it religiously incumbent (*wādjib*) for constitutional government to be established in Persia and for all Persians to obey measures passed by the Madjlis. In spring 1908, Shaykh Faḍl Allāh Nūrī (d. 1909 [*q.v.*]), an influential religious leader of the capital, began agitating against the constitutionalist cause, with the result that the three scholars of Nadjaf, responding to an appeal by their colleagues in Tehran, declared it forbidden (*ḥarām*) for Nūrī, as a "worker of corruption" (*mufsid*), to be permitted any say in affairs; thus anathematised, Nūrī retorted by declaring the trio in Nadjaf to be unbelievers. As Muḥammad ʿAlī Shāh [*q.v.*] was preparing to suppress the constitutional movement by force, he sent Ḥādjdjī Mīrzā Ḥusayn and his colleagues in Nadjaf a telegram appealing to them to abandon their support of the movement because of its alleged dominance by Bābīs, but they rejected this, and on 19 June 1908 sent a message of support and encouragement to the two principal leaders of the constitutionalists in Tehran, Sayyid ʿAbd Allāh Bihbihānī and Sayyid Muḥammad Ṭabāṭabāʾī. Their communications reached the capital two days before the bombardment of the Madjlis and the dispersion of the constitutionalists.

Ḥādjdjī Mīrzā Husayn died in Kūfa on 6 November 1908. When the news of his death reached Tehran three days later, there were riotous scenes of grief: the bazaar was closed and massively-attended mourning ceremonies were held in the Masdjid-i Shāh. Given the tense political situation, it was perhaps inevitable that rumours of foul play should arise, although Ḥādjdjī Mīrzā Ḥusayn had been ninety lunar years old when he died. It is in any event possible that his support for the constitutionalist cause was beginning to weaken precisely at the time of his death. Commenting on his passing, Nāẓim al-Islām Kirmānī wrote, "It is true that this great man was a supporter

of the constitution, but he was not at all pleased with this anarchy, and if he had become aware of the goals of the Europeanisers (*farangī-ma'āb-hā*), corrupt and malevolent people, he would never have given his consent and agreement to constitutionalism" (*Tārīkh-i bīdārī-yi Īrānīyān*, ii, 238), but such reports may have been inspired by a desire posthumously to exonerate him at a time when many *ʿulamāʾ* had come to regret their support of constitutionalism.

Ḥādjdjī Mīrzā Ḥusayn was not a prolific author; his whole output appears to have been restricted to a few treatises on *fiḳh*. His legacy consisted primarily of six sons and numerous students, some of whom went on to become noted scholars in their own right; and he built two mosques in the ʿAmmāra district of Nadjaf and a canal carrying drinking water to the city.

(H. ALGAR)

TIK WA-TUM, a technical term in Arabic music, corresponding to the learned term *ṭāʾ*; also used in Arabic dialectic metres for the *zadjal*. It means the note struck, sharp and heavy: *a.* on the edge of the tambourine, sometimes on the little cymbal that is fixed there; *b.* on the back of the closed left hand when the hands are beaten; *c.* with the left foot on the ground when dancing.

It is one of the two terms of the fundamental metrical dualism of the popular songs in Arabic dialects (called *muwashshaḥāt* [see MUWASHSHAḤ], where between the pauses there only follow a pair of antithetic values (like the iambic of classical metres, except that the antithesis depends not on the length but on the intensity): *ṭāʾ* (usually *tik*) and *dīh* (usually *tum*); the first being the sharp and heavy blow and the latter, *dīh*, the dense and sonorous. The latter is struck on the stretched skin: *a.* at the centre of the tambourine; *b.* on the centre of the open left palm if the hands are beaten; *c.* with the right foot on the ground when dancing.

Just as classical prosody built up a series of metres by arranging long and short in varying order, so the popular Arabic prosody of the *muwashshaḥāt* built up the series of special rhythmic types (called *ḍurūb*) on differentiated series of *ṭāʾāt* and *dīhāt* with pauses between. The *maṣmūdī* rhythm, for example, may be thus written:

k, *m*, *s* / *k*, *s* / *m*, *m*, *s* /
(where *k*=*ṭāʾ*, *m*=*dīh*, *s*=silence and /=caesura).

So that the phrases in the song may coincide with the series of characteristic beats of the rhythm selected, the following rules are observed: 1) each syllable must correspond to at least one beat (*naḳra*); 2) one or more *ṭāʾāt* may be intercalated (intercalation = *ribāṭ*) in the rhythmic series; 3) but certain pauses must not be interfered with, intangible caesuras, characteristic of the rhythm (first by pause after a *dīh*, otherwise short pause after a *ṭāʾ*); 4) contrary to Arabic classical metre, we may have open syllables when the time is strong and closed when the time is weak. Martin Hartmann was therefore wrong in trying to reduce the rhythm of the *muwashshaḥāt* to the *tafāʿīl* of the Arabic classical metres. Several Oriental musicians have given tables of identification, confusing intensity and duration, so as to force the Arabic *ḍurūb* to correspond with European musical notations.

TIKRĪT [see TAKRĪT].

TILANGĀNĪ, KHĀN-I DJAHĀN [see KHĀN-I DJAHĀN MAḲBŪL].

TILIMSĀN, or, according to Yāḳūt, *Buldān*, ed. Beirut, ii, 44, Tinimsān, conventionally TLEMCEN, a town of western Algeria, situated in lat. 34° 53' N., long. 1° 21' W. between Oran/Wahrān [*q.v.*] to the north-east (138 km/86 miles away), Sidi bel Abbès/Sīdī Bu 'l-ʿAbbās [*q.v.*] to the east (91 km/56 miles) and the Moroccan frontier (63 km/40 miles). It is at the junction of the great national route linking Tunis with Oujda/Wadjda [*q.v.*] and the "Gold and Ivory Road" connecting the Mediterranean (ports of Hunayn [*q.v.* in Suppl.] to the west and Rachgoun, the ancient Arshakūl, to the east) with Tīzīl and then Sidjilmāsa and the gates of the Sahara. At the back of the town lie the Tlemcen Mountains, which rise in stages from north to south to 1,842 m/6,040 feet, and they turn towards the sea, which is visible from the higher parts of the town at 50 km/31 miles' distance through the trough of the Tafna through the coastal chain of the Traras. The town dominates, from its altitude of 827 m/2,712 feet, the plains of Hennaya to the north and Maghnia to the east, which form the vast territory of the Haouz, watered by the Tafna, the Isser and their affluents as well as by numerous streams which cascade down from the mountain massif and which, with their perennial flow, nourish in that region olive groves, vines, large-scale and small-scale cultivation, woods and pastures.

Tilimsān is "the town of springs", sc. ʿAyn al-Ḥadjar, ʿAyn al-Ḥūt, the waterfalls of El Ourit, the underground river of the Ghār, ʿUyūn Abu 'l-Muhādjir Dinār (the vanquisher of the Berber chief Kusayla [*q.v.*]), just near Tilimsān, etc. A plausible, if not certain, etymology derives the town's name from *tilmisān*, pl. of Berber *tilmas* "spring, water-hole", and there is another one from the Zanāta words *talam* "junction" and *sān* "two", i.e. the town which brings together two opposites, the desert and the mountain (Moubarak Mili, *Hist. de l'Algérie ancienne et moderne*, Constantine 1932, ii, 348). Muslim travellers (e.g. al-Bakrī, *Masālik*, ed. Van Leeuwen and Ferré, Tunis 1992, § 1250; al-Idrīsī, *Nuzha*, Beirut 1989, i, 248) speak frequently of its baths and its water-mills. It has had other names, after the time of Roman Pomaria ("the Orchards"), such as Agādīr, on the site of the Roman city, where in 174/790 Idrīs I built a mosque, of which there only remains, to the east of the present town, the minaret added by the first ʿAbd al-Wādid or Zayyānid Yaghmurāsan b. Zayyān. This then became the capital of the Zanāta Banū Khazar and Banū Yaʿlā,

and was conquered by the Almoravid Yūsuf b. Tāshufīn, who in 474/1081 founded, to the west of Agādīr, the town of Tākrārt (Berber "camp"). Out of the fusion of Agādīr and Tākrārt arose the present town of Tilimsān, which the Almohad ʿAbd al-Muʾmin surrounded by a strong wall in 540/1145 (al-Nāṣirī, *Istiḳṣāʾ*, Casablanca 1954, ii, 65, 95; Mili, *op. cit.*, ii, 350). The Marīnids subjected it to a long siege (699-707/1299-1307), and for this siege founded an encampment-town, al-Manṣūra ("the Victorious"), to the west of the town, of which substantial vestiges remain. Tilimsān is yet again called Madīnat al-Djidār or Arḍ al-Djidār ("town, land of the Wall"), alluding to the wall in Ḳurʾān, XVIII, 76/77, 81/82, where Moses met al-Khaḍir (see al-Warthilānī, *Nuzha*, ed. Ben Cheneb, 290), and these names with *djidār* could be reflections of the name Agādīr, which is itself probably derived from Punic *gader* = Ar. *djidār*. But out of all these names, only Tilimsān has survived today.

The Zanāta Berber dynasty of Yaghmurāsan (r. 633-81/1236-83 [*q.v.*]) (see above) was the goal of attempted conquests by the Ḥafṣids of Tunis and the Marīnids of Fās. The thirty or so princes who succeeded him in Tilimsān had various fortunes in their attempts to maintain their power, allying themselves with one or another of their rivals, fighting against the Hilālī tribes but in case of need allying with them, and finally appealing to the Turks of Algiers against the Spaniards in Bougie/Bidjāya, Bône/al-ʿAnnāba, Mers el-Kebir/Marsā al-Kabīr and Oran, and agreeing to pay the Turks tribute. Abū ʿAbd Allāh Muḥammad VII al-Thābitī (910-23/1504-17) had in 912/1506 to give them 12,000 ducats a year, twelve assorted horses and six falcons (Mili, *op. cit.*, ii, 365). The Turks of Algiers, under Ṣalāḥ Reʾīs, deposed the last ʿAbd al-Wādid Abū Zayyān IV al-Ḥasan and annexed Tilimsān in 962/1555, ending 319 years of the town's independence. For three centuries, Tilimsān decayed under the rule of the Beys of Algiers, years marked by struggles in the town between the indigenous Arab and Berber Ḥaḍar (who also included *Andalusiyyūn* who had fled before the Christian *Reconquista* of Spain) and the Turkish Ḳul-oghlu [*q.v.*] troops, whose unions with the local womenfolk left a permanent element in the town's demography. Then came the French occupation of Algeria, with Tilimsān first captured in 1836, returned to the *amīr* ʿAbd al-Ḳādir [*q.v.*] by the Treaty of the Tafna of 30 May 1837 between him and Bugeaud, followed in 1842 by a second, definitive occupation which was to last 120 years.

Amongst the remarkably fine Islamic monuments of Tilimsān and its vicinity, one may mention the remains of the ancient walls of Agādīr, Tākrārt and al-Manṣūra; the Great Mosque of Tilimsān with its 7th/13th-century minaret; the minaret of the Great Mosque of Agādīr; the Mosque of Sīdī Bel Ḥasan, now the Museum of Islamic Art; the citadel of Mashwar, the fortified palace built by Yaghmurāsan; and the great basin (now dry) of the Ṣahrīdj (200 m × 100 m × 3 m) dug out by Abū Tāshufīn I (718-37/1318-37) allegedly to please his daughter but more probably to irrigate his gardens. The stone minaret of the mosque of al-Manṣūra is impressive, 40 m in height and with polychrome tile work, reminiscent of such great Almohad buildings as the Giralda of Seville, the Kutubiyya of Marrakesh and the Ḥasan Tower at Rabat. To the east-south-east of Tilimsān is the mosque and mausoleum of Sīdī Bū Madyan [see ABŪ MADYAN], the famous Andalusī mystic and patron saint of Tilimsān (d. in the town 594/1197), built by the Marīnid Abu 'l-Ḥasan; the saint's tomb still today remains an object of great popular devotion. Finally, to the north of the town and at the very foot of its wall is the mosque of another Andalusī mystic, Sīdī al-Ḥalwī, built by the Marīnid Abū ʿInān Fāris in 754/1353 and in construction related, in several details, to that same sultan's Bū ʿInāniyya *madrasa* at Fās.

During the French Protectorate, Tilimsān became in 1854 a *commune de plein exercice* and in 1858 the chef-lieu of an *arrondissement*. In the 1920s it had a population of *ca.* 30,000 Muslims, 6,000 Jews and 4,000 Europeans. In the present-day Algerian Republic, the population is entirely Muslim, the Jewish and European population having all emigrated to France, Israel, etc. It is today the chef-lieu of a *wilāya* or governorate of the same name, covering 8,067 km², with five *arrondissements* and half a million people. In 1987 the town itself had *ca.* 140,000 inhabitants, a population constantly rising by 3.4% annually, in part from the prosperity arising from special development programmes and the creation of institutions of higher learning (including the Imāma University, with over 5,000 students in its five institutes). Industrial development involves factories for olive oil, tanneries, spinning and manufacture of silk textiles, manufacturing gas cylinders and telephone equipment, etc., permanently employing some 4,500 people. The industrial and new housing zones have considerably expanded the town's limits and encroached upon the cultivated area of the Haouz/Ḥawz which nevertheless continues to provide employment for 2,000 people.

(A. BEL-[M. YALAOUI])

AL-**TILIMSĀNĪ**, *nisba* from the Algerian town of Tilimsān [*q.v.*], to which numerous authors and scholars are attributed. Kaḥḥāla, in his *Muʿdjam al-muʾallifīn*, lists no fewer than 37 persons called (Ibn) al-Tilimsānī, usually with a more defining *nisba*, e.g. al-ʿUbbādī, al-ʿUḳbānī; or a function, al-Ḳāḍī; a specialisation, al-Faraḍī, al-Manṭiḳī; or simply, a *laḳab, kunya* or family name. Hence many of these persons should be sought under their more particular name, e.g. the historian al-Maḳḳarī, the *faḳīh* Ibn Zakrī, or the families of Ibn Marzūḳ or al-Sharīf al-Tilimsānī [*q.vv.*].

Some authors can nevertheless be conveniently grouped together under the *nisba* al-Tilimsānī:

1. IBN ZĀGHŪ, AḤMAD B. MUḤAMMAD b. ʿAbd al-Raḥmān AL-MAGHRĀWĪ AL-KHAZRĪ, Mālikī *faḳīh*, b. 782/1380, d. of plague at Tilimsān in 845/1441. The Andalusī author al-Ḳalṣādī (d. 891/1486 in Tunisia) had followed his courses in Tilimsān, and gives him a eulogistic notice in his *Riḥla*, celebrating his piety, modesty and asceticism, plus his vast erudition in all branches of knowledge: exegesis (he wrote a commentary on the *Fātiḥa*), Mālikī *fiḳh* (a commentary on the *Mukhtaṣar* of Khalīl b. Isḥāḳ), mysticism (glosses on al-Ghazālī's *Iḥyāʾ*), the division of inheritances (a commentary on the *Tilimsāniyya* of no. 2 below), etc. He

also gave legal decisions and thus figures in the great collections of *nawāzil* such as al-Wans̲h̲arīsī's *Miʿyār*.

Bibliography: Ḳalṣādī, *Riḥla*, ed. Boulajfan, Tunis 1978, 102; Aḥmad Bābā, *Nayl al-ibtihād̲j̲*, in margins of Ibn Farḥūn, *Dībād̲j̲*, 78 (reproduces Ḳalṣādī); Kaḥḥāla, iii, 116; Mak̲h̲lūf, *S̲h̲ad̲j̲arat al-nūr*, Cairo 1349/1931, 254 no. 921. (M. YALAOUI)

2. IBRĀHĪM B. ABĪ BAKR b. ʿAbd Allāh AL-ANṢĀRĪ, Mālikī *faḳīh*, from a family originally of Was̲h̲s̲h̲āḳ (Huecas, in the region of Toledo in al-Andalus), born at Tilimsān in 609/1212, died 690/1291 or 699/1300 at Ceuta, where he had settled after studies in Malaga. At the age of 20 he composed his *urd̲j̲ūza* on the division of inheritances (*farāʾiḍ*), which became celebrated as the *Tilimsāniyya*, stimulating the writing of numerous commentaries. He was also versed in grammar, as a student of the famous Abū ʿAlī al-S̲h̲alawbīn [*q.v.*], and in prosody, on which he composed another versified treatise. He also wrote edifying eulogies of the Prophet and Companions.

Bibliography: Ibn Farḥūn, 90; al-Wādīʾās̲h̲ī, *Barnāmad̲j̲*, ed. Muḥammad Maḥfūẓ, Beirut 1982, 114; Bag̲h̲dādī, *Hadiyyat al-ʿārifīn*, i, 13; Kaḥḥāla, i, 16; Mak̲h̲lūf, 202 no. 695; Brockelmann, I², 482, S I, 666.

3. SULAYMĀN B. ʿALĪ b. ʿAbd Allāh ... b. Yāsīn (? Yātīnann) AL-KŪMĪ (from a Berber tribe, the Kūmiya [*q.v.*] living in the coastland near Tilimsān, and not al-Kūfī), ʿAFĪF AL-DĪN, usually known as AL-ʿAFĪF AL-TILIMSĀNĪ, born at Tilimsān or Damascus in 610/1213, died at Damascus in 690/1291.

He was a poet, with mystical tendencies—he had lived in the Ṣūfī *k̲h̲ānaḳāh* of Saʿīd al-Suʿadāʾ in Cairo—and was accused of heterodox views, including as a "*zindīḳ* of the Ṣūfīs" (al-D̲h̲ahabī), a partisan of *ittiḥād* (Ibn al-ʿImād), and even of the Nuṣayriyya [*q.v.*] or of mainstream S̲h̲īʿism (the latter, according to the modern S̲h̲īʿī author Ḥasan al-Ṣadr). Nevertheless, there are hardly any spiritual traces to be discerned in the poetry of his cited by his biographers. However, as well as his *dīwān*, collected by al-Ṣafadī and published at Cairo in 1308/1889, he is said to have written commentaries on several mystical works, including Ibn al-ʿArabī's *Fuṣūṣ al-ḥikam*, al-Niffarī's *Mawāḳif*, al-Anṣārī al-Harawī's *Manāzil al-sāʾirīn* (published at Tunis), a gloss on Ibn al-Fāriḍ's *tāʾiyya* called *Naẓm al-sulūk*, and *al-Kas̲h̲f wa ʾl-bayān fī maʿrifat al-insān* on a poem on the soul by Ibn Sīnā. Al-ʿAfīf was equally skilled in grammar, prosody and the religious sciences. He occupied various official positions in Syria, including that of inspector of *mukūs*, market dues, in Damascus under the Mamlūk sultan al-Nāṣir Ḳalāwūn [*q.v.*], clashing with the latter's representative over the withholding of his accounts.

Bibliography: D̲h̲ahabī, *ʿIbar*, v, 367, year 690; Ibn al-ʿImād, *S̲h̲ad̲h̲arāt*, v, 412-13; Ibn Kat̲h̲īr, *Bidāya*, year 690; Ibn S̲h̲ākir al-Kutubī, *Fawāt*, ed. ʿAbbās, ii, 72-6 no. 179; Ṣafadī, *Wāfī*, xv, 408 no. 557; Ḥasan al-Ṣadr, *Taʾsīs al-S̲h̲īʿa*, Beirut 1981, 129; Brockelmann, I², 300, S I, 458.

4. MUḤAMMAD B. SULAYMĀN, S̲h̲ams al-Dīn, son of no. 3, called *al-S̲h̲ābb al-Ẓarīf* "the Elegant, Witty Youth", also a poet, born at Cairo in 661/1263. He predeceased his father by two years, dying in 688/1289 at Damascus, where he was an official in the treasury. For his life and works, see IBN AL-ʿAFĪF AL-TILIMSĀNĪ, to the *Bibl.* of which should now be added *Dīwān al-S̲h̲ābb al-Ẓarīf*, ed. S̲h̲ākir Hādī S̲h̲akr, Nad̲j̲af 1967 (373 pieces, totalling 2,247 verses).

(F. KRENKOW-[M. YALAOUI])

TILSAM, also *tilsim, tilism, tilasm*, etc. from the Greek τέλεσμα, a talisman, i.e. an inscription with astrological and other magic signs or an object covered with such inscriptions, especially also with figures from the zodiacal circle or the constellations and animals which were used as magic charms to protect and avert the evil eye. The Greek name is evidence of its origin in the late Hellenistic period and gnostic ideas are obviously reflected in the widespread use of such charms.

The sage Balīnās or Balīnūs [*q.v.*], i.e. Apollonius of Tyana (*fl.* 1st century A.D.), is said to have been the great master of talismans (*ṣāḥib al-tilasmāt*). According to tradition, he left in many towns charms for protection against storms, snakes, scorpions, etc., and there is extant a Paris manuscript of a *K. Talāsim Balīnās al-Akbar* (see BALĪNŪS, at Vol. I, 995a, and add to the *Bibl.* there Sezgin, *GAS*, iii, 77-91). Many rules for preparing talismans are also ascribed to Hermes Trismegistus, i.e. Hirmis or Hirmīs, Harmis, etc. (see HIRMIS, and add to the *Bibl.* there, Sezgin, iii, 31-44).

One of the most widespread uses of talismans was in the form of amulets, often worn on or close to the human body, and used for protective purposes. Early Arabic poetry and other literature shows that the use of amulets was found amongst the pre-Islamic Arabs, in whose poetry is mentioned e.g. the amulets (*tamāʾim*, sing. *tamīma*, or *taʿāwīd̲h̲*, sing. *taʿwīd̲h̲*) hung round children's necks to ward off the evil eye (see G. Jacob, *Das Leben der vorislamischen Beduinen nach den Quellen geschildert*, ²Berlin 1897, and ʿAYN).

The use of amulets in these and similar circumstances was absorbed into the religious life and folklore of the early Muslims, with both Islamic religious and magical elements combined in these (see below). Dervishes and beggars often did a good trade in amulets for which they claimed special efficaciousness. Thus the 4th/10th century author Abū Dulaf al-K̲h̲azrad̲j̲ī [*q.v.*] mentions beggars who wrote out talismanic charms (*ḥarraza*, i.e. wrote out *aḥrāz*, sing. *ḥirz*) and who sold to credulous S̲h̲īʿīs little clay tablets allegedly made from the earth on the tomb of al-Ḥusayn at Karbalāʾ; these would doubtless be used for amulets (C.E. Bosworth, *The mediaeval Islamic underworld. The Banū Sāsān in Arabic society and literature*, Leiden 1976, i, 86, 87-8, 90, ii, 192, 198-9, 221, 243: the *munfid̲h̲ al-ṭīn*). In the shadow-play [see K̲H̲AYĀL AL-ẒILL] *ʿAd̲j̲īb wa-G̲h̲arīb* of Ibn Dāniyāl (later 7th/13th century [*q.v.*]), the man who writes out amulets is called ʿAwwād̲h̲ al-S̲h̲armāṭ (*ibid.*, i, 128). In the next century, the ʿIrāḳī poet Ṣafī al-Dīn al-Ḥillī [*q.v.*] lists the *naffād̲h̲* or seller of amulets and images as a well-known figure amongst the swindlers who preyed on the credulous (*ibid.*, ii, 297, 319).

In more recent times, the terms most frequently used for "amulet" have been such words as *ḥurz* (Class. *ḥirz*) in the Mag̲h̲rib; *ḥid̲j̲āb* in Egypt; *ḥimāla* (cf. Dozy, *Supplement*, i, 327), *ḥāfiẓ*, *ʿūd̲h̲a*, *miʿw ad̲h̲a* amongst the Arabs of the Mas̲h̲riḳ; *yafta*, *nusk̲h̲a* and *ḥimāla* amongst the Turks; and *tilism* amongst the Persians.

Amulets are often carried in little bags, lockets or purses, which are worn round the neck or fastened to the arm or turban. Among rich people they are of gold or silver. Children are given these amulets as soon as they are forty days old; the crudest articles may be used as amulets, such as a shell, a piece of bone, sewn into leather and fastened under the left arm (see Sayyida Salme/Emily Ruete, *An Arabian princess between two worlds. Memoirs, letters home, sequels to the memoirs, Syrian customs and usages*, ed. with intro E. van Donzel, Leiden 1993, 202-3). Bedouin girls have an amulet which they call *ḥurz* and prize highly; it is a book of prayers 7 cm long and 4-5 cm broad

enclosed in a gold or silver box, and is worn as a brooch.

The prayers, signs and figures on these talismans are of very different origin and their investigation offers great difficulties. We find on them divine names, names of angels, verses from the Ḳur'ān, astrological symbols, Kabbalistic letters, magic squares, signs of geomancy, figures of animals and men [see DJADWAL]. According to Muslim tradition, God has 99 names, which in reality are only epithets, such as "the Great", "the Wise", "the Knowing", "the Merciful"; some authors like al-Tirmidhī and Ibn Mādja enumerate them all. (They are also given in Doutté, *Magie et religion dans l'Afrique au Nord*, 200; see also J.W. Redhouse, in *JRAS* [1880], and AL-ASMĀ' AL-ḤUSNĀ.) These names may be used as one pleases or arranged according to the numerical value of the letters composing them. Besides these, God has a name not to be spoken, which men do not know but which is revealed only to prophets and saints.

The names of the angels are also numerous. The best known are those of the four archangels Mīkhā'īl, Djabrā'īl, 'Azrā'īl and Isrāfīl, which are found on many amulets. Besides these, there is a host of others, which are given in the angelologies. There are several works of this kind in Arabic which are ascribed to suppositious authors like Andrūn or Andahriush; they contain a doctrine, which is derived from the notion of the Gnostic aeons. There are angels who preside over the planets; others preside over the months or the days of the week. Seven are given for each day; their names, barbaric in their sound, frequently appear in pairs, e.g. Ṭalīkh and Ilīkh, Ḳayṭar and Mayṭar, Ḳinṭash and Yāḳintash, a kind of combination such as we find in the Gog and Magog of the Bible and the Yādjūdj and Mādjūdj [*q.v.*] of Arab tradition. An angel very prominent in the world of magic, who presides sometimes over the planet Jupiter and sometimes over Mercury, and whom the Arabs seem sometimes to have confused with Mīkhā'il, is Meṭaṭron. He is one of the great figures in Kabbalistic literature. We find him also in the Zohar, where he fills the part of a kind of demiurge. Two other angels, who have a history of their own and are also mentioned in the Ḳur'ān, likewise appear on talismans, namely, Hārūt and Mārūt [*q.v.*]. Besides the angels, several mythical beings are also invoked, notably the seven sleepers (*Aṣḥāb al-Kahf* [*q.v.*]).

Of the verses of the Ḳur'ān, the most efficacious as amulets are the short sūras CXIII and CXIV: "Say: I take refuge (*a'ūdhu*) in the lord of the dawn, etc.—Say: I take refuge in the lord of men, the king of men, etc". These two sūras are called *al-mu'awwidhatān*ⁱ ("the two who preserve"). In the first, the evil women are mentioned "who blow upon knots", it is believed that it is particularly efficacious against the ills of the flesh; the other is credited with more power against psychic afflictions. Besides these, the sūra *Yā-Sīn* is highly esteemed by pious Muslims. This is also true of the *Fātiḥa*, the *Āyat al-Kursī* (II, 256) and the throne-verse, *Āyat al-'Arsh* (IX, 130). Other verses than these are also used in special circumstances.

The astrological signs, the signs of the planets and of the zodiac are well-known; they are naturally used for talismans. We often find quite peculiar signs which may be traced to different Kabbalistic alphabets; these frequently turn out to be transformations or corruptions of Hebrew or Kūfic letters. Kabbalistic alphabets are given by Ibn al-Waḥshiyya in his *K. Shawk al-mustahām*. Small circles, or rings or ornaments are often found behind the Hebrew letters; these scrolls are called "little moons" or "crowns". According to the *Sefer Yetsīrā*, every letter in a talisman ought to have its crown (*Sepher Yetsira*, tr. M. Lambert, 114).

Geomantic figures formed by points arranged in different groups are also sometimes used. Geomancy, the Arabic *'ilm al-ramal*, is divination from points formed in sand. Four lines are drawn in the sand, points marked at regular intervals and some of them wiped out at random. The remainder form definite figures to which names and different meanings have been given. These figures are used on talismans; for further details, see RAMAL.

Magic squares (*wafk*, *wifk* [see WAFḲ]) are also often met with. They consist of 9 or 16 compartments. Usually, the same number is added to each of the 9 or 16 numbers of which they consist. This gives the thing a more learned look. Thus they begin with 9 instead of 1 and run from 9 to 24 instead of 1 to 16. Instead of numbers, letters are often written in the squares, e.g. the four letters of the name Allāh, *allh*, four times in different order. The problem of magic squares has been thoroughly studied by the Arabs, for we see from the Ikhwān al-Ṣafā' that squares of 9 columns were known.

Forms of men and animals are rarely found in North Africa on talismans; but in the East we find them on amulets and charms, which have been produced under the influence of Persian art. Looking-glasses, cups and seals to which magic power is ascribed, are often adorned with them. For this purpose, figures of angels or animals, particularly griffins with human heads or the signs of the zodiac are used. A talisman which Reinaud saw represented a man drawing something out of a well; this talisman had the peculiar property of helping to locate hidden treasure. Several other examples are given in G.A. Herklots, *The customs of the Musulmans of India*, 339.

The human hand is a very popular symbol among Muslims. It is carried around the neck, cut out of gold or silver or engraved on a medallion; it is said to avert the evil eye. This charm is usually called "the hand of Fāṭima". The Shī'īs interpret the five fingers as the five saints: Muḥammad, 'Alī, Fāṭima, Ḥasan and Ḥusayn.

To sum up, it may be said that the subjects used, except the verses from the Ḳur'ān, may for the most part be traced back to Gnostic or Talmudic sources. According to Arab tradition, Adam himself discovered or rather revealed the talisman. According to the *Akhbār al-zamān*, of unknown authorship, (tr. Carra de Vaux, *L'Abrégé des merveilles*, Paris 1898, 142), 'Anāḳ, the son of Adam, stole from Eve, while she slept, the charms she used to conjure spirits; but he made bad use of them. Solomon was a great magician, according to Muslim belief; his ring plays a great part in Talmudic legends and Arabian tales. The *djinnī*, who appears in the story of the fisherman in the "Arabian Nights", was confined in a vase, which had been sealed with Solomon's ring. The talisman, still known as Solomon's seal and worn by Muslims and Jews alike, represents a six-pointed star. The Berbers also, according to the *Abrégé des merveilles*, were very skilled in magic and, when they threw their talismans into the Nile, they were able to bring numerous plagues upon Egypt.

In Arabic literature, there are various treatises on the science of talismans. The most celebrated writers on this subject are Maslama al-Madjrīṭī (*ca.* 398/1007 [*q.v.*]), who brought the ideas of the Ikhwān al-Ṣafā' to Spain, Ibn al-Waḥshiyya, the author of the *Nabataean agriculture*, and al-Būnī [*q.v.* in Suppl.]. A number of

amulets preserved in the Bibliothèque Nationale in Paris are ascribed—certainly wrongly—to the great theologian al-Ghazālī.

Muslim theology, which prohibits black magic and sorcery [see SIḤR], tolerates the use of amulets. They are usually prepared by dervishes, who belong to various orders, and are only of value when they are received from their hands.

(J. RUSKA and B. CARRA DE VAUX-[C.E. BOSWORTH])

TĪMĀR (P.), literally "care, attention", Tkish. equivalent *dirilik, dirlik* "livelihood", a term denoting non-hereditary prebends to sustain a cavalry army and a military-administrative hierarchy in the core provinces of the Ottoman Empire. The system of *tīmār*s was not only the underpinning of the military-administrative organisation of the empire but also the determining factor for its *mīrī* [*q.v.*] land system and for the peasants' status and taxation, as well as for its agrarian economy in the classical age, 1300-1600.

1. *Origins.*

The earliest documentary reference to the *tīmār* system dates back to Sultan Orkhan's time. *Tīmār*s distributed by ʿOthmān I to his comrades-in-arms (ʿĀshīk-Pasha-zāde, 105) appear to be rather appanages or types of *yurd*, similar to *tiyul* or *ulka* (*ülke*) in the Turcoman states of eastern Anatolia. The terms *ulka* and *yurd* survived in the same area under the Ottomans in the sense of hereditary appanage. However, already in Persia under the Saldjūḳids and in Egypt under the Mamlūks, certain characteristics of the Ottoman *tīmār* can be seen. The number of the auxiliary cavalry to be brought to the field by the *iḳṭāʿ*-holder was to be in proportion to the amount of his *iḳṭāʿ*, a practice found in the Ottoman *tīmār* system and, earlier, in the Byzantine empire. It seems that in Anatolia under the Saldjūḳids there were appanage-type *tīmār*s as well as military prebends similar to the Ottoman *tīmār*. Generally speaking, in a state in which a cash economy and a central treasury were not adequately developed, and the soldiery consisted mainly of cavalry, a feudal or prebendal system imposed itself as a necessity. The cavalry's needs could be met only in a rural environment, and tithes on grain as the main source of the state revenues could be collected and turned into cash only in a local market. Conditioned by these basic factors, such a system became prevalent in ancient Persia, the Byzantine empire, Western Europe, the Islamic states, and the Turco-Mongol states (cf. Doerfer, s.vv. *tiyul, nutug, yurd*). The Ottoman state developed its distinct *tīmār* organisation, apparently borrowing in its successive periods of expansion elements from each of these feudal systems.

In general, the horse and armour were the principal features distinguishing the professional *sipāhī* class from people engaged in economic activities subject to taxation. It was a strict rule that these two classes did not mix with each other, this being believed to be the principle of good order in society. In the Balkans, the Ottomans found a class of professional armoured cavalry in possession of *pronoïa* or *bashtina*; and considering them *sipāhī*s or a military élite, different from the tax-paying *reʿāyā*, they incorporated them into their own timariot army without any discrimination, expecting their loyalty to the sultan. In sum, *sipāhīlik*, the *sipāhī* profession and class was a prevalent idea with the Ottomans until the use of hand guns made it necessary to resort to mercenaries during the war against the Habsburgs in 1593-1606 (see İnalcık, *Transformation*). Armoured cavalry, of a type known in ancient Persia, made up the select divisions in the Il-Khānid, Aḳ-Ḳoyunlu and Ṣafawid armies in Persia. Such terms in the Ottoman timariot army as *djebe* and *gedjim*, all from Mongolian, may be taken as a proof of the prevalent influence. The influence of the Byzantine *pronoïa* system may also be discerned in the later development of the Ottoman *tīmār* system, being the exact translation of the Greek *pronoïa*. On the other hand, the Ottomans came into direct contact with the Mamlūks and they must have been familiar with the *iḳṭāʿ* system.

2. *The developed system.*

As the *tīmār idjmāl* registers drawn up under Murād II demonstrate, the Ottoman *tīmār* system was already fully developed in all its basic principles and features as described in the 16th-century regulations. The typical Ottoman province was one where the *tīmār* system was in force. Those provinces whose revenues were not distributed as *tīmār*s, sc. Egypt, Baghdād, Yemen, Ḥabesh, Baṣra, Lahsā (al-Ḥasā), Algiers, Tripoli and Tunis, were *sālyāneli*. A province under a *beylerbeyi* [see EYĀLET] was divided into *sandjaḳ*s under a *sandjaḳ-beyi*, and each *sandjaḳ* into *subashīlīḳ*s or *ziʿāmet*s under a *subashī* or *zaʿīm*. One of the *zaʿīm*s was chosen and was given the title of *alay-beyi* to be responsible for all matters concerning the *sipāhī*s in the *sandjaḳ*. All of these were commanding officers bearing the title of *beg/bey*. In fact, the *sandjaḳ* was the basic administrative and military unit, but the territory of a *beylerbeyilik* could be changed by adding or taking away *sandjaḳ*s. It was a basic rule that a *sipāhī* had to stay within his initial *sandjaḳ* and changes in

his *tīmār* has to be implemented only in this *sandjak*. Transfer from one *sandjak* or *beylerbeyilik* to another was exceptional. When the campaign season started, as a rule in March or April, *čeri-bashīs* rounding up the *sipāhīs* in the *ziʿāmet* joined the *subashī*. *Subashīs* then met the *sandjak beyi*. Uniting the *sipāhīs* from the *sandjaks* under his command, the *beylerbeyi* reviewed his troops before arriving at the meeting place with the imperial army.

A reliable source, Idrīs-i Bidlīsī, in his *Hasht bihisht*, estimated the timariot army of Anatolia at 20,000 and that of Rumili at 24,000 in 1473. In these figures, obviously the auxiliary *djebelüs* (see below) were included. In the official account of 933-4/1527-8, the timariot army numbered 37,521 (for the distribution among the *beylerbeyiliks*, see Table I).

Out of 37,521 *tīmār*-holders, 9,653 were *hiṣār-eri* or guards in the fortresses and the rest *eshkündji* or cavalry participating in the campaigns. Excluding the revenue from Egypt, where the *tīmār* system was not applied, almost half of the public revenues was allocated to *tīmārs*. Each *tīmār*, *ziʿāmet* and *khāṣṣ*-holder had to bring with him a number of *djebelü* or fully-armed auxiliary horsemen to the campaign commensurate with the amount of his *tīmār* (see Table II).

Although the *Ḳānūnnāme* of ʿAlī Čawush is dated 1653, his sources must be of the period 1560-80.

The figures in Table II suggest that, in general, the number of *djebelüs* was twice as many as that of the *tīmār*-holders. It is difficult to determine the exact number of the *djebelüs* which the *tīmār*-holders had to equip and bring to the field as their retinue (see Beldiceanu, *Timar*, Tables I-III). In accordance with the regulations, a *djebelü sipāhī* enjoying small *tīmārs* as low as 730 *aḳčes* had to wear a *djebe*, a simple armour perhaps made of metal plates, but after 3,000 *aḳčes* he would wear a *bürüme* or coat of mail consisting of linked steel rings (see the photo in *Die Karlsruher Türkenbeute*, 85, 90) apparently a more efficient and expensive armour.

In the *tīmār* organisation, categories were distinguished on the basis of function and heredity. Functionally, *tīmārs* were essentially divided into three categories: *khāṣṣ*, *ziʿāmet* and *tīmār*. The *khāṣṣ* (pl. *khawāṣṣ*) were of two types, *khawāṣṣ-i hümāyūn*, and *khawāṣṣ-i wuzerā*ʾ and *umerā*ʾ. *Khawāṣṣ-i hümāyūn* or imperial revenues, belonging theoretically to the sultan but actually within the public treasury, were basically distinguished from all the other categories. The richest and most reliable sources of revenues were reserved for this category, although it was possible to transfer them to other categories at any time. *Khawāṣṣ-i wuzerā*ʾ and *umerā*ʾ were reserved for the members of the government and provincial governors, *sandjak-beyis*/*mīrliwās* and *beylerbeyis*/*mīrimīrāns*. In the Arvanid register of 835/1432, *tīmārs* are seen categorised only as *khāṣṣ* and *tīmārs*. *Subashīs*' prebends were either called *tīmār* or *khāṣṣ*, obviously in deference to their rank in the military hierarchy rather than the amount of the *tīmār*. Only later, those *tīmārs* recorded in the *idjmāl* as 20,000 *aḳčes* are referred to as *ziʿāmet*, and their recipients as *subashī* or *zaʿīm*, i.e. commanding officer who bore the title of *beg*/*bey*. A *ziʿāmet* could go up to 100,000 *aḳčes* by additions through promotions. *Khāṣṣ* was supposed to start from 100,000 *aḳčes*, reserved for *sandjak-beyis* and *beylerbeyis*. Toward 1609, the lowest *khāṣṣ* of a *sandjak-beyi* was that of the Kurdish bey of Egil, 96,750, and the highest that of Kilis in Bosnia, 642,500. The highest *khāṣṣ* for a *beylerbeyi* was that of Diyarbekir, 1,200,660, and the lowest, that of Kıbrıs (Cyprus), 600,000 *aḳčes*.

The surveyor, responsible for drawing up the *idjmāl* register, so arranged each *khāṣṣ* and each *ziʿāmet* unit that its components, villages or shares, were dispersed in various parts of the *sandjak* or *ziʿāmet* territory. So the *sandjak-beyi* or *zaʿīm*, responsible for security, felt a personal interest in visiting various parts of his *sandjak* or *ziʿāmet*. Shares in the ordinary *tīmār* were also dispersed in different villages. In addition to security, this arrangement must have been motivated by the state's concern to prevent the *tīmār*-holder from turning the village into a personal estate. So *khāṣṣ*, *ziʿāmets* and *tīmārs* made up a mosaic throughout the *beylerbeyilik*. The *sandjak-beyi* and *zaʿīm* had to make regular tours in their area of jurisdiction, looking for wrongdoers and punishing them after obtaining a verdict from the local *ḳāḍī* by due process of law. A contingent of *sipāhīs* was left behind for security when the soldiery went to a campaign. The distribution of the fines [see RUSŪM] between these three gave rise to frequent disputes, so that the Porte had to arrange the shares in special regulations.

A *tīmār* registered in the *idjmāl* register constituted an indivisible fiscal and military unit called *ḳilidj*, which had boundaries coinciding with those of the villages included in the *tīmār*. Also, the registered peasant households within the boundaries were legally the *tīmār*-holder's *raʿiyyet*. The uncultivated land or *khālī* or waste land, and all other natural resources within the *tīmār*, could be exploited by the *tīmār*-holder, who allowed farmers from outside to settle on such lands. All of the incumbent taxes belonged to the *tīmār*-holder until a new survey or *taḥrīr* [*q.v.*] was made. So, when the *tīmār*-holder had one whole village or a cluster of villages as his *tīmār*, one can speak of a *tīmār* territory. The *tīmār*-holder was called *ṣāhib-i arḍ*, or the lord of the land, and *ṣāḥib-i raʿiyyet*, or the lord of the peasants in his *tīmār*, because he had exclusive jurisdiction over the land and peasantry there with full authority to implement the stipulations of the regulations concerning *mīrī* land and *reʿāyā*. If he transgressed these laws, he was subject to investigation and dismissal. Usually peasants from a neighbouring *tīmār*-holder came to cultivate.

In this case, the law-maker ruled that personal taxes such as *čift-resmi* and *ispendje* [see RUSŪM] were paid to the *ṣāḥib-i raʿiyyet* and tithes to the *sipāhī* who had jurisdiction over the cultivated land. In case of non-payment of the tithes, he had to pay a compensation called *čift-bozan resmi* or a second tithe. The attachment of the peasant to the land was secured by the law stipulating that the *tīmār*-holder was empowered to bring back a fugitive peasant within ten (in later regulations, fifteen) years. This stipulation was designed to ensure productivity and *tīmār*-holder's income. Later on, *ḳānūns* gave more freedom in this respect. In principle, the Ottoman régime was against exploitation of peasant labour by the local authorities as well as the establishment of personal ties between the military and peasants. A *raʿiyyet* was *ḥurr*, independent in the sense that he was free to organise his productive activities, and the *tīmār*-holder could not impose any tax or forced labour against the stipulations of the law. It was true that the state maintained some pre-Ottoman feudal corvées deemed necessary for the *sipāhī* to provide hay for his horse, to work on a *sipāhī*'s *khāṣṣa čiftlik*, to build his house and to carry tithes to the market place, to mention only the main *angaryas* or corvées. However, most of these services were converted into cash payments under the Ottomans. As in the Byzantine-Balkan context, the Ottoman *tīmār* was also a fiscal unit. The *ḥāṣil*, or the grand total

TABLE I
Revenues allocated to tīmārs *in the budget of 933-34/1527-28 (in million* aḳčes)

of the *tīmār* revenue put at the end of each *tīmār* in *idjmāl*, indicated the *tīmār* itself.

In general, the relationship between the *tīmār*-holder and villagers was an uneasy one, since each party tried to exploit to the maximum, or tried to escape the obligations. The *re'āyā*'s rights vis-à-vis the *sipāhī* were detailed in the *ḳānūnnāmes* [*q.v.*], the stipulations of which were enforced by the local *ḳāḍī*, and the *re'āyā* were also free to take their complaints directly to the sultan.

Ottoman law-makers took various measures to keep the territorial and fiscal unity of the *tīmārs* so that the number of *sipāhīs* remained stable. Each *tīmār* unit, called *ḳîlîdj*, was recorded as a separate item in the *idjmāl* register, and these units were kept unaltered as much as possible. In order to preserve the *tīmār* organisation and the number of *ḳîlîdj* units, as settled in the *idjmāl* register, the state declared certain rules. A *tīmār* unit as recorded in the register could not be partitioned and bestowed as *ḥiṣṣe*, or shares, or added in its entirety to another unit; at the death of a *tīmār*-holder the *ḥiṣṣes* could be taken away and added to other units; a *sipāhī*'s son could not get a *tīmār* in his father's lifetime except in certain special cases; in the transfer or *farāgh* of the *tīmār* to a son, only the original *ḳîlîdj* unit could be transferred. In principle, a *ḳîlîdj* unit could not be held by more than one *sipāhī*. But in practice, as may be observed in the registers of Murād II and in later ones, a *tīmār* was given *mushterek*, jointly, to more than one *sipāhī*. In that case, they went to campaigns together or each in turn (*be-newbet*). The practice of *mushterek* appears to be the result of the pressure by those waiting for *tīmārs*, as well as of the Porte's need of more men in the field.

One of the main characteristics of the Ottoman *tīmār* system, distinguishing it from western feudal practices, was that a *tīmār* was not a patrimony inherited by the heirs. However, the Ottoman law recognised the right of the son to a part of the deceased father's *tīmār* in proportion to a beginner's *tīmār*, or, to the sons jointly, to the father's *tīmār* in its entirety, a practice commonly found in the early registers (for the sons eligible for *tīmārs* in each rank, see the table in Howard, *Ottoman administration*, 97-8, 110-12).

Following their policy of *istimālet* or conciliation, the Ottomans applied modified forms of the *tīmār* system in the conquered lands. For instance, during the Balkan conquests, the Ottomans left many former Christian *pronoïa*-holders or feudal lords of the pre-Ottoman régime in their former *pronoïa* or estates as Ottoman *tīmār*-holders. Conversion to Islam was not a prerequisite to be an Ottoman *sipāhī*. The number of Christian timariots reached as high as 35% of the total *sipāhīs* in some *sandjaks*. In Anatolia, in the Ḳaramān and Dhulḳadriyye *sandjaks*, members of the *sipāhī* class were bestowed *tīmārs* whenever they declared loyalty to the Ottoman dynasty. It appears that for the Ottomans, *sipāhīlik* was a universally inheritable quality. Sons of the established military families were called *odjak-zāde*.

To ensure their loyalty in his struggle against the Türkmens and Ḳîzîlbash, Selīm I recognised *mülkiyyet* or freehold rights on their *yurdluk* land, and *odjaklîk*, *ḥukūmet* or internal autonomy to the nine Kurdish *sandjak-beys* in the *beylerbeyilik* of Diyarbekir. Lesser tribal chiefs, *'ashīret beyleri* treated as *za'īms*, also enjoyed *yurdluk* and *odjaklîk* status. Their *zi'āmet* and *tīmārs* were inheritable among the family members. The *yurdluk-odjaklîk* system was applied in other *beylerbeyiliks*, to eight *sandjaks* in Van, one *sandjak* in Ḥaleb, four *sandjaks* in Čîldîr and one *sandjak* in Shehrizol, and in some areas in northern 'Irāḳ. *Yurdluk odjaklîk* was applied also among the Yörük tribes in the *beylerbeyilik* of Konya. Over the course of time, *odjaklîk tīmārs* came into being in Bosnia, too. From the end of the 16th century, because of the constant threat of invasion by the Habsburg armies, the Porte had to accept the Bosnian *sipāhīs*' demand that their *tīmārs* or *zi'āmets* should pass in heredity not only to the sons but, in the absence of a son, to other male members of the family; such *tīmār*-holding families were known as *odjak* and their *tīmārs* as *odjaklîk*. The decision granting the privilege appears to go back to the reign of Aḥmed I (1603-17), confirmed by Ibrāhīm in 1644.

On the other hand, a category of *tīmārs* called *serbest* enjoyed certain immunities. All *khāṣṣ* and *zi'āmets* belonging to *ḍābiṭs*, or those who had police authority in their jurisdiction, including *beylerbeyi*, *sandjak-beyi*, *alay-beyi*, *za'īms*, *čeribashî* (*ser-'asker*), *dizdār* and *čawush*, were of this category. They did not share with other authorities the tax revenue accruing from fines, marriage tax and income from the sale of runaway slaves [see RUSŪM]. All *yurdluk-odjaklîk tīmārs* enjoyed the same immunity.

Tīmārs and *zi'āmets* of the *arpalîk*, *ḥukūmet* and *odjaklîk* types were distinguished from the ordinary *tīmārs* and *zi'āmets* by the fact that they enjoyed some kind of autonomy under the so-called *mafrūḍ al-ḳalem* and *maḳṭū' al-ḳadem* status. That is, the taxes in their prebends were "excluded from the registers" and "the interference of the local authorities are cut" as far as the pursuit of wrong-doers and the collection of fines were concerned.

Tīmārs and *zi'āmets* of the heads of groups organised in *odjaks*, such as *yaya*, *musallam* (*müsellem*), *yörük*, *akîndjî* and *voynuk*, as well as commanders in the fortresses, were also registered under the same category of *arpalîk* since headship was transferable only within the group. *Tīmārs* bestowed on religious functionaries, including *ḳāḍīs*, *imāms*, metropolitans and bishops appear to have been of the *arpalîk* type, too, since they often succeeded in the same function with the same *tīmār*.

Other forms of the Ottoman *tīmār* adapted to local conditions were *mālikāne*, *eshkindjilü*, *be-newbet* and *mushterek tīmārs*. In need of additional troops, Meḥemmed II required those in possession of the *yurd*-like freehold or *mulk* land to equip and send auxiliary soldiery called *eshkündji* to his campaigns. These were included in the *idjmāl* registers. He was also responsible for a large-scale land reform abrogating many useless *ewḳāf* and *emlāk* lands in order to create *tīmārs* for *sipāhīs*.

A regulation determined, on the basis of the amount of the *tīmār*, the type of the equipment and the number of *djebelü*, or fully-equipped armoured horsemen and *oghlan/ghulām* or esquire a *tīmār*-holder had to bring with him to a campaign. Already towards 835/1432, these rules were fully in force. For instance, all *tīmār*-holders enjoying a *tīmār* from 1,000 or less up to 2,000 had to be present in the campaign with a *djebe*, armour, but he had to bring with him a *ghulām* when promoted to 2,000. An *oghlan/ghulām* was usually a slave captured or bought by the *sipāhī*. Apparently after a certain period of service, a *ghulām* was promoted to the *djebelü* position. Runaway *ghulāms* are often mentioned in the sources. A simple *sipāhī* had to equip one *djebelü* for each extra 3,000 *akčes* of his *tīmār*, but the commanding officers, *subashîs* and higher, enjoying a *tīmār* over 20,000 brought one *djebelü* for each 5,000 *akčes*. Thus the Ottoman *sipāhī* army was altogether an armoured cavalry force. But

when confronted by its eastern rivals, Turkmen, Persian or Mamlūk armoured cavalry armies, the Ottomans secured military superiority mainly thanks to fire-power of artillery and muskets. The *sipāhī* with 3,000 *akčes* of *tīmār* had himself to wear a *bürüme* and bring a *djebelü* with him. The one with 5,000 had to wear a *bürüme* and bring one *djebelü*, one *ghulām* and a small tent.

Over the course of time, the *sipāhīs* undoubtedly became impoverished. A *sipāhī* had to take with him all he needed in equipment and food for a campaign. In addition to the decrease in the real value of *tīmārs*, high prices for necessary equipment must have made it difficult or impossible for a timariot to participate in a distant campaign. The final blow came with the 100% inflation in the period after 1584, whereas the rate of the *tīmārs* remained unchanged (see İnalcık, *Transformation*). Ottoman archival sources speak of an increasing number of *sipāhīs* involved in exactions from their peasants and of many joining brigand bands.

It was a strict rule not to allow anybody of *re'āyā* status to become a member of the *sipāhī* class and to get a *tīmār*. However, volunteers or *gönüllü* [*q.v.*] and *gharīb-yigids* of *re'āyā* origins who came to participate in the campaigns as fighters, as well as *akîndjis* [*q.v.*] and members of the fortress garrisons, might be recommended by commanders for *tīmārs*. The pressing demand for more men during the long wars against Persia and the Habsburgs in 1578-1618 made field commanders more tolerant in this matter, and thousands of Anatolian Turks, Kurds and other elements of the *re'āyā* found their way into the privileged class of *sipāhīs*. The complaints against *edjnebīs* or outsiders were spelled out already in the imperial orders under Süleymān I. Further strict rules were then introduced to verify the *sipāhī* origin of applicants. Besides those who were legally eligible for *tīmārs*, there were *mulāzims*, that is, *ma'zūls* or dismissed *sipāhīs*, and the young sons of the *sipāhīs* who participated in the campaigns with the hope of getting a *tīmār* as well as *eli-emīrlüs* (see below). Thus those claiming *tīmārs* constituted an impatient, tumultuous host ready to join any rebellious movement against the central government. All these, and discontented *sipāhīs*, joined rebellions, such as those of Sheykh Bedr al-Dīn in 1416, Shāhkulu in 1511 and the Kîzîlbash uprisings in the 16th century. Rival Ottoman princes struggling to succeed their father under Bāyezīd II and Süleymān I promised *tīmārs* to those who supported them, and finally the *Djelālī* bands in Anatolia [see DJALĀLĪ, in Suppl.] in 1593-1609 comprised similar elements.

The reasons for dismissal from a *tīmār* included in the first place failure to participate in a campaign. A *yoklama* or roll-call was made by the *beylerbeyi* during the campaign and the register of absentees was sent to the Porte [see ISTI'RĀD, 'ARD, at Vol. IV, 268a]. 'Aynī 'Alī emphasises the crucial importance of these registers in determining which *tīmārs* became vacant and in preventing double assignments and disputes. Among other reasons for dismissal were committing a grave crime such as murder or robbery or engaging in oppressive acts against the *re'āyā*. A *ma'zūl* timariot had to participate in the campaigns under the *beylerbeyi* in *mülāzemet* or "attendance" in order to be eligible for a *tīmār* again. If he did not join the army in campaign within seven years after his dismissal, he lost his eligibility and became a simple *ra'iyyet*, subject to taxation. So *sipāhīlik*, too, was not strictly hereditary. *'Azl* or dismissal was frequently practiced by the Porte, obviously in order to provide vacancies for a host of pressing candidates and to encourage the *tīmār*-holders to be present in campaigns. However, many *sipāhīs* were unenthusiastic for distant campaigns which were too expensive for their *tīmār* income. Those Anatolian *sipāhīs* who were not present at the crucial imperial campaign of 1596 were dismissed permanently from *sipāhīlik*, which caused grave disorders in the empire. There is no evidence that, to find jobs for many *sipāhīs* waiting for vacancies, the Porte introduced a rotation system through *mülāzemet*. Discouraged because of the widespread practice of bribery and favouritism in the last decades of the 16th century, many *ma'zūls* joined other discontented or rebellious groups. At the same time, following their growing inefficiency in the field when faced with the increasing fire-power of the Habsburg armies, *sipāhīs* were replaced by the increasing number of Janissaries and *sekbān we sarīdja* mercenary troops in the campaigns, so that the *tīmār* system declined and the government channelled most of the *tīmār* revenues into the central treasury, or else these ended up in the hands of palace favourites as sinecures, or as *tīmārs* and *zi'āmets* of influential people such as *čawushes*, *müteferrikas* or *kātibs* at the Porte (see Table III).

The same source tells us that in the campaign of 1030/1621, 2,882 *čawush* and sons of *čawush*, 94 *gedikli čawush*, 681 *müteferrika* and their sons, and 522 secretaries at the Porte were in possession of *tīmārs*. This confirms the complaint that a great number of *tīmārs* went to people outside the *sipāhī* army.

Bibliography: 1. Ottoman archives and document publications. The bureaus dealing with *tīmār* affairs were (1) *defterkhāne* where the *mufassal* and *idjmāl tahrīr* registers were located; (2) the *tahwīl kalemi* where *tahwīl tedhkires* or memos for bestowal were delivered; (3) then, *tahwīl tedhkires* were dis-

(Source: Barkan, *Timar*, 327.)

patched to the *beglidji kalemi*, where the final *berāt* or *nishān* or imperial diploma was prepared and delivered to the recipient of the *tīmār*. The 91 registers of the *tahwīl kalemi* cover the period 1024-1335/1615-1916. The *tīmār tahwīl* or *rūznāmče* registers number about 2,000 from Bāyezīd II's time, to be found in the Osmanlı Arşivi, Istanbul, see D.A. Howard, *The BBA rūznāmče tasnifi*, in *TSAB*, v/10 (1985), 11-19; N. Göyünç, *Timar rûznâmçe defterleri*, in *Belleten*, lx (1996), 127-38, which contains most comprehensive documents on *tīmār* since it summarises the complete procedure of bestowal before issuing the *tedhkire* for the delivery of the final *berāt*.

The basic sources for the *tīmār* system are the *Defter-i khakānī* registers, *idjmāl defterleri* in particular, see *Başbakanlık Osmanlı Arşivi katologlar rehberi*, Ankara 1995: *Tapu tahrir defterleri*, 118-23, 253-4; *Başbakanlık Osmanlı Arşivi rehberi*, Ankara 1992, 126-42, 186-230; *idjmāl* is a register drawn up to show the distribution of the revenues among the holders of *khāṣṣ*, *zi'āmet* and *tīmār*, arranged on the basis of *tīmār* units. The earliest *idjmāl* registers in the Osmanlı Arşivi belong to the reign of Murād II; see *Hicrî 835 tarihli sûret-i defter-i sancak-i Arvanid*, ed. H. İnalcık, Ankara 1954. Also V. Velčov *et alii*, *Fontes turcici historiae bulgaricae*, xx, Sofia 1974; *Hüdavendigâr livâsı tahrir defterleri*, i, ed. Ö.L. Barkan and E. Meriçli, Ankara 1988, 47-115, at 92-104, 112-15; F.M. TIMBUKTU or TINBUKTU, in earlier writings Timbuctoo (Fr. Tombouctou), a city of commerce and learning in West Africa, situated at lat. 16° 46' N., long. 3° 01' W., and now the administrative headquarters of the sixth region of the Republic of Mali. The earliest recorded form of the name is "Tunbuktū" (Ibn Baṭṭūṭa, iv, 430), or in European sources "Tenbuch" (Catalan Atlas of 1375). Al-Saʿdī (*Taʾrīkh al-Sūdān*, 21), glosses the name with *al-ʿudjra*, "protuberance" or "knot", and says that "in their language" (presumably Znaga) it was the name of the slave woman who was guardian of the first nomadic camp there; later writers have glossed this as "she of the enlarged navel". However, the name may more plausibly be derived from the Znaga root *b-k-t* meaning "to be distant or hidden" (R. Basset, *Mission au Sénégal*, Paris 1909, 198), and the feminine possessive particle *tin*.

The city lies about seven miles from the main bed of the river Niger, but only some four miles from the town of Kabara which is reached by the rising waters of the Niger between September and April, and was linked year round to a creek of the Niger by a canal in former times. During the years of greatest flood, water from the Niger reaches to the heart of Timbuktu through a meandering channel that begins a little east of Kabara. At the time of its occupation by the French in 1894, the area of permanent settlement was approximately half-a-mile from north to south and 700 yards from east to west at its widest point; the fixed population was estimated at 7-8,000, with a floating seasonal population. In 1853 Barth estimated the settled population at 13,000, and the seasonal influx at an average of 5,000. He estimated that, at its height in the 16th century, it was perhaps twice the size, but there is as yet no archaeological evidence to indicate its fullest extent. Late 18th and early 19th-century accounts speak of low walls and gates, but by Barth's day these had disappeared. Houses were (and still are) mainly made of adobe with flat roofs, often of two storeys.

Historically, Timbuktu has been a point of exchange for caravan traffic of the Sahara and waterborne traffic that reaches downstream into present-day Nigeria, and upstream through the inland delta of the Niger into the heart of Mali. Its population has always been mixed. Founded by Ṣanhādja Berbers, it was settled by Arabs from various Saharan oases (Walāta, Tuwāt, Ghadāmis), by Soninke and Dyula merchants and scholars, by Songhay initially as conquerors, and by Fulbe and Tuareg as temporary occupiers. In the early 16th century, Leo Africanus considered it a Songhay-speaking city, and Songhay is still the dominant tongue, though Arabic and Tamadjaḳ are widely used.

Al-Saʿdī places the origins of the city at the end of the 5th century of the *Hidjra*, or *ca.* 1100, but it was clearly of little importance during its first two and a half centuries of existence, as it earned no mention in the external Arabic sources until Ibn Baṭṭūṭa visited it. He described it as mainly inhabited by Masūfa, one of the component groups of the Ṣanhādja of the veil (*al-mulaththamūn*). It was probably Masūfa who first settled the area, moving southwards and eastwards from their Saharan ranges at a time when others of their group moved northwards with the Almoravid movement into the Maghrib and Andalusia. Indeed, Masūfa moved farther east in the late 5th/11th century to intervene in the affairs of Kawkaw (Gao [*q.v.*]) and eventually migrated into the Takidda region [*q.v.*].

When Ibn Baṭṭūṭa visited Timbuktu, the city was under Malian domination, as it had been for probably half-a-century. In about 1325, the Malian ruler *mansā* Mūsā [*q.v.*] visited the city on his way back from the pilgrimage to Mecca, and had in his company an Andalusian notary and man of letters Abū Isḥāḳ Ibrāhīm al-Sāḥilī, known as al-Ṭuwaydjin. The latter, who was from Granada, had met *mansā* Mūsā in Mecca and was persuaded to accompany him back to Mali. Although his chief attraction to the *mansā* was no doubt his knowledge of Mālikī jurisprudence, he evidently had architectural skills, for he is credited with building for Mūsā a residence in Timbuktu, as well as the Djingere-Bēr (Great Mosque).

By the end of the 8th/14th century the power of Mali was in decline, and by 837/1433-4 the city had come under the domination of a group described as "Maghsharan" Tuareg (al-Saʿdī, 22), who installed a Ṣanhādja governor. In 877/1468 the Tuareg were driven out and the city was incorporated into the rising Songhay empire under Sunni ʿAlī. Many of the Ṣanhādja *ʿulamāʾ* of Timbuktu fled to Walāta, and harsh measures were taken against some of the non-Ṣanhādja *ʿulamāʾ* who stayed behind. Timbuktu remained part of the Songhay empire from this time until 1000/1591. From 899/1493 Songhay was ruled by Askiya *al-ḥādjdj* Muḥammad b. Abī Bakr [*q.v.*] and his descendants, and Timbuktu entered upon a period of prosperity and growth, its *ʿulamāʾ* generally respected by the rulers and in some cases shown material marks of favour.

In 1000/1591 Timbuktu again changed masters when Songhay suffered defeat at the hands of a force sent by the Saʿdian ruler of Morocco, Mawlāy Aḥmad al-Manṣūr. In the preceding century it had enjoyed some measure of autonomy, since the capital of the *askiyas* was at Gao. Under the *bāshās* (the military title retained by the new rulers), the capital was Timbuktu, and again the *ʿulamāʾ* suffered. Several members of the Masūfa Aḳīt family, the leading jurisprudents of the city, whose members had filled the office of *ḳāḍī* under the *askiyas*, were exiled to Marrākush. Other scholars left volontarily. Intellectually, and to a large extent economically, Timbuktu now entered into a long period of decline. Over a period of some forty years the military oligarchy gradually shook off its ties to the Saʿdians, who were themselves in political disarray after the death of Aḥmad al-Manṣūr in 1603. Thereafter and until the early 19th century, the *bāshās* maintained a weak state around the Niger river from Djenne to around Bamba (in the early days, to a little beyond Gao), with their headquarters at Timbuktu. Arabic sources refer to them as *rumāt* ("arquebusiers"), and with the passing of time, their descendants evolved into a distinct social class and their name passed into Songhay as *arma*.

The state they ruled over was weak and a prey to attack by Tuareg of the Sahara, and later, in the 18th century, by Bambara from the south-west and by Fulbe. Members of the Moroccan and Andalusian divisions that made up the *rumāt* quarrelled among themselves and there were frequent changes of *bāshā* and subordinate officers; between 1591 and 1832 there were no less than 242 holders of the office, some individuals having multiple tenures. The 18th century was marked by ecological stress producing famines and epidemics which spawned a scramble for scarce resources. Late in that century, the Bambara kingdom of Segu [*q.v.*] harrassed the western reaches of the Bāshalik, but could not hold any part of its territory. Similarly, the Kel Tadmekkat Tuareg har-

rassed Timbuktu on several occasions, most notably in 1770-1 when a siege of the town was only lifted after the intervention of the Ḳādiriyya *shaykh* and scholar al-Mukhtār al-Kuntī [see KUNTA].

In 1826 the rising Fulbe state of Masina under Shaykh Aḥmad Lobbo [*q.v.*] took control of the city, but in 1844 the Tuareg forced them out temporarily. Two years later, having used their power to deny grain imports to Timbuktu from the inland delta region, the Fulbe regained control, but the agreement brokered by Shaykh Aḥmad al-Bakkā'ī, grandson of al-Mukhtār al-Kuntī, while involving tribute, stopped short of military occupation. When the Tukulor Tidjānī conqueror al-Ḥādjdj 'Umar [*q.v.*] defeated the Fulbe of Masina in 1862, al-Bakkā'ī defended the independence of Timbuktu, and in 1864 he besieged Ḥamdullāhi together with Fulbe forces. His clan continued to dominate the affairs of Timbuktu for a while, but by the time of the French occupation in 1893-4 they had withdrawn to the Azawād, leaving various Tuareg groups in control of the city's hinterland, and the city itself an easy prey.

French rule lasted until Malian independence in 1960, and Timbuktu was the headquarters of a *cercle*. Though trans-Saharan trade atrophied, salt caravans (*azalai*) continued to come in from Taoudeni. Since 1960 the city has survived mainly as a tourist attraction, though drought and a long Tuareg rebellion, ended only in 1996, have taken their toll. An archive and research centre, the Centre de Documentation et de Recherche Ahmad Baba, was established there in the early 1970s and has collected over 6,000 Arabic manuscripts (see J.O. Hunwick in *Sudanic Africa*, iii [1992], 173-81).

In European writing, Timbuktu became a fabled city based on its role in the gold trade. While gold was an important item in trans-Saharan trade, especially in the 15th and 16th centuries, the more prosaic staples of Timbuktu's prosperity were salt, cloth, grain and slaves, and in the 19th century, ostrich feathers. The principal desert routes led to Ghadāmis, Ghāt, Warghla, Tuwāt and the Dar'a valley. These in turn led on to North African cities such as Tripoli, Tunis, Algiers, Tlemcen, Fās and Marrākush, the first three of which were ports of entry for European manufactured goods such as paper, cloths, metalware and glassware. To the south, Timbuktu's principal trading partner was Djenne, whence routes led into central Mali and down to the savannah and forest lands of what are now Ivory Coast and Ghana. It was from these distant lands—the Bure region of Mali and the Akan forests of Ghana—that gold dust (*tibr*) was obtained. Gold dust was the principal medium of exchange for external trade, while smaller local transactions were conducted in cowries (*wada'*). Timbuktu's reputation made it the European explorer's prize in the early 19th century. The British officer Major Alexander Gordon Laing was the first to reach the city in 1826, but he was murdered in the Sahara while on his way back. The first traveller to survive the trip and bring back an account of the city was the Frenchman René Caillié in 1828. An earlier account of Timbuktu by the shipwrecked American sailor Robert Adams (published in London, 1816), though full of difficulties, is probably genuine.

Timbuktu was also, in the 10th-12th/15th-17th centuries, one of the major centres of Islamic learning in West Africa. The Sankore mosque and the quarter of that name in the north-east of the city were the focus of the teaching tradition, the older Djingere-Ber and the 9th/15th-century Sīdī Yaḥyā mosque being better known for devotional recitations. Two Ṣanhādja familes who intermarried provided most of the imāms of Sankore and the *ḳāḍīs* of the city in the period 1450-1650: the descendants of Anda-Ag-Muḥammad (*fl.* 1450) and his contemporary 'Umar b. Muḥammad Aḳīt. From the latter family came the celebrated Aḥmad Bābā (d. 1036/1627 [*q.v.*]), who gained wider fame during his exile in Marrākush 1002/1594-16/1608, when he taught at the Djāmi' al-shurafā'. Other notable scholarly families of the period were the Dyula Baghayogho (Muḥammad Baghayogho (d. 1002/1594) was the principal teacher of Aḥmad Bābā), the descendants of the Fulbe scholars Muḥammad Gidado (d. *ca.* 1577) and of Muḥammad Gurdo (d. 1065/1655-6), and the descendants of Aḥmad Mughyā (d. 1002/1593). In the 13th/19th century, Arab scholars of the Kunta revived the city's scholarly tradition for a period, and in the 14th/20th century the families of Ḥaydara and Bu 'l-A'rāf have upheld it. The French also established a *madrasa* in Timbuktu in 1911 where Islamic sciences were taught in Arabic and select secular subjects were taught in French.

TIMSĀḤ (a., pl. *tamāsīḥ*), masculine substantive denoting the Nile crocodile (*Crocodilus vulgaris*) of the class of reptiles (*zaḥḥāfāt*) and the order of saurians (*'aẓāliyyāt*); it is the only crocodile known in the Arabophone countries. The name appears to be derived from the Coptic *'imsaḥ*.

According to ancient authors, this crocodile is said to have been formerly present in the waters of the Jordan and the Euphrates. A carnivore, it devours all kinds of meat and fish. Of naturalists writing in the Arabic language, al-Damīrī (see *Bibl.*) is the only one to have dealt at length with the crocodile; he mentions all of its particular features, most of his information being borrowed from Aristotle (see *Bibl.*). The crocodile has as its avowed enemies the lion, the hippopotamus (*faras al-mā'*), the otter (*kalb al-mā'*) and the weasel (*ibn 'irs*); the latter gains access to the interior of the crocodile's belly by way of the open mouth, and devours its liver. The only effective defensive weapon at the crocodile's disposal is the violent thrashing of its tail, which can fell a man or an ox. It spends most of the time submerged; however, being oviparous it leaves the water to lay its eggs in soft soil and cover them.

In Islamic law, the consumption of the flesh of the crocodile is formally prohibited, the animal being a carnivore.

On the other hand, this saurian presents several specific qualities. Thus one of its eyes worn by a rheumy-eyed person (*ramad*) cures him rapidly, whether this be the left eye for the left or the right for the right. To carry one of its teeth about one's person has an aphrodisiac effect and, if it is from the left side, it dispels any kind of shivers (*kasha'rīr*). Its fat is a beneficial ointment for treating otitis and its gall makes an effective eye-wash for the treatment of albugo. When dried, pulverised and used in fumigation, its liver alleviates epilepsy (*ṣar'*) and its dung, extracted from the intestine and applied as a lotion to the affected skin of the leper (*bayāḍ*), makes the disease disappear. In spite of all this, the crocodile remains, in the opinion of most, an exceedingly harmful beast, as is shown by expressions such as *aẓlam min timsāḥ* "more tyrannical than a crocodile". As against this, there is a small bird which profits by association with the aquatic monster, this being the Egyptian plover (*Pluvianus aegyptius*) called *ṭayr al-timsāḥ* "crocodile bird" and also known as *saḳsāḳ, zaḳzāḳ* or *tawram*; it enters the open mouth of the saurian and, with its sharp-pointed beak, feeds on the morsels of meat stuck between the teeth.

In botany, there is the *ḥabḳa al-timsāḥ* "crocodile basil" which is the common calamint (*Clinopodium vulgare* or *Calamintha clinopodium*), a labiate member of the Melissa genus.

In oneiromancy, seeing a crocodile in a dream presages the defeat of an enemy.

Krokodil. (F. Viré)

TIMSĀḤ, Lake, one of the series of swamps and lagoons in the Eastern Nile Delta region of Egypt (now administratively in the *muḥāfaẓa* of Ismā'īliyya) through which the Suez Canal passes on its way from Port Sa'īd south to Suez. The Canal enters the Lake at the 80th kilometre. On the northern shore lies the town of Ismā'īliyya [*q.v.*]. The Lake is about 6 sq. miles in area, although before the construction of the Canal it was brackish and reedy. Now it is very picturesque, with its bright blue waters and the background of desert hills. The name means "Crocodile Lake" [see the preceding art.], being once upon a time the haunt of that creature. Archaeologists are undecided as to the part it played in historic times. Wallis Budge (*Hist. of Egypt*, v, 131-2) supposes that it was somewhere in its neighbourhood that the Israelites crossed during their flight from Egypt. He identifies it with the *yam-sūp* or Sea of Reeds mentioned in Exod., xiii. 18.

TIMTHĀL [see ṣanam].

TĪMŪR LANG ("Timur the Lame") b. Taraghay Barlas, the founder of the Tīmūrid dynasty [*q.v.*] which ruled in Central Asia and eastern Iran from 1370 to 1507. The birthdate commonly ascribed to Tīmūr, 25 Sha'bān 736/8 April 1336, is probably an invention from the time of his successor Shāh Rukh [*q.v.*], the day chosen for astrological meaning and the year to coincide with the death of the last Il-Khān (Manz, *Tamerlane and the symbolism of sovereignty*, in *Iranian Studies*, xxi/1-2 [1988], 113-14 n.) Tīmūr rose to power in the Ulus Čaghatay, a tribal confederation forming the western section of the Mongol Čaghatay Khānate [*q.v.*] He was a member of the Barlas of the Kish region. This was an important Mongol tribe within the Ulus, tracing its leadership back to Činggis Khān's commander Ḳaračar, who shared a common ancestor with Činggis, and was later attached to his son Čaghatay. Tīmūr descended from Ḳaračar but was not of the chiefly lineage, and gained power through skilful politics and the help of a personal, non-tribal following.

1. His career.

The histories first mention Tīmūr on the invasion of the Eastern Čaghatayid Khān Tughluḳ Tīmūr in Rabī' II 761/February-March 1360. Ḥādjdjī Beg, chief of the Barlas, fled the Ulus, and Tīmūr obtained appointment to his place. He forged an alliance with Amīr Ḥusayn Ḳara'unas, nephew of the former tribal ruler of the Ulus. During the next ten years Tīmūr campaigned and intrigued, first in alliance with Ḥusayn against the Eastern Čaghatayids, and after Ḥusayn's

seizure of the Ulus in 767/1366, usually in competition with Ḥusayn. He frequently had to take refuge in Khurāsān and Māzandarān. According to contemporary histories, it was at one of these times, in a campaign for the kings of Sīstān, that Tīmūr received the wound which deformed his right arm, but examination of his skeleton suggests that this was in part due to illness.

In 771/1369 Tīmūr gathered the tribal aristocracy behind him and defeated and killed Sulṭān Ḥusayn. Since he was not descended from Činggis Khān, Tīmūr ruled through a puppet khān from the Ögedeyid branch, while posing as an upholder of the Čaghatayid order. He took for himself a Čingisid wife (Saray Malik) and assumed the title of *güregen* "royal son-in-law", making his capital at Samarḳand, which he embellished and fortified. On 12 Ramaḍān 771/9 April 1370 he had his government formally reaffirmed by the members of the Ulus Čaghatay. Nonetheless, he found the tribal leaders of the Ulus quick to react against any assertion of power. For the first twelve years of his reign he suffered numerous tribal uprisings and desertions, which he put down largely without force, especially in his first years of rule.

Tīmūr soon began to lead his armies outside the Ulus Čaghatay. In 772-3/1370-2 he began campaigning in the Farghānā Valley, and over the next several years gradually expanded his claims into the Eastern Čaghatayid regions, where the seizure of power by tribal leaders in 1369 offered opportunities for interference. By 777/1375 he had installed a governor in Andīdjān, and in 779/1377-8, in Kāshghar. These claims required effort to maintain, and Tīmūr stretched his forays as far as the Irtysh and Yulduz. Tīmūr's first attack on Khʷārazm came in 773-4/1372-3, after its ruler refused to cede to him the cities of Kath and Khīwa, to which he laid claim. This also embroiled Tīmūr in a set of continuing campaigns, culminating in the seizure and sack of Urganč in 789/1387.

In 777/1376 Tīmūr espoused the cause of Tokhtamïsh or Toḳtamïsh [*q.v.*], a pretender to the throne of the Djočid Blue (or in some sources, White) Horde north of the Syr Darya, and helped him to power in 778/1377. By 1382, Tokhtamïsh had taken control over the Golden Horde with the Russian lands, and re-imposed tribute over Lithuania. During this time, Tīmūr was active in Persia. In 782/1380 he appointed his third son, Mīrān Shāh [*q.v.*] governor of Khurāsān, and in winter 1380-1, began his Persian campaigns. Over the next years, Tīmūr campaigned in Khurāsān, Sīstān and in Māzandarān. In Shawwāl 786/Nov.-Dec. 1384, he took Māzandarān and re-installed Luḳmān b. Toghāy Tīmūr, last of the pretenders to the Il-Khānid throne (though descended from Činggis Khān's brother). From here Tīmūr proceeded to the Il-Khānid city of Sulṭāniyya.

It seems likely that Tīmūr was aiming at a restoration of the Mongol Empire; he had by now collected three Čingisid khāns beneath him (as he hoped): an Ögedeyid puppet khān, and "clients" from the Djočid and Il-Khānid Uluses. Tokhtamïsh, however, now revived the Golden Horde-Il-Khānid rivalry, attacking Tabrīz in winter 787/1385-6. The duel between the two men lasted almost ten years. In spring 788/1386 Tīmūr set out for his "Three-year campaign" to Luristān, Ādharbaydjān and the Caucasus. When Tokhtamïsh again prepared to attack Ādharbaydjān in early 789/1387, Tīmūr's army defeated him; Tīmūr then campaigned against the Turkmen Ḳara Ḳoyunlu [*q.v.*] and the Muẓaffarid [*q.v.*] dynasty of Fārs. At the end of 789/1387 he learned that Tokhtamïsh had pillaged Transoxania and gained the support of the Khʷārazmian local dynasty and the Eastern Čaghatayids. Tīmūr spent the next four years campaigning in the east. In autumn 792/1390 he set out for a major offensive against Tokhtamïsh, and in June 793/1391 defeated him on the Kondurcha River near Samara. By 1394 Tokhtamïsh had recovered the Golden Horde, again forming an alliance with the Mamlūks against Tīmūr, and in autumn 796/1394 he raided Ādharbaydjān. Tīmūr counter-attacked and soundly defeated him on the Terek River on 23 Djumādā II 797/15 April 1395. He waged a systematic campaign of destruction in the Don and Volga regions up to Yelets, pillaging trading cities and nomad centres; Tokhtamïsh could not again challenge Tīmūr's power.

During this period, Tīmūr also campaigned in Persia. On 6 Ramaḍān 794/27 July 1392 he began his "Five-year campaign". In spring 795/1393 he destroyed the Muẓaffarid dynasty, and put southern Persia under his son ʿUmar Shaykh. He appointed Mīrān Shāh as governor of western Persia and set out to wrest the region from the Djalāyirids of Baghdād and the Ḳara Ḳoyunlu. The Aḳ Ḳoyunlu [*q.v.*], less powerful, he recruited as allies, and this started their rise to power. In summer 798/1396 Tīmūr returned to Samarḳand and spent about a year there, then in spring, 800/1398 he went against India, sacking and burning Dihlī in Rabīʿ II 801/December 1398.

In the spring of 801/1399, Tīmūr returned to Samarḳand, and in early 802/September 1399 set out for his "Seven-year campaign" to the west. He reasserted his power in Georgia and Baghdād, and again fought the Ḳara Ḳoyunlu. Tīmūr's involvement in the politics of the Arab, Kurdish and Turkmen dynasties of eastern Anatolia had brought him into conflict with the Mamlūks and Ottomans. Since 1395 he had been considering war against the former. At that time, he had still been friendly with the Ottoman sultan Bāyezīd I [*q.v.*], but relations changed in 800/1398 with the deaths of the Mamlūk sultan Barḳūḳ and of the Ḳāḍī Burhān al-Dīn, ruler of Sīwās (Z.V. Togan, *Timurs Osteuropapolitik*, in *ZDMG*, cviii [1958], 279-98). The resulting confusion attracted both Tīmūr and Bāyezīd, and their relations as a result rapidly deteriorated. In autumn to winter 803/1400-1 Tīmūr campaigned in Syria, after the Mamlūks had murdered his ambassadors and given refuge to his enemies. In spring 804/1402 he set out against the Ottomans, whom he defeated near Anḳara on 19 Dhu 'l-Ḥidjdja 804/20 July 1402. He took Yïldïrïm Bāyezīd captive but treated him well. His armies campaigned through the Ottoman territories, collecting tribute from their cities, but left the Ottoman dynasty in place.

Tīmūr now returned to Samarḳand, where he staged a major convocation (*ḳuriltay* [*q.v.*]), attended by foreign ambassadors, including the Spanish ambassador Ruy Gonzáles de Clavijo. Chinese ambassadors were also present, but were publicly humiliated. In late autumn 807/1404 he set out with an enormous army against China, planning to winter in Utrār, but died there on the eve of 17 Shaʿbān 807/18 February 1405.

2. The method and purpose of his campaigns.

The Turco-Mongolian population of the Ulus Čaghatay, known as Čaghatays, formed the core of Tīmūr's army, decimally ordered and led by his family and personal following. He also levied contingents from the regions he conquered, whom he used in campaigns close to their place of origin. Thus the

composition of Tīmūr's army changed and conformed to the needs of specific expeditions. As Tīmūr appointed his sons and followers governors over new dominions, he assigned armies to them, each containing commanders from a variety of tribes and from the families of Tīmūr's personal followers.

Taking Činggis Khān as model, Tīmūr offered a choice of submission with safety or complete destruction; he carried off the skilled artisans and spared the religious classes, sometimes amusing himself by matching them in disputation and in chess. Even from submissive cities he extorted a massive ransom. His campaigns included displays of spectacular ferocity, sparingly used, and almost always intentional. The ravages of his army were considerable but frequently followed by the restoration of agriculture. On his first expedition to a region, Tīmūr simply extracted submission and taxes, returning later to punish insubordinate vassals and install governors. He destroyed only the larger dynasties within his dominions, notably the Karts [*q.v.*] of Harāt and the Muẓaffarids [*q.v.*] of Fārs; small dynasties continued in place, providing hostages and troops.

Tīmūr incorporated only part of his conquered territory into his domains, sc. regions combining a strong agricultural base and largely Persian-speaking population with a significant nomad Turco-Mongolian stratum. This corresponded approximately to the Il-Khānid and western Čaghatayid territories. Tīmūr may originally have intended to restore the entire Mongol empire, and have changed his mind when he found steppe regions more difficult to control and less rewarding financially than settled ones. By the mid-1390s, he had probably decided not to incorporate the steppe into his domain; he chose simply to destroy the cities of the Golden Horde and to leave the nominal rulership to a Djočid protégé, whom he left without support. Tīmūr's campaigns into regions outside the Mongol empire seem to have been aimed to show that he was supreme also within the Islamic world. He installed no administration in India, Syria or Anatolia. One region Tīmūr tried to hold and failed, Ādharbaydjān, was ruled by Turkmen nomads whom he could defeat but not destroy. Although it was nominally within Tīmūr's realm, he held it only briefly.

3. The organisation of Tīmūr's realm.

Tīmūr installed a *dīwān* system on the model of earlier nomad dynasties, but during his lifetime it was probably not highly articulated. Persian bureaucrats appear to have held rather low status, especially in central government. The central *dīwān* (*dīwān-i aʿlā*), responsible for financial administration, was staffed largely with Persians, but Čaghatay *amīr*s were also active within it. Provincial governors were either princes or close followers; city governors (*darūghā*s [*q.v.*]) were appointed personally by Tīmūr from among his followers or tribesmen. Tīmūr controlled his governors through periodic changes in provincial appointment, and by demanding their presence on campaigns.

In 805/1403 he reorganised his dominions into four sections, each under the family of one of his sons: Mīrān Shāh's family in the west; ʿUmar Shaykh's sons in southern and central Persia; Djahāngīr's son in the southeast; and Shāh Rukh with his sons in Khurāsān and the regions to the east and north. In planning for succession, Tīmūr favoured the line of his second son, Djahāngīr, born of a free wife, but he died early; later, Tīmūr appointed as successor Djahāngīr's son by a Činggisid wife, Muḥammad Sulṭān. Muḥammad Sulṭān died in 805/1403, and it was not until just before his own death that Tīmūr appointed Pīr Muḥammad b. Djahāngīr, who failed to take power.

4. Foreign relations.

Tīmūr maintained active relations with both neighbouring and distant states. His initial contacts with China were friendly; in October 1394 his ambassadors arrived at the Chinese court with a letter whose Chinese version expressed submission. The Chinese reply of 1395 alerted Tīmūr, however, to the Emperor's understanding of the relationship. He detained the ambassadors, and from this time remained unfriendly to China, beginning as early as 800/1398 to plan a campaign against it. The same year, he welcomed a pretender from the dynasty of the Northern Yüan, who remained in his following, making up part of his projected China expedition in 807/1405.

Common enmity to the Ottomans attracted Tīmūr and the Christian powers, and during his later years he exchanged embassies with the Paleologi rulers of Constantinople, the Venetians, Henry IV of England, the Genoese of Ghalaṭa, Charles VI of France, Martin I of Aragon and Catalonia, and finally Henry III of Castile and León, whose ambassador, Ruy Gonzáles de Clavijo, has left a valuable record of his embassy to Samarḳand in 1404-6.

5. Literary and artistic patronage.

Tīmūr was an active patron of religion, monumental architecture and historical writing. He had both Ṣūfīs and *ʿulamāʾ* in his suite; in belief, he was Sunnī, with a strong reverence for the family of the Prophet. In architecture, Tīmūr favoured the monumental. In 771/1370 he began to turn Samarḳand into a royal capital, and about 775/1373-4 he started building at his second capital of Kish (Shahr-i Sabz) [*q.v.*], adding fortifications, and the Aḳ Sarāy palace in 781/1379-80 after his conquest of Khʷārazm, whose craftsmen he transported to work there. He continued his building programme in Samarḳand, erecting garden palaces around the city, many designed for his wives. After his decisive defeat of Tokhtamïsh, Tīmūr undertook more grandiose building projects, including the shrine complex for Aḥmad Yasawī [*q.v.*] in Yāsī/Turkistān in 799/1396-7, and, on his return from India, the huge Masdjid-i Djāmiʿ (the Bībī Khānum). After his campaign against the Mamlūks and Ottomans, he ordered the building of canals and a bazaar at his winter quarters of Ḳarabāgh, and apparently a new bazaar for Samarḳand (Clavijo, *Narrative of the Spanish Embassy to the court of Timur at Samarkand in the years 1403-1406*, tr. G. Le Strange, London 1928, 278). It is notable that, during Tīmūr's lifetime, the patronage of large-scale architecture was reserved for him, royal women, and his heir-apparent Muḥammad Sulṭān.

Tīmūr also commissioned historical writing. Ibn Khaldūn, who met him, considered him highly knowledgeable in this area. Sources mention several contemporary chronicles of his reign, prose and verse, Turkic and Persian, most now lost. One commissioned work survives: the *Ẓafar-nāma* of Niẓām al-Dīn Shāmī [*q.v.*], completed in 1404, which served as a major source for later Tīmūrid historians. Tīmūr's "memoirs", the *Tuzūk-i tīmūrī*, are a later fabrication.

Tīmūr's concern for his reputation was well rewarded, and he was remembered for centuries as a supremely charismatic figure, still invoked for legitimation in the 18th century by Nādir Shāh Afshār, and in the 19th by the Ming dynasty of Khoḳand.

TĪMŪRIDS, a dynasty of Persia and Central Asia (771-913/1370-1507) founded by the conqueror Tīmūr Lang [*q.v.*], who rose to power within the Ulus Čaghatay, a tribal confederation covering Transoxania and much of what is now northeastern Afghanistan. This was controlled by Turco-Mongolian military aristocracy, known as "Čaghatay", faithful to Mongol traditions but Muslim and living in close contact with the settled population.

1. History.

Tīmūr assumed leadership on 12 Ramaḍān 771/9 April 1370, and spent the first years of rule in campaigns against Kh^{w}ārazm and the eastern Čaghatayid Khānate. In 777-8/1375-7 he installed a Činggisid protégé, Tokhtamīsh [see TOKTAMĪSH] on the throne of the Blue (or White) Horde north of the Syr Darya. Tokhtamīsh soon took over the Golden Horde, and began a contest for power with Tīmūr which ended only with Tokhtamīsh's defeat on the Kondurcha River near Samara in 793/1391. In 782/1380-1 Tīmūr began campaigning in Persia, whose conquest he completed in 795/1393. In his campaigns to India (800-1/1398-9), Syria (803/1400-1), and Anatolia (804/1402), he achieved suzerainty but installed no administration. In the east, he incorporated Kh^{w}ārazm, the cities just north of the Syr Darya and the Farghānā Valley. He established forts near the Issyk Kul and claimed Kāshghar, but we do not know what level of control he held there. In Persia he created a regular administration, and he attempted to do the same in Arab ʿIrāk and Ādharbaydjān, but here his hold remained insecure.

Tīmūr ruled through a Činggisid puppet khān, and acquired Činggisid wives both for himself and for several of his sons, gaining the right to the title of *güregen* or "royal son-in-law", held by several of his descendants. At the same time, he patronised Islamic institutions and scholars.

Tīmūr left his realm divided into four sections, each under the family of one of his sons, ʿUmar Shaykh, Djahāngīr, Mīrān Shāh and Shāh Rukh. His death on the eve of 17 Shaʿbān 807/18 February 1405 unleashed a struggle for supreme power and struggles for supremacy within each of his sons' regions. Kh^{w}ārazm reverted to the Golden Horde, and Ādharbaydjān fell to the Turkmen Kara Koyunlu in 810/1408. The victor in this succession struggle was Tīmūr's fourth son Shāh Rukh [*q.v.*], governor of Khurāsān. Shāh Rukh took Transoxania from his nephew Khalīl Sulṭān b. Mīrān Shāh and installed his own son Ulugh Beg [*q.v.*] as governor in Samarkand on 27 Dhu 'l-Ḥidjdja 811/13 May 1409. In 815/1413 he re-took Kh^{w}ārazm, and in the course of two expeditions in 817/1414 and 818/1415 asserted control over Fārs and installed his son Ibrāhīm Sulṭān as governor. Kirmān, Sīstān and Khuzistān also had to be regained through force. In Dhu 'l Kaʿda 823/November 1420 Shāh Rukh wrested Ādharbaydjān from the Kara Koyunlu, but for him, as for Tīmūr, it proved easier to conquer than to hold. He had to mount two more expeditions, in 832/1429 and 838/1435, and contented himself with the installation of Kara Koyunlu vassals of his own choosing.

For some time, Shāh Rukh held Tīmūr's domain and maintained formal suzerainty over the Ottomans and the sultans of Dihlī, Bengal and Mālwa in India. At first, he and Ulugh Beg pursued an aggressive policy against the eastern Čaghatayids and Djočids, welcoming in his lands rival khāns, but after a defeat on the Syr Darya in 830/1427, Ulugh Beg ceased to campaign, and the balance of power changed. The

eastern Čaghatayids re-took Kāshghar in 1435; in the 1440s Abu 'l-Khayr Khān Uzbek took the northern Syr Darya region, and repeatedly raided Transoxania.

Towards the end of Shāh Rukh's life, the death of several sons and major *amīrs* and his own illness weakened central control. Due in part to disagreement with his wife Gawharshād, he was unable to choose a successor, and after his death on 25 Dhu 'l-Ḥidjdja 850/13 March 1447, rival Tīmūrid princes ravaged Khurāsān and killed each other, damaging the prestige of Shāh Rukh's line. The event which aroused the greatest disapproval was the murder of the ruler Ulugh Beg by his son ʿAbd al-Laṭīf in Ramaḍān 853/Oct.-Nov. 1449.

The Ḳara Ḳoyunlu Djahānshāh, Shāh Rukh's governor in Ādharbaydjān, expanded his power and by summer 856/1452 held ʿIrāḳ and central and western Persia, with the Tīmūrids limited to Khurāsān, Abarḳūh, Kīrmān and Transoxania. Within the Tīmūrid dynasty, a new figure emerged, sc. Mīrān Shāh's grandson Abū Saʿīd [*q.v.*], who had served Ulugh Beg on the Syr Darya borders. With the help of Abu 'l-Khayr Khān he took Samarḳand from Ulugh Beg's line in Djumādā I 855/June 1451. In 862/1458 he profited from confusion in Khurāsān to take Harāt, and in 863/1459 made it his capital. He now held Transoxania, Khurāsān and Māzandarān, fending off attacks from the Uzbeks and from Ḥusayn Bayḳara, a descendant of ʿUmar Shaykh operating from Khʷārazm under Uzbek protection. In Shaʿbān 872/end February 1468, Abū Saʿīd undertook a campaign against Ādharbaydjān, hoping to retake the province and to halt the rise of the Aḳ Ḳoyunlu. This expedition was badly planned, and despite initial successes, Abū Saʿīd was captured by the Aḳ Ḳoyunlu and put to death on 22 Radjab 873/5 February 1469.

Khurāsān was now contested between Ḥusayn Bayḳara and the Aḳ Ḳoyunlu, promoting a Tīmūrid protégé, a descendant of Shāh Rukh called Yādgār Muḥammad. Ḥusayn took Harāt in 873/1469, lost it to the Aḳ Ḳoyunlu, and retook it permanently in Ṣafar 875/August 1470, inaugurating a period of great cultural florescence there. His realm included Balkh in the east; to the west, Bisṭām and Dāmghān; to the north Khʷārazm; and to the south, Ḳandahār and Sīstān. The northern Tīmūrid lands remained with Abū Saʿīd's sons. The eldest, Sulṭān Aḥmad, held highest place, in Samarḳand and Bukhārā. A younger brother, ʿUmar Shaykh, was centred on Farghānā. Tashkent and the border regions were contested between these two and the Eastern Čaghatayids. Badakhshān, Tirmidh, Čaghāniyān, and Ḥiṣār were held by another brother, Sulṭān Maḥmūd. The boundaries between the two parts of the Tīmūrid realm remained relatively stable until near the end of Sulṭān Ḥusayn's life, despite attempts by both sides to gain territory.

In 902/1497 Sulṭān Ḥusayn's son Badīʿ al-Zamān, governor of Balkh, rebelled, and despite an initial defeat by Sulṭān Ḥusayn, his power increased until he controlled much of southern Afghānistān and was strong enough to threaten Harāt in 903/1498. In the same year, Sulṭān Ḥusayn faced rebellions from two other sons and had to cede the region of Balkh to Badīʿ al-Zamān.

The death of Abū Saʿīd's sons in 899-900/1494-5 inaugurated a power struggle in Transoxania, in which contending princes pulled in allies from the Eastern Čaghatayids and the Uzbeks under Muḥammad Shaybānī Khān [*q.v.*]. Shaybānī Khān was related to the Tīmūrids by marriage, and spent the next several years contesting the region with them, most notably ʿUmar Shaykh's son Ẓahīr al-Dīn Bābur [*q.v.*]. In 1505-6 Shaybānī Khān crossed the Oxus. Ḥusayn Bayḳara set off against him, but died on 11 Dhu 'l Ḥidjdja 911/5 May 1506; Shaybānī took Harāt on 8 Muḥarram 913/20 May 1507, and soon thereafter much of Khurāsān.

Shaybānī's death at the hands of the Ṣafawids in Ramaḍān 916/December 1510 allowed Ẓahīr al-Dīn Bābur to regain power, but he was unable to hold Transoxania, and in 920/1514 left permanently for Kābul. The Uzbeks retook Transoxania and Balkh that year, but Badakhshān remained until *ca.* 1550 in the possession of Bābur's line.

Government and administration

Tīmūr's campaigns inflicted serious damage, but he restored many of the cities affected and he opened some new areas to agriculture; later succession struggles caused new ravages. Princes lacking cash allowed their soldiers to loot, even in their own provinces, and punished insubordinate rulers by devastating their regions. Sīstān and Kirmān suffered significantly in this way after Tīmūr's death. For Khurāsān, the Tīmūrid period was a prosperous one, athough it suffered in the disturbances after Shāh Rukh's death. Shāh Rukh, Abū Saʿīd and Sulṭān Ḥusayn, along with many of their leading *amīrs*, organised large-scale irrigation projects here. Transoxania, while actively developed under Tīmūr, later declined in relation to Khurāsān.

Tīmūr entrusted the highest government posts to the members of his personal, non-tribal following, who intermarried with his family, developing into a tight ruling élite. Their descendants continued to hold high positions up to the end of the dynasty. While the power of the tribes within the Ulus Čaghatay had been reduced under Tīmūr, it seems to have recovered thereafter, and by the end of the dynasty the Barlas, Djalāyir, Arghun and Tarkhan appear prominently. Tīmūrid administration—financial and military—was organised in two spheres, the Persian and the Turco-Mongolian, employing two sets of scribes, Persian and Čaghatay. Persian bureaucrats, relatively powerless under Tīmūr, increased their strength under later rulers, but Čaghatay *amīrs* usually held supervisory positions even within financial administration.

Most provinces of the Tīmūrid realm were governed by princes, usually sons or grandsons of the ruler. Tīmūr controlled his governors closely, and reserved to himself both major campaigns and ostentatious cultural display. The later Tīmūrid state was more decentralised. Shāh Rukh maintained effective control over the military activities of his governors, but allowed greater fiscal and personal independence. The courts of Shīrāz, Yazd and Samarḳand now became centres of major cultural activity. Thus began a period of active princely patronage of architecture, calligraphy and miniature painting, and the development of a new literature in "Čaghatay" Turkic, written sometimes in Uyghur script but more often in Arabic.

Shāh Rukh began the granting of large *soyūrghāls* [*q.v.*], landholdings with tax immunity, and he and his wife Gawharshād established major *waḳfs* for religious establishments. Under Sulṭān Ḥusayn both *waḳf* and *soyurghal* properties multiplied, leaving the dynasty without a secure tax base. Taxation was a contentious issue, expressed often as a conflict between Turco-Mongolian and Islamic practice (*yasa* and *sharīʿa*). Several rulers outlawed taxes not permitted by the *sharīʿa*, but most of these seem to have reappeared. Sulṭān Ḥusayn attempted a centralising tax reform in

the name of Islam, but failed to achieve it. In Khurāsān, this decentralisation fuelled cultural florescence, with a wealth of competing patrons among *amīrs* and bureaucrats (M. Subtelny, *Socio-economic bases of cultural patronage under the later Timurids*, in *IJMES*, xx [1988], 479-505). Sulṭān Ḥusayn's court achieved lasting fame for its brilliance, especially in poetry and the arts of the book. Two towering figures presided here. One was ʿAbd al-Raḥmān Djāmī [*q.v.*], head of the Naḳshbandiyya in Harāt and a famed Persian poet. The other was Mīr ʿAlī Shīr Nawāʾī [*q.v.*], companion and official to Sulṭān Ḥusayn, who became the supreme arbiter of poetic taste in Harāt and is probably the greatest Čaghatay poet.

The Tīmūrid period was important also in religious history. The two *ʿulamāʾ* patronised by Tīmūr and Shāh Rukh, Saʿd al-Dīn Taftazānī (d. 793/1390 [*q.v.*]) and Sayyid Sharīf Djurdjānī (d. 816/1413 [*q.v.*]), produced commentaries widely used thereafter in *madrasa* curriculums. The great shrine complexes which the Tīmūrids patronised, at Mashhad, Turkistān, Gāzurgāh and Mazār-i Sharīf, continued to dominate the landscape and to attract pilgrims for centuries to come. Royal patronage contributed to the spectacular rise of the Naḳshbandiyya, founded by Bahāʾ al-Dīn Naḳshband (d. 791/1389 [*q.v.*]). Later Khwādja ʿUbayd Allāh Aḥrār (d. 895/1490 [*q.v.* in Suppl.]) acquired enormous wealth and power through dynastic favour, along with systems of economic patronage.

The Tīmūrids fell to the Ṣafawids and Uzbeks near the height of their cultural splendour, and the calligraphers, literati, and miniaturists of Harāt, seeking new patrons, carried Tīmūrid styles and prestige to the surrounding regions, including India, where Ẓahīr al-Dīn Bābur founded the later Tīmūrid or Mughal dynasty [see MUGHALS] in 1526.

2. Literature.

During the Tīmūrid period, three languages, Persian, Turkish, and Arabic, were in use. The major language of the period was Persian, the native language of the Tajik (Persian) component of society and the language of learning acquired by all literate and/or urban Turks. Persian served as the language of administration, history, belles lettres, and poetry.

The first member of the dynasty to show great interest in literature and the arts of book production was Shāh Rukh's son Prince Bāysonghor, whose edition of Firdawsī's *Shāh-nāma* was the standard for centuries until modern critical editions. The sumptuously illustrated volumes produced for Bāysonghor's library are still treasured by museums and private collections.

This period, which began with the death of Ḥāfiẓ and ended with the death of Djāmī [*q.vv.*], saw the great flowering of the *ghazal* and the decline of the erudite, formalised court *ḳaṣīda* based on Arabic models. After the contributions of the great 6th/12th- and 7th/13th-century didactic poets of Ṣūfism, Sanā'ī, 'Aṭṭār, and Rūmī, who imbued the amatory vocabulary of Persian poetry with mystical significations, and with the influence of Sa'dī, who did so much to give the *ghazal* its classical form, the language of the *ghazal* and the language of mysticism became so intertwined that by the 9th/15th century it was nearly impossible to extricate the mystical threads from the non-mystical. This ambiguity becomes, from the Tīmūrid period on, a hallmark of the Persian *ghazal*. Also during the period certain "baroquisms" and affectations are noticeable, primarily a marked tendency to use abstractions, a penchant for forms like the chronogram (*tārīkh* [*q.v.*]) and the *mu'ammā* [*q.v.*] (an enigmatic anagram of a name), and displays of technical proficiency in composing poetry, such as using only two-letter words in one line, three-letter words in the next, four-letter words in the next, etc.

A major contribution to Persian literary history, and a work that had lasting influence, is Dawlatshāh's *Tadhkirat al-shu'arā'* (completed *ca.* 892/1487). This "memoir" of poets, containing biographical sketches and selections, did much to fix the canon of classical Persian poetry, and Djāmī's having become known as the "last classical Persian poet" is probably due more to the fact that he is mentioned toward the end of Dawlatshāh's work than to any objective assessment of literary history.

Three other works produced during the period that achieved lasting fame are Kamāl al-Dīn Ḥusayn al-Wā'iẓ Kāshifī's *Rawḍat al-shuhadā'* and *Anwār-i Suhaylī* and Ibn-i Ḥusām's *Khāwarān-nāma*. The *Rawḍat al-shuhadā'*, a martyrology of the Shī'ī imāms, is still today the primary text recited in Persia in sessions called, after the work, *rawḍa-khwānī*. The *Anwār-i Suhaylī* is a reworking of Naṣr Allāh's Persian translation of Ibn al-Muḳaffa''s Arabic setting of the Bidpai fables, and the familiar and well-loved stories are cast into a fluid Tīmūrid prose interspersed with lines of poetry. Ibn-i Ḥusām's *Khāwarān-nāma* is a poetic "epic" on the exploits of 'Alī b. Abī Ṭālib, and it reflects not only the heroic legends that had accrued to the "Lion of God" over the centuries but also the blending of Sunnī and Shī'ī strains into a synthesis that is a distinguishing feature of the religiosity of the period, and one that was ruptured forever by Ṣafawid Shī'ism.

Persian historiography was patronised as never before, and the period is rich in historical literature. The tone of the period was set by Sharaf al-Dīn Yazdī's *Sharaf-nāma*, which was taken to be the model of refined history writing. Yazdī's style may strike the modern reader as florid and verbose, but he is restrained in comparison with the highly rhetorical style of his predecessor, the Il-Khānid historian Waṣṣāf al-Ḥaḍra, or with the laborious style of Rashīd al-Dīn's *Djāmi' al-tawārīkh*, and he intersperses his prose with poetry in order to reinforce or highlight a point, a technique that can be seen in earlier works but which was used to great effect by Yazdī and his successors. The style was continued by Mīrkhwānd (*Rawḍat al-ṣafā'*); Khwāndamīr (*Ḥabīb al-siyar*); and other historians of the period, like Ḥāfiẓ-i Abrū, the author of *Madjma' al-tawārīkh*, Faṣīḥ Khwāfī, author of *Mudjmal-i Faṣīḥī*, and Kamāl al-Dīn 'Abd al-Razzāḳ Samarḳandī, author of the *Maṭla'-i sa'dayn* (a history from the Il-Khānid Abū Sa'īd to the Tīmūrid Abū Sa'īd). To this should be added Zayn al-Dīn Maḥmūd Wāṣifī's gossipy *Badāyi' al-waḳāyi'* (ed. A.N. Boldyrev, 2nd ed. Tehran 1349), an interesting source that provides much information on the *madjlis* setting in which much of late Tīmūrid literary culture was conducted.

What is now called Čaghatay Turkish, which was then called simply *türki*, was the native and "home" language of the Tīmūrids throughout the period, and it was used sporadically as a literary medium also. It was written initially in the Uyghur script, a survival from the Mongol period, and later in the Arabic script. Surviving from the early years of the dynasty is a poetic anthology produced in 835/1431 in Yazd for Djalāl al-Dīn Fīrūzshāh that contains poetry in Turkish written in the Uyghur script. The splendid *Mi'rādj-nāma* (Paris, B.N., Suppl. turc 190), also ascribed to Shāh Rukh's reign, is similarly in Turkish written in the Uyghur script. Turkish poetry was much in vogue in Harāt during Sulṭān Ḥusayn's reign, and poets like Sakkākī, Luṭfī, Shaykhīm Suhaylī, the prolific 'Alī-Shīr Nawā'ī, and Sulṭān Ḥusayn himself produced highly Persianate poetry in Čaghatay Turkish. Clearly, at the time of the "Harāt renaissance" Turkish was thought to be in need of patronage, for, as Sulṭān Ḥusayn says of 'Alī-Shīr Nawā'ī in his *Apologia*, "those whose names have been mentioned and descriptions penned have banqueted in the assembly of Persian poetry and exhibited their ability to swim in the sea of Persian, but until today no one has clothed those virgins of meaning with a Turkish garb, and these musk-scented *élégantes* have remained veiled in their nakedness in the oblivion of poetical talent, and these angelic beauties have not been able to manifest their charm because of their lack of raiment....

He has infused life into the dead body of the Turkish language with his messianic breath. He has clothed those revivified ones with embroidery and silks woven with a Turkic warp and woof." A useful anthology of Turkish poetry produced during the period is to be found in ʿAlī-Shīr Nawāʾī's own *tadhkira*, the *Madjālis al-nafāyis*.

Although others wrote Čaghatay prose (notably Sulṭān Ḥusayn and ʿAlī-Shīr Nawāʾī), the great monument of Čaghatay prose is Bābur's memoirs, the *Bābur-nāma*, fittingly produced by the last scion of the dynasty in Central Asia. While Sulṭān Ḥusayn's and ʿAlī-Shīr Nawāʾī's prose is a calque on very ornate and rhetorical Persian models, Bābur's writing records a simple, straightforward Turkish as it must have been spoken.

As it had been prior to the Tīmūrids and continued to be after them, Arabic was the language *par excellence* of science, philosophy, theology and the religious sciences. Much of the astronomical work of Ulugh Beg and his co-workers ʿAlī Ḳūshī and Ghiyāth al-Dīn Djamshīd Kāshī is in Arabic, although they also wrote in Persian. Theological works, like those of Masʿūd b. ʿUmar Taftāzānī, are generally in Arabic.

3. Art and architecture.

(a) *The arts of the book and painting.*

Patronage of the arts by the Tīmūrid ruling house, an activity whose primary objective has been explained as political legitimisation and cultural assimilation, centred mainly on the production of books. The cumulative result of this wholesale sponsorship, with its refined visual canon and idiom, was to establish a benchmark for excellence but also criteria for the judgment of artistic quality and achievement. Conceptual, formal, and technical developments in secular and religious books, encompassing calligraphy, painting, drawing, illumination and binding, had an enduring impact on subsequent production, and, more broadly, visual culture. The court patronage model established by such enlightened Tīmūrid patrons as Shāh Rukh, Bāysonghor and Ḥusayn Bayḳara, provided the model for Aḳ Ḳoyunlu, Ottoman, Ṣafawid, and Mughal patrons that endured long after the house of Tīmūr had faded away.

Despite textual references to his acquisition of artists and craftsmen from cities in western Persia, there is no evidence that Tīmūr sponsored the production of illustrated manuscripts in Samarḳand. Accounts written by the contemporaries Ibn ʿArabshāh and Sharaf al-Dīn ʿAlī Yazdī testify to the practice of figural wall-painting during his reign, but these too are uncorroborated by physical evidence.

The earliest documented visual record of Tīmūrid patronage is a corpus of illustrated books commissioned by Iskandar b. ʿUmar Shaykh, governor of Fārs between 1409 and 1413. These twelve manuscripts are dedicated to him, and most of their colophons contain calligraphers' signatures, mention places such as Shīrāz and Iṣfahān, and have dates ranging between 1410 and 1413. Other manuscripts attributed to his patronage suggest that it began as early as 1397; however, Shīrāz had been an important centre for book production before Tīmūrid political hegemony, as evidenced by manuscripts associated with Muẓaffarid patrons. Some continuity between these traditions is apparent in Iskandar b. ʿUmar Shaykh's manuscripts, particularly in their format, spatial construction, organisation and illumination. Following the ruler Aḥmad Djalāyir's death in 1410, artists who had worked for him in Baghdād may have moved to Shīrāz seeking patronage from Iskandar b. ʿUmar Shaykh, thus providing him with access to developments in painting formulated under the Djalāyirids.

Iskandar b. ʿUmar Shaykh's manuscripts are mainly anthologies by various authors, essentially didactic in tone, and, with rare exceptions small (*Anthologies*: Lisbon, Gulbenkian Foundation dated 813/1411; London, BL, dated 813-14/1410-11; Istanbul, TSK dated 816/1413). The recently developed *nastaʿlīḳ* script was used in all of them. Illustrations range from straightforward narrative illustration to charts and diagrammatic depictions, and marginal narratives unconnected to the text. Most striking is a series of illuminated full-page designs that mark structural divisions in the book, illuminated thumb-pieces, and tinted drawings, often based on Chinese motifs, that exceed any textual requirement, and display extraordinary inventiveness.

Iskandar b. ʿUmar Shaykh was taken prisoner by Shāh Rukh in 816/1413, at which time Shāh Rukh acquired the treasury's contents, no doubt including its manuscripts. The impact of Iskandar b. ʿUmar Shaykh's manuscripts was manifest throughout the 15th century, as both components and entire compositions are copied repeatedly. Presumably Shāh Rukh also employed calligraphers and artists who had worked for Iskandar b. ʿUmar Shaykh because the painting practised in Shīrāz during the subsequent governorship of Ibrāhīm Sulṭān (1414-35) largely returns to the illustrative traditions associated with the Muẓaffarids, and is markedly different from that in Harāt. The best-known manuscripts commissioned by Ibrāhīm Sulṭān are a *Shāh-nāma* of Firdawsī *ca.* 1435 (Oxford, Bodleian) and the *Ẓafar-nāma* (dispersed), the earliest illustrated panegyric of his grandfather Tīmūr.

Harāt became and remained the pre-eminent centre of patronage, but satellite artistic centres grew up at Shīrāz, Samarḳand and other places as a result of the Tīmūrid custom of appointing princes as regional governors. Support for poets, historians, calligraphers and artists—driven by the royal tradition of patronage and participation in poetry and calligraphy—established a network of competing cultural centres that encouraged the movement of artisans between courts. Calligraphic exercises written by Bāysonghor and Ḳurʾāns copied by Ibrāhīm Sulṭān survive, and both princes designed epigraphic programmes for architecture as public expressions of piety. Contributing to the complexity of patronage networks during Shāh Rukh's rule and later, was a broadening patronage base, one made possible by socio-economic change resulting from a freer distribution of the *soyūrghāls* [*q.v.*].

Important for the production of new historical, poetic, scientific and epic manuscripts was the collecting of books and loose materials comprising calligraphies, drawings, and paintings made under the Īl-Khāns, Muẓaffarids, Mamlūks and Djalāyirids which could act as models and offer a constant point of return in the development and refinement of new stylistic vocabularies and repertoires. The diversity of models available is manifest in the group of manuscripts commissioned by Shāh Rukh in the course of his reign. Among these are historical works written by Ḥāfiẓ-i Abrū. One of the earliest is the *Kulliyyat-i tārīkh*, dated 818-19/1415-16 (Istanbul, TSK); its illustrations are evidence for the transfer of artists from Iskandar b. ʿUmar Shaykh's atelier at Shīrāz to Harāt. A second

work by Ḥāfiẓ-i Abrū, the *Madjma' al-tawārīkh* dated 829/1425 (Istanbul, TSK), is characterised by its large numbers of illustrations, their horizontal rectangular format and their spare appearance, all features connected to an early 14th-century prototype, the *Djāmi' al-tawārīkh* of Rashīd al-Dīn Ṭabīb. These Tīmūrid paintings have been labelled as displaying the "historical style". Two volumes of poetry made for Shāh Rukh show an aesthetic different from illustrations in his historical manuscripts. The first, Niẓāmī Gandjawī's *Khamsa* dated 1431 in Harāt (St. Petersburg, State Hermitage), is illustrated by paintings much like those made for his son Bāysunghur. The second, 'Aṭṭār's *Sitta*, is dated 841/1438 in Harāt (Istanbul, TIEM) and combines an extensive programme of illumination with polished, coloured Chinese papers painted with gold landscapes, patterns of flowing water, pomegranates, vines, and bird and flower subjects.

The *Sitta* manuscript signals one of many instances of the renewed impact of Ming dynasty Chinese vocabularies and forms in Tīmūrid painting and illustration. There were numerous exchanges between the Tīmūrid and Ming courts until *ca.* 1425. For example, in 822/1419, Ghiyāth al-Dīn Naḳḳāsh, a painter in Bāysonghor's retinue, joined an embassy to Peking and recorded his observations during the journey.

Although Bāysonghor's patronage is attested as early as 1411, the majority of manuscripts made for him are dated between 1426 and 1433; many of them are illustrated poetic texts. Two calligraphers, Dja'far al-Tabrīzī and Muḥammad b. Ḥusām, dominate this production. The most important of these manuscripts are an *Anthology* (Florence, I Tatti) and a *Gulistān* of Sa'dī (Dublin, CB) both completed in 830/1426-7, a *Kalīla wa-Dimna* of Abu 'l-Ma'ālī Naṣr Allāh dated 833/1429 (Istanbul, TSK), and a *Shāh-nāma* of Firdawsī dated 833/1430 (Tehran, Gulistān Library). This group evinces a unity of conception, a consistently high quality of paper, ink and pigments, and harmony between image, illumination and calligraphy, and a technical execution of a level rarely equalled. Further refinements are made to the Djalāyirid pictorial tradition—in some instances direct restatements of Djalāyirid paintings—probably resulting from Bāysonghor's acquisition of manuscripts and practitioners after his capture of Tabrīz in 1420. The paintings expand to fill the page with a minimal amount of relevant text; compositions are strictly controlled and depict an abstracted and idealised realm, an effect heightened by radiant colour and minute attention to detail and surface that allows each item to be completely legible.

According to the sources, Dja'far directed production at Bāysonghor's *kitāb-khāna* [see MAKTABA], and one document, the *'arḍadāsht*, lists the projects underway there. Analysed in conjunction with the manuscripts and a vast array of drawings and designs bound into albums (Istanbul, TSK H. 2152; and Berlin, SPK Diez A. fols. 70-3), the design process of codification and distillation used at the workshop can be reconstructed. Artists followed a series of strict conventions and idioms that, in turn, were governed by the final context of the drawing or painting.

Production at Harāt continued after Bāysonghor's death. Manuscripts made for members of the Tīmūrid house include a *Shāh-nāma* for Muḥammad Djūkī *ca.* 1444 (London, RAS), and a *Khamsa* for 'Iṣmat al-Dunyā dated 849/1445-6 (Istanbul, TSK). Little is known about production between *ca.* 1447 and 1470, when numerous attacks on Tīmūrid Khurāsān and occupations of Harāt led to the migration of artists to Ḳara Ḳoyunlu and Aḳ Ḳoyunlu courts in western Persia.

Harāt once again became a high-level centre of book production under the last Tīmūrid ruler, Sulṭān Ḥusayn Bayḳara (*r.* 875-912/1470-1506 [*q.v.*]), and the statesman, poet, and man of letters Mīr 'Alī Shīr Nawā'ī [*q.v.*]. A *Ẓafar-nāma* dated 872/1467-8 (Baltimore, Johns Hopkins University) is the earliest manuscript associated with Sulṭān Ḥusayn Bayḳara; its paintings are invested with political overtones.

In Harātī painting of the late 15th century, compositions from earlier in the century are re-used, and much like the rhetorical complexity of contemporary poetry, the relationships between new and old paintings become increasingly intricate. The formal, static qualities of painting under Bāysonghor are replaced by freer compositions in which figural interaction and the activities of everyday life are emphasised. The temporal aspects of the narrative are also reintroduced and many of the texts chosen for illustration are mystical or Ṣūfī in nature. These developments in painting are clearly seen in a *Bustān* of Sa'dī dated 893/1488 at Harāt (Cairo, General Egyptian Book Organisation) made for Sulṭān Ḥusayn Bayḳara and a *Khamsa* of Niẓāmī commissioned by Amīr 'Alī Fārsī Barlās, dated 900/1494-95 (London, BM). The formal qualities of painting take on the role of content. Some techniques are further perfected, notably filigree (*munabbat-kārī*), used for the doublures of bindings (e.g. *Mathnawī-i ma'nawī* of Djalāl al-Dīn Rūmī, dated 887/1483 [Istanbul, TIEM]), and *découpage* used in manuscripts (*Dīwān* of Sulṭān Ḥusayn Bayḳara *ca.* 1490 [Istanbul, TIEM]) and single-page calligraphies.

Developments in late 15th-century painting previously attributed to Bihzād [*q.v.*], on the basis of comments made by his contemporaries and 16th-century writers, now seem to have been the inspiration of several artists. In particular, the late Tīmūrid period is important for historiography and at this time biographical notices on artists and calligraphers—Shāh Muẓaffar, Ḳāsim 'Alī, Mīrak Naḳḳāsh, and Sulṭān 'Alī Mashhadī—begin to appear in contemporary chronicles, marking the increased value attached to painting and painters, and the beginnings of art history writing as a genre.

(b) *Architecture.*

Tīmūrid architecture has been investigated on many levels and is well documented (early accounts are valuable for the photographic record, but for most complete documentation on individual monuments, see Pugachenkova 1981, O'Kane 1987, Golombek and Wilber 1988). Some 300 monuments are noted in publications and hundreds of others are mentioned in contemporary texts. Architecture during the period of Tīmūrid rule may be divided into three phases: (1) Imperial Tīmūrid (1390-1405); (2) Metropolitan Tīmūrid (1410-1445); and (3) Provincial styles (primarily, second half of 15th century).

(1) *Imperial Tīmūrid.*

This age was dominated by the *persona* of the dynasty's founder, Tīmūr. Aware of architecture's powers, Tīmūr built impressive monuments in both Samarḳand [*q.v.*, for descriptions of monuments], his chosen capital, and Shahr-i Sabz [see KISH], home of the Barlās tribe. These projects were characterised by mammoth scale, lavish glazed tile exteriors and painted interiors, tall, often ribbed, elliptical "double" domes, and experimental vaulting. The grandiosity of this style may be attributed to Tīmūr's self-image as Čingizid heir. Innovation resulted from the mingling of craftsmen from the many regions conquered by him.

At Shahr-i Sabz Tīmūr constructed a mausoleum near his father's tomb for his fallen heir-designate Djahāngīr (777-806/1375-1404) and the Aḳ Sarāy palace (781-98/1379-96) (Masson and Pugachenkova 1978), built with craftsmen from Tabrīz and Gurgandj [*q.vv.*]. The Aḳ Sarāy portal, the only element remaining (50.93 m wide with an arch spanning 22 m), could be seen from a distance of 7 farsangs. According to Clavijo (tr. Le Strange, *Embassy to Tamerlane 1403-1406*, London 1928), the vast courtyard lying behind this portal was surrounded by many rooms, including harem apartments, a dining hall, and other reception areas, as well as a vast garden. Of the mausoleum of Djahāngīr (Dār al-Siyāda, "Ḥaḍrat Imām") only the imposing left pylon of the entrance block and a magnificent stone-lined crypt remain. Russian scholars reconstruct the mausoleum as a rectangle (50 m × 70 m), with a square courtyard (or covered hall) in the centre and a tomb-chamber over the crypt at the rear, similar to the shrine of Khwādja Aḥmad Yasawī [*q.v.*]. Built by Tīmūr at Turkestan in 799-801/1397-99, the Yasawī shrine (65.5 m × 46.5 m) is as impressive as the buildings of Shahr-i Sabz. It consists of a monumental portal, followed by a large square domed hall, leading into the mausoleum of the *shaykh*. This axis is flanked by a series of rooms of different shapes, some with designated functions (*masdjid*, kitchen, dining hall). Because of its excellent state of preservation and the rich documentation, it provided L.Yu. Man'kovskaya (1985) with important insights into the craft of the architect, such as the dimensions of the *gaz* (see DHIRĀʿ; Sharaf al-Dīn ʿAlī Yazdī, *Ẓafar-nāma*, ed. Muḥammad ʿAbbāsī, Tehran 1336/1957-8, ii, 16) and the geometrical analysis of plan, elevation, and decoration (see also Bulatov 1978). Calling it a "museum" of vaulting technology, G.A. Pugachenkova (1981) saw these experiments as critical to the invention of the vault on intersecting arches in the next phase by Ḳiwām al-Dīn Shīrāzī. Architects associated with Shīrāz, either natives or their descendants, were particularly prominent in the Tīmūrid court. Two architects with Shīrāzī *nisbas* signed the tilework at Turkestan. Craftsmen from Tabrīz and Iṣfahān cast a huge bronze cauldron and other artifacts for the shrine (A.A. Ivanov, *O bronzov'ikh izdeliyakh kontsa XIV v. iz mavzoleya Khodža Ahmeda Yasevi*, in *Srednyaya aziya i ee sosedi v drevnosti i srednevekov'e*, ed. B.A. Litvinskiy, Moscow 1981, 68-84).

But it was in Samarḳand that Tīmūr chose to make his mark (for descriptions of specific monuments, see SAMARḲAND). Prior to his return from the Indian campaign, Tīmūr's building activities here were limited to the citadel and two suburban gardens, described by texts as exceedingly beautiful, of the *čahār-bāgh* type, divided into four sections by axial canals, with a pavilion at the intersection. They were built for his wives but used for the reception of ambassadors and other occasions (L. Golombek, *The gardens of Timur: new perspectives*, in *Muqarnas*, xii [1995], 137-47). A series of cube-like mausoleums, notable for exquisite tilework, were erected along the lane leading up the slope of the old city to the shrine of Ḳutham b. ʿAbbās [*q.v.*] (the "Shāh-i Zinda") by female members of his family and prominent *amīrs* (Nemtseva 1977). Tīmūr's *masdjid al-djāmiʿ* ("Bībī Khānum"), founded on 14 Ramaḍān 801/21 May 1399 (Yazdī, ii, 144-7) at the north end of the city, borrows many features from imperial architecture: colossal scale (109 m × 167 m), impressive towering façade, flanked by towers, and "green" tiled domes, signifying imperial power. An earthquake in 1897 destroyed much of what had already fallen in ruins, but the four axial

units around the courtyard remained, and the mosque has been fully restored. Minarets spring from the four corners and pairs of minarets flank both entrance portal and *ḳibla-īwān*. A large elliptical dome set on a cylindrical drum rises over the cruciform *miḥrāb* hall. The bulk of this *miḥrāb* hall, which is roofed by a second, shallower dome on squinches, is so enormous that it dwarfs the adjoining columned halls (once supported by some 480 stone columns). Smaller domed halls behind the side *īwān*s provide visual accents to the lateral axis. In addition to the other usual decorative techniques, unglazed terracotta was used on the *ḳibla-īwān* for the foundation inscription (801/1399), repeating the genealogy above the stone entrance portal (806/1403-4), which links Tīmūr to Čingiz Khān. When Tīmūr reviewed the progress of the project in 807/1404, he considered the scale too modest, had it torn down and rebuilt, and executed the supervisors.

In 805/1403 the heir-presumptive, Muḥammad Sulṭān, had died and was brought to Samarḳand for burial in his *madrasa-khānaḳāh* complex. This was one of the first Tīmūrid ensembles planned around a mutual courtyard. In 807/1404 Tīmūr commissioned a mausoleum to adjoin this courtyard, today known as the Gūr-i Mīr, which eventually became his own tomb (later burials include Shāh Rukh and Ulugh Beg [*q.vv.*]) (*Les mosquées de Samarcand*, 1905). Although not of mammoth scale, its melon-shaped turquoise ribbed dome evokes grandeur and elegance.

Decoration. Tīmūr's major buildings were lavishly reveted in glazed tile: carved and glazed terracotta, *haft-rangī* (a technique similar to *cuerda seca* in which the design is incised and/or drawn with a greasy substance to separate colours), mosaic tile (tiles of different colours are cut into shapes to form patterns), and *hazār-bāf* (lit. "thousand-weave", also known as *bannā'ī*, "mason's" technique, simulating the pattern of masonry, consisting of glazed bricks or ends of bricks, set into a matrix of unglazed bricks to form geometric and epigraphic patterns to cover large surfaces). Plastered interiors were often painted with gold and lapis designs, and vaults were filled with cascades of *muḳarnas* [*q.v.*], dados of hexagonal glazed tiles, turquoise or green, lined walls.

(2) *Metropolitan Tīmūrid.*

During the reign of Shāh Rukh, major building projects were undertaken by his wife Gawhar Shād and several of his powerful viziers and *amīrs*, such as Pīr Aḥmad b. Isḥāḳ al-Khʷāfī and Djalāl al-Dīn Fīrūz Shāh (O'Kane 1987; Allen 1981). Near the citadel within the old walled city, Shāh Rukh built a *madrasa-khānaḳāh* complex (non-extant) and rebuilt the chief bazaars in fired brick. Gawhar Shād undertook two major projects, both designed by the brilliant architect Ḳiwām al-Dīn b. Zayn al-Dīn Shīrāzī. These were the *masdjid al-djāmi'* of Mashhad [*q.v.*] (819-21/1416-18; Bāysonghor b. Shāh Rukh [*q.v.*] signed the inscription on the *ḳibla-īwān*) and the *masdjid al-djāmi'* and *madrasa* ensemble (later designated as the "Muṣallā") west of the old city of Harāt [*q.v.*] (820-41/1417-38). While the mosque at Mashhad has a classic four-*īwān* plan, the *madrasa*, only fragments of which remained after the destruction of the "Muṣallā" in 1885, must have shown the same innovative features as three other *madrasas* built at the same time but still preserved: at Samarḳand and Bukhārā (simultaneously by Ulugh Beg, 820-3/1417-21) and at Khargird (the Ghiyāthiyya, by the vizier Pīr Aḥmad al-Khʷāfī, completed 848/1444-5). The latter was also built by Ḳiwām al-Dīn but completed by Ghiyāth al-Dīn Shīrāzī after the master's death in 842/1438. The shrine of Khʷādja 'Abd Allāh al-Anṣārī [*q.v.*] at Gāzur Gāh, built by Shāh Rukh in 829-32/1425-9, resembles a *madrasa* but is actually a monumentalised funerary enclosure (*ḥaẓīra*), the religious proscription against mausoleum, yet allowing for an awe-inspiring structure (Golombek 1969). All of these buildings stress symmetry and rationality, with impressive façades, corner towers or minarets (at Samarḳand all four corners have minarets), and a well-defined entrance block, accessed through a polygonal vestibule, leading laterally to two public halls for lectures or prayer. The Khargird *madrasa* has two domed halls, a *masdjid* with its dome resting on recumbent arches, and a lecture hall with an extraordinary lantern dome on intersecting arches. This innovative design repeats and improves on Ḳiwām al-Dīn's mausoleum for Bāysonghor in the Harāt mausoleum. The transition from square walls to circular dome is effected not by squinches bridging the corners, as had been the practice for centuries, but by opening the walls to form arches, intersecting in the corners. Plaster ribs rise from the arched recesses to create a sense of flotation in space.

Major monuments continue the same decorative techniques except for carved and glazed terracotta, which disappears, and *haft-rangī* tilework becomes less prominent. Inset technique is further developed (composite mosaic tiles are set into larger designs). Plaster *muḳarnas* ornament in vaulting gives way to the arch-net (a network of intersecting plaster ribs, forming stellate patterns).

(3) *Provincial styles.*

During the second half of the 9th/15th century, quality and quantity of major projects declined in Khurāsān. Most buildings were poorly constructed and sparsely decorated (except for royal sponsorship). Economical *haft-rangī* tilework resumed popularity. Complex vault construction gave way to simple corbelling, concealed by fancy plasterwork. Sulṭān Ḥusayn Bayḳara [see ḤUSAYN (b. Manṣūr)] and Mīr 'Alī Shīr Nawā'ī [*q.v.*] were the major patrons, although many officials and aristocracy built minor constructions, such as funerary enclosures, *ḥaẓīra*. Most notable were the royal *madrasa* and dynastic mausoleum of Sulṭān Ḥusayn in Harāt and the Ikhlāṣiyya complex of Nawā'ī, which included a *masdjid al-djāmi'*, a *madrasa* and *khānaḳāh*, a *dār al-ḥuffāẓ* (place for Ḳur'ān reading), a hospital, and a bath (M. Subtelny, *A Timurid educational and charitable foundation: the Ikhlāṣiyya complex of 'Alī Shīr Navā'ī in 15th-century Herāt and its endowment*, in *JAOS*, cxi/1 [1991], 38-61). Only four minarets of Sulṭān Ḥusayn's *madrasa* remain, and nothing of Nawā'ī's complex. Nawā'ī's extensive patronage is eulogized by Khʷāndamīr [*q.v.*], but only his restoration of the Kartid mosque of Harāt and several caravanserais testify to his building activity. Outside the walled city on the east new suburbs were encouraged through the digging of the Djūy-yi Naw by Abū Sa'īd [*q.v.*], which enabled the creation of many garden estates, including Sulṭān Ḥusayn's famous Bāgh-i Djahān-Ārā.

The provinces benefited from the attention of local Tīmūrid governors or their Turkmen replacements. Yazd under Mīr Čaḳmāḳ Shāmī developed new suburbs with superb monuments, and Ṣūfī orders (e.g. the Ni'mat-Allāhiyya [*q.v.*]) acquired magnificent *khānaḳāhs* and mausoleums (in Yazd, Taft, Bundarābād, Maybūd and Abrandābād; see Afshār 1969). The characteristic Tīmūrid mosque in this region incorporated adaptations of the long transverse halls found in the old *masdjid al-djāmi'* of Yazd (late 8th/14th century
Shrine of Shaykh Aḥmad Yasawī, Turkestan, longitudinal section. After drawing by L.Yu Man'kovskaya.

Masdjid al-Djāmiʿ of Tīmūr, Samarḳand, ground plan.

0 5 20 M
additions), either flanking the *kibla* dome or as a "winter" mosque unit. Little remains of Turkmen construction at Tabrīz, except for the "Blue Mosque" (Muẓaffariyya, 1465), a multi-purpose institution, with a central dome, surrounded by arcades and followed by a small domed *masdjid*, possibly with crypt below. Its type relates to such complex mausoleums as the ʿIshrat-khāna of Samarḳand (*ca.* 869/1464; M.E. Masson, *et alii*, *Mavzoleĭ Ishratkhana*, Tashkent 1958), built by Ḥabība Sulṭān Begum, the wife of Abū Saʿīd. At Ḳumm and throughout Māzandarān, new mausoleums were erected at Shīʿī shrines, mostly tomb towers of modest scale (B. O'Kane, *Timurid stucco decoration*, in *AI*, xx [1984], 61-84). Architecture in Shīrwān (Palace of the Shīrwānshāhs at Bākū; Bretanitskiy 1966) continues the fine stone masonry tradition of this region, untouched by the Tīmūrid "Metropolitan" style.

(c) *Ceramics.*

Ceramic production in this period was strongly influenced by imported Chinese blue-and-white porcelains, travelling primarily by sea but also with embassies over land. The idea of painting in cobalt under a clear glaze, and initially the cobalt itself, was imported by the Chinese from the Middle East to suit the taste of the many foreigners (Muslims) employed by the Mongols. These wares were highly successful in the Muslim West, where they began to appear in Syria and Egypt in the late 14th century (P.J. Riis and V. Poulsen, *Hama: les verreries et poteries medievales*, iv/2 of *Hama, Fouilles et recherches de la Fondation Carlsberg 1931-38*, Copenhagen 1957). Large quantities of Chinese porcelain were amassed in the collections of the Topkapi Sarayi Museum, Istanbul (R. Krahl (ed.), *Chinese ceramics in the Topkapi Sarayi Museum*, London 1986) and in the Porcelain House of Shāh ʿAbbās at the shrine of Ardabīl (J.A. Pope, *Chinese porcelains from the Ardebil shrine*, Baltimore 1956). They were widely imitated in the Islamic world thereafter, and much confusion has beset attempts to differentiate production centres on the basis of decoration alone. The following discussion incorporates findings based on petrographic analyses (study of the mineralogy and technology of the body fabric in thin-section; Mason and Golombek 1990; for results of recent studies, see Golombek, Mason, and Bailey 1996).

The Tīmūrids' passion for Chinese blue-and-white is attested in miniature paintings, in Clavijo's report, and accounts of gifts requested by Muslim visitors to the Ming court (E. Bretschneider, *Chinese intercourse with the countries of Central and Western Asia in the fifteenth century*, in *The China Review*, v/1-4 [1876-7], 13-40, 109-32, 165-82, 227-41). However, imports could not satisfy local demand. In 1402 Tīmūr brought home potters from Damascus (Clavijo, tr. Le Strange, 287-8), where they were already making fine imitations of Chinese porcelain. They introduced Samarḳand potters to stonepaste (frit-ware) technology and the repertory of Yüan motifs. Although no kilns of this period have been found at Samarḳand, petrographic analysis of dozens of sherds unearthed in the Tīmūrid citadel indicate a single source of origin in the region. The use of sand for quartz, which constitutes the bulk of the stonepaste fabric, also points to Syrian practice, as does the frequent occurrence of a spiky blossom peculiar to Syrian blue-and-white wares.

Ulugh Beg's edict of 814/1411 (J.E. Woods, *Timur's genealogy*, in *Intellectual studies on Islam: essays written in honor of Martin B. Dickson*, ed. M. Mazzaoui and V.B. Moreen, Salt Lake City 1990, 115) permitting foreign craftsmen and others to return home dispersed this technology and repertory to other pottery-producing centres in Persia, while still others returned to Damascus and Anatolia. Prior to the Mongol conquest, Nīshāpūr had a long history as a centre for pottery production (C. Wilkinson, *Nishapur: pottery of the early Islamic period*, New York 1973). In response to new demands from the court at Harāt for luxury pottery, Nīshāpūr production was revived. In the second half of the century, this city produced wares resembling Cizhou pottery, painted in black under a transparent turquoise glaze. Four of these bear dates (1468-95; see Lane 1957, pl. 20A; Reitlinger 1958, fig. 12) and are characterised by scrollwork scratched through the black pigment. Nīshāpūr was the chief producer of this style, as revealed through comparison with sherds found at a Nīshāpūr kiln (unpublished), but others were made at Mashhad. Imitations have been found in Khurāsān, Sīstān, Central Asia and Anatolia ("Miletus" ware; J.W. Hayes, *Excavations at Sarachane in Istanbul*, ii, *The pottery*, Princeton 1992). The dominant line of production at Nīshāpūr consisted of imitations of Chinese blue-and-white, particularly of the Xuande period. Large dishes, bordered with Chinese wave-and-crest motifs, have floral designs with groups of peonies, chrysanthemums, or lichees, or animals in vegetation. The cobalt is often "heaped-and-piled" (applied in light and heavy tones, sometimes in relief) affecting the Chinese manner. A second blue-and-white group features interlaced stellate patterns with scale-fill or hatching. Both types bear the hallmark of the Nīshāpūr pottery on the exterior, a scroll made up of double volutes ("double-scroll" motif), sometimes with foliate elements. The city continued to make fine pottery into the Ṣafawid period, as attested by a dish dating to 929/1522-3 and naming Nīshāpūr as its place of manufacture (Golombek and Mason 1995).

The Mashhad workshop has been identified through sampling of two dated pieces: a small green-painted pot (848/1444-5, Edinburgh, Royal Scottish Museum, no. 1888.570; Grube 1974) and a blue-painted floral

dish similar to the Nīshāpūr "peony" group (878/1473-4, St. Petersburg, Hermitage Museum, no. VG2650; A.A. Ivanov 1980). Mashhad dishes often use a wave-and-crest border for the rim which resembles a caterpillar. Possibly also from Mashhad come the series of deep bowls and handled mugs bearing sinuous dragons (Grube 1988-9). The founding of a workshop in Mashhad was probably in response to the increased pilgrimage trade resulting from Shāh Rukh's build-up of the city.

A minor workshop in an unidentified region supplied blue-and-white pottery of inferior quality to ports on the Persian Gulf and Indian Ocean, as pots of the same petrofabric were found at Sīrāf [*q.v.*] and in East Africa.

Toward the end of the 9th/15th century, the Turkmen dynasties founded a pottery in the Tabrīz region, importing potters from Khurāsān for this purpose. The geology of the region did not easily support stonepaste production, and a glassy substitute gave poor results (Mason and Golombek 1990). Nevertheless, potters initially made finely-painted wares in the Khurāsān style and, later, mass-produced wares. The first phase is characterised by very precise drawing and resembles early Iznik blue-and-white pottery (for example, dish in the Ashmolean Museum, Oxford, illus. in Reitlinger 1938, fig. 33). Some of these potters were probably among those named in Ottoman documents as having worked on a building in Istanbul (G. Necipoğlu, *From international Timurid to Ottoman: a change of taste in sixteenth-century ceramic tiles*, in *Muqarnas*, vii [1990], 136-70). The second phase, which continued into the 10th/16th century, comprises a wide-footed (with comma-like motifs on the exterior) and a narrow-footed group (with water-weed design on the exterior). Designs copy earlier Tīmūrid models or contemporary Chinese imports. A large quantity of these survive in the Dāghistān village of Kubāča and show much duplication (Lane 1939; Golombek 1993). How they arrived there is not known, but the assemblage includes Nīshāpūr and Mashhad wares, as well, and large quantities of 16th-17th century pottery from an unknown kiln source. The Tabrīz workshop also produced celadon-like wares. A small production in lustre-wares, particularly tiles, continued, probably at Kāshān (O. Watson, *Persian lustre ware*, London 1985, 157-63).

In this period not only did Chinese designs come to dominate but pottery shapes also followed Chinese models. Unlike European potteries, which fell under the same spell a century later, the Tīmūrid kilns were unable to reproduce true porcelain. Chinese porcelain had an impact on Persian pottery far outlasting the Tīmūrid period, for subsequent generations of potters scarcely deviated from Chinese models.

(Lisa Golombek)

(d) *Metalwork.*

The earliest examples are part of a group of seven objects—a large cauldron and six tall oil lamps—from the shrine complex of Shaykh Aḥmad Yasawī (see (b) above). All but one lamp carries an Arabic inscription indicating that it was made by order of Tīmūr, while the cauldron's inscriptions specifically state that it was made for the shrine in 801/1399. These first Tīmūrid wares represent the coalescing of a number of distinct artistic trends and metalwork techniques from within and outside of the Persian world, a fusion that came about as a direct result of the Tīmūrid invasions of central and western Asia in the late 14th and early 15th centuries.

Apart from the objects from the shrine, which date or are datable to this same period, there are more than twenty examples that bear inscribed dates from the 15th or early 16th century. These represent two basic types of metalwork: brass inlaid with precious metal; or brass or copper that is frequently tinned, producing a silvery surface. Along with their dated inscriptions, these wares are further distinguished from earlier Persian metalwork in terms of their shape, technique, decoration and/or epigraphy. Numerous other metal objects can likewise be ascribed to the Tīmūrid period based on analogies with the dated examples.

The most common shape is a type of small pot-bellied tankard with a dragon-shaped handle. Other vessel types include a shallow dish whose prototype may be found in 14th-15th century Chinese pottery and a large hemispherical bowl. There is a bucket with wide shoulder that gradually tapers towards the base and a very similarly-shaped vessel with a spout. The characteristic candlestick has a chamfered shoulder; the base gradually tapers outward toward the wide, splayed bottom, and the socket is often in the form of a pair of entwined open-mouthed dragons. The tankard occurs among inlaid and non-inlaid wares, while other shapes are restricted to non-inlaid wares. Such metalwork is depicted in Tīmūrid painting, although it is unclear whether or not they represent objects made of precious metal that have not survived.

Among the inlaid wares, the technique is much finer than in earlier periods and is restricted to small-scale decoration, while for the first time tinned brass and copper, with bold, large-scale designs, are pro-

duced as a luxury ware. The decoration virtually excludes figural representation and instead relies on floral and vegetal motifs, as well as geometric and abstract ornament. Inscriptions in *naskh*, *thulth*, and occasionally *nasta'lik* often have a prominent role in the decoration. Inscriptions quote from Persian poetry, including the work of Ḥāfiẓ, Ḳāsim-i Anwar, Ṣāliḥī and Djāmī; the three latter poets were all active in Khurāsān in the 15th century.

Most objects have been ascribed to Khurāsān, and, for the inlaid wares, its capital Harāt. Evidence for such attributions is provided, in part, by signed examples where the artist's *nisba* is formed after a place-name in eastern Persia. One inlaid tankard, in the British Museum, is inscribed with the name and titles of Sulṭān Ḥusayn Bayḳara. Some brass candlesticks carry a particular verse by the contemporary poet Ṣāliḥī, whose work seems not to have been well-known outside eastern Persia, suggesting that such wares are products of Khurāsān. The decorative repertoire and style of the inlaid and non-inlaid wares is in keeping with that of other Tīmūrid arts, particularly manuscript illumination.

4. Numismatics.

The Tīmūrids based their currency on a monometallic system of silver coinage for the entire period of their rule. A gold coin exists, however, struck by the Ḳara Ḳoyunlu in Baghdād dated 849 in the name of Shāh Rukh as evidence of Tīmūrid overlordship of 'Irāḳ al-'arabī. Quarter-ashrafī gold coins were also struck in Badakhshān by Sulaymān Mīrzā and Shāh Rukh during the reigns of their Mughal cousins Humāyūn and Akbar in India. An occasional copper coinage is also known in the names of Tīmūr and his son Shāh Rukh, but little of this has been published. It may be presumed that foreign gold coinage (mostly Venetian ducats and Mamluk ashrafīs which were treated as a commodity) was readily available in dealings between important traders and merchants. Equally, it is likely that the authorities of important towns issued a plentiful anonymous copper coinage to facilitate the daily purchases of their inhabitants.

It is obvious from examination of the coins themselves that the origins of the Tīmūrid tanka [*q.v.*] and its subdivision the dirham lie in the coinage issued by the Čaghatayid Khāns of Transoxiana, Tīmūr's immediate predecessors and later his theoretical overlords in Samarḳand. This was never part of the Il-Khānid coinage system established by Maḥmūd Ghazan in 696/1296-7, where the currency was based on a silver dīnār divided into six dirhams, and 10,000 dīnārs were equal to one tuman (the principal unit of account). Because the Tīmūrids had no central government bureaucracy to organise a unified coinage for their territories, they tended to continue the coinage standards of the states they had conquered, resulting in a multiplicity of silver coins of varying weights. This decentralised system was the rule both before and after the time of Shāh Rukh, except for a period between 827 and 850/1424-46 when a generally uniform tanka weighing approximately 5.2 grams circulated throughout his lands. This tanka, which was issued in huge quantities, received the popular name of Shah Rukhī, and became a unit of account in its own right in Eastern Persia, Afghānistān and early Mughal India.

The obverse on nearly all Tīmūrid coins contains the Sunnī *kalima*, with the names, and frequently the epithets of the four Orthodox Caliphs in the margin, although three conciliatory-minded rulers, Abū Sa'īd, Ḥusayn Bayḳara and Abu 'l-Ḳāsim Bābur used the Shī'ī *kalima* or the names of the Twelve Imāms when their mint towns were located in strongly Shī'ī areas. Occasionally the name of the mint was inscribed in a central cartouche in the centre of the obverse die. The reverse inscriptions carried the names and titles of the rulers, followed by a benedictory formula and frequently the names of the mints and dates in which they were issued. The usual title was *al-Sulṭān al-A'ẓam*, but Tīmūr himself never took a title higher than *Amīr* or *Amīr al-Mu'aẓẓam* on his coinage.

Tīmūr struck most of his coinage in the name of his nominal Čaghatayid overlords: Soyūrghatmīsh, between 771 and 790/1370-88, Maḥmūd from 790-806/1388-1404, and finally in his name alone in the last year of his life, 806-7/1404-5. None of the other Tīmūrids struck coinage in the name of a Čaghatayid overlord, but Ulugh Beg, Abū Sa'īd and Aḥmad continued Tīmūr's custom of naming himself *Kūrakān* or *Küreken* (son-in-law). The inclusion of this word provided evidence that the ruler had married a princess of the royal Čaghatayid house, thus continuing the line of Čingiz Khān through their children. In addition, Tīmūr, Ulugh Beg and Abū Sa'īd placed a *tamgha*, formed of three circles arranged in a triangle, as the dynastic mark on their coinage. Most of the other Tīmūrids described themselves as Bahādur Khān, a title made popular by the Il-Khān Abū Sa'īd Bahādur Khān.

One feature of the later Tīmūrid coinage, also found on that of their contemporaries the Ḳara Ḳoyunlu and the Aḳ Ḳoyunlu, was the widespread practise of countermarking coins once, twice or even several times. This custom, which spread rapidly throughout the Iranian lands in the latter part of the 9th/15th century, was probably a way of generating income by charging a fee for validating coins in circulation. The table (see below) summarises the principal members of the family who struck coins both in their own names and by countermarking those of others. While the coins of Tīmūr, Shāh Rukh and Ḥusayn Bayḳara are abundant, and others such as those of Abū Sa'īd are scarce, most of them are rare to extremely rare, which suggests that when the numismatic resources of museums in the former Soviet Union are examined the coinages of other minor rulers may either come to light or become much better known.

The chief Tīmūrid mints were located in the capital cities Samarḳand and Harāt, but, as might be expected in such a decentralised régime, mints operated in nearly every other town of note. It is unfortunate that the superb artistic heritage left by the Tīmūrids did not extend to their coinage, whose dies varied widely in quality. Like those of the Čaghatayids, some were surprisingly crude, while others attempted to uphold the higher artistic standards of the western Persian mints. Their actual striking was, more often

than not, very careless. The coins were usually dated in ciphers which, to the exasperation of numismatists and collectors, are all too frequently missing from the flan. These numismatic shortcomings may be a contributory factor to the dearth of published material on the dynasty, a regrettable lack because a thorough examination of the Tīmūrid coinage would throw a much clearer light on the history of the rulers who issued it.

Darley-Doran)

TIMURTĀS̲H̲ b. IL-G̲H̲ĀZĪ, second Artuḳid ruler of Mārdīn, was born probably *ca.* 487/1094 (Ibn al-At̲h̲īr, 418). On Il-G̲h̲āzī's death in 515/1122, Timurtās̲h̲ took Mārdīn without opposition (Ibn al-Azraḳ, 47; *Anon. Syr. Chron.*, 89; Ibn al-Ḳalānisī, 208; *Kāmil*, x, 426; Ibn al-ʿAdīm, *Zubda*, 209; Michael the Syrian, 218), whilst his brother Sulaymān ruled at Mayyāfāriḳīn. In the service of his energetic cousin, Balak, Timurtās̲h̲ was present at Balak's siege of Manbid̲j̲ in 518/1124. That same year, Timurtās̲h̲ took possession of Aleppo (Ibn al-ʿAdīm, *Zubda*, 220; Ibn al-Azraḳ, 50).

After a short, disastrous rule at Aleppo, Timurtās̲h̲ withdrew to Mārdīn, thus ending the intermittent interest of the Artuḳids in Aleppo, which had begun seven years earlier. Thereafter, Timurtās̲h̲ furthered his own modest territorial ambitions in the D̲j̲azīra, rejecting the life of virtually ceaseless campaigning adopted by his father and grandfather. Timurtās̲h̲'s abandonment of Aleppo is roundly condemned by Ibn al-ʿAdīm, the chronicler of Aleppo (*Zubda*, 225; *Bug̲h̲ya*, 204-7). On Sulaymān's death in 518/1124, Timurtās̲h̲ took Mayyāfāriḳīn, which he was to rule jointly for thirty years (Ibn al-Azraḳ, 48).

It was Timurtās̲h̲'s political misfortune to encounter the tough expansionist policies of Zangī in the D̲j̲azīra. There was also local rivalry between Timurtās̲h̲ and his more bellicose cousin, Dāwūd, the ruler of Ḥiṣn Kayfā since *ca.* 502/1108-9. After Zangī had defeated the combined Artuḳid forces in 524/1130 (Ibn al-At̲h̲īr, *Atābegs*, 38-9; Michael the Syrian, 240; *Kāmil*, x, 467), Timurtās̲h̲ became "Zangī's vassal" (al-ʿAẓīmī, 408). From 530/1135-6 onwards, Timurtās̲h̲ played a pragmatic game of shifting alliances with Zangī and Dāwūd, outliving both of them. After the deaths of Dāwūd in 539/1144-5 and Zangī in 541/1146, Timurtās̲h̲ enjoyed a brief period of genuine, if modest, power in the D̲j̲azīra.

The pro-Zangid Ibn al-At̲h̲īr castigates Timurtās̲h̲ for a life given over to pleasure (*Atābegs*, 79). However, Ibn al-Azraḳ, the local chronicler of Mayyāfāriḳīn, who worked for Timurtās̲h̲, views his achievements more favourably and provides some glimpses, not found in other sources, of the social and economic life of the time and of Timurtās̲h̲'s increasing commitment to the area. An Artuḳid family tomb was constructed at Mārdīn, and the Karamān bridge, begun in 541/1146-7, was "one of the marvels built in this age" (Ibn al-Azraḳ, 110, 115). Towards the end of his reign, a copper mine was discovered north of Mayyāfāriḳīn (*Kāmil*, x, 215) and Timurtās̲h̲ minted copper coins for local trade (Ibn al-Azraḳ, 120; Spengler-Sayles, 71-8). Timurtās̲h̲'s exact religious allegiance is impossible to determine, although his warm reception of an Ismāʿīlī *s̲h̲ayk̲h̲* is described in

detail by Ibn al-Azraḳ (112). Michael the Syrian states that Timurtās̲h̲ did not treat his Christian subjects well (311). Caliphal recognition of Timurtās̲h̲'s rule arrived in 547/1152-3, only a year before his death (Ibn al-Azraḳ, 134), perhaps an indication that only then did he enjoy genuine local power in the D̲j̲azīra. He died in 548/1154 (*ibid.*, 141; Ibn al-Ḳalānisī, 329; al-Bundārī, 244; Sibṭ, 218-9; *Atābegs*, 106).

Timurtās̲h̲ may have lacked the panache and frenetic energy of his father, but his more limited horizons and adaptable style of government over thirty years at Mārdīn and Mayyāfāriḳīn laid the foundations for Artuḳid Turcoman rule in the D̲j̲azīra until the early 9th/15th century. Broadly speaking, his successors retained the local emphasis of his polity.

(CAROLE HILLENBRAND)

TĪMŪRTĀS̲H̲ OG̲H̲ULLARÎ, a family which flourished in the service of the early Ottoman sultans in the 8th/14th and early 9th/15th centuries, the most celebrated of its members being the general and *wezīr* Tīmūrtās̲h̲ b. Ḳara ʿAlī Beg, d. 806/1404. In the early Ottoman historical sources, it is called the Āl-i Tīmūrtās̲h̲.

Ḳara ʿAlī Beg's father Ayḳut Alp (d. 725/1325) had been in the service of the somewhat shadowy founding figures of the Ottoman dynasty, Ertog̲h̲rul and ʿOt̲h̲mān I [*q.v.*]. In the first year of Ork̲h̲an's reign (726/1326), Ḳara ʿAlī Beg took the fortress of Hereke on the Gulf of Nicomedia and displayed particular bravery at the siege of Aydos, when he removed with his own hand an arrow that had pierced his eye. Of the origin of the family very little is known, as is also the case with the other noble families of the early Ottoman empire, viz. the D̲j̲andarlî, the Ewrenos and the Mīk̲h̲āl-og̲h̲lu [*q.vv.*]. Tīmūrtās̲h̲ Pas̲h̲a is mentioned for the first time, when he continued the sultan's conquests along the Tund̲j̲a valley in Bulgaria by Murād I's order with the help of Lālā S̲h̲āhīn Pas̲h̲a [see S̲H̲ĀHĪN, LĀLĀ]. In 767/1365 he took Yeñid̲j̲e Ḳîzîlag̲h̲ač (see Ḥād̲j̲d̲j̲ī K̲h̲alīfa, tr. J. von Hammer, *Rumeli und Bosna*, Vienna 1812, 49-50, where the date is given as 768/1366-7) and Yānbolî (*ibid.*, 53-4, with the same date) in the plain of the Tund̲j̲a. The sources tell us nothing of his activities during the next decade. When Lālā S̲h̲āhīn died towards the end of the Serbo-Bulgar War (777/1375), Tīmūrtās̲h̲ succeeded him as *Beglerbeg* of Rūm-eli. In this capacity he distinguished himself in the first place by organising the army, including creating the *voynuḳs* [see WOYNUḲ], which consisted mainly of Bulgarian Christians who were chiefly used as drivers (see von Hammer, *GOR*, i, 181-2). It appears that it was at Tīmūrtās̲h̲'s instigation that the felt caps (usually made in Bile̲d̲j̲ik), since the time of Ork̲h̲an worn generally, were limited to the army and that red was decided on as the colour for the headdresses of the Begs and officers (see von Hammer, *op. cit.*, i, 89-90). Tīmūrtās̲h̲ Pas̲h̲a again came into prominence when he took the fortress of Monastir (the modern Bitolj), Prilep and Is̲h̲tip (the modern Štip) (the date given is 784/1382; see Ḥād̲j̲d̲j̲ī K̲h̲alīfa, *Rumeli und Bosna*, 92, 96-97, and also his *Taḳwīm al-tawārīk̲h̲*, Istanbul 1146/1733-4, 97. Tīmūrtās̲h̲ crossed the Vardar, invaded the south of modern Serbia and conquered there three strongholds for the sultan. Ḳārlî-eli, viz. Aetolia and Acarnania, the land of the "King of the Epirotes" Carlo II Tocco (d. July 1429), was also hard pressed by him on this occasion. In 787/1385 Tīmūrtās̲h̲ is said to have undertaken a campaign against the Arta (not far from the Ionian Sea), who were showing separatist tendencies (cf. *Epirotica*, ed. J. Bekker, Bonn 1849, 229,22 and Jorga, *GOR*, i, 273), so that he was sometimes here, sometimes there, in Thessaly and in Epirus, districts in which Ṭurak̲h̲ān Beg [*q.v.*] also fought with success. In 788/1386 Ṭurak̲h̲ān Beg suddenly appeared in Anatolia. In the battle which Murād fought on the plain of Ḳonya against his most dangerous opponent, ʿAlāʾ al-Dīn ʿAlī of Ḳaramān, he commanded the rearguard of the Ottoman army, and it was his intervention that put the ruler of Ḳaramān to flight and thus decided the battle in favour of the Ottomans. As a reward, he was given the greater part of the plunder and the title of vizier, i.e. a Pas̲h̲a with three tails, which he bore as the first *Beglerbeg* of the kingdom. When in the following year (789/1387) Murād was again preparing for a campaign in Europe, Tīmūrtās̲h̲ remained in Anatolia and administered the district of Germiyān-eli [*q.v.*] in the absence of prince Yaʿḳūb. in 792/1390 Tīmūrtās̲h̲ again appears in the Balkans. In this year, according to Ḥād̲j̲d̲j̲ī K̲h̲alīfa's *Taḳwīm al-tawārīk̲h̲*, he took Kratovo (Turkish Ḳaraṭowa) east of Üsküb, famous for its mines of silver and copper. In the next year (793/1391) he was taken prisoner in Bursa during a Ḳaramānid raid on it and on Anḳara, was released and revenged himself by defeating the Ḳaramānid on the plain of Aḳčay (in Germiyān-eli), when he hanged him without ceremony, although he was the brother-in-law of Bāyezīd I. From Müned̲j̲d̲j̲im-bas̲h̲î, who probably drew on Idrīs Bitlīsī (*Has̲h̲t bihis̲h̲t*, iii, 311), we learn of the further history of Tīmūrtās̲h̲ Pas̲h̲a that he conquered Čanḳîrî [*q.v.*] in Anatolia by order of Bāyezīd I in (799/1396-7), and in the following year (800/1397-8), Athens (cf. *Chronicon breve*, in Ducas, ed., Bonn, 516 (Μουρτάζης), and J.H. Mordtmann, in *Byz.-Neugr. Jahrb.*, iv [1923], 346 ff.) with the surrounding lands, also Behesnī or Besni [*q.v.*] and Malaṭya [*q.v.*] from the Turkomans, Dīwrigī from the Kurds, Dārende and Kemāk̲h̲ [*q.v.*] (cf. also Saʿd el-Dīn, i, 150), and was busy with warlike enterprises, sometimes in Europe and sometimes in Asia Minor (see von Hammer, *GOR*, i, 248-9). In the battle of Anḳara (19 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 804/20 July 1402), he with his son Yak̲h̲s̲h̲ī shared the fate of Bāyezīd I and passed as a prisoner into Tīmūr's hands. When the treasures accumulated by Tīmūrtās̲h̲ were discovered in Kütahiya [*q.v.*], Tīmūr heaped

reproaches upon him and at first refused him his liberty (see von Hammer, *op. cit.*, i, 330, following Sharaf al-Dīn ʿAlī Yazdī, *Histoire de Timur-Bec*, tr. Petis de la Croix, v, 54, p. 1). He only survived the collapse of the Ottoman kingdom for a short time. While lending an army for prince ʿĪsā in the battle of Ulubāṭ (Asia Minor), he was treacherously murdered by one of his own servants in Ramaḍān 806/March 1404. Sultan Meḥemmed I sent the head of the old warrior to his brother Süleymān as a token of victory. His body was taken to Bursa and buried there in a *türbe* by the mosque founded by him, the tomb bearing his name as *Malik al-Umarāʾ Tīmūrtāsh b. ʿAlī Beg*.

He had four sons, who rose to distinction as commanders and *wezīrs*, scholars and ambassadors. Yakhshī Beg fought in the Balkan wars, including at the taking of Nish [*q.v.*] in 788/1386 and at Kosovo, and the battle of Ankara. Orūdj and ʿAlī Begs played roles in the events revolving round Düzme Muṣṭafā and Izmīr-oghlu Djunayd [*q.vv.*]. Umur Beg (d. 865/1461) was a scholar who established *ewḳāf* for the mosque in the quarter named after him at Bursa, with an inscription surviving (see Aḥmed Tewḥīd, in *TOEM*, no. 13, ii, 868 ff.), and was a source for the historian ʿĀshïḳ-pasha-zāde. Of the next generation, Umur Beg's son ʿAlī Čelebi was *defterdār*, to the prince Muṣṭafā, and another son ʿOthmān Čelebi is said to have been killed in 832/1428-9 at the siege of Varna as *sandjaḳ-begi* of Germiyān-eli.

(F. Babinger-[C.E. Bosworth])

TĪN (A.), the common fig (*ficus carica*) and, after Lane, the tree of the *balas*; or, the tree and the fruit itself. Another tree and fruit resembling the *tīn* is called *djummayz*, the sycamore fig, a name included in some lists of simples and treated along with *tīn* (Ibn al-Ḳuff, 338; al-Rāzī, 43). Widespread throughout the Mediterranean from antiquity, it is mentioned in both the Hebrew Bible and the Ḳurʾān (together with the olive, XCV, 1). There are dozens of species and hundreds of varieties, both cultivated and wild, covering a wide spectrum of flavour, sweetness, size and colour. The common fig needs no pollination and is seedless, while other varieties which produce seeds (e.g. Smyrna figs) require pollination with the aid of a species of small wasp. Figs are described as hot and dry, and any ill effects to the stomach may be avoided by washing out the mouth after eating them and drinking *sakandjabīn* (the classical oxymel). Apart from their known laxative property, they are said to dissolve phlegm, purify the kidneys and open obstructions in the liver and spleen. The juice of cooked figs (together with other ingredients) appears in several medical recipes mentioned by Abū al-ʿAlāʾ Zuhr (d. 525/1130). The fruit was apparently eaten most commonly unaccompanied, fresh or dried. One culinary preparation recommends how the dried fruit, filled with honey and saffron and steamed in a sieve over boiling water, creates the effect of a freshly tree-picked fig.

(D. Waines)

ṬĪN (A.), mud, clay.

1. In the Ḳurʾān, it is said that God created man from base clay (contrasted with the superior fire from which Iblīs [*q.v.*] boasts he has been made), and *ṭīn* is the most commonly used word here for "clay" (together with e.g. *turāb*, *ḥamāʾ*) See e.g. sūra VI, 2, VII, 11/12, XVII, 63/61, XXIII, 12, XXXII, 6/7). *Ṭīn* is further used as the substance from which Jesus

will create a live bird (III, 43/49, V, 110). On the general topic of creation from these materials, see KHALḲ, at IV, 981b, and further, ṬĪNA.

2. As the potter's material. See for this, KHAZAF. One might also note that the Ḳur'ān, LV, 13/14, speaks of man being created from clay such as potters use (*ṣalṣāl ka 'l-fakhkhār*).

3. Edible clay or earth. This was a diatomaceous earth or kieselguhr, made up of the siliceous remains of minute marine organisms, and was found in various parts of Persia in mediaeval Islamic times. Al-Thaʿālibī in his *Laṭā'if al-maʿārif*, tr. C.E. Bosworth, *The Book of curious and entertaining information*, Edinburgh 1968, 128, 131-2, mentions edible earth (here called *nuḳl*) from Sīrāf [*q.v.*] on the Persian Gulf coast, but above all, from Khurāsān, the districts of Nīshāpūr, Ḳā'in and Zawzan. This last was highly prized, exported all over the Islamic world and given as a present to *amīrs* and kings. This commerce is confirmed by Ibn Ḥawḳal, ed. Kramers, 446-7, tr. Kramers and Wiet, 432, who styles it *ṭīn nadjāhī* "successful, auspicious, valued clay".

Bibliography: See also Mez, *Die Renaissance des Islâms*, 410-1, Eng. tr. 436. The whole subject of earth eating was exhaustively treated by B. Laufer in his monograph *Geophagy*, Field Museum of Natural History Publications, 280, Anthropological Ser., vol. xviii/2, Chicago 1930, 101-98, cf. 150-5 on earth eating in the Islamic world. (C.E. BOSWORTH)

ṬĪNA (A.), "matter", originally "a piece of earth", *ṭīn* "earth, clay" [*q.v.*] being the Ḳur'ānic term for the material of creation, and specifically of man (III, 49; V, 110; VI, 2; VII, 12; XXIII, 12; XXVIII, 38; XXXII, 7; XXXVII, 11; XXXVIII, 71, 76; cf. Wensinck *et alii*, *Concordance*, s.v. *ṭīn*, on *ṭīnat Ādam* in the Ḥadīth; Lane, s.v., hence *ibn al-ṭīn* for "man"). In philosophical allegory, the term occurs in direct reference to the Ḳur'ānic *ṭīn*, as in Ibn Ṭufayl's *Ḥayy ibn Yaḳẓān* (ed. Gauthier, 27) where the spontaneous generation of a human being from a "fermented mass of clay" is depicted as an allegory for the creation of man.

As a technical term of philosophy, *ṭīna* is used in some early Arabic translations from the Greek, and in the first period of Arabic philosophical writing, to render the basic meaning of Greek ὕλη, Ar. *hayūlā* [*q.v.*], as "matter, material substrate" (synonymously with *mādda*), especially in the sense of the Aristotelian Prime Matter, the substratum of the forms of the primary bodies or στοιχεῖα (*usṭuḳussāt*, *ʿanāṣir*), while *hayūlā* renders the general use of ὕλη in Ibn al-Muḳaffaʿ's introduction to the *Organon* (*al-Manṭiḳ li-Ibn al-Muḳaffaʿ*, ed. M.T. Dānishpazhūh, Tehran 1978, 4, 4) as of "matter relative to form". See e.g. *ṭīna* for ὕλη in an early version of Aristotle's *De anima*, 403b18, ed. ʿA. Badawī, *Arisṭūṭālīs fī 'l-nafs*, Cairo 1954, 7.13, 31.4; al-Kindī's definition of *ʿunṣur* ("elementary body", "material cause") in his *Risāla fī ḥudūd al-ashyā' wa-rusūmihā* (ed. D. Gimaret, *Al-Kindî, Cinq épîtres*, Paris 1976, 15 no. 9) as *ṭīnat kull dhī ṭīna* "material of everything that has material"; cf. M. Guidi and R. Walzer, *Uno scritto introduttivo allo studio di Aristotele* (*Studi su al-Kindi*, I), Rome 1940, 394 (V 5), 397 (VI 44-6), 403 (XI 8-10); al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 136.4 (explaining *hayūlā*). Ibn Sīnā, in the *Physics* of his *Shifā'* (*al-Samāʿ al-ṭabīʿī*, ed. Saʿīd Zāyid, Cairo 1983, 14-15), explains *hayūlā* qua "prime matter" partaking in all the forms as *mādda wa-ṭīna*, in distinction from *ʿunṣur* "matter" (relative to form) as a general principle of all composition, and from *usṭuḳuss* as a primary element of compound matter (viz. one of the four elements).

AL-TINBUKTĪ [see AḤMAD BĀBĀ].

TINDŪF, conventionally TINDOUF, a small town in the southwestern part of modern Algeria, in the governorate (*wilāya*) of Saoura and at the southwestern end of the Hamada of the Dra near where the modern borders of Algeria, Morocco, the former Spanish Sahara and Mauritania meet (lat. 27° 42' N., long. 80 10' W.). It is now on the road connecting western Algeria with Mauritania, with an airstrip, and has recently acquired economic and political importance because of the proximity of iron ore deposits at Gara Jubeilat just to the south of Tindūf; it was around Tindūf that fighting took place in 1963 between Algeria and Morocco. In *ca.* 1980 the population of the town was 6,500. (ED.)

TINMAL, TINMALLAL (in Berber, denoting terraces for agriculture on a mountain side, though other etymologies have been put forward), the name of a mountain and a village on a plateau in the High Atlas, on the road to the col of Tizin-Test, which was the centre for the Almohad expansion. Surrounded as it is by high peaks (around 3,000 m/ 9,800 feet), with steep access routes, the site is almost impregnable. It had of old a sacred character, where the mountain tribes made agreements and took oaths, explaining, in part, the choice there of the future Almohad Mahdī, with whose dynasty Tinmal was closely linked. It came within the territory of the Hazmīra who provided Ibn Tūmart with a refuge during his campaigns against the Almoravids.

Once installed at Tinmal after his *hidjra*, the future Mahdī formed around himself a community formed of various tribal elements: Hargha, Hintāta, Gadmīwa and Ganfīssa. Fearing the power of his hosts there, Ibn Tūmart pitilessly had them massacred. Tinmal now became the bastion of the *ahl Sūs* against the power of Marrākush. The town was ringed with walls topped by towers, access was by a single bridge, and al-Idrīsī affirmed that four men could defend the capital Tinmal. The Mahdī's own house and mosque formed the core of this embryonic state. The Almohad campaigns and the influx of booty and captives gave the region considerable prosperity. After the destruction of the Almoravid fortress of Tasghimūt in 526/ 1132, its gates were brought, with great pomp, to decorate the Bāb al-Fakhkhārīn at Tinmal. It is possible that Tinmal had a mint at this time. It was here that Ibn Tūmart set forth the main lines of the new order and perfected his strategy against the Almoravids.

On his death there, his heir and successor ʿAbd al-Mu'min transformed Tinmal into a pilgrimage centre, praying at Ibn Tūmart's tomb before making any great decision and endowing the shrine with *awḳāf*; the cult of the Mahdī was in fact to survive the demise of his dynasty. The caliph continued building works at Tinmal, including a remarkable mosque. On his death, he was buried with Ibn Tūmart, and henceforth Tinmal became the official necropolis of the Almohad caliphs; thus the remains of Abū Yaʿḳūb Yūsuf, killed at the siege of Santarem, were brought back there. Exchanges between Marrākush and Tinmal remained important during the Almohad period, and after the fall of Marrākush and the victory of the Marīnids, the remnants of the Almohads rallied at Tinmal. But the governor of Aghmāt, Abū ʿAlī al-Milyānī, seized Tinmal in 674/1275 and despoiled the tombs of the Almohad caliphs. Even so, the region retained a certain prosperity, and Leo Africanus, *De-*

scription, 113, described Tinmal as very populous, with a fine mosque. From the recent edition of the ms. of al-Zarhūnī, we have information on the place at the end of the 17th and beginning of the 18th centuries. The great Almohad mosque was still functioning, but was shortly to be abandoned on account of its incorrect *ḳibla* orientation. It was still a pilgrimage centre, even though there were only sixty families there. The memory of the Mahdī was still alive, and Almohad coins, brought to the surface by rain storms, were considered as valuable talismans. But the abandoned mosque fell into ruins, and Tinmal fell into oblivion. In the 19th century, the *ḳā'id* al-Gundāfī tried unsuccessfully to restore it.

The archaeological excavations of the present century have shown the importance of the monuments of Tinmal in the history of Maghribī art and architecture. In 646/1248 ʿAbd al-Mu'min announced, in his *Risālat al-Fuṣūl*, the beginning of work on his splendid mosque, replacing the modest building of Ibn Tūmart. The walls of Tinmal had been built within the Almoravid tradition, but the mosque reveals the new Almohad style, with its construction from concrete instead of stone and its use of brick mainly to decorate the doorways, merlons, window surrounds and the walls supporting the four domes. There was a great profusion of stucco decoration, although calligraphic decoration was relatively rare; the dome interiors had *muḳarnas* [*q.v.*] work. Many of the mosque's decorative features were innovations which became points of reference in the future art of the Maghrib. Restoration is in progress, but the limits of the little town at its apogee are still unknown, since its ruins are now partly subsumed under cultivated land.

(Halima Ferhat)

al-**TINNĪN** (a.), lit. "dragon". In astronomy and astrology, this is (1) the Arabic name for the constellation Draco (the third of the 21 northern constellations according to Ptolemy). It contains 31 stars. It became known to the Arabs through translations of Greek astronomical texts, especially Ptolemy's *Almagest*, and is mentioned by this name throughout the Arabic astronomical and astrological literature. The north pole of the ecliptic is situated in this constellation; (2) the Arabic name for the figure of a mythological dragon, or serpent (not of Greek origin), which was assumed to cause solar and lunar eclipses. Its head (*al-ra's, ra's al-tinnīn, caput* [*draconis*]) marked the point of the ecliptic at which the moon's orbit crosses the ecliptic towards the north, its tail (*al-dhanab, dhanab al-tinnīn, cauda* [*draconis*]) the point of its crossing towards the south. At these points eclipses are liable to occur. Arabic and—following them—mediaeval European astrologers treated these two points as pseudo-planets and included them in their casting of horoscopes. These two points of the ecliptic, called in Greek astronomy the ascending and the descending nodes (*al-ʿuḳdatān*ⁱ), respectively, have a retrograde movement along the ecliptic of *ca.* 19½° per year; a full revolution is completed in *ca.* 18.6 years.

(P. Kunitzsch)

TINNĪS, a town of the eastern part of the Nile Delta of Egypt, in Antiquity called Tenessos. The medieval town of Tinnīs was situated in the fourth climate of the Muslim geographers, occupying almost all of a small island in the Lake Manzala or the Lake of Tinnīs, at the confluence of the waters of the Tanaitic branch of the Nile with the Mediterranean ones, some 30 miles behind the chain of lagoons.

At the time of the Muslim expansion, Tinnīs was governed for the Byzantines by a Christian Arab, one Abū Thawr, but in 20/641, just after the fall of Damietta, it was conquered by force (*ʿanwat^an*) by ʿAmr b. al-ʿĀṣ's forces, probably explaining why the main church was transformed into a mosque. The city's population continued to grow up to the 11th century, according to the figures of various chroniclers, even though these are probably much exaggerated. At the time of the conquest, the Byzantine governor had 20,000 men to oppose the Arabs. When the Patriarch of Antioch Dionysius of Tell-Mahré passed through Tinnīs in 832, he counted 30,000 Christians; and in 1048 Nāṣir-i Khusraw estimated its male population at 50,000. At least until the 4th/10th century, it remained essentially a Christian city, of Copts but also of some Melkites; Tinnīs was in fact one of those rare places where Melkite bishops maintained themselves after the Islamic conquest, although there seem to have been tensions between the two Churches. This strong Christian presence in a coastal city posed problems for the Muslim rulers. After a Byzantine raid which temporarily captured Damietta [see dimyāṭ] in 238/853, they decided to reinforce the Muslim element of the population. The Christians suffered persecution, moreover, from the Fāṭimid caliph al-Ḥākim, who in 403/1012-13 ordered the destruction of most of the churches there (72 destroyed, according to Ibn Bassām); this brought about much Christian emigration, including one of textile industry workers to the Byzantine lands. The progressive Islamisation of Tinnīs was signalled by the building of numerous mosques; in the 6th/12th century, Ibn Bassām again mentions a great mosque and 160 oratories. The Jewish population seems to have been very small; Benjamin of Tudela counted it at this time as some 40 only.

The main problem for the city in mediaeval times was its food supply. The island could not produce enough food for the population, which lived essentially on fish, trapped aquatic birds and a small number of milk-yielding cows. Other provisions arrived from outside, thanks, so Nāṣir-i Khusraw says, to a fleet of small boats which loaded supplies from larger ships touching in at the port or from the mainland. The supply of water was, it seems, even more difficult, since the lake waters were only potable for part of the year, during the summer, when the high Nile waters pushed back the salt waters of the Mediterranean. During the winter, drinking water was stored
Miḥrāb of the Great Mosque.

Arcading of the prayer hall of the Great Mosque.

up in underground cisterns, called "those of the *amīr*" since they were hewn out after Aḥmad b. Ṭūlūn's visit to Tinnīs in 269/882-3; some of these were rediscovered in the 1980s by excavations carried out by the Egyptian Antiquities Service.

In the Crusading period, Tinnīs was the third port for Egyptian commerce in the Mediterranean after Alexandria and Damietta, and it had especially strong commercial connections with the Syrian ports and then with the Northern Italian trading states. It imported the raw materials for its textile industry such as wool, silk, and gold and silver thread, but the city was also a port of entry for more strategically-valuable materials such as wood, iron and pitch. The textile industry seems to have flourished at Tinnīs since Antiquity, but it was under Islam that it formed, with Damietta, Dabīḳ and some fifteen other less important sites in the Delta, the main centre for linen textiles in the whole Muslim empire. This activity was favoured by the nearby production of flax in the Delta, the presence of still waters for retting or steeping the flax, and a particularly humid climate guaranteeing suppleness of the thread and thus spinning and weaving. The main material used there was flax, spun by women and woven by men. The Egyptian Delta was especially noted for the fine linen cloth known as *ḳaṣab*, that of Tinnīs being coloured whilst that of Damietta was white. Silk thread was imported into the city, probably from Syria, and gold thread was used notably for weaving *dabīḳī* cloth, made essentially from linen and often stitched with gold or silk. This product, of international repute, was at first woven only in the nearby city of Dabīḳ, but production gradually spread to other neighbouring centres of the Delta. Tinnīs had a particularly high place amongst these textile production centres of the Delta in that it had a caliphal workshop (*ṭirāz* [*q.v.*]) working essentially for the Baghdād court of the ʿAbbāsids and then, from the end of the 4th/10th century, for the Fāṭimids in Cairo. Amongst robes made for the Fāṭimid caliphs, the chroniclers mention a seamless robe, the *badana*, made from linen and gold thread. The Tinnīs workshops also produced a cloth especially prized by the court in Cairo, *būḳalamūn*, coloured (violet, red and green) and with a moiré, watered-silk effect, copied from Byzantine models. Finally, the veil of the Kaʿba, the *kiswa* [see KAʿBA] was for most of the mediaeval period woven in workshops of the Delta, and notably at Tinnīs, where detailed mentions of its production there for the years 159/776 and 162/779 exist.

It was apparently in the 3rd/9th century that the eastern shores of the Delta began to be the target of maritime raids. The city was fortified in 230/844 under al-Wāthiḳ and finished in 239/853-4 under al-Mutawakkil, who also ordered the nearby cities of Damietta and Pelusium to be fortified. In the 6th/12th century, Tinnīs's wall had 19 gates. From the second half of this century, raids against the Egyptian Mediterranean ports by Christian ships increased. The Normans attacked Tinnīs in 1151 and again in 548/1154, pillaging the city for three days and carrying off many inhabitants into slavery. In 571/1175, forty Norman ships launched a fresh attack on the city, but retreated after two days' of fighting. However, an attack two years later took the garrison by surprise, and the city was in Norman hands for several days, and was plundered and burnt. In 577/1181-2 Ṣalāḥ al-Dīn had to order the building of a citadel and the repairing of the city walls. The Third Crusade had led to Ṣalāḥ al-Dīn's fleet becoming weakened, and fresh expeditions against the Egyptian coasts were feared. Hence the sultan in 588/1192 evacuated the civilian population of the city and left there only the citadel's garrison. Frankish threats continued into the first decades of the 7th/13th century and assumed firm shape at the time of the Fifth Crusade in the occupation of Damietta. The Ayyūbid sultan al-Malik al-Kāmil [*q.v.*] drew a lesson from this episode, and in 624/1227 decided to destroy Tinnīs in order to prevent a new descent and occupation of the region by the Franks. It nevertheless seems that a small town maintained itself for some time amid the city's ruins; but Ibn Baṭṭūṭa found the town in ruins in 726/1326, and the French traveller Gilbert de Lannoy, who was there in the 1420s, found the same situation.

TIPPU TIP [see AL-MURDJIBĪ].

TĪPŪ SULṬĀN, ruler of the south Indian state of Mysore (Mahisūr [*q.v.*]) from 1782 until his death in 1799, was probably born in 1760. His father, Ḥaydar ʿAlī Khān Bahādur [*q.v.*], was a military commander who in 1761 took control of Mysore from the descendants of the dynasty of Hindū rulers that had built up the state from early in the 17th century.

Mysore under Ḥaydar ʿAlī and later under Tīpū was in constant contention with the Marāṭhās [*q.v.*] and with those who claimed to exercise Mughal authority in southern India, the Niẓāms of Ḥaydarābād [*q.v.*] and the Nawwābs of Arcot [*q.v.*] or the Carnatic, as well as with the British East India Company. At Tīpū's succession in 1782, Mysore was locked in a war with the British in which its troops had been more than able to hold their own.

Following peace in 1784, Tīpū built up a well-equipped and trained army of over 60,000, supported by a strong and relatively centralised state administration. Revenue yields were enhanced by eliminating intermediaries between the peasantry and the state and by increasing the levels of taxation. Tīpū also tried to levy resources for the state from commerce, taking some trades under direct government management. Any internal challenge to the ruler was ruthlessly repressed. Tīpū took the title of *Pādishāh*, seeking confirmation from the Ottoman Khalīfa and thus rejecting Mughal authority. He stressed the Islamic nature of his régime without active persecution of his Hindū subjects.

Tīpū's Mysore was drawn into repeated wars: against the Niẓām and the Marāthās and against the British at the head of Indian coalitions from 1789 to 1792 and again in 1799. In the first of the two wars, Tīpū was able to hold the British at bay until the Governor-General, Lord Cornwallis, defeated him near his capital at Seringapatam [see ŚRĪRANGAPAṬṬANAM] in 1792 and forced him to make large cessions of territory. In 1799, a new Governor-General, the future Lord Wellesley, launched an invasion of Mysore. Seringapatam was stormed and Tīpū died in the fighting. The Hindū dynasty displaced by Ḥaydar ʿAlī was restored under British domination.

Myths attached themselves to Tīpū, both in his lifetime and since. He is seen in modern India both as a secular nationalist and as an enemy of Hindus. To the British, he appeared to be a cruel and implacable foe, bent on expelling them from India with French aid. A more realistic interpretation would be that his efforts to maintain a strong and independent state alarmed the British, who sought first to reduce his power and then to eliminate it altogether.

(P.J. MARSHALL)

TIRAN, the Ottoman Turkish name for TIRANA, the capital of the modern Albanian Republic.

It is situated on a plain at the foot of Mount Dajti (1,610 m/5,280 feet) some 40 km/25 miles from the port of Durrës [see DRAČ], with the Lana river running through it. It is a relatively recent foundation, of the Ottoman period, from the opening of the 17th century when there was built a mosque, an oven (or *ʿimāret*), a *ḥammām* and shops by Süleymān Pas͟ha (Berkīn-zāde or Bargjini, from a nearby village, d. 1024/1616 during a campaign in Persia, buried in his own mosque). The date of the mosque's construction, 1023/1614-15, is generally taken as the foundation date for the town. The name Tirana comes from that of a pre-existing village on the site, and not, as legend has it, from Ṭihrān/Tehran in Persia, because Süleymān Pas͟ha had been in Persia (cf. Kaleshi, *İA*, art. *Tiran*).

For roughly two centuries, during which the town grew gradually, it remained under the governorship of Süleymān's descendants from father to son: Aḥmed Muk͟htār (who built the minaret on his father's mosque); Ibrāhīm Bey (executed by the Ottomans); Aḥmed Bey; and finally, Ḳahramān Pas͟ha. According to Ewliyā Čelebi, who was there in 1072/1661-2, Tirana was at that time a *ḳaṣaba*, a *voyvodalïḳ* of the *sand͟jaḳ* of Ohrid [see OK͟HRĪ] and seat of a *ḳāḍī* (but this last point does not seem accurate; see Kiel, *Ottoman architecture in Albania, 1385-1912*, 249-50). It was in the 18th century that it developed most. Ibrāhīm Bey had a fortress built, but it still remained primarily a market town, the centre of an agricultural area, with *ca.* 3,000 to 4,000 inhabitants around 1700, all Muslims except for one Roman Catholic family which had been installed there almost from the start. After the struggle with Ḳurt Aḥmed Pas͟ha of Beirut, in which the Orthodox population of the plain had contributed to the defence of the town, Ibrāhīm Bey offered them land along the Lana where the church of St. Procopius was now built; some of these Orthodox now became traders or small manufacturers in the town itself. In *ca.* 1800, Tirana had around 480 shops and 2,000 houses. In 1208/1793-4 Mollā Bey, a descendant of Süleymān Pas͟ha, built a new mosque, completed three decades later by his son Ḥād͟jd͟jī Edhem Bey when he was temporarily in control of the town.

On the death of Ḳahramān Pas͟ha, the male line of beys from Süleymān Pas͟ha came to an end. At this time, the end of the 18th and the opening of the 19th centuries, the region was very troubled by various struggles amongst the notables (Ibrāhīm Bus͟hatlī of S͟hkodra [see ISHKODRA, in Suppl.], Ḳaplan Aḥmed Pas͟ha Toptani of Kruja, ʿAlī Pas͟ha of Tepedelen [*q.v.*], etc.). The town, whose population had been reduced by these wars, finally fell definitively to the Toptanis of Kruja, sons of Ḳaplan Pas͟ha (d. 1816) having married, moreover, the four sisters of Ḳahramān Pas͟ha, and Ḳaplan Pas͟ha himself had become installed in Tirana. His son ʿAbd al-Raḥmān Pas͟ha (d. 1837) gave Tirana a new *medrese* and a library, restored the ancient mosque and laid out the town in six quarters. His prudence allowed the family to survive, unlike others, *vis-à-vis* the central Ottoman government, even though the fortress was demolished by the authorities in 1830-1. It was in the time of Aḥmed Bey b. ʿAbd al-Raḥmān that the Roman Catholic cathedral (*Kïsha e së Madhes virgjin*), financed by Austria-Hungary, protecting power of the religious interests of Albanian Catholics, was built (1856). In the atmosphere of the *Tanẓīmāt* reforms, a *rüs͟hdiyye* school was built in 1862 and also a post and telegraph office. In 1873, a new and more splendid Orthodox cathedral was built (*Kïsha e vangjelismos*). Two bridges were built over the Lana. As part of the administrative reforms of 1864-5, Tirana became the centre of a *ḳaḍā*, with about 100 villages, almost all Muslim, of the *sand͟jaḳ* of Durrës in the *wilāyet* of S͟hkodra. On the plain, almost all the lands were *čiftliks* [*q.v.*] belonging to the Toptani family.

According to the Austrian consul J.G. von Hahn, *ca.* 1850 the town had 2,000 houses, including 100 Orthodox (almost all Vlachs) and 6 Catholic. This would give a population of about 10,000. The population lived to a considerable extent off their beasts of burden, and the *kirad͟jïs* (purveyors of caravan transport) of Tirana were famed throughout Rumelia. At the opening of the 20th century, the population rose to around 15,000, including 900 Orthodox Vlachs and a handful of Albanian Catholics, to which a certain number of gypsies living in a quarter on the periphery should probably be added. The assertion of the French consul A. Degrand that the Muslims of Tirana were at that time in general Bektās͟hīs and adherents of the Rifāʿiyya must be corrected; in fact, the people were entirely linked with the *medrese* and its three *müderris*. There were 19 mosques, great and small, and a *namāz-gah*, and a dozen *tekkes* belonging to the Ḳādiriyya and the K͟halwatiyya. Only three or four families in the town were linked with the Bektās͟hīs (probably with the Bektās͟hī establishments of Kruja).

The upheavals consequent on the demise of the Ottoman empire affected Tirana, and in 1920, because of its central position, it was chosen as the provisional capital of the Albanian state, whose independence had been recognised in 1913 by the Great Powers. This choice was confirmed in 1925, to the detriment of more important towns like S͟hkodra and Korča [*q.v.*]. Tirana has thus been the capital of the Republic, then the Kingdom (1928-39), then Fascist Albania (1939-44), then the Communist People's Republic (1944-92) and now the new Republic. Population growth was

slow in the inter-war period, but more rapid under Communism (108,200 in 1955; 225,700 in 1989). With the fall of the Communist régime and the possibility for the first time for peasants to move around, population has grown greatly, to 300-400,000 now. The religious proportions have changed, but it is difficult to assess precisely these proportions. The first new arrivals were Muslims in 1919-20 from the town of Dibra, allotted then to Yugoslavia. With the Communist régime and the foundation of Tirana University in 1957, Albanians of all localities and confessions have come to the capital, but in the absence of data on religious confession in censuses, no estimates can be given.

In the 1920s, the religious communities took their place in the new state, in general, with central organisations in Tirana. The Sunnī Muslim community held its first congress there in 1923, a higher *medrese* (*Medrese e naltë*, thereafter *Medrese e përgjithshme*) was founded in that decade for the training of religious cadres. Regarding the Bektās̲h̲īs, it was only in 1929 that a congress on the outskirts of Korča decided to set up a seat of the head of the community (*Kryegjyshata*) in the suburbs of Tirana, with Salih Niyazi Dede (an Albanian by origin), the last chief of the Bektās̲h̲īs in Turkey, as this head. Since the *ṭuruḳ* were now banned in Turkey, the new *tekke* became the "world centre of Bektās̲h̲īs". In the 1930s, two organisations were founded in Tirana grouping together the *ṭuruḳ*: the "Divine Light" (*Drita hyjnore*) for the Ḳādirīs, Rifāʿīs, Saʿdīs and Tid̲j̲ānīs, and the Directorate of the "ʿAlevī sects" for the K̲h̲alwatīs, D̲j̲alwatīs, Guls̲h̲anīs and Malāmīs.

In the Communist period, religious activity was much impaired, especially after 1967 when all places of worship were closed and all religious groups dissolved. The *Kryegjyshata* became an old folks' home, and several mosques and *tekkes* were destroyed or transformed into storehouses, museums (like the mosque of Ḥād̲j̲d̲j̲ī Edhem Bey), etc., as elsewhere in the land. Since the end of 1990, the Albanian government reauthorised religious practices, with a consequent reorganisation of the various communities. The first act of worship in the Edhem Bey mosque was held on 18 January 1991, two months after the re-opening of the "Lead Mosque" at S̲h̲kodra, followed by three other mosques. The Bektās̲h̲ī *Kryegjyshata* re-opened on 22 March 1991. The K̲h̲alwatī *tekke* of Pazar is being repaired, and the *türbe* of the Ḳādirī Derwīs̲h̲ K̲h̲ātid̲j̲e is visited again. *D̲h̲ikrs* have been held in the Ḳādirī *tekke* of S̲h̲eh Dürri and in a Rifāʿī *zāwiye*. A *medrese* has been provisionally opened near the Kokonozi mosque. Links with the outside Muslim world are numerous, and some fifteen Arabo-Islamic organisations have an office in Tirana.

TĪRĀN [see tihrān. II.]

TIRANA [see tiran].

ṬIRĀZ (a., pl. *ṭuruz*), a Persian loan word (cf. Pers. *tarāz* "adornment" or "embellishment" and *tirīz* "gusset" or "gore") originally meaning "embroidery" or "decorative work" (*ʿalam*) on a garment or piece of fabric. It later came to mean a *k̲h̲ilʿa* [*q.v.*], a robe of honour, richly adorned with elaborate embroidery, especially in the form of embroidered bands with writing upon them. In the earliest centuries of Islam, such a garment was worn by rulers and members of their entourage (*aṣḥāb al-k̲h̲ilʿa*). *Ṭirāz* (and *dār al-ṭirāz*) also came to designate the workshop in which such fabrics or robes were manufactured. A secondary development from the meaning "embroidered strip of writing" is that of "strip of writing", border or braid in general, applied not only to inscriptions woven, embroidered, or sewn on materials, but also to any inscriptions on a band of any kind, whether hewn out of stone, done in mosaic, glass or faience, or carved in wood (see e.g. al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 79: *al-ṭirāz al-manḳūs̲h̲ fi 'l-ḥid̲j̲āra*). Until about the middle of the 4th/10th century, when the production of papyrus [see ḳirṭās; raḳḳ] ceased in Egypt, the word *ṭirāz* sometimes also designated the inscriptions officially stamped with ink upon the rolls of papyrus in the factories. This usage of *ṭirāz* was in turn extended to indicate the factories themselves (see J. von Karabacek, *Zur orientalischen Altertumskunde. II. Die arabischen Papyrusprotokolle*, in *SBAW*, clxi/1 [1908], 8-10; A. Grohmann, *Corpus papyrorum Raineri*, i/2, Vienna 1995, nos. 175, 204, 214, 265, 270).

1. Origins of the institution.

The production of certain luxury textiles was an imperial privilege in both the Byzantine and Sāsānid empires and had antecedents in the earlier Roman and Persian states. The Byzantine emperors established royal weaving ateliers or *gynacea* (literally, "women's quarters"), in various places throughout their domains, including in Egypt, where there developed a distinctive Coptic style marked by embroidered decorative patches (either squares or roundels) and bands (*clavi*) that continued for nearly seven centuries into the Islamic era (see A. Baginski and A. Tidhar, *Textiles from Egypt, 4th-13th centuries C.E.*). Some scholars surmised that such establishments were probably taken over by the Umayyad caliphs, who were known to have had a *dār al-ṭirāz* in Alexandria (al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲ā*, iv, 7) and adapted to their special needs and tastes (E. Kühnel and L. Bellinger, *Catalogue of dated tiraz fabrics: Umayyad, Abbasid, Fatimid*, 1). Ebersolt has proposed a connection between the *ṭirāz* bands and the Roman *clavus*—the sign of the senatorial and knightly rank—which is ultimately traced to an Etruscan origin. It is worth noting that, in Muslim fabrics also, the band of writing was often embroidered or woven in red silk. The preference for red in embroidery is likely due to the fact that the wearing of red was considered to be a caliphal prerogative (Hilāl al-Ṣābi', *Rusūm dār al-k̲h̲ilāfa*, Bag̲h̲dād 1964, 75). The privilege of the *Princeps* to grant the *latus clavus* to the senators and the reservation of purple for the use of the ruler and, from A.D. 369, the limitation of the production of gold braid to the *gynacea*,

at least, afford parallels to the sovereign right of the Muslim caliphs to the *ṭirāz* and its presentation.

In contradistinction to the scholars who have looked to Byzantium and Rome for the source of *ṭirāz* as object and institution, others, most notably Serjeant, following the testimony of many mediaeval Arab historians, have been of the belief that the *ṭirāz* system had its origin in Sāsānid Persia and that during the Umayyad period it expanded westward to Egypt, North Africa, and Spain (R.B. Serjeant, *Islamic textiles*, 9). Ibn Khaldūn, for example, states outright that "the pre-Islamic Persian kings (*mulūk al-ʿadjam*) used to make that *ṭirāz* with the images and likenesses of monarchs or other images and likenesses specifically designated for that use, and later the Islamic monarchs substituted for that the inscribing of their names together with other words of good omen or praises of God" (*Muḳaddima*, ii, 57-9, tr. Rosenthal, ii, 65-7). Ibn Khaldūn's remarks concerning garments with royal insignia in Sāsānid times are corroborated by the much earlier testimony of the Talmud (*BT Shabbat* 58a, where it is mentioned that the robes of scholars associated with the house of the Exilarch bore some sort of badge with his seal). (S.D. Goitein, *Petitions to Fatimid caliphs from the Cairo Geniza*, in *JQR*, NS, xlv [1954-5], 34-5, has suggested that the custom was borrowed by the Jewish Exilarchs from the Sāsānid court at which they served.)

The truth concerning the origins of the *ṭirāz* system, it would seem, combines both views. The institution of royal ateliers was so widespread throughout the ancient and early mediaeval Near East that its adoption by the Muslims, who were decidedly eclectic, need not be attributed to a single source. The name of the system is clearly Persian, but on the other hand, it is an established fact that the Umayyads, based as they were in the former Byzantine province of Syria, were at first far more under the influence of Eastern Roman rather than of Persian culture, as the Dome of the Rock, the great mosque of Damascus, and the numerous desert chateaux in Syria, Palestine, and Trans-Jordan bear ample witness.

2. Development of the *Ṭirāz* institution.

i. *Historiographical considerations.* In addition to debates over the origins of the institution, scholarship on the development of the *ṭirāz* institution has followed several different trajectories. Considerable attention has been paid to the content of the inscriptions themselves. Since most known *ṭirāz* are held in museum collections, catalogues of dated or datable *ṭirāz* fabrics have dominated scholarly publication in the field (see *Bibl.*). Considerably less is known, therefore, about *ṭirāz* fragments which cannot be dated or about uninscribed textiles, though these represent by far the majority of recovered fragments. The catalogues of *ṭirāz* fabrics, which have emphasised the content and style of inscriptions themselves, have formed a major source for students of Arabic calligraphy and epigraphy. Historians have shown particular interest in the content of their caliphal inscriptions for the obvious reason that they provide documentary evidence about titulature, which is a central element of the political culture of mediaeval Islamic dynasties, and have used them primarily in conjunction with literary evidence, which includes sometimes detailed descriptions of textiles. In spite of the relative abundance of both literary and material evidence, however, not a single known *ṭirāz* fabric has ever been matched to a description provided in a literary source.

Furthermore, in spite of the abundant literary evidence about the function of *ṭirāz*, almost no information has been preserved about the uses or the original dimensions and style of the actual textiles that are known. This situation is the consequence both of the emphasis on the content of inscriptions themselves (leading to the practice of cutting out only the inscribed portion of a textile and discarding the rest) and of earlier excavation priorities and practices, which largely excluded textiles from being considered as important archaeological finds. Thus there are almost no inscribed textiles whose original or even last uses are documented (see J.A. Sokoly, *Between life and death. The funerary context of Ṭirāz textiles*, in *Islamische Textilkunst des Mittelalters. Aktuelle Probleme*, 1997, 71-8; Suʿād Māhir Muḥammad, *al-Nasīdj al-Islāmī*, Cairo 1977).

New directions in research and standard archaeological practice are changing this situation. As Lisa Golombek and Veronika Gervers note, "The interest in *ṭirāz* studies has paralleled that of numismatics, where the content of the inscription was initially the leading concern. The object itself, either coin or textile, was of secondary importance. More recently, numismatists have turned to the study of the intrinsic qualities of coins" (*Tiraz fabrics in the Royal Ontario Museum*, 82-3; Sokoly, *Towards a model of early Islamic textile institutions in Egypt*, in *Islamische Textilkunst*, 115-21). New documentary evidence (most notably from the Cairo Geniza [*q.v.*]) has provided information about the production, distribution and uses of a wider variety of textiles, thereby creating greater interest in documenting the technical characteristics and actual uses of inscribed textiles. One trajectory in this newer research situates *ṭirāz* fabrics within the history of the public uses of writing by Islamic rulers from early Fāṭimid times onwards (Irene A. Bierman, *The art of the public text: medieval Islamic rule*, in *World art. Themes of unity in diversity*, ed. I. Lavin, ii, 283-8). Finally, recent archaeological excavations have yielded textiles, many of them in funerary settings (R.-P. Gayraud *et alii*, *Istabl ʿAntar (Fostat) 1994: Rapport de Fouilles*, in *AI*, xxix [1995], 2-24). The full implications of these new directions and evidence will no doubt be borne out in the years to come.

ii. *The institution under the Umayyads.* The earliest regular production of Arabic-inscribed *ṭirāz* probably goes back to the time of the reforms of ʿAbd al-Malik, when not only did Arabic become the official chancery language but it was henceforth inscribed on all coins and was used for the stamp (also called *ṭirāz*) on papyrus. Although the earliest Muslim historians, such as al-Balādhurī and al-Ṭabarī, mention only the coinage and papyrus, al-Bayhaḳī claims that the reforms included inscriptions on garments (*thiyāb*) and tapestries (*sutūr*) (*K. al-Maḥāsin wa 'l-masāwī*, ed. F. Schwally, Giessen 1902, 498). The first Umayyad caliph who is specifically mentioned in the Arabic sources as having had *ṭirāz* factories was ʿAbd al-Malik's son Hishām (al-Djahshiyārī, *K. al-Wuzarāʾ*, Cairo 1983, 60), who was known as a dandy and a great lover of fine robes, textiles and carpets (al-Masʿūdī, *Murūdj*, v, 466; also Ibn ʿAbd Rabbih, *al-ʿIkd al-farīd*, ii, Cairo 1331/1913, 338). He is also said to have worn silk garments with what may have been embroidered bands (*al-khazz al-raḳm*: al-Masʿūdī, *loc. cit.*), but the term is somewhat ambiguous and could also merely indicate striping. Hishām's successor, al-Walīd II, is reported to have worn "caliphal garments" (*thiyāb al-khilāfa*: *Aghānī*[1], vii, 83). This term was later synonymous with *ṭirāz* robes, although it is not clear whether al-Walīd's royal garments actually had the embroidered bands or were simply designated caliphal because they were white, the Umayyad official colour.

One of the oldest surviving *ṭirāz* fabrics, which has

a red silk ground with designs in several colours and an inscription in yellow silk, exists in three pieces, all discovered in Egypt, and bears the name of the caliph Marwān. The question is which Marwān—Marwān I (64-5/684-5) or Marwān II (127-32/744-50)? Most scholars prefer the latter on historical grounds, since one piece bears the inscription "in the *ṭirāz* factory of Ifrīḳiya," and it seems unlikely that the Maghribī province was secure enough in the earlier reign to have such an establishment (R. Guest and A.F. Kendrick, *The earliest dated Islamic textiles*, in *Burlington Magazine*, lx [1932], 185-6; G. Wiet, in *RCEA*, i, no. 36; Serjeant, *Islamic textiles*, 13). F.E. Day, on the other hand, has pointed out that from a stylistic point of view, the inscriptions look more like 1st/7th century, rather than 2nd/8th century (*The ṭirāz silk of Marwān, passim*, but esp. 52-61). Another very early *ṭirāz* fragment of wool tapestry has a partial inscription "[commander of the] faithful Ma[rwān]" that also appears to come from the reign of Marwān. Its Sāsānid ground design of cocks on pedestals enclosed in roundels again points stylistically to the time of Marwān I; yet again, most scholars favour attributing the piece to Marwān II on the grounds that the reign of the former was too brief to make any attribution to him likely. In any event, it seems clear that by late Umayyad times, the *ṭirāz* system extended across the caliphate.

There is one dated *ṭirāz* fragment from the Umayyad period, an Egyptian linen turban cloth with an inscription giving the date of Radjab 88 (June 707) and the name Shamū'īl b. Mūsā (M.A.A. Marzouk, *The turban of Samuel ibn Musa, the earliest dated Islamic textile*, 143-51). This was probably a privately-commissioned piece made for a wealthy Jew or Christian. It mentions neither the caliph nor the factory and was not, therefore, an official *ṭirāz* cloth. However, in later periods, private *ṭirāz* production for the bourgeoisie became increasingly common (see below).

iii. *The development of the institution under the ʿAbbāsids.* The *ṭirāz* system continued to flourish in the Muslim East under the ʿAbbāsids. Hārūn al-Rashīd is reported to have entrusted the *ṭirāz* operations (*dūr al-ṭuruz*) to his famous vizier Djaʿfar al-Barmakī (al-Djahshiyārī, *Wuzarā'*, 249), and control of the *ṭirāz* factories was considered one of the most important of administrative responsibilities, along with oversight of the mints, the post and the bureaux of taxation, and only individuals of high rank and the most trusted individuals among their freedman were given this office. Al-Rashīd made regular presents of *ṭirāz* garments and fabrics to his favourites. His Christian physician Bukhtīshūʿ b. Djurdjīs received every Muḥarram an allotment of garments, furs and textiles that included twenty garment-sized pieces (*shiḳḳa*) of royal *ṭirāz* linen shot with gold or silver thread (*al-ḳaṣab al-khāṣṣ al-ṭirāzī*) and a like number of pieces of *mulḥam ṭirāzī* (a combination fabric of silk warp and woof of another material with embroidered bands) (Ibn Abī Uṣaybiʿa, ed. Müller, i, 136). Certainly from the time of Hārūn al-Rashīd onwards, the symbolic importance of *ṭirāz* as a caliphal prerogative was well established and was accepted, then and later, as a medium for extending the prestige of the court to favoured individuals. The importance of *ṭirāz* and in this connection was subsequently described by Ibn Khaldūn:

> It is part of royal and governmental pomp and dynastic custom to have the names of rulers or their peculiar marks [*ʿalāmāt*] put on [*tursam*] on the silk.... The writing is brought out by weaving a gold thread or some other coloured thread of a colour different from that of the fabric itself into it. [Its execution] depends upon the skill of the weavers in designing and weaving it. Royal fabrics are embellished with such a *ṭirāz*, in order to increase the prestige of... those whom the ruler distinguishes by bestowing on them his own garment when he wants to honor them or appoint them to one of the offices of the dynasty (tr. Rosenthal, ii, 65-6).

Supervision of the *ṭirāz* factories was so important to the caliph because it was considered one of his royal prerogatives to have his name on the textiles produced in them, just as it was to have his name on the *sikka* or coinage and pronounced in the *khuṭba*. Omission of the ruler's name from any or all of these was tantamount to rebellion. For example, al-Ma'mūn dropped his brother al-Amīn's name from the *sikka* and the *ṭirāz* when he began his revolt in 194/809-10 (Ibn Taghrībirdī, ed. Juynboll and Mattes, i, 551-2), and Ibn Ṭūlūn dropped the regent al-Muwaffaḳ's name from the *ṭirāz* and the *khuṭba* in 269/882-3, when he broke relations with Baghdād (Ibn al-Athīr, Būlāḳ 1290, vii, 143). This latter act was of particularly far-reaching consequence since the annual caliphal gift of an inscribed covering to the Kaʿba (*kiswa*) was produced in the *ṭirāz* factories of Egypt, and the absence of the regent's name would be seen by pilgrims from all around the *dār al-islām*. Serjeant has suggested that it was perhaps at this time that Kaʿba coverings began to be produced in the East, although it is only three generations later that Tustar (Shustar) in Persia is first mentioned as the place where the coverings were produced (*Islamic textiles*, 20, 42; al-Iṣṭakhrī, 92).

Despite the political importance of caliphal inscriptions on the Kaʿba coverings, it is by no means clear that such inscriptions featured prominently on *khilaʿ* distributed by the caliph during the first century of the ʿAbbāsid period. Bierman has pointed to the universal silence of the numerous texts describing the bestowal of robes of honour at this time (*Art and politics*, 20-1), whereas for the later Fāṭimid period such descriptions frequently include details on the political inscriptions. On the other hand, the literary sources do mention that, starting with the reign of Hārūn al-Rashīd, when the Persian secretarial class were the trendsetters in all matters of high culture and good taste with their polite educational ideal of *adab* [*q.v.*], it became the fashion to have verses of poetry embroidered onto the garments. The poet Abu 'l-ʿAtāhiya presented al-Rashīd on the occasion of the Nawrūz festival with a perfumed *thawb* with verses embroidered on its borders (Ibn Khallikān, tr. de Slane, i, 203). The *adīb* al-Washshā' (d. 325/936 [*q.v.*]) devotes a chapter of his book *On elegance and elegant people* to "What [verses] may be found [inscribed] on shirt tails [*dhuyūl al-aḳmiṣa wa 'l-aʿlām*] and on pieces of embroidery on cloaks and sleeves (*wa-ṭuruz al-ardiya wa 'l-akmām*)," another to the verses on headdresses and head bands (*karāzin wa-ʿaṣā'ib*) and a third to the verses on belts, pantaloon drawstrings and scarves (*zanānīr wa-tikak wa-manādīl*) (*K. al-Muwashshā aw al-ẓarf wa 'l-ẓurafā'*, Cairo 1362/1953, chs. 42-4, pp. 219-30).

iv. *The institution under the Fāṭimids.* The Fāṭimids had adopted the use of inscribed textiles even in North Africa, and clearly brought a number of these fabrics produced in Ifrīḳiya with them when they came to Egypt, as is attested by the presence of *ṭirāz* fabrics dating from the North African period in a Fāṭimid funerary site in Fusṭāṭ (Gayraud, 1995). In the North African period, a man had asked for a garment (*thawb*) of the caliph's to use as a funeral shroud because of its *baraka* (*Sīrat al-Ustādh Djūdhar* [*Djawdhar*], 138),

although there is no indication that the textile was inscribed. The evidence (which is admittedly meagre) suggests that the mass production of textiles inscribed with the caliph's name and given as a robe of honour (*khil'a*) may have developed as the demand for robes of honour increased and the caliph abandoned the practice of giving a piece of his own clothing in favour of bestowing a garment that had been produced in the *ṭirāz* factories. Already in the reign of al-Ẓāhir, a man who aspired to both a larger *iḳṭā'* and greater prestige requested a robe and skullcap from the caliph, specifying not only garments that were the caliph's own (*thiyāb min thiyābihi... wa-shāshiyya min shawāshīhi*) but that the caliph had actually worn (*thiyāb min thiyāb mawlānā ... allatī yalbisuhā*) (al-Musabbiḥī, *Akhbār Miṣr*, 57-8).

The flourishing of the *ṭirāz* industry under the Fāṭimids is attested both by the large number of surviving inscribed textiles and by the literary and documentary records. The chronicles and administrative histories which survive establish that *ṭirāz* production was an integral part of the Fāṭimid bureaucracy. There is little information on the structure of the *ṭirāz* administration for the earlier Fāṭimid period, but for the later period we have not only the accounts of Ibn Mammātī and al-Makhzūmī but also the excerpts from Ibn al-Ṭuwayr preserved by al-Ḳalḳashandī and al-Maḳrīzī. The head of the *ṭirāz* institution was a high-ranking court official, the only one to receive his *khil'a* in a private ceremony according to Ibn al-Ṭuwayr, who devotes a section in his chapter on the Fāṭimid *dīwāns* to the *ṭirāz* (*Nuzhat al-muḳlatayn fī akhbār al-dawlatayn*, ed. A.F. Sayyid, Cairo 1992, 101-4).

The sums spent in the *ṭirāz* were apparently quite large, though the sparse information in the chronicles makes systematic tracking of the expenditures impossible. Ibn al-Ma'mūn al-Baṭā'iḥī reports that the expenditures for costumes (including gold thread) in the year 516/1122 were nearly 20,000 dīnārs (*Akhbār Miṣr*, ed. Sayyid, 48 ff.). Ibn al-Ṭuwayr put the amount spent on costumes for various court occasions at 10,000 dīnārs a year (*Nuzhat al-muḳlatayn*, 75, 104).

The management of the *ṭirāz* was closely related to that of the mint (*dār al-ḍarb*) for two reasons. First, *ṭirāz* involved the same prerogative of inscribing the caliph's name as *sikka*. Indeed, the inscription of textiles (*ṭirāz*) is mentioned alongside the minting and inscription of coins (*sikka*) among the prerogatives that the *wazīr* al-Ma'mūn al-Baṭā'iḥī restored to the caliph al-Āmir after the fall of the *wazīr* al-Afḍal b. Amīr al-Djuyūsh. Second, the *ṭirāz* factories used large quantities of gold, which was spun into thread under the careful supervision of the mint. The close association of the mint and *ṭirāz* is clear in both Ibn Mammātī (*Kitāb Ḳawānīn al-dawāwīn*, 330-3) and al-Makhzūmī (*Kitāb al-Minhādj fī 'ilm kharādj Miṣr*, 30-3), who describe the mint (*dār al-ḍarb*) and the *ṭirāz* sequentially. The production of gold thread is specifically mentioned under the discussion of each institution. The elaborate inventory preserved in Ibn al-Ma'mūn records not only the amount of gold in each garment, but also the labour charges for spinning the gold thread.

Abundant material from the Cairo Geniza (particularly business letters, marriage contracts and trousseaux) documents the vitality of the textile industry that was the cornerstone of the Egyptian economy (S.D. Goitein, *A Mediterranean society*, i, Berkeley, etc. 1967, 101 ff.; Gladys Frantz-Murphy, *The agrarian administration of Egypt from the Arabs to the Ottomans*, 1986). Fāṭimid Egypt had five major *ṭirāz* centres: Alexandria, Tinnīs, Dimyāṭ (Damietta), Dabīḳ and the Fayyūm. These were not just centres of *ṭirāz* but also more generally of textile production. The overwhelming majority of *ṭirāz* fabrics with dated or datable Kūfic inscriptions are from Egypt, and nearly all are of linen or other light-weight fabrics. Egypt was especially famous during the Fāṭimid period for its flax cultivation and finished linen textiles; Goitein and Stillman identified 22 different varieties of linen, mostly named after localities, rulers, or type, in the Geniza documents (Goitein, *op. cit.*, i, 104-5; Y.K. Stillman, *Female attire of medieval Egypt, according to the trousseau lists and cognate material from the Cairo Geniza, passim*). The *ṭirāz* institution under the Fāṭimids was not merely a court institution but was integrally connected to the economy as a whole. This is particularly true in view of the fact that fine clothing was a valuable commodity in the mediaeval Mediterranean economy, and high-quality textiles, even after having been worn, had considerable cash value. Textiles of various kinds often constituted a major portion of bridal trousseaux. *Ṭirāz* textiles were classified as either *khāṣṣa* (exclusively for the court) or *'āmma* (available for public purchase). The sale of *ṭirāz* textiles to the public was a significant source of revenue for the Fāṭimid caliphs. In the late 4th/10th century, the largest *ṭirāz* factories apparently provided an income of more than 200,000 dīnārs each day. Income from the *ṭirāz* for the later Fāṭimid period is not reported, but must have been considerable, given the dramatic increase in *ṭirāz* production at court and the penchant of the middle and upper classes for imitation.

The wealthier classes imitated the court by wearing garments with inscribed bands just as they addressed each other respectfully by their *kunyas* or used the honorific titles that had become commonplace by the 5th/11th century. In a 12th-century Geniza document, the Jewish India trader Abraham b. Joseph b. Abraham b. Bundār b. Ḥasan ordered a *ṭirāz* turban with his son's name embroidered on it as a gift for the latter (Stillman 1972, 18). The fashion of élite imitation of the court resulted ultimately in the production of fake *ṭirāz* with pseudo-inscriptions, i.e. of textiles with decorative bands that merely create the appearance of an inscription (Gervers, *Rags to riches*, 28). The *ṭirāz* institution by the late 6th/12th century, then, had developed far beyond its original political uses at court into a widespread social and economic phenomenon. This is confirmed by the oft-quoted passage in al-Dimashḳī's *K. al-Ishāra ilā maḥāsin al-tidjāra* (later 6th/12th century), in the section devoted to the two fine linens, *dabīḳī* and *sharb*, which often formed the ground fabric for *ṭirāz*: "People's tastes vary in regard to the *ṭirāz* borders and the ornamented embroideries, but they are agreed in the preference of that which is of the finest thread, and closest of weave, of the purest white, of the best workmanship, red, and golden" (tr. Serjeant, *Islamic textiles*, 140).

3. The term's use in architecture.

Ṭirāz came to architecture from textiles at an unknown date, but no earlier than the Fāṭimid period (10th-12th centuries), and seems to have remained in use until the early Ottoman period in Egypt and Syria. Oddly, no Arabic dictionary records the architectural application of the term, which nonetheless frequently appears in Ayyūbid and Mamlūk *waḳf* [*q.v.*] documents and in Mamlūk primary sources such as al-Maḳrīzī's *Khiṭaṭ* (noted in *EI*[1], art. *Ṭirāz*). Like its prevailing meaning for textiles as an epigraphic band embroidered on the sleeves of robes of honour, *ṭirāz* in architecture designates any inscription band. It may appear on the inside or the outside of the building: as a frieze running along a wall, on the side of doors, above or around a window, or around the drum of a dome. It may be executed in different media: carved in stone, moulded in stucco, or painted or gilded on wood. A *ṭirāz* may include Ḳur'ānic verses, the name and titles of the patron and the superintendent of construction (*shādd*), the date of building, sometimes the name of the master builder or decorator, and in a few instances, poetic citations or an abbreviated text of the building's *waḳf* document (Laila Ibrahim and M.M. Amin, *Architectural terms in Mamluk documents*, Cairo 1990, 76).

Bibliography: Given in the article.

(NASSER RABBAT)

TĪRE, modern Turkish Tire, a town of south-western Anatolia, in the southern part of the Küçük Menderes valley, 67 km/40 miles south-east of Izmir (lat. 38° 64' N., long. 27° 45' E., altitude 108 m/350 feet), in early Turkish times a town in the *beylik* of the Aydïn-oghullarï [see AYDÏN; AYDÏN-OGHLU].

The present town presumably occupies the site of the ancient Arcadiopolis, later called Teira (i.e. "town", e.g. in Thya-teira; cf. W.M. Ramsay, *The historical geography of Asia Minor*, 104, 114). In the Byzantine period the town appears as Thyrea (Θύρεα) and Thyraia (Θύραια: cf. Ducas, 38, 73, 97, 109,
Ṭirāz bands on sleeves, ms. *Maḳāmāt* of al-Ḥarīrī, B.N. arabe 5847, fol. 58b. Probably ʿIrāḳ, 634/1237. Courtesy of the Bibliothèque Nationale, Paris.

175, 196) and repeatedly plays a part in history. Travellers like Ibn Baṭṭūṭa (ii, 307-8, tr. Gibb, ii, 444), who went via Bīrge to Tīre, which lay in the midst of orchards, gardens, and streams in the land of the "Sultan of Bīrge", i.e. of the Aydîn-og͟hlu, or the adventurous Catalonian chronicler Ramon Muntaner (sect. 25), passed through Tīre. When in 1403 Tīmūr advanced against the town, the inhabitants fled to Izmir (cf. Ducas, 38, 97, 109). After the Ottoman annexation of the principality of the Aydîn-og͟hlu in 830/1426, Tīre became the capital of a *sand̲j̲aḳ* of the empire. It plays no particular part in later history; it was a mint down to the 10th/16th century and is occasionally mentioned in connection with risings (cf. J. von Hammer, *GOR*, iv, 398 n., v, 50 n.). In Tīre is the tomb of the celebrated scholar ʿAbd al-Laṭīf b. ʿAbd al-ʿAzīz b. Firis͟hte (Ar. Ibn al-Malak, Turk. Firis͟hte-og͟hlu, d. according to the *Sālnāma* of Aydîn of 1302, 239, in 799/1396), known as the author of a once much-used Turkish dictionary in verse (*Lug͟hat-i Firis͟hte-og͟hlu*) and of a commentary on the principles of jurisprudence, *Manār al-anwār* of al-Nasafī [*q.v.*]. He taught there in a *medrese* which bears his name and is still in use. Tīre was also the birthplace of several Ottoman authors, e.g. S͟hayk͟h Ḥaydar b. Saʿd Allāh and Molla Naṣr Allāh al-Rūmī, and the scene of activity of *ḳāḍīs* who also played a part in literature (F. Babinger, *GOW*, 146: D̲j̲arrāḥ-zāde). Tīre is also mentioned as a place of banishment; the versatile historian S͟hānī-zāde, for example, ended his life here (cf. *ibid.*, 346).

The earlier European travellers rarely visited Tīre. The chaplain of the English factory in Smyrna, Edmund Chishull (d. 1733), is one of the few who visited Tīre (cf. *Travels in Turkey and back to London*, London 1747, 19, and Thos. Smith, *Septem Asiae Ecclesiarum notitia*).

It was then thought that Tīre represented Thyáteira (= Aḳ-ḥiṣār), one of the "Seven Churches of Asia". Ewliyā Čelebi [*q.v.*] describes Tīre in his *Seyāḥat-nāme*, ix, Istanbul 1935, 159 ff. The town does not seem to possess any antiquities. Mention may be made of the library of 1,325 volumes (including the holograph of the above-mentioned commentary of Firis͟hte-og͟hlu), presented by Ned̲j̲īb Pas͟ha, governor of Bag͟hdād. Down to the Turko-Greek exchanges of population after the First World War, Tīre had about 15,000, mainly Greek, inhabitants (see V. Cuinet, *La Turquie d'Asie*, iii, 508 ff.), who were mainly occupied in carpet-weaving and the cultivation of the vine.

Present-day Tire is the chef-lieu of an *ilçe* in the *il* or province of Izmir; its population *ca.* 1970 was 28,000.

(F. Babinger*)

TIREBOLU, a town on the Black Sea coast of Turkey, in the province (*il*) of Giresun, and also the centre of a county (*ilçe*). The town lies 80 km/50 miles to the west of Trebizond in lat. 41° 01' N., long. 38° 49' E.

Originally a Milesian colony of the 7th century B.C. and called Tripolis, it has had little importance because of the port's lack of shelter and difficult communications with the interior, along the steeply-rising sides of the Harşit valley (ancient Philabonites). From 1204 it was a personal fief of the Great Comneni, emperors of Trebizond [see ṬARABZUN]. It was mentioned by Clavijo, and captured by Meḥemmed II at the time of the conquest of Trebizond in 1461. After the Ottoman conquest, the town, called Driboli in documents, came within the *nāḥiye* of Kürtün, settled by the Čepni Turkmen tribe, which had occupied the hinterland of Tirebolu from the 14th century onwards. The census of 891/1486 (BBK, Tapu tahrir no. 828, p. 592) enumerated for the *ḳalʿa* of Tirebolu 67 Christian hearths (and 5 widows) but no Muslim ones. In 921/1515 (*ibid.*, no. 52, pp. 609-13) there were 211 older and 60 new Christian hearths (plus 6 bachelors and 4 widows) and 4 Muslim hearths, but no Christian villages in the hinterland. Finally, in 961/1553 (*ibid.*, no. 288), there were 320 Christian hearths and 15 Muslim ones. When Ewliyā Čelebi passed through in 1050/1640, he found an ancient rectangular fortress and a very flourishing town inhabited by Greeks (*Seyāḥat-nāme*, i, 80). Tournefort (1701) called it a village; it seems to have been the seat of an *aʿyān* when local disputes of petty chiefs rent the region at the opening of the 19th century. W.J. Hamilton estimated the population in 1834 at 400 Muslim families and 100 Christian ones (*Researches in Asia Minor*, London 1842, i, 253-7), and Hommaire de Hell in 1846 estimated 450 Muslim families and 150 Christian ones (*Voyage en Turquie et en Perse*, Paris 1859). Cuinet gives for the early 1890s 8,000 inhabitants (5,600 Muslims, 2,000 Greek Orthodox, 400 Gregorian Armenians (*La Turquie d'Asie*, i, 53). At that time the town had 8 mosques, 2 Greek churches and one Armenian one, 350 booths and shops, 2 *k͟hān*s and a *ḥammām* (*ibid.*, i, 54-5). The region produced an average of 5,000 tons of nuts. During the First World War, the Russian advance of 1916 reached the right bank of the Harşit river and caused the Muslim population to flee, followed by the deportation of the Greek population from 29 November 1916 to Şebinkarahisar. In the 1927 census, Tirebolu had a mere 3,375 inhabitants, and it was only in the 1980s that it passed the 1914 figure. Today, the town is the centre of an agricultural region in which tea planting has partially replaced nut growing.

(St. Yerasimos)

TIRḤĀLA, the Ottoman Turkish name for the Greek town of Trik(k)ala in western Thessaly [see TESALYA].

The Byzantine citadel of Trikala is built on the acropolis of ancient Trikki on the Lithaios river, in the northwest of the Thessalian plain; not far from it was the oldest shrine of Asclepios known in Greece. The town prospered in early times from its situation at a crossway for communications. Procopius mentions

the restoration of the town's walls in Justinian's time. The ancient name Trikki survived in ecclesiastical geography, with the bishopric of Trikki attached to the metropolitanate of Larissa from the 4th century onwards. The form Trikkala first appears in the 12th century in Anna Comnena's *Alexiad*.

The town probably fell into Ottoman hands in the time of Bāyezīd I in 1395-6. The presence of Ewrenos Beg in the conquest of Thessaly is not certain, even if the sources refer to one of his descendants, Aḥmed Ewren-oghlu, as *sandjak beg* of a large *sandjak* of which Tirḥāla was the capital [see EWRENOS OGHULLARI]. In the 14th century it had been the flourishing capital of the Greco-Serbian state of Western Thessaly under Simeon Uresis, half-brother of Stefan Dušan, and it formed part of the domains of the great noble Turkish family of the Turakhān-oghlu.

Turakhān Beg (d. 860/1456 [*q.v.*]) settled Muslim colonists on the plains and granted privileges to the Greek population. As an administrative and commercial centre, the town attracted a Turkish population, and in 1520 Tirḥāla was one of the twelve towns of the hinterland with an annual revenue above 100,000 *akčes*. From the works of Turakhān Beg and his son ʿÖmer (d. 889/1484), the town acquired the appearance of a typical Ottoman town, with mosques, *medreses*, a *ḥammām*, *ʿimāret*, *khān* and *karwānsarāy* extending beyond the citadel and the Varoussi (Varosh) quarter which remained Christian. The market, with workshops and booths, stretched further eastwards to where was constructed in the mid-9th/15th century the Turakhān Beg or Pazar Djāmiʿi adjacent to the great cemeteries.

In the census of 859/1454-5 Tirḥāla had *ca.* 2,453 inhabitants (251 Muslim families and 9 widows, and 212 Christian families and 73 widows). In 912/1506, 3,100 persons were counted, including 260 Muslim families, 310 Christian ones and 19 Jewish ones, their first appearance here, although Byzantine sources of the 14th century mention Jews in the outskirts of Tirḥāla, and Turakhān Beg's testament of 850/1446 mentions a Jewish quarter of Y(ah)ukdi outside the town. Between 926/1520 and 945/1538, 301 Muslim families were counted, 343 Christian ones and 181 Jewish ones.

The oldest description of the Ottoman town is that of Ewliyā Čelebi in the later 11th/17th century, who noted 16 Muslim quarters and 8 Christian ones, with a total of 2,300 houses. He mentions eight mosques, the oldest being that of Ghāzī Turakhān Beg (built in 895/1489-90 according to its inscription), and the most important one that of ʿOthmān Shāh Beg, of unknown date but which must have been built by the famous architect Sinān [*q.v.*] around 1550-60. Ḳara ʿOthmān Shāh was Süleymān the Magnificent's nephew and governor of Thessaly, and died at Tirḥāla in 974/1567, being buried in a mausoleum by the mosque. The latter has been restored and is the sole one remaining in the town today. Ewliyā gives what is probably an exaggerated number for the shops, 1,000, and does not mention the *bezesten*; yet old authorities describe an imposing stone building, locked and guarded at night, which corresponds to the *bezesten* demolished at the beginning of the 20th century. There were also four *ḥammāms*, six *tekkes* and many fountains. Famous persons connected with Tirḥāla included the Turkish historian Aḥmed Para Para-zāde, buried there in 968/1560, and its *ḳāḍīs* included ʿAṭāʾī and Weysī. In 1601 the bishop of Trikki was Dionysios the Philosopher, head of an abortive attempt at rebellion by the Christians of Yannina.

The town was destroyed by a great fire in 1749. In 1771, during the rising of Christians at the time of the 1768-74 Russo-Turkish war, 4,000 Albanian irregulars sacked the town and burnt down the market and 500 shops. At this time, the town had 25,000 inhabitants, the same figure given by Pouqueville at the time of the Greek Revolt. Ami Boué visited Tirḥāla just before 1840 and attributed to it 10,000 inhabitants, comprising Muslims, Greeks, Gypsies and a few Albanians. On the basis of the descriptions of numerous 19th century travellers, plus cartographical material from 1885, the plan of the 19th century town can be reconstructed: it had seven mosques (four of them mentioned in the *sāl-nāme* of the *wilāyet* of Yānya (1288/1871), a synagogue, six *tekkes*, etc.

The last Ottoman census (1294/1877-8) listed 25,000 inhabitants and 2,500 buildings for the *sandjak* of Tirḥāla. From 1881, the town became part of Greece, and a census then numbered 5,563 persons in the town itself. An urban plan of European type was put into force in the 1930s, numerous old buildings were destroyed, and the town has now lost its mediaeval character. From 20,200 inhabitants in 1926, the town had over 50,000 in 1991.

(ALEXANDRA YEROLIMPOS)

TIRHUT, often referred to as Mithila in Indian epic, historic name of the northern tract of the present Indian state of Bihar (lat. 25° 28'-26° 52' N., long. 84° 56'-86° 46' E.; roughly 6,343 sq. miles) bordering Nepal, comprising Darbhanga (Persian *Dār-i-Bang* "gateway to Bengal"), Muẓaffarpur and the adjoining districts, sometimes extended as far eastwards as the river Mahananda (Purnabvaba) in Bengal. Located in the present district of Champaran, Simarāon was one of the oldest capitals of the region. The Pala empire (*ca.* 750-1161) of Bengal dominated the area from time to time. Several Hindu dynasties ruled the Kingdom of Mithila, such as the Karṇāta 1087-1325, the Oinwāra 1325-1532 and the Khaṇḍawāla (founded by Maheśa Thākura in 1556), who took Bhoura as their capital.

Because of its strategic location on the central route

between North India and Bengal, the green, fertile land of Tirhut (known as the granary of Bihar) was one of the earliest regions in Eastern India to be known to the Muslims. Its south-eastern part came under Muslim sway when Bengal was conquered by Bakhtiyār Khaldjī in 1204. Narasimhadeva (*ca.* 1188-1227), the third king of the Karṇāta dynasty, agreed to pay tribute to this newly-emerged power, but this did not save Tirhut from further military pressure from the Muslim rulers of Bengal, Bihar, Oudh and Dihlī. Islamic inscriptions in Tirhut, such as a citadel inscription dated 692/1292 from Maheśwara, Mungher or Mungīr [*q.v.*] (see Mohammad Yusuf Siddiq, *Arabic and Persian texts of the Islamic inscriptions of Bengal*, Watertown, Mass. 1992, 23-5), suggest that Muslim settlement began in this region as early as the 13th century. Though Tirhut was annexed to Muslim territory from time to time, its Hindu kingdom remained as a tributary vassal state for centuries until the transfer of the Dīwānī to the East India Company in 1765, when it lost its power completely. Though a large number of Muslims from Tirhut emigrated to Pakistan after 1947, a sizeable Muslim population still exists in the region.

(MOHAMMAD YUSUF SIDDIQ)

AL-ṬIRIMMĀḤ, meaning in Arabic "tall", or "proud", the name of at least four persons from the 1st century of the Hidjra. On the basis of al-Āmidī's (d. 370/980) *Mu'talif*, Cairo 1381/1961, 'Izzat Ḥasan's Introduction to the *Dīwān* of al-Ṭirimmāḥ b. Ḥakīm (²Aleppo and Beirut 1414/1994) and, above all, Salīm al-Nu'aymī's article *al-Ṭirimmāḥ*, in *Publics. of the Arab Academy*, Baghdād (1964), 401-22, four persons of this name can be disentangled:

1. AL-ṬIRIMMĀḤ AL-AKBAR, or Ḳa'ḳa' b. Nafr or Ibn Ḳays al-Ṭā'ī, the paternal uncle of al-Ṭirimmāḥ al-Ḥakīm or rather, his father's uncle. According to al-Balādhurī, *Ansāb*, and al-Ṭabarī, *Ta'rīkh*, in al-Nu'aymī, 412, he is said to have been born in Syria, migrated to Kūfa, where an old man from the Banū Taym Allāh b. Tha'laba reportedly initiated him into Khāridjism and where he is finally said to have written a poem wrongly attributed to al-Ṭirimmāḥ al-Ḥakīm (*Dīwān*, 201-2, no. 22).

2. AL-ṬIRIMMĀḤ B. 'ADĪ b. 'Abd Allāh al-DJUBAYRĪ, also called al-Ṭirimmāḥ al-Akbar. According to Ibn 'Asākir, *T. Dimashk*, vii, 53, in al-Nu'aymī, *loc. cit.*, he is also said to have been a Khāridjite. However, in al-'Ashshāsh, *Ash'ār al-tashayyu'*, Beirut 1997, 223-4, he has been rightly placed amongst the Shī'ī poets.

He is said to have been al-Ḥusayn's guide and to have fought at Karbalā' in 61/680, and several ancient authors (Abū Mikhnaf, al-Ṭabarī, Ibn Shahrāshūb and Ibn Kathīr) rank him amongst al-Ḥusayn's faithful partisans. A *radjaz* poem attributed to him (al-'Ashshāsh, 223-4) confirms his Shī'ī allegiance. Al-Nu'aymī also adds three verses which he is said to have composed against al-Farazdaḳ, and thus denies the poetic exchange and satires between al-Farazdaḳ and al-Ṭirimmāḥ al-Ḥakīm, even though in the *Dīwān* of the latter is a long poem (257-8) in the same rhyme and metre.

3. AL-ṬIRIMMĀḤ B. DJAHM AL-ṬĀ'Ī OR AL-SINBISĪ, from the Banū Sinbis of Ṭayyi' or al-Uḳdī from a woman, Uḳda, also of the latter tribe. He is also called al-A'war, the one-eyed, and al-Shinnī (not to be confused with another poet, Bishr b., Munḳidh al-Shinnī, d. 50/670). Al-Āmidī attributes to him, *Mu'talif*, 48, a poem in *basīṭ* metre and a *radjaz* poem.

4. AL-ṬIRIMMĀḤ B. ḤAKĪM b. Ḥakam b. Nafr b. Ḳays ... b. al-Ghawth b. Ṭayyi', generally known as al-Ṭirimmāḥ b. Ḥakīm al-Ṭā'ī, the best-known of the four. He stemmed from a well-known family, the Thu'al, of the Yemeni tribe of Ṭayyi' [*q.v.*], and his forebear Ḳays was a maternal cousin of the famed Ḥātim of Ṭayyi' [*q.v.*], said also to have come to the Prophet at Mecca in 9/630-1 to render homage, hence counted amongst the Companions.

(a) *Life*.

His exact birth date is unsure, but must have been *ca.* 45/660 in al-Shām (and not in the Sawād of 'Irāḳ, as Blachère, *HLA*, 530, correctly pointed out). Al-Nu'aymī, 413, however, basing himself on Ibn Ḳutayba and al-Marzubānī, thought that it was al-Ṭirimmāḥ al-Akbar who was born in Syria. In any case, it seems to be generally agreed that al-Ṭirimmāḥ al-Ḥakīm was amongst troops sent by 'Abd al-Malik against rebels in 'Irāḳ, probably *ca.* 70/689, then staying in Kūfa to study, where he became a noted poet and orator. Several of his biographers state that he became affected by Khāridjism *ca.* 65/684, some of them assigning him precisely to the Azāriḳa or Ṣufriyya [*q.vv.*]. Yet al-Nu'aymī, basing himself on internal criticism of the poems and on external biographical information, seems to be correct in querying or denying his Khāridjism. At all events, he then worked at Kirmān and Rayy in Persia, reportedly in the latter place as a school master (*mu'addib ṣibyān*, cf. al-Djāḥiẓ, *Bayān*, ii, 257).

Like most of the great Umayyad poets, al-Ṭirimmāḥ frequented certain of the Umayyads' governors, notably the Muhallabids [*q.v.*], including Yazīd b. al-Muhallab, governor of Khurāsān for 'Abd al-Malik and Sulaymān; he relates in his verses Yazīd's combats in Djurdjān and Ṭabaristān and mourns his death. He was also connected with Yazīd's son Makhlad, also appointed governor of Khurāsān, this time by 'Umar II in 100/718, but who died shortly afterwards. His relationship with the Muhallabids, of Yemeni stock like himself, made him the mouthpiece of Yemeni aspirations and attacker of Ḳaysī groups like the Tamīm, especially on the killing of Ḳutayba b. Muslim [*q.v.*] by Ḳaysīs in Khurāsān, contrasting these with the faithful Yemenis (cf. Blachère, *HLA*, 531). He was further connected with the governor of 'Irāḳ during 105-20/724-38, Khālid b. 'Abd Allāh al-Ḳasrī [*q.v.*], also Ḳaḥṭānī in *nasab* and a fierce opponent of the Khāridjites. All these connections confirm that al-Ṭirimmāḥ can hardly have been himself a Khāridjite, but was, rather, a tribal poet. Also, the fall of Yazīd b. Muhallab, in part through Tamīmī treachery, put him in opposition to al-Farazdaḳ [*q.v.*], from Mudjāshi' of Tamīm, though it seems that after a trenchant satire by al-Ṭirimmāḥ (*Dīwān*, 66-8), al-Farazdaḳ abandoned the fight. Al-Ṭirimmāḥ was also connected, by a great friendship, with the Shī'ī poet al-Kumayt [*q.v.*], and is said to have had links with the *radjaz* poet Ru'ba b. al-'Adjdjādj (d. 145/762 [*q.v.*]), but, as pointed out by Krenkow in his *EI*¹ art., followed also by Sezgin, *GAS*, ii, 351, al-Ṭirimmāḥ died before Ru'ba acquired his fame.

We lack firm information on the poet's last years and date of death. A *khabar* given in the *Aghānī* states that the *ḳāḍī* of Kūfa Ibn Shubruma (d. 144/763), apparently a friend of al-Ṭirimmāḥ's, saw the latter's

funeral cortège, but no date is given. Sezgin thought that a probable date was 126/743. The editor of his *Dīwān* states, without supporting reference, that he died at Kūfa. Of the poet's family, we know of his wife Salm(ā), his three sons and a grandson Amān b. Ṣamṣāma, also a poet and grammarian and in the service of the Muhallabids in Ifrīḳiya until Ibrāhīm b. al-Aghlab thrust him aside there, probably because of his grandfather's satires on Tamīm.

(b) *Poetry*.

Al-Ṭirimmāḥ's *dīwān* is said by Ibn al-Nadīm to have had several recensions, notably by Ibn al-Sikkīt, Thaʿlab [*q.vv.*] and al-Ṭūsī (d. after 250/864); al-Ḳālī [*q.v.*] introduced it to al-Andalus when he arrived in Cordova in 330/941; and Ḥādjdjī Khalīfa lists it. F. Krenkow was the first to publish it (GMS, London 1927), with an English translation, after a Spanish ms. with al-Ṭūsī's recension in a Kūfan transmission. Using this and a Turkish ms. of the 7th-8th/13th-14th century, ʿIzzat Ḥasan republished it at Damascus in 1385/1968 and then in Beirut-Aleppo in 1414/1994. This scholarly satisfactory edition has a good introduction on the life of the poet and a thematic analysis of his poems, and, at pp. 107-303, his *dīwān* with 1,443 verses (against 800 in Krenkow's ed.), plus a *dhayl* (305-31) of some 40 verses gleaned from other sources by the editor, but it lacks an index of rhymes. In this edition there is one *radjaz*, seven short fragments of 2 to 6 verses, and 29 poems, some very long, with 118, 92, 84, 81 and 77 verses (nos. 25, 20, 13, 7 and 12). Blachère suggested, *HLA*, 332, that the length of these poems suggests the hypothesis of an early fixing of the text, or even of a written, and not oral, transmission.

Al-Ṭirimmāḥ uses nine metres, sc. *ṭawīl* (15 times), *kāmil* (6), *basīṭ* and *wāfir* (5), *khafīf* (2) and *sarīʿ*, *radjaz* and *mutaḳārib* once each, showing the poet's classicism in this respect, and regarding his rhymes, the rarity of those in *bāʾ*, *tāʾ*, *fāʾ* and *ḳāf* is surprising given the frequency of these in classical poetry. His rather Bedouin style has often been remarked upon, whilst his use of rare words and difficult turns of phrase explain the pedantic allure of his verses, but a careful reading of his work shows a certain heterogeneity in style and language which are, taking everything into account, traditional.

Likewise his genres and themes. Khāridjite touches are very few, only in one poem and two short fragments, and Blachère, *loc. cit.*, concluded that, as might have been expected, everything which had the mark of militant Khāridjism has disappeared; but as noted at the outset, al-Nuʿaymī thinks it improbable that he was ever a Khāridjite anyway. The second genre to be discerned is personal and tribal satire, above all against al-Farazdaḳ and Tamīm (notably no. 4, in 53 verses). Then there is panegyric poetry, again personal and tribal, devoted to Yemen and the Muhallabids, above all, to Yazīd (in particular, no. 25, in 118 verses, is dedicated to him). *Fakhr* poetry is naturally frequent, as is poetry descriptive of Bedouin life (e.g. no. 12, in 77 verses). There is an elegy on Yazīd, and wisdom and *zuhd* poetry. Finally, one may note that, if *ghazal* poetry properly speaking is absent, there is one piece, no. 7 of 81 verses, expressing in lyric style his nostalgia and affection for his wife Salmā, whom he left in Kūfa when he went to Kirmān and Khurāsān.

In conclusion, in his *dīwān*, al-Ṭirimmāḥ shows himself as a tribal poet, like so many of his contemporaries, in the service of Yemen and of the Muhallabids without, however, forgetting his own family, wife and children. But the tradition is ancient and firmly stated, that many authors, fairly old ones and also modern and contemporary ones, classify him amongst the great poets of Khāridjism.

Bibliography: In addition to sources mentioned above, such as Blachère, *HLA*, 530-4; Sezgin, *GAS*, ii, 351-2, ix, 280, with recent bibl.; and al-Nuʿaymī, *al-Ṭirimmāḥ*, see works in general on politico-religious poetry of the period, and especially those on Khāridjite poetry: Khalīl Mardam, *al-Ṭirimmāḥ al-Ḥakīm*, in *RAAD*, xii (1942), 48-56, 119-27; Suhayr al-Ḳalamāwī, *Adab al-Khawāridj*, Cairo 1945; Nāʾif Maḥmūd Maʿrūf, *al-Khawāridj*, Beirut 1983; Iḥsān ʿAbbās, *Shiʿr al-Khawāridj*, [2]Beirut 1984.

(F. Krenkow-[Taïeb El Achèche])

TIRMIDH, a town on the north bank of the Oxus river [see ĀMŪ DARYĀ] near the mouth of its tributary, the Surkhān river (lat. 37° 15' N., long. 67° 15' E.), now the town of Termez in the southernmost part of the Uzbekistan Republic.

As Samʿānī, who spent 12 days there, testifies, the name was pronounced Tarmīdh in the town itself (*K. al-Ansāb*, ed. Ḥaydarābād, iii, 41) which is confirmed by the Chinese Ta-mi (e.g. Hüan Tsang, tr. St. Julien, *Mémoires sur les contrées occidentales*, i, 25). Russian officers in 1889 also heard the pronunciation Termiz or Tarmîz (*Sbornik materialov po Azii*, lvii, 393, 399).

Tirmidh does not seem to have been touched by Alexander the Great and is not mentioned in Antiquity, although its foundation was afterwards ascribed to Alexander the Great. According to Ḥāfiẓ-i Abrū (text by Barthold in *al-Muẓaffariyya*, St. Petersburg 1897, 20), not only Tirmidh but also Burdāghūy, not far from it on the river, was built by Alexander; Burdāghūy is said to be a Greek word and to mean "inn" (*mihmān-khāna*) (? Greek τιαραδυχεῖον?).

At the time of the Muslim conquest, Buddhism was predominant in Tirmidh; there were 12 monasteries and about 1,000 monks there (Hüan Tsang, *loc. cit.*). Tirmidh was then under an important ruler who bore the title Tirmidh-Shāh (al-Ṭabarī, ii, 1147; Ibn Khurradādhbih, 39); there was a powerful fortress on the bank (al-Ṭabarī, *loc. cit.*). In the year 70/689-90, Tirmidh was conquered by Mūsā b. ʿAbd Allāh b. Khāzim, who had thrown off allegiance to the Muslim government, and was ruled for 15 years by him (cf. al-Balādhurī, *Futūḥ*, 417; al-Ṭabarī, ii, 1145). Only towards the end of 85/704 did ʿUthmān b. Masʿūd, by order of the governor al-Mufaḍḍal b. al-Muhallab, succeed in taking the town for the government. In this fighting and in later sieges and bridge-building, the island at Tirmidh, called in the Arab period Djazīrat ʿUthmān, played an important part; in the Özbeg period, the island was called Orta Aral or Orta Aralî ("middle island") (J. Senkowski, *Supplément à l'histoire générale des Huns* etc., St. Petersburg 1824, text, 20, and the passages quoted from manuscripts in Barthold, *K istorii orosheniya Turkestana*, St. Petersburg 1914). The worship of the prophet Dhu 'l-Kifl (al-Muḳaddasī, 291) mentioned as early as the 4th/10th century in Kālif, was transferred here; after this cult, the island is now called Aral Payghambar ("island of the prophet").

On geographical conditions in the 4th/10th century, see especially al-Iṣṭakhrī, 298, and al-Muḳaddasī, *loc. cit.* Tirmidh was an important port on the Oxus; boats were built and exported from there (al-Muḳaddasī, 325). Like Balkh, Tirmidh was noted for its soap (*op. cit.*, 324). Two natives of Tirmidh attained fame in Muslim literature: the author of the famous collection of traditions Abū ʿĪsā Muḥammad b. ʿĪsā al-Tirmidhī (d. 279/892 [*q.v.*]) and the traditionist and

mystic Abū ʿAbd Allāh Muḥammad b. ʿAlī al-Tirmidhī (d. 255/869 [*q.v.*]); cf. Brockelmann, I², 169-70. The latter's tomb, probably erected in the 9th/15th century, is now the finest building in the ruins of Tirmidh and one of the most beautiful in Central Asia. The inscriptions give us in part what we are told about Muḥammad b. ʿAlī in the *Tadhkirat al-awliyāʾ* (*Pers hist. texts*, v, 93) of Farīd al-Dīn ʿAṭṭār [*q.v.*], and in the *Nafaḥāt al-uns* (lith. Calcutta 1859, 77) of Djāmī [*q.v.*]; we are further told that he studied under the same scholars as al-Bukhārī, which al-Samʿānī (iii, 42) refers to Muḥammad b. ʿĪsā.

Tirmidh afterwards shared the political history of Khurāsān and Mā warāʾ al-Nahr, sometimes, as at the present day, the Oxus frontier and sometimes the connection with Balkh being of greater importance. Under Maḥmūd of Ghazna and his immediate successors, Tirmidh, like other dependencies of Balkh north of the Oxus, belonged to the empire of the Ghaznawids [*q.v.*]. When as a result of the battle in the desert of Ḳaṭwān near Samarḳand (5 Ṣafar 536/9 September 1141) rule over Transoxania passed to the Ḳara Khiṭāy [*q.v.*], Tirmidh remained in the hands of the Saldjūḳs, as is shown by the fact that Sultan Sandjar [*q.v.*] sought refuge here in 551/1156. Tirmidh was later in the possession of the Ḳara Khiṭāy, from whom it was taken in Dhu 'l-Ḳaʿda 601/June-July 1205 by ʿImād al-Dīn ʿUmar, governor of Balkh for the Ghūrids [*q.v.*] (Ibn al-Athīr, xii, 135). ʿImād al-Dīn's son Bahrām Shāh (the name occurs in al-Nasawī, ed. Houdas, 39) was appointed governor of Tirmidh. The very next year it was taken by the Khʷārazmshāh ʿAlāʾ al-Dīn Muḥammad, then allied with the Ḳara Khiṭāy, and handed over to the latter; according to Ibn al-Athīr (xii, 152), this news provoked great indignation against the Khʷārazmshāh throughout the Muslim world. According to Djuwaynī (ii, 64), the town was surrendered by the governor on the advice of his father to ʿUthmān, Khān of Samarḳand; in Mīrkhʷānd (*Hist. des sultans du Khorezm*, ed. Defrémery, Paris 1842, 51) the Khʷārazmshāh is mentioned in place of the Khān. After the fall of the empire of the Ḳara Khiṭāy, Tirmidh belonged to the empire of the Khʷārazmshāh; in the autumn of 617/1220 it was taken and completely destroyed by the Mongols. In Djuwaynī's narrative (i, 102) of the conquest, it is mentioned that half of the city walls are in the middle of the river.

A few years earlier, we have the first reference to the Sayyids of Tirmidh, whose importance was not affected even by the Mongol conquest. When the Khʷārazmshāh Muḥammad had quarrelled with the caliph al-Nāṣir, he proclaimed through the learned men of his empire that the ʿAbbāsids had appropriated by unjust means the power, which really belonged to the descendants of ʿAlī. ʿAlāʾ al-Mulk, one of the great Sayyids (*az sādāt-i buzurg*) of Tirmidh, was appointed caliph (Djuwaynī, ii, 97, 122). The appointment had no further consequences, and we know nothing of the life or end of this anti-caliph. In the *Taʾrīkh-i guzīda* of Ḥamd Allāh Ḳazwīnī (ed. Browne, 496) he is called Sayyid ʿImād al-Dīn Tirmidhī.

In the next century, Ibn Baṭṭūṭa (iii, 48, tr. Gibb, iii, 565) records happenings in the Čaghatayid [see ČAGHATAY KHĀNATE] kingdoms. ʿAlāʾ al-Mulk Khudāwand-zāde, a descendant of Ḥusayn b. ʿAlī, lord (*ṣāḥib*) of Tirmidh, is mentioned. He is said to have thrust himself upon the Khān Khalīl Allāh at the head of 4,000 Muslims and to have been appointed vizier by him. The members of his house are also called Khudāwand-zāde in later times (in the *Ẓafar-nāma* of Sharaf al-Dīn Yazdī, Calcutta 1885-8, i, 210, *passim*, and in the *Bābur-nāma*, facs. Beveridge, fol. 208, contracted to Khān-zāde. The full form is found in the oldest recensions of the *Ẓafar-nāma*, composed in Tīmūr's time, *Tekstî po istorii Sredney Azii*, St. Petersburg 1895, 131, 199). In the *Ẓafar-nāma*, the "Khān-zāde" Abu 'l-Maʿālī and his brother ʿAlī Akbar are mentioned several times; in 772/1371 Abu 'l-Maʿālī was banished for his share in a campaign against Tīmūr (*Ẓafar-nāma*, i, 231), but his exile was not of long duration; in the very next year we find him taking part in Tīmūr's campaign against Khʷārazm (*op. cit.*, i, 241). A Khān-zāde ʿAlāʾ al-Mulk is again mentioned later; Tīmūr stayed at his home on his return from his Indian campaign in 801/1399 and from the campaign in the west in 807/1404 (*op. cit.*, ii, 190, 593). In 892/1487 Aḥmad Mīrzā married a wife of the house of the Sayyids (*Bābur-nāma*, fol. 206).

In the time of Ibn Baṭṭūṭa, when Balkh was still in ruins, Tirmidh had already recovered from its destruction by the Mongols; the town was not rebuilt on its old site but two Arab miles from the river; it was a fine large town with prosperous inhabitants (iii, 56-7, tr. Gibb, iii, 570-1). Among the ruins of this town is the mausoleum described by A.A. Semenov (*Protokoli turk. kružka lyub. arkh.*, xix, 3 ff., with pictures) with the tombs of the Sayyids now called Sultan Sadat (probably *Sulṭān-i Sādāt*). The descendants of the Sayyids now live in the village of Ṣāliḥābād near Tirmidh. A. Semenov obtained from them a manuscript genealogy and history of their house ending on 4 Dhu 'l-Ḥidjdja 1046/29 April 1637. According to this ms., the Sayyid Ḥasan al-Amīr, son of the *amīr* Ḥusayn, came to Samarḳand in 235/849-50 and thence went to Balkh and Tirmidh in 246/860-1. We are told something of his relations with the Sāmānids, with a number of anachronisms; for the rest, the genealogy only contains names (Sulṭān Sādāt occurs in it as a woman's name) without facts or historical associations.

In the *Ẓafar-nāma* (i, 57) "Old Tirmidh" (*Tirmidh-i kuhna*) is mentioned alongside of Tirmidh. In literary works, including the ms. just mentioned, and on coins, Tirmidh after the Mongol period is frequently called "The Men's Town" (*madīnat al-ridjāl*). After Tīmūr's death, the Oxus frontier again came into prominence for a brief period. Khalīl Sulṭān, who had seized Samarḳand, could only hold the territory north of the Oxus. During the preparations for war between him and Shāh Rukh [*q.v.*], Khalīl Sulṭān in 810/1407 restored old Tirmidh, and Shāh Rukh, the defences of Balkh (Ibn ʿArabshāh, ed. Egypt, 205-6). It is to this period that probably belongs the memorial to Muḥammad b. ʿAlī al-Tirmidhī.

From the 10th/16th century Tirmidh, and as a rule Balkh also, belonged to the kingdom of the Shībānid [*q.v.*] Özbegs. During the fighting for Balkh between the Özbegs and the Indian prince (later emperor) Awrangzīb [*q.v.*] in 1056-7/1646-7, Tirmidh was occupied by Indian troops under Saʿādat Khān (Elliot-Dowson, *History of India*, vii, 79).

In the early years of the 18th century, Tirmidh was in possession of Shīr ʿAlī of the Ḳungrāt family, the founder of the town of Shīrābād (*ZDMG*, xxxviii, 276). A distinction was made at this time between the "great citadel" (*kalʿa-yi kalān*) of Tirmidh and the "citadel of the village" (?) where the bulk of the inhabitants (of Tirmidh?) lived. The unsettled condition of the following decades brought about the complete ruin of Tirmidh as of many other towns. In 1758 the Mangït *Atalïḳ* Muḥammad Raḥīm Khān rebuilt the town (Barthold, *K istorii oroshenīya Turkestana*, St.

Petersburg 1914, 74); it was afterwards destroyed once more.

In the second half of the 19th century, there was nothing near the ruins of the old town of Tirmidh except the insignificant village of Patta Ḥiṣār (with 1,257 inhabitants) and Ṣāliḥābād (see above). Patta Ḥiṣār acquired more importance when it was made the starting point of the Russian steamships on the Oxus. In 1894 the Russian fort of Termez was built 5 miles from the ruins and gradually became a town, but with a predominantly male population. In 1916 the Bukhārā-Ḳarshī-Termez railway was opened; during the Russian Revolution it was destroyed but has since been rebuilt.

The modern town of Termez, on the Ḳarshī-Dushanbe railway, has some light industries and serves as a port on the Oxus. In 1970 it had a population of 35,000. Archaeological excavations there have yielded, *inter alia*, Buddhist remains.

(W. BARTHOLD)

AL-TIRMIDHĪ, ABŪ ʿABD ALLĀH MUḤAMMAD b. ʿALĪ AL-ḤAKĪM, eminent mystic.

Numerous dates have been suggested for his birth and death; according to any of these he would have lived more than one hundred years. He was probably born in the first decade of the 3rd/9th century, in Tirmidh [*q.v.*] (where Buddhism and Manichaeism in particular had preceded Islam). The most plausible date for his death is located between 318/936 and 320/938. The little that is known of his life mostly derives from his *Badʾ shaʾn al-Ḥakīm al-Tirmidhī* which, rather than being an autobiography, represents his spiritual itinerary. His first teacher was his father. Leaving home at the age of 27 to perform the Pilgrimage, he spent time in Baṣra engaged in the study of *ḥadīth*. On his return, he acknowledged his vocation and commenced his mystical itinerary.

Ca. 261/874, accused of speaking of love, of corrupting the public and of claiming the gift of prophecy, he was summoned to Balkh to appear before the *wālī* (according to al-Dhahabī, two of his writings, *Khatm al-awliyāʾ* and *ʿIlal al-sharīʿa*, formed the basis of the charges against him). After proceedings which lasted several years, his enemies were obliged to flee from Tirmidh and he himself, rehabilitated, was enabled to return to his home. In 269/883, a dream experienced by his wife confirmed that he had just acceded to the rank of the forty *ṣiddīḳs*. In 285/898, he is said to have made his way to Nīshāpūr. After this date, nothing more is known of his life.

Doctrinal tendencies. A traditionalist, he adopted numerous themes characteristic of the *Ahl al-ḥadīth*, refused to accept discussion of the Ḳurʾān and of the *Sunna*, repudiated *kalām* and controversies, rejected reason and personal opinion (*raʾy*), and showed clear sympathy for the Ḥanbalīs, and also for the Umayyads rather than the ʿAbbāsids. However, he scorned the exoteric and preached esoteric knowledge interpreting Ḳurʾānic verses in the most fantastical manner, and approving of the in-depth interpretation of *ḥadīth* and even of the Law. As was later to be the practice of the Ashʿarīs, he accepted the condensing of the hundred names of Allāh into ten attributes. Furthermore, he denounced philosophy, at least that of others, and accepted the cognomen of al-Ḥakīm, evidently in the sense of monotheist and Muslim philosopher. He borrowed numerous themes from the Shīʿīs, and used them against them. These contradictions reflect the multiplicity of tendencies which then co-existed and the degree of freedom present in religious thought, still in something of a state of flux. Clearly influenced by the scientific, alchemical and philosophical thought of his time, he separated their various strands. His work retained numerous vestiges of it, most often employed as elements of a lyrical expression of his mystical sensibility, without concern for logic, coherence or compatibility: earth deriving from water and light from the refinement of water; absence of fire in man, but the earth of which he is composed capable of blazing with the fire of his passion; the heart of an initiate becoming, after its evil tendencies "have been melted", "an ingot of pure silver"; etc. Also found were numerous reflections of neo-Platonist and Pythagorean thought, widespread at that time among a certain élite of Muslim society, in the East as in the West. He called God the One and Only, grouped the sciences into three categories (assessed, however, from an essentially religious point of view), and, finally, he assimilated the mystical grades to levels of reason, and while paying no heed to the "Fall", attached primordial importance to the ascent following upon it.

Pre-formation of man. Around several Ḳurʾānic verses, al-Tirmidhī constructed a veritable myth of Adam and of Iblīs, which replaces the "fall of souls" with the "casting of divine light". Here, transcendence and anthropomorphism are not easily separated, and the same applies to the material and the spiritual. God created other beings, in the service of man, by His Word, *kun*, but He created man by His own hand. Before man's arrival on the earth, there were three preparatory phases:

(1) *The "Day of Destinies" (yawm al-maḳādīr).* God has "sown" men in the earth and has determined their status as believers or infidels by sprinkling them with His light, simultaneously at random and according to His will. According to the quantity of light received, men are to be divided into three groups: infidels, hypocrites and believers (among these last being the mystical "saints" whom God has touched with His right hand).

(2) *The Formation of Adam.* 50,000 years later, God kneads a fragment of earth with the "water of His mercy", makes the dough rise with the "light of gnosis", adds the "five things" or components of intelligence and provides the finest physical forms, by virtue of which Adam is close to Him ("light of proximity"). Then God insufflates there, with gnosis, the "light of life" and the spirit (which regulates speech) and, by virtue of the combination in him of gnosis and of the "light of gnosis", Adam "acknowledges his Lord" and recites the *shahāda*. Form, light of gnosis and spirit constitute the "light of destinies" (*nūr maḳādīrī*). Every one of his future descendants has his part of all this.

(3) *The "Day of the Pact" (yawm al-mīthāḳ).* God brings forth all men from the loins of Adam. He asks them "Am I not your Lord?" and all reply "Yes"; the evil reply out of fear, and the demons lead them towards unbelief; the believers reply out of love and conviction, and God rewards them with His alliance. "Proximity of form", vision of God in His light and divine speech (or "Word") constitute the "light of the pact" (*nūr mīthāḳī*), and the five components of intel-

ligence recognise it by analogy with the "light of destinies" which are a part of them.

Transgression. Iblīs had refused to bow before Adam, whose body and soul were made from a soil which he himself had trampled underfoot. He tempted Adam to prove his superiority over him. God granted that Iblīs should rule only over the wicked, leading them by appetites of the soul supplemented by a hundred traits of Satanic nature. But he accepted the repentence of Adam, promised to send prophets who will be bearers of revelations to the believers, to subordinate their soul to their heart, supported by a hundred traits of virtuous character (deriving from the divine attributes), through reason, gnosis and the five components of intelligence.

Human organism and faculties. Based on a fundamental duality (the heart and the soul) there is a somewhat anarchic multiplicity of organs and faculties. The following are identified: the exterior soul (which is nothing other than the body with its members and organs and which, by means of its senses, already has embryonic knowledge); the inner soul (located in the lungs, made from soil trampled underfoot by Iblīs); the heart (both organ and faculty); reason (located in the brain); the spirit (located in the head, below the ears); then the five components of intelligence (located in the chest): intelligence proper (*dhihn*), faculty of memory (*ḥifẓ*), understanding (*fahm*), penetration of spirit (*dhakā'*; almost non-existent role) and knowledge (the immediate perceptions of awareness; cf. Gobillot, 617). All the faculties which God gave to Adam and his descendants on the "Day of the Pact" constitute the *fiṭra* (on the subject of the *fiṭra*, cf. Gobillot, 611 ff., FIṬRA and MĪTHĀḲ).

Believers and infidels. All men are thus endowed at the outset with "natural reason" (*'aḳl al-fiṭra*) which should make them into Muslims, and their duty would be to use this in combination with the five components of intelligence. Then, *dhihn*, assisted by understanding (*fahm*), receives exterior knowledge (sensible awareness) in bulk, conveys it to the breast, on the lining of which each idea leaves a shadow of its form. Then *dhihn* entrusts all this to the memory (also located in the breast). When the heart has need of a particular thing, it looks at the memory (illuminating it with the "light of life" which is in it) and the latter shows it the thing which is sought. It is a purely external, utilitarian and concrete knowledge "which has no solidity in the heart". But from the outset, there is rivalry between the heart and reason on the one hand, and the inner soul on the other. Charged with lesser functions, such as satisfying appetites, licit or illicit, the latter has no knowledge, only appetites. Appetites are a soft breath, created from the fire of Hell, located in a thin vesicle between heart and lung and distributed throughout the body by the blood-vessels (like the demons); they bring delight to the inner soul and are the acolytes of Iblīs. Men whose appetites dominate heart and reason and who do not feel the need to love God (on the love of God, cf. Gobillot, *passim*), thus those to whom God has refused "alliance" because of their disregard for the "Day of the Pact", are the prey of the demons and the latter lead them to polytheism or to infidelity. On the other hand, God has given to the believer the privilege of the "light of reason" which, through the door of the brain which opens onto the breast, illumines that which the eyes of the heart wish to see; and the latter can classify the objects of awareness and also distinguish between the fair and the ugly (evil actions leave a black stain on the heart). Furthermore, God has added to the "light of life", in his heart, the "light of monotheism", and with the eyes of his heart seeing this, man acknowledges God and proclaims His uniqueness. Then "natural reason" is replaced by "reason of faith". Despite their love of God, simple believers have nothing more than utilitarian and concrete knowledge and they retain their appetites, which co-exist with the heart and with reason. But believers, even those of a relatively higher level, must beware of being swamped by their appetites, for these accumulate in the breast—according to whether they are more or less excessive or illicit—clouds, dust or even smoke, and prevent the imprisoned heart seeing the shadows of knowledge on the lining of the breast. Eventually, faith will give way to the domination of passion.

Spiritual ascent. For a certain type of believer who has already acquired a well-organised awareness of the exterior world, the knowledge which is accumulated in the chest and seen by the eyes of the heart becomes "knowledge of the heart" (abstract), and his faith is strengthened. But he will soon be in a position to aspire to a higher level. The heart, observing the breast, discovers in itself and in the creatures of this inferior world attributes which they owe to the divine Omnipotence. Gradually, it will thus ascend towards the divine Unity and the awareness of God. There, finally, is the highest level accessible to man, and the heart will bring back to the chest the quintessence of an incomparable knowledge. Heart, reason and *dhihn* together illuminate the chest, the "light of gnosis" and that of "monotheism" shine forth and, in the illumined chest, all these lights become a single one, the "light of certitude" and of the love of God (Gobillot emphasises, 578 ff., that all lights corresponding to the divine attributes are derived from the divine light), for the heart is like a mirror where heaven and the other world are reflected, extending as far as the "Throne", and there eyes see the Majesty of God. It seems (yet to be confirmed) that the echelons of reason correspond to these stages (a decidedly muffled echo of the concepts of Plato and of Aristotle): above "reason of faith" there are "reason of knowledge and of perception (*idrāk*)", "reason of right guidance (*hidāya*)" and "reason of gnosis and of insight (*baṣīra*)". But mystical grades are also superimposed here.

The mystical grades. Al-Tirmidhī does simple believers the honour of according them a "grade", that of the *awliyā' al-tawḥīd* who, as has been seen, are permitted to retain the appetites of the soul. Above them come: (1) *The ṣādiḳs*. Despite their love of God, the mundane life constantly brings them back to concrete realities. They are required to exert the extenuating effort of ceaseless struggle with the soul, with the aim of cleansing it of appetites and of the hundred traits of diabolical nature; achieving the passivity of members, the instrument of the soul, and at least overseeing their actions; and avoiding acts of obeisance not required by the Law, for fear that the soul will interfere. Finally, they plead for the divine mercy which will transport them directly to the higher level.

(2) *The aḥrār kirām*. The lights of "proximity" and of "divine grace" are interposed between them and their soul, which cannot threaten the heart. But it survives with its appetites and this grade should not be left, nor anything done, without the permission of God, Who then guarantees the safeguarding of the heart. Finally, passion extinguished and the soul submissive, one may pass to the next grade.

(3) *The "forty" ṣiddīḳs*. Despite the soul, there is nothing in them other than the love of God. They benefit from the *madjālis al-nadjwā* which include inspiration, physiognomy and *ṣiddīḳiyya* (revelation through dreams). They can now progressively assimilate, by means of the divine *minna*, ten virtues deriving from the divine attributes; each of the ten is acquired by the traversing of a "kingdom".

(4) *The munfarid*. The man who reaches the tenth "kingdom", that of the divine Unity, has attained the highest of all grades and the deepest point of esotericism. He is then caliph of God on His earth. He is *muḥaddath*: besides the three modes of inspiration of the *ṣiddīḳs*, he is a beneficiary of *ḥadīth* (*ḳudsī*). His level is much closer to that of the prophets than to that of the *ṣiddīḳs*: he is introduced to a third, even to half and more, of the practices associated with prophecy, of which the "veracious dreams" (an idea borrowed from the Shīʿīs) are one forty-sixth of revelation.

Ahl al-ṣidḳ and ahl al-minna. The former are those who are obliged to make the extenuating effort to escape the slavery of the inner soul. The *ahl al-minna* easily traverse the echelons because *minna* and the divine creative will have predisposed them to it naturally through their fine traits of character. It is their vocation to accede to *infirād*.

The seal of the saints. Al-Tirmidhī no doubt borrowed from the Shīʿīs this notion of a seal of the saints, at the end of time, parallel to the seal of the prophets, Muḥammad, and much closer to him than any other saint.

It may be noted, in conclusion, that the influence of al-Tirmidhī remains perceptible among later mystics (especially ʿAbd al-Ḳādir al-Djīlānī [*q.v.*]; *Ghunya*, 160-2); furthermore, borrowing from Shīʿism and representing a first wave of Neo-Platonism in Islamic mysticism, he is in this sense a precursor of Ibn al-ʿArabī [*q.v.*].

AL-**TIRMIDHĪ**, ABŪ ʿĪSĀ MUḤAMMAD B. ʿĪSĀ b. Sawra, great collector of *ḥadīth* [*q.v.*], the author of one of the Six Books, *al-kutub al-sitta*. He is said to have been born in 210/825 near the town of Tirmidh [*q.v.*]. He travelled widely in search of traditions through Khurāsān, ʿIrāḳ and the Ḥidjāz. He was among others a pupil of al-Bukhārī [*q.v.*]. Later in life he became blind, allegedly as a result of excessive weeping, and he died in Tirmidh in 279/892.

He is famous in the first place for his *al-Djāmiʿ al-ṣaḥīḥ*, a collection generally considered to hold the fourth rank after those of al-Bukhārī, Muslim and Abū Dāwūd [*q.vv.*]. In the edition of Aḥmad Muḥammad Shākir *et alii*, Cairo 1937-65, it contains 3,956 traditions. Like his predecessors, al-Tirmidhī included in his collection many dozens of traditions, which he provided with single strand *isnāds*, for which he may solely be held responsible. These traditions can be identified by consulting *Tuḥfat al-ashrāf bi-maʿrifat al-aṭrāf* of Yūsuf b. ʿAbd al-Raḥmān al-Mizzī (d. 742/1341 [*q.v.*]) where they are easily recognised by a single Arabic *tāʾ*. At the end of his *Djāmiʿ* (v, 736-63) an extremely important early theoretical work on common defects (*ʿilal*) is appended: his *Kitāb al-ʿIlal*. In this chapter, al-Tirmidhī defines his methods in *ḥadīth* classification (*ṣaḥīḥ-ḥasan-gharīb*), three technical terms which he often used in seemingly contradictory combinations. These methods met with some criticism as well as bewilderment on the part of his fellow-traditionists. For a detailed survey of these, see the important commentary of ʿAbd al-Raḥmān b. Aḥmad b. Radjab al-Ḥanbalī (d. 795/1393), *Sharḥ ʿilal al-Tirmidhī*, ed. Ṣubḥī Djāsim al-Ḥumayd, Baghdād 1396, 287-91. Al-Tirmidhī also made a collection of traditions solely comprising the Prophet's characteristics entitled *K. al-Shamāʾil*; for editions and commentaries, see Sezgin, *GAS*, i, 156-9. It was probably modelled on the latter part of the biography of Muḥammad by Ibn Saʿd (d. 230/845 [*q.v.*]) in *K. al-Ṭabaḳāt al-kabīr*, i/2, 87-186.

Bibliography: Mizzī, *Tahdhīb al-kamāl*, xxvi, 250-2; Dhahabī, *Siyar aʿlām al-nubalāʾ*, ed. Shuʿayb al-Arnaʾūṭ, xiii, 270-7.

(G.H.A. JUYNBOLL)

TIRMIDHĪ, SAYYID BURHĀN AL-DĪN AL-ḤUSAYN MUḤAḲḲIḲĪ, also known as Sayyid Ḥusayn or Sayyid Sirdān, disciple of Bahāʾ al-Dīn Walad and spiritual master of Djalāl al-Dīn Rūmī [*q.vv.*], *fl.* in the first half of the 7th/13th century.

Born at an unknown date and originally from the town of Tirmidh [*q.v.*] on the Oxus, where he already had a circle of disciples, he became the disciple and then successor of Bahāʾ al-Dīn Walad. He went to

join his master at Ḳonya, but Bahā' al-Dīn had died a year previously (628/1231) and his son Djalāl al-Dīn Rūmī had succeeded him in teaching the religious sciences. Sayyid Burhān al-Dīn took charge of Djalāl al-Dīn's education and became his spiritual master, with Rūmī studying under him for nine years. They set off together for Syria, but Burhān al-Dīn settled at Ḳayṣariyya [q.v.] whilst Rūmī went on to Aleppo. Burhān al-Dīn is said to have retired to Ḳayṣariyya and to have been there at the time of the Mongol invasion of Anatolia. The Saldjūḳ governor of Ḳayṣariyya, Shams al-Dīn Iṣfahānī, was at the same time protector and disciple of Sayyid Burhān al-Dīn. It is possible that the latter died in 638/1240; according to Djāmī he was buried there, but there exists also at Ḳonya a *turba* traditionally referred to as being his.

Attributed to him is a large work in Persian called the *Maḳālāt-i Sayyid Burhān al-Dīn Muḥaḳḳiḳ-i Tirmidhī*, bearing witness to the breadth of his knowledge of the theological sciences and the intellectual currents of his time. In it he cites various mystical poems, including those of Sanā'ī, whom he loved as much as Djalāl al-Dīn loved Shams-i Tibrīzī [q.v.], and he also discusses various questions pertaining to Ṣūfī mysticism, covering Ismā'īlī doctrines, the topic of the Mahdī and theological problems. For Burhān al-Dīn, the Malāmatiyya [q.v.] were the highest grade of the mystics, whilst the philosophical scholars did not have access to the real truth.

(P. Ballanfat)

TİRNOWA, the Ottoman name of a town in northern Bulgaria, capital of the Bulgarian rulers from the 12th to the 14th centuries, called until 1965 Tarnovo, now Veliko Tarnovo.

It is situated on the River Yantra, whose waters have cut into the limestone hills where the town is situated. It was fortified by the Romans and Byzantines, until in 1185 the local feudal lords Assen and Peter rose up against the Byzantines, and Tarnovo became the capital of the restored Bulgarian monarchy. The mediaeval town had some 40 churches and five monasteries, a *Frenk* town for Western European traders and a Jewish quarter. In 795/1393 it was besieged and captured by the Ottomans, with severe reprisals against the town; the Tsar's palace and the fortress walls were demolished, the Bulgarian Patriarch exiled and many local dignitaries executed. Tirnowa now became the centre of a *ḳaḍā* within the *sandjaḳ* of Nīkbūlī [q.v.] or Nicopolis, and a *khāṣṣ* of the sultan or the *sandjaḳ-beyi*. In 1864, after the formation of the Tuna or Danube *wilāyet*, Tirnowa became the chef-lieu of a *sandjaḳ*. In 1877, during the Russo-Turkish War, the town was entered by Russian troops and since 1878 has formed part of Bulgaria.

After the Ottoman conquest, part of the population was massacred and others subjected to forced deportation (*sürgün*). According to the taxation registers of the later 15th and the 16th centuries, Tirnowa had about 4,600 inhabitants, about one-third of them Muslims. In the mid-17th century, the two communities of Christians and Muslims were almost equal and totalled *ca.* 5,000. In the second half of the 19th century, it had *ca.* 12,000 inhabitants, one-third of them Muslims; in 1900 there were 11,628 Bulgarians, 748 Turks, 52 Armenians, and 23 Gypsies and others; in 1976 the town had 58,096 inhabitants.

It seems that the development of the town was marked, for the Orthodox Bulgarians, by their memories of its past glories as a royal capital and its continued role as the seat of an archbishop under the Greek Oecumenical Patriarch. By the end of the 18th century there were in the town eight churches and three monasteries, and in the next century, twelve Orthodox churches served by a considerable number of priests. It was probably significant that it was in Tirnowa that plans for links with the European Powers for the ejection of the Ottomans were hatched. On the other hand, the concentration of Muslim religious functionaries in the town was relatively high, and in the 17th century there were between 29 and 35 of them. The sizeable colony of Catholic Ragusan merchants of the 16th century was by the 17th century ousted by Armenians, who came to use the former Catholic church of the Ascension. There were also a Jewish community and Albanians, these last living in the satellite settlement of Arbanassi.

The strong religious feelings between the communities may explain why so few Islamic monuments have been preserved there compared with other Bulgarian towns. In 839/1435-6 the Ḥiṣār mosque was built by the greatest benefactor of the town of that time, Fīrūz Bey, whose *waḳf* also supported a monumental mosque which survived until 1957 (its inscription is preserved in the Tărnovo Historical Museum), an *ʿimāret*, a *medrese*, a caravanserai, a *mesdjid* in the bazaar, a *ḥammām*, a *mekteb*, etc. The Muslim part of the town was sharply divided off from the Christian one, and held the administrative buildings plus the most imposing mosque of the town, the Ḳurşum one, with a *medrese*, seven fountains and a library (whose building was destroyed when Russian troops entered the town in 1877 and its books scattered; no information exists today on their whereabouts). According to the *sālnāme* of 1872-3, the town had 22 mosques (*djāmiʿ*s and *mesdjid*s), of which 13 survived in 1912, a *tekke*, seven *medreses*, etc. At some point in the later 15th century, the Ḳawaḳ Baba *tekke* had been established round the former church of the Forty Martyrs by a *waḳf*, and places of pilgrimage included the tomb of one Maḥmūd Fātiḥ, believed to have conquered the town. In the Ottoman period, commercial activity was brisk in Tirnowa, seen in the fact that by the 19th century there were 1,008 *dukkāns*, nine *khāns*, 120 warehouses, three *ḥammāms* and 35 fountains.

ṬIRS [see RAKK. 1].

TIRYĀKĪ, ḤASAN PASHA [see MEHMED PASHA, TIRYĀKĪ].

TISHRĪN, the name of the first two months of the Syrian calendar. It is found as early as the Palmyrene inscriptions and there means only one month, namely the first (in the Jewish calendar, the seventh) while the next was called Kānūn. In the calendar of the Syriac church, however, we find this name applied to two months, the third and fourth Syrian = ninth and tenth Jewish, Kislēw and Ṭēbhēth, while the original Kānūn was replaced by a second Tishrīn month. As a stage in the development of the four first Syriac names of months from four different to two pairs, A. von Gutschmid recognised the calendar of Heliopolis, the first four months of which bore the names Ag, Thorin, Gelōn and Chanu. The last three names correspond to Tishrī, Kislēw and Kānūn. The development from Gelōn to Kānūn is explained by a change of letters, while the replacement of Ag by Tishrī might be due to Jewish influence. The Syrians distinguished the two Tishrīns by the epithets *ḳᵉdēm* and *ḥrāy* (so al-Bīrūnī) for which the Arabs used *al-awwal* and *al-ākhir* or *al-thānī*.

In time, the two months coincide with the October and November of the Roman calendar and have 31 and 30 days. In the two months, the four first stations of the moon set and the 15th to 18th and the rise. The days on which this happens are, according to al-Bīrūnī, 10 and 23 Tishrīn I, and 5 and 18 Tishrīn II; according to al-Ḳazwīnī, 18 and 31 Tishrīn I, and 13 and 26 Tishrīn II. In 1300 of the Seleucid era (= A.D. 989), according to al-Bīrūnī, the stars of the four stations rose or set on 22 Tishrīn I and on 5, 18 and 31 Tishrīn II.
